   ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

Superseded

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: ☐ **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access

Superseded

to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

Superseded

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

   i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

   ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

Superseded

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

21.A.126 - Production inspection system

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

Superseded

2. incoming materials, and bought or subcontracted parts, are properly identified; ☐ **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; ☐ **GM1** ☐ **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. ☐ **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; ☐ **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; ☐ **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; ☐ **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; ☐ **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; ☐ **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. ☐ **GM**

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;

2. A check on flight performance (using normal aircraft instrumentation);

3. A check on the proper functioning of all aircraft equipment and systems;

Superseded

4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;

5. A check of the operational characteristics of the aircraft on the ground;

6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or

Superseded

appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

Superseded

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties, conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

Superseded

iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

iv. identification and traceability;

v. manufacturing processes;

vi. inspection and testing, including production flight tests;

vii. calibration of tools, jigs, and test equipment;

viii. non-conforming item control;

ix. airworthiness coordination with the applicant for, or holder of, the design approval;

x. records completion and retention;

xi. personnel competence and qualification;

xii. issue of airworthiness release documents;

xiii. handling, storage and packing;

xiv. internal quality audits and resulting corrective actions;

xv. work within the terms of approval performed at any location other than the approved facilities;

xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

xvii. issue of military permit to fly and approval of associated flight conditions.

The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.143 - Production Organisation Exposition

☐ **GM**

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

Superseded

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

    (vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

Superseded

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. **AMC**

Superseded

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

Superseded

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or

3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**

4. the production organisation no longer meets the requirements of; or

5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

Superseded

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

Superseded

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; ☐ **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

☐ **AMC to Subpart H**

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

Superseded

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

   i. a statement of conformity:

      – issued under DASR 21.A.163(b); or

      – issued under DASR 21.A.130 and validated by the Authority; or

      – for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

   ii. a weight and balance report with a loading schedule;

   iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

   i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

   ii. in any other case:

      – a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

      – a weight and balance report with a loading schedule;

      – the flight manual and any other manuals required by the Authority of the State of registry;

      – historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

      – a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

   i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

Superseded

ii. the applicant has submitted to DASA the following documents:

- evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document
- a copy of the applicable Type Certificate Data Sheet
- a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate
- a copy of the manufacturer's instructions for continuing airworthiness for the aircraft
- a copy of the parts catalogue for the aircraft
- a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

- continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)
- continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

Superseded

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

Superseded

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

Superseded

ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: **AMC1** **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

Superseded

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

Superseded

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. **AMC**

21.A.257 - Investigations

GM

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.263 - Privileges

(a) (Reserved);

(b) (Reserved);

Superseded

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

   v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

Superseded

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

Superseded

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. ☐ **GM**

Superseded

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. ☐ **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451.☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: ☐ **AMC**

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

Superseded

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

   ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

Superseded

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. **GM**

(b) A repair shall be classified and approved by: **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. **GM**

21.A.445 - Unrepaired damage

AMC **GM**

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Superseded

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

Superseded

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

Superseded

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**
2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;
3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;
4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

Superseded

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

Superseded

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used

Superseded

to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. ☐ **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or
2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or
3. the article has proved to give rise to unacceptable hazards in service; or
4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;
15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;
16. (Reserved)

Superseded

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

Superseded

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

Superseded

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

21.A.713 - Changes

☐ **GM**

Superseded

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

Superseded

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

21.A.807 - Identification of AUSMTSO articles

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SECTION A

SUBPART A - GENERAL

M.A.101 - Scope

This Section establishes the measures to be taken to ensure that airworthiness is maintained. It also specifies the conditions to be met by organisations involved in such continuing airworthiness management.

SUBPART B - ACCOUNTABILITY

M.A.201 - Responsibilities

(a) The Operating Organisation is accountable for the continuing airworthiness of an aircraft and shall ensure that no flight takes place unless: ☐ **GM1** ☐ **GM2** ☐ **GM3**

1. the aircraft is maintained in an airworthy condition; and
2. any operational and emergency equipment fitted is correctly installed and serviceable or clearly identified as unserviceable; and
3. the Military Certificate of Airworthiness and the Military Airworthiness Review Certificate (MARC) remain valid; and
4. the maintenance of the aircraft is performed in accordance with the Aircraft Maintenance Programme (AMP) as specified in DASR M.A.302.

NOTE: For individual aircraft or types for which a Military Certificate of Airworthiness or Military Restricted Certificate of Airworthiness is not appropriate, a Military Permit to Fly may be issued in accordance with national regulations.

(b) NOT APPLICABLE.

(c) Any organisation performing maintenance shall be responsible for the tasks performed.

(d) The Operating Organisation shall be responsible for the satisfactory accomplishment of the pre-flight inspection. This inspection must be carried out by a qualified person but need not be carried out by a DASR 145 Approved Maintenance Organisation (AMO). ☐ **AMC**

(e) NOT APPLICABLE.

(f) NOT APPLICABLE.

(g) Maintenance of military aircraft, and components thereof shall be carried out by a DASR 145 AMO, or another maintenance organisation accepted by DASA. ☐ **AMC**

Superseded

(h) The Operating Organisation is responsible for the continuing airworthiness of the aircraft it operates and shall: ☐ **AMC**

1. be appropriately approved, in accordance with DASR M Subpart G, for the management of the continuing airworthiness of the aircraft it operates; and ☐ **AMC**

2. be approved in accordance with DASR 145 or contract/task directly (or through a Continuing Airworthiness Management Organisation (CAMO)) such organisations; and ☐ **GM**

3. ensure that paragraph (a) is satisfied.

(i) NOT APPLICABLE

(j) The Operating Organisation is responsible for granting the Military Aviation Authority (MAA) access to the organisation/aircraft to determine continued compliance with this DASR.

(k) By way of exception to paragraph (h)1, an Operating Organisation may contract/task an organisation approved in accordance with DASR M.A. Subpart G, for the management of the continuing airworthiness of the aircraft it operates. In this case, a written contract/ arrangement shall be made and the CAMO assumes responsibility for the proper accomplishment of these tasks. ☐ **AMC**

M.A.202 - Occurrence reporting

(a) Any Operating Organisation accountable in accordance with DASR M.A.201, shall report to the MAA, and all further addressees as required by national regulations, any identified condition of an aircraft or component which endangers flight safety. ☐ **AMC** ☐ **GM**

(b) The Operating Organisation shall establish an occurrence reporting system to enable the collection and evaluation of such reports, including the assessment and extraction of those occurrences to be reported under paragraph (a). This procedure shall identify adverse trends, corrective actions taken or to be taken by the Operating Organisation to address deficiencies and include evaluation of all known relevant information relating to such occurrences and a method to circulate the information as necessary. ☐ **AMC**

(c) Reports shall be made in a form and manner established by the MAA and contain all pertinent information about the condition known to the Operating Organisation. ☐ **AMC** ☐ **GM**

(d) NOT APPLICABLE.

(e) Reports shall be made as soon as practicable, but in any case within 72 hours of the organisation identifying the condition to which the report relates.

SUBPART C - CONTINUING AIRWORTHINESS

M.A.301 - Continuing airworthiness tasks

(a) The continuing airworthiness of the aircraft shall be ensured by:

1. the accomplishment of pre-flight inspections; ☐ **AMC**

Superseded

2. the rectification in accordance with the data specified in DASR M.A.304 of any defect and damage affecting safe operation, taking into account the Minimum Equipment List (MEL) and Configuration Deviation List (CDL) as applicable to the aircraft type; ☐ **AMC** ☐ **GM**

3. the accomplishment of all maintenance, in accordance with the DASR M.A.302 approved Aircraft Maintenance Programme (AMP); ☐ **AMC**

4. the analysis of the effectiveness of the DASR M.A.302 AMP; ☐ **AMC**

5. the accomplishment of any applicable: ☐ **AMC**

   i. Airworthiness Directive;

   ii. operational directive with a continuing airworthiness impact;

   iii. continued or continuing airworthiness requirements mandated by the MAA;

   iv. measures mandated by the MAA in immediate reaction to a safety problem.

6. the accomplishment of modifications and repairs in accordance with DASR M.A.304;

7. for non-mandatory modifications and/or inspections, the establishment of an embodiment policy; ☐ **AMC**

8. maintenance check flights when necessary.

(b) An aircraft shall not fly if:

1. the continuing airworthiness of the aircraft or any component fitted to the aircraft does not meet the requirements of DASR M; or

2. the aircraft does not remain in conformity with the type design approved by the MAA; or

3. the aircraft has been operated beyond the limitations of the flight manual or the Military Certificate of Airworthiness, without appropriate action being taken; or

4. the aircraft has been involved in an accident or incident that affects the airworthiness of the aircraft, without subsequent appropriate action to restore airworthiness; or

5. a modification or repair is not in compliance with DASR M.A.304.

M.A.302 - Aircraft Maintenance Programme (AMP)

☐ **AMC**

(a) Maintenance of each aircraft shall be organised in accordance with an AMP. ☐ **GM**

(b) An organisation responsible for producing and amending an AMP in accordance with DASR M.A. 302 shall also be responsible for sending the AMP to the MAA. The AMP and any subsequent amendments shall be approved by the MAA.

(c) NOT APPLICABLE.

(d) The AMP shall establish compliance with: ☐ **AMC**

1. instructions issued by the MAA;

Superseded

2. instructions for continuing airworthiness issued by any organisation recognised by the MAA.

3. additional or alternative instructions, once approved in accordance with paragraph (b), proposed by the CAMO, except for intervals of safety related tasks referred in paragraph (e), which may be extended, subject to sufficient reviews carried out in accordance with paragraph g, and only when subject to direct approval in accordance with paragraph (b). ☐ **AMC**

(e) The AMP shall contain details, including frequency, of all maintenance to be carried out, including any specific tasks linked to the type and the specificity of operations.

(f) The AMP shall include a reliability programme, unless otherwise specified by the MAA. ☐ **GM**

(g) The AMP shall be subject to periodic reviews and amended accordingly when necessary. These reviews shall ensure that the AMP continues to be valid in light of the operating experience and instructions from the MAA, whilst taking into account new and / or modified maintenance instructions promulgated by the (Military) Type Certificate (MTC) and (Military) Supplementary Type Certificate (MSTC) holders and any other organisation that publishes such data in accordance with DASR 21.

M.A.303 - Airworthiness Directives

Any applicable Airworthiness Directive must be carried out within the requirements of that Airworthiness Directive, unless otherwise specified by the MAA.

M.A.304 - Data for modifications and repairs

Damage shall be assessed and modifications and repairs carried out using as appropriate: ☐ **AMC**

(a) data approved by the MAA; or

(b) data approved by a DASR 21 Design Organisation or MTC holder organisation; or ☐ **GM**

(c) NOT APPLICABLE;

(d) data produced by an organisation accepted by the MAA. ☐ **AMC** ☐ **GM**

M.A.305 - Aircraft continuing airworthiness record system

(a) At the completion of any maintenance, the Certificate of Release to Service required by DASR 145.A.50 shall be entered in the aircraft continuing airworthiness record system. Each entry shall be made as soon as practicable but in no case more than 30 days after the day of the maintenance action.

(b) The aircraft continuing airworthiness record system shall cover the aircraft, engine(s), propeller(s), any service life limited component(s) as appropriate, and shall include an aircraft technical log.

(c) The aircraft type and registration mark, the date, together with total flight time and/or flight cycles and/or landings and any other airworthiness data as required by the MAA as appropriate, shall be entered in the aircraft continuing airworthiness record system. ☐ **GM**

Superseded

(d) The aircraft continuing airworthiness record system shall also contain as a minimum the current: ☐ **AMC**

1. status of Airworthiness Directives and measures mandated by the MAA in immediate reaction to a safety problem;
2. status of modifications and repairs;
3. status of compliance with the AMP;
4. status of service life limited components; ☐ **AMC** ☐ **AMC1**
5. weight and balance report;
6. list of deferred maintenance;
7. symmetry check report (if required).

(e) In addition to the authorised release certificate, DASR Form 1 or equivalent, the following information relevant to any component installed (engine, propeller, engine module or service life-limited component) shall be entered into the aircraft continuing airworthiness record system:

1. identification of the component; and
2. the type, serial number and registration, as appropriate, of the aircraft, engine, propeller, engine module or service life-limited component to which the particular component has been fitted, along with the reference to the installation and removal of the component; and
3. the date together with the component's accumulated total flight time and/or flight cycles and/or landings and/or calendar time, and/or any other approved service life consumption units as appropriate; and
4. the current paragraph (d) information applicable to the component.

(f) The CAMO responsible for the management of continuing airworthiness tasks in accordance with DASR M.A. Subpart B, shall control the records as detailed in this paragraph and present the records to the MAA upon request.

(g) All entries made in the aircraft continuing airworthiness record system shall be clear and accurate. When it is necessary to correct an entry, the correction shall be made in a manner that clearly shows the original entry. ☐ **AMC** ☐ **GM**

(h) An Operating Organisation shall ensure that a system has been established to keep the following records for the periods specified: ☐ **AMC**

1. all detailed maintenance records in respect of the aircraft and any service life-limited component fitted thereto, until such time as the information contained therein is superseded by new information equivalent in scope and detail but not less than 36 months after the aircraft or component has been released to service; and
2. the total time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) of the aircraft and all service life-limited components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

Superseded

3. the time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) as appropriate, since last scheduled maintenance of the component subjected to a service life limit, at least until the component scheduled maintenance has been superseded by another scheduled maintenance of equivalent work scope and detail; and

4. the current status of compliance with all maintenance programme tasks such that compliance with the Aircraft Maintenance Programme can be established, at least until the aircraft or component scheduled maintenance task has been repeated; and

5. the current status of Airworthiness Directives applicable to the aircraft and components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

6. details of current modifications and repairs to the aircraft, engine(s), propeller(s) and any other component vital to flight safety, at least 12 months after they have been permanently withdrawn from service. ☐ **AMC**

M.A.306 - Aircraft technical log

(a) In addition to the requirements of DASR M.A.305, an Operating Organisation shall use an aircraft technical log containing the following information for each aircraft: ☐ **AMC**

1. information about each flight, necessary to ensure continued flight safety; and

2. the current aircraft Certificate of Release to Service; and

3. the current maintenance statement giving the aircraft maintenance status of what scheduled and out of phase maintenance is next due except that the MAA may agree to the maintenance statement being kept elsewhere; and

4. all outstanding deferred defects rectifications that affect the operation of the aircraft; and

5. any necessary guidance instructions on maintenance support arrangements.

(b) The aircraft technical log and any subsequent amendments shall be approved by the MAA. ☐ **AMC**

(c) An Operating Organisation shall ensure that the aircraft technical log is retained for at least 36 months after the date of the last entry.

M.A.307 - Transfer of aircraft continuing airworthiness records

(a) The Operating Organisation shall ensure when an aircraft is permanently transferred to another Operating Organisation, that the records within the DASR M.A.305 continuing airworthiness records system, are also transferred. The time periods prescribed for the retention of records shall continue to apply to the new Operating Organisation.

(b) The Operating Organisation shall ensure that when the continuing airworthiness management tasks are contracted/tasked to an external CAMO, that the records within the DASR M.A.305 aircraft continuing airworthiness records system, are transferred to that CAMO.

Superseded

(c) Moved to paragraph (a).

SUBPART D - MAINTENANCE STANDARDS

NOT APPLICABLE – See DASR 145

SUBPART E - COMPONENTS

NOT APPLICABLE – See DASR 145

SUBPART F - MAINTENANCE ORGANISATION

NOT APPLICABLE

SUBPART G - CONTINUING AIRWORTHINESS MANAGEMENT ORGANISATION (CAMO)

M.A.701 - Scope

This Subpart establishes the requirements to be met by an organisation to qualify for the issue or continuation of an approval for the management of aircraft continuing airworthiness.

M.A.702 - Application

(a) An application for issue or change of a CAMO approval shall be made on a form and in a manner established by the MAA. ☐ **AMC**

(b) It shall include the following documents: ☐ **AMC**

1. the Continuing Airworthiness Management Exposition (CAME); and
2. the Operating Organisation's Aircraft Maintenance Programmes (only if the participating Member State (pMS) requires the CAMO to develop and control the AMP for the aircraft managed); and ☐ **GM**
3. the aircraft technical log(s); and
4. where appropriate, the technical specification(s) of the DASR M.A.708(c) maintenance contracts/taskings with the DASR 145 AMO(s); and
5. any additional documentation required by the MAA. ☐ **AMC**

Superseded

M.A.703 - Extent of approval

(a) The approval is indicated on a DASR Form 14, issued by the MAA.

(b) NOT APPLICABLE.

(c) The scope of work deemed to constitute the approval shall be specified in the CAME in accordance with DASR M.A.704.

M.A.704 - Continuing Airworthiness Management Exposition (CAME)

☐ **AMC**

(a) The CAMO shall provide a CAME containing the following information:

1. a statement signed by the Accountable Manager to confirm that the organisation will work in accordance with DASR M and the Exposition at all times; and
2. the organisation's scope of work; and
3. the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) andM.A.706(i); and
4. an organisation chart showing associated chains of responsibility between all the person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i); and
5. a list of the airworthiness review staff referred to in DASR M.A.707; and
6. a general description and location of the facilities; and
7. procedures specifying how the CAMO ensures compliance with this DASR; and
8. the CAME amendment procedures; and
9. the list of approved AMPs (see DASR M.A. 302); and
10. a list of all contractors/tasked organisations (where applicable); and
11. the names of all Operating Organisations to which CAMO support activities are provided (if applicable).

(b) The CAME and its amendments shall be approved by the MAA.

(c) Notwithstanding paragraph (b), minor amendments to the CAME may be approved indirectly through an indirect approval procedure. The indirect approval procedure shall define the minor amendment eligible, be established by the CAMO as part of the CAME and be approved by the MAA. ☐ **GM**

M.A.705 - Facilities

The CAMO shall ensure suitable office accommodation is provided at appropriate locations for the personnel specified in DASR M.A.706. ☐ **AMC**

Superseded

M.A.706 - Personnel requirements

☐ **AMC**

(a) The CAMO shall appoint an Accountable Manager, who has corporate authority for ensuring that all continuing airworthiness management activities can be resourced and carried out in accordance with this DASR. Where the CAMO is part of an Operating Organisation, the Accountable Manager shall be the same person who has the corporate authority for ensuring that all operations of the Operating Organisation can be resourced and carried out to the standard detailed in DASR M.A.201(h). ☐ **AMC**

(b) NOT APPLICABLE.

(c) A person or group of persons shall be nominated with the responsibility of ensuring that the CAMO is always in compliance with this Subpart. Such person(s) shall be ultimately responsible to the Accountable Manager.

(d) The Accountable Manager shall designate a Continuing Airworthiness Manager. This person shall be responsible for the management and supervision of continuing airworthiness activities, pursuant to paragraph (c).

(e) The Continuing Airworthiness Manager referred to in paragraph (d) shall not be employed by a DASR 145 AMO under contract to the Operating Organisation, unless specifically agreed by the MAA. ☐ **AMC**

(f) The CAMO shall have sufficient appropriately qualified staff for the expected work. ☐ **AMC**

(g) All paragraph (c) and (d) persons shall be able to demonstrate relevant knowledge, background and appropriate experience related to aircraft continuing airworthiness.

(h) The qualifications of all personnel involved in continuing airworthiness management shall be recorded. ☐ **GM**

(i) For CAMOs extending Military Airworthiness Review Certificates (MARC) in accordance with DASR M.A.711(a)4 and DASR M.A.901(c)2, the CAMO shall nominate persons authorised to do so, subject to approval by the MAA. ☐ **AMC**

(j) The CAMO shall define and keep updated in the CAME, the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i).

(k) The CAMO shall establish and control the competence of personnel involved in the continuing airworthiness management, airworthiness review and/or quality audits, in accordance with a procedure and to a standard agreed by the MAA. ☐ **AMC**

M.A.707 - Airworthiness review staff

(a) To be approved to carry out airworthiness reviews, a CAMO shall have appropriate airworthiness review staff to issue Military Airworthiness Review Certificates (MARC) or recommendations referred to in DASR M.A. Subpart I: ☐ **AMC**

1. These staff shall have acquired:

   i. at least five years' experience in continuing airworthiness; and

Superseded

ii. an appropriate Military Aircraft Maintenance Licence (MAML) in compliance with DASR 66 or an aeronautical degree or a national equivalent; and

iii. formal aeronautical maintenance training; and ☐ **AMC**

iv. a position within the CAMO with appropriate responsibilities.

v. Notwithstanding paragraph (i) to (iv), the requirement laid down in DASR M.A.707(a)1(ii) may be replaced by five years of experience in continuing airworthiness additional to those already required by DASR M.A.707(a)1(i).

2. NOT APPLICABLE.

(b) Airworthiness review staff nominated by the CAMO can only be issued with an authorisation by the CAMO when formally accepted by the MAA after satisfactory completion of an airworthiness review under supervision. ☐ **AMC**

(c) The CAMO shall ensure that aircraft airworthiness review staff can demonstrate appropriate recent continuing airworthiness management experience. ☐ **AMC**

(d) Airworthiness review staff shall be identified by listing each person in the CAME together with their airworthiness review authorisation reference.

(e) The CAMO shall maintain a record of all airworthiness review staff, which shall include details of any appropriate qualification held together with a summary of relevant continuing airworthiness management experience and training and a copy of the authorisation. This record shall be retained until two years after the airworthiness review staff have left the CAMO. ☐ **AMC**

M.A.708 - Continuing airworthiness management

☐ **GM** ☐ **GM1**

(a) All continuing airworthiness management shall be carried out according to the prescriptions of DASR M.A. Subpart C—Continuing Airworthiness.

(b) For every aircraft managed, the CAMO shall:

1. have access to and use the applicable current AMP(s) for the aircraft managed;

2. if required by the pMS: ☐ **GM**

i. develop and control the AMP for the aircraft managed including any applicable reliability programme; and

ii. present the AMP and its amendments to the MAA for approval, unless covered by an indirect approval procedure. In that case, the indirect approval procedure shall be established by the CAMO, as part of the CAME, and shall be approved by the MAA.

3. manage the accomplishment of modifications and repairs;

4. ensure that all maintenance is carried out in accordance with the AMP and released in accordance with DASR 145 or DASR M.A. Subpart H;

Superseded

5. ensure that all applicable Airworthiness Directives and operational directives with a continuing airworthiness impact are applied;

6. ensure that all defects discovered or reported, are managed appropriately until corrected by a DASR 145 AMO;

7. ensure that maintenance is only carried out by a DASR 145 AMO;

8. coordinate scheduled maintenance, the application of Airworthiness Directives, the replacement of service life limited parts and component inspection and ensure the work is carried out properly;

9. manage and archive all continuing airworthiness records;

10. ensure that the weight and balance statement reflects the current status of the aircraft;

11. ensure the symmetry check statement reflects the current status of the aircraft (if applicable);

12. initiate and coordinate any necessary actions and follow-up activity highlighted by an occurrence report.

(c) Where there is a maintenance contract/tasking with a DASR 145 AMO, it shall detail the functions specified under DASR M.A.301(a)2, DASR M.A.301(a)3, DASR M.A.301(a)5,DASR M.A.301(a)6 and DASR M.A.301(a)8, and define the support of the quality functions of DASR M.A.712(b). ☐ **AMC**

M.A.709 - Documentation

☐ **AMC**

(a) The CAMO shall have access to and use applicable current maintenance data in accordance with DASR 145.A.45, for the performance of continuing airworthiness tasks referred to in DASR M.A.708. This data will be provided by the Operating Organisation/(M)TC holder/any other organisation as defined in DASR 21 as appropriate, subject to an appropriate contract/ tasking being established. In such a case, the CAMO only needs access to such data for the duration of the contract, except when required by DASR M.A.714.

(b) NOT APPLICABLE.

M.A.710 - Airworthiness review

(a) To satisfy the requirement for the airworthiness review of an aircraft referred to in DASR M.A.901, a review of the aircraft records shall be carried out by the CAMO in order to be satisfied that: ☐ **AMC**

1. airframe, engine and propeller flying hours and associated flight cycles and / or landings and any other airworthiness data as required by the MAA, have been properly recorded; and

2. the aircraft flight manual and / or any other manuals required by the MAA are applicable to the aircraft configuration and reflect the latest revision status; and

Superseded

3. all the maintenance due on the aircraft according to the AMP has been carried out; and ☐ **AMC**

4. all known defects have been corrected or, when applicable, carried forward in a controlled manner; and

5. all applicable Airworthiness Directives have been applied and properly registered; and

6. all modifications and repairs applied to the aircraft have been registered and are in compliance with DASR M.A.304; and

7. all service life limited components installed on the aircraft are properly identified, registered and have not exceeded their approved service life limit; and

8. all maintenance has been released in accordance with DASR 145 or DASR M.A.Subpart H; and

9. the current weight and balance statement reflects the configuration of the aircraft and is valid; and

10. the aircraft complies with the latest revision of its type design approved by the MAA/ (M)TC holder; and

11. NOT APPLICABLE.

12. if required, the current symmetry report reflects the configuration of the aircraft and is valid.

This review shall be fully documented.

(b) The airworthiness review staff of the CAMO shall carry out a physical survey of the aircraft. For this survey, airworthiness review staff not appropriately qualified to DASR 66 and authorised in accordance with DASR 145.A.35, shall be assisted by such qualified/authorised personnel. ☐ **AMC**

(c) Through the physical survey of the aircraft, the airworthiness review staff shall ensure that: ☐ **AMC**

1. all required markings and placards are properly installed; and

2. the aircraft complies with its aircraft flight manual and/or any other manuals required by the MAA; and

3. the aircraft configuration complies with the approved data; and

4. no evident defect can be found that could not have been reasonably expected to be addressed; and

5. no inconsistencies can be found between the aircraft and the paragraph (a) review of records.

(d) By way of exception to DASR M.A.901(a), the airworthiness review can be anticipated by a maximum period of 90 days without loss of continuity of the airworthiness review pattern, to allow the physical survey to take place during a maintenance check. ☐ **AMC**

Superseded

(e) The Military Airworthiness Review Certificate (MARC) (DASR Form 15b) or the recommendation for the issue of the MARC (DASR Form 15a) can only be issued: ☐ **AMC** ☐ **GM**

1. by airworthiness review staff appropriately authorised in accordance with DASR M.A.707, on behalf of the CAMO; and

2. when the airworthiness review has been completely carried out and that there is no non-compliance which is known to endanger flight safety.

(f) A copy of any MARC issued or extended for an aircraft shall be sent to the MAA within 10 days.

(g) All MARC tasks must be completed/supervised/managed by authorised airworthiness review staff. ☐ **AMC**

(h) NOT APPLICABLE.

M.A.711 - Privileges of the organisation

(a) In accordance with its CAME, for any aircraft listed on its approval certificate a CAMO approved in accordance with Section A, Subpart G:

1. shall manage the continuing airworthiness of specific aircraft;

2. NOT APPLICABLE;

3. may arrange for any of the continuing airworthiness management tasks to be carried out by another organisation that is:

i. working under the quality system of the CAMO; or

ii. working under their own DASR M.A. Subpart G approval.

In either case, the CAMO retains responsibility for all CAMO functions irrespective of who is undertaking them. All such organisations shall be listed on the approval certificate;

4. may extend, under the conditions of DASR M.A.901(f), a MARC.

(b) A CAMO may, additionally, carry out airworthiness reviews referred to in DASR M.A.710 for any aircraft listed on the approval certificate and:

1. issue the related MARC and extend it in due time under the conditions of DASR M.A.901(c)2; and

2. issue a recommendation for the airworthiness review to the MAA.

(c) NOT APPLICABLE.

(d) A CAMO may, if required by pMS according to DASR M.A.708(b)2, develop and control the DASR M.A.302 AMPs, including any applicable reliability programme for any aircraft listed on the approval certificate.

Superseded

M.A.712 - Quality system and safety management system

(a) To ensure that the CAMO continues to meet the requirements of this Subpart, it shall establish a quality system and designate a Quality Manager to monitor compliance with, and the adequacy of, procedures required to ensure airworthy aircraft. Compliance monitoring shall include a feedback system to the Accountable Manager to ensure corrective action as necessary. ☐ **AMC**

(b) The quality system shall monitor DASR M.A. Subpart G activities. It shall at least include the following functions: ☐ **AMC** ☐ **GM**

1. monitoring that all DASR M.A. Subpart G activities are being performed in accordance with the approved procedures; and

2. monitoring that all contracted / tasked maintenance is carried out in accordance with the contract / tasking; and

3. monitoring the continued compliance with the requirements of this DASR.

(c) The records of these activities shall be stored for at least two years.

(d) Where an organisation has several DASR approvals, the quality systems may be combined.

(e) The CAMO's quality system shall be an integrated part of the Operating Organisation's quality system, unless the MAA approves otherwise. ☐ **GM**

(f) NOT APPLICABLE.

(g) The CAMO's Safety Management System (SMS) shall be an integrated part of the Operating Organisation's SMS, unless the MAA approves otherwise. ☐ **GM**

M.A.713 - Changes to the CAMO

(a) In order to enable the MAA to determine continued compliance with this DASR, the CAMO shall notify the MAA of any proposal to change any of the following, before such changes take place: ☐ **AMC**

1. the name of the CAMO;

2. the location of the CAMO;

3. additional locations of the CAMO;

4. the Accountable Manager;

5. any of the persons specified in DASR M.A.706(c);

6. the facilities, procedures, work scope and staff that could affect the approval;

7. any change that affects the approval certificate.

(b) In the case of proposed changes in personnel not known to the management beforehand, these changes shall be notified at the earliest opportunity.

Superseded

M.A.714 - Record-keeping

AMC

(a) The CAMO shall record all details of continuing airworthiness management activity carried out. The aircraft records required by DASR M.A.305 and, if applicable, DASR M.A.306, shall be retained.

(b) If the CAMO has the privilege referred to in DASR M.A.711(b), it shall retain a copy of each MARC and recommendation issued or, as applicable, extended, together with all supporting documents. In addition, the CAMO shall retain a copy of any MARC that it has extended under the privilege referred to in DASR M.A.711(a)4.

(c) Permits to Fly, and all documents relating to their issue as detailed in DASR 21 Subpart P, shall be retained.

(d) The CAMO shall retain a copy of all records referred to in paragraphs (b) and (c) for at least two years after the aircraft has been permanently withdrawn from service.

(e) The records shall be stored in a manner that ensures protection from damage, alteration and theft. The records shall remain readable and accessible for the duration of the storage period.

(f) All computer hardware used to ensure backup shall be stored in a different location from that containing the working data, in an environment that ensures they remain in good condition.

(g) Where continuing airworthiness management of an aircraft is transferred to another CAMO, all retained records shall be transferred to the new CAMO. The time periods prescribed for the retention of records shall continue to apply to the new CAMO.

(h) Where a CAMO terminates its operation, all retained records shall be transferred to the Operating Organisation (if applicable), unless determined otherwise by the MAA.

M.A.715 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. the CAMO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings and;
2. the MAA being granted access to the CAMO to determine continued compliance with this DASR; and
3. the approval not being surrendered or revoked.

(b) Upon surrender or revocation, the approval certificate shall be returned to the MAA.

M.A.716 - CAMO findings by the MAA

Refer to GR.60 Oversight and enforcement.

Superseded

SUBPART H - CERTIFICATE OF RELEASE TO SERVICE (CRS) (AUS)

M.A.801 - Aircraft certificate of release to service (AUS)

(a) Except for aircraft released to service by a maintenance organisation approved in accordance with DASR 145, the certificate of release to service shall be issued according to this Subpart;

(b) No aircraft can be released to service unless a certificate of release to service is issued at the completion of any maintenance, when satisfied that all maintenance required has been properly carried out, by: ☐ **AMC**

1. appropriate certifying staff on behalf of the maintenance organisation considered equivalent to DASR 145 in accordance with DASR M.A.201(g)

(c) NOT APPLICABLE

(d) NOT APPLICABLE

(e) NOT APPLICABLE

(f) A certificate of release to service shall contain as a minimum: ☐ **AMC**

1. basic details of the maintenance carried out; and
2. the date such maintenance was completed; and
3. the identity of the organisation and/or person issuing the release to service, including:
   i. the approval reference of the DASR M.A.201(g) maintenance organisation (if applicable) and the certifying staff issuing such a certificate.
4. the limitations to airworthiness or operations, if any.

(g) By way of exception from paragraph (b) and notwithstanding the provisions of paragraph (h), when the maintenance prescribed cannot be completed, a certificate of release to service may be issued within the approved aircraft limitations. Such fact together with any applicable limitations of the airworthiness or the operations shall be entered in the aircraft certificate of release to service before its issue as part of the information required in DASR M.A.801(f).4. ☐ **AMC**

(h) A certificate of release to service shall not be issued in the case of any known non-compliance which endangers flight safety. ☐ **AMC**

M.A.802 - Component certificate of release to service (AUS)

☐ **AMC**

(a) Except for aircraft components released to service in accordance with DASR 21 or DASR 145, the certificate of release to service / authorised release certificate shall be issued according to this Subpart.

(b) A component certificate of release to service may be issued by a maintenance organisation accepted by DASA in accordance with DASR M.A.201(g).

Superseded

(c) A component certificate of release to service may be issued by a production organisation accepted by DASA. ☐ **AMC**

SUBPART I - MILITARY AIRWORTHINESS REVIEW CERTIFICATE (MARC)

M.A.901 - Aircraft airworthiness review

To ensure the validity of the Military Certificate of Airworthiness an airworthiness review of the aircraft and its continuing airworthiness records shall be carried out periodically. ☐ **AMC**

(a) A MARC is issued in accordance with DASR Form 15a, or DASR Form 15b on completion of a satisfactory airworthiness review. The MARC is valid one year. ☐ **AMC**

(b) NOT APPLICABLE.

(c) The CAMO may, if appropriately approved, and subject to compliance with paragraph (k):

1. issue a MARC in accordance with DASR M.A.710; and

2. for MARCs it has issued, extend twice the validity of a MARC for a period of one year each time. ☐ **AMC**

(d) For all aircraft that have their continuing airworthiness managed by a CAMO that does not hold the privilege to carry out airworthiness reviews, the MARC shall be issued by the MAA upon satisfactory assessment based on a recommendation made by a CAMO appropriately approved in accordance with DASR M.A.711(b)(2), sent together with the application from the Operating Organisation. This recommendation shall be based on an airworthiness review carried out in accordance with DASR M.A.710. ☐ **AMC**

(e) NOT APPLICABLE.

(f) Subject to compliance with paragraph (k), a CAMO may extend twice for a period of one year each time the validity of a MARC that has been issued by the MAA or by another CAMO approved in accordance with Section A, Subpart G.

(g) NOT APPLICABLE.

(h) Notwithstanding paragraphs (a), (c) and (d) above, the MAA may carry out a MARC at any time it considers it appropriate to do so.

(i) NOT APPLICABLE.

(j) When the MAA carries out the airworthiness review and/or issues the MARC itself, the Operating Organisation shall provide the MAA with: ☐ **AMC**

1. the documentation required by the MAA; and

2. suitable accommodation at the appropriate location for its personnel; and

3. when necessary, the support of personnel appropriately authorised in accordance with DASR 145.A.35;

(k) A MARC cannot be issued nor extended if there is evidence or reason to believe that the aircraft is not airworthy.

Superseded

M.A.902 - Validity of the MARC

(a) A MARC becomes invalid if:

1. surrendered, suspended or revoked; or
2. the Military Certificate of Airworthiness is suspended or revoked; or
3. the aircraft is removed from the military aircraft register of the MAA; or
4. the (Military) Type Certificate under which the Military Certificate of Airworthiness was issued is suspended or revoked.

(b) Moved to DASR M.A.301(b).

(c) Upon surrender or revocation, the MARC shall be returned to the MAA.

M.A.903 - NOT APPLICABLE

M.A.904 - NOT APPLICABLE

M.A.905 - Findings from an aircraft airworthiness review carried out by the MAA

(a) After receipt of notification of findings by the MAA, the Operating Organisation of the aircraft concerned shall manage the finding IAW GR.60, and: ☐ **GM**

1. ensure the aircraft with a non-compliance does not fly until such time that any condition defined in DASR M.A.301(b), has been corrected. ☐ **AMC**

(b) NOT APPLICABLE

(c) NOT APPLICABLE

(d) The Operating Organisation shall consider the potential for non-compliance in other aircraft under its responsibility and take appropriate action in accordance with DASR M.A.905(a)1.

SUBPART A - GENERAL

SECTION A

SUBPART A - GENERAL

M.A.101 - Scope

This Section establishes the measures to be taken to ensure that airworthiness is maintained. It also specifies the conditions to be met by organisations involved in such continuing airworthiness management.

SUBPART B - ACCOUNTABILITY

M.A.201 - Responsibilities

(a) The Operating Organisation is accountable for the continuing airworthiness of an aircraft and shall ensure that no flight takes place unless: ☐ **GM1** ☐ **GM2** ☐ **GM3**

1. the aircraft is maintained in an airworthy condition; and
2. any operational and emergency equipment fitted is correctly installed and serviceable or clearly identified as unserviceable; and
3. the Military Certificate of Airworthiness and the Military Airworthiness Review Certificate (MARC) remain valid; and
4. the maintenance of the aircraft is performed in accordance with the Aircraft Maintenance Programme (AMP) as specified in DASR M.A.302.

NOTE: For individual aircraft or types for which a Military Certificate of Airworthiness or Military Restricted Certificate of Airworthiness is not appropriate, a Military Permit to Fly may be issued in accordance with national regulations.

(b) NOT APPLICABLE.

(c) Any organisation performing maintenance shall be responsible for the tasks performed.

(d) The Operating Organisation shall be responsible for the satisfactory accomplishment of the pre-flight inspection. This inspection must be carried out by a qualified person but need not be carried out by a DASR 145 Approved Maintenance Organisation (AMO). ☐ **AMC**

(e) NOT APPLICABLE.

(f) NOT APPLICABLE.

(g) Maintenance of military aircraft, and components thereof shall be carried out by a DASR 145 AMO, or another maintenance organisation accepted by DASA. ☐ **AMC**

(h) The Operating Organisation is responsible for the continuing airworthiness of the aircraft it operates and shall: ☐ **AMC**

Superseded

1. be appropriately approved, in accordance with DASR M Subpart G, for the management of the continuing airworthiness of the aircraft it operates; and ☐ **AMC**

2. be approved in accordance with DASR 145 or contract/task directly (or through a Continuing Airworthiness Management Organisation (CAMO)) such organisations; and ☐ **GM**

3. ensure that paragraph (a) is satisfied.

(i) NOT APPLICABLE

(j) The Operating Organisation is responsible for granting the Military Aviation Authority (MAA) access to the organisation/aircraft to determine continued compliance with this DASR.

(k) By way of exception to paragraph (h)1, an Operating Organisation may contract/task an organisation approved in accordance with DASR M.A. Subpart G, for the management of the continuing airworthiness of the aircraft it operates. In this case, a written contract/ arrangement shall be made and the CAMO assumes responsibility for the proper accomplishment of these tasks. ☐ **AMC**

M.A.202 - Occurrence reporting

(a) Any Operating Organisation accountable in accordance with DASR M.A.201, shall report to the MAA, and all further addressees as required by national regulations, any identified condition of an aircraft or component which endangers flight safety. ☐ **AMC** ☐ **GM**

(b) The Operating Organisation shall establish an occurrence reporting system to enable the collection and evaluation of such reports, including the assessment and extraction of those occurrences to be reported under paragraph (a). This procedure shall identify adverse trends, corrective actions taken or to be taken by the Operating Organisation to address deficiencies and include evaluation of all known relevant information relating to such occurrences and a method to circulate the information as necessary. ☐ **AMC**

(c) Reports shall be made in a form and manner established by the MAA and contain all pertinent information about the condition known to the Operating Organisation. ☐ **AMC** ☐ **GM**

(d) NOT APPLICABLE.

(e) Reports shall be made as soon as practicable, but in any case within 72 hours of the organisation identifying the condition to which the report relates.

SUBPART C - CONTINUING AIRWORTHINESS

M.A.301 - Continuing airworthiness tasks

(a) The continuing airworthiness of the aircraft shall be ensured by:

1. the accomplishment of pre-flight inspections; ☐ **AMC**

2. the rectification in accordance with the data specified in DASR M.A.304 of any defect and damage affecting safe operation, taking into account the Minimum Equipment List (MEL) and Configuration Deviation List (CDL) as applicable to the aircraft type; ☐ **AMC** ☐ **GM**

Superseded

3. the accomplishment of all maintenance, in accordance with the DASR M.A.302 approved Aircraft Maintenance Programme (AMP); ☐ **AMC**

4. the analysis of the effectiveness of the DASR M.A.302 AMP; ☐ **AMC**

5. the accomplishment of any applicable: ☐ **AMC**

   i. Airworthiness Directive;

   ii. operational directive with a continuing airworthiness impact;

   iii. continued or continuing airworthiness requirements mandated by the MAA;

   iv. measures mandated by the MAA in immediate reaction to a safety problem.

6. the accomplishment of modifications and repairs in accordance with DASR M.A.304;

7. for non-mandatory modifications and/or inspections, the establishment of an embodiment policy; ☐ **AMC**

8. maintenance check flights when necessary.

(b) An aircraft shall not fly if:

1. the continuing airworthiness of the aircraft or any component fitted to the aircraft does not meet the requirements of DASR M; or

2. the aircraft does not remain in conformity with the type design approved by the MAA; or

3. the aircraft has been operated beyond the limitations of the flight manual or the Military Certificate of Airworthiness, without appropriate action being taken; or

4. the aircraft has been involved in an accident or incident that affects the airworthiness of the aircraft, without subsequent appropriate action to restore airworthiness; or

5. a modification or repair is not in compliance with DASR M.A.304.

M.A.302 - Aircraft Maintenance Programme (AMP)

☐ **AMC**

(a) Maintenance of each aircraft shall be organised in accordance with an AMP. ☐ **GM**

(b) An organisation responsible for producing and amending an AMP in accordance with DASR M.A. 302 shall also be responsible for sending the AMP to the MAA. The AMP and any subsequent amendments shall be approved by the MAA.

(c) NOT APPLICABLE.

(d) The AMP shall establish compliance with: ☐ **AMC**

1. instructions issued by the MAA;

2. instructions for continuing airworthiness issued by any organisation recognised by the MAA.

Superseded

3. additional or alternative instructions, once approved in accordance with paragraph (b), proposed by the CAMO, except for intervals of safety related tasks referred in paragraph (e), which may be extended, subject to sufficient reviews carried out in accordance with paragraph g, and only when subject to direct approval in accordance with paragraph (b). ☐ **AMC**

(e) The AMP shall contain details, including frequency, of all maintenance to be carried out, including any specific tasks linked to the type and the specificity of operations.

(f) The AMP shall include a reliability programme, unless otherwise specified by the MAA. ☐ **GM**

(g) The AMP shall be subject to periodic reviews and amended accordingly when necessary. These reviews shall ensure that the AMP continues to be valid in light of the operating experience and instructions from the MAA, whilst taking into account new and / or modified maintenance instructions promulgated by the (Military) Type Certificate (MTC) and (Military) Supplementary Type Certificate (MSTC) holders and any other organisation that publishes such data in accordance with DASR 21.

M.A.303 - Airworthiness Directives

Any applicable Airworthiness Directive must be carried out within the requirements of that Airworthiness Directive, unless otherwise specified by the MAA.

M.A.304 - Data for modifications and repairs

Damage shall be assessed and modifications and repairs carried out using as appropriate: ☐ **AMC**

(a) data approved by the MAA; or

(b) data approved by a DASR 21 Design Organisation or MTC holder organisation; or ☐ **GM**

(c) NOT APPLICABLE;

(d) data produced by an organisation accepted by the MAA. ☐ **AMC** ☐ **GM**

M.A.305 - Aircraft continuing airworthiness record system

(a) At the completion of any maintenance, the Certificate of Release to Service required by DASR 145.A.50 shall be entered in the aircraft continuing airworthiness record system. Each entry shall be made as soon as practicable but in no case more than 30 days after the day of the maintenance action.

(b) The aircraft continuing airworthiness record system shall cover the aircraft, engine(s), propeller(s), any service life limited component(s) as appropriate, and shall include an aircraft technical log.

(c) The aircraft type and registration mark, the date, together with total flight time and/or flight cycles and/or landings and any other airworthiness data as required by the MAA as appropriate, shall be entered in the aircraft continuing airworthiness record system. ☐ **GM**

(d) The aircraft continuing airworthiness record system shall also contain as a minimum the current: ☐ **AMC**

Superseded

1. status of Airworthiness Directives and measures mandated by the MAA in immediate reaction to a safety problem;

2. status of modifications and repairs;

3. status of compliance with the AMP;

4. status of service life limited components; ☐ **AMC** ☐ **AMC1**

5. weight and balance report;

6. list of deferred maintenance;

7. symmetry check report (if required).

(e) In addition to the authorised release certificate, DASR Form 1 or equivalent, the following information relevant to any component installed (engine, propeller, engine module or service life-limited component) shall be entered into the aircraft continuing airworthiness record system:

1. identification of the component; and

2. the type, serial number and registration, as appropriate, of the aircraft, engine, propeller, engine module or service life-limited component to which the particular component has been fitted, along with the reference to the installation and removal of the component; and

3. the date together with the component's accumulated total flight time and/or flight cycles and/or landings and/or calendar time, and/or any other approved service life consumption units as appropriate; and

4. the current paragraph (d) information applicable to the component.

(f) The CAMO responsible for the management of continuing airworthiness tasks in accordance with DASR M.A. Subpart B, shall control the records as detailed in this paragraph and present the records to the MAA upon request.

(g) All entries made in the aircraft continuing airworthiness record system shall be clear and accurate. When it is necessary to correct an entry, the correction shall be made in a manner that clearly shows the original entry. ☐ **AMC** ☐ **GM**

(h) An Operating Organisation shall ensure that a system has been established to keep the following records for the periods specified: ☐ **AMC**

1. all detailed maintenance records in respect of the aircraft and any service life-limited component fitted thereto, until such time as the information contained therein is superseded by new information equivalent in scope and detail but not less than 36 months after the aircraft or component has been released to service; and

2. the total time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) of the aircraft and all service life-limited components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

3. the time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) as appropriate, since last scheduled maintenance of the component subjected to a service life limit, at least until the component

Superseded

scheduled maintenance has been superseded by another scheduled maintenance of equivalent work scope and detail; and

4. the current status of compliance with all maintenance programme tasks such that compliance with the Aircraft Maintenance Programme can be established, at least until the aircraft or component scheduled maintenance task has been repeated; and

5. the current status of Airworthiness Directives applicable to the aircraft and components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

6. details of current modifications and repairs to the aircraft, engine(s), propeller(s) and any other component vital to flight safety, at least 12 months after they have been permanently withdrawn from service. ☐ **AMC**

M.A.306 - Aircraft technical log

(a) In addition to the requirements of DASR M.A.305, an Operating Organisation shall use an aircraft technical log containing the following information for each aircraft: ☐ **AMC**

1. information about each flight, necessary to ensure continued flight safety; and

2. the current aircraft Certificate of Release to Service; and

3. the current maintenance statement giving the aircraft maintenance status of what scheduled and out of phase maintenance is next due except that the MAA may agree to the maintenance statement being kept elsewhere; and

4. all outstanding deferred defects rectifications that affect the operation of the aircraft; and

5. any necessary guidance instructions on maintenance support arrangements.

(b) The aircraft technical log and any subsequent amendments shall be approved by the MAA. ☐ **AMC**

(c) An Operating Organisation shall ensure that the aircraft technical log is retained for at least 36 months after the date of the last entry.

M.A.307 - Transfer of aircraft continuing airworthiness records

(a) The Operating Organisation shall ensure when an aircraft is permanently transferred to another Operating Organisation, that the records within the DASR M.A.305 continuing airworthiness records system, are also transferred. The time periods prescribed for the retention of records shall continue to apply to the new Operating Organisation.

(b) The Operating Organisation shall ensure that when the continuing airworthiness management tasks are contracted/tasked to an external CAMO, that the records within the DASR M.A.305 aircraft continuing airworthiness records system, are transferred to that CAMO.

(c) Moved to paragraph (a).

Superseded

SUBPART D - MAINTENANCE STANDARDS

NOT APPLICABLE – See DASR 145

SUBPART E - COMPONENTS

NOT APPLICABLE – See DASR 145

SUBPART F - MAINTENANCE ORGANISATION

NOT APPLICABLE

SUBPART G - CONTINUING AIRWORTHINESS MANAGEMENT ORGANISATION (CAMO)

M.A.701 - Scope

This Subpart establishes the requirements to be met by an organisation to qualify for the issue or continuation of an approval for the management of aircraft continuing airworthiness.

M.A.702 - Application

(a) An application for issue or change of a CAMO approval shall be made on a form and in a manner established by the MAA. ☐ **AMC**

(b) It shall include the following documents: ☐ **AMC**

1. the Continuing Airworthiness Management Exposition (CAME); and
2. the Operating Organisation's Aircraft Maintenance Programmes (only if the participating Member State (pMS) requires the CAMO to develop and control the AMP for the aircraft managed); and ☐ **GM**
3. the aircraft technical log(s); and
4. where appropriate, the technical specification(s) of the DASR M.A.708(c) maintenance contracts/taskings with the DASR 145 AMO(s); and
5. any additional documentation required by the MAA. ☐ **AMC**

M.A.703 - Extent of approval

(a) The approval is indicated on a DASR Form 14, issued by the MAA.

(b) NOT APPLICABLE.

(c) The scope of work deemed to constitute the approval shall be specified in the CAME in accordance with DASR M.A.704.

Superseded

AMC

(a) The CAMO shall provide a CAME containing the following information:

1. a statement signed by the Accountable Manager to confirm that the organisation will work in accordance with DASR M and the Exposition at all times; and
2. the organisation's scope of work; and
3. the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) andM.A.706(i); and
4. an organisation chart showing associated chains of responsibility between all the person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i); and
5. a list of the airworthiness review staff referred to in DASR M.A.707; and
6. a general description and location of the facilities; and
7. procedures specifying how the CAMO ensures compliance with this DASR; and
8. the CAME amendment procedures; and
9. the list of approved AMPs (see DASR M.A. 302); and
10. a list of all contractors/tasked organisations (where applicable); and
11. the names of all Operating Organisations to which CAMO support activities are provided (if applicable).

(b) The CAME and its amendments shall be approved by the MAA.

(c) Notwithstanding paragraph (b), minor amendments to the CAME may be approved indirectly through an indirect approval procedure. The indirect approval procedure shall define the minor amendment eligible, be established by the CAMO as part of the CAME and be approved by the MAA. **GM**

M.A.705 - Facilities

The CAMO shall ensure suitable office accommodation is provided at appropriate locations for the personnel specified in DASR M.A.706. **AMC**

M.A.706 - Personnel requirements

AMC

(a) The CAMO shall appoint an Accountable Manager, who has corporate authority for ensuring that all continuing airworthiness management activities can be resourced and carried out in accordance with this DASR. Where the CAMO is part of an Operating Organisation, the Accountable Manager shall be the same person who has the corporate authority for ensuring that all operations of the Operating Organisation can be resourced and carried out to the standard detailed in DASR M.A.201(h). **AMC**

Superseded

(b) NOT APPLICABLE.

(c) A person or group of persons shall be nominated with the responsibility of ensuring that the CAMO is always in compliance with this Subpart. Such person(s) shall be ultimately responsible to the Accountable Manager.

(d) The Accountable Manager shall designate a Continuing Airworthiness Manager. This person shall be responsible for the management and supervision of continuing airworthiness activities, pursuant to paragraph (c).

(e) The Continuing Airworthiness Manager referred to in paragraph (d) shall not be employed by a DASR 145 AMO under contract to the Operating Organisation, unless specifically agreed by the MAA. ☐ **AMC**

(f) The CAMO shall have sufficient appropriately qualified staff for the expected work. ☐ **AMC**

(g) All paragraph (c) and (d) persons shall be able to demonstrate relevant knowledge, background and appropriate experience related to aircraft continuing airworthiness.

(h) The qualifications of all personnel involved in continuing airworthiness management shall be recorded. ☐ **GM**

(i) For CAMOs extending Military Airworthiness Review Certificates (MARC) in accordance with DASR M.A.711(a)4 and DASR M.A.901(c)2, the CAMO shall nominate persons authorised to do so, subject to approval by the MAA. ☐ **AMC**

(j) The CAMO shall define and keep updated in the CAME, the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i).

(k) The CAMO shall establish and control the competence of personnel involved in the continuing airworthiness management, airworthiness review and/or quality audits, in accordance with a procedure and to a standard agreed by the MAA. ☐ **AMC**

M.A.707 - Airworthiness review staff

(a) To be approved to carry out airworthiness reviews, a CAMO shall have appropriate airworthiness review staff to issue Military Airworthiness Review Certificates (MARC) or recommendations referred to in DASR M.A. Subpart I: ☐ **AMC**

1. These staff shall have acquired:

   i. at least five years' experience in continuing airworthiness; and

   ii. an appropriate Military Aircraft Maintenance Licence (MAML) in compliance with DASR 66 or an aeronautical degree or a national equivalent; and

   iii. formal aeronautical maintenance training; and ☐ **AMC**

   iv. a position within the CAMO with appropriate responsibilities.

   v. Notwithstanding paragraph (i) to (iv), the requirement laid down in DASR M.A.707(a)1(ii) may be replaced by five years of experience in continuing airworthiness additional to those already required by DASR M.A.707(a)1(i).

2. NOT APPLICABLE.

Superseded

(b) Airworthiness review staff nominated by the CAMO can only be issued with an authorisation by the CAMO when formally accepted by the MAA after satisfactory completion of an airworthiness review under supervision. ☐ **AMC**

(c) The CAMO shall ensure that aircraft airworthiness review staff can demonstrate appropriate recent continuing airworthiness management experience. ☐ **AMC**

(d) Airworthiness review staff shall be identified by listing each person in the CAME together with their airworthiness review authorisation reference.

(e) The CAMO shall maintain a record of all airworthiness review staff, which shall include details of any appropriate qualification held together with a summary of relevant continuing airworthiness management experience and training and a copy of the authorisation. This record shall be retained until two years after the airworthiness review staff have left the CAMO. ☐ **AMC**

M.A.708 - Continuing airworthiness management

☐ **GM** ☐ **GM1**

(a) All continuing airworthiness management shall be carried out according to the prescriptions of DASR M.A. Subpart C—Continuing Airworthiness.

(b) For every aircraft managed, the CAMO shall:

1. have access to and use the applicable current AMP(s) for the aircraft managed;

2. if required by the pMS: ☐ **GM**

   i. develop and control the AMP for the aircraft managed including any applicable reliability programme; and

   ii. present the AMP and its amendments to the MAA for approval, unless covered by an indirect approval procedure. In that case, the indirect approval procedure shall be established by the CAMO, as part of the CAME, and shall be approved by the MAA.

3. manage the accomplishment of modifications and repairs;

4. ensure that all maintenance is carried out in accordance with the AMP and released in accordance with DASR 145 or DASR M.A. Subpart H;

5. ensure that all applicable Airworthiness Directives and operational directives with a continuing airworthiness impact are applied;

6. ensure that all defects discovered or reported, are managed appropriately until corrected by a DASR 145 AMO;

7. ensure that maintenance is only carried out by a DASR 145 AMO;

8. coordinate scheduled maintenance, the application of Airworthiness Directives, the replacement of service life limited parts and component inspection and ensure the work is carried out properly;

9. manage and archive all continuing airworthiness records;

Superseded

10. ensure that the weight and balance statement reflects the current status of the aircraft;

11. ensure the symmetry check statement reflects the current status of the aircraft (if applicable);

12. initiate and coordinate any necessary actions and follow-up activity highlighted by an occurrence report.

(c) Where there is a maintenance contract/tasking with a DASR 145 AMO, it shall detail the functions specified under DASR M.A.301(a)2, DASR M.A.301(a)3, DASR M.A.301(a)5,DASR M.A.301(a)6 and DASR M.A.301(a)8, and define the support of the quality functions of DASR M.A.712(b). ☐ **AMC**

M.A.709 - Documentation

☐ **AMC**

(a) The CAMO shall have access to and use applicable current maintenance data in accordance with DASR 145.A.45, for the performance of continuing airworthiness tasks referred to in DASR M.A.708. This data will be provided by the Operating Organisation/(M)TC holder/any other organisation as defined in DASR 21 as appropriate, subject to an appropriate contract/ tasking being established. In such a case, the CAMO only needs access to such data for the duration of the contract, except when required by DASR M.A.714.

(b) NOT APPLICABLE.

M.A.710 - Airworthiness review

(a) To satisfy the requirement for the airworthiness review of an aircraft referred to in DASR M.A.901, a review of the aircraft records shall be carried out by the CAMO in order to be satisfied that: ☐ **AMC**

1. airframe, engine and propeller flying hours and associated flight cycles and / or landings and any other airworthiness data as required by the MAA, have been properly recorded; and

2. the aircraft flight manual and / or any other manuals required by the MAA are applicable to the aircraft configuration and reflect the latest revision status; and

3. all the maintenance due on the aircraft according to the AMP has been carried out; and ☐ **AMC**

4. all known defects have been corrected or, when applicable, carried forward in a controlled manner; and

5. all applicable Airworthiness Directives have been applied and properly registered; and

6. all modifications and repairs applied to the aircraft have been registered and are in compliance with DASR M.A.304; and

7. all service life limited components installed on the aircraft are properly identified, registered and have not exceeded their approved service life limit; and

Superseded

8. all maintenance has been released in accordance with DASR 145 or DASR M.A.Subpart H; and

9. the current weight and balance statement reflects the configuration of the aircraft and is valid; and

10. the aircraft complies with the latest revision of its type design approved by the MAA/(M)TC holder; and

11. NOT APPLICABLE.

12. if required, the current symmetry report reflects the configuration of the aircraft and is valid.

This review shall be fully documented.

(b) The airworthiness review staff of the CAMO shall carry out a physical survey of the aircraft. For this survey, airworthiness review staff not appropriately qualified to DASR 66 and authorised in accordance with DASR 145.A.35, shall be assisted by such qualified/authorised personnel. ☐ **AMC**

(c) Through the physical survey of the aircraft, the airworthiness review staff shall ensure that: ☐ **AMC**

1. all required markings and placards are properly installed; and

2. the aircraft complies with its aircraft flight manual and/or any other manuals required by the MAA; and

3. the aircraft configuration complies with the approved data; and

4. no evident defect can be found that could not have been reasonably expected to be addressed; and

5. no inconsistencies can be found between the aircraft and the paragraph (a) review of records.

(d) By way of exception to DASR M.A.901(a), the airworthiness review can be anticipated by a maximum period of 90 days without loss of continuity of the airworthiness review pattern, to allow the physical survey to take place during a maintenance check. ☐ **AMC**

(e) The Military Airworthiness Review Certificate (MARC) (DASR Form 15b) or the recommendation for the issue of the MARC (DASR Form 15a) can only be issued: ☐ **AMC** ☐ **GM**

1. by airworthiness review staff appropriately authorised in accordance with DASR M.A.707, on behalf of the CAMO; and

2. when the airworthiness review has been completely carried out and that there is no non-compliance which is known to endanger flight safety.

(f) A copy of any MARC issued or extended for an aircraft shall be sent to the MAA within 10 days.

(g) All MARC tasks must be completed/supervised/managed by authorised airworthiness review staff. ☐ **AMC**

Superseded

(h) NOT APPLICABLE.

M.A.711 - Privileges of the organisation

(a) In accordance with its CAME, for any aircraft listed on its approval certificate a CAMO approved in accordance with Section A, Subpart G:

1. shall manage the continuing airworthiness of specific aircraft;

2. NOT APPLICABLE;

3. may arrange for any of the continuing airworthiness management tasks to be carried out by another organisation that is:

   i. working under the quality system of the CAMO; or

   ii. working under their own DASR M.A. Subpart G approval.

In either case, the CAMO retains responsibility for all CAMO functions irrespective of who is undertaking them. All such organisations shall be listed on the approval certificate;

4. may extend, under the conditions of DASR M.A.901(f), a MARC.

(b) A CAMO may, additionally, carry out airworthiness reviews referred to in DASR M.A.710 for any aircraft listed on the approval certificate and:

1. issue the related MARC and extend it in due time under the conditions of DASR M.A.901(c)2; and

2. issue a recommendation for the airworthiness review to the MAA.

(c) NOT APPLICABLE.

(d) A CAMO may, if required by pMS according to DASR M.A.708(b)2, develop and control the DASR M.A.302 AMPs, including any applicable reliability programme for any aircraft listed on the approval certificate.

M.A.712 - Quality system and safety management system

(a) To ensure that the CAMO continues to meet the requirements of this Subpart, it shall establish a quality system and designate a Quality Manager to monitor compliance with, and the adequacy of, procedures required to ensure airworthy aircraft. Compliance monitoring shall include a feedback system to the Accountable Manager to ensure corrective action as necessary. ☐ **AMC**

(b) The quality system shall monitor DASR M.A. Subpart G activities. It shall at least include the following functions: ☐ **AMC** ☐ **GM**

1. monitoring that all DASR M.A. Subpart G activities are being performed in accordance with the approved procedures; and

2. monitoring that all contracted / tasked maintenance is carried out in accordance with the contract / tasking; and

3. monitoring the continued compliance with the requirements of this DASR.

Superseded

(c) The records of these activities shall be stored for at least two years.

(d) Where an organisation has several DASR approvals, the quality systems may be combined.

(e) The CAMO's quality system shall be an integrated part of the Operating Organisation's quality system, unless the MAA approves otherwise. ☐ **GM**

(f) NOT APPLICABLE.

(g) The CAMO's Safety Management System (SMS) shall be an integrated part of the Operating Organisation's SMS, unless the MAA approves otherwise. ☐ **GM**

M.A.713 - Changes to the CAMO

(a) In order to enable the MAA to determine continued compliance with this DASR, the CAMO shall notify the MAA of any proposal to change any of the following, before such changes take place: ☐ **AMC**

1. the name of the CAMO;
2. the location of the CAMO;
3. additional locations of the CAMO;
4. the Accountable Manager;
5. any of the persons specified in DASR M.A.706(c);
6. the facilities, procedures, work scope and staff that could affect the approval;
7. any change that affects the approval certificate.

(b) In the case of proposed changes in personnel not known to the management beforehand, these changes shall be notified at the earliest opportunity.

M.A.714 - Record-keeping

☐ **AMC**

(a) The CAMO shall record all details of continuing airworthiness management activity carried out. The aircraft records required by DASR M.A.305 and, if applicable, DASR M.A.306, shall be retained.

(b) If the CAMO has the privilege referred to in DASR M.A.711(b), it shall retain a copy of each MARC and recommendation issued or, as applicable, extended, together with all supporting documents. In addition, the CAMO shall retain a copy of any MARC that it has extended under the privilege referred to in DASR M.A.711(a)4.

(c) Permits to Fly, and all documents relating to their issue as detailed in DASR 21 Subpart P, shall be retained.

(d) The CAMO shall retain a copy of all records referred to in paragraphs (b) and (c) for at least two years after the aircraft has been permanently withdrawn from service.

Superseded

(e) The records shall be stored in a manner that ensures protection from damage, alteration and theft. The records shall remain readable and accessible for the duration of the storage period.

(f) All computer hardware used to ensure backup shall be stored in a different location from that containing the working data, in an environment that ensures they remain in good condition.

(g) Where continuing airworthiness management of an aircraft is transferred to another CAMO, all retained records shall be transferred to the new CAMO. The time periods prescribed for the retention of records shall continue to apply to the new CAMO.

(h) Where a CAMO terminates its operation, all retained records shall be transferred to the Operating Organisation (if applicable), unless determined otherwise by the MAA.

M.A.715 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. the CAMO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings and;

2. the MAA being granted access to the CAMO to determine continued compliance with this DASR; and

3. the approval not being surrendered or revoked.

(b) Upon surrender or revocation, the approval certificate shall be returned to the MAA.

M.A.716 - CAMO findings by the MAA

Refer to GR.60 Oversight and enforcement.

SUBPART H - CERTIFICATE OF RELEASE TO SERVICE (CRS) (AUS)

M.A.801 - Aircraft certificate of release to service (AUS)

(a) Except for aircraft released to service by a maintenance organisation approved in accordance with DASR 145, the certificate of release to service shall be issued according to this Subpart;

(b) No aircraft can be released to service unless a certificate of release to service is issued at the completion of any maintenance, when satisfied that all maintenance required has been properly carried out, by: ☐ **AMC**

1. appropriate certifying staff on behalf of the maintenance organisation considered equivalent to DASR 145 in accordance with DASR M.A.201(g)

(c) NOT APPLICABLE

(d) NOT APPLICABLE

(e) NOT APPLICABLE

(f) A certificate of release to service shall contain as a minimum: ☐ **AMC**

Superseded

1. basic details of the maintenance carried out; and

2. the date such maintenance was completed; and

3. the identity of the organisation and/or person issuing the release to service, including:

   i. the approval reference of the DASR M.A.201(g) maintenance organisation (if applicable) and the certifying staff issuing such a certificate.

4. the limitations to airworthiness or operations, if any.

(g) By way of exception from paragraph (b) and notwithstanding the provisions of paragraph (h), when the maintenance prescribed cannot be completed, a certificate of release to service may be issued within the approved aircraft limitations. Such fact together with any applicable limitations of the airworthiness or the operations shall be entered in the aircraft certificate of release to service before its issue as part of the information required in DASR M.A.801(f).4. ☐ **AMC**

(h) A certificate of release to service shall not be issued in the case of any known non-compliance which endangers flight safety. ☐ **AMC**

M.A.802 - Component certificate of release to service (AUS)

☐ **AMC**

(a) Except for aircraft components released to service in accordance with DASR 21 or DASR 145, the certificate of release to service / authorised release certificate shall be issued according to this Subpart.

(b) A component certificate of release to service may be issued by a maintenance organisation accepted by DASA in accordance with DASR M.A.201(g).

(c) A component certificate of release to service may be issued by a production organisation accepted by DASA. ☐ **AMC**

SUBPART I - MILITARY AIRWORTHINESS REVIEW CERTIFICATE (MARC)

M.A.901 - Aircraft airworthiness review

To ensure the validity of the Military Certificate of Airworthiness an airworthiness review of the aircraft and its continuing airworthiness records shall be carried out periodically. ☐ **AMC**

(a) A MARC is issued in accordance with DASR Form 15a, or DASR Form 15b on completion of a satisfactory airworthiness review. The MARC is valid one year. ☐ **AMC**

(b) NOT APPLICABLE.

(c) The CAMO may, if appropriately approved, and subject to compliance with paragraph (k):

1. issue a MARC in accordance with DASR M.A.710; and

2. for MARCs it has issued, extend twice the validity of a MARC for a period of one year each time. ☐ **AMC**

Superseded

(d) For all aircraft that have their continuing airworthiness managed by a CAMO that does not hold the privilege to carry out airworthiness reviews, the MARC shall be issued by the MAA upon satisfactory assessment based on a recommendation made by a CAMO appropriately approved in accordance with DASR M.A.711(b)(2), sent together with the application from the Operating Organisation. This recommendation shall be based on an airworthiness review carried out in accordance with DASR M.A.710. ☐ **AMC**

(e) NOT APPLICABLE.

(f) Subject to compliance with paragraph (k), a CAMO may extend twice for a period of one year each time the validity of a MARC that has been issued by the MAA or by another CAMO approved in accordance with Section A, Subpart G.

(g) NOT APPLICABLE.

(h) Notwithstanding paragraphs (a), (c) and (d) above, the MAA may carry out a MARC at any time it considers it appropriate to do so.

(i) NOT APPLICABLE.

(j) When the MAA carries out the airworthiness review and/or issues the MARC itself, the Operating Organisation shall provide the MAA with: ☐ **AMC**

1. the documentation required by the MAA; and
2. suitable accommodation at the appropriate location for its personnel; and
3. when necessary, the support of personnel appropriately authorised in accordance with DASR 145.A.35;

(k) A MARC cannot be issued nor extended if there is evidence or reason to believe that the aircraft is not airworthy.

M.A.902 - Validity of the MARC

(a) A MARC becomes invalid if:

1. surrendered, suspended or revoked; or
2. the Military Certificate of Airworthiness is suspended or revoked; or
3. the aircraft is removed from the military aircraft register of the MAA; or
4. the (Military) Type Certificate under which the Military Certificate of Airworthiness was issued is suspended or revoked.

(b) Moved to DASR M.A.301(b).

(c) Upon surrender or revocation, the MARC shall be returned to the MAA.

Superseded

M.A.903 - NOT APPLICABLE

M.A.904 - NOT APPLICABLE

M.A.905 - Findings from an aircraft airworthiness review carried out by the MAA

(a) After receipt of notification of findings by the MAA, the Operating Organisation of the aircraft concerned shall manage the finding IAW GR.60, and: ☐ **GM**

1. ensure the aircraft with a non-compliance does not fly until such time that any condition defined in DASR M.A.301(b), has been corrected. ☐ **AMC**

(b) NOT APPLICABLE

(c) NOT APPLICABLE

(d) The Operating Organisation shall consider the potential for non-compliance in other aircraft under its responsibility and take appropriate action in accordance with DASR M.A.905(a)1.

SUBPART B - ACCOUNTABILITY

SECTION A

SUBPART A - GENERAL

M.A.101 - Scope

This Section establishes the measures to be taken to ensure that airworthiness is maintained. It also specifies the conditions to be met by organisations involved in such continuing airworthiness management.

SUBPART B - ACCOUNTABILITY

M.A.201 - Responsibilities

(a) The Operating Organisation is accountable for the continuing airworthiness of an aircraft and shall ensure that no flight takes place unless: ☐ **GM1** ☐ **GM2** ☐ **GM3**

1. the aircraft is maintained in an airworthy condition; and
2. any operational and emergency equipment fitted is correctly installed and serviceable or clearly identified as unserviceable; and
3. the Military Certificate of Airworthiness and the Military Airworthiness Review Certificate (MARC) remain valid; and
4. the maintenance of the aircraft is performed in accordance with the Aircraft Maintenance Programme (AMP) as specified in DASR M.A.302.

NOTE: For individual aircraft or types for which a Military Certificate of Airworthiness or Military Restricted Certificate of Airworthiness is not appropriate, a Military Permit to Fly may be issued in accordance with national regulations.

(b) NOT APPLICABLE.

(c) Any organisation performing maintenance shall be responsible for the tasks performed.

(d) The Operating Organisation shall be responsible for the satisfactory accomplishment of the pre-flight inspection. This inspection must be carried out by a qualified person but need not be carried out by a DASR 145 Approved Maintenance Organisation (AMO). ☐ **AMC**

(e) NOT APPLICABLE.

(f) NOT APPLICABLE.

(g) Maintenance of military aircraft, and components thereof shall be carried out by a DASR 145 AMO, or another maintenance organisation accepted by DASA. ☐ **AMC**

(h) The Operating Organisation is responsible for the continuing airworthiness of the aircraft it operates and shall: ☐ **AMC**

Superseded

1. be appropriately approved, in accordance with DASR M Subpart G, for the management of the continuing airworthiness of the aircraft it operates; and ☐ **AMC**

2. be approved in accordance with DASR 145 or contract/task directly (or through a Continuing Airworthiness Management Organisation (CAMO)) such organisations; and ☐ **GM**

3. ensure that paragraph (a) is satisfied.

(i) NOT APPLICABLE

(j) The Operating Organisation is responsible for granting the Military Aviation Authority (MAA) access to the organisation/aircraft to determine continued compliance with this DASR.

(k) By way of exception to paragraph (h)1, an Operating Organisation may contract/task an organisation approved in accordance with DASR M.A. Subpart G, for the management of the continuing airworthiness of the aircraft it operates. In this case, a written contract/ arrangement shall be made and the CAMO assumes responsibility for the proper accomplishment of these tasks. ☐ **AMC**

M.A.202 - Occurrence reporting

(a) Any Operating Organisation accountable in accordance with DASR M.A.201, shall report to the MAA, and all further addressees as required by national regulations, any identified condition of an aircraft or component which endangers flight safety. ☐ **AMC** ☐ **GM**

(b) The Operating Organisation shall establish an occurrence reporting system to enable the collection and evaluation of such reports, including the assessment and extraction of those occurrences to be reported under paragraph (a). This procedure shall identify adverse trends, corrective actions taken or to be taken by the Operating Organisation to address deficiencies and include evaluation of all known relevant information relating to such occurrences and a method to circulate the information as necessary. ☐ **AMC**

(c) Reports shall be made in a form and manner established by the MAA and contain all pertinent information about the condition known to the Operating Organisation. ☐ **AMC** ☐ **GM**

(d) NOT APPLICABLE.

(e) Reports shall be made as soon as practicable, but in any case within 72 hours of the organisation identifying the condition to which the report relates.

SUBPART C - CONTINUING AIRWORTHINESS

M.A.301 - Continuing airworthiness tasks

(a) The continuing airworthiness of the aircraft shall be ensured by:

1. the accomplishment of pre-flight inspections; ☐ **AMC**

2. the rectification in accordance with the data specified in DASR M.A.304 of any defect and damage affecting safe operation, taking into account the Minimum Equipment List (MEL) and Configuration Deviation List (CDL) as applicable to the aircraft type; ☐ **AMC** ☐ **GM**

Superseded

3. the accomplishment of all maintenance, in accordance with the DASR M.A.302 approved Aircraft Maintenance Programme (AMP); ☐ **AMC**

4. the analysis of the effectiveness of the DASR M.A.302 AMP; ☐ **AMC**

5. the accomplishment of any applicable: ☐ **AMC**

   i. Airworthiness Directive;

   ii. operational directive with a continuing airworthiness impact;

   iii. continued or continuing airworthiness requirements mandated by the MAA;

   iv. measures mandated by the MAA in immediate reaction to a safety problem.

6. the accomplishment of modifications and repairs in accordance with DASR M.A.304;

7. for non-mandatory modifications and/or inspections, the establishment of an embodiment policy; ☐ **AMC**

8. maintenance check flights when necessary.

(b) An aircraft shall not fly if:

1. the continuing airworthiness of the aircraft or any component fitted to the aircraft does not meet the requirements of DASR M; or

2. the aircraft does not remain in conformity with the type design approved by the MAA; or

3. the aircraft has been operated beyond the limitations of the flight manual or the Military Certificate of Airworthiness, without appropriate action being taken; or

4. the aircraft has been involved in an accident or incident that affects the airworthiness of the aircraft, without subsequent appropriate action to restore airworthiness; or

5. a modification or repair is not in compliance with DASR M.A.304.

M.A.302 - Aircraft Maintenance Programme (AMP)

☐ **AMC**

(a) Maintenance of each aircraft shall be organised in accordance with an AMP. ☐ **GM**

(b) An organisation responsible for producing and amending an AMP in accordance with DASR M.A. 302 shall also be responsible for sending the AMP to the MAA. The AMP and any subsequent amendments shall be approved by the MAA.

(c) NOT APPLICABLE.

(d) The AMP shall establish compliance with: ☐ **AMC**

1. instructions issued by the MAA;

2. instructions for continuing airworthiness issued by any organisation recognised by the MAA.

Superseded

3. additional or alternative instructions, once approved in accordance with paragraph (b), proposed by the CAMO, except for intervals of safety related tasks referred in paragraph (e), which may be extended, subject to sufficient reviews carried out in accordance with paragraph g, and only when subject to direct approval in accordance with paragraph (b). ☐ **AMC**

(e) The AMP shall contain details, including frequency, of all maintenance to be carried out, including any specific tasks linked to the type and the specificity of operations.

(f) The AMP shall include a reliability programme, unless otherwise specified by the MAA. ☐ **GM**

(g) The AMP shall be subject to periodic reviews and amended accordingly when necessary. These reviews shall ensure that the AMP continues to be valid in light of the operating experience and instructions from the MAA, whilst taking into account new and / or modified maintenance instructions promulgated by the (Military) Type Certificate (MTC) and (Military) Supplementary Type Certificate (MSTC) holders and any other organisation that publishes such data in accordance with DASR 21.

M.A.303 - Airworthiness Directives

Any applicable Airworthiness Directive must be carried out within the requirements of that Airworthiness Directive, unless otherwise specified by the MAA.

M.A.304 - Data for modifications and repairs

Damage shall be assessed and modifications and repairs carried out using as appropriate: ☐ **AMC**

(a) data approved by the MAA; or

(b) data approved by a DASR 21 Design Organisation or MTC holder organisation; or ☐ **GM**

(c) NOT APPLICABLE;

(d) data produced by an organisation accepted by the MAA. ☐ **AMC** ☐ **GM**

M.A.305 - Aircraft continuing airworthiness record system

(a) At the completion of any maintenance, the Certificate of Release to Service required by DASR 145.A.50 shall be entered in the aircraft continuing airworthiness record system. Each entry shall be made as soon as practicable but in no case more than 30 days after the day of the maintenance action.

(b) The aircraft continuing airworthiness record system shall cover the aircraft, engine(s), propeller(s), any service life limited component(s) as appropriate, and shall include an aircraft technical log.

(c) The aircraft type and registration mark, the date, together with total flight time and/or flight cycles and/or landings and any other airworthiness data as required by the MAA as appropriate, shall be entered in the aircraft continuing airworthiness record system. ☐ **GM**

(d) The aircraft continuing airworthiness record system shall also contain as a minimum the current: ☐ **AMC**

Superseded

1. status of Airworthiness Directives and measures mandated by the MAA in immediate reaction to a safety problem;

2. status of modifications and repairs;

3. status of compliance with the AMP;

4. status of service life limited components; ☐ **AMC** ☐ **AMC1**

5. weight and balance report;

6. list of deferred maintenance;

7. symmetry check report (if required).

(e) In addition to the authorised release certificate, DASR Form 1 or equivalent, the following information relevant to any component installed (engine, propeller, engine module or service life-limited component) shall be entered into the aircraft continuing airworthiness record system:

1. identification of the component; and

2. the type, serial number and registration, as appropriate, of the aircraft, engine, propeller, engine module or service life-limited component to which the particular component has been fitted, along with the reference to the installation and removal of the component; and

3. the date together with the component's accumulated total flight time and/or flight cycles and/or landings and/or calendar time, and/or any other approved service life consumption units as appropriate; and

4. the current paragraph (d) information applicable to the component.

(f) The CAMO responsible for the management of continuing airworthiness tasks in accordance with DASR M.A. Subpart B, shall control the records as detailed in this paragraph and present the records to the MAA upon request.

(g) All entries made in the aircraft continuing airworthiness record system shall be clear and accurate. When it is necessary to correct an entry, the correction shall be made in a manner that clearly shows the original entry. ☐ **AMC** ☐ **GM**

(h) An Operating Organisation shall ensure that a system has been established to keep the following records for the periods specified: ☐ **AMC**

1. all detailed maintenance records in respect of the aircraft and any service life-limited component fitted thereto, until such time as the information contained therein is superseded by new information equivalent in scope and detail but not less than 36 months after the aircraft or component has been released to service; and

2. the total time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) of the aircraft and all service life-limited components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

3. the time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) as appropriate, since last scheduled maintenance of the component subjected to a service life limit, at least until the component

Superseded

scheduled maintenance has been superseded by another scheduled maintenance of equivalent work scope and detail; and

4. the current status of compliance with all maintenance programme tasks such that compliance with the Aircraft Maintenance Programme can be established, at least until the aircraft or component scheduled maintenance task has been repeated; and

5. the current status of Airworthiness Directives applicable to the aircraft and components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

6. details of current modifications and repairs to the aircraft, engine(s), propeller(s) and any other component vital to flight safety, at least 12 months after they have been permanently withdrawn from service. ☐ **AMC**

M.A.306 - Aircraft technical log

(a) In addition to the requirements of DASR M.A.305, an Operating Organisation shall use an aircraft technical log containing the following information for each aircraft: ☐ **AMC**

1. information about each flight, necessary to ensure continued flight safety; and

2. the current aircraft Certificate of Release to Service; and

3. the current maintenance statement giving the aircraft maintenance status of what scheduled and out of phase maintenance is next due except that the MAA may agree to the maintenance statement being kept elsewhere; and

4. all outstanding deferred defects rectifications that affect the operation of the aircraft; and

5. any necessary guidance instructions on maintenance support arrangements.

(b) The aircraft technical log and any subsequent amendments shall be approved by the MAA. ☐ **AMC**

(c) An Operating Organisation shall ensure that the aircraft technical log is retained for at least 36 months after the date of the last entry.

M.A.307 - Transfer of aircraft continuing airworthiness records

(a) The Operating Organisation shall ensure when an aircraft is permanently transferred to another Operating Organisation, that the records within the DASR M.A.305 continuing airworthiness records system, are also transferred. The time periods prescribed for the retention of records shall continue to apply to the new Operating Organisation.

(b) The Operating Organisation shall ensure that when the continuing airworthiness management tasks are contracted/tasked to an external CAMO, that the records within the DASR M.A.305 aircraft continuing airworthiness records system, are transferred to that CAMO.

(c) Moved to paragraph (a).

Superseded

SUBPART D - MAINTENANCE STANDARDS

NOT APPLICABLE – See DASR 145

SUBPART E - COMPONENTS

NOT APPLICABLE – See DASR 145

SUBPART F - MAINTENANCE ORGANISATION

NOT APPLICABLE

SUBPART G - CONTINUING AIRWORTHINESS MANAGEMENT ORGANISATION (CAMO)

M.A.701 - Scope

This Subpart establishes the requirements to be met by an organisation to qualify for the issue or continuation of an approval for the management of aircraft continuing airworthiness.

M.A.702 - Application

(a) An application for issue or change of a CAMO approval shall be made on a form and in a manner established by the MAA. ☐ **AMC**

(b) It shall include the following documents: ☐ **AMC**

1. the Continuing Airworthiness Management Exposition (CAME); and
2. the Operating Organisation's Aircraft Maintenance Programmes (only if the participating Member State (pMS) requires the CAMO to develop and control the AMP for the aircraft managed); and ☐ **GM**
3. the aircraft technical log(s); and
4. where appropriate, the technical specification(s) of the DASR M.A.708(c) maintenance contracts/taskings with the DASR 145 AMO(s); and
5. any additional documentation required by the MAA. ☐ **AMC**

M.A.703 - Extent of approval

(a) The approval is indicated on a DASR Form 14, issued by the MAA.

(b) NOT APPLICABLE.

(c) The scope of work deemed to constitute the approval shall be specified in the CAME in accordance with DASR M.A.704.

Superseded

AMC

(a) The CAMO shall provide a CAME containing the following information:

1. a statement signed by the Accountable Manager to confirm that the organisation will work in accordance with DASR M and the Exposition at all times; and
2. the organisation's scope of work; and
3. the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) andM.A.706(i); and
4. an organisation chart showing associated chains of responsibility between all the person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i); and
5. a list of the airworthiness review staff referred to in DASR M.A.707; and
6. a general description and location of the facilities; and
7. procedures specifying how the CAMO ensures compliance with this DASR; and
8. the CAME amendment procedures; and
9. the list of approved AMPs (see DASR M.A. 302); and
10. a list of all contractors/tasked organisations (where applicable); and
11. the names of all Operating Organisations to which CAMO support activities are provided (if applicable).

(b) The CAME and its amendments shall be approved by the MAA.

(c) Notwithstanding paragraph (b), minor amendments to the CAME may be approved indirectly through an indirect approval procedure. The indirect approval procedure shall define the minor amendment eligible, be established by the CAMO as part of the CAME and be approved by the MAA. **GM**

M.A.705 - Facilities

The CAMO shall ensure suitable office accommodation is provided at appropriate locations for the personnel specified in DASR M.A.706. **AMC**

M.A.706 - Personnel requirements

AMC

(a) The CAMO shall appoint an Accountable Manager, who has corporate authority for ensuring that all continuing airworthiness management activities can be resourced and carried out in accordance with this DASR. Where the CAMO is part of an Operating Organisation, the Accountable Manager shall be the same person who has the corporate authority for ensuring that all operations of the Operating Organisation can be resourced and carried out to the standard detailed in DASR M.A.201(h). **AMC**

Superseded

(b) NOT APPLICABLE.

(c) A person or group of persons shall be nominated with the responsibility of ensuring that the CAMO is always in compliance with this Subpart. Such person(s) shall be ultimately responsible to the Accountable Manager.

(d) The Accountable Manager shall designate a Continuing Airworthiness Manager. This person shall be responsible for the management and supervision of continuing airworthiness activities, pursuant to paragraph (c).

(e) The Continuing Airworthiness Manager referred to in paragraph (d) shall not be employed by a DASR 145 AMO under contract to the Operating Organisation, unless specifically agreed by the MAA. ☐ **AMC**

(f) The CAMO shall have sufficient appropriately qualified staff for the expected work. ☐ **AMC**

(g) All paragraph (c) and (d) persons shall be able to demonstrate relevant knowledge, background and appropriate experience related to aircraft continuing airworthiness.

(h) The qualifications of all personnel involved in continuing airworthiness management shall be recorded. ☐ **GM**

(i) For CAMOs extending Military Airworthiness Review Certificates (MARC) in accordance with DASR M.A.711(a)4 and DASR M.A.901(c)2, the CAMO shall nominate persons authorised to do so, subject to approval by the MAA. ☐ **AMC**

(j) The CAMO shall define and keep updated in the CAME, the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i).

(k) The CAMO shall establish and control the competence of personnel involved in the continuing airworthiness management, airworthiness review and/or quality audits, in accordance with a procedure and to a standard agreed by the MAA. ☐ **AMC**

M.A.707 - Airworthiness review staff

(a) To be approved to carry out airworthiness reviews, a CAMO shall have appropriate airworthiness review staff to issue Military Airworthiness Review Certificates (MARC) or recommendations referred to in DASR M.A. Subpart I: ☐ **AMC**

1. These staff shall have acquired:

   i. at least five years' experience in continuing airworthiness; and

   ii. an appropriate Military Aircraft Maintenance Licence (MAML) in compliance with DASR 66 or an aeronautical degree or a national equivalent; and

   iii. formal aeronautical maintenance training; and ☐ **AMC**

   iv. a position within the CAMO with appropriate responsibilities.

   v. Notwithstanding paragraph (i) to (iv), the requirement laid down in DASR M.A.707(a)1(ii) may be replaced by five years of experience in continuing airworthiness additional to those already required by DASR M.A.707(a)1(i).

2. NOT APPLICABLE.

Superseded

(b) Airworthiness review staff nominated by the CAMO can only be issued with an authorisation by the CAMO when formally accepted by the MAA after satisfactory completion of an airworthiness review under supervision. ☐ **AMC**

(c) The CAMO shall ensure that aircraft airworthiness review staff can demonstrate appropriate recent continuing airworthiness management experience. ☐ **AMC**

(d) Airworthiness review staff shall be identified by listing each person in the CAME together with their airworthiness review authorisation reference.

(e) The CAMO shall maintain a record of all airworthiness review staff, which shall include details of any appropriate qualification held together with a summary of relevant continuing airworthiness management experience and training and a copy of the authorisation. This record shall be retained until two years after the airworthiness review staff have left the CAMO. ☐ **AMC**

M.A.708 - Continuing airworthiness management

☐ **GM** ☐ **GM1**

(a) All continuing airworthiness management shall be carried out according to the prescriptions of DASR M.A. Subpart C—Continuing Airworthiness.

(b) For every aircraft managed, the CAMO shall:

1. have access to and use the applicable current AMP(s) for the aircraft managed;
2. if required by the pMS: ☐ **GM**
   i. develop and control the AMP for the aircraft managed including any applicable reliability programme; and
   ii. present the AMP and its amendments to the MAA for approval, unless covered by an indirect approval procedure. In that case, the indirect approval procedure shall be established by the CAMO, as part of the CAME, and shall be approved by the MAA.
3. manage the accomplishment of modifications and repairs;
4. ensure that all maintenance is carried out in accordance with the AMP and released in accordance with DASR 145 or DASR M.A. Subpart H;
5. ensure that all applicable Airworthiness Directives and operational directives with a continuing airworthiness impact are applied;
6. ensure that all defects discovered or reported, are managed appropriately until corrected by a DASR 145 AMO;
7. ensure that maintenance is only carried out by a DASR 145 AMO;
8. coordinate scheduled maintenance, the application of Airworthiness Directives, the replacement of service life limited parts and component inspection and ensure the work is carried out properly;
9. manage and archive all continuing airworthiness records;

Superseded

10. ensure that the weight and balance statement reflects the current status of the aircraft;

11. ensure the symmetry check statement reflects the current status of the aircraft (if applicable);

12. initiate and coordinate any necessary actions and follow-up activity highlighted by an occurrence report.

(c) Where there is a maintenance contract/tasking with a DASR 145 AMO, it shall detail the functions specified under DASR M.A.301(a)2, DASR M.A.301(a)3, DASR M.A.301(a)5,DASR M.A.301(a)6 and DASR M.A.301(a)8, and define the support of the quality functions of DASR M.A.712(b). ☐ **AMC**

M.A.709 - Documentation

☐ **AMC**

(a) The CAMO shall have access to and use applicable current maintenance data in accordance with DASR 145.A.45, for the performance of continuing airworthiness tasks referred to in DASR M.A.708. This data will be provided by the Operating Organisation/(M)TC holder/any other organisation as defined in DASR 21 as appropriate, subject to an appropriate contract/ tasking being established. In such a case, the CAMO only needs access to such data for the duration of the contract, except when required by DASR M.A.714.

(b) NOT APPLICABLE.

M.A.710 - Airworthiness review

(a) To satisfy the requirement for the airworthiness review of an aircraft referred to in DASR M.A.901, a review of the aircraft records shall be carried out by the CAMO in order to be satisfied that: ☐ **AMC**

1. airframe, engine and propeller flying hours and associated flight cycles and / or landings and any other airworthiness data as required by the MAA, have been properly recorded; and

2. the aircraft flight manual and / or any other manuals required by the MAA are applicable to the aircraft configuration and reflect the latest revision status; and

3. all the maintenance due on the aircraft according to the AMP has been carried out; and ☐ **AMC**

4. all known defects have been corrected or, when applicable, carried forward in a controlled manner; and

5. all applicable Airworthiness Directives have been applied and properly registered; and

6. all modifications and repairs applied to the aircraft have been registered and are in compliance with DASR M.A.304; and

7. all service life limited components installed on the aircraft are properly identified, registered and have not exceeded their approved service life limit; and

Superseded

8. all maintenance has been released in accordance with DASR 145 or DASR M.A.Subpart H; and

9. the current weight and balance statement reflects the configuration of the aircraft and is valid; and

10. the aircraft complies with the latest revision of its type design approved by the MAA/(M)TC holder; and

11. NOT APPLICABLE.

12. if required, the current symmetry report reflects the configuration of the aircraft and is valid.

This review shall be fully documented.

(b) The airworthiness review staff of the CAMO shall carry out a physical survey of the aircraft. For this survey, airworthiness review staff not appropriately qualified to DASR 66 and authorised in accordance with DASR 145.A.35, shall be assisted by such qualified/authorised personnel. ☐ **AMC**

(c) Through the physical survey of the aircraft, the airworthiness review staff shall ensure that: ☐ **AMC**

1. all required markings and placards are properly installed; and

2. the aircraft complies with its aircraft flight manual and/or any other manuals required by the MAA; and

3. the aircraft configuration complies with the approved data; and

4. no evident defect can be found that could not have been reasonably expected to be addressed; and

5. no inconsistencies can be found between the aircraft and the paragraph (a) review of records.

(d) By way of exception to DASR M.A.901(a), the airworthiness review can be anticipated by a maximum period of 90 days without loss of continuity of the airworthiness review pattern, to allow the physical survey to take place during a maintenance check. ☐ **AMC**

(e) The Military Airworthiness Review Certificate (MARC) (DASR Form 15b) or the recommendation for the issue of the MARC (DASR Form 15a) can only be issued: ☐ **AMC** ☐ **GM**

1. by airworthiness review staff appropriately authorised in accordance with DASR M.A.707, on behalf of the CAMO; and

2. when the airworthiness review has been completely carried out and that there is no non-compliance which is known to endanger flight safety.

(f) A copy of any MARC issued or extended for an aircraft shall be sent to the MAA within 10 days.

(g) All MARC tasks must be completed/supervised/managed by authorised airworthiness review staff. ☐ **AMC**

Superseded

(h) NOT APPLICABLE.

M.A.711 - Privileges of the organisation

(a) In accordance with its CAME, for any aircraft listed on its approval certificate a CAMO approved in accordance with Section A, Subpart G:

1. shall manage the continuing airworthiness of specific aircraft;

2. NOT APPLICABLE;

3. may arrange for any of the continuing airworthiness management tasks to be carried out by another organisation that is:

   i. working under the quality system of the CAMO; or

   ii. working under their own DASR M.A. Subpart G approval.

   In either case, the CAMO retains responsibility for all CAMO functions irrespective of who is undertaking them. All such organisations shall be listed on the approval certificate;

4. may extend, under the conditions of DASR M.A.901(f), a MARC.

(b) A CAMO may, additionally, carry out airworthiness reviews referred to in DASR M.A.710 for any aircraft listed on the approval certificate and:

1. issue the related MARC and extend it in due time under the conditions of DASR M.A.901(c)2; and

2. issue a recommendation for the airworthiness review to the MAA.

(c) NOT APPLICABLE.

(d) A CAMO may, if required by pMS according to DASR M.A.708(b)2, develop and control the DASR M.A.302 AMPs, including any applicable reliability programme for any aircraft listed on the approval certificate.

M.A.712 - Quality system and safety management system

(a) To ensure that the CAMO continues to meet the requirements of this Subpart, it shall establish a quality system and designate a Quality Manager to monitor compliance with, and the adequacy of, procedures required to ensure airworthy aircraft. Compliance monitoring shall include a feedback system to the Accountable Manager to ensure corrective action as necessary. ☐ **AMC**

(b) The quality system shall monitor DASR M.A. Subpart G activities. It shall at least include the following functions: ☐ **AMC** ☐ **GM**

1. monitoring that all DASR M.A. Subpart G activities are being performed in accordance with the approved procedures; and

2. monitoring that all contracted / tasked maintenance is carried out in accordance with the contract / tasking; and

3. monitoring the continued compliance with the requirements of this DASR.

Superseded

(c) The records of these activities shall be stored for at least two years.

(d) Where an organisation has several DASR approvals, the quality systems may be combined.

(e) The CAMO's quality system shall be an integrated part of the Operating Organisation's quality system, unless the MAA approves otherwise. ☐ **GM**

(f) NOT APPLICABLE.

(g) The CAMO's Safety Management System (SMS) shall be an integrated part of the Operating Organisation's SMS, unless the MAA approves otherwise. ☐ **GM**

M.A.713 - Changes to the CAMO

(a) In order to enable the MAA to determine continued compliance with this DASR, the CAMO shall notify the MAA of any proposal to change any of the following, before such changes take place: ☐ **AMC**

1. the name of the CAMO;
2. the location of the CAMO;
3. additional locations of the CAMO;
4. the Accountable Manager;
5. any of the persons specified in DASR M.A.706(c);
6. the facilities, procedures, work scope and staff that could affect the approval;
7. any change that affects the approval certificate.

(b) In the case of proposed changes in personnel not known to the management beforehand, these changes shall be notified at the earliest opportunity.

M.A.714 - Record-keeping

☐ **AMC**

(a) The CAMO shall record all details of continuing airworthiness management activity carried out. The aircraft records required by DASR M.A.305 and, if applicable, DASR M.A.306, shall be retained.

(b) If the CAMO has the privilege referred to in DASR M.A.711(b), it shall retain a copy of each MARC and recommendation issued or, as applicable, extended, together with all supporting documents. In addition, the CAMO shall retain a copy of any MARC that it has extended under the privilege referred to in DASR M.A.711(a)4.

(c) Permits to Fly, and all documents relating to their issue as detailed in DASR 21 Subpart P, shall be retained.

(d) The CAMO shall retain a copy of all records referred to in paragraphs (b) and (c) for at least two years after the aircraft has been permanently withdrawn from service.

Superseded

(e) The records shall be stored in a manner that ensures protection from damage, alteration and theft. The records shall remain readable and accessible for the duration of the storage period.

(f) All computer hardware used to ensure backup shall be stored in a different location from that containing the working data, in an environment that ensures they remain in good condition.

(g) Where continuing airworthiness management of an aircraft is transferred to another CAMO, all retained records shall be transferred to the new CAMO. The time periods prescribed for the retention of records shall continue to apply to the new CAMO.

(h) Where a CAMO terminates its operation, all retained records shall be transferred to the Operating Organisation (if applicable), unless determined otherwise by the MAA.

M.A.715 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. the CAMO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings and;

2. the MAA being granted access to the CAMO to determine continued compliance with this DASR; and

3. the approval not being surrendered or revoked.

(b) Upon surrender or revocation, the approval certificate shall be returned to the MAA.

M.A.716 - CAMO findings by the MAA

Refer to GR.60 Oversight and enforcement.

SUBPART H - CERTIFICATE OF RELEASE TO SERVICE (CRS) (AUS)

M.A.801 - Aircraft certificate of release to service (AUS)

(a) Except for aircraft released to service by a maintenance organisation approved in accordance with DASR 145, the certificate of release to service shall be issued according to this Subpart;

(b) No aircraft can be released to service unless a certificate of release to service is issued at the completion of any maintenance, when satisfied that all maintenance required has been properly carried out, by: ☐ **AMC**

1. appropriate certifying staff on behalf of the maintenance organisation considered equivalent to DASR 145 in accordance with DASR M.A.201(g)

(c) NOT APPLICABLE

(d) NOT APPLICABLE

(e) NOT APPLICABLE

(f) A certificate of release to service shall contain as a minimum: ☐ **AMC**

Superseded

1. basic details of the maintenance carried out; and

2. the date such maintenance was completed; and

3. the identity of the organisation and/or person issuing the release to service, including:

   i. the approval reference of the DASR M.A.201(g) maintenance organisation (if applicable) and the certifying staff issuing such a certificate.

4. the limitations to airworthiness or operations, if any.

(g) By way of exception from paragraph (b) and notwithstanding the provisions of paragraph (h), when the maintenance prescribed cannot be completed, a certificate of release to service may be issued within the approved aircraft limitations. Such fact together with any applicable limitations of the airworthiness or the operations shall be entered in the aircraft certificate of release to service before its issue as part of the information required in DASR M.A.801(f).4. ☐ **AMC**

(h) A certificate of release to service shall not be issued in the case of any known non-compliance which endangers flight safety. ☐ **AMC**

M.A.802 - Component certificate of release to service (AUS)

☐ **AMC**

(a) Except for aircraft components released to service in accordance with DASR 21 or DASR 145, the certificate of release to service / authorised release certificate shall be issued according to this Subpart.

(b) A component certificate of release to service may be issued by a maintenance organisation accepted by DASA in accordance with DASR M.A.201(g).

(c) A component certificate of release to service may be issued by a production organisation accepted by DASA. ☐ **AMC**

SUBPART I - MILITARY AIRWORTHINESS REVIEW CERTIFICATE (MARC)

M.A.901 - Aircraft airworthiness review

To ensure the validity of the Military Certificate of Airworthiness an airworthiness review of the aircraft and its continuing airworthiness records shall be carried out periodically. ☐ **AMC**

(a) A MARC is issued in accordance with DASR Form 15a, or DASR Form 15b on completion of a satisfactory airworthiness review. The MARC is valid one year. ☐ **AMC**

(b) NOT APPLICABLE.

(c) The CAMO may, if appropriately approved, and subject to compliance with paragraph (k):

1. issue a MARC in accordance with DASR M.A.710; and

2. for MARCs it has issued, extend twice the validity of a MARC for a period of one year each time. ☐ **AMC**

Superseded

(d) For all aircraft that have their continuing airworthiness managed by a CAMO that does not hold the privilege to carry out airworthiness reviews, the MARC shall be issued by the MAA upon satisfactory assessment based on a recommendation made by a CAMO appropriately approved in accordance with DASR M.A.711(b)(2), sent together with the application from the Operating Organisation. This recommendation shall be based on an airworthiness review carried out in accordance with DASR M.A.710. ☐ **AMC**

(e) NOT APPLICABLE.

(f) Subject to compliance with paragraph (k), a CAMO may extend twice for a period of one year each time the validity of a MARC that has been issued by the MAA or by another CAMO approved in accordance with Section A, Subpart G.

(g) NOT APPLICABLE.

(h) Notwithstanding paragraphs (a), (c) and (d) above, the MAA may carry out a MARC at any time it considers it appropriate to do so.

(i) NOT APPLICABLE.

(j) When the MAA carries out the airworthiness review and/or issues the MARC itself, the Operating Organisation shall provide the MAA with: ☐ **AMC**

1. the documentation required by the MAA; and
2. suitable accommodation at the appropriate location for its personnel; and
3. when necessary, the support of personnel appropriately authorised in accordance with DASR 145.A.35;

(k) A MARC cannot be issued nor extended if there is evidence or reason to believe that the aircraft is not airworthy.

M.A.902 - Validity of the MARC

(a) A MARC becomes invalid if:

1. surrendered, suspended or revoked; or
2. the Military Certificate of Airworthiness is suspended or revoked; or
3. the aircraft is removed from the military aircraft register of the MAA; or
4. the (Military) Type Certificate under which the Military Certificate of Airworthiness was issued is suspended or revoked.

(b) Moved to DASR M.A.301(b).

(c) Upon surrender or revocation, the MARC shall be returned to the MAA.

Superseded

M.A.903 - NOT APPLICABLE

M.A.904 - NOT APPLICABLE

M.A.905 - Findings from an aircraft airworthiness review carried out by the MAA

(a) After receipt of notification of findings by the MAA, the Operating Organisation of the aircraft concerned shall manage the finding IAW GR.60, and: ☐ **GM**

1. ensure the aircraft with a non-compliance does not fly until such time that any condition defined in DASR M.A.301(b), has been corrected. ☐ **AMC**

(b) NOT APPLICABLE

(c) NOT APPLICABLE

(d) The Operating Organisation shall consider the potential for non-compliance in other aircraft under its responsibility and take appropriate action in accordance with DASR M.A.905(a)1.

SUBPART C - CONTINUING AIRWORTHINESS

SECTION A

SUBPART A - GENERAL

M.A.101 - Scope

This Section establishes the measures to be taken to ensure that airworthiness is maintained. It also specifies the conditions to be met by organisations involved in such continuing airworthiness management.

SUBPART B - ACCOUNTABILITY

M.A.201 - Responsibilities

(a) The Operating Organisation is accountable for the continuing airworthiness of an aircraft and shall ensure that no flight takes place unless: ☐ **GM1** ☐ **GM2** ☐ **GM3**

1. the aircraft is maintained in an airworthy condition; and
2. any operational and emergency equipment fitted is correctly installed and serviceable or clearly identified as unserviceable; and
3. the Military Certificate of Airworthiness and the Military Airworthiness Review Certificate (MARC) remain valid; and
4. the maintenance of the aircraft is performed in accordance with the Aircraft Maintenance Programme (AMP) as specified in DASR M.A.302.

NOTE: For individual aircraft or types for which a Military Certificate of Airworthiness or Military Restricted Certificate of Airworthiness is not appropriate, a Military Permit to Fly may be issued in accordance with national regulations.

(b) NOT APPLICABLE.

(c) Any organisation performing maintenance shall be responsible for the tasks performed.

(d) The Operating Organisation shall be responsible for the satisfactory accomplishment of the pre-flight inspection. This inspection must be carried out by a qualified person but need not be carried out by a DASR 145 Approved Maintenance Organisation (AMO). ☐ **AMC**

(e) NOT APPLICABLE.

(f) NOT APPLICABLE.

(g) Maintenance of military aircraft, and components thereof shall be carried out by a DASR 145 AMO, or another maintenance organisation accepted by DASA. ☐ **AMC**

(h) The Operating Organisation is responsible for the continuing airworthiness of the aircraft it operates and shall: ☐ **AMC**

Superseded

1. be appropriately approved, in accordance with DASR M Subpart G, for the management of the continuing airworthiness of the aircraft it operates; and ☐ **AMC**

2. be approved in accordance with DASR 145 or contract/task directly (or through a Continuing Airworthiness Management Organisation (CAMO)) such organisations; and ☐ **GM**

3. ensure that paragraph (a) is satisfied.

(i) NOT APPLICABLE

(j) The Operating Organisation is responsible for granting the Military Aviation Authority (MAA) access to the organisation/aircraft to determine continued compliance with this DASR.

(k) By way of exception to paragraph (h)1, an Operating Organisation may contract/task an organisation approved in accordance with DASR M.A. Subpart G, for the management of the continuing airworthiness of the aircraft it operates. In this case, a written contract/ arrangement shall be made and the CAMO assumes responsibility for the proper accomplishment of these tasks. ☐ **AMC**

M.A.202 - Occurrence reporting

(a) Any Operating Organisation accountable in accordance with DASR M.A.201, shall report to the MAA, and all further addressees as required by national regulations, any identified condition of an aircraft or component which endangers flight safety. ☐ **AMC** ☐ **GM**

(b) The Operating Organisation shall establish an occurrence reporting system to enable the collection and evaluation of such reports, including the assessment and extraction of those occurrences to be reported under paragraph (a). This procedure shall identify adverse trends, corrective actions taken or to be taken by the Operating Organisation to address deficiencies and include evaluation of all known relevant information relating to such occurrences and a method to circulate the information as necessary. ☐ **AMC**

(c) Reports shall be made in a form and manner established by the MAA and contain all pertinent information about the condition known to the Operating Organisation. ☐ **AMC** ☐ **GM**

(d) NOT APPLICABLE.

(e) Reports shall be made as soon as practicable, but in any case within 72 hours of the organisation identifying the condition to which the report relates.

SUBPART C - CONTINUING AIRWORTHINESS

M.A.301 - Continuing airworthiness tasks

(a) The continuing airworthiness of the aircraft shall be ensured by:

1. the accomplishment of pre-flight inspections; ☐ **AMC**

2. the rectification in accordance with the data specified in DASR M.A.304 of any defect and damage affecting safe operation, taking into account the Minimum Equipment List (MEL) and Configuration Deviation List (CDL) as applicable to the aircraft type; ☐ **AMC** ☐ **GM**

Superseded

3. the accomplishment of all maintenance, in accordance with the DASR M.A.302 approved Aircraft Maintenance Programme (AMP); ☐ **AMC**

4. the analysis of the effectiveness of the DASR M.A.302 AMP; ☐ **AMC**

5. the accomplishment of any applicable: ☐ **AMC**

   i. Airworthiness Directive;

   ii. operational directive with a continuing airworthiness impact;

   iii. continued or continuing airworthiness requirements mandated by the MAA;

   iv. measures mandated by the MAA in immediate reaction to a safety problem.

6. the accomplishment of modifications and repairs in accordance with DASR M.A.304;

7. for non-mandatory modifications and/or inspections, the establishment of an embodiment policy; ☐ **AMC**

8. maintenance check flights when necessary.

(b) An aircraft shall not fly if:

1. the continuing airworthiness of the aircraft or any component fitted to the aircraft does not meet the requirements of DASR M; or

2. the aircraft does not remain in conformity with the type design approved by the MAA; or

3. the aircraft has been operated beyond the limitations of the flight manual or the Military Certificate of Airworthiness, without appropriate action being taken; or

4. the aircraft has been involved in an accident or incident that affects the airworthiness of the aircraft, without subsequent appropriate action to restore airworthiness; or

5. a modification or repair is not in compliance with DASR M.A.304.

M.A.302 - Aircraft Maintenance Programme (AMP)

☐ **AMC**

(a) Maintenance of each aircraft shall be organised in accordance with an AMP. ☐ **GM**

(b) An organisation responsible for producing and amending an AMP in accordance with DASR M.A. 302 shall also be responsible for sending the AMP to the MAA. The AMP and any subsequent amendments shall be approved by the MAA.

(c) NOT APPLICABLE.

(d) The AMP shall establish compliance with: ☐ **AMC**

1. instructions issued by the MAA;

2. instructions for continuing airworthiness issued by any organisation recognised by the MAA.

Superseded

3. additional or alternative instructions, once approved in accordance with paragraph (b), proposed by the CAMO, except for intervals of safety related tasks referred in paragraph (e), which may be extended, subject to sufficient reviews carried out in accordance with paragraph g, and only when subject to direct approval in accordance with paragraph (b). ☐ **AMC**

(e) The AMP shall contain details, including frequency, of all maintenance to be carried out, including any specific tasks linked to the type and the specificity of operations.

(f) The AMP shall include a reliability programme, unless otherwise specified by the MAA. ☐ **GM**

(g) The AMP shall be subject to periodic reviews and amended accordingly when necessary. These reviews shall ensure that the AMP continues to be valid in light of the operating experience and instructions from the MAA, whilst taking into account new and / or modified maintenance instructions promulgated by the (Military) Type Certificate (MTC) and (Military) Supplementary Type Certificate (MSTC) holders and any other organisation that publishes such data in accordance with DASR 21.

M.A.303 - Airworthiness Directives

Any applicable Airworthiness Directive must be carried out within the requirements of that Airworthiness Directive, unless otherwise specified by the MAA.

M.A.304 - Data for modifications and repairs

Damage shall be assessed and modifications and repairs carried out using as appropriate: ☐ **AMC**

(a) data approved by the MAA; or

(b) data approved by a DASR 21 Design Organisation or MTC holder organisation; or ☐ **GM**

(c) NOT APPLICABLE;

(d) data produced by an organisation accepted by the MAA. ☐ **AMC** ☐ **GM**

M.A.305 - Aircraft continuing airworthiness record system

(a) At the completion of any maintenance, the Certificate of Release to Service required by DASR 145.A.50 shall be entered in the aircraft continuing airworthiness record system. Each entry shall be made as soon as practicable but in no case more than 30 days after the day of the maintenance action.

(b) The aircraft continuing airworthiness record system shall cover the aircraft, engine(s), propeller(s), any service life limited component(s) as appropriate, and shall include an aircraft technical log.

(c) The aircraft type and registration mark, the date, together with total flight time and/or flight cycles and/or landings and any other airworthiness data as required by the MAA as appropriate, shall be entered in the aircraft continuing airworthiness record system. ☐ **GM**

(d) The aircraft continuing airworthiness record system shall also contain as a minimum the current: ☐ **AMC**

Superseded

1. status of Airworthiness Directives and measures mandated by the MAA in immediate reaction to a safety problem;

2. status of modifications and repairs;

3. status of compliance with the AMP;

4. status of service life limited components; ☐ **AMC** ☐ **AMC1**

5. weight and balance report;

6. list of deferred maintenance;

7. symmetry check report (if required).

(e) In addition to the authorised release certificate, DASR Form 1 or equivalent, the following information relevant to any component installed (engine, propeller, engine module or service life-limited component) shall be entered into the aircraft continuing airworthiness record system:

1. identification of the component; and

2. the type, serial number and registration, as appropriate, of the aircraft, engine, propeller, engine module or service life-limited component to which the particular component has been fitted, along with the reference to the installation and removal of the component; and

3. the date together with the component's accumulated total flight time and/or flight cycles and/or landings and/or calendar time, and/or any other approved service life consumption units as appropriate; and

4. the current paragraph (d) information applicable to the component.

(f) The CAMO responsible for the management of continuing airworthiness tasks in accordance with DASR M.A. Subpart B, shall control the records as detailed in this paragraph and present the records to the MAA upon request.

(g) All entries made in the aircraft continuing airworthiness record system shall be clear and accurate. When it is necessary to correct an entry, the correction shall be made in a manner that clearly shows the original entry. ☐ **AMC** ☐ **GM**

(h) An Operating Organisation shall ensure that a system has been established to keep the following records for the periods specified: ☐ **AMC**

1. all detailed maintenance records in respect of the aircraft and any service life-limited component fitted thereto, until such time as the information contained therein is superseded by new information equivalent in scope and detail but not less than 36 months after the aircraft or component has been released to service; and

2. the total time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) of the aircraft and all service life-limited components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

3. the time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) as appropriate, since last scheduled maintenance of the component subjected to a service life limit, at least until the component

Superseded

scheduled maintenance has been superseded by another scheduled maintenance of equivalent work scope and detail; and

4. the current status of compliance with all maintenance programme tasks such that compliance with the Aircraft Maintenance Programme can be established, at least until the aircraft or component scheduled maintenance task has been repeated; and

5. the current status of Airworthiness Directives applicable to the aircraft and components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

6. details of current modifications and repairs to the aircraft, engine(s), propeller(s) and any other component vital to flight safety, at least 12 months after they have been permanently withdrawn from service. ☐ **AMC**

M.A.306 - Aircraft technical log

(a) In addition to the requirements of DASR M.A.305, an Operating Organisation shall use an aircraft technical log containing the following information for each aircraft: ☐ **AMC**

1. information about each flight, necessary to ensure continued flight safety; and

2. the current aircraft Certificate of Release to Service; and

3. the current maintenance statement giving the aircraft maintenance status of what scheduled and out of phase maintenance is next due except that the MAA may agree to the maintenance statement being kept elsewhere; and

4. all outstanding deferred defects rectifications that affect the operation of the aircraft; and

5. any necessary guidance instructions on maintenance support arrangements.

(b) The aircraft technical log and any subsequent amendments shall be approved by the MAA. ☐ **AMC**

(c) An Operating Organisation shall ensure that the aircraft technical log is retained for at least 36 months after the date of the last entry.

M.A.307 - Transfer of aircraft continuing airworthiness records

(a) The Operating Organisation shall ensure when an aircraft is permanently transferred to another Operating Organisation, that the records within the DASR M.A.305 continuing airworthiness records system, are also transferred. The time periods prescribed for the retention of records shall continue to apply to the new Operating Organisation.

(b) The Operating Organisation shall ensure that when the continuing airworthiness management tasks are contracted/tasked to an external CAMO, that the records within the DASR M.A.305 aircraft continuing airworthiness records system, are transferred to that CAMO.

(c) Moved to paragraph (a).

SUBPART F - MAINTENANCE ORGANISATION

NOT APPLICABLE

SUBPART G - CONTINUING AIRWORTHINESS MANAGEMENT ORGANISATION (CAMO)

M.A.701 - Scope

This Subpart establishes the requirements to be met by an organisation to qualify for the issue or continuation of an approval for the management of aircraft continuing airworthiness.

M.A.702 - Application

(a) An application for issue or change of a CAMO approval shall be made on a form and in a manner established by the MAA. ☐ **AMC**

(b) It shall include the following documents: ☐ **AMC**

1. the Continuing Airworthiness Management Exposition (CAME); and
2. the Operating Organisation's Aircraft Maintenance Programmes (only if the participating Member State (pMS) requires the CAMO to develop and control the AMP for the aircraft managed); and ☐ **GM**
3. the aircraft technical log(s); and
4. where appropriate, the technical specification(s) of the DASR M.A.708(c) maintenance contracts/taskings with the DASR 145 AMO(s); and
5. any additional documentation required by the MAA. ☐ **AMC**

M.A.703 - Extent of approval

(a) The approval is indicated on a DASR Form 14, issued by the MAA.

(b) NOT APPLICABLE.

(c) The scope of work deemed to constitute the approval shall be specified in the CAME in accordance with DASR M.A.704.

Superseded

AMC

(a) The CAMO shall provide a CAME containing the following information:

1. a statement signed by the Accountable Manager to confirm that the organisation will work in accordance with DASR M and the Exposition at all times; and
2. the organisation's scope of work; and
3. the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) andM.A.706(i); and
4. an organisation chart showing associated chains of responsibility between all the person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i); and
5. a list of the airworthiness review staff referred to in DASR M.A.707; and
6. a general description and location of the facilities; and
7. procedures specifying how the CAMO ensures compliance with this DASR; and
8. the CAME amendment procedures; and
9. the list of approved AMPs (see DASR M.A. 302); and
10. a list of all contractors/tasked organisations (where applicable); and
11. the names of all Operating Organisations to which CAMO support activities are provided (if applicable).

(b) The CAME and its amendments shall be approved by the MAA.

(c) Notwithstanding paragraph (b), minor amendments to the CAME may be approved indirectly through an indirect approval procedure. The indirect approval procedure shall define the minor amendment eligible, be established by the CAMO as part of the CAME and be approved by the MAA. **GM**

M.A.705 - Facilities

The CAMO shall ensure suitable office accommodation is provided at appropriate locations for the personnel specified in DASR M.A.706. **AMC**

M.A.706 - Personnel requirements

AMC

(a) The CAMO shall appoint an Accountable Manager, who has corporate authority for ensuring that all continuing airworthiness management activities can be resourced and carried out in accordance with this DASR. Where the CAMO is part of an Operating Organisation, the Accountable Manager shall be the same person who has the corporate authority for ensuring that all operations of the Operating Organisation can be resourced and carried out to the standard detailed in DASR M.A.201(h). **AMC**

Superseded

(b) NOT APPLICABLE.

(c) A person or group of persons shall be nominated with the responsibility of ensuring that the CAMO is always in compliance with this Subpart. Such person(s) shall be ultimately responsible to the Accountable Manager.

(d) The Accountable Manager shall designate a Continuing Airworthiness Manager. This person shall be responsible for the management and supervision of continuing airworthiness activities, pursuant to paragraph (c).

(e) The Continuing Airworthiness Manager referred to in paragraph (d) shall not be employed by a DASR 145 AMO under contract to the Operating Organisation, unless specifically agreed by the MAA. ☐ **AMC**

(f) The CAMO shall have sufficient appropriately qualified staff for the expected work. ☐ **AMC**

(g) All paragraph (c) and (d) persons shall be able to demonstrate relevant knowledge, background and appropriate experience related to aircraft continuing airworthiness.

(h) The qualifications of all personnel involved in continuing airworthiness management shall be recorded. ☐ **GM**

(i) For CAMOs extending Military Airworthiness Review Certificates (MARC) in accordance with DASR M.A.711(a)4 and DASR M.A.901(c)2, the CAMO shall nominate persons authorised to do so, subject to approval by the MAA. ☐ **AMC**

(j) The CAMO shall define and keep updated in the CAME, the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i).

(k) The CAMO shall establish and control the competence of personnel involved in the continuing airworthiness management, airworthiness review and/or quality audits, in accordance with a procedure and to a standard agreed by the MAA. ☐ **AMC**

M.A.707 - Airworthiness review staff

(a) To be approved to carry out airworthiness reviews, a CAMO shall have appropriate airworthiness review staff to issue Military Airworthiness Review Certificates (MARC) or recommendations referred to in DASR M.A. Subpart I: ☐ **AMC**

1. These staff shall have acquired:

   i. at least five years' experience in continuing airworthiness; and

   ii. an appropriate Military Aircraft Maintenance Licence (MAML) in compliance with DASR 66 or an aeronautical degree or a national equivalent; and

   iii. formal aeronautical maintenance training; and ☐ **AMC**

   iv. a position within the CAMO with appropriate responsibilities.

   v. Notwithstanding paragraph (i) to (iv), the requirement laid down in DASR M.A.707(a)1(ii) may be replaced by five years of experience in continuing airworthiness additional to those already required by DASR M.A.707(a)1(i).

2. NOT APPLICABLE.

Superseded

(b) Airworthiness review staff nominated by the CAMO can only be issued with an authorisation by the CAMO when formally accepted by the MAA after satisfactory completion of an airworthiness review under supervision. ☐ **AMC**

(c) The CAMO shall ensure that aircraft airworthiness review staff can demonstrate appropriate recent continuing airworthiness management experience. ☐ **AMC**

(d) Airworthiness review staff shall be identified by listing each person in the CAME together with their airworthiness review authorisation reference.

(e) The CAMO shall maintain a record of all airworthiness review staff, which shall include details of any appropriate qualification held together with a summary of relevant continuing airworthiness management experience and training and a copy of the authorisation. This record shall be retained until two years after the airworthiness review staff have left the CAMO. ☐ **AMC**

M.A.708 - Continuing airworthiness management

☐ **GM** ☐ **GM1**

(a) All continuing airworthiness management shall be carried out according to the prescriptions of DASR M.A. Subpart C—Continuing Airworthiness.

(b) For every aircraft managed, the CAMO shall:

1. have access to and use the applicable current AMP(s) for the aircraft managed;
2. if required by the pMS: ☐ **GM**
   i. develop and control the AMP for the aircraft managed including any applicable reliability programme; and
   ii. present the AMP and its amendments to the MAA for approval, unless covered by an indirect approval procedure. In that case, the indirect approval procedure shall be established by the CAMO, as part of the CAME, and shall be approved by the MAA.
3. manage the accomplishment of modifications and repairs;
4. ensure that all maintenance is carried out in accordance with the AMP and released in accordance with DASR 145 or DASR M.A. Subpart H;
5. ensure that all applicable Airworthiness Directives and operational directives with a continuing airworthiness impact are applied;
6. ensure that all defects discovered or reported, are managed appropriately until corrected by a DASR 145 AMO;
7. ensure that maintenance is only carried out by a DASR 145 AMO;
8. coordinate scheduled maintenance, the application of Airworthiness Directives, the replacement of service life limited parts and component inspection and ensure the work is carried out properly;
9. manage and archive all continuing airworthiness records;

Superseded

10. ensure that the weight and balance statement reflects the current status of the aircraft;

11. ensure the symmetry check statement reflects the current status of the aircraft (if applicable);

12. initiate and coordinate any necessary actions and follow-up activity highlighted by an occurrence report.

(c) Where there is a maintenance contract/tasking with a DASR 145 AMO, it shall detail the functions specified under DASR M.A.301(a)2, DASR M.A.301(a)3, DASR M.A.301(a)5,DASR M.A.301(a)6 and DASR M.A.301(a)8, and define the support of the quality functions of DASR M.A.712(b). ☐ **AMC**

M.A.709 - Documentation

☐ **AMC**

(a) The CAMO shall have access to and use applicable current maintenance data in accordance with DASR 145.A.45, for the performance of continuing airworthiness tasks referred to in DASR M.A.708. This data will be provided by the Operating Organisation/(M)TC holder/any other organisation as defined in DASR 21 as appropriate, subject to an appropriate contract/ tasking being established. In such a case, the CAMO only needs access to such data for the duration of the contract, except when required by DASR M.A.714.

(b) NOT APPLICABLE.

M.A.710 - Airworthiness review

(a) To satisfy the requirement for the airworthiness review of an aircraft referred to in DASR M.A.901, a review of the aircraft records shall be carried out by the CAMO in order to be satisfied that: ☐ **AMC**

1. airframe, engine and propeller flying hours and associated flight cycles and / or landings and any other airworthiness data as required by the MAA, have been properly recorded; and

2. the aircraft flight manual and / or any other manuals required by the MAA are applicable to the aircraft configuration and reflect the latest revision status; and

3. all the maintenance due on the aircraft according to the AMP has been carried out; and ☐ **AMC**

4. all known defects have been corrected or, when applicable, carried forward in a controlled manner; and

5. all applicable Airworthiness Directives have been applied and properly registered; and

6. all modifications and repairs applied to the aircraft have been registered and are in compliance with DASR M.A.304; and

7. all service life limited components installed on the aircraft are properly identified, registered and have not exceeded their approved service life limit; and

Superseded

8. all maintenance has been released in accordance with DASR 145 or DASR M.A.Subpart H; and

9. the current weight and balance statement reflects the configuration of the aircraft and is valid; and

10. the aircraft complies with the latest revision of its type design approved by the MAA/(M)TC holder; and

11. NOT APPLICABLE.

12. if required, the current symmetry report reflects the configuration of the aircraft and is valid.

This review shall be fully documented.

(b) The airworthiness review staff of the CAMO shall carry out a physical survey of the aircraft. For this survey, airworthiness review staff not appropriately qualified to DASR 66 and authorised in accordance with DASR 145.A.35, shall be assisted by such qualified/authorised personnel. ☐ **AMC**

(c) Through the physical survey of the aircraft, the airworthiness review staff shall ensure that: ☐ **AMC**

1. all required markings and placards are properly installed; and

2. the aircraft complies with its aircraft flight manual and/or any other manuals required by the MAA; and

3. the aircraft configuration complies with the approved data; and

4. no evident defect can be found that could not have been reasonably expected to be addressed; and

5. no inconsistencies can be found between the aircraft and the paragraph (a) review of records.

(d) By way of exception to DASR M.A.901(a), the airworthiness review can be anticipated by a maximum period of 90 days without loss of continuity of the airworthiness review pattern, to allow the physical survey to take place during a maintenance check. ☐ **AMC**

(e) The Military Airworthiness Review Certificate (MARC) (DASR Form 15b) or the recommendation for the issue of the MARC (DASR Form 15a) can only be issued: ☐ **AMC** ☐ **GM**

1. by airworthiness review staff appropriately authorised in accordance with DASR M.A.707, on behalf of the CAMO; and

2. when the airworthiness review has been completely carried out and that there is no non-compliance which is known to endanger flight safety.

(f) A copy of any MARC issued or extended for an aircraft shall be sent to the MAA within 10 days.

(g) All MARC tasks must be completed/supervised/managed by authorised airworthiness review staff. ☐ **AMC**

Superseded

(h) NOT APPLICABLE.

M.A.711 - Privileges of the organisation

(a) In accordance with its CAME, for any aircraft listed on its approval certificate a CAMO approved in accordance with Section A, Subpart G:

1. shall manage the continuing airworthiness of specific aircraft;

2. NOT APPLICABLE;

3. may arrange for any of the continuing airworthiness management tasks to be carried out by another organisation that is:

   i. working under the quality system of the CAMO; or

   ii. working under their own DASR M.A. Subpart G approval.

   In either case, the CAMO retains responsibility for all CAMO functions irrespective of who is undertaking them. All such organisations shall be listed on the approval certificate;

4. may extend, under the conditions of DASR M.A.901(f), a MARC.

(b) A CAMO may, additionally, carry out airworthiness reviews referred to in DASR M.A.710 for any aircraft listed on the approval certificate and:

1. issue the related MARC and extend it in due time under the conditions of DASR M.A.901(c)2; and

2. issue a recommendation for the airworthiness review to the MAA.

(c) NOT APPLICABLE.

(d) A CAMO may, if required by pMS according to DASR M.A.708(b)2, develop and control the DASR M.A.302 AMPs, including any applicable reliability programme for any aircraft listed on the approval certificate.

M.A.712 - Quality system and safety management system

(a) To ensure that the CAMO continues to meet the requirements of this Subpart, it shall establish a quality system and designate a Quality Manager to monitor compliance with, and the adequacy of, procedures required to ensure airworthy aircraft. Compliance monitoring shall include a feedback system to the Accountable Manager to ensure corrective action as necessary. ☐ **AMC**

(b) The quality system shall monitor DASR M.A. Subpart G activities. It shall at least include the following functions: ☐ **AMC** ☐ **GM**

1. monitoring that all DASR M.A. Subpart G activities are being performed in accordance with the approved procedures; and

2. monitoring that all contracted / tasked maintenance is carried out in accordance with the contract / tasking; and

3. monitoring the continued compliance with the requirements of this DASR.

Superseded

(c) The records of these activities shall be stored for at least two years.

(d) Where an organisation has several DASR approvals, the quality systems may be combined.

(e) The CAMO's quality system shall be an integrated part of the Operating Organisation's quality system, unless the MAA approves otherwise. ☐ **GM**

(f) NOT APPLICABLE.

(g) The CAMO's Safety Management System (SMS) shall be an integrated part of the Operating Organisation's SMS, unless the MAA approves otherwise. ☐ **GM**

M.A.713 - Changes to the CAMO

(a) In order to enable the MAA to determine continued compliance with this DASR, the CAMO shall notify the MAA of any proposal to change any of the following, before such changes take place: ☐ **AMC**

1. the name of the CAMO;
2. the location of the CAMO;
3. additional locations of the CAMO;
4. the Accountable Manager;
5. any of the persons specified in DASR M.A.706(c);
6. the facilities, procedures, work scope and staff that could affect the approval;
7. any change that affects the approval certificate.

(b) In the case of proposed changes in personnel not known to the management beforehand, these changes shall be notified at the earliest opportunity.

M.A.714 - Record-keeping

☐ **AMC**

(a) The CAMO shall record all details of continuing airworthiness management activity carried out. The aircraft records required by DASR M.A.305 and, if applicable, DASR M.A.306, shall be retained.

(b) If the CAMO has the privilege referred to in DASR M.A.711(b), it shall retain a copy of each MARC and recommendation issued or, as applicable, extended, together with all supporting documents. In addition, the CAMO shall retain a copy of any MARC that it has extended under the privilege referred to in DASR M.A.711(a)4.

(c) Permits to Fly, and all documents relating to their issue as detailed in DASR 21 Subpart P, shall be retained.

(d) The CAMO shall retain a copy of all records referred to in paragraphs (b) and (c) for at least two years after the aircraft has been permanently withdrawn from service.

Superseded

(e) The records shall be stored in a manner that ensures protection from damage, alteration and theft. The records shall remain readable and accessible for the duration of the storage period.

(f) All computer hardware used to ensure backup shall be stored in a different location from that containing the working data, in an environment that ensures they remain in good condition.

(g) Where continuing airworthiness management of an aircraft is transferred to another CAMO, all retained records shall be transferred to the new CAMO. The time periods prescribed for the retention of records shall continue to apply to the new CAMO.

(h) Where a CAMO terminates its operation, all retained records shall be transferred to the Operating Organisation (if applicable), unless determined otherwise by the MAA.

M.A.715 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. the CAMO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings and;

2. the MAA being granted access to the CAMO to determine continued compliance with this DASR; and

3. the approval not being surrendered or revoked.

(b) Upon surrender or revocation, the approval certificate shall be returned to the MAA.

M.A.716 - CAMO findings by the MAA

Refer to GR.60 Oversight and enforcement.

SUBPART H - CERTIFICATE OF RELEASE TO SERVICE (CRS) (AUS)

M.A.801 - Aircraft certificate of release to service (AUS)

(a) Except for aircraft released to service by a maintenance organisation approved in accordance with DASR 145, the certificate of release to service shall be issued according to this Subpart;

(b) No aircraft can be released to service unless a certificate of release to service is issued at the completion of any maintenance, when satisfied that all maintenance required has been properly carried out, by: ☐ **AMC**

1. appropriate certifying staff on behalf of the maintenance organisation considered equivalent to DASR 145 in accordance with DASR M.A.201(g)

(c) NOT APPLICABLE

(d) NOT APPLICABLE

(e) NOT APPLICABLE

(f) A certificate of release to service shall contain as a minimum: ☐ **AMC**

Superseded

1. basic details of the maintenance carried out; and

2. the date such maintenance was completed; and

3. the identity of the organisation and/or person issuing the release to service, including:

   i. the approval reference of the DASR M.A.201(g) maintenance organisation (if applicable) and the certifying staff issuing such a certificate.

4. the limitations to airworthiness or operations, if any.

(g) By way of exception from paragraph (b) and notwithstanding the provisions of paragraph (h), when the maintenance prescribed cannot be completed, a certificate of release to service may be issued within the approved aircraft limitations. Such fact together with any applicable limitations of the airworthiness or the operations shall be entered in the aircraft certificate of release to service before its issue as part of the information required in DASR M.A.801(f).4. ☐ **AMC**

(h) A certificate of release to service shall not be issued in the case of any known non-compliance which endangers flight safety. ☐ **AMC**

M.A.802 - Component certificate of release to service (AUS)

☐ **AMC**

(a) Except for aircraft components released to service in accordance with DASR 21 or DASR 145, the certificate of release to service / authorised release certificate shall be issued according to this Subpart.

(b) A component certificate of release to service may be issued by a maintenance organisation accepted by DASA in accordance with DASR M.A.201(g).

(c) A component certificate of release to service may be issued by a production organisation accepted by DASA. ☐ **AMC**

SUBPART I - MILITARY AIRWORTHINESS REVIEW CERTIFICATE (MARC)

M.A.901 - Aircraft airworthiness review

To ensure the validity of the Military Certificate of Airworthiness an airworthiness review of the aircraft and its continuing airworthiness records shall be carried out periodically. ☐ **AMC**

(a) A MARC is issued in accordance with DASR Form 15a, or DASR Form 15b on completion of a satisfactory airworthiness review. The MARC is valid one year. ☐ **AMC**

(b) NOT APPLICABLE.

(c) The CAMO may, if appropriately approved, and subject to compliance with paragraph (k):

1. issue a MARC in accordance with DASR M.A.710; and

2. for MARCs it has issued, extend twice the validity of a MARC for a period of one year each time. ☐ **AMC**

Superseded

(d) For all aircraft that have their continuing airworthiness managed by a CAMO that does not hold the privilege to carry out airworthiness reviews, the MARC shall be issued by the MAA upon satisfactory assessment based on a recommendation made by a CAMO appropriately approved in accordance with DASR M.A.711(b)(2), sent together with the application from the Operating Organisation. This recommendation shall be based on an airworthiness review carried out in accordance with DASR M.A.710. ☐ **AMC**

(e) NOT APPLICABLE.

(f) Subject to compliance with paragraph (k), a CAMO may extend twice for a period of one year each time the validity of a MARC that has been issued by the MAA or by another CAMO approved in accordance with Section A, Subpart G.

(g) NOT APPLICABLE.

(h) Notwithstanding paragraphs (a), (c) and (d) above, the MAA may carry out a MARC at any time it considers it appropriate to do so.

(i) NOT APPLICABLE.

(j) When the MAA carries out the airworthiness review and/or issues the MARC itself, the Operating Organisation shall provide the MAA with: ☐ **AMC**

1. the documentation required by the MAA; and
2. suitable accommodation at the appropriate location for its personnel; and
3. when necessary, the support of personnel appropriately authorised in accordance with DASR 145.A.35;

(k) A MARC cannot be issued nor extended if there is evidence or reason to believe that the aircraft is not airworthy.

M.A.902 - Validity of the MARC

(a) A MARC becomes invalid if:

1. surrendered, suspended or revoked; or
2. the Military Certificate of Airworthiness is suspended or revoked; or
3. the aircraft is removed from the military aircraft register of the MAA; or
4. the (Military) Type Certificate under which the Military Certificate of Airworthiness was issued is suspended or revoked.

(b) Moved to DASR M.A.301(b).

(c) Upon surrender or revocation, the MARC shall be returned to the MAA.

Superseded

M.A.903 - NOT APPLICABLE

M.A.904 - NOT APPLICABLE

M.A.905 - Findings from an aircraft airworthiness review carried out by the MAA

(a) After receipt of notification of findings by the MAA, the Operating Organisation of the aircraft concerned shall manage the finding IAW GR.60, and: ☐ **GM**

1. ensure the aircraft with a non-compliance does not fly until such time that any condition defined in DASR M.A.301(b), has been corrected. ☐ **AMC**

(b) NOT APPLICABLE

(c) NOT APPLICABLE

(d) The Operating Organisation shall consider the potential for non-compliance in other aircraft under its responsibility and take appropriate action in accordance with DASR M.A.905(a)1.

SUBPART G - CONTINUING AIRWORTHINESS MANAGEMENT ORGANISATION (CAMO)

SECTION A

SUBPART A - GENERAL

M.A.101 - Scope

This Section establishes the measures to be taken to ensure that airworthiness is maintained. It also specifies the conditions to be met by organisations involved in such continuing airworthiness management.

SUBPART B - ACCOUNTABILITY

M.A.201 - Responsibilities

(a) The Operating Organisation is accountable for the continuing airworthiness of an aircraft and shall ensure that no flight takes place unless: ☐ **GM1** ☐ **GM2** ☐ **GM3**

1. the aircraft is maintained in an airworthy condition; and
2. any operational and emergency equipment fitted is correctly installed and serviceable or clearly identified as unserviceable; and
3. the Military Certificate of Airworthiness and the Military Airworthiness Review Certificate (MARC) remain valid; and
4. the maintenance of the aircraft is performed in accordance with the Aircraft Maintenance Programme (AMP) as specified in DASR M.A.302.

NOTE: For individual aircraft or types for which a Military Certificate of Airworthiness or Military Restricted Certificate of Airworthiness is not appropriate, a Military Permit to Fly may be issued in accordance with national regulations.

(b) NOT APPLICABLE.

(c) Any organisation performing maintenance shall be responsible for the tasks performed.

(d) The Operating Organisation shall be responsible for the satisfactory accomplishment of the pre-flight inspection. This inspection must be carried out by a qualified person but need not be carried out by a DASR 145 Approved Maintenance Organisation (AMO). ☐ **AMC**

(e) NOT APPLICABLE.

(f) NOT APPLICABLE.

(g) Maintenance of military aircraft, and components thereof shall be carried out by a DASR 145 AMO, or another maintenance organisation accepted by DASA. ☐ **AMC**

(h) The Operating Organisation is responsible for the continuing airworthiness of the aircraft it operates and shall: ☐ **AMC**

Superseded

1. be appropriately approved, in accordance with DASR M Subpart G, for the management of the continuing airworthiness of the aircraft it operates; and ☐ **AMC**

2. be approved in accordance with DASR 145 or contract/task directly (or through a Continuing Airworthiness Management Organisation (CAMO)) such organisations; and ☐ **GM**

3. ensure that paragraph (a) is satisfied.

(i) NOT APPLICABLE

(j) The Operating Organisation is responsible for granting the Military Aviation Authority (MAA) access to the organisation/aircraft to determine continued compliance with this DASR.

(k) By way of exception to paragraph (h)1, an Operating Organisation may contract/task an organisation approved in accordance with DASR M.A. Subpart G, for the management of the continuing airworthiness of the aircraft it operates. In this case, a written contract/ arrangement shall be made and the CAMO assumes responsibility for the proper accomplishment of these tasks. ☐ **AMC**

M.A.202 - Occurrence reporting

(a) Any Operating Organisation accountable in accordance with DASR M.A.201, shall report to the MAA, and all further addressees as required by national regulations, any identified condition of an aircraft or component which endangers flight safety. ☐ **AMC** ☐ **GM**

(b) The Operating Organisation shall establish an occurrence reporting system to enable the collection and evaluation of such reports, including the assessment and extraction of those occurrences to be reported under paragraph (a). This procedure shall identify adverse trends, corrective actions taken or to be taken by the Operating Organisation to address deficiencies and include evaluation of all known relevant information relating to such occurrences and a method to circulate the information as necessary. ☐ **AMC**

(c) Reports shall be made in a form and manner established by the MAA and contain all pertinent information about the condition known to the Operating Organisation. ☐ **AMC** ☐ **GM**

(d) NOT APPLICABLE.

(e) Reports shall be made as soon as practicable, but in any case within 72 hours of the organisation identifying the condition to which the report relates.

SUBPART C - CONTINUING AIRWORTHINESS

M.A.301 - Continuing airworthiness tasks

(a) The continuing airworthiness of the aircraft shall be ensured by:

1. the accomplishment of pre-flight inspections; ☐ **AMC**

2. the rectification in accordance with the data specified in DASR M.A.304 of any defect and damage affecting safe operation, taking into account the Minimum Equipment List (MEL) and Configuration Deviation List (CDL) as applicable to the aircraft type; ☐ **AMC** ☐ **GM**

Superseded

3. the accomplishment of all maintenance, in accordance with the DASR M.A.302 approved Aircraft Maintenance Programme (AMP); ☐ **AMC**

4. the analysis of the effectiveness of the DASR M.A.302 AMP; ☐ **AMC**

5. the accomplishment of any applicable: ☐ **AMC**

   i. Airworthiness Directive;

   ii. operational directive with a continuing airworthiness impact;

   iii. continued or continuing airworthiness requirements mandated by the MAA;

   iv. measures mandated by the MAA in immediate reaction to a safety problem.

6. the accomplishment of modifications and repairs in accordance with DASR M.A.304;

7. for non-mandatory modifications and/or inspections, the establishment of an embodiment policy; ☐ **AMC**

8. maintenance check flights when necessary.

(b) An aircraft shall not fly if:

1. the continuing airworthiness of the aircraft or any component fitted to the aircraft does not meet the requirements of DASR M; or

2. the aircraft does not remain in conformity with the type design approved by the MAA; or

3. the aircraft has been operated beyond the limitations of the flight manual or the Military Certificate of Airworthiness, without appropriate action being taken; or

4. the aircraft has been involved in an accident or incident that affects the airworthiness of the aircraft, without subsequent appropriate action to restore airworthiness; or

5. a modification or repair is not in compliance with DASR M.A.304.

M.A.302 - Aircraft Maintenance Programme (AMP)

☐ **AMC**

(a) Maintenance of each aircraft shall be organised in accordance with an AMP. ☐ **GM**

(b) An organisation responsible for producing and amending an AMP in accordance with DASR M.A. 302 shall also be responsible for sending the AMP to the MAA. The AMP and any subsequent amendments shall be approved by the MAA.

(c) NOT APPLICABLE.

(d) The AMP shall establish compliance with: ☐ **AMC**

1. instructions issued by the MAA;

2. instructions for continuing airworthiness issued by any organisation recognised by the MAA.

Superseded

3. additional or alternative instructions, once approved in accordance with paragraph (b), proposed by the CAMO, except for intervals of safety related tasks referred in paragraph (e), which may be extended, subject to sufficient reviews carried out in accordance with paragraph g, and only when subject to direct approval in accordance with paragraph (b). ☐ **AMC**

(e) The AMP shall contain details, including frequency, of all maintenance to be carried out, including any specific tasks linked to the type and the specificity of operations.

(f) The AMP shall include a reliability programme, unless otherwise specified by the MAA. ☐ **GM**

(g) The AMP shall be subject to periodic reviews and amended accordingly when necessary. These reviews shall ensure that the AMP continues to be valid in light of the operating experience and instructions from the MAA, whilst taking into account new and / or modified maintenance instructions promulgated by the (Military) Type Certificate (MTC) and (Military) Supplementary Type Certificate (MSTC) holders and any other organisation that publishes such data in accordance with DASR 21.

M.A.303 - Airworthiness Directives

Any applicable Airworthiness Directive must be carried out within the requirements of that Airworthiness Directive, unless otherwise specified by the MAA.

M.A.304 - Data for modifications and repairs

Damage shall be assessed and modifications and repairs carried out using as appropriate: ☐ **AMC**

(a) data approved by the MAA; or

(b) data approved by a DASR 21 Design Organisation or MTC holder organisation; or ☐ **GM**

(c) NOT APPLICABLE;

(d) data produced by an organisation accepted by the MAA. ☐ **AMC** ☐ **GM**

M.A.305 - Aircraft continuing airworthiness record system

(a) At the completion of any maintenance, the Certificate of Release to Service required by DASR 145.A.50 shall be entered in the aircraft continuing airworthiness record system. Each entry shall be made as soon as practicable but in no case more than 30 days after the day of the maintenance action.

(b) The aircraft continuing airworthiness record system shall cover the aircraft, engine(s), propeller(s), any service life limited component(s) as appropriate, and shall include an aircraft technical log.

(c) The aircraft type and registration mark, the date, together with total flight time and/or flight cycles and/or landings and any other airworthiness data as required by the MAA as appropriate, shall be entered in the aircraft continuing airworthiness record system. ☐ **GM**

(d) The aircraft continuing airworthiness record system shall also contain as a minimum the current: ☐ **AMC**

Superseded

1. status of Airworthiness Directives and measures mandated by the MAA in immediate reaction to a safety problem;

2. status of modifications and repairs;

3. status of compliance with the AMP;

4. status of service life limited components; ☐ **AMC** ☐ **AMC1**

5. weight and balance report;

6. list of deferred maintenance;

7. symmetry check report (if required).

(e) In addition to the authorised release certificate, DASR Form 1 or equivalent, the following information relevant to any component installed (engine, propeller, engine module or service life-limited component) shall be entered into the aircraft continuing airworthiness record system:

1. identification of the component; and

2. the type, serial number and registration, as appropriate, of the aircraft, engine, propeller, engine module or service life-limited component to which the particular component has been fitted, along with the reference to the installation and removal of the component; and

3. the date together with the component's accumulated total flight time and/or flight cycles and/or landings and/or calendar time, and/or any other approved service life consumption units as appropriate; and

4. the current paragraph (d) information applicable to the component.

(f) The CAMO responsible for the management of continuing airworthiness tasks in accordance with DASR M.A. Subpart B, shall control the records as detailed in this paragraph and present the records to the MAA upon request.

(g) All entries made in the aircraft continuing airworthiness record system shall be clear and accurate. When it is necessary to correct an entry, the correction shall be made in a manner that clearly shows the original entry. ☐ **AMC** ☐ **GM**

(h) An Operating Organisation shall ensure that a system has been established to keep the following records for the periods specified: ☐ **AMC**

1. all detailed maintenance records in respect of the aircraft and any service life-limited component fitted thereto, until such time as the information contained therein is superseded by new information equivalent in scope and detail but not less than 36 months after the aircraft or component has been released to service; and

2. the total time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) of the aircraft and all service life-limited components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

3. the time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) as appropriate, since last scheduled maintenance of the component subjected to a service life limit, at least until the component

Superseded

scheduled maintenance has been superseded by another scheduled maintenance of equivalent work scope and detail; and

4. the current status of compliance with all maintenance programme tasks such that compliance with the Aircraft Maintenance Programme can be established, at least until the aircraft or component scheduled maintenance task has been repeated; and

5. the current status of Airworthiness Directives applicable to the aircraft and components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

6. details of current modifications and repairs to the aircraft, engine(s), propeller(s) and any other component vital to flight safety, at least 12 months after they have been permanently withdrawn from service. ☐ **AMC**

M.A.306 - Aircraft technical log

(a) In addition to the requirements of DASR M.A.305, an Operating Organisation shall use an aircraft technical log containing the following information for each aircraft: ☐ **AMC**

1. information about each flight, necessary to ensure continued flight safety; and

2. the current aircraft Certificate of Release to Service; and

3. the current maintenance statement giving the aircraft maintenance status of what scheduled and out of phase maintenance is next due except that the MAA may agree to the maintenance statement being kept elsewhere; and

4. all outstanding deferred defects rectifications that affect the operation of the aircraft; and

5. any necessary guidance instructions on maintenance support arrangements.

(b) The aircraft technical log and any subsequent amendments shall be approved by the MAA. ☐ **AMC**

(c) An Operating Organisation shall ensure that the aircraft technical log is retained for at least 36 months after the date of the last entry.

M.A.307 - Transfer of aircraft continuing airworthiness records

(a) The Operating Organisation shall ensure when an aircraft is permanently transferred to another Operating Organisation, that the records within the DASR M.A.305 continuing airworthiness records system, are also transferred. The time periods prescribed for the retention of records shall continue to apply to the new Operating Organisation.

(b) The Operating Organisation shall ensure that when the continuing airworthiness management tasks are contracted/tasked to an external CAMO, that the records within the DASR M.A.305 aircraft continuing airworthiness records system, are transferred to that CAMO.

(c) Moved to paragraph (a).

Superseded

SUBPART D - MAINTENANCE STANDARDS

NOT APPLICABLE – See DASR 145

SUBPART E - COMPONENTS

NOT APPLICABLE – See DASR 145

SUBPART F - MAINTENANCE ORGANISATION

NOT APPLICABLE

SUBPART G - CONTINUING AIRWORTHINESS MANAGEMENT ORGANISATION (CAMO)

M.A.701 - Scope

This Subpart establishes the requirements to be met by an organisation to qualify for the issue or continuation of an approval for the management of aircraft continuing airworthiness.

M.A.702 - Application

(a) An application for issue or change of a CAMO approval shall be made on a form and in a manner established by the MAA. ☐ **AMC**

(b) It shall include the following documents: ☐ **AMC**

1. the Continuing Airworthiness Management Exposition (CAME); and
2. the Operating Organisation's Aircraft Maintenance Programmes (only if the participating Member State (pMS) requires the CAMO to develop and control the AMP for the aircraft managed); and ☐ **GM**
3. the aircraft technical log(s); and
4. where appropriate, the technical specification(s) of the DASR M.A.708(c) maintenance contracts/taskings with the DASR 145 AMO(s); and
5. any additional documentation required by the MAA. ☐ **AMC**

M.A.703 - Extent of approval

(a) The approval is indicated on a DASR Form 14, issued by the MAA.

(b) NOT APPLICABLE.

(c) The scope of work deemed to constitute the approval shall be specified in the CAME in accordance with DASR M.A.704.

Superseded

AMC

(a) The CAMO shall provide a CAME containing the following information:

1. a statement signed by the Accountable Manager to confirm that the organisation will work in accordance with DASR M and the Exposition at all times; and
2. the organisation's scope of work; and
3. the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) andM.A.706(i); and
4. an organisation chart showing associated chains of responsibility between all the person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i); and
5. a list of the airworthiness review staff referred to in DASR M.A.707; and
6. a general description and location of the facilities; and
7. procedures specifying how the CAMO ensures compliance with this DASR; and
8. the CAME amendment procedures; and
9. the list of approved AMPs (see DASR M.A. 302); and
10. a list of all contractors/tasked organisations (where applicable); and
11. the names of all Operating Organisations to which CAMO support activities are provided (if applicable).

(b) The CAME and its amendments shall be approved by the MAA.

(c) Notwithstanding paragraph (b), minor amendments to the CAME may be approved indirectly through an indirect approval procedure. The indirect approval procedure shall define the minor amendment eligible, be established by the CAMO as part of the CAME and be approved by the MAA. **GM**

M.A.705 - Facilities

The CAMO shall ensure suitable office accommodation is provided at appropriate locations for the personnel specified in DASR M.A.706. **AMC**

M.A.706 - Personnel requirements

AMC

(a) The CAMO shall appoint an Accountable Manager, who has corporate authority for ensuring that all continuing airworthiness management activities can be resourced and carried out in accordance with this DASR. Where the CAMO is part of an Operating Organisation, the Accountable Manager shall be the same person who has the corporate authority for ensuring that all operations of the Operating Organisation can be resourced and carried out to the standard detailed in DASR M.A.201(h). **AMC**

Superseded

(b) NOT APPLICABLE.

(c) A person or group of persons shall be nominated with the responsibility of ensuring that the CAMO is always in compliance with this Subpart. Such person(s) shall be ultimately responsible to the Accountable Manager.

(d) The Accountable Manager shall designate a Continuing Airworthiness Manager. This person shall be responsible for the management and supervision of continuing airworthiness activities, pursuant to paragraph (c).

(e) The Continuing Airworthiness Manager referred to in paragraph (d) shall not be employed by a DASR 145 AMO under contract to the Operating Organisation, unless specifically agreed by the MAA. ☐ **AMC**

(f) The CAMO shall have sufficient appropriately qualified staff for the expected work. ☐ **AMC**

(g) All paragraph (c) and (d) persons shall be able to demonstrate relevant knowledge, background and appropriate experience related to aircraft continuing airworthiness.

(h) The qualifications of all personnel involved in continuing airworthiness management shall be recorded. ☐ **GM**

(i) For CAMOs extending Military Airworthiness Review Certificates (MARC) in accordance with DASR M.A.711(a)4 and DASR M.A.901(c)2, the CAMO shall nominate persons authorised to do so, subject to approval by the MAA. ☐ **AMC**

(j) The CAMO shall define and keep updated in the CAME, the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i).

(k) The CAMO shall establish and control the competence of personnel involved in the continuing airworthiness management, airworthiness review and/or quality audits, in accordance with a procedure and to a standard agreed by the MAA. ☐ **AMC**

M.A.707 - Airworthiness review staff

(a) To be approved to carry out airworthiness reviews, a CAMO shall have appropriate airworthiness review staff to issue Military Airworthiness Review Certificates (MARC) or recommendations referred to in DASR M.A. Subpart I: ☐ **AMC**

1. These staff shall have acquired:

   i. at least five years' experience in continuing airworthiness; and

   ii. an appropriate Military Aircraft Maintenance Licence (MAML) in compliance with DASR 66 or an aeronautical degree or a national equivalent; and

   iii. formal aeronautical maintenance training; and ☐ **AMC**

   iv. a position within the CAMO with appropriate responsibilities.

   v. Notwithstanding paragraph (i) to (iv), the requirement laid down in DASR M.A.707(a)1(ii) may be replaced by five years of experience in continuing airworthiness additional to those already required by DASR M.A.707(a)1(i).

2. NOT APPLICABLE.

Superseded

(b) Airworthiness review staff nominated by the CAMO can only be issued with an authorisation by the CAMO when formally accepted by the MAA after satisfactory completion of an airworthiness review under supervision. ☐ **AMC**

(c) The CAMO shall ensure that aircraft airworthiness review staff can demonstrate appropriate recent continuing airworthiness management experience. ☐ **AMC**

(d) Airworthiness review staff shall be identified by listing each person in the CAME together with their airworthiness review authorisation reference.

(e) The CAMO shall maintain a record of all airworthiness review staff, which shall include details of any appropriate qualification held together with a summary of relevant continuing airworthiness management experience and training and a copy of the authorisation. This record shall be retained until two years after the airworthiness review staff have left the CAMO. ☐ **AMC**

M.A.708 - Continuing airworthiness management

☐ **GM** ☐ **GM1**

(a) All continuing airworthiness management shall be carried out according to the prescriptions of DASR M.A. Subpart C—Continuing Airworthiness.

(b) For every aircraft managed, the CAMO shall:

1. have access to and use the applicable current AMP(s) for the aircraft managed;
2. if required by the pMS: ☐ **GM**
   i. develop and control the AMP for the aircraft managed including any applicable reliability programme; and
   ii. present the AMP and its amendments to the MAA for approval, unless covered by an indirect approval procedure. In that case, the indirect approval procedure shall be established by the CAMO, as part of the CAME, and shall be approved by the MAA.
3. manage the accomplishment of modifications and repairs;
4. ensure that all maintenance is carried out in accordance with the AMP and released in accordance with DASR 145 or DASR M.A. Subpart H;
5. ensure that all applicable Airworthiness Directives and operational directives with a continuing airworthiness impact are applied;
6. ensure that all defects discovered or reported, are managed appropriately until corrected by a DASR 145 AMO;
7. ensure that maintenance is only carried out by a DASR 145 AMO;
8. coordinate scheduled maintenance, the application of Airworthiness Directives, the replacement of service life limited parts and component inspection and ensure the work is carried out properly;
9. manage and archive all continuing airworthiness records;

Superseded

10. ensure that the weight and balance statement reflects the current status of the aircraft;

11. ensure the symmetry check statement reflects the current status of the aircraft (if applicable);

12. initiate and coordinate any necessary actions and follow-up activity highlighted by an occurrence report.

(c) Where there is a maintenance contract/tasking with a DASR 145 AMO, it shall detail the functions specified under DASR M.A.301(a)2, DASR M.A.301(a)3, DASR M.A.301(a)5,DASR M.A.301(a)6 and DASR M.A.301(a)8, and define the support of the quality functions of DASR M.A.712(b). ☐ **AMC**

M.A.709 - Documentation

☐ **AMC**

(a) The CAMO shall have access to and use applicable current maintenance data in accordance with DASR 145.A.45, for the performance of continuing airworthiness tasks referred to in DASR M.A.708. This data will be provided by the Operating Organisation/(M)TC holder/any other organisation as defined in DASR 21 as appropriate, subject to an appropriate contract/ tasking being established. In such a case, the CAMO only needs access to such data for the duration of the contract, except when required by DASR M.A.714.

(b) NOT APPLICABLE.

M.A.710 - Airworthiness review

(a) To satisfy the requirement for the airworthiness review of an aircraft referred to in DASR M.A.901, a review of the aircraft records shall be carried out by the CAMO in order to be satisfied that: ☐ **AMC**

1. airframe, engine and propeller flying hours and associated flight cycles and / or landings and any other airworthiness data as required by the MAA, have been properly recorded; and

2. the aircraft flight manual and / or any other manuals required by the MAA are applicable to the aircraft configuration and reflect the latest revision status; and

3. all the maintenance due on the aircraft according to the AMP has been carried out; and ☐ **AMC**

4. all known defects have been corrected or, when applicable, carried forward in a controlled manner; and

5. all applicable Airworthiness Directives have been applied and properly registered; and

6. all modifications and repairs applied to the aircraft have been registered and are in compliance with DASR M.A.304; and

7. all service life limited components installed on the aircraft are properly identified, registered and have not exceeded their approved service life limit; and

Superseded

8. all maintenance has been released in accordance with DASR 145 or DASR M.A.Subpart H; and

9. the current weight and balance statement reflects the configuration of the aircraft and is valid; and

10. the aircraft complies with the latest revision of its type design approved by the MAA/(M)TC holder; and

11. NOT APPLICABLE.

12. if required, the current symmetry report reflects the configuration of the aircraft and is valid.

This review shall be fully documented.

(b) The airworthiness review staff of the CAMO shall carry out a physical survey of the aircraft. For this survey, airworthiness review staff not appropriately qualified to DASR 66 and authorised in accordance with DASR 145.A.35, shall be assisted by such qualified/authorised personnel. ☐ **AMC**

(c) Through the physical survey of the aircraft, the airworthiness review staff shall ensure that: ☐ **AMC**

1. all required markings and placards are properly installed; and

2. the aircraft complies with its aircraft flight manual and/or any other manuals required by the MAA; and

3. the aircraft configuration complies with the approved data; and

4. no evident defect can be found that could not have been reasonably expected to be addressed; and

5. no inconsistencies can be found between the aircraft and the paragraph (a) review of records.

(d) By way of exception to DASR M.A.901(a), the airworthiness review can be anticipated by a maximum period of 90 days without loss of continuity of the airworthiness review pattern, to allow the physical survey to take place during a maintenance check. ☐ **AMC**

(e) The Military Airworthiness Review Certificate (MARC) (DASR Form 15b) or the recommendation for the issue of the MARC (DASR Form 15a) can only be issued: ☐ **AMC** ☐ **GM**

1. by airworthiness review staff appropriately authorised in accordance with DASR M.A.707, on behalf of the CAMO; and

2. when the airworthiness review has been completely carried out and that there is no non-compliance which is known to endanger flight safety.

(f) A copy of any MARC issued or extended for an aircraft shall be sent to the MAA within 10 days.

(g) All MARC tasks must be completed/supervised/managed by authorised airworthiness review staff. ☐ **AMC**

Superseded

(h) NOT APPLICABLE.

M.A.711 - Privileges of the organisation

(a) In accordance with its CAME, for any aircraft listed on its approval certificate a CAMO approved in accordance with Section A, Subpart G:

1. shall manage the continuing airworthiness of specific aircraft;

2. NOT APPLICABLE;

3. may arrange for any of the continuing airworthiness management tasks to be carried out by another organisation that is:

   i. working under the quality system of the CAMO; or

   ii. working under their own DASR M.A. Subpart G approval.

In either case, the CAMO retains responsibility for all CAMO functions irrespective of who is undertaking them. All such organisations shall be listed on the approval certificate;

4. may extend, under the conditions of DASR M.A.901(f), a MARC.

(b) A CAMO may, additionally, carry out airworthiness reviews referred to in DASR M.A.710 for any aircraft listed on the approval certificate and:

1. issue the related MARC and extend it in due time under the conditions of DASR M.A.901(c)2; and

2. issue a recommendation for the airworthiness review to the MAA.

(c) NOT APPLICABLE.

(d) A CAMO may, if required by pMS according to DASR M.A.708(b)2, develop and control the DASR M.A.302 AMPs, including any applicable reliability programme for any aircraft listed on the approval certificate.

M.A.712 - Quality system and safety management system

(a) To ensure that the CAMO continues to meet the requirements of this Subpart, it shall establish a quality system and designate a Quality Manager to monitor compliance with, and the adequacy of, procedures required to ensure airworthy aircraft. Compliance monitoring shall include a feedback system to the Accountable Manager to ensure corrective action as necessary. ☐ **AMC**

(b) The quality system shall monitor DASR M.A. Subpart G activities. It shall at least include the following functions: ☐ **AMC** ☐ **GM**

1. monitoring that all DASR M.A. Subpart G activities are being performed in accordance with the approved procedures; and

2. monitoring that all contracted / tasked maintenance is carried out in accordance with the contract / tasking; and

3. monitoring the continued compliance with the requirements of this DASR.

Superseded

(c) The records of these activities shall be stored for at least two years.

(d) Where an organisation has several DASR approvals, the quality systems may be combined.

(e) The CAMO's quality system shall be an integrated part of the Operating Organisation's quality system, unless the MAA approves otherwise. ☐ **GM**

(f) NOT APPLICABLE.

(g) The CAMO's Safety Management System (SMS) shall be an integrated part of the Operating Organisation's SMS, unless the MAA approves otherwise. ☐ **GM**

M.A.713 - Changes to the CAMO

(a) In order to enable the MAA to determine continued compliance with this DASR, the CAMO shall notify the MAA of any proposal to change any of the following, before such changes take place: ☐ **AMC**

1. the name of the CAMO;
2. the location of the CAMO;
3. additional locations of the CAMO;
4. the Accountable Manager;
5. any of the persons specified in DASR M.A.706(c);
6. the facilities, procedures, work scope and staff that could affect the approval;
7. any change that affects the approval certificate.

(b) In the case of proposed changes in personnel not known to the management beforehand, these changes shall be notified at the earliest opportunity.

M.A.714 - Record-keeping

☐ **AMC**

(a) The CAMO shall record all details of continuing airworthiness management activity carried out. The aircraft records required by DASR M.A.305 and, if applicable, DASR M.A.306, shall be retained.

(b) If the CAMO has the privilege referred to in DASR M.A.711(b), it shall retain a copy of each MARC and recommendation issued or, as applicable, extended, together with all supporting documents. In addition, the CAMO shall retain a copy of any MARC that it has extended under the privilege referred to in DASR M.A.711(a)4.

(c) Permits to Fly, and all documents relating to their issue as detailed in DASR 21 Subpart P, shall be retained.

(d) The CAMO shall retain a copy of all records referred to in paragraphs (b) and (c) for at least two years after the aircraft has been permanently withdrawn from service.

Superseded

(e) The records shall be stored in a manner that ensures protection from damage, alteration and theft. The records shall remain readable and accessible for the duration of the storage period.

(f) All computer hardware used to ensure backup shall be stored in a different location from that containing the working data, in an environment that ensures they remain in good condition.

(g) Where continuing airworthiness management of an aircraft is transferred to another CAMO, all retained records shall be transferred to the new CAMO. The time periods prescribed for the retention of records shall continue to apply to the new CAMO.

(h) Where a CAMO terminates its operation, all retained records shall be transferred to the Operating Organisation (if applicable), unless determined otherwise by the MAA.

M.A.715 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. the CAMO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings and;

2. the MAA being granted access to the CAMO to determine continued compliance with this DASR; and

3. the approval not being surrendered or revoked.

(b) Upon surrender or revocation, the approval certificate shall be returned to the MAA.

M.A.716 - CAMO findings by the MAA

Refer to GR.60 Oversight and enforcement.

SUBPART H - CERTIFICATE OF RELEASE TO SERVICE (CRS) (AUS)

M.A.801 - Aircraft certificate of release to service (AUS)

(a) Except for aircraft released to service by a maintenance organisation approved in accordance with DASR 145, the certificate of release to service shall be issued according to this Subpart;

(b) No aircraft can be released to service unless a certificate of release to service is issued at the completion of any maintenance, when satisfied that all maintenance required has been properly carried out, by: ☐ **AMC**

1. appropriate certifying staff on behalf of the maintenance organisation considered equivalent to DASR 145 in accordance with DASR M.A.201(g)

(c) NOT APPLICABLE

(d) NOT APPLICABLE

(e) NOT APPLICABLE

(f) A certificate of release to service shall contain as a minimum: ☐ **AMC**

Superseded

1. basic details of the maintenance carried out; and

2. the date such maintenance was completed; and

3. the identity of the organisation and/or person issuing the release to service, including:

   i. the approval reference of the DASR M.A.201(g) maintenance organisation (if applicable) and the certifying staff issuing such a certificate.

4. the limitations to airworthiness or operations, if any.

(g) By way of exception from paragraph (b) and notwithstanding the provisions of paragraph (h), when the maintenance prescribed cannot be completed, a certificate of release to service may be issued within the approved aircraft limitations. Such fact together with any applicable limitations of the airworthiness or the operations shall be entered in the aircraft certificate of release to service before its issue as part of the information required in DASR M.A.801(f).4. ☐ **AMC**

(h) A certificate of release to service shall not be issued in the case of any known non-compliance which endangers flight safety. ☐ **AMC**

M.A.802 - Component certificate of release to service (AUS)

☐ **AMC**

(a) Except for aircraft components released to service in accordance with DASR 21 or DASR 145, the certificate of release to service / authorised release certificate shall be issued according to this Subpart.

(b) A component certificate of release to service may be issued by a maintenance organisation accepted by DASA in accordance with DASR M.A.201(g).

(c) A component certificate of release to service may be issued by a production organisation accepted by DASA. ☐ **AMC**

SUBPART I - MILITARY AIRWORTHINESS REVIEW CERTIFICATE (MARC)

M.A.901 - Aircraft airworthiness review

To ensure the validity of the Military Certificate of Airworthiness an airworthiness review of the aircraft and its continuing airworthiness records shall be carried out periodically. ☐ **AMC**

(a) A MARC is issued in accordance with DASR Form 15a, or DASR Form 15b on completion of a satisfactory airworthiness review. The MARC is valid one year. ☐ **AMC**

(b) NOT APPLICABLE.

(c) The CAMO may, if appropriately approved, and subject to compliance with paragraph (k):

1. issue a MARC in accordance with DASR M.A.710; and

2. for MARCs it has issued, extend twice the validity of a MARC for a period of one year each time. ☐ **AMC**

Superseded

(d) For all aircraft that have their continuing airworthiness managed by a CAMO that does not hold the privilege to carry out airworthiness reviews, the MARC shall be issued by the MAA upon satisfactory assessment based on a recommendation made by a CAMO appropriately approved in accordance with DASR M.A.711(b)(2), sent together with the application from the Operating Organisation. This recommendation shall be based on an airworthiness review carried out in accordance with DASR M.A.710. ☐ **AMC**

(e) NOT APPLICABLE.

(f) Subject to compliance with paragraph (k), a CAMO may extend twice for a period of one year each time the validity of a MARC that has been issued by the MAA or by another CAMO approved in accordance with Section A, Subpart G.

(g) NOT APPLICABLE.

(h) Notwithstanding paragraphs (a), (c) and (d) above, the MAA may carry out a MARC at any time it considers it appropriate to do so.

(i) NOT APPLICABLE.

(j) When the MAA carries out the airworthiness review and/or issues the MARC itself, the Operating Organisation shall provide the MAA with: ☐ **AMC**

1. the documentation required by the MAA; and
2. suitable accommodation at the appropriate location for its personnel; and
3. when necessary, the support of personnel appropriately authorised in accordance with DASR 145.A.35;

(k) A MARC cannot be issued nor extended if there is evidence or reason to believe that the aircraft is not airworthy.

M.A.902 - Validity of the MARC

(a) A MARC becomes invalid if:

1. surrendered, suspended or revoked; or
2. the Military Certificate of Airworthiness is suspended or revoked; or
3. the aircraft is removed from the military aircraft register of the MAA; or
4. the (Military) Type Certificate under which the Military Certificate of Airworthiness was issued is suspended or revoked.

(b) Moved to DASR M.A.301(b).

(c) Upon surrender or revocation, the MARC shall be returned to the MAA.

Superseded

M.A.903 - NOT APPLICABLE

M.A.904 - NOT APPLICABLE

M.A.905 - Findings from an aircraft airworthiness review carried out by the MAA

(a) After receipt of notification of findings by the MAA, the Operating Organisation of the aircraft concerned shall manage the finding IAW GR.60, and: ☐ **GM**

1. ensure the aircraft with a non-compliance does not fly until such time that any condition defined in DASR M.A.301(b), has been corrected. ☐ **AMC**

(b) NOT APPLICABLE

(c) NOT APPLICABLE

(d) The Operating Organisation shall consider the potential for non-compliance in other aircraft under its responsibility and take appropriate action in accordance with DASR M.A.905(a)1.

SUBPART H - CERTIFICATE OF RELEASE TO SERVICE (CRS) (AUS)

SECTION A

SUBPART A - GENERAL

M.A.101 - Scope

This Section establishes the measures to be taken to ensure that airworthiness is maintained. It also specifies the conditions to be met by organisations involved in such continuing airworthiness management.

SUBPART B - ACCOUNTABILITY

M.A.201 - Responsibilities

(a) The Operating Organisation is accountable for the continuing airworthiness of an aircraft and shall ensure that no flight takes place unless: ☐ **GM1** ☐ **GM2** ☐ **GM3**

1. the aircraft is maintained in an airworthy condition; and
2. any operational and emergency equipment fitted is correctly installed and serviceable or clearly identified as unserviceable; and
3. the Military Certificate of Airworthiness and the Military Airworthiness Review Certificate (MARC) remain valid; and
4. the maintenance of the aircraft is performed in accordance with the Aircraft Maintenance Programme (AMP) as specified in DASR M.A.302.

NOTE: For individual aircraft or types for which a Military Certificate of Airworthiness or Military Restricted Certificate of Airworthiness is not appropriate, a Military Permit to Fly may be issued in accordance with national regulations.

(b) NOT APPLICABLE.

(c) Any organisation performing maintenance shall be responsible for the tasks performed.

(d) The Operating Organisation shall be responsible for the satisfactory accomplishment of the pre-flight inspection. This inspection must be carried out by a qualified person but need not be carried out by a DASR 145 Approved Maintenance Organisation (AMO). ☐ **AMC**

(e) NOT APPLICABLE.

(f) NOT APPLICABLE.

(g) Maintenance of military aircraft, and components thereof shall be carried out by a DASR 145 AMO, or another maintenance organisation accepted by DASA. ☐ **AMC**

(h) The Operating Organisation is responsible for the continuing airworthiness of the aircraft it operates and shall: ☐ **AMC**

Superseded

1. be appropriately approved, in accordance with DASR M Subpart G, for the management of the continuing airworthiness of the aircraft it operates; and ☐ **AMC**

2. be approved in accordance with DASR 145 or contract/task directly (or through a Continuing Airworthiness Management Organisation (CAMO)) such organisations; and ☐ **GM**

3. ensure that paragraph (a) is satisfied.

(i) NOT APPLICABLE

(j) The Operating Organisation is responsible for granting the Military Aviation Authority (MAA) access to the organisation/aircraft to determine continued compliance with this DASR.

(k) By way of exception to paragraph (h)1, an Operating Organisation may contract/task an organisation approved in accordance with DASR M.A. Subpart G, for the management of the continuing airworthiness of the aircraft it operates. In this case, a written contract/ arrangement shall be made and the CAMO assumes responsibility for the proper accomplishment of these tasks. ☐ **AMC**

M.A.202 - Occurrence reporting

(a) Any Operating Organisation accountable in accordance with DASR M.A.201, shall report to the MAA, and all further addressees as required by national regulations, any identified condition of an aircraft or component which endangers flight safety. ☐ **AMC** ☐ **GM**

(b) The Operating Organisation shall establish an occurrence reporting system to enable the collection and evaluation of such reports, including the assessment and extraction of those occurrences to be reported under paragraph (a). This procedure shall identify adverse trends, corrective actions taken or to be taken by the Operating Organisation to address deficiencies and include evaluation of all known relevant information relating to such occurrences and a method to circulate the information as necessary. ☐ **AMC**

(c) Reports shall be made in a form and manner established by the MAA and contain all pertinent information about the condition known to the Operating Organisation. ☐ **AMC** ☐ **GM**

(d) NOT APPLICABLE.

(e) Reports shall be made as soon as practicable, but in any case within 72 hours of the organisation identifying the condition to which the report relates.

SUBPART C - CONTINUING AIRWORTHINESS

M.A.301 - Continuing airworthiness tasks

(a) The continuing airworthiness of the aircraft shall be ensured by:

1. the accomplishment of pre-flight inspections; ☐ **AMC**

2. the rectification in accordance with the data specified in DASR M.A.304 of any defect and damage affecting safe operation, taking into account the Minimum Equipment List (MEL) and Configuration Deviation List (CDL) as applicable to the aircraft type; ☐ **AMC** ☐ **GM**

Superseded

3. the accomplishment of all maintenance, in accordance with the DASR M.A.302 approved Aircraft Maintenance Programme (AMP); ☐ **AMC**

4. the analysis of the effectiveness of the DASR M.A.302 AMP; ☐ **AMC**

5. the accomplishment of any applicable: ☐ **AMC**

   i. Airworthiness Directive;

   ii. operational directive with a continuing airworthiness impact;

   iii. continued or continuing airworthiness requirements mandated by the MAA;

   iv. measures mandated by the MAA in immediate reaction to a safety problem.

6. the accomplishment of modifications and repairs in accordance with DASR M.A.304;

7. for non-mandatory modifications and/or inspections, the establishment of an embodiment policy; ☐ **AMC**

8. maintenance check flights when necessary.

(b) An aircraft shall not fly if:

1. the continuing airworthiness of the aircraft or any component fitted to the aircraft does not meet the requirements of DASR M; or

2. the aircraft does not remain in conformity with the type design approved by the MAA; or

3. the aircraft has been operated beyond the limitations of the flight manual or the Military Certificate of Airworthiness, without appropriate action being taken; or

4. the aircraft has been involved in an accident or incident that affects the airworthiness of the aircraft, without subsequent appropriate action to restore airworthiness; or

5. a modification or repair is not in compliance with DASR M.A.304.

M.A.302 - Aircraft Maintenance Programme (AMP)

☐ **AMC**

(a) Maintenance of each aircraft shall be organised in accordance with an AMP. ☐ **GM**

(b) An organisation responsible for producing and amending an AMP in accordance with DASR M.A. 302 shall also be responsible for sending the AMP to the MAA. The AMP and any subsequent amendments shall be approved by the MAA.

(c) NOT APPLICABLE.

(d) The AMP shall establish compliance with: ☐ **AMC**

1. instructions issued by the MAA;

2. instructions for continuing airworthiness issued by any organisation recognised by the MAA.

Superseded

3. additional or alternative instructions, once approved in accordance with paragraph (b), proposed by the CAMO, except for intervals of safety related tasks referred in paragraph (e), which may be extended, subject to sufficient reviews carried out in accordance with paragraph g, and only when subject to direct approval in accordance with paragraph (b). ☐ **AMC**

(e) The AMP shall contain details, including frequency, of all maintenance to be carried out, including any specific tasks linked to the type and the specificity of operations.

(f) The AMP shall include a reliability programme, unless otherwise specified by the MAA. ☐ **GM**

(g) The AMP shall be subject to periodic reviews and amended accordingly when necessary. These reviews shall ensure that the AMP continues to be valid in light of the operating experience and instructions from the MAA, whilst taking into account new and / or modified maintenance instructions promulgated by the (Military) Type Certificate (MTC) and (Military) Supplementary Type Certificate (MSTC) holders and any other organisation that publishes such data in accordance with DASR 21.

M.A.303 - Airworthiness Directives

Any applicable Airworthiness Directive must be carried out within the requirements of that Airworthiness Directive, unless otherwise specified by the MAA.

M.A.304 - Data for modifications and repairs

Damage shall be assessed and modifications and repairs carried out using as appropriate: ☐ **AMC**

(a) data approved by the MAA; or

(b) data approved by a DASR 21 Design Organisation or MTC holder organisation; or ☐ **GM**

(c) NOT APPLICABLE;

(d) data produced by an organisation accepted by the MAA. ☐ **AMC** ☐ **GM**

M.A.305 - Aircraft continuing airworthiness record system

(a) At the completion of any maintenance, the Certificate of Release to Service required by DASR 145.A.50 shall be entered in the aircraft continuing airworthiness record system. Each entry shall be made as soon as practicable but in no case more than 30 days after the day of the maintenance action.

(b) The aircraft continuing airworthiness record system shall cover the aircraft, engine(s), propeller(s), any service life limited component(s) as appropriate, and shall include an aircraft technical log.

(c) The aircraft type and registration mark, the date, together with total flight time and/or flight cycles and/or landings and any other airworthiness data as required by the MAA as appropriate, shall be entered in the aircraft continuing airworthiness record system. ☐ **GM**

(d) The aircraft continuing airworthiness record system shall also contain as a minimum the current: ☐ **AMC**

Superseded

1. status of Airworthiness Directives and measures mandated by the MAA in immediate reaction to a safety problem;

2. status of modifications and repairs;

3. status of compliance with the AMP;

4. status of service life limited components; ☐ **AMC** ☐ **AMC1**

5. weight and balance report;

6. list of deferred maintenance;

7. symmetry check report (if required).

(e) In addition to the authorised release certificate, DASR Form 1 or equivalent, the following information relevant to any component installed (engine, propeller, engine module or service life-limited component) shall be entered into the aircraft continuing airworthiness record system:

1. identification of the component; and

2. the type, serial number and registration, as appropriate, of the aircraft, engine, propeller, engine module or service life-limited component to which the particular component has been fitted, along with the reference to the installation and removal of the component; and

3. the date together with the component's accumulated total flight time and/or flight cycles and/or landings and/or calendar time, and/or any other approved service life consumption units as appropriate; and

4. the current paragraph (d) information applicable to the component.

(f) The CAMO responsible for the management of continuing airworthiness tasks in accordance with DASR M.A. Subpart B, shall control the records as detailed in this paragraph and present the records to the MAA upon request.

(g) All entries made in the aircraft continuing airworthiness record system shall be clear and accurate. When it is necessary to correct an entry, the correction shall be made in a manner that clearly shows the original entry. ☐ **AMC** ☐ **GM**

(h) An Operating Organisation shall ensure that a system has been established to keep the following records for the periods specified: ☐ **AMC**

1. all detailed maintenance records in respect of the aircraft and any service life-limited component fitted thereto, until such time as the information contained therein is superseded by new information equivalent in scope and detail but not less than 36 months after the aircraft or component has been released to service; and

2. the total time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) of the aircraft and all service life-limited components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

3. the time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) as appropriate, since last scheduled maintenance of the component subjected to a service life limit, at least until the component

Superseded

scheduled maintenance has been superseded by another scheduled maintenance of equivalent work scope and detail; and

4. the current status of compliance with all maintenance programme tasks such that compliance with the Aircraft Maintenance Programme can be established, at least until the aircraft or component scheduled maintenance task has been repeated; and

5. the current status of Airworthiness Directives applicable to the aircraft and components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

6. details of current modifications and repairs to the aircraft, engine(s), propeller(s) and any other component vital to flight safety, at least 12 months after they have been permanently withdrawn from service. ☐ **AMC**

M.A.306 - Aircraft technical log

(a) In addition to the requirements of DASR M.A.305, an Operating Organisation shall use an aircraft technical log containing the following information for each aircraft: ☐ **AMC**

1. information about each flight, necessary to ensure continued flight safety; and

2. the current aircraft Certificate of Release to Service; and

3. the current maintenance statement giving the aircraft maintenance status of what scheduled and out of phase maintenance is next due except that the MAA may agree to the maintenance statement being kept elsewhere; and

4. all outstanding deferred defects rectifications that affect the operation of the aircraft; and

5. any necessary guidance instructions on maintenance support arrangements.

(b) The aircraft technical log and any subsequent amendments shall be approved by the MAA. ☐ **AMC**

(c) An Operating Organisation shall ensure that the aircraft technical log is retained for at least 36 months after the date of the last entry.

M.A.307 - Transfer of aircraft continuing airworthiness records

(a) The Operating Organisation shall ensure when an aircraft is permanently transferred to another Operating Organisation, that the records within the DASR M.A.305 continuing airworthiness records system, are also transferred. The time periods prescribed for the retention of records shall continue to apply to the new Operating Organisation.

(b) The Operating Organisation shall ensure that when the continuing airworthiness management tasks are contracted/tasked to an external CAMO, that the records within the DASR M.A.305 aircraft continuing airworthiness records system, are transferred to that CAMO.

(c) Moved to paragraph (a).

Superseded

SUBPART D - MAINTENANCE STANDARDS

NOT APPLICABLE – See DASR 145

SUBPART E - COMPONENTS

NOT APPLICABLE – See DASR 145

SUBPART F - MAINTENANCE ORGANISATION

NOT APPLICABLE

SUBPART G - CONTINUING AIRWORTHINESS MANAGEMENT ORGANISATION (CAMO)

M.A.701 - Scope

This Subpart establishes the requirements to be met by an organisation to qualify for the issue or continuation of an approval for the management of aircraft continuing airworthiness.

M.A.702 - Application

(a) An application for issue or change of a CAMO approval shall be made on a form and in a manner established by the MAA. ☐ **AMC**

(b) It shall include the following documents: ☐ **AMC**

1. the Continuing Airworthiness Management Exposition (CAME); and
2. the Operating Organisation's Aircraft Maintenance Programmes (only if the participating Member State (pMS) requires the CAMO to develop and control the AMP for the aircraft managed); and ☐ **GM**
3. the aircraft technical log(s); and
4. where appropriate, the technical specification(s) of the DASR M.A.708(c) maintenance contracts/taskings with the DASR 145 AMO(s); and
5. any additional documentation required by the MAA. ☐ **AMC**

M.A.703 - Extent of approval

(a) The approval is indicated on a DASR Form 14, issued by the MAA.

(b) NOT APPLICABLE.

(c) The scope of work deemed to constitute the approval shall be specified in the CAME in accordance with DASR M.A.704.

Superseded

AMC

(a) The CAMO shall provide a CAME containing the following information:

1. a statement signed by the Accountable Manager to confirm that the organisation will work in accordance with DASR M and the Exposition at all times; and
2. the organisation's scope of work; and
3. the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) andM.A.706(i); and
4. an organisation chart showing associated chains of responsibility between all the person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i); and
5. a list of the airworthiness review staff referred to in DASR M.A.707; and
6. a general description and location of the facilities; and
7. procedures specifying how the CAMO ensures compliance with this DASR; and
8. the CAME amendment procedures; and
9. the list of approved AMPs (see DASR M.A. 302); and
10. a list of all contractors/tasked organisations (where applicable); and
11. the names of all Operating Organisations to which CAMO support activities are provided (if applicable).

(b) The CAME and its amendments shall be approved by the MAA.

(c) Notwithstanding paragraph (b), minor amendments to the CAME may be approved indirectly through an indirect approval procedure. The indirect approval procedure shall define the minor amendment eligible, be established by the CAMO as part of the CAME and be approved by the MAA. **GM**

M.A.705 - Facilities

The CAMO shall ensure suitable office accommodation is provided at appropriate locations for the personnel specified in DASR M.A.706. **AMC**

M.A.706 - Personnel requirements

AMC

(a) The CAMO shall appoint an Accountable Manager, who has corporate authority for ensuring that all continuing airworthiness management activities can be resourced and carried out in accordance with this DASR. Where the CAMO is part of an Operating Organisation, the Accountable Manager shall be the same person who has the corporate authority for ensuring that all operations of the Operating Organisation can be resourced and carried out to the standard detailed in DASR M.A.201(h). **AMC**

Superseded

(b) NOT APPLICABLE.

(c) A person or group of persons shall be nominated with the responsibility of ensuring that the CAMO is always in compliance with this Subpart. Such person(s) shall be ultimately responsible to the Accountable Manager.

(d) The Accountable Manager shall designate a Continuing Airworthiness Manager. This person shall be responsible for the management and supervision of continuing airworthiness activities, pursuant to paragraph (c).

(e) The Continuing Airworthiness Manager referred to in paragraph (d) shall not be employed by a DASR 145 AMO under contract to the Operating Organisation, unless specifically agreed by the MAA. ☐ **AMC**

(f) The CAMO shall have sufficient appropriately qualified staff for the expected work. ☐ **AMC**

(g) All paragraph (c) and (d) persons shall be able to demonstrate relevant knowledge, background and appropriate experience related to aircraft continuing airworthiness.

(h) The qualifications of all personnel involved in continuing airworthiness management shall be recorded. ☐ **GM**

(i) For CAMOs extending Military Airworthiness Review Certificates (MARC) in accordance with DASR M.A.711(a)4 and DASR M.A.901(c)2, the CAMO shall nominate persons authorised to do so, subject to approval by the MAA. ☐ **AMC**

(j) The CAMO shall define and keep updated in the CAME, the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i).

(k) The CAMO shall establish and control the competence of personnel involved in the continuing airworthiness management, airworthiness review and/or quality audits, in accordance with a procedure and to a standard agreed by the MAA. ☐ **AMC**

M.A.707 - Airworthiness review staff

(a) To be approved to carry out airworthiness reviews, a CAMO shall have appropriate airworthiness review staff to issue Military Airworthiness Review Certificates (MARC) or recommendations referred to in DASR M.A. Subpart I: ☐ **AMC**

1. These staff shall have acquired:

   i. at least five years' experience in continuing airworthiness; and

   ii. an appropriate Military Aircraft Maintenance Licence (MAML) in compliance with DASR 66 or an aeronautical degree or a national equivalent; and

   iii. formal aeronautical maintenance training; and ☐ **AMC**

   iv. a position within the CAMO with appropriate responsibilities.

   v. Notwithstanding paragraph (i) to (iv), the requirement laid down in DASR M.A.707(a)1(ii) may be replaced by five years of experience in continuing airworthiness additional to those already required by DASR M.A.707(a)1(i).

2. NOT APPLICABLE.

Superseded

(b) Airworthiness review staff nominated by the CAMO can only be issued with an authorisation by the CAMO when formally accepted by the MAA after satisfactory completion of an airworthiness review under supervision. ☐ **AMC**

(c) The CAMO shall ensure that aircraft airworthiness review staff can demonstrate appropriate recent continuing airworthiness management experience. ☐ **AMC**

(d) Airworthiness review staff shall be identified by listing each person in the CAME together with their airworthiness review authorisation reference.

(e) The CAMO shall maintain a record of all airworthiness review staff, which shall include details of any appropriate qualification held together with a summary of relevant continuing airworthiness management experience and training and a copy of the authorisation. This record shall be retained until two years after the airworthiness review staff have left the CAMO. ☐ **AMC**

M.A.708 - Continuing airworthiness management

☐ **GM** ☐ **GM1**

(a) All continuing airworthiness management shall be carried out according to the prescriptions of DASR M.A. Subpart C—Continuing Airworthiness.

(b) For every aircraft managed, the CAMO shall:

1. have access to and use the applicable current AMP(s) for the aircraft managed;
2. if required by the pMS: ☐ **GM**
   i. develop and control the AMP for the aircraft managed including any applicable reliability programme; and
   ii. present the AMP and its amendments to the MAA for approval, unless covered by an indirect approval procedure. In that case, the indirect approval procedure shall be established by the CAMO, as part of the CAME, and shall be approved by the MAA.
3. manage the accomplishment of modifications and repairs;
4. ensure that all maintenance is carried out in accordance with the AMP and released in accordance with DASR 145 or DASR M.A. Subpart H;
5. ensure that all applicable Airworthiness Directives and operational directives with a continuing airworthiness impact are applied;
6. ensure that all defects discovered or reported, are managed appropriately until corrected by a DASR 145 AMO;
7. ensure that maintenance is only carried out by a DASR 145 AMO;
8. coordinate scheduled maintenance, the application of Airworthiness Directives, the replacement of service life limited parts and component inspection and ensure the work is carried out properly;
9. manage and archive all continuing airworthiness records;

Superseded

10. ensure that the weight and balance statement reflects the current status of the aircraft;

11. ensure the symmetry check statement reflects the current status of the aircraft (if applicable);

12. initiate and coordinate any necessary actions and follow-up activity highlighted by an occurrence report.

(c) Where there is a maintenance contract/tasking with a DASR 145 AMO, it shall detail the functions specified under DASR M.A.301(a)2, DASR M.A.301(a)3, DASR M.A.301(a)5,DASR M.A.301(a)6 and DASR M.A.301(a)8, and define the support of the quality functions of DASR M.A.712(b). ☐ **AMC**

M.A.709 - Documentation

☐ **AMC**

(a) The CAMO shall have access to and use applicable current maintenance data in accordance with DASR 145.A.45, for the performance of continuing airworthiness tasks referred to in DASR M.A.708. This data will be provided by the Operating Organisation/(M)TC holder/any other organisation as defined in DASR 21 as appropriate, subject to an appropriate contract/ tasking being established. In such a case, the CAMO only needs access to such data for the duration of the contract, except when required by DASR M.A.714.

(b) NOT APPLICABLE.

M.A.710 - Airworthiness review

(a) To satisfy the requirement for the airworthiness review of an aircraft referred to in DASR M.A.901, a review of the aircraft records shall be carried out by the CAMO in order to be satisfied that: ☐ **AMC**

1. airframe, engine and propeller flying hours and associated flight cycles and / or landings and any other airworthiness data as required by the MAA, have been properly recorded; and

2. the aircraft flight manual and / or any other manuals required by the MAA are applicable to the aircraft configuration and reflect the latest revision status; and

3. all the maintenance due on the aircraft according to the AMP has been carried out; and ☐ **AMC**

4. all known defects have been corrected or, when applicable, carried forward in a controlled manner; and

5. all applicable Airworthiness Directives have been applied and properly registered; and

6. all modifications and repairs applied to the aircraft have been registered and are in compliance with DASR M.A.304; and

7. all service life limited components installed on the aircraft are properly identified, registered and have not exceeded their approved service life limit; and

Superseded

8. all maintenance has been released in accordance with DASR 145 or DASR M.A.Subpart H; and

9. the current weight and balance statement reflects the configuration of the aircraft and is valid; and

10. the aircraft complies with the latest revision of its type design approved by the MAA/(M)TC holder; and

11. NOT APPLICABLE.

12. if required, the current symmetry report reflects the configuration of the aircraft and is valid.

This review shall be fully documented.

(b) The airworthiness review staff of the CAMO shall carry out a physical survey of the aircraft. For this survey, airworthiness review staff not appropriately qualified to DASR 66 and authorised in accordance with DASR 145.A.35, shall be assisted by such qualified/authorised personnel. ☐ **AMC**

(c) Through the physical survey of the aircraft, the airworthiness review staff shall ensure that: ☐ **AMC**

1. all required markings and placards are properly installed; and

2. the aircraft complies with its aircraft flight manual and/or any other manuals required by the MAA; and

3. the aircraft configuration complies with the approved data; and

4. no evident defect can be found that could not have been reasonably expected to be addressed; and

5. no inconsistencies can be found between the aircraft and the paragraph (a) review of records.

(d) By way of exception to DASR M.A.901(a), the airworthiness review can be anticipated by a maximum period of 90 days without loss of continuity of the airworthiness review pattern, to allow the physical survey to take place during a maintenance check. ☐ **AMC**

(e) The Military Airworthiness Review Certificate (MARC) (DASR Form 15b) or the recommendation for the issue of the MARC (DASR Form 15a) can only be issued: ☐ **AMC** ☐ **GM**

1. by airworthiness review staff appropriately authorised in accordance with DASR M.A.707, on behalf of the CAMO; and

2. when the airworthiness review has been completely carried out and that there is no non-compliance which is known to endanger flight safety.

(f) A copy of any MARC issued or extended for an aircraft shall be sent to the MAA within 10 days.

(g) All MARC tasks must be completed/supervised/managed by authorised airworthiness review staff. ☐ **AMC**

Superseded

(h) NOT APPLICABLE.

M.A.711 - Privileges of the organisation

(a) In accordance with its CAME, for any aircraft listed on its approval certificate a CAMO approved in accordance with Section A, Subpart G:

1. shall manage the continuing airworthiness of specific aircraft;

2. NOT APPLICABLE;

3. may arrange for any of the continuing airworthiness management tasks to be carried out by another organisation that is:

   i. working under the quality system of the CAMO; or

   ii. working under their own DASR M.A. Subpart G approval.

In either case, the CAMO retains responsibility for all CAMO functions irrespective of who is undertaking them. All such organisations shall be listed on the approval certificate;

4. may extend, under the conditions of DASR M.A.901(f), a MARC.

(b) A CAMO may, additionally, carry out airworthiness reviews referred to in DASR M.A.710 for any aircraft listed on the approval certificate and:

1. issue the related MARC and extend it in due time under the conditions of DASR M.A.901(c)2; and

2. issue a recommendation for the airworthiness review to the MAA.

(c) NOT APPLICABLE.

(d) A CAMO may, if required by pMS according to DASR M.A.708(b)2, develop and control the DASR M.A.302 AMPs, including any applicable reliability programme for any aircraft listed on the approval certificate.

M.A.712 - Quality system and safety management system

(a) To ensure that the CAMO continues to meet the requirements of this Subpart, it shall establish a quality system and designate a Quality Manager to monitor compliance with, and the adequacy of, procedures required to ensure airworthy aircraft. Compliance monitoring shall include a feedback system to the Accountable Manager to ensure corrective action as necessary. ☐ **AMC**

(b) The quality system shall monitor DASR M.A. Subpart G activities. It shall at least include the following functions: ☐ **AMC** ☐ **GM**

1. monitoring that all DASR M.A. Subpart G activities are being performed in accordance with the approved procedures; and

2. monitoring that all contracted / tasked maintenance is carried out in accordance with the contract / tasking; and

3. monitoring the continued compliance with the requirements of this DASR.

Superseded

(c) The records of these activities shall be stored for at least two years.

(d) Where an organisation has several DASR approvals, the quality systems may be combined.

(e) The CAMO's quality system shall be an integrated part of the Operating Organisation's quality system, unless the MAA approves otherwise. ☐ **GM**

(f) NOT APPLICABLE.

(g) The CAMO's Safety Management System (SMS) shall be an integrated part of the Operating Organisation's SMS, unless the MAA approves otherwise. ☐ **GM**

M.A.713 - Changes to the CAMO

(a) In order to enable the MAA to determine continued compliance with this DASR, the CAMO shall notify the MAA of any proposal to change any of the following, before such changes take place: ☐ **AMC**

1. the name of the CAMO;
2. the location of the CAMO;
3. additional locations of the CAMO;
4. the Accountable Manager;
5. any of the persons specified in DASR M.A.706(c);
6. the facilities, procedures, work scope and staff that could affect the approval;
7. any change that affects the approval certificate.

(b) In the case of proposed changes in personnel not known to the management beforehand, these changes shall be notified at the earliest opportunity.

M.A.714 - Record-keeping

☐ **AMC**

(a) The CAMO shall record all details of continuing airworthiness management activity carried out. The aircraft records required by DASR M.A.305 and, if applicable, DASR M.A.306, shall be retained.

(b) If the CAMO has the privilege referred to in DASR M.A.711(b), it shall retain a copy of each MARC and recommendation issued or, as applicable, extended, together with all supporting documents. In addition, the CAMO shall retain a copy of any MARC that it has extended under the privilege referred to in DASR M.A.711(a)4.

(c) Permits to Fly, and all documents relating to their issue as detailed in DASR 21 Subpart P, shall be retained.

(d) The CAMO shall retain a copy of all records referred to in paragraphs (b) and (c) for at least two years after the aircraft has been permanently withdrawn from service.

Superseded

(e) The records shall be stored in a manner that ensures protection from damage, alteration and theft. The records shall remain readable and accessible for the duration of the storage period.

(f) All computer hardware used to ensure backup shall be stored in a different location from that containing the working data, in an environment that ensures they remain in good condition.

(g) Where continuing airworthiness management of an aircraft is transferred to another CAMO, all retained records shall be transferred to the new CAMO. The time periods prescribed for the retention of records shall continue to apply to the new CAMO.

(h) Where a CAMO terminates its operation, all retained records shall be transferred to the Operating Organisation (if applicable), unless determined otherwise by the MAA.

M.A.715 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. the CAMO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings and;

2. the MAA being granted access to the CAMO to determine continued compliance with this DASR; and

3. the approval not being surrendered or revoked.

(b) Upon surrender or revocation, the approval certificate shall be returned to the MAA.

M.A.716 - CAMO findings by the MAA

Refer to GR.60 Oversight and enforcement.

SUBPART H - CERTIFICATE OF RELEASE TO SERVICE (CRS) (AUS)

M.A.801 - Aircraft certificate of release to service (AUS)

(a) Except for aircraft released to service by a maintenance organisation approved in accordance with DASR 145, the certificate of release to service shall be issued according to this Subpart;

(b) No aircraft can be released to service unless a certificate of release to service is issued at the completion of any maintenance, when satisfied that all maintenance required has been properly carried out, by: ☐ **AMC**

1. appropriate certifying staff on behalf of the maintenance organisation considered equivalent to DASR 145 in accordance with DASR M.A.201(g)

(c) NOT APPLICABLE

(d) NOT APPLICABLE

(e) NOT APPLICABLE

(f) A certificate of release to service shall contain as a minimum: ☐ **AMC**

Superseded

1. basic details of the maintenance carried out; and

2. the date such maintenance was completed; and

3. the identity of the organisation and/or person issuing the release to service, including:

   i. the approval reference of the DASR M.A.201(g) maintenance organisation (if applicable) and the certifying staff issuing such a certificate.

4. the limitations to airworthiness or operations, if any.

(g) By way of exception from paragraph (b) and notwithstanding the provisions of paragraph (h), when the maintenance prescribed cannot be completed, a certificate of release to service may be issued within the approved aircraft limitations. Such fact together with any applicable limitations of the airworthiness or the operations shall be entered in the aircraft certificate of release to service before its issue as part of the information required in DASR M.A.801(f).4. ☐ **AMC**

(h) A certificate of release to service shall not be issued in the case of any known non-compliance which endangers flight safety. ☐ **AMC**

M.A.802 - Component certificate of release to service (AUS)

☐ **AMC**

(a) Except for aircraft components released to service in accordance with DASR 21 or DASR 145, the certificate of release to service / authorised release certificate shall be issued according to this Subpart.

(b) A component certificate of release to service may be issued by a maintenance organisation accepted by DASA in accordance with DASR M.A.201(g).

(c) A component certificate of release to service may be issued by a production organisation accepted by DASA. ☐ **AMC**

SUBPART I - MILITARY AIRWORTHINESS REVIEW CERTIFICATE (MARC)

M.A.901 - Aircraft airworthiness review

To ensure the validity of the Military Certificate of Airworthiness an airworthiness review of the aircraft and its continuing airworthiness records shall be carried out periodically. ☐ **AMC**

(a) A MARC is issued in accordance with DASR Form 15a, or DASR Form 15b on completion of a satisfactory airworthiness review. The MARC is valid one year. ☐ **AMC**

(b) NOT APPLICABLE.

(c) The CAMO may, if appropriately approved, and subject to compliance with paragraph (k):

1. issue a MARC in accordance with DASR M.A.710; and

2. for MARCs it has issued, extend twice the validity of a MARC for a period of one year each time. ☐ **AMC**

Superseded

(d) For all aircraft that have their continuing airworthiness managed by a CAMO that does not hold the privilege to carry out airworthiness reviews, the MARC shall be issued by the MAA upon satisfactory assessment based on a recommendation made by a CAMO appropriately approved in accordance with DASR M.A.711(b)(2), sent together with the application from the Operating Organisation. This recommendation shall be based on an airworthiness review carried out in accordance with DASR M.A.710. ☐ **AMC**

(e) NOT APPLICABLE.

(f) Subject to compliance with paragraph (k), a CAMO may extend twice for a period of one year each time the validity of a MARC that has been issued by the MAA or by another CAMO approved in accordance with Section A, Subpart G.

(g) NOT APPLICABLE.

(h) Notwithstanding paragraphs (a), (c) and (d) above, the MAA may carry out a MARC at any time it considers it appropriate to do so.

(i) NOT APPLICABLE.

(j) When the MAA carries out the airworthiness review and/or issues the MARC itself, the Operating Organisation shall provide the MAA with: ☐ **AMC**

1. the documentation required by the MAA; and
2. suitable accommodation at the appropriate location for its personnel; and
3. when necessary, the support of personnel appropriately authorised in accordance with DASR 145.A.35;

(k) A MARC cannot be issued nor extended if there is evidence or reason to believe that the aircraft is not airworthy.

M.A.902 - Validity of the MARC

(a) A MARC becomes invalid if:

1. surrendered, suspended or revoked; or
2. the Military Certificate of Airworthiness is suspended or revoked; or
3. the aircraft is removed from the military aircraft register of the MAA; or
4. the (Military) Type Certificate under which the Military Certificate of Airworthiness was issued is suspended or revoked.

(b) Moved to DASR M.A.301(b).

(c) Upon surrender or revocation, the MARC shall be returned to the MAA.

Superseded

M.A.903 - NOT APPLICABLE

M.A.904 - NOT APPLICABLE

M.A.905 - Findings from an aircraft airworthiness review carried out by the MAA

(a) After receipt of notification of findings by the MAA, the Operating Organisation of the aircraft concerned shall manage the finding IAW GR.60, and: ☐ **GM**

1. ensure the aircraft with a non-compliance does not fly until such time that any condition defined in DASR M.A.301(b), has been corrected. ☐ **AMC**

(b) NOT APPLICABLE

(c) NOT APPLICABLE

(d) The Operating Organisation shall consider the potential for non-compliance in other aircraft under its responsibility and take appropriate action in accordance with DASR M.A.905(a)1.

SUBPART I - MILITARY AIRWORTHINESS REVIEW CERTIFICATE (MARC)

SECTION A

SUBPART A - GENERAL

M.A.101 - Scope

This Section establishes the measures to be taken to ensure that airworthiness is maintained. It also specifies the conditions to be met by organisations involved in such continuing airworthiness management.

SUBPART B - ACCOUNTABILITY

M.A.201 - Responsibilities

(a) The Operating Organisation is accountable for the continuing airworthiness of an aircraft and shall ensure that no flight takes place unless: ☐ **GM1** ☐ **GM2** ☐ **GM3**

1. the aircraft is maintained in an airworthy condition; and
2. any operational and emergency equipment fitted is correctly installed and serviceable or clearly identified as unserviceable; and
3. the Military Certificate of Airworthiness and the Military Airworthiness Review Certificate (MARC) remain valid; and
4. the maintenance of the aircraft is performed in accordance with the Aircraft Maintenance Programme (AMP) as specified in DASR M.A.302.

NOTE: For individual aircraft or types for which a Military Certificate of Airworthiness or Military Restricted Certificate of Airworthiness is not appropriate, a Military Permit to Fly may be issued in accordance with national regulations.

(b) NOT APPLICABLE.

(c) Any organisation performing maintenance shall be responsible for the tasks performed.

(d) The Operating Organisation shall be responsible for the satisfactory accomplishment of the pre-flight inspection. This inspection must be carried out by a qualified person but need not be carried out by a DASR 145 Approved Maintenance Organisation (AMO). ☐ **AMC**

(e) NOT APPLICABLE.

(f) NOT APPLICABLE.

(g) Maintenance of military aircraft, and components thereof shall be carried out by a DASR 145 AMO, or another maintenance organisation accepted by DASA. ☐ **AMC**

(h) The Operating Organisation is responsible for the continuing airworthiness of the aircraft it operates and shall: ☐ **AMC**

Superseded

1. be appropriately approved, in accordance with DASR M Subpart G, for the management of the continuing airworthiness of the aircraft it operates; and ☐ **AMC**

2. be approved in accordance with DASR 145 or contract/task directly (or through a Continuing Airworthiness Management Organisation (CAMO)) such organisations; and ☐ **GM**

3. ensure that paragraph (a) is satisfied.

(i) NOT APPLICABLE

(j) The Operating Organisation is responsible for granting the Military Aviation Authority (MAA) access to the organisation/aircraft to determine continued compliance with this DASR.

(k) By way of exception to paragraph (h)1, an Operating Organisation may contract/task an organisation approved in accordance with DASR M.A. Subpart G, for the management of the continuing airworthiness of the aircraft it operates. In this case, a written contract/ arrangement shall be made and the CAMO assumes responsibility for the proper accomplishment of these tasks. ☐ **AMC**

M.A.202 - Occurrence reporting

(a) Any Operating Organisation accountable in accordance with DASR M.A.201, shall report to the MAA, and all further addressees as required by national regulations, any identified condition of an aircraft or component which endangers flight safety. ☐ **AMC** ☐ **GM**

(b) The Operating Organisation shall establish an occurrence reporting system to enable the collection and evaluation of such reports, including the assessment and extraction of those occurrences to be reported under paragraph (a). This procedure shall identify adverse trends, corrective actions taken or to be taken by the Operating Organisation to address deficiencies and include evaluation of all known relevant information relating to such occurrences and a method to circulate the information as necessary. ☐ **AMC**

(c) Reports shall be made in a form and manner established by the MAA and contain all pertinent information about the condition known to the Operating Organisation. ☐ **AMC** ☐ **GM**

(d) NOT APPLICABLE.

(e) Reports shall be made as soon as practicable, but in any case within 72 hours of the organisation identifying the condition to which the report relates.

SUBPART C - CONTINUING AIRWORTHINESS

M.A.301 - Continuing airworthiness tasks

(a) The continuing airworthiness of the aircraft shall be ensured by:

1. the accomplishment of pre-flight inspections; ☐ **AMC**

2. the rectification in accordance with the data specified in DASR M.A.304 of any defect and damage affecting safe operation, taking into account the Minimum Equipment List (MEL) and Configuration Deviation List (CDL) as applicable to the aircraft type; ☐ **AMC** ☐ **GM**

Superseded

3. the accomplishment of all maintenance, in accordance with the DASR M.A.302 approved Aircraft Maintenance Programme (AMP); ☐ **AMC**

4. the analysis of the effectiveness of the DASR M.A.302 AMP; ☐ **AMC**

5. the accomplishment of any applicable: ☐ **AMC**

   i. Airworthiness Directive;

   ii. operational directive with a continuing airworthiness impact;

   iii. continued or continuing airworthiness requirements mandated by the MAA;

   iv. measures mandated by the MAA in immediate reaction to a safety problem.

6. the accomplishment of modifications and repairs in accordance with DASR M.A.304;

7. for non-mandatory modifications and/or inspections, the establishment of an embodiment policy; ☐ **AMC**

8. maintenance check flights when necessary.

(b) An aircraft shall not fly if:

1. the continuing airworthiness of the aircraft or any component fitted to the aircraft does not meet the requirements of DASR M; or

2. the aircraft does not remain in conformity with the type design approved by the MAA; or

3. the aircraft has been operated beyond the limitations of the flight manual or the Military Certificate of Airworthiness, without appropriate action being taken; or

4. the aircraft has been involved in an accident or incident that affects the airworthiness of the aircraft, without subsequent appropriate action to restore airworthiness; or

5. a modification or repair is not in compliance with DASR M.A.304.

M.A.302 - Aircraft Maintenance Programme (AMP)

☐ **AMC**

(a) Maintenance of each aircraft shall be organised in accordance with an AMP. ☐ **GM**

(b) An organisation responsible for producing and amending an AMP in accordance with DASR M.A. 302 shall also be responsible for sending the AMP to the MAA. The AMP and any subsequent amendments shall be approved by the MAA.

(c) NOT APPLICABLE.

(d) The AMP shall establish compliance with: ☐ **AMC**

1. instructions issued by the MAA;

2. instructions for continuing airworthiness issued by any organisation recognised by the MAA.

Superseded

3. additional or alternative instructions, once approved in accordance with paragraph (b), proposed by the CAMO, except for intervals of safety related tasks referred in paragraph (e), which may be extended, subject to sufficient reviews carried out in accordance with paragraph g, and only when subject to direct approval in accordance with paragraph (b). ☐ **AMC**

(e) The AMP shall contain details, including frequency, of all maintenance to be carried out, including any specific tasks linked to the type and the specificity of operations.

(f) The AMP shall include a reliability programme, unless otherwise specified by the MAA. ☐ **GM**

(g) The AMP shall be subject to periodic reviews and amended accordingly when necessary. These reviews shall ensure that the AMP continues to be valid in light of the operating experience and instructions from the MAA, whilst taking into account new and / or modified maintenance instructions promulgated by the (Military) Type Certificate (MTC) and (Military) Supplementary Type Certificate (MSTC) holders and any other organisation that publishes such data in accordance with DASR 21.

M.A.303 - Airworthiness Directives

Any applicable Airworthiness Directive must be carried out within the requirements of that Airworthiness Directive, unless otherwise specified by the MAA.

M.A.304 - Data for modifications and repairs

Damage shall be assessed and modifications and repairs carried out using as appropriate: ☐ **AMC**

(a) data approved by the MAA; or

(b) data approved by a DASR 21 Design Organisation or MTC holder organisation; or ☐ **GM**

(c) NOT APPLICABLE;

(d) data produced by an organisation accepted by the MAA. ☐ **AMC** ☐ **GM**

M.A.305 - Aircraft continuing airworthiness record system

(a) At the completion of any maintenance, the Certificate of Release to Service required by DASR 145.A.50 shall be entered in the aircraft continuing airworthiness record system. Each entry shall be made as soon as practicable but in no case more than 30 days after the day of the maintenance action.

(b) The aircraft continuing airworthiness record system shall cover the aircraft, engine(s), propeller(s), any service life limited component(s) as appropriate, and shall include an aircraft technical log.

(c) The aircraft type and registration mark, the date, together with total flight time and/or flight cycles and/or landings and any other airworthiness data as required by the MAA as appropriate, shall be entered in the aircraft continuing airworthiness record system. ☐ **GM**

(d) The aircraft continuing airworthiness record system shall also contain as a minimum the current: ☐ **AMC**

Superseded

1. status of Airworthiness Directives and measures mandated by the MAA in immediate reaction to a safety problem;

2. status of modifications and repairs;

3. status of compliance with the AMP;

4. status of service life limited components; ☐ **AMC** ☐ **AMC1**

5. weight and balance report;

6. list of deferred maintenance;

7. symmetry check report (if required).

(e) In addition to the authorised release certificate, DASR Form 1 or equivalent, the following information relevant to any component installed (engine, propeller, engine module or service life-limited component) shall be entered into the aircraft continuing airworthiness record system:

1. identification of the component; and

2. the type, serial number and registration, as appropriate, of the aircraft, engine, propeller, engine module or service life-limited component to which the particular component has been fitted, along with the reference to the installation and removal of the component; and

3. the date together with the component's accumulated total flight time and/or flight cycles and/or landings and/or calendar time, and/or any other approved service life consumption units as appropriate; and

4. the current paragraph (d) information applicable to the component.

(f) The CAMO responsible for the management of continuing airworthiness tasks in accordance with DASR M.A. Subpart B, shall control the records as detailed in this paragraph and present the records to the MAA upon request.

(g) All entries made in the aircraft continuing airworthiness record system shall be clear and accurate. When it is necessary to correct an entry, the correction shall be made in a manner that clearly shows the original entry. ☐ **AMC** ☐ **GM**

(h) An Operating Organisation shall ensure that a system has been established to keep the following records for the periods specified: ☐ **AMC**

1. all detailed maintenance records in respect of the aircraft and any service life-limited component fitted thereto, until such time as the information contained therein is superseded by new information equivalent in scope and detail but not less than 36 months after the aircraft or component has been released to service; and

2. the total time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) of the aircraft and all service life-limited components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

3. the time in service (hours, calendar time, cycles, landings or any other approved service life consumption units) as appropriate, since last scheduled maintenance of the component subjected to a service life limit, at least until the component

Superseded

scheduled maintenance has been superseded by another scheduled maintenance of equivalent work scope and detail; and

4. the current status of compliance with all maintenance programme tasks such that compliance with the Aircraft Maintenance Programme can be established, at least until the aircraft or component scheduled maintenance task has been repeated; and

5. the current status of Airworthiness Directives applicable to the aircraft and components, at least 12 months after the aircraft or component has been permanently withdrawn from service; and

6. details of current modifications and repairs to the aircraft, engine(s), propeller(s) and any other component vital to flight safety, at least 12 months after they have been permanently withdrawn from service. ☐ **AMC**

M.A.306 - Aircraft technical log

(a) In addition to the requirements of DASR M.A.305, an Operating Organisation shall use an aircraft technical log containing the following information for each aircraft: ☐ **AMC**

1. information about each flight, necessary to ensure continued flight safety; and

2. the current aircraft Certificate of Release to Service; and

3. the current maintenance statement giving the aircraft maintenance status of what scheduled and out of phase maintenance is next due except that the MAA may agree to the maintenance statement being kept elsewhere; and

4. all outstanding deferred defects rectifications that affect the operation of the aircraft; and

5. any necessary guidance instructions on maintenance support arrangements.

(b) The aircraft technical log and any subsequent amendments shall be approved by the MAA. ☐ **AMC**

(c) An Operating Organisation shall ensure that the aircraft technical log is retained for at least 36 months after the date of the last entry.

M.A.307 - Transfer of aircraft continuing airworthiness records

(a) The Operating Organisation shall ensure when an aircraft is permanently transferred to another Operating Organisation, that the records within the DASR M.A.305 continuing airworthiness records system, are also transferred. The time periods prescribed for the retention of records shall continue to apply to the new Operating Organisation.

(b) The Operating Organisation shall ensure that when the continuing airworthiness management tasks are contracted/tasked to an external CAMO, that the records within the DASR M.A.305 aircraft continuing airworthiness records system, are transferred to that CAMO.

(c) Moved to paragraph (a).

Superseded

SUBPART D - MAINTENANCE STANDARDS

NOT APPLICABLE – See DASR 145

SUBPART E - COMPONENTS

NOT APPLICABLE – See DASR 145

SUBPART F - MAINTENANCE ORGANISATION

NOT APPLICABLE

SUBPART G - CONTINUING AIRWORTHINESS MANAGEMENT ORGANISATION (CAMO)

M.A.701 - Scope

This Subpart establishes the requirements to be met by an organisation to qualify for the issue or continuation of an approval for the management of aircraft continuing airworthiness.

M.A.702 - Application

(a) An application for issue or change of a CAMO approval shall be made on a form and in a manner established by the MAA. ☐ **AMC**

(b) It shall include the following documents: ☐ **AMC**

1. the Continuing Airworthiness Management Exposition (CAME); and
2. the Operating Organisation's Aircraft Maintenance Programmes (only if the participating Member State (pMS) requires the CAMO to develop and control the AMP for the aircraft managed); and ☐ **GM**
3. the aircraft technical log(s); and
4. where appropriate, the technical specification(s) of the DASR M.A.708(c) maintenance contracts/taskings with the DASR 145 AMO(s); and
5. any additional documentation required by the MAA. ☐ **AMC**

M.A.703 - Extent of approval

(a) The approval is indicated on a DASR Form 14, issued by the MAA.

(b) NOT APPLICABLE.

(c) The scope of work deemed to constitute the approval shall be specified in the CAME in accordance with DASR M.A.704.

Superseded

AMC

(a) The CAMO shall provide a CAME containing the following information:

1. a statement signed by the Accountable Manager to confirm that the organisation will work in accordance with DASR M and the Exposition at all times; and
2. the organisation's scope of work; and
3. the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) andM.A.706(i); and
4. an organisation chart showing associated chains of responsibility between all the person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i); and
5. a list of the airworthiness review staff referred to in DASR M.A.707; and
6. a general description and location of the facilities; and
7. procedures specifying how the CAMO ensures compliance with this DASR; and
8. the CAME amendment procedures; and
9. the list of approved AMPs (see DASR M.A. 302); and
10. a list of all contractors/tasked organisations (where applicable); and
11. the names of all Operating Organisations to which CAMO support activities are provided (if applicable).

(b) The CAME and its amendments shall be approved by the MAA.

(c) Notwithstanding paragraph (b), minor amendments to the CAME may be approved indirectly through an indirect approval procedure. The indirect approval procedure shall define the minor amendment eligible, be established by the CAMO as part of the CAME and be approved by the MAA. **GM**

M.A.705 - Facilities

The CAMO shall ensure suitable office accommodation is provided at appropriate locations for the personnel specified in DASR M.A.706. **AMC**

M.A.706 - Personnel requirements

AMC

(a) The CAMO shall appoint an Accountable Manager, who has corporate authority for ensuring that all continuing airworthiness management activities can be resourced and carried out in accordance with this DASR. Where the CAMO is part of an Operating Organisation, the Accountable Manager shall be the same person who has the corporate authority for ensuring that all operations of the Operating Organisation can be resourced and carried out to the standard detailed in DASR M.A.201(h). **AMC**

Superseded

(b) NOT APPLICABLE.

(c) A person or group of persons shall be nominated with the responsibility of ensuring that the CAMO is always in compliance with this Subpart. Such person(s) shall be ultimately responsible to the Accountable Manager.

(d) The Accountable Manager shall designate a Continuing Airworthiness Manager. This person shall be responsible for the management and supervision of continuing airworthiness activities, pursuant to paragraph (c).

(e) The Continuing Airworthiness Manager referred to in paragraph (d) shall not be employed by a DASR 145 AMO under contract to the Operating Organisation, unless specifically agreed by the MAA. ☐ **AMC**

(f) The CAMO shall have sufficient appropriately qualified staff for the expected work. ☐ **AMC**

(g) All paragraph (c) and (d) persons shall be able to demonstrate relevant knowledge, background and appropriate experience related to aircraft continuing airworthiness.

(h) The qualifications of all personnel involved in continuing airworthiness management shall be recorded. ☐ **GM**

(i) For CAMOs extending Military Airworthiness Review Certificates (MARC) in accordance with DASR M.A.711(a)4 and DASR M.A.901(c)2, the CAMO shall nominate persons authorised to do so, subject to approval by the MAA. ☐ **AMC**

(j) The CAMO shall define and keep updated in the CAME, the title(s) and name(s) of person(s) referred to in DASR M.A.706(a), M.A.706(c), M.A.706(d) and M.A.706(i).

(k) The CAMO shall establish and control the competence of personnel involved in the continuing airworthiness management, airworthiness review and/or quality audits, in accordance with a procedure and to a standard agreed by the MAA. ☐ **AMC**

M.A.707 - Airworthiness review staff

(a) To be approved to carry out airworthiness reviews, a CAMO shall have appropriate airworthiness review staff to issue Military Airworthiness Review Certificates (MARC) or recommendations referred to in DASR M.A. Subpart I: ☐ **AMC**

1. These staff shall have acquired:

   i. at least five years' experience in continuing airworthiness; and

   ii. an appropriate Military Aircraft Maintenance Licence (MAML) in compliance with DASR 66 or an aeronautical degree or a national equivalent; and

   iii. formal aeronautical maintenance training; and ☐ **AMC**

   iv. a position within the CAMO with appropriate responsibilities.

   v. Notwithstanding paragraph (i) to (iv), the requirement laid down in DASR M.A.707(a)1(ii) may be replaced by five years of experience in continuing airworthiness additional to those already required by DASR M.A.707(a)1(i).

2. NOT APPLICABLE.

Superseded

(b) Airworthiness review staff nominated by the CAMO can only be issued with an authorisation by the CAMO when formally accepted by the MAA after satisfactory completion of an airworthiness review under supervision. ☐ **AMC**

(c) The CAMO shall ensure that aircraft airworthiness review staff can demonstrate appropriate recent continuing airworthiness management experience. ☐ **AMC**

(d) Airworthiness review staff shall be identified by listing each person in the CAME together with their airworthiness review authorisation reference.

(e) The CAMO shall maintain a record of all airworthiness review staff, which shall include details of any appropriate qualification held together with a summary of relevant continuing airworthiness management experience and training and a copy of the authorisation. This record shall be retained until two years after the airworthiness review staff have left the CAMO. ☐ **AMC**

M.A.708 - Continuing airworthiness management

☐ **GM** ☐ **GM1**

(a) All continuing airworthiness management shall be carried out according to the prescriptions of DASR M.A. Subpart C—Continuing Airworthiness.

(b) For every aircraft managed, the CAMO shall:

1. have access to and use the applicable current AMP(s) for the aircraft managed;
2. if required by the pMS: ☐ **GM**
   i. develop and control the AMP for the aircraft managed including any applicable reliability programme; and
   ii. present the AMP and its amendments to the MAA for approval, unless covered by an indirect approval procedure. In that case, the indirect approval procedure shall be established by the CAMO, as part of the CAME, and shall be approved by the MAA.
3. manage the accomplishment of modifications and repairs;
4. ensure that all maintenance is carried out in accordance with the AMP and released in accordance with DASR 145 or DASR M.A. Subpart H;
5. ensure that all applicable Airworthiness Directives and operational directives with a continuing airworthiness impact are applied;
6. ensure that all defects discovered or reported, are managed appropriately until corrected by a DASR 145 AMO;
7. ensure that maintenance is only carried out by a DASR 145 AMO;
8. coordinate scheduled maintenance, the application of Airworthiness Directives, the replacement of service life limited parts and component inspection and ensure the work is carried out properly;
9. manage and archive all continuing airworthiness records;

Superseded

10. ensure that the weight and balance statement reflects the current status of the aircraft;

11. ensure the symmetry check statement reflects the current status of the aircraft (if applicable);

12. initiate and coordinate any necessary actions and follow-up activity highlighted by an occurrence report.

(c) Where there is a maintenance contract/tasking with a DASR 145 AMO, it shall detail the functions specified under DASR M.A.301(a)2, DASR M.A.301(a)3, DASR M.A.301(a)5,DASR M.A.301(a)6 and DASR M.A.301(a)8, and define the support of the quality functions of DASR M.A.712(b). ☐ **AMC**

M.A.709 - Documentation

☐ **AMC**

(a) The CAMO shall have access to and use applicable current maintenance data in accordance with DASR 145.A.45, for the performance of continuing airworthiness tasks referred to in DASR M.A.708. This data will be provided by the Operating Organisation/(M)TC holder/any other organisation as defined in DASR 21 as appropriate, subject to an appropriate contract/ tasking being established. In such a case, the CAMO only needs access to such data for the duration of the contract, except when required by DASR M.A.714.

(b) NOT APPLICABLE.

M.A.710 - Airworthiness review

(a) To satisfy the requirement for the airworthiness review of an aircraft referred to in DASR M.A.901, a review of the aircraft records shall be carried out by the CAMO in order to be satisfied that: ☐ **AMC**

1. airframe, engine and propeller flying hours and associated flight cycles and / or landings and any other airworthiness data as required by the MAA, have been properly recorded; and

2. the aircraft flight manual and / or any other manuals required by the MAA are applicable to the aircraft configuration and reflect the latest revision status; and

3. all the maintenance due on the aircraft according to the AMP has been carried out; and ☐ **AMC**

4. all known defects have been corrected or, when applicable, carried forward in a controlled manner; and

5. all applicable Airworthiness Directives have been applied and properly registered; and

6. all modifications and repairs applied to the aircraft have been registered and are in compliance with DASR M.A.304; and

7. all service life limited components installed on the aircraft are properly identified, registered and have not exceeded their approved service life limit; and

Superseded

8. all maintenance has been released in accordance with DASR 145 or DASR M.A.Subpart H; and

9. the current weight and balance statement reflects the configuration of the aircraft and is valid; and

10. the aircraft complies with the latest revision of its type design approved by the MAA/(M)TC holder; and

11. NOT APPLICABLE.

12. if required, the current symmetry report reflects the configuration of the aircraft and is valid.

This review shall be fully documented.

(b) The airworthiness review staff of the CAMO shall carry out a physical survey of the aircraft. For this survey, airworthiness review staff not appropriately qualified to DASR 66 and authorised in accordance with DASR 145.A.35, shall be assisted by such qualified/authorised personnel. ☐ **AMC**

(c) Through the physical survey of the aircraft, the airworthiness review staff shall ensure that: ☐ **AMC**

1. all required markings and placards are properly installed; and

2. the aircraft complies with its aircraft flight manual and/or any other manuals required by the MAA; and

3. the aircraft configuration complies with the approved data; and

4. no evident defect can be found that could not have been reasonably expected to be addressed; and

5. no inconsistencies can be found between the aircraft and the paragraph (a) review of records.

(d) By way of exception to DASR M.A.901(a), the airworthiness review can be anticipated by a maximum period of 90 days without loss of continuity of the airworthiness review pattern, to allow the physical survey to take place during a maintenance check. ☐ **AMC**

(e) The Military Airworthiness Review Certificate (MARC) (DASR Form 15b) or the recommendation for the issue of the MARC (DASR Form 15a) can only be issued: ☐ **AMC** ☐ **GM**

1. by airworthiness review staff appropriately authorised in accordance with DASR M.A.707, on behalf of the CAMO; and

2. when the airworthiness review has been completely carried out and that there is no non-compliance which is known to endanger flight safety.

(f) A copy of any MARC issued or extended for an aircraft shall be sent to the MAA within 10 days.

(g) All MARC tasks must be completed/supervised/managed by authorised airworthiness review staff. ☐ **AMC**

Superseded

(h) NOT APPLICABLE.

M.A.711 - Privileges of the organisation

(a) In accordance with its CAME, for any aircraft listed on its approval certificate a CAMO approved in accordance with Section A, Subpart G:

1. shall manage the continuing airworthiness of specific aircraft;

2. NOT APPLICABLE;

3. may arrange for any of the continuing airworthiness management tasks to be carried out by another organisation that is:

   i. working under the quality system of the CAMO; or

   ii. working under their own DASR M.A. Subpart G approval.

In either case, the CAMO retains responsibility for all CAMO functions irrespective of who is undertaking them. All such organisations shall be listed on the approval certificate;

4. may extend, under the conditions of DASR M.A.901(f), a MARC.

(b) A CAMO may, additionally, carry out airworthiness reviews referred to in DASR M.A.710 for any aircraft listed on the approval certificate and:

1. issue the related MARC and extend it in due time under the conditions of DASR M.A.901(c)2; and

2. issue a recommendation for the airworthiness review to the MAA.

(c) NOT APPLICABLE.

(d) A CAMO may, if required by pMS according to DASR M.A.708(b)2, develop and control the DASR M.A.302 AMPs, including any applicable reliability programme for any aircraft listed on the approval certificate.

M.A.712 - Quality system and safety management system

(a) To ensure that the CAMO continues to meet the requirements of this Subpart, it shall establish a quality system and designate a Quality Manager to monitor compliance with, and the adequacy of, procedures required to ensure airworthy aircraft. Compliance monitoring shall include a feedback system to the Accountable Manager to ensure corrective action as necessary. ☐ **AMC**

(b) The quality system shall monitor DASR M.A. Subpart G activities. It shall at least include the following functions: ☐ **AMC** ☐ **GM**

1. monitoring that all DASR M.A. Subpart G activities are being performed in accordance with the approved procedures; and

2. monitoring that all contracted / tasked maintenance is carried out in accordance with the contract / tasking; and

3. monitoring the continued compliance with the requirements of this DASR.

Superseded

(c) The records of these activities shall be stored for at least two years.

(d) Where an organisation has several DASR approvals, the quality systems may be combined.

(e) The CAMO's quality system shall be an integrated part of the Operating Organisation's quality system, unless the MAA approves otherwise. ☐ **GM**

(f) NOT APPLICABLE.

(g) The CAMO's Safety Management System (SMS) shall be an integrated part of the Operating Organisation's SMS, unless the MAA approves otherwise. ☐ **GM**

M.A.713 - Changes to the CAMO

(a) In order to enable the MAA to determine continued compliance with this DASR, the CAMO shall notify the MAA of any proposal to change any of the following, before such changes take place: ☐ **AMC**

1. the name of the CAMO;
2. the location of the CAMO;
3. additional locations of the CAMO;
4. the Accountable Manager;
5. any of the persons specified in DASR M.A.706(c);
6. the facilities, procedures, work scope and staff that could affect the approval;
7. any change that affects the approval certificate.

(b) In the case of proposed changes in personnel not known to the management beforehand, these changes shall be notified at the earliest opportunity.

M.A.714 - Record-keeping

☐ **AMC**

(a) The CAMO shall record all details of continuing airworthiness management activity carried out. The aircraft records required by DASR M.A.305 and, if applicable, DASR M.A.306, shall be retained.

(b) If the CAMO has the privilege referred to in DASR M.A.711(b), it shall retain a copy of each MARC and recommendation issued or, as applicable, extended, together with all supporting documents. In addition, the CAMO shall retain a copy of any MARC that it has extended under the privilege referred to in DASR M.A.711(a)4.

(c) Permits to Fly, and all documents relating to their issue as detailed in DASR 21 Subpart P, shall be retained.

(d) The CAMO shall retain a copy of all records referred to in paragraphs (b) and (c) for at least two years after the aircraft has been permanently withdrawn from service.

Superseded

(e) The records shall be stored in a manner that ensures protection from damage, alteration and theft. The records shall remain readable and accessible for the duration of the storage period.

(f) All computer hardware used to ensure backup shall be stored in a different location from that containing the working data, in an environment that ensures they remain in good condition.

(g) Where continuing airworthiness management of an aircraft is transferred to another CAMO, all retained records shall be transferred to the new CAMO. The time periods prescribed for the retention of records shall continue to apply to the new CAMO.

(h) Where a CAMO terminates its operation, all retained records shall be transferred to the Operating Organisation (if applicable), unless determined otherwise by the MAA.

M.A.715 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. the CAMO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings and;

2. the MAA being granted access to the CAMO to determine continued compliance with this DASR; and

3. the approval not being surrendered or revoked.

(b) Upon surrender or revocation, the approval certificate shall be returned to the MAA.

M.A.716 - CAMO findings by the MAA

Refer to GR.60 Oversight and enforcement.

SUBPART H - CERTIFICATE OF RELEASE TO SERVICE (CRS) (AUS)

M.A.801 - Aircraft certificate of release to service (AUS)

(a) Except for aircraft released to service by a maintenance organisation approved in accordance with DASR 145, the certificate of release to service shall be issued according to this Subpart;

(b) No aircraft can be released to service unless a certificate of release to service is issued at the completion of any maintenance, when satisfied that all maintenance required has been properly carried out, by: ☐ **AMC**

1. appropriate certifying staff on behalf of the maintenance organisation considered equivalent to DASR 145 in accordance with DASR M.A.201(g)

(c) NOT APPLICABLE

(d) NOT APPLICABLE

(e) NOT APPLICABLE

(f) A certificate of release to service shall contain as a minimum: ☐ **AMC**

Superseded

1. basic details of the maintenance carried out; and

2. the date such maintenance was completed; and

3. the identity of the organisation and/or person issuing the release to service, including:

   i. the approval reference of the DASR M.A.201(g) maintenance organisation (if applicable) and the certifying staff issuing such a certificate.

4. the limitations to airworthiness or operations, if any.

(g) By way of exception from paragraph (b) and notwithstanding the provisions of paragraph (h), when the maintenance prescribed cannot be completed, a certificate of release to service may be issued within the approved aircraft limitations. Such fact together with any applicable limitations of the airworthiness or the operations shall be entered in the aircraft certificate of release to service before its issue as part of the information required in DASR M.A.801(f).4. ☐ **AMC**

(h) A certificate of release to service shall not be issued in the case of any known non-compliance which endangers flight safety. ☐ **AMC**

M.A.802 - Component certificate of release to service (AUS)

☐ **AMC**

(a) Except for aircraft components released to service in accordance with DASR 21 or DASR 145, the certificate of release to service / authorised release certificate shall be issued according to this Subpart.

(b) A component certificate of release to service may be issued by a maintenance organisation accepted by DASA in accordance with DASR M.A.201(g).

(c) A component certificate of release to service may be issued by a production organisation accepted by DASA. ☐ **AMC**

SUBPART I - MILITARY AIRWORTHINESS REVIEW CERTIFICATE (MARC)

M.A.901 - Aircraft airworthiness review

To ensure the validity of the Military Certificate of Airworthiness an airworthiness review of the aircraft and its continuing airworthiness records shall be carried out periodically. ☐ **AMC**

(a) A MARC is issued in accordance with DASR Form 15a, or DASR Form 15b on completion of a satisfactory airworthiness review. The MARC is valid one year. ☐ **AMC**

(b) NOT APPLICABLE.

(c) The CAMO may, if appropriately approved, and subject to compliance with paragraph (k):

1. issue a MARC in accordance with DASR M.A.710; and

2. for MARCs it has issued, extend twice the validity of a MARC for a period of one year each time. ☐ **AMC**

Superseded

(d) For all aircraft that have their continuing airworthiness managed by a CAMO that does not hold the privilege to carry out airworthiness reviews, the MARC shall be issued by the MAA upon satisfactory assessment based on a recommendation made by a CAMO appropriately approved in accordance with DASR M.A.711(b)(2), sent together with the application from the Operating Organisation. This recommendation shall be based on an airworthiness review carried out in accordance with DASR M.A.710. ☐ **AMC**

(e) NOT APPLICABLE.

(f) Subject to compliance with paragraph (k), a CAMO may extend twice for a period of one year each time the validity of a MARC that has been issued by the MAA or by another CAMO approved in accordance with Section A, Subpart G.

(g) NOT APPLICABLE.

(h) Notwithstanding paragraphs (a), (c) and (d) above, the MAA may carry out a MARC at any time it considers it appropriate to do so.

(i) NOT APPLICABLE.

(j) When the MAA carries out the airworthiness review and/or issues the MARC itself, the Operating Organisation shall provide the MAA with: ☐ **AMC**

1. the documentation required by the MAA; and
2. suitable accommodation at the appropriate location for its personnel; and
3. when necessary, the support of personnel appropriately authorised in accordance with DASR 145.A.35;

(k) A MARC cannot be issued nor extended if there is evidence or reason to believe that the aircraft is not airworthy.

M.A.902 - Validity of the MARC

(a) A MARC becomes invalid if:

1. surrendered, suspended or revoked; or
2. the Military Certificate of Airworthiness is suspended or revoked; or
3. the aircraft is removed from the military aircraft register of the MAA; or
4. the (Military) Type Certificate under which the Military Certificate of Airworthiness was issued is suspended or revoked.

(b) Moved to DASR M.A.301(b).

(c) Upon surrender or revocation, the MARC shall be returned to the MAA.

Superseded

M.A.903 - NOT APPLICABLE

M.A.904 - NOT APPLICABLE

M.A.905 - Findings from an aircraft airworthiness review carried out by the MAA

(a) After receipt of notification of findings by the MAA, the Operating Organisation of the aircraft concerned shall manage the finding IAW GR.60, and: ☐ **GM**

1. ensure the aircraft with a non-compliance does not fly until such time that any condition defined in DASR M.A.301(b), has been corrected. ☐ **AMC**

(b) NOT APPLICABLE

(c) NOT APPLICABLE

(d) The Operating Organisation shall consider the potential for non-compliance in other aircraft under its responsibility and take appropriate action in accordance with DASR M.A.905(a)1.

DASR 145 - Requirements for Maintenance Organisations

SECTION A

145.A.10 - Scope

This Section establishes the requirements to be met by a maintenance organisation to qualify for the issue or continuation of an approval for the maintenance of aircraft and components. **AMC**

145.A.15 - Application

An application for the issue or change of an approval shall be made to the Military Aviation Authority (MAA) in a form and manner established by such authority. **AMC**

145.A.20 - Terms of approval

The maintenance organisation shall specify the scope of work deemed to constitute approval in its Maintenance Organisation Exposition (MOE)(**Appendix** II to this DASR contains a table of all classes and ratings). **AMC**

145.A.25 - Facility requirements

The maintenance organisation shall ensure that:

(a) Facilities are provided appropriate for all planned work, ensuring in particular, protection from the weather elements. Specialised workshops and bays are segregated as appropriate, to ensure that environmental and work area contamination is unlikely to occur. **AMC**

1. For base maintenance of aircraft, aircraft hangars are both available and large enough to accommodate aircraft on planned base maintenance;

2. For component maintenance, component workshops are large enough to accommodate the components on planned maintenance.

(b) Office accommodation is provided for the management of the planned work referred to in paragraph (a), and certifying staff so that they can carry out their designated tasks in a manner that contributes to good aircraft maintenance standards. **AMC**

(c) The working environment including aircraft hangars, component workshops and office accommodation is appropriate for the task carried out and in particular special requirements observed. Unless otherwise dictated by the particular task environment, the working environment shall be such that the effectiveness of personnel is not impaired: **AMC**

Superseded

1. Temperatures shall be maintained such that personnel can carry out required tasks without undue discomfort.

2. Dust and any other airborne contamination shall be kept to a minimum and not be permitted to reach a level in the work task area where visible aircraft/component surface contamination is evident. Where dust/other airborne contamination results in visible surface contamination, all susceptible systems are sealed until acceptable conditions are re-established.

3. Lighting shall be such as to ensure each inspection and maintenance task can be carried out in an effective manner.

4. Noise shall not distract personnel from carrying out inspection tasks. Where it is impractical to control the noise source, such personnel are provided with the necessary personal equipment to stop excessive noise causing distraction during inspection tasks.

5. Where a particular maintenance task requires the application of specific environmental conditions different to the foregoing, then such conditions shall be observed. Specific conditions are identified in the maintenance data.

6. The working environment for line maintenance shall be such that the particular maintenance or inspection task can be carried out without undue distraction. Therefore where the working environment deteriorates to an unacceptable level in respect of temperature, moisture, hail, ice, snow, wind, light, dust/other airborne contamination, the particular maintenance or inspection tasks must be suspended until satisfactory conditions are re-established.

(d) Secure storage facilities shall be provided for components, equipment, tools and material. Storage conditions ensure segregation of serviceable components and material from unserviceable aircraft components, material, equipment and tools. The conditions of storage shall be in accordance with the manufacturer's instructions to prevent deterioration and damage of stored items. Access to storage facilities is restricted to authorised personnel. ☐ **AMC**

145.A.30 - Personnel requirements

☐ **AMC**

(a) The maintenance organisation shall appoint an Accountable Manager who has corporate authority for ensuring that all maintenance can be carried out to the standard required by DASR 145. The Accountable Manager shall: ☐ **AMC**

1. Ensure that all necessary resources are available to accomplish maintenance in accordance with DASR 145.A.65(b) to support the maintenance organisation approval.

2. Establish and promote the safety and quality policy specified in DASR 145.A.65(a).

3. Demonstrate a basic understanding of this DASR.

(b) The maintenance organisation shall nominate a person or group of persons, whose responsibilities include ensuring that the maintenance organisation complies with this DASR. Such person(s) shall ultimately be responsible to the Accountable Manager. ☐ **AMC**

Superseded

1. The person or persons nominated shall represent the maintenance management structure of the maintenance organisation and be responsible for all functions specified in this DASR.

2. The person or persons nominated shall be identified and their credentials submitted in a form and manner established by the MAA.

3. The person or persons nominated shall be able to demonstrate relevant knowledge, background and satisfactory experience related to aircraft or component maintenance and demonstrate a working knowledge of this DASR. ☐ **AMC**

4. Procedures shall make clear who deputises for any particular person in the case of lengthy absence of the said person.

(c) The Accountable Manager under paragraph (a) shall appoint a person with responsibility for monitoring the quality system, including the associated feedback system as required by DASR 145.A.65(c). The appointed person shall have direct access to the Accountable Manager to ensure that the Accountable Manager is kept properly informed on quality and compliance matters. ☐ **AMC**

(d) The maintenance organisation shall have a maintenance person-hour plan showing that the maintenance organisation has sufficient competent staff to plan, perform, supervise, inspect and quality monitor the maintenance organisation in accordance with the approval. In addition the maintenance organisation shall have a procedure to reassess work intended to be carried out when actual staff availability is less than the planned staffing level for any particular work shift or period. ☐ **AMC**

(e) The maintenance organisation shall establish and control the competence of personnel involved in any maintenance, management and/or quality audits in accordance with a procedure and to a standard defined through the MOE and approved by the MAA. In addition to the necessary expertise related to the job function, competence shall include an understanding of the application of human factors and human performance issues appropriate to that person's function in the maintenance organisation. ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **AMC4** ☐ **GM1** ☐ **GM2** ☐ **GM3**

'Human factors' means principles which apply to aeronautical design, certification, training, operations and maintenance and which seek safe interface between the human and other system components by proper consideration of human performance.

'Human performance' means human capabilities and limitations which have an impact on the safety and efficiency of aeronautical operations.

(f) The maintenance organisation shall ensure that personnel who carry out and/or control a non-destructive test of aircraft structures and/or components are appropriately qualified for the particular non-destructive test in accordance with the European or equivalent Standard recognised by the MAA. Personnel who carry out any other specialised task shall be appropriately qualified in accordance with officially recognised Standards. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **GM**

1. By way of exception to paragraph (f), a maintenance organisation may authorise those personnel specified in paragraphs (g) and (h)(1), qualified in Category B1 in accordance with DASR 66, to carry out and/or control colour contrast dye penetrant inspections/visible dye penetrant inspections which are to be detailed in the MOE.

Superseded

(g) Any maintenance organisation maintaining aircraft, except where stated otherwise in paragraph (j), shall in the case of aircraft line maintenance, have appropriate Military Aircraft Type Rated certifying staff, qualified as category B1, B2 in accordance with DASR 66 and DASR 145.A.35. ☐ **AMC**

In addition such maintenance organisations may also use appropriately task trained certifying staff holding the privileges described in DASR 66.A.20(a)(1) or DASR 66.A.20(a)3(ii) and qualified in accordance with DASR 66 and DASR 145.A.35 to carry out minor scheduled line maintenance and simple defect rectification. The availability of such certifying staff shall not replace the need for Category B1, B2 certifying staff as appropriate.

(h) Any maintenance organisation maintaining aircraft, except where stated otherwise in paragraph (j) shall: ☐ **AMC**

1. In the case of base maintenance of aircraft, have appropriate Military Aircraft Type Rated certifying staff qualified as Category C in accordance with DASR 66 and DASR 145.A.35. In addition the maintenance organisation shall have sufficient Military Aircraft Type Rated staff qualified as Category B1 or B2 as appropriate in accordance with DASR 66 and DASR 145.A.35 to support the category C staff.

   i. Category B1 and B2 support staff shall ensure that all relevant maintenance tasks have been carried out to the required standard before the Category C certifying staff issues the Certificate of Release to Service (CRS) for aircraft.

   ii. The maintenance organisation shall maintain a register of any such B1 and B2 support staff.

   iii. The Category C certifying staff shall ensure that compliance with paragraph (i) has been met and that all work has been accomplished during the particular base maintenance check or work package, and shall also assess the impact of any work not carried out with a view to either requiring its accomplishment or agreeing with the appropriate Continuing Airworthiness Management Organisation (CAMO) to defer such work to another specified check or time limit.

2. NOT APPLICABLE

(i) Component certifying staff shall be authorised by the maintenance organisation on the basis of appropriate competence, training and experience in accordance with a procedure(s) contained in the MOE.

(j) By way of exception to paragraphs (g) and (h), in relation to the obligation to comply with DASR 66 the maintenance organisation may use certifying staff qualified in accordance with the following provisions:

1. NOT APPLICABLE

2. NOT APPLICABLE

3. For a repetitive pre-flight Airworthiness Directive (AD) which specifically states that the flight crew may carry out such AD, the maintenance organisation may issue a limited certification authorisation to the aircraft commander and/or the flight engineer on the basis of the flight crew licence or national equivalent qualification held. However, the maintenance organisation shall ensure that sufficient practical

Superseded

training has been carried out to ensure that such aircraft commander and/or flight engineer can accomplish the AD to the required standard.

4. In the case of aircraft operating away from a supported location the maintenance organisation may issue a limited certification authorisation to the aircraft commander and/or the flight engineer on the basis of the flight crew licence or national equivalent qualification held subject to being satisfied that sufficient practical training has been carried out to ensure that the aircraft commander and/or flight engineer can accomplish the specified task to the required standard. The provisions of this paragraph shall be detailed in a MOE procedure. ☐ **AMC** ☐ **GM**

5. In unforeseen cases, where an aircraft is grounded at a location other than the main base where no appropriate certifying staff are available, the maintenance organisation may issue a one-off certification authorisation: ☐ **AMC**

   i. to one of its employees holding equivalent authorisations on other aircraft types of similar technology, construction and systems; or ☐ **AMC**

   ii. to any person with not less than five years maintenance experience and holding a valid Military Aircraft Maintenance Licence (MAML) rated for the aircraft, provided there is no maintenance organisation appropriately approved under DASR 145 at that location and the supporting maintenance organisation obtains and holds on file evidence of the experience and the MAML of that person. ☐ **AMC**

   All such cases as specified in this subparagraph shall be reported to the MAA within seven days of the issuance of such certification authorisation. The maintenance organisation issuing the one-off authorisation shall ensure that any such maintenance that could affect flight safety is re-checked by an appropriately approved maintenance organisation.

(k) To certify on-aircraft maintenance performed on armament, rescue and escape systems and other military-specific systems, any maintenance organisation maintaining aircraft shall have sufficient staff possessing the Category A, B1 or B2 MAML with the appropriate extensions.

145.A.35 - Certifying staff and support staff

(a) In addition to the appropriate requirements of DASR 145.A.30(g) and (h), the maintenance organisation shall ensure that certifying and support staff have an adequate understanding of the relevant aircraft and/or components to be maintained together with the associated maintenance organisation procedures. In the case of certifying staff, this shall be accomplished before the issue or re-issue of the certification authorisation. ☐ **AMC**

   i. 'Support staff' means those staff holding a DASR 66 MAML in Category B1 and/or B2 with the appropriate extensions and Military Aircraft Type Ratings, working in a base maintenance environment while not necessarily holding certification privileges.

   ii. 'Relevant aircraft and/or components', means those aircraft or components specified in the particular certification authorisation.

   iii. 'Certification authorisation' means the authorisation issued to certifying staff by the Approved Maintenance Organisation (AMO) and which specifies the fact that they

Superseded

may sign CRSs within the limitations stated in such authorisation on behalf of the AMO.

(b) Excepting those cases listed in DASR 145.A.30(j) and DASR 66.A.20(a)3(ii) the maintenance organisation may only issue a certification authorisation to certifying staff in relation to the basic categories or subcategories and any Military Aircraft Type Rating endorsed on the MAML, subject to the MAML remaining valid throughout the validity period of the authorisation and the certifying staff remaining in compliance with DASR 66. **AMC** **AMC1**

The maintenance organisation issues the certification authorisation when satisfied that compliance has been established with the appropriate paragraphs of DASR 145 and DASR 66. In granting the certification authorisation the maintenance organisation needs to be satisfied that the person holds a valid and applicable DASR 66 MAML and shall confirm such fact with their MAA.

(c) The maintenance organisation shall ensure that all certifying staff and support staff are involved in at least six months of actual relevant aircraft or component maintenance experience in any consecutive two year period. **AMC1** **AMC2**

For the purpose of this paragraph 'involved in actual relevant aircraft or component maintenance' means that the person has worked in an aircraft or component maintenance environment and has either exercised the privileges of the certification authorisation and/or has actually carried out maintenance on at least some of the aircraft type or aircraft group systems specified in the particular certification authorisation.

(d) The maintenance organisation shall ensure that all certifying staff and support staff receive sufficient continuation training in each two year period to ensure that such staff have up-to-date knowledge of relevant technology, maintenance organisation procedures and human factor issues. **AMC**

(e) The maintenance organisation shall establish a programme for continuation training for certifying staff and support staff, including a procedure to ensure compliance with the relevant paragraphs of DASR 145.A.35 as the basis for issuing certification authorisations under this DASR to certifying staff, and a procedure to ensure compliance with DASR 66. **AMC**

(f) Except where any of the unforeseen cases of DASR 145.A.30(j)(5) apply, the maintenance organisation shall assess all prospective certifying staff for their competence, qualification and capability to carry out their intended certifying duties in accordance with a procedure as specified in the MOE prior to the issue or re-issue of a certification authorisation under this DASR. **AMC**

(g) When the conditions of paragraphs (a), (b), (d), (f) and, where applicable, paragraph (c) have been fulfilled by the certifying staff, the maintenance organisation shall issue a certification authorisation that clearly specifies the scope and limits of such authorisation. Continued validity of the certification authorisation is dependent upon continued compliance with paragraphs (a), (b), (d), and where applicable, paragraph (c).

(h) The certification authorisation shall be in a style that makes its scope clear to the certifying staff and any authorised person who may require to examine the authorisation. Where codes are used to define scope, the maintenance organisation shall make a code translation readily available.

Superseded

'Authorised person' means the officials of the MAA.

(i) The maintenance organisation shall nominate an individual who shall remain responsible on behalf of the maintenance organisation for issuing certification authorisations to certifying staff. Such person may nominate other persons to actually issue or revoke the certification authorisations in accordance with a procedure as specified in the MOE.

(j) The maintenance organisation shall maintain a record of all certifying staff and support staff which shall contain: ☐ **AMC**

1. Details of any MAML held under DASR 66; and

2. All relevant training completed; and

3. The scope of the certification authorisations issued, where relevant; and

4. Particulars of staff with limited or one-off certification authorisations.

The maintenance organisation shall retain the record for at least three years after the certifying staff or support staff have ceased employment with the maintenance organisation or as soon as the authorisation has been withdrawn. In addition, upon request, the maintenance organisation shall furnish certifying staff and support staff with a copy of their record on leaving the maintenance organisation. ☐ **GM**

The certifying staff and support staff shall be given access on request to their personal records as detailed above.

(k) The maintenance organisation shall provide certifying staff with a copy of their certification authorisation in either a documented or electronic format.

(l) Certifying staff shall produce their certification authorisation to any authorised person within 72 hours.

(m) The minimum age for certifying staff and support staff shall be 21 years. By exception, for minor scheduled line maintenance and simple defect rectification, using privileges described in DASR 66.A.20(a)(1) or DASR 66.A.20(a)3(ii), the minimum age for certifying staff shall be 18 years.

(n) The holder of a Category A MAML may only exercise certification privileges on a specific aircraft type following the satisfactory completion of the relevant Category A aircraft task training carried out by an organisation appropriately approved in accordance with DASR 145 or DASR 147. This training shall include practical hands on training and theoretical training as appropriate for each task authorised. Satisfactory completion of training shall be demonstrated by an examination or by workplace assessment carried out by the AMO or DASR 147 MTO. ☐ **AMC**

(o) The holder of a Category B2 MAML may only exercise the certification privileges described in DASR 66.A.20(a)(3)(ii) following the satisfactory completion of: ☐ **AMC** ☐ **GM**

i. the relevant Category A aircraft task training; and

ii. 6 months of documented practical experience covering the scope of the authorisation that will be issued.

The task training shall include practical hands on training and theoretical training as appropriate for each task authorised. Satisfactory completion of training shall be

Superseded

demonstrated by an examination or by workplace assessment. Task training and examination/ assessment shall be carried out by the AMO issuing the certifying staff authorisation. The practical experience shall be also obtained within the same AMO unless approved otherwise by the MAA.

145.A.40 - Equipment, tools and material

(a) The maintenance organisation shall have available and use the necessary equipment, tools and material to perform the approved scope of work. ☐ **AMC**

1. Where the manufacturer specifies a particular tool or equipment, the maintenance organisation shall use that tool or equipment, unless the use of alternative tooling or equipment is agreed by the MAA via procedures specified in the MOE. ☐ **GM**

2. Equipment and tools must be permanently available, except in the case of any tool or equipment that is so infrequently used that its permanent availability is not necessary. Such cases shall be detailed in the MOE.

3. A maintenance organisation approved for base maintenance shall have sufficient aircraft access equipment and inspection platforms/docking such that the aircraft can be properly inspected.

(b) The maintenance organisation shall ensure that all tools, equipment and particularly test equipment, as appropriate, are controlled and calibrated according to an officially recognised standard at a frequency to ensure serviceability and accuracy. Records of such calibrations and traceability to the standard used shall be kept by the maintenance organisation ☐ **AMC**

145.A.42 - Acceptance of components

(a) All components shall be classified and appropriately segregated into the following categories: ☐ **AMC**

1. Components which are in a satisfactory condition, released on a DASR Form 1 or equivalent and marked in accordance with DASR 21 Section A Subpart Q.

2. Unserviceable components which shall be maintained in accordance with this section. A component shall be considered unserviceable in any one of the following circumstances: ☐ **AMC**

   i. expiry of the service life limit as defined in the Aircraft Maintenance Programme (AMP);

   ii. non-compliance with the applicable ADs and other continued or continuing airworthiness requirement mandated by the MAA;

   iii. absence of the necessary information to determine the airworthiness status or eligibility for installation;

   iv. evidence of defects or malfunctions;

   v. involvement in an incident or accident likely to affect its serviceability.

Superseded

Unserviceable components shall be identified and stored in a secure location under the control of a maintenance organisation until a decision is made on the future status of such component.

3. Unsalvageable components which are classified in accordance with DASR 145.A.42(d). A maintenance organisation in consultation with the CAMO/Operating Organisation shall, in the case of unsalvageable components: ☐ **AMC**

   i. retain such components in a secure location under the control of the maintenance organisation until a decision is made on the future status of such component; or ☐ **AMC**

   ii. arrange for the components to be mutilated in a manner that ensures they are beyond economic salvage or repair before relinquishing responsibility for such components. By way of exception, a CAMO/Operating Organisation may transfer responsibility of components classified as unsalvageable to an organisation for training or research without mutilation. ☐ **AMC**

4. Standard parts used on an aircraft, engine, propeller or other aircraft component when specified in the manufacturer's illustrated parts catalogue and/or the maintenance data. These parts shall be accompanied by a manufacturer's declaration of conformity traceable to the applicable standard. ☐ **AMC**

5. Material both raw and consumable used in the course of maintenance when the maintenance organisation is satisfied that the material meets the required specification and has appropriate traceability. All material shall be accompanied by documentation clearly relating to the particular material and containing a conformity to specification statement plus both the manufacturing and supplier source. ☐ **AMC**

6. NOT APPLICABLE.

(b) Prior to installation of a component, the maintenance organisation shall ensure that the particular component is eligible to be fitted when different modification and/or AD standards may be applicable. ☐ **AMC**

(c) The maintenance organisation may fabricate a restricted range of parts to be used in the course of undergoing work within its own facilities, or other facilities if this is approved by the MAA, provided procedures are identified in the MOE. ☐ **AMC**

(d) Components which have reached their certified life limit or contain a non-repairable defect shall be classified as unsalvageable and shall not be permitted to re-enter the component supply system unless certified life limits have been extended or a repair solution has been approved according to DASR 21. ☐ **AMC** ☐ **GM**

(e) NOT APPLICABLE.

145.A.45 - Maintenance data

(a) The maintenance organisation shall have access to and use applicable current maintenance data in the performance of maintenance, including modifications and repairs. 'Applicable' means relevant to any aircraft, component or process specified in the Maintenance Organisation Approval Schedule and in any associated capability list.

Superseded

In the case of maintenance data provided by a CAMO/Operating Organisation, the maintenance organisation shall have access to such data when the work is in progress, with the exception of the need to comply with DASR 145.A.55(c).

(b) For the purposes of DASR 145, applicable maintenance data shall be any of the following: **AMC**

1. Any applicable requirement, procedure, operational directive or information issued by or provided by the MAA;

2. Any applicable AD issued by the MAA;

3. Instructions for Continuing Airworthiness, issued by (Military) Type Certificate (MTC) holders, (Military) Supplementary Type Certificate (MSTC) holders, any other organisation required to publish such data by DASR 21 and in the case of aircraft or components from third countries the airworthiness data mandated by the Authority responsible for the oversight of the aircraft or component and accepted by the MAA;

4. Any applicable standard, such as but not limited to, maintenance standard practices recognised by the MAA as a good standard for maintenance;

5. Any applicable data issued in accordance with paragraph (d).

(c) The maintenance organisation shall establish procedures to ensure that if found, any inaccurate, incomplete or ambiguous procedure, practice, information or maintenance instruction contained in the maintenance data used by maintenance personnel is recorded and notified to the author of the maintenance data. **AMC**

(d) The maintenance organisation may only modify maintenance instructions in accordance with a procedure specified in the MOE. With respect to those changes, the maintenance organisation shall demonstrate that they result in equivalent or improved maintenance standards and shall inform the MTC holder/MSTC holder of such changes. Maintenance instructions for the purposes of this paragraph means instructions on how to carry out the particular maintenance task: they exclude the engineering design of repairs and modifications. **AMC**

(e) The maintenance organisation shall provide a common work card or worksheet system to be used throughout relevant parts of the maintenance organisation. In addition, the maintenance organisation shall either transcribe accurately the maintenance data contained in paragraphs (b) and (d) onto such work cards or worksheets or make precise reference to the particular maintenance task or tasks contained in such maintenance data. Work cards and worksheets may be computer generated and held on an electronic database subject to both adequate safeguards against unauthorised alteration and a back-up electronic database which shall be updated within 24 hours of any entry made to the main electronic database. Complex maintenance tasks shall be transcribed onto the work cards or worksheets and subdivided into clear stages to ensure a record of the accomplishment of the complete maintenance task. **AMC** **GM**

Where the maintenance organisation provides a maintenance service to an Operating Organisation/CAMO who requires their work card or worksheet system to be used then such work card or worksheet system may be used. In this case, the maintenance organisation shall establish a procedure to ensure correct completion of the Operating Organisation's/CAMO's work cards or worksheets.

Superseded

(f) The maintenance organisation shall ensure that all applicable maintenance data is readily available for use when required by maintenance personnel. ☐ **AMC**

(g) The maintenance organisation shall establish a procedure to ensure that maintenance data it controls is kept up to date. In the case of maintenance data controlled and provided by the Operating Organisation/CAMO, the maintenance organisation shall be able to show that either it has written confirmation from the Operating Organisation/CAMO that all such maintenance data is up to date or it has work orders specifying the amendment status of the maintenance data to be used or it can show that it is on the Operating Organisation's/CAMO's maintenance data amendment list. ☐ **AMC**

145.A.47 - Maintenance planning

(a) The maintenance organisation shall have a system appropriate to the amount and complexity of work to plan the availability of all necessary personnel, tools, equipment, material, maintenance data and facilities in order to ensure the safe completion of the maintenance work. ☐ **AMC**

(b) The planning of maintenance tasks, and the organising of shifts, shall take into account human performance limitations. ☐ **AMC**

(c) When it is required to hand over the continuation or completion of maintenance tasks for reasons of a shift or personnel changeover, relevant information shall be adequately communicated between outgoing and incoming personnel. ☐ **AMC**

145.A.48 - Performance of maintenance

(a) All maintenance shall be performed by qualified personnel, following the methods, techniques, standards, and instructions specified in the DASR 145.A.45 maintenance data.

(b) An independent inspection shall be carried out after any flight safety sensitive maintenance task unless otherwise specified in this DASR or agreed by the MAA. ☐ **AMC**

(c) Only the authorised certifying staff according to DASR 145.A.35 and in consultation with the CAMO as necessary, can decide, using DASR 145.A.45 maintenance data, whether an aircraft defect hazards seriously the flight safety and therefore decide when and which rectification action shall be taken before further flight and which defect rectification can be deferred. However, this does not apply when: ☐ **AMC**

1. the approved Minimum Equipment List as mandated by the MAA is used; or
2. aircraft defects are defined as being acceptable by the MAA.

(d) After completion of all maintenance, a general verification shall be carried out to ensure the aircraft or component is clear of all tools, equipment, and any other extraneous parts and material, and that all access panels removed have been refitted.

145.A.50 - Certification of maintenance

(a) A CRS for aircraft and a CRS for components shall be issued by appropriately authorised certifying staff on behalf of the AMO when it has been verified that all maintenance ordered/ tasked has been properly carried out in accordance with the procedures specified in DASR

Superseded

145.A.70, taking into account the availability and use of the maintenance data specified in DASR 145.A.45 and that there are no non-compliances which are known to endanger flight safety. ☐ **AMC**

(b) A CRS for aircraft shall be issued before flight at the completion of any maintenance. ☐ **AMC**

(c) New defects or incomplete maintenance work orders identified during the above maintenance shall be brought to the attention of the Operating Organisation/CAMO for the specific purpose of obtaining agreement to rectify such defects or completing the missing elements of the maintenance work order. In the case where the Operating Organisation/ CAMO declines to have such maintenance carried out under this paragraph, paragraph (e) is applicable.

(d) A CRS for components shall be issued at the completion of any maintenance on a component whilst off the aircraft. The authorised release certificate or airworthiness approval tag identified as DASR Form 1 constitutes the component CRS. When an AMO maintains a component for its own use, a DASR Form 1 may not be necessary depending upon the AMO's internal release procedures defined in the MOE. ☐ **AMC1** ☐ **AMC2**

(e) By way of exception to paragraph (a), when the AMO is unable to complete all maintenance ordered/tasked, it may issue a CRS within the approved aircraft limitations. The AMO shall enter such fact in the aircraft CRS before the issue of such certificate. Details of any deferred maintenance are to be entered in the aircraft technical log by appropriately approved certifying staff. ☐ **AMC**

(f) By way of exception to paragraphs (a) and DASR 145.A.42 when an aircraft is grounded at a location other than the Main Operation Base (MOB) due to the non-availability of a component with an appropriate release certificate, it is permissible to temporarily fit a component with another release certificate, subject to CAMO approval, which is in compliance with all the applicable technical and operational requirements. The fitment of such components shall be noted in the aircraft documentation, with a provision for the component to be removed at a time specified by the CAMO, unless an appropriate release certificate has been obtained in the meantime under paragraph (a) and DASR 145.A.42. ☐ **AMC**

145.A.55 - Maintenance records

(a) The maintenance organisation shall record all details of maintenance work carried out. As a minimum, the AMO shall retain records necessary to prove that all requirements have been met for issuance of the CRS, including all release documents. ☐ **GM**

(b) The AMO shall provide a copy of each CRS to the CAMO, together with a copy of any specific repair/modification data used for repairs/modifications carried out.

(c) The AMO shall retain a copy of all detailed maintenance records and any associated maintenance data for three years from the date the aircraft or component to which the work relates was released from the AMO. ☐ **AMC** ☐ **GM**

1. Records under this paragraph shall be stored in a manner that ensures protection from damage, alteration and theft. The records shall remain readable and accessible for the duration of the storage period. ☐ **GM**

Superseded

2. Computer backup discs, tapes etc. shall be stored in a different location from that containing the working discs, tapes etc., in an environment that ensures they remain in good condition.

3. Where an AMO terminates its operation, all retained maintenance records covering the last three years shall be distributed to the CAMO responsible for the respective aircraft or component or shall be stored as specified by the MAA. ☐ **GM**

145.A.60 - Occurrence reporting

(a) The maintenance organisation shall report to the MAA and all further addressees as required by national regulations any condition of the aircraft or component identified by the maintenance organisation that has resulted or may result in an unsafe condition that hazards seriously the flight safety. ☐ **GM**

(b) The maintenance organisation shall establish an internal occurrence reporting system as detailed in the MOE to enable the collection and evaluation of such reports, including the assessment and extraction of those occurrences to be reported under paragraph (a). This procedure shall identify adverse trends, corrective actions taken or to be taken by the maintenance organisation to address deficiencies and include evaluation of all known relevant information relating to such occurrences and a method to circulate the information as necessary. ☐ **AMC**

(c) The maintenance organisation shall make such reports in a form and manner established by the MAA, and ensure that they contain all pertinent information about the condition and evaluation results known to the maintenance organisation. ☐ **GM**

(d) The maintenance organisation shall report to the CAMO/Operating Organisation any such condition affecting the aircraft or component.

(e) The maintenance organisation shall produce and submit such reports within predefined MAA timeframes, but in any case within 72 hours of the maintenance organisation identifying the condition to which the report relates.

145.A.65 - Safety and quality policy, maintenance procedures, quality system and safety management system

(a) The maintenance organisation shall establish a safety and quality policy for the organisation to be included in the MOE under DASR 145.A.70. ☐ **AMC**

(b) The maintenance organisation shall establish procedures agreed by the MAA taking into account human factors and human performance to ensure good maintenance practices and compliance with DASR 145 which shall include a clear work order or contract such that aircraft and components may be released to service in accordance with DASR 145.A.50. ☐ **AMC**

1. The maintenance procedures under this paragraph apply to DASR 145.A.25 to DASR 145.A.95.

2. The maintenance procedures established or to be established by the maintenance organisation under this paragraph shall cover all aspects of carrying out the maintenance activity, including the provision and control of specialised services and lay down the standards to which the maintenance organisation intends to work. ☐ **AMC**

Superseded

3. With regard to aircraft line and base maintenance, the maintenance organisation shall establish procedures to minimise the risk of multiple errors and capture errors on critical systems, and to ensure that no person is required to carry out and inspect in relation to a maintenance task involving some element of disassembly/reassembly of several components of the same type fitted to more than one system on the same aircraft during a particular maintenance check. However, when only one person is available to carry out these tasks then the maintenance organisation's work card or worksheet shall include an additional stage for re-inspection of the work by this person after completion of all the same tasks. ☐ **AMC** ☐ **GM**

4. Maintenance procedures shall be established to ensure that damage is assessed and modifications and repairs are carried out using data specified in DASR M.A304.

(c) The maintenance organisation shall establish a quality system that includes the following:

1. Independent audits in order to monitor compliance with required aircraft/aircraft component standards and adequacy of the procedures to ensure that such procedures invoke good maintenance practices and airworthy aircraft/aircraft components; and ☐ **AMC** ☐ **GM**

2. A quality feedback reporting system to the person or group of persons specified in DASR 145.A.30(b) and ultimately to the Accountable Manager that ensures proper and timely corrective action is taken in response to reports resulting from the independent audits established to meet paragraph (1). ☐ **AMC**

(d) The maintenance organisation shall ensure that its personnel have access to quality system documentation and are knowledgeable of procedures relevant to their function.

(e) Where an organisation has several DASR approvals, the quality systems may be combined.

(f) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR SMS.

145.A.70 - Maintenance Organisation Exposition (MOE)

(a) 'Maintenance Organisation Exposition' means the document or documents that contain the material specifying the scope of work deemed to constitute approval and showing how the maintenance organisation intends to comply with DASR 145. The maintenance organisation shall provide the MAA with a MOE containing the following information: ☐ **AMC** ☐ **GM**

1. A statement signed by the Accountable Manager confirming that the MOE and any referenced associated manuals define the maintenance organisation's compliance with DASR 145 and shall be complied with at all times. When the Accountable Manager is neither the Chief Executive Officer nor senior military commander of the maintenance organisation then one of the latter shall countersign the statement; and

2. The maintenance organisation's safety and quality policy as specified by DASR 145.A.65; and

3. The title(s) and name(s) of the persons nominated under DASR 145.A.30(b); ☐ **GM** and

Superseded

4. The duties and responsibilities of the persons nominated under DASR 145.A.30(b), including matters on which they may deal directly with the MAA on behalf of the maintenance organisation; and

5. An organisation chart showing associated chains of responsibility between the persons nominated under DASR 145.A.30(b); and

6. A list of certifying staff and support staff; and

7. A general description of human resources; and

8. A general description of the facilities located at each address specified in the maintenance organisation's approval certificate; and

9. A specification of the maintenance organisation's scope of work relevant to the extent of approval; and

10. The notification procedure of DASR 145.A.85 for organisation changes; and

11. The MOE amendment procedure; and

12. The procedures and quality system established by the maintenance organisation under DASR 145.A.25 to DASR 145.A.90; and

13. A list of Operating Organisations and CAMOs to which the maintenance organisation provides an aircraft maintenance service; and

14. A list of contracted/tasked organisations, where applicable, as specified in DASR 145.A.75(b); and

15. A list of line stations, where applicable, as specified in DASR 145.A.75(d); and

16. A list of contracted/tasked organisations operating under their own DASR approval, where applicable.

(b) The MOE shall be amended as necessary to remain an up-to-date description of the maintenance organisation. The MOE and any subsequent amendment shall be approved by MAA.

(c) Notwithstanding paragraph (b) minor amendments to the MOE may be approved through a MOE procedure (hereinafter called indirect approval).

(d) Where a maintenance organisation has an extant EASA Part 145 approval, those parts of the organisation's EASA Part 145 exposition that are equally applicable to satisfy the DASR 145 requirements shall generally be accepted by the MAA as equivalent in respect of the DASR 145 MOE. In this case it is permissible that only those requirements that are military specific need be addressed in the DASR 145 MOE; those requirements covered by read-across of the sections of the EASA exposition document shall be identified and the EASA document clause reference quoted. ☐ **GM**

(e) Paragraph moved to DASR 145.A.65(d).

145.A.75 - Privileges of the AMO

In accordance with the MOE, the AMO shall be entitled to carry out the following tasks:

Superseded

(a) Maintain any aircraft and/or component listed on its approval certificate at the locations identified in the approval certificate and in the MOE;

(b) Arrange for the maintenance of any aircraft or component, listed on its approval certificate, to be carried out by another maintenance organisation that is working under the quality system of the AMO. This refers to work being carried out by a maintenance organisation not itself appropriately approved to carry out such maintenance under this DASR and is limited to the work scope permitted under DASR 145.A.65(b) procedures. This work scope shall not include a base maintenance check of an aircraft or a complete workshop maintenance check or overhaul of an engine or engine module. The AMO that contracts/tasks such work retains responsibility for all these maintenance activities irrespective of who is undertaking them. All such maintenance organisations shall be listed in the MOE; ☐ **AMC**

(c) Maintain any aircraft or any component listed on its approval certificate at any location subject to the need for such maintenance arising either from the unserviceability of the aircraft or from the necessity of supporting occasional line maintenance, subject to the conditions specified in the MOE;

(d) Maintain any aircraft and/or component listed on its approval certificate at a location identified as a line maintenance location capable of supporting minor maintenance and only if the MOE both permits such activity and lists such locations;

(e) Issue CRSs in respect of completion of maintenance in accordance with DASR 145.A.50.

145.A.80 - Limitations on the AMO

(a) The AMO shall only maintain an aircraft or component for which it is approved when all the necessary facilities, equipment, tooling, material, maintenance data and certifying staff are available. ☐ **AMC**

145.A.85 - Changes to the AMO

(a) The AMO shall notify the MAA of any proposal to carry out any of the following changes before such changes take place to enable the MAA to determine continued compliance with DASR 145 and to amend, if necessary, the approval certificate, except that in the case of proposed changes in personnel not known to the management beforehand, these changes shall be notified at the earliest opportunity. ☐ **AMC**

1. The name of the AMO;
2. The main location of the AMO;
3. Additional locations of the AMO;
4. The Accountable Manager and all appointed deputies;
5. Any of the persons nominated under DASR 145.A.30(b) and their appointed deputies;
6. The facilities, equipment, tools, material, procedures, work scope or certifying staff that could affect the approval;
7. The ownership of the AMO or its parent company.

Superseded

145.A.90 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. The AMO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings; and

2. The MAA being granted access to the AMO to determine continued compliance with this DASR; and

3. The certificate not being surrendered or revoked.

(b) Upon surrender or revocation, the approval shall be returned to the MAA.

145.A.95 - AMO Findings by the MAA

Refer to GR.60 Oversight and enforcement.

DASR 145 Appendixes

Appendix II

Appendix II to DASR 145.A.20 - Class and Rating System to be used for the Approval of Maintenance Organisations

Appendix IV

Appendix IV to DASR AMC3 145.A.30(e)

Appendix V

Appendix V to DASR AMC 145.A.70 - Maintenance Organisation Exposition

Superseded

DASR 145 Appendixes

SECTION A

145.A.10 - Scope

This Section establishes the requirements to be met by a maintenance organisation to qualify for the issue or continuation of an approval for the maintenance of aircraft and components. **AMC**

145.A.15 - Application

An application for the issue or change of an approval shall be made to the Military Aviation Authority (MAA) in a form and manner established by such authority. **AMC**

145.A.20 - Terms of approval

The maintenance organisation shall specify the scope of work deemed to constitute approval in its Maintenance Organisation Exposition (MOE)(**Appendix** II to this DASR contains a table of all classes and ratings). **AMC**

145.A.25 - Facility requirements

The maintenance organisation shall ensure that:

(a) Facilities are provided appropriate for all planned work, ensuring in particular, protection from the weather elements. Specialised workshops and bays are segregated as appropriate, to ensure that environmental and work area contamination is unlikely to occur. **AMC**

1. For base maintenance of aircraft, aircraft hangars are both available and large enough to accommodate aircraft on planned base maintenance;

2. For component maintenance, component workshops are large enough to accommodate the components on planned maintenance.

(b) Office accommodation is provided for the management of the planned work referred to in paragraph (a), and certifying staff so that they can carry out their designated tasks in a manner that contributes to good aircraft maintenance standards. **AMC**

(c) The working environment including aircraft hangars, component workshops and office accommodation is appropriate for the task carried out and in particular special requirements observed. Unless otherwise dictated by the particular task environment, the working environment shall be such that the effectiveness of personnel is not impaired: **AMC**

1. Temperatures shall be maintained such that personnel can carry out required tasks without undue discomfort.

2. Dust and any other airborne contamination shall be kept to a minimum and not be permitted to reach a level in the work task area where visible aircraft/component surface contamination is evident. Where dust/other airborne contamination results in

Superseded

visible surface contamination, all susceptible systems are sealed until acceptable conditions are re-established.

3. Lighting shall be such as to ensure each inspection and maintenance task can be carried out in an effective manner.

4. Noise shall not distract personnel from carrying out inspection tasks. Where it is impractical to control the noise source, such personnel are provided with the necessary personal equipment to stop excessive noise causing distraction during inspection tasks.

5. Where a particular maintenance task requires the application of specific environmental conditions different to the foregoing, then such conditions shall be observed. Specific conditions are identified in the maintenance data.

6. The working environment for line maintenance shall be such that the particular maintenance or inspection task can be carried out without undue distraction. Therefore where the working environment deteriorates to an unacceptable level in respect of temperature, moisture, hail, ice, snow, wind, light, dust/other airborne contamination, the particular maintenance or inspection tasks must be suspended until satisfactory conditions are re-established.

(d) Secure storage facilities shall be provided for components, equipment, tools and material. Storage conditions ensure segregation of serviceable components and material from unserviceable aircraft components, material, equipment and tools. The conditions of storage shall be in accordance with the manufacturer's instructions to prevent deterioration and damage of stored items. Access to storage facilities is restricted to authorised personnel. ☐ **AMC**

145.A.30 - Personnel requirements

☐ **AMC**

(a) The maintenance organisation shall appoint an Accountable Manager who has corporate authority for ensuring that all maintenance can be carried out to the standard required by DASR 145. The Accountable Manager shall: ☐ **AMC**

1. Ensure that all necessary resources are available to accomplish maintenance in accordance with DASR 145.A.65(b) to support the maintenance organisation approval.

2. Establish and promote the safety and quality policy specified in DASR 145.A.65(a).

3. Demonstrate a basic understanding of this DASR.

(b) The maintenance organisation shall nominate a person or group of persons, whose responsibilities include ensuring that the maintenance organisation complies with this DASR. Such person(s) shall ultimately be responsible to the Accountable Manager. ☐ **AMC**

1. The person or persons nominated shall represent the maintenance management structure of the maintenance organisation and be responsible for all functions specified in this DASR.

2. The person or persons nominated shall be identified and their credentials submitted in a form and manner established by the MAA.

Superseded

3. The person or persons nominated shall be able to demonstrate relevant knowledge, background and satisfactory experience related to aircraft or component maintenance and demonstrate a working knowledge of this DASR. ☐ **AMC**

4. Procedures shall make clear who deputises for any particular person in the case of lengthy absence of the said person.

(c) The Accountable Manager under paragraph (a) shall appoint a person with responsibility for monitoring the quality system, including the associated feedback system as required by DASR 145.A.65(c). The appointed person shall have direct access to the Accountable Manager to ensure that the Accountable Manager is kept properly informed on quality and compliance matters. ☐ **AMC**

(d) The maintenance organisation shall have a maintenance person-hour plan showing that the maintenance organisation has sufficient competent staff to plan, perform, supervise, inspect and quality monitor the maintenance organisation in accordance with the approval. In addition the maintenance organisation shall have a procedure to reassess work intended to be carried out when actual staff availability is less than the planned staffing level for any particular work shift or period. ☐ **AMC**

(e) The maintenance organisation shall establish and control the competence of personnel involved in any maintenance, management and/or quality audits in accordance with a procedure and to a standard defined through the MOE and approved by the MAA. In addition to the necessary expertise related to the job function, competence shall include an understanding of the application of human factors and human performance issues appropriate to that person's function in the maintenance organisation. ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **AMC4** ☐ **GM1** ☐ **GM2** ☐ **GM3**

'Human factors' means principles which apply to aeronautical design, certification, training, operations and maintenance and which seek safe interface between the human and other system components by proper consideration of human performance.

'Human performance' means human capabilities and limitations which have an impact on the safety and efficiency of aeronautical operations.

(f) The maintenance organisation shall ensure that personnel who carry out and/or control a non-destructive test of aircraft structures and/or components are appropriately qualified for the particular non-destructive test in accordance with the European or equivalent Standard recognised by the MAA. Personnel who carry out any other specialised task shall be appropriately qualified in accordance with officially recognised Standards. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **GM**

1. By way of exception to paragraph (f), a maintenance organisation may authorise those personnel specified in paragraphs (g) and (h)(1), qualified in Category B1 in accordance with DASR 66, to carry out and/or control colour contrast dye penetrant inspections/visible dye penetrant inspections which are to be detailed in the MOE.

(g) Any maintenance organisation maintaining aircraft, except where stated otherwise in paragraph (j), shall in the case of aircraft line maintenance, have appropriate Military Aircraft Type Rated certifying staff, qualified as category B1, B2 in accordance with DASR 66 and DASR 145.A.35. ☐ **AMC**

Superseded

In addition such maintenance organisations may also use appropriately task trained certifying staff holding the privileges described in DASR 66.A.20(a)(1) or DASR 66.A.20(a)3(ii) and qualified in accordance with DASR 66 and DASR 145.A.35 to carry out minor scheduled line maintenance and simple defect rectification. The availability of such certifying staff shall not replace the need for Category B1, B2 certifying staff as appropriate.

(h) Any maintenance organisation maintaining aircraft, except where stated otherwise in paragraph (j) shall: ☐ **AMC**

1. In the case of base maintenance of aircraft, have appropriate Military Aircraft Type Rated certifying staff qualified as Category C in accordance with DASR 66 and DASR 145.A.35. In addition the maintenance organisation shall have sufficient Military Aircraft Type Rated staff qualified as Category B1 or B2 as appropriate in accordance with DASR 66 and DASR 145.A.35 to support the category C staff.

   i. Category B1 and B2 support staff shall ensure that all relevant maintenance tasks have been carried out to the required standard before the Category C certifying staff issues the Certificate of Release to Service (CRS) for aircraft.

   ii. The maintenance organisation shall maintain a register of any such B1 and B2 support staff.

   iii. The Category C certifying staff shall ensure that compliance with paragraph (i) has been met and that all work has been accomplished during the particular base maintenance check or work package, and shall also assess the impact of any work not carried out with a view to either requiring its accomplishment or agreeing with the appropriate Continuing Airworthiness Management Organisation (CAMO) to defer such work to another specified check or time limit.

2. NOT APPLICABLE

(i) Component certifying staff shall be authorised by the maintenance organisation on the basis of appropriate competence, training and experience in accordance with a procedure(s) contained in the MOE.

(j) By way of exception to paragraphs (g) and (h), in relation to the obligation to comply with DASR 66 the maintenance organisation may use certifying staff qualified in accordance with the following provisions:

1. NOT APPLICABLE

2. NOT APPLICABLE

3. For a repetitive pre-flight Airworthiness Directive (AD) which specifically states that the flight crew may carry out such AD, the maintenance organisation may issue a limited certification authorisation to the aircraft commander and/or the flight engineer on the basis of the flight crew licence or national equivalent qualification held. However, the maintenance organisation shall ensure that sufficient practical training has been carried out to ensure that such aircraft commander and/or flight engineer can accomplish the AD to the required standard.

4. In the case of aircraft operating away from a supported location the maintenance organisation may issue a limited certification authorisation to the aircraft commander

Superseded

and/or the flight engineer on the basis of the flight crew licence or national equivalent qualification held subject to being satisfied that sufficient practical training has been carried out to ensure that the aircraft commander and/or flight engineer can accomplish the specified task to the required standard. The provisions of this paragraph shall be detailed in a MOE procedure. ☐ **AMC** ☐ **GM**

5. In unforeseen cases, where an aircraft is grounded at a location other than the main base where no appropriate certifying staff are available, the maintenance organisation may issue a one-off certification authorisation: ☐ **AMC**

i. to one of its employees holding equivalent authorisations on other aircraft types of similar technology, construction and systems; or ☐ **AMC**

ii. to any person with not less than five years maintenance experience and holding a valid Military Aircraft Maintenance Licence (MAML) rated for the aircraft, provided there is no maintenance organisation appropriately approved under DASR 145 at that location and the supporting maintenance organisation obtains and holds on file evidence of the experience and the MAML of that person. ☐ **AMC**

All such cases as specified in this subparagraph shall be reported to the MAA within seven days of the issuance of such certification authorisation. The maintenance organisation issuing the one-off authorisation shall ensure that any such maintenance that could affect flight safety is re-checked by an appropriately approved maintenance organisation.

(k) To certify on-aircraft maintenance performed on armament, rescue and escape systems and other military-specific systems, any maintenance organisation maintaining aircraft shall have sufficient staff possessing the Category A, B1 or B2 MAML with the appropriate extensions.

145.A.35 - Certifying staff and support staff

(a) In addition to the appropriate requirements of DASR 145.A.30(g) and (h), the maintenance organisation shall ensure that certifying and support staff have an adequate understanding of the relevant aircraft and/or components to be maintained together with the associated maintenance organisation procedures. In the case of certifying staff, this shall be accomplished before the issue or re-issue of the certification authorisation. ☐ **AMC**

i. 'Support staff' means those staff holding a DASR 66 MAML in Category B1 and/or B2 with the appropriate extensions and Military Aircraft Type Ratings, working in a base maintenance environment while not necessarily holding certification privileges.

ii. 'Relevant aircraft and/or components', means those aircraft or components specified in the particular certification authorisation.

iii. 'Certification authorisation' means the authorisation issued to certifying staff by the Approved Maintenance Organisation (AMO) and which specifies the fact that they may sign CRSs within the limitations stated in such authorisation on behalf of the AMO.

(b) Excepting those cases listed in DASR 145.A.30(j) and DASR 66.A.20(a)3(ii) the maintenance organisation may only issue a certification authorisation to certifying staff in relation to the basic categories or subcategories and any Military Aircraft Type Rating endorsed on the MAML, subject to the MAML remaining valid throughout the validity period of the

Superseded

authorisation and the certifying staff remaining in compliance with DASR 66. **AMC** **AMC1**

The maintenance organisation issues the certification authorisation when satisfied that compliance has been established with the appropriate paragraphs of DASR 145 and DASR 66. In granting the certification authorisation the maintenance organisation needs to be satisfied that the person holds a valid and applicable DASR 66 MAML and shall confirm such fact with their MAA.

(c) The maintenance organisation shall ensure that all certifying staff and support staff are involved in at least six months of actual relevant aircraft or component maintenance experience in any consecutive two year period. **AMC1** **AMC2**

For the purpose of this paragraph 'involved in actual relevant aircraft or component maintenance' means that the person has worked in an aircraft or component maintenance environment and has either exercised the privileges of the certification authorisation and/or has actually carried out maintenance on at least some of the aircraft type or aircraft group systems specified in the particular certification authorisation.

(d) The maintenance organisation shall ensure that all certifying staff and support staff receive sufficient continuation training in each two year period to ensure that such staff have up-to-date knowledge of relevant technology, maintenance organisation procedures and human factor issues. **AMC**

(e) The maintenance organisation shall establish a programme for continuation training for certifying staff and support staff, including a procedure to ensure compliance with the relevant paragraphs of DASR 145.A.35 as the basis for issuing certification authorisations under this DASR to certifying staff, and a procedure to ensure compliance with DASR 66. **AMC**

(f) Except where any of the unforeseen cases of DASR 145.A.30(j)(5) apply, the maintenance organisation shall assess all prospective certifying staff for their competence, qualification and capability to carry out their intended certifying duties in accordance with a procedure as specified in the MOE prior to the issue or re-issue of a certification authorisation under this DASR. **AMC**

(g) When the conditions of paragraphs (a), (b), (d), (f) and, where applicable, paragraph (c) have been fulfilled by the certifying staff, the maintenance organisation shall issue a certification authorisation that clearly specifies the scope and limits of such authorisation. Continued validity of the certification authorisation is dependent upon continued compliance with paragraphs (a), (b), (d), and where applicable, paragraph (c).

(h) The certification authorisation shall be in a style that makes its scope clear to the certifying staff and any authorised person who may require to examine the authorisation. Where codes are used to define scope, the maintenance organisation shall make a code translation readily available.

'Authorised person' means the officials of the MAA.

(i) The maintenance organisation shall nominate an individual who shall remain responsible on behalf of the maintenance organisation for issuing certification authorisations to certifying staff. Such person may nominate other persons to actually issue or revoke the certification authorisations in accordance with a procedure as specified in the MOE.

Superseded

(j) The maintenance organisation shall maintain a record of all certifying staff and support staff which shall contain: ☐ **AMC**

1. Details of any MAML held under DASR 66; and

2. All relevant training completed; and

3. The scope of the certification authorisations issued, where relevant; and

4. Particulars of staff with limited or one-off certification authorisations.

The maintenance organisation shall retain the record for at least three years after the certifying staff or support staff have ceased employment with the maintenance organisation or as soon as the authorisation has been withdrawn. In addition, upon request, the maintenance organisation shall furnish certifying staff and support staff with a copy of their record on leaving the maintenance organisation. ☐ **GM**

The certifying staff and support staff shall be given access on request to their personal records as detailed above.

(k) The maintenance organisation shall provide certifying staff with a copy of their certification authorisation in either a documented or electronic format.

(l) Certifying staff shall produce their certification authorisation to any authorised person within 72 hours.

(m) The minimum age for certifying staff and support staff shall be 21 years. By exception, for minor scheduled line maintenance and simple defect rectification, using privileges described in DASR 66.A.20(a)(1) or DASR 66.A.20(a)3(ii), the minimum age for certifying staff shall be 18 years.

(n) The holder of a Category A MAML may only exercise certification privileges on a specific aircraft type following the satisfactory completion of the relevant Category A aircraft task training carried out by an organisation appropriately approved in accordance with DASR 145 or DASR 147. This training shall include practical hands on training and theoretical training as appropriate for each task authorised. Satisfactory completion of training shall be demonstrated by an examination or by workplace assessment carried out by the AMO or DASR 147 MTO. ☐ **AMC**

(o) The holder of a Category B2 MAML may only exercise the certification privileges described in DASR 66.A.20(a)(3)(ii) following the satisfactory completion of: ☐ **AMC** ☐ **GM**

i. the relevant Category A aircraft task training; and

ii. 6 months of documented practical experience covering the scope of the authorisation that will be issued.

The task training shall include practical hands on training and theoretical training as appropriate for each task authorised. Satisfactory completion of training shall be demonstrated by an examination or by workplace assessment. Task training and examination/ assessment shall be carried out by the AMO issuing the certifying staff authorisation. The practical experience shall be also obtained within the same AMO unless approved otherwise by the MAA.

Superseded

145.A.40 - Equipment, tools and material

(a) The maintenance organisation shall have available and use the necessary equipment, tools and material to perform the approved scope of work. ☐ **AMC**

1. Where the manufacturer specifies a particular tool or equipment, the maintenance organisation shall use that tool or equipment, unless the use of alternative tooling or equipment is agreed by the MAA via procedures specified in the MOE. ☐ **GM**

2. Equipment and tools must be permanently available, except in the case of any tool or equipment that is so infrequently used that its permanent availability is not necessary. Such cases shall be detailed in the MOE.

3. A maintenance organisation approved for base maintenance shall have sufficient aircraft access equipment and inspection platforms/docking such that the aircraft can be properly inspected.

(b) The maintenance organisation shall ensure that all tools, equipment and particularly test equipment, as appropriate, are controlled and calibrated according to an officially recognised standard at a frequency to ensure serviceability and accuracy. Records of such calibrations and traceability to the standard used shall be kept by the maintenance organisation ☐ **AMC**

145.A.42 - Acceptance of components

(a) All components shall be classified and appropriately segregated into the following categories: ☐ **AMC**

1. Components which are in a satisfactory condition, released on a DASR Form 1 or equivalent and marked in accordance with DASR 21 Section A Subpart Q.

2. Unserviceable components which shall be maintained in accordance with this section. A component shall be considered unserviceable in any one of the following circumstances: ☐ **AMC**

   i. expiry of the service life limit as defined in the Aircraft Maintenance Programme (AMP);

   ii. non-compliance with the applicable ADs and other continued or continuing airworthiness requirement mandated by the MAA;

   iii. absence of the necessary information to determine the airworthiness status or eligibility for installation;

   iv. evidence of defects or malfunctions;

   v. involvement in an incident or accident likely to affect its serviceability.

Unserviceable components shall be identified and stored in a secure location under the control of a maintenance organisation until a decision is made on the future status of such component.

3. Unsalvageable components which are classified in accordance with DASR 145.A.42(d). A maintenance organisation in consultation with the CAMO/Operating Organisation shall, in the case of unsalvageable components: ☐ **AMC**

Superseded

i. retain such components in a secure location under the control of the maintenance organisation until a decision is made on the future status of such component; or ☐ **AMC**

ii. arrange for the components to be mutilated in a manner that ensures they are beyond economic salvage or repair before relinquishing responsibility for such components. By way of exception, a CAMO/Operating Organisation may transfer responsibility of components classified as unsalvageable to an organisation for training or research without mutilation. ☐ **AMC**

4. Standard parts used on an aircraft, engine, propeller or other aircraft component when specified in the manufacturer's illustrated parts catalogue and/or the maintenance data. These parts shall be accompanied by a manufacturer's declaration of conformity traceable to the applicable standard. ☐ **AMC**

5. Material both raw and consumable used in the course of maintenance when the maintenance organisation is satisfied that the material meets the required specification and has appropriate traceability. All material shall be accompanied by documentation clearly relating to the particular material and containing a conformity to specification statement plus both the manufacturing and supplier source. ☐ **AMC**

6. NOT APPLICABLE.

(b) Prior to installation of a component, the maintenance organisation shall ensure that the particular component is eligible to be fitted when different modification and/or AD standards may be applicable. ☐ **AMC**

(c) The maintenance organisation may fabricate a restricted range of parts to be used in the course of undergoing work within its own facilities, or other facilities if this is approved by the MAA, provided procedures are identified in the MOE. ☐ **AMC**

(d) Components which have reached their certified life limit or contain a non-repairable defect shall be classified as unsalvageable and shall not be permitted to re-enter the component supply system unless certified life limits have been extended or a repair solution has been approved according to DASR 21. ☐ **AMC** ☐ **GM**

(e) NOT APPLICABLE.

145.A.45 - Maintenance data

(a) The maintenance organisation shall have access to and use applicable current maintenance data in the performance of maintenance, including modifications and repairs. 'Applicable' means relevant to any aircraft, component or process specified in the Maintenance Organisation Approval Schedule and in any associated capability list.

In the case of maintenance data provided by a CAMO/Operating Organisation, the maintenance organisation shall have access to such data when the work is in progress, with the exception of the need to comply with DASR 145.A.55(c).

(b) For the purposes of DASR 145, applicable maintenance data shall be any of the following: ☐ **AMC**

1. Any applicable requirement, procedure, operational directive or information issued by or provided by the MAA;

Superseded

2. Any applicable AD issued by the MAA;

3. Instructions for Continuing Airworthiness, issued by (Military) Type Certificate (MTC) holders, (Military) Supplementary Type Certificate (MSTC) holders, any other organisation required to publish such data by DASR 21 and in the case of aircraft or components from third countries the airworthiness data mandated by the Authority responsible for the oversight of the aircraft or component and accepted by the MAA;

4. Any applicable standard, such as but not limited to, maintenance standard practices recognised by the MAA as a good standard for maintenance;

5. Any applicable data issued in accordance with paragraph (d).

(c) The maintenance organisation shall establish procedures to ensure that if found, any inaccurate, incomplete or ambiguous procedure, practice, information or maintenance instruction contained in the maintenance data used by maintenance personnel is recorded and notified to the author of the maintenance data. ☐ **AMC**

(d) The maintenance organisation may only modify maintenance instructions in accordance with a procedure specified in the MOE. With respect to those changes, the maintenance organisation shall demonstrate that they result in equivalent or improved maintenance standards and shall inform the MTC holder/MSTC holder of such changes. Maintenance instructions for the purposes of this paragraph means instructions on how to carry out the particular maintenance task: they exclude the engineering design of repairs and modifications. ☐ **AMC**

(e) The maintenance organisation shall provide a common work card or worksheet system to be used throughout relevant parts of the maintenance organisation. In addition, the maintenance organisation shall either transcribe accurately the maintenance data contained in paragraphs (b) and (d) onto such work cards or worksheets or make precise reference to the particular maintenance task or tasks contained in such maintenance data. Work cards and worksheets may be computer generated and held on an electronic database subject to both adequate safeguards against unauthorised alteration and a back-up electronic database which shall be updated within 24 hours of any entry made to the main electronic database. Complex maintenance tasks shall be transcribed onto the work cards or worksheets and subdivided into clear stages to ensure a record of the accomplishment of the complete maintenance task. ☐ **AMC** ☐ **GM**

Where the maintenance organisation provides a maintenance service to an Operating Organisation/CAMO who requires their work card or worksheet system to be used then such work card or worksheet system may be used. In this case, the maintenance organisation shall establish a procedure to ensure correct completion of the Operating Organisation's/CAMO's work cards or worksheets.

(f) The maintenance organisation shall ensure that all applicable maintenance data is readily available for use when required by maintenance personnel. ☐ **AMC**

(g) The maintenance organisation shall establish a procedure to ensure that maintenance data it controls is kept up to date. In the case of maintenance data controlled and provided by the Operating Organisation/CAMO, the maintenance organisation shall be able to show that either it has written confirmation from the Operating Organisation/CAMO that all such maintenance data is up to date or it has work orders specifying the amendment status of the maintenance data to be used or it can show that it is on the Operating Organisation's/CAMO's maintenance data amendment list. ☐ **AMC**

Superseded

145.A.47 - Maintenance planning

(a) The maintenance organisation shall have a system appropriate to the amount and complexity of work to plan the availability of all necessary personnel, tools, equipment, material, maintenance data and facilities in order to ensure the safe completion of the maintenance work. **AMC**

(b) The planning of maintenance tasks, and the organising of shifts, shall take into account human performance limitations. **AMC**

(c) When it is required to hand over the continuation or completion of maintenance tasks for reasons of a shift or personnel changeover, relevant information shall be adequately communicated between outgoing and incoming personnel. **AMC**

145.A.48 - Performance of maintenance

(a) All maintenance shall be performed by qualified personnel, following the methods, techniques, standards, and instructions specified in the DASR 145.A.45 maintenance data.

(b) An independent inspection shall be carried out after any flight safety sensitive maintenance task unless otherwise specified in this DASR or agreed by the MAA. **AMC**

(c) Only the authorised certifying staff according to DASR 145.A.35 and in consultation with the CAMO as necessary, can decide, using DASR 145.A.45 maintenance data, whether an aircraft defect hazards seriously the flight safety and therefore decide when and which rectification action shall be taken before further flight and which defect rectification can be deferred. However, this does not apply when: **AMC**

1. the approved Minimum Equipment List as mandated by the MAA is used; or

2. aircraft defects are defined as being acceptable by the MAA.

(d) After completion of all maintenance, a general verification shall be carried out to ensure the aircraft or component is clear of all tools, equipment, and any other extraneous parts and material, and that all access panels removed have been refitted.

145.A.50 - Certification of maintenance

(a) A CRS for aircraft and a CRS for components shall be issued by appropriately authorised certifying staff on behalf of the AMO when it has been verified that all maintenance ordered/ tasked has been properly carried out in accordance with the procedures specified in DASR 145.A.70, taking into account the availability and use of the maintenance data specified in DASR 145.A.45 and that there are no non-compliances which are known to endanger flight safety. **AMC**

(b) A CRS for aircraft shall be issued before flight at the completion of any maintenance. **AMC**

(c) New defects or incomplete maintenance work orders identified during the above maintenance shall be brought to the attention of the Operating Organisation/CAMO for the specific purpose of obtaining agreement to rectify such defects or completing the missing elements of the maintenance work order. In the case where the Operating Organisation/

Superseded

CAMO declines to have such maintenance carried out under this paragraph, paragraph (e) is applicable.

(d) A CRS for components shall be issued at the completion of any maintenance on a component whilst off the aircraft. The authorised release certificate or airworthiness approval tag identified as DASR Form 1 constitutes the component CRS. When an AMO maintains a component for its own use, a DASR Form 1 may not be necessary depending upon the AMO's internal release procedures defined in the MOE. ☐ **AMC1** ☐ **AMC2**

(e) By way of exception to paragraph (a), when the AMO is unable to complete all maintenance ordered/tasked, it may issue a CRS within the approved aircraft limitations. The AMO shall enter such fact in the aircraft CRS before the issue of such certificate. Details of any deferred maintenance are to be entered in the aircraft technical log by appropriately approved certifying staff. ☐ **AMC**

(f) By way of exception to paragraphs (a) and DASR 145.A.42 when an aircraft is grounded at a location other than the Main Operation Base (MOB) due to the non-availability of a component with an appropriate release certificate, it is permissible to temporarily fit a component with another release certificate, subject to CAMO approval, which is in compliance with all the applicable technical and operational requirements. The fitment of such components shall be noted in the aircraft documentation, with a provision for the component to be removed at a time specified by the CAMO, unless an appropriate release certificate has been obtained in the meantime under paragraph (a) and DASR 145.A.42. ☐ **AMC**

145.A.55 - Maintenance records

(a) The maintenance organisation shall record all details of maintenance work carried out. As a minimum, the AMO shall retain records necessary to prove that all requirements have been met for issuance of the CRS, including all release documents. ☐ **GM**

(b) The AMO shall provide a copy of each CRS to the CAMO, together with a copy of any specific repair/modification data used for repairs/modifications carried out.

(c) The AMO shall retain a copy of all detailed maintenance records and any associated maintenance data for three years from the date the aircraft or component to which the work relates was released from the AMO. ☐ **AMC** ☐ **GM**

1. Records under this paragraph shall be stored in a manner that ensures protection from damage, alteration and theft. The records shall remain readable and accessible for the duration of the storage period. ☐ **GM**

2. Computer backup discs, tapes etc. shall be stored in a different location from that containing the working discs, tapes etc., in an environment that ensures they remain in good condition.

3. Where an AMO terminates its operation, all retained maintenance records covering the last three years shall be distributed to the CAMO responsible for the respective aircraft or component or shall be stored as specified by the MAA. ☐ **GM**

Superseded

145.A.60 - Occurrence reporting

(a) The maintenance organisation shall report to the MAA and all further addressees as required by national regulations any condition of the aircraft or component identified by the maintenance organisation that has resulted or may result in an unsafe condition that hazards seriously the flight safety. ☐ **GM**

(b) The maintenance organisation shall establish an internal occurrence reporting system as detailed in the MOE to enable the collection and evaluation of such reports, including the assessment and extraction of those occurrences to be reported under paragraph (a). This procedure shall identify adverse trends, corrective actions taken or to be taken by the maintenance organisation to address deficiencies and include evaluation of all known relevant information relating to such occurrences and a method to circulate the information as necessary. ☐ **AMC**

(c) The maintenance organisation shall make such reports in a form and manner established by the MAA, and ensure that they contain all pertinent information about the condition and evaluation results known to the maintenance organisation. ☐ **GM**

(d) The maintenance organisation shall report to the CAMO/Operating Organisation any such condition affecting the aircraft or component.

(e) The maintenance organisation shall produce and submit such reports within predefined MAA timeframes, but in any case within 72 hours of the maintenance organisation identifying the condition to which the report relates.

145.A.65 - Safety and quality policy, maintenance procedures, quality system and safety management system

(a) The maintenance organisation shall establish a safety and quality policy for the organisation to be included in the MOE under DASR 145.A.70. ☐ **AMC**

(b) The maintenance organisation shall establish procedures agreed by the MAA taking into account human factors and human performance to ensure good maintenance practices and compliance with DASR 145 which shall include a clear work order or contract such that aircraft and components may be released to service in accordance with DASR 145.A.50. ☐ **AMC**

1. The maintenance procedures under this paragraph apply to DASR 145.A.25 to DASR 145.A.95.

2. The maintenance procedures established or to be established by the maintenance organisation under this paragraph shall cover all aspects of carrying out the maintenance activity, including the provision and control of specialised services and lay down the standards to which the maintenance organisation intends to work. ☐ **AMC**

3. With regard to aircraft line and base maintenance, the maintenance organisation shall establish procedures to minimise the risk of multiple errors and capture errors on critical systems, and to ensure that no person is required to carry out and inspect in relation to a maintenance task involving some element of disassembly/reassembly of several components of the same type fitted to more than one system on the same aircraft during a particular maintenance check. However, when only one person is available to carry out these tasks then the maintenance organisation's work card or

Superseded

worksheet shall include an additional stage for re-inspection of the work by this person after completion of all the same tasks. ☐ **AMC** ☐ **GM**

4. Maintenance procedures shall be established to ensure that damage is assessed and modifications and repairs are carried out using data specified in DASR M.A304.

(c) The maintenance organisation shall establish a quality system that includes the following:

1. Independent audits in order to monitor compliance with required aircraft/aircraft component standards and adequacy of the procedures to ensure that such procedures invoke good maintenance practices and airworthy aircraft/aircraft components; and ☐ **AMC** ☐ **GM**

2. A quality feedback reporting system to the person or group of persons specified in DASR 145.A.30(b) and ultimately to the Accountable Manager that ensures proper and timely corrective action is taken in response to reports resulting from the independent audits established to meet paragraph (1). ☐ **AMC**

(d) The maintenance organisation shall ensure that its personnel have access to quality system documentation and are knowledgeable of procedures relevant to their function.

(e) Where an organisation has several DASR approvals, the quality systems may be combined.

(f) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR SMS.

145.A.70 - Maintenance Organisation Exposition (MOE)

(a) 'Maintenance Organisation Exposition' means the document or documents that contain the material specifying the scope of work deemed to constitute approval and showing how the maintenance organisation intends to comply with DASR 145. The maintenance organisation shall provide the MAA with a MOE containing the following information: ☐ **AMC** ☐ **GM**

1. A statement signed by the Accountable Manager confirming that the MOE and any referenced associated manuals define the maintenance organisation's compliance with DASR 145 and shall be complied with at all times. When the Accountable Manager is neither the Chief Executive Officer nor senior military commander of the maintenance organisation then one of the latter shall countersign the statement; and

2. The maintenance organisation's safety and quality policy as specified by DASR 145.A.65; and

3. The title(s) and name(s) of the persons nominated under DASR 145.A.30(b); ☐ **GM** and

4. The duties and responsibilities of the persons nominated under DASR 145.A.30(b), including matters on which they may deal directly with the MAA on behalf of the maintenance organisation; and

5. An organisation chart showing associated chains of responsibility between the persons nominated under DASR 145.A.30(b); and

6. A list of certifying staff and support staff; and

7. A general description of human resources; and

Superseded

8. A general description of the facilities located at each address specified in the maintenance organisation's approval certificate; and

9. A specification of the maintenance organisation's scope of work relevant to the extent of approval; and

10. The notification procedure of DASR 145.A.85 for organisation changes; and

11. The MOE amendment procedure; and

12. The procedures and quality system established by the maintenance organisation under DASR 145.A.25 to DASR 145.A.90; and

13. A list of Operating Organisations and CAMOs to which the maintenance organisation provides an aircraft maintenance service; and

14. A list of contracted/tasked organisations, where applicable, as specified in DASR 145.A.75(b); and

15. A list of line stations, where applicable, as specified in DASR 145.A.75(d); and

16. A list of contracted/tasked organisations operating under their own DASR approval, where applicable.

(b) The MOE shall be amended as necessary to remain an up-to-date description of the maintenance organisation. The MOE and any subsequent amendment shall be approved by MAA.

(c) Notwithstanding paragraph (b) minor amendments to the MOE may be approved through a MOE procedure (hereinafter called indirect approval).

(d) Where a maintenance organisation has an extant EASA Part 145 approval, those parts of the organisation's EASA Part 145 exposition that are equally applicable to satisfy the DASR 145 requirements shall generally be accepted by the MAA as equivalent in respect of the DASR 145 MOE. In this case it is permissible that only those requirements that are military specific need be addressed in the DASR 145 MOE; those requirements covered by read-across of the sections of the EASA exposition document shall be identified and the EASA document clause reference quoted. ☐ **GM**

(e) Paragraph moved to DASR 145.A.65(d).

145.A.75 - Privileges of the AMO

In accordance with the MOE, the AMO shall be entitled to carry out the following tasks:

(a) Maintain any aircraft and/or component listed on its approval certificate at the locations identified in the approval certificate and in the MOE;

(b) Arrange for the maintenance of any aircraft or component, listed on its approval certificate, to be carried out by another maintenance organisation that is working under the quality system of the AMO. This refers to work being carried out by a maintenance organisation not itself appropriately approved to carry out such maintenance under this DASR and is limited to the work scope permitted under DASR 145.A.65(b) procedures. This work scope shall not include a base maintenance check of an aircraft or a complete workshop maintenance check or overhaul of an engine or engine module. The AMO that contracts/tasks such work retains

Superseded

responsibility for all these maintenance activities irrespective of who is undertaking them. All such maintenance organisations shall be listed in the MOE; ☐ **AMC**

(c) Maintain any aircraft or any component listed on its approval certificate at any location subject to the need for such maintenance arising either from the unserviceability of the aircraft or from the necessity of supporting occasional line maintenance, subject to the conditions specified in the MOE;

(d) Maintain any aircraft and/or component listed on its approval certificate at a location identified as a line maintenance location capable of supporting minor maintenance and only if the MOE both permits such activity and lists such locations;

(e) Issue CRSs in respect of completion of maintenance in accordance with DASR 145.A.50.

145.A.80 - Limitations on the AMO

(a) The AMO shall only maintain an aircraft or component for which it is approved when all the necessary facilities, equipment, tooling, material, maintenance data and certifying staff are available. ☐ **AMC**

145.A.85 - Changes to the AMO

(a) The AMO shall notify the MAA of any proposal to carry out any of the following changes before such changes take place to enable the MAA to determine continued compliance with DASR 145 and to amend, if necessary, the approval certificate, except that in the case of proposed changes in personnel not known to the management beforehand, these changes shall be notified at the earliest opportunity. ☐ **AMC**

1. The name of the AMO;
2. The main location of the AMO;
3. Additional locations of the AMO;
4. The Accountable Manager and all appointed deputies;
5. Any of the persons nominated under DASR 145.A.30(b) and their appointed deputies;
6. The facilities, equipment, tools, material, procedures, work scope or certifying staff that could affect the approval;
7. The ownership of the AMO or its parent company.

145.A.90 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. The AMO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings; and
2. The MAA being granted access to the AMO to determine continued compliance with this DASR; and

Superseded

3. The certificate not being surrendered or revoked.

(b) Upon surrender or revocation, the approval shall be returned to the MAA.

145.A.95 - AMO Findings by the MAA

Refer to GR.60 Oversight and enforcement.

SECTION A

66.A.1 - Scope

This section defines the Military Aircraft Maintenance Licence (MAML) and establishes the requirements for application, issue and continuation of its validity.

66.A.3 - MAML categories

☐ **GM**

(a) Military Aircraft Maintenance Licences include the following categories:

- Category A
- Category B1
- Category B2
- Category C

(b) Categories A and B1 are subdivided into subcategories relative to combinations of aeroplanes, helicopters, turbine and piston engines. These subcategories are:

- A1 and B1.1 Aeroplanes Turbine
- A2 and B1.2 Aeroplanes Piston
- A3 and B1.3 Helicopters Turbine
- A4 and B1.4 Helicopters Piston

(c) NOT APPLICABLE.

66.A.5 - Aircraft groups

All military aircraft shall be considered as complex motor-powered aircraft.

66.A.10 - Application

☐ **AMC**

(a) An application for a MAML or change to such a licence shall be made on a DASR Form 19 (see Appendix V to DASR 66) in a manner established by the MAA and submitted thereto. ☐ **GM**

(b) NOT APPLICABLE.

Superseded

(c) In addition to the documents required in DASR 66.A.10(a) the applicant for additional basic categories or subcategories to a MAML shall submit their current MAML to the MAA together with the DASR Form 19. ☐ **GM**

(d) NOT APPLICABLE.

(e) NOT APPLICABLE.

(f) Each application shall be supported by documentation to demonstrate compliance with the applicable theoretical knowledge, practical training and experience requirements at the time of application. ☐ **GM**

66.A.15 - Eligibility

An applicant for a MAML shall be at least 18 years of age.

66.A.20 - Privileges

☐ **GM**

(a) The following privileges shall apply: ☐ **GM**

1. A Category A MAML permits the holder to issue certificates of release to service following minor scheduled line maintenance and simple defect rectification within the limits of tasks specifically endorsed on the certification authorisation referred to in DASR 145.A.35. The certification privileges shall be restricted to work that the licence holder has personally performed in the DASR 145 AMO that issued the certification authorisation. ☐ **GM1**

2. A Category B1 MAML shall permit the holder to issue certificates of release to service and to act as B1 support staff for the following:

   – maintenance performed on aircraft structure, powerplant, mechanical systems and electrical systems, and

   – work on avionic systems requiring only simple tests to prove their serviceability and not requiring troubleshooting. ☐ **GM**

Category B1 includes the corresponding A subcategory.

3. A Category B2 MAML shall permit the holder:

   i. to issue certificates of release to service and to act as B2 support staff for the following:

   – maintenance performed on avionic and electrical systems, and

   – electrical and avionics tasks within powerplant and mechanical systems, requiring only simple tests to prove their serviceability

   ii. to issue certificates of release to service following minor scheduled line maintenance and simple defect rectification within the limits of tasks specifically endorsed on the certification authorisation referred to in DASR 145.A.35. This certification privilege shall be restricted to work that the MAML

Superseded

holder has personally performed in the AMO which issued the certification authorisation and limited to the Military Aircraft Type Ratings already endorsed in the B2 MAML. ☐ **GM1**

Category B2 does not include any A subcategory. ☐ **GM2**

4. NOT APPLICABLE.

5. A Category C MAML shall permit the holder to issue certificates of release to service for aircraft following base maintenance on aircraft. The privileges apply to the aircraft in its entirety.

6. Categories A, B1 and B2 MAMLs can have extensions (DASR 66.A.52) to address one or more of the military-specific topics included in Appendix I to DASR 66 (Modules 50 - 55). These shall permit the holder to issue certificates of release to service and act as support staff appropriate to the basic knowledge gained from all modules and as approved by the MAA for maintenance performed on armament, rescue and escape systems and other military-specific systems.

(b) The holder of a MAML shall not exercise its privileges unless: ☐ **AMC**

1. in compliance with the applicable requirements of DASR M and DASR 145; and

2. in the preceding 2-year period the holder has, either had 6 months of maintenance experience in accordance with the privileges granted by the MAML or, met the provision for the issue of the appropriate privileges; and ☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

3. they have the adequate competence to certify maintenance on the corresponding aircraft; and ☐ **AMC**

4. they are able to read, write and communicate to an understandable level in the language(s) in which the technical documentation and procedures necessary to support the issue of the certificate of release to service are written. ☐ **GM**

66.A.25 - Basic knowledge requirements

☐ **AMC**

(a) An applicant for a MAML, the extension to a MAML or the addition of a category or subcategory to such a MAML, shall demonstrate by examination a level of knowledge in the appropriate subject modules in accordance with Appendix I. The examination shall be conducted either by an MTO appropriately approved in accordance with DASR 147 or by the MAA. ☐ **GM**

(b) The training courses and examinations shall be passed within 10 years prior to the application for a MAML, the extension to a MAML or the addition of a category or subcategory to such a MAML. Should this not be the case, examination credits may however be obtained in accordance with point (c).

(c) The applicant may apply to the MAA for full or partial examination credit to the basic knowledge requirements for:

1. basic knowledge examinations that do not meet the requirement described in point (b) above; and

Superseded

2. any other technical qualification considered by the MAA to be equivalent to the knowledge standard of this DASR. If the applicant holds an EASA Part 66 licence, the MAA may accept the EASA licence as a basis, only requiring additional training to cover the differences between the EASA licence and the MAML requirements. ☐ **AMC**

Credits shall be granted in accordance with Annex A.

(d) Credits expire 10 years after they were granted to the applicant by the MAA. The applicant may apply for new credits after expiration. ☐ **GM**

(e) Modules 50-55 shall be used to provide extensions to a MAML for military-specific systems. Module 53 includes sub-modules that can also be used to provide extensions to a MAML for military-specific systems.

66.A.30 - Basic experience requirements

(a) An applicant for a MAML shall have acquired: ☐ **GM**

1A. for Category A:

1. 3 years of practical maintenance experience on operating military aircraft, if the applicant has no previous relevant technical training; or

2. 2 years of practical maintenance experience on operating military aircraft and completion of training considered relevant by the MAA as a skilled worker, in a technical trade; or

3. 6 months of practical maintenance experience on operating military aircraft and completion of a basic training course providing the minimum practical training (as detailed in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147; or ☐ **GM**

4. 1 years of practical maintenance experience on operating military aircraft and completion of a basic training course that does not provide the recommended minimum practical training (as defined in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147.

1B. for Subcategories B1.2 and B1.4:

1. 3 years of practical maintenance experience on operating military aircraft, if the applicant has no previous relevant technical training; or

2. 2 years of practical maintenance experience on operating military aircraft and completion of training considered relevant by the MAA as a skilled worker, in a technical trade; or

3. 1 year of practical maintenance experience on operating military aircraft and completion of a basic training course providing the minimum practical training (as detailed in Column 4 of DASR 147 Appendix I) approved in accordance with DASR 147; or

4. 2 years of practical maintenance experience on operating military aircraft and completion of a basic training course that does not provide the recommended

Superseded

minimum practical training (as defined in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147.

The 2 years of practical maintenance experience can be reduced by the duration of the practical training given during the basic training course with a maximum reduction of 1 year. (**NOTE:** as a reference 20 hours of practical training will be considered as being equivalent to a duration of 1 week.)

2. for Categories B2 and Subcategories B1.1 and B1.3:

1. 5 years of practical maintenance experience on operating military aircraft if the applicant has no previous relevant technical training; or

2. 3 years of practical maintenance experience on operating military aircraft and completion of training considered relevant by the MAA as a skilled worker, in a technical trade; or

3. 2 years of practical maintenance experience on operating military aircraft and completion of a basic training course providing the minimum practical training (as detailed in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147; or

4. 3 years of practical maintenance experience on operating military aircraft and completion of a basic training course that does not provide the recommended minimum practical training (as defined in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147.

The 3 years of practical maintenance experience can be reduced by the duration of the practical training given during the basic training course with a maximum reduction of 1 year. (**NOTE:** as a reference 20 hours of practical training will be considered as being equivalent to a duration of 1 week.)

3. for Category C:

1. 3 years of experience exercising Category B1.1, B1.3 or B2 privileges or as support staff according to DASR 145.A.35, or a combination of both; or

2. 5 years of experience exercising Category B1.2 or B1.4 privileges or as support staff according to DASR 145.A.35, or a combination of both.

4. NOT APPLICABLE.

5. for Category C obtained through the academic route: an applicant holding an academic degree in a technical discipline, from a university or other higher educational institution, recognised by the MAA, plus: ☐ **AMC**

1. 3 years of experience working in a military aircraft maintenance environment on a representative selection of tasks directly associated with military aircraft maintenance including 6 months of observation of base maintenance tasks; or

2. experience as detailed by the MAA but not less than 6 months of observation of base maintenance tasks. ☐ **AMC** ☐ **AMC1**

(b) An applicant for an additional category or subcategory to a MAML shall have a minimum aircraft maintenance experience requirement appropriate to the additional category or subcategory of MAML applied for as defined in Appendix IV to DASR 66.

Superseded

(c) The experience shall be practical and involve a representative cross section of maintenance tasks on aircraft.

(d) At least 1 year of the required experience shall be recent maintenance experience on aircraft of the category/subcategory for which the initial MAML is sought. For subsequent category/subcategory additions to an existing MAML, the additional recent maintenance experience required may be less than 1 year, but shall be at least 3 months. The required experience shall be dependent upon the difference between the MAML category/subcategory held and applied for. Such additional experience shall be typical of the new MAML category/subcategory sought. ☐ **AMC**

(e) Notwithstanding paragraph (a), aircraft maintenance experience gained outside a military aircraft maintenance environment may be accepted when such maintenance is equivalent to that required by this DASR as established by the MAA. Additional experience of military aircraft maintenance shall, however, be required to ensure adequate understanding of the military aircraft maintenance environment. ☐ **AMC**

(f) Experience shall have been acquired within the 10 years preceding the application for a MAML or the addition of a category or subcategory to such a MAML.

66.A.40 - Continued validity of the Military Aircraft Maintenance Licence

☐ **GM**

(a) The MAML shall be issued for an unlimited duration. It shall remain valid subject to the holder remaining in compliance with the requirements in this DASR and the MAML not being suspended, surrendered or revoked.

(b) Upon suspension, surrendering or revocation the MAML shall be returned to the MAA.

(c) Any certification privilege based upon a MAML becomes invalid as soon as the MAML is invalid.

(d) The MAML is only valid:

1. when issued and/or changed by the MAA; and
2. when the holder has signed the document.

(e) If the MAML holder's name, service number or state ID number change, the MAML shall be resubmitted to the MAA within 30 days. ☐ **GM**

66.A.45 - Military Aircraft Type Ratings

☐ **AMC**

(a) In order to be entitled to exercise certification privileges on a specific aircraft type, the holder of a MAML shall have their MAML endorsed with the relevant Military Aircraft Type Ratings, following satisfactory completion of the relevant Military Aircraft Type Training within an DASR 147 approved MTO.

For Category A, no Military Aircraft Type Rating is required, subject to compliance with the task training requirements of DASR 145.A.35.

Superseded

(b) The issuing of a Military Aircraft Type Rating requires the satisfactory completion of the relevant Category B1, B2 or C Military Aircraft Type Training. Where relevant, the MAA may accept an appropriate EASA aircraft type rating as evidence of having undertaken a partial or full equivalent to Military Aircraft Type Training. ☐ **GM**

(c) In addition to the requirement of point (b), the issuing of the first Military Aircraft Type Rating within a given category/sub-category requires satisfactory completion of the corresponding On the Job Training, as described in Appendix III to DASR 66. Any subsequent Military Aircraft Type Rating within a given category/sub-category may require further On the Job Training as defined by the MAA.

(d) NOT APPLICABLE.

(e) NOT APPLICABLE.

(f) NOT APPLICABLE.

(g) NOT APPLICABLE.

66.A.50 - Limitations

(a) Limitations introduced on a MAML are exclusions from the certification privileges. If a new Military Aircraft Type Rating is gained, the MAML limitation(s) shall continue to apply to the new Military Aircraft Type Rating. ☐ **GM**

(b) NOT APPLICABLE.

(c) Any limitation shall be removed upon satisfactory completion of the relevant requirements of DASR 66 or as defined in the applicable conversion report.

66.A.52 - Extensions

Extensions introduced on a MAML may allow additional certification privileges. ☐ **AMC**

66.A.55 - Evidence of qualification

Personnel exercising certification privileges as well as support staff shall produce their MAML, as evidence of qualification, within 72 hours upon request by an official of the MAA.

66.A.70 - Conversion provisions

☐ **GM**

The holder of a licence or other qualification for the maintenance of aircraft gained prior to, or an individual undergoing a process to gain such a licence or other qualification prior to, a date established in national regulation shall follow the procedures for conversion into a MAML as set out in Annex B to DASR 66. ☐ **GM**

(a) NOT APPLICABLE.

(b) NOT APPLICABLE.

Superseded

(c) NOT APPLICABLE.

(d) NOT APPLICABLE.

DASR 66 Annexes/Appendices

Annex A to DASR 66 - Examination Credit Procedures (AUS)

This Annex provides the procedures for granting examination credits referred to in DASR 66.A.25(c).

1. **General**

   a. The MAA may only grant credit on the basis of a credit report prepared in accordance with paragraph 2.

   b. The credit report shall be either developed by the MAA or approved by the MAA to ensure compliance with DASR 66.

   c. Credit reports together with any change of these shall be dated and kept on record by the MAA.

2. **Examination credit report**

   a. The credit report shall include a comparison between:

      1. the modules, sub-modules, subjects and knowledge levels contained in Appendix I to DASR 66, as applicable; and

      2. the syllabus of the technical qualification concerned relevant to the particular category being sought.

      NOTE: This comparison shall state if compliance is demonstrated and contain the justifications for each statement.

   b. Credit for examinations, other than basic knowledge examinations carried out in Maintenance Training Organisations approved in accordance with DASR 147, can only be granted by the MAA.

   c. No credit can be granted unless there is a statement of compliance against each module and sub-module, stating where, in the technical qualification, the equivalent standard can be found.

   d. The MAA shall check on a regular basis if changes to the credit report are required due to changes to the national qualification standard or Appendix I to DASR 66. Such changes shall be documented, dated and recorded.

3. **Examination credit validity**

   a. The MAA shall notify the applicant in writing of any credits granted together with the reference to the credit report used.

   b. Credits shall expire 10 years after they are granted.

Superseded

c. Upon expiration of the credits, the applicant may apply for new credits. The MAA shall continue the validity of the credits for an additional period of 10 years without further consideration if basic knowledge requirements defined in Appendix I have not been changed.

Annex B to DASR 66 - Licence Conversion Procedures (AUS)

This Annex provides the procedures for the conversion of military certifying staff qualifications referred to in DASR 66.A.70 into MAMLs.

1. **General**

The MAA may only convert its own national licences or other military qualifications, without prejudice to bilateral agreements, considered valid prior to the entry into national regulation of the applicable requirements of DASR 66.

The MAA may only perform the conversion in accordance with a conversion report established pursuant to this Annex B, paragraph 2 or paragraph 3, as applicable.

Conversion reports shall be either developed by the MAA or approved by the MAA to ensure compliance with DASR 66.

Conversion reports together with any change of these shall be kept on record by the MAA.

2. Conversion report for licences or other qualifications

a. The conversion report for licences or other qualifications into a MAML shall describe the scope of each type of qualification, including the associated national licence, if any, the associated privileges and include a copy of the relevant national regulations defining these.

b. The conversion report shall show for each type of qualification referred to in point (a):

1. to which MAML it will be converted; and
2. which limitations/extensions shall be added; and
3. the conditions to remove the limitations, specifying the DASR 66 Appendix I module/subjects on which examination is needed to remove the limitations and obtain a full MAML, or to include an additional (sub-) category. This shall include the modules defined in Appendix III not covered by the national qualification.

3. **Conversion report for Approved Maintenance Organisations authorisations**

This paragraph applies to the issuance of a MAML to maintenance personnel who hold an AMO authorisation allowing them to certify aircraft work but who do not hold a formal national qualification as described in this Annex B. ☐ **GM**

Appendix I to DASR 66 - Basic Knowledge Requirements

1. Knowledge levels for Category A, B1, B2 and C Military Aircraft Maintenance Licence

Basic knowledge for Categories A, B1 and B2 are indicated by knowledge levels (1, 2 or 3) against each applicable subject. Except for the Category C obtained by the academic route (DASR 66.A.30(a)5 refers), Category C applicants shall meet either the Category B1 or the Category B2 basic knowledge levels.

Superseded

The knowledge level indicators are defined on 3 levels as follows:

- LEVEL 1: A familiarisation with the principal elements of the subject.

Objectives:

a. The applicant should be familiar with the basic elements of the subject.
b. The applicant should be able to give a simple description of the whole subject, using common words and examples.
c. The applicant should be able to use typical terms.

- LEVEL 2: A general knowledge of the theoretical and practical aspects of the subject and an ability to apply that knowledge.

Objectives:

a. The applicant should be able to understand the theoretical fundamentals of the subject.
b. The applicant should be able to give a general description of the subject using, as appropriate, typical examples.
c. The applicant should be able to use mathematical formulae in conjunction with physical laws describing the subject.
d. The applicant should be able to read and understand sketches, drawings and schematics describing the subject.
e. The applicant should be able to apply their knowledge in a practical manner using detailed procedures.

- LEVEL 3: A detailed knowledge of the theoretical and practical aspects of the subject and a capacity to combine and apply the separate elements of knowledge in a logical and comprehensive manner.

Objectives:

a. The applicant should know the theory of the subject and interrelationships with other subjects.
b. The applicant should be able to give a detailed description of the subject using theoretical fundamentals and specific examples.
c. The applicant should understand and be able to use mathematical formulae related to the subject.
d. The applicant should be able to read, understand and prepare sketches, simple drawings and schematics describing the subject.
e. The applicant should be able to apply their knowledge in a practical manner using manufacturer's instructions.
f. The applicant should be able to interpret results from various sources and measurements and apply corrective action where appropriate.

2. Modularisation

Qualification on basic subjects for each MAML category or subcategory should be in accordance with the following matrix, where applicable subjects are indicated by an "X":

Subject module	A or B1 aeroplane with:	A or B1 helicopter with:	B2

MODULE 1 - MATHEMATICS

	Level		
	A	B1	B2

Superseded

1.1 Arithmetic Arithmetical terms and signs, methods of multiplication and division, fractions and decimals, factors and multiples, weights, measures and conversion factors, ratio and proportion, averages and percentages, areas and volumes, squares, cubes, square and cube roots.	1	2	2
1.2 Algebra (a) Evaluating simple algebraic expressions, addition, subtraction, multiplication and division, use of brackets, simple algebraic fractions;	1	2	2
(b) Linear equations and their solutions; Indices and powers, negative and fractional indices; Binary and other applicable numbering systems; Simultaneous equations and second degree equations with one unknown; logarithms.	-	1	1
1.3 Geometry (a) Simple geometrical constructions;	-	1	1
(b) Graphical representation; nature and uses of graphs, graphs of equations/ functions;	2	2	2
(c) Simple trigonometry; trigonometrical relationships, use of tables and rectangular and polar coordinates.	-	2	2

MODULE 2 - PHYSICS

	Level		
	A	B1	B2
2.1 Matter Nature of matter: the chemical elements, structure of atoms, molecules; Chemical compounds; States: solid, liquid and gaseous; Changes between states.	1	1	1
2.2 Mechanics *2.2.1 Statics* Forces, moments and couples, representation as vectors;	1	2	1

Superseded

Centre of gravity; Elements of theory of stress, strain and elasticity: tension, compression, shear and torsion; Nature and properties of solid, fluid and gas; Pressure and buoyancy in liquids (barometers).			
2.2.2 Kinetics Linear movement: uniform motion in a straight line, motion under constant acceleration (motion under gravity); Rotational movement: uniform circular motion (centrifugal/ centripetal forces); Periodic motion: pendular movement; Simple theory of vibration, harmonics and resonance; Velocity ratio, mechanical advantage and efficiency.	1	2	1
2.2.3 Dynamics (a) Mass; Force, inertia, work, power, energy (potential, kinetic and total energy), heat, efficiency;	1	2	1
(b) Momentum, conservation of momentum; Impulse; Gyroscopic principles; Friction: nature and effects, coefficient of friction (rolling resistance).	1	2	2
2.2.4 Fluid dynamics (a) Specific gravity and density;	2	2	2
(b) Viscosity, fluid resistance, effects of streamlining; Effects of compressibility on fluids; Static, dynamic and total pressure: Bernoulli's Theorem, Venturi effect.	1	2	1
2.3 Thermodynamics (a) Temperature: thermometers and temperature scales: Celsius, Fahrenheit and Kelvin; Heat definition;	2	2	2

Superseded

(b) Heat capacity, specific heat; Heat transfer: convection, radiation and conduction; Volumetric expansion; First and second law of thermodynamics; Gases: ideal gases laws; specific heat at constant volume and constant pressure, work done by expanding gas; Isothermal, adiabatic expansion and compression, engine cycles, constant volume and constant pressure, refrigerators and heat pumps; Latent heats of fusion and evaporation, thermal energy, heat of combustion.	-	2	2
2.4 Optics (Light) Nature of light; speed of light; Laws of reflection and refraction: reflection at plane surfaces, reflection by spherical mirrors, refraction, lenses; Fibre optics.	-	2	2
2.5 Wave Motion and Sound Wave motion: mechanical waves, sinusoidal wave motion, interference phenomena, standing waves; Sound: speed of sound, production of sound, intensity, pitch and quality, Doppler effect.	-	2	2

MODULE 3 - ELECTRICAL FUNDAMENTALS

	Level		
	A	B1	B2
3.1 Electron Theory Structure and distribution of electrical charges within: atoms, molecules, ions, compounds; Molecular structure of conductors, semiconductors and insulators.	1	1	1
3.2 Static Electricity and Conduction Static electricity and distribution of electrostatic charges; Electrostatic laws of attraction and repulsion; Units of charge, Coulomb's Law;	1	2	2

Superseded

Conduction of electricity in solids, liquids, gases and a vacuum.			
3.3 Electrical Terminology The following terms, their units and factors affecting them: potential difference, electromotive force, voltage, current, resistance, conductance, charge, conventional current flow, electron flow.	1	2	2
3.4 Generation of Electricity Production of electricity by the following methods: light, heat, friction, pressure, chemical action, magnetism and motion.	1	1	1
3.5 DC Sources of Electricity Construction and basic chemical action of: primary cells, secondary cells, lead acid cells, nickel cadmium cells, Li-ion cells, other alkaline cells; Cells connected in series and parallel; Internal resistance and its effect on a battery; Construction, materials and operation of thermocouples; Operation of photo-cells.	1	2	2
3.6 DC Circuits Ohms Law, Kirchoff's Voltage and Current Laws; Calculations using the above laws to find resistance, voltage and current; Significance of the internal resistance of a supply.	1	2	2
3.7 Resistance/Resistor (a) Resistance and affecting factors; Specific resistance; Resistor colour code, values and tolerances, preferred values, wattage ratings; Resistors in series and parallel; Calculation of total resistance using series, parallel and series parallel combinations; Operation and use of potentiometers and rheostats; Operation of Wheatstone Bridge;	-	2	2
(b) Positive and negative temperature coefficient conductance; Fixed resistors, stability, tolerance and limitations, methods of construction; Variable resistors, thermistors, voltage dependent resistors; Construction of potentiometers and rheostats;	-	1	1

Superseded

Construction of Wheatstone Bridge.			
3.8 Power Power, work and energy (kinetic and potential); Dissipation of power by a resistor; Power formula; Calculations involving power, work and energy.	-	2	2
3.9 Capacitance/Capacitor Operation and function of a capacitor; Factors affecting capacitance area of plates, distance between plates, number of plates, dielectric and dielectric constant, working voltage, voltage rating; Capacitor types, construction and function; Capacitor colour coding; Calculations of capacitance and voltage in series and parallel circuits; Exponential charge and discharge of a capacitor, time constants; Testing of capacitors.	-	2	2
3.10 Magnetism (a) Theory of magnetism; Properties of a magnet; Action of a magnet suspended in the Earth's magnetic field; Magnetisation and demagnetisation; Magnetic shielding; Various types of magnetic material; Electromagnets construction and principles of operation; Hand clasp rules to determine: magnetic field around current carrying conductor; b) Magnetomotive force, field strength, magnetic flux density, permeability, hysteresis loop, retentivity, coercive force reluctance, saturation point, eddy currents; Precautions for care and storage of magnets.	- -	2 2	2 2
3.11 Inductance/Inductor Faraday's Law; Action of inducing a voltage in a conductor moving in a magnetic field; Induction principles;	-	2	2

Superseded

Effects of the following on the magnitude of an induced voltage: magnetic field strength, rate of change of flux, number of conductor turns; Mutual induction; The effect the rate of change of primary current and mutual inductance has on induced voltage; Factors affecting mutual inductance: number of turns in coil, physical size of coil, permeability of coil, position of coils with respect to each other; Lenz's Law and polarity determining rules; Back emf, self-induction; Saturation point; Principle uses of inductors.			
3.12 DC Motor/Generator Theory Basic motor and generator theory; Construction and purpose of components in DC generator; Operation of, and factors affecting output and direction of current flow in DC generators; Operation of, and factors affecting output power, torque, speed and direction of rotation of DC motors; Series wound, shunt wound and compound motors; Starter Generator construction.	-	2	2
3.13 AC Theory Sinusoidal waveform: phase, period, frequency, cycle; Instantaneous, average, root mean square, peak, peak to peak current values and calculations of these values, in relation to voltage, current and power; Triangular/Square waves; Single/3 phase principles.	1	2	2
3.14 Resistive (R), Capacitive (C) and Inductive (L) Circuits Phase relationship of voltage and current in L, C and R circuits, parallel, series and series parallel; Power dissipation in L, C and R circuits; Impedance, phase angle, power factor and current calculations; True power, apparent power and reactive power calculations.	-	2	2

Superseded

3.15 Transformers Transformer construction principles and operation; Transformer losses and methods for overcoming them; Transformer action under load and no-load conditions; Power transfer, efficiency, polarity markings; Calculation of line and phase voltages and currents; Calculation of power in a three phase system; Primary and Secondary current, voltage, turns ratio, power, efficiency; Auto transformers.	-	2	2
3.16 Filters Operation, application and uses of the following filters: low pass, high pass, band pass, band stop.	-	1	1
3.17 AC Generators Rotation of loop in a magnetic field and waveform produced; Operation and construction of revolving armature and revolving field type AC generators; Single phase, two phase and three phase alternators; Three phase star and delta connections advantages and uses; Permanent Magnet Generators.	-	2	2
3.18 AC Motors Construction, principles of operation and characteristics of: AC synchronous and induction motors both single and polyphase; Methods of speed control and direction of rotation; Methods of producing a rotating field: capacitor, inductor, shaded or split pole.	-	2	2

MODULE 4 - ELECTRONIC FUNDAMENTALS

	Level		
	A	B1	B2

Superseded

4.1 Semiconductors *4.1.1 Diodes* (a) Diode symbols; Diode characteristics and properties; Diodes in series and parallel; Main characteristics and use of silicon controlled rectifiers (thyristors), light emitting diode, photo conductive diode, varistor, rectifier diodes; Functional testing of diodes; (b) Materials, electron configuration, electrical properties; P and N type materials: effects of impurities on conduction, majority and minority characters; PN junction in a semiconductor, development of a potential across a PN junction in unbiased, forward biased and reverse biased conditions; Diode parameters: peak inverse voltage, maximum forward current, temperature, frequency, leakage current, power dissipation; Operation and function of diodes in the following circuits: clippers, clampers, full and half wave rectifiers, bridge rectifiers, voltage doublers and triplers; Detailed operation and characteristics of the following devices: silicon controlled rectifier (thyristor), light emitting diode, Schottky diode, photo conductive diode, varactor diode, varistor, rectifier diodes, Zener diode.	- -	2 -	2 2
4.1.2 Transistors (a) Transistor symbols; Component description and orientation; Transistor characteristics and properties; (b) Construction and operation of PNP and NPN transistors; Base, collector and emitter configurations; Testing of transistors; Basic appreciation of other transistor types and their uses; Application of transistors: classes of amplifier (A, B, C); Simple circuits including: bias, decoupling, feedback and stabilisation; Multistage circuit principles: cascades, push-pull, oscillators, multivibrators, flip-flop circuits.	- -	1 -	2 2

Superseded

4.1.3 Integrated Circuits (a) Description and operation of logic circuits and linear circuits/operational amplifiers; (b) Description and operation of logic circuits and linear circuits; Introduction to operation and function of an operational amplifier used as: integrator, differentiator, voltage follower, comparator; Operation and amplifier stages connecting methods: resistive capacitive, inductive (transformer), inductive resistive (IR), direct; Advantages and disadvantages of positive and negative feedback.	- - -	1 - -	- - 2
4.2 Printed Circuit Boards Description and use of printed circuit boards.	-	1	2
4.3 Servomechanisms (a) Understanding of the following terms: Open and closed loop systems, feedback, follow up, analogue transducers; Principles of operation and use of the following synchro system components/ features: resolvers, differential, control and torque, transformers, inductance and capacitance transmitters; (b) Understanding of the following terms: Open and closed loop, follow up, servomechanism, analogue, transducer, null, damping, feedback, deadband; Construction operation and use of the following synchro system components: resolvers, differential, control and torque, E and I transformers, inductance transmitters, capacitance transmitters, synchronous transmitters; Servomechanism defects, reversal of synchro leads, hunting.	- - -	1 - -	- - 2

MODULE 5 - DIGITAL TECHNIQUES/ELECTRONIC INSTRUMENT SYSTEMS

	Level		
	A	B1	B2

Superseded

5.1 Electronic Instrument Systems Typical systems arrangements and cockpit layout of electronic instrument systems.	1	2	3
5.2 Numbering Systems Numbering systems: binary, octal and hexadecimal; Demonstration of conversions between the decimal and binary, octal and hexadecimal systems and vice versa.	-	1	2
5.3 Data Conversion Analogue Data, Digital Data; Operation and application of analogue to digital, and digital to analogue converters, inputs and outputs, limitations of various types.	-	1	2
5.4 Data Buses Operation of data buses in aircraft systems, including knowledge of ARINC and other specifications; Aircraft Network/Ethernet.	-	2	2
5.5 Logic Circuits (a) Identification of common logic gate symbols, tables and equivalent circuits; Applications used for aircraft systems, schematic diagrams; (b) Interpretation of logic diagrams.	- -	2 -	2 2
5.6 Basic Computer Structure (a) Computer terminology (including bit, byte, software, hardware, CPU, IC, and various memory devices such as RAM, ROM, PROM); Computer technology (as applied in aircraft systems); (b) Computer related terminology; Operation, layout and interface of the major components in a micro-computer including their associated bus systems; Information contained in single and multi-address instruction words; Memory associated terms; Operation of typical memory devices; Operation, advantages and disadvantages of the various data storage systems.	1 -	2 -	- 2
5.7 Microprocessors Functions performed and overall operation of a microprocessor;	-	-	2

Superseded

Basic operation of each of the following microprocessor elements: control and processing unit, clock, register, arithmetic logic unit.			
5.8 Integrated Circuits Operation and use of encoders and decoders; Function of encoder types; Uses of medium, large and very large scale integration.	-	-	2
5.9 Multiplexing Operation, application and identification in logic diagrams of multiplexers and demultiplexers.	-	-	2
5.10 Fibre Optics Advantages and disadvantages of fibre optic data transmission over electrical wire propagation; Fibre optic data bus; Fibre optic related terms; Terminations; Couplers, control terminals, remote terminals; Application of fibre optics in aircraft systems.	-	1	2
5.11 Electronic Displays Principles of operation of common types of displays used in modern aircraft, including Cathode Ray Tubes, Light Emitting Diodes and Liquid Crystal Display.	-	2	2
5.12 Electrostatic Sensitive Devices Special handling of components sensitive to electrostatic discharges; Awareness of risks and possible damage, component and personnel anti-static protection devices.	1	2	2
5.13 Software Management Control Awareness of restrictions, airworthiness requirements and possible catastrophic effects of unapproved changes to software programmes.	-	2	2
5.14 Electromagnetic Environment Influence of the following phenomena on maintenance practices for electronic system: EMC-Electromagnetic Compatibility EMI-Electromagnetic Interference HIRF-High Intensity Radiated Field	-	2	2

Superseded

Lightning/lightning protection.			
5.15 Typical Electronic/Digital Aircraft Systems General arrangement of typical electronic/digital aircraft systems and associated BITE (Built In Test Equipment) such as: ACARS-ARINC Communication and Addressing and Reporting System EICAS-Engine Indication and Crew Alerting System FBW-Fly-by-Wire FMS-Flight Management System IRS-Inertial Reference System ECAM-Electronic Centralised Aircraft Monitoring EFIS-Electronic Flight Instrument System GPS-Global Positioning System TCAS-Traffic Alert Collision Avoidance System Integrated Modular Avionics Cabin Systems Information Systems.	-	2	2

MODULE 6 - MATERIALS AND HARDWARE

	Level		
	A	B1	B2
6.1 Aircraft Materials — Ferrous (a) Characteristics, properties and identification of common alloy steels used in aircraft; Heat treatment and application of alloy steels; (b) Testing of ferrous materials for hardness, tensile strength, fatigue strength and impact resistance.	1 -	2 1	1 1
6.2 Aircraft Materials — Non-Ferrous (a) Characteristics, properties and identification of common non-ferrous materials used in aircraft;	1	2	1

Superseded

Heat treatment and application of non-ferrous materials; (b) Testing of non-ferrous material for hardness, tensile strength, fatigue strength and impact resistance.	-	1	1
6.3 Aircraft Materials — Composite and Non-Metallic *6.3.1 Composite and non-metallic other than wood and fabric* (a) Characteristics, properties and identification of common composite and non-metallic materials, other than wood, used in aircraft; Sealant and bonding agents; (b) The detection of defects/deterioration in composite and non-metallic material; Repair of composite and non-metallic material.	1 1	2 2	2 -
6.3.2 Wooden structures Construction methods of wooden airframe structures; Characteristics, properties and types of wood and glue used in aeroplanes; Preservation and maintenance of wooden structure; Types of defects in wood material and wooden structures; The detection of defects in wooden structure; Repair of wooden structure.	-	-	-
6.3.3 Fabric covering Characteristics, properties and types of fabrics used in aeroplanes; Inspections methods for fabric; Types of defects in fabric; Repair of fabric covering.	-	-	-
6.4 Corrosion (a) Chemical fundamentals; Formation by, galvanic action process, microbiological, stress; (b) Types of corrosion and their identification; Causes of corrosion; Material types, susceptibility to corrosion.	1 2	1 3	1 2

Superseded

6.5 Fasteners *6.5.1 Screw threads* Screw nomenclature; Thread forms, dimensions and tolerances for standard threads used in aircraft; Measuring screw threads.	2	2	2
6.5.2 Bolts, studs and screws Bolt types: specification, identification and marking of aircraft bolts, international standards; Nuts: self-locking, anchor, standard types; Machine screws: aircraft specifications; Studs: types and uses, insertion and removal; Self tapping screws, dowels.	2	2	2
6.5.3 Locking devices Tab and spring washers, locking plates, split pins, pal-nuts, wire locking, quick release fasteners, keys, circlips, cotter pins.	2	2	2
6.5.4 Aircraft rivets Types of solid and blind rivets: specifications and identification, heat treatment.	1	2	1
6.6 Pipes and Unions (a) Identification of, and types of rigid and flexible pipes and their connectors used in aircraft; (b) Standard unions for aircraft hydraulic, fuel, oil, pneumatic and air system pipes.	2 2	2 2	2 1
6.7 Springs Types of springs, materials, characteristics and applications.	1	2	1
6.8 Bearings Purpose of bearings, loads, material, construction; Types of bearings and their application.	1	2	2

Superseded

6.9 Transmissions Gear types and their application; Gear ratios, reduction and multiplication gear systems, driven and driving gears, idler gears, mesh patterns; Belts and pulleys, chains and sprockets.	1	2	2
6.10 Control Cables Types of cables; End fittings, turnbuckles and compensation devices; Pulleys and cable system components; Bowden cables; Aircraft flexible control systems.	1	2	1
6.11 Electrical Cables and Connectors Cable types, construction and characteristics; High tension and co-axial cables; Crimping; Connector types, pins, plugs, sockets, insulators, current and voltage rating, coupling, identification codes.	1	2	2

MODULE 7 - MAINTENANCE PRACTICES

	Level		
	A	B1	B2
7.1 Safety Precautions-Aircraft and Workshop Aspects of safe working practices including precautions to take when working with electricity, gases especially oxygen, oils and chemicals; Also, instruction in the remedial action to be taken in the event of a fire or another accident with one or more of these hazards including knowledge on extinguishing agents.	3	3	3
7.2 Workshop Practices Care of tools, control of tools, use of workshop materials; Dimensions, allowances and tolerances, standards of workmanship;	3	3	3

Superseded

Calibration of tools and equipment, calibration standards.			
7.3 Tools Common hand tool types; Common power tool types; Operation and use of precision measuring tools; Lubrication equipment and methods; Operation, function and use of electrical general test equipment.	3	3	3
7.4 Avionic General Test Equipment Operation, function and use of avionic general test equipment.	-	2	3
7.5 Engineering Drawings, Diagrams and Standards Drawing types and diagrams, their symbols, dimensions, tolerances and projections; Identifying title block information; Microfilm, microfiche and computerised presentations; Specification 100 of the Air Transport Association (ATA) of America; Specification S1000D; Aeronautical and other applicable standards including ISO, AN, MS, NAS and MIL; Wiring diagrams and schematic diagrams.	1	2	2
7.6 Fits and Clearances Drill sizes for bolt holes, classes of fits; Common system of fits and clearances; Schedule of fits and clearances for aircraft and engines; Limits for bow, twist and wear; Standard methods for checking shafts, bearings and other parts.	1	2	1
7.7 Electrical Wiring Interconnection System (EWIS) Continuity, insulation and bonding techniques and testing; Use of crimp tools: hand and hydraulic operated; Testing of crimp joints; Connector pin removal and insertion; Co-axial cables: testing and installation precautions; Identification of wire types, their inspection criteria and damage tolerance;	1	3	3

Superseded

Wiring protection techniques: Cable looming and loom support, cable clamps, protective sleeving techniques including heat shrink wrapping, shielding; EWIS installations, inspection, repair, maintenance and cleanliness standards.			
7.8 Riveting Riveted joints, rivet spacing and pitch; Tools used for riveting and dimpling; Inspection of riveted joints.	1	2	-
7.9 Pipes and Hoses Bending and belling/flaring aircraft pipes; Inspection and testing of aircraft pipes and hoses; Installation and clamping of pipes.	1	2	-
7.10 Springs Inspection and testing of springs.	1	2	-
7.11 Bearings Testing, cleaning and inspection of bearings; Lubrication requirements of bearings; Defects in bearings and their causes.	1	2	-
7.12 Transmissions Inspection of gears, backlash; Inspection of belts and pulleys, chains and sprockets; Inspection of screw jacks, lever devices, push-pull rod systems.	1	2	-
7.13 Control Cables Swaging of end fittings; Inspection and testing of control cables; Bowden cables; aircraft flexible control systems.	1	2	-
7.14 Material handling *7.14.1 Sheet Metal* Marking out and calculation of bend allowance; Sheet metal working, including bending and forming; Inspection of sheet metal work.	-	2	-

Superseded

7.14.2 Composite and non-metallic Bonding practices; Environmental conditions; Inspection methods.	-	2	-
7.15 Welding, Brazing, Soldering and Bonding (a) Soldering methods; inspection of soldered joints; (b) Welding and brazing methods; Inspection of welded and brazed joints; Bonding methods and inspection of bonded joints.	- -	2 2	2 -
7.16 Aircraft Weight and Balance (a) Centre of Gravity/Balance limits calculation: use of relevant documents; (b) Preparation of aircraft for weighing; Aircraft weighing.	- -	2 2	2 -
7.17 Aircraft Handling and Storage Aircraft taxiing/towing and associated safety precautions; Aircraft jacking, chocking, securing and associated safety precautions; Aircraft storage methods; Refuelling/defuelling procedures; De-icing/anti-icing procedures; Electrical, hydraulic and pneumatic ground supplies; Effects of environmental conditions on aircraft handling and operation.	2	2	2
7.18 Disassembly, Inspection, Repair and Assembly Techniques (a) Types of defects and visual inspection techniques; Corrosion removal, assessment and reprotection; (b) General repair methods, Structural Repair Manual; Ageing, fatigue and corrosion control programmes; (c) Non-destructive inspection techniques including, penetrant, radiographic, eddy current, ultrasonic and boroscope methods;	2 - -	3 2 2	3 - 1

Superseded

(d) Disassembly and re-assembly techniques;	2	2	2
(e) Trouble shooting techniques.	-	2	2
7.19 Abnormal Events (a) Inspections following lightning strikes and HIRF penetration; (b) Inspections following abnormal events such as heavy landings and flight through turbulence.	2 2	2 2	2 -
7.20 Maintenance Procedures Maintenance planning; Modification procedures; Stores procedures; Certification/release procedures; Interface with aircraft operation; Maintenance Inspection/Quality Control/Quality Assurance; Additional maintenance procedures; Control of life limited components.	1	2	2
7.21 Armament Safety Safety principles and elements with armed aircraft, ammunitions; Safety aspects of canopy, ejection seat and other pyrotechnic devices.	2	2	2

MODULE 8 - BASIC AERODYNAMICS

	Level		
	A	B1	B2
8.1 Physics of the Atmosphere International Standard Atmosphere (ISA), application to aerodynamics.	1	2	2

Superseded

8.2 Aerodynamics Airflow around a body; Boundary layer, laminar and turbulent flow, free stream flow, relative airflow, upwash and downwash, vortices, stagnation; The terms: camber, chord, mean aerodynamic chord, profile (parasite) drag, induced drag, centre of pressure, angle of attack, wash in and wash out, fineness ratio, wing shape and aspect ratio; Thrust, Weight, Aerodynamic Resultant; Generation of Lift and Drag: Angle of Attack, Lift coefficient, Drag coefficient, polar curve, stall; Aerofoil contamination including ice, snow, frost.	1	2	2
8.3 Theory of Flight Relationship between lift, weight, thrust and drag; Glide ratio; Steady state flights, performance; Theory of the turn; Influence of load factor: stall, flight envelope and structural limitations; Lift augmentation.	1	2	2
8.4 Flight Stability and Dynamics Longitudinal, lateral and directional stability (active and passive).	1	2	2

MODULE 9 - HUMAN FACTORS

	Level		
	A	B1	B2
9.1 General The need to take human factors into account; Incidents attributable to human factors/human error; "Murphy's" law.	1	2	2

Superseded

9.2 Human Performance and Limitations Vision; Hearing; Information processing; Attention and perception; Memory; Claustrophobia and physical access.	1	2	2
9.3 Social Psychology Responsibility: individual and group; Motivation and de-motivation; Peer pressure; "Culture" issues; Team working; Management, supervision and leadership; Military environment and other military factors.	1	1	1
9.4 Factors Affecting Performance Fitness/health; Stress: domestic and work related; Time pressure and deadlines; Workload: overload and underload; Sleep and fatigue, shiftwork; Alcohol, medication, drug abuse.	2	2	2
9.5 Physical Environment Noise and fumes; Illumination; Climate and temperature; Motion and vibration; Military Working environments.	1	1	1
9.6 Tasks Physical work; Repetitive tasks; Visual inspection; Complex systems.	1	1	1

Superseded

9.7 Communication Within and between teams; Work logging and recording; Keeping up to date, currency; Dissemination of information.	2	2	2
9.8 Human Error Error models and theories; Types of error in maintenance tasks; Implications of errors (i.e. accidents); Avoiding and managing errors.	1	2	2
9.9 Hazards in the Workplace Recognising and avoiding hazards; Dealing with emergencies.	2	2	2

MODULE 10 - AVIATION LEGISLATION

	Level		
	A	B1	B2
10.1 Regulatory Framework Military/State Organisation: Role of the Military Aviation Authority; Introduction to the national military airworthiness regulations.	1	1	1
10.2 Certifying Staff — Maintenance Understanding of MAML and Certifying staff regulation.	2	2	2
10.3 Approved Maintenance Organisations Understanding of DASR 145.	2	2	2
10.4 Air operations Operating Authority's responsibilities, in particular regarding continuing airworthiness and maintenance;	1	2	2

Superseded

Aircraft Maintenance Programme; MEL/CDL or National equivalent; Documents to be carried on board; Aircraft placarding (markings).			
10.5 Certification of aircraft, parts and appliances (a) General; General understanding of DASR 21 and airworthiness codes/criteria; (b) Documents; Military Type-Certificates; Military Restricted Type-Certificates; Military Supplemental Type-Certificates; Military Certificates Of Airworthiness; Military Restricted Certificates Of Airworthiness; Military Permit To Fly; National Certificate of Registration; Weight & Balance; National Noise Certificate if required.	- - -	1 1 1	1 1 1
10.6 Continuing airworthiness Understanding of DASR 21 provisions related to continuing airworthiness; Understanding of DASR M.	1 2	1 2	1 2
10.7 Applicable Requirements a) Maintenance Programmes, Maintenance checks and inspections; Airworthiness Directives; Service Bulletins, manufacturers' service information; Modifications and repairs; Maintenance documentation: maintenance manuals, structural repair manual, illustrated parts catalogue, etc ; Master Minimum Equipment Lists, Minimum Equipment List and Dispatch Deviation Lists or National equivalent; (b) Continuing airworthiness; Minimum equipment requirements — Test flights; Maintenance and dispatch requirements.	 1 -	 2 1	 2 1

Superseded

MODULE 11A - TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

	Level	
	A1	B1.1
11.1 Theory of Flight *11.1.1. Aeroplane Aerodynamics and Flight Controls* Operation and effect of: — roll control: ailerons and spoilers, — pitch control: elevators, stabilators, variable incidence stabilisers and canards, — yaw control, rudder limiters; Control using elevons, ruddervators; High lift devices, slots, slats, flaps, flaperons; Drag inducing devices, spoilers, lift dumpers, speed brakes; Effects of wing fences, saw tooth leading edges; Boundary layer control using, vortex generators, stall wedges or leading edge devices; Operation and effect of trim tabs, balance and antibalance (leading) tabs, servo tabs, spring tabs, mass balance, control surface bias, aerodynamic balance panels; Effects of external stores;	1	2
11.1.2. High Speed Flight Speed of sound, subsonic flight, transonic flight, supersonic flight; Mach number, critical Mach number, compressibility buffet, shock wave, aerodynamic heating, area rule; Factors affecting airflow in engine intakes of high speed aircraft; Effects of sweepback on critical Mach number; Effects of external stores.	1	2
11.2 Airframe Structures — General Concepts (a) Airworthiness requirements for structural strength/integrity; Structural classification, primary, secondary and tertiary;	2	2

Superseded

Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision; Aircraft bonding; (b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning, anti-corrosive protection, wing, empennage and engine attachments; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning; Airframe symmetry: methods of alignment and symmetry checks.	1	2
11.3 Airframe Structures — Aeroplanes *11.3.1 Fuselage (System 52/53/56)* Construction and pressurisation sealing; Wing, stabiliser, pylon and undercarriage attachments; Seat installation and cargo loading system; Doors and emergency exits: construction, mechanisms, operation and safety devices; Windows and windscreen construction and mechanisms; Canopy construction and mechanism;	1	2
11.3.2 Wings (System 57) Construction; Fuel storage; Landing gear, pylon, control surface and high lift/drag attachments;	1	2
11.3.3 Stabilisers (System 55) Construction; Control surface attachment ;	1	2

Superseded

11.3.4 Flight Control Surfaces (System 55/57) Construction and attachment; Balancing — mass and aerodynamic;	1	2
11.3.5 Nacelles/Pylons (System 54) Nacelles/Pylons: — Construction, — Firewalls, — Engine mounts.	1	2
11.4 Air Conditioning and Cabin Pressurisation (System 21) *11.4.1 Air supply* Sources of air supply including engine bleed, APU and ground cart;	1	2
11.4.2 Air Conditioning Air conditioning systems; Air cycle and vapour cycle machines; Distribution systems; Flow, temperature and humidity control system;	1	3
11.4.3 Pressurisation Pressurisation systems; Control and indication including control and safety valves; Cabin pressure controllers; Canopy seal, anti-g system;	1 1	3 2
11.4.4 Safety and warning devices Protection and warning devices.	1	3
11.5 Instruments/Avionic Systems *11.5.1 Instrument Systems (System 31)* Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Angle of attack indication, stall warning systems;	1	2

Superseded

Glass cockpit; Other aircraft system indication.		
11.5.2 Avionic Systems Fundamentals of system lay-outs and operation of: — Auto Flight (System 22), — Communications (System 23), — Navigation Systems (System 34).	1	1
11.6 Electrical Power (System 24) Batteries Installation and Operation; DC power generation; AC power generation; Emergency power generation; Voltage regulation; Power distribution; Inverters, transformers, rectifiers; Circuit protection; External/Ground power.	1	3
11.7 Equipment and Furnishings (System 25) (a) Emergency equipment requirements; Seats, harnesses and belts; (b) Cabin lay-out; Equipment lay-out; Cabin Furnishing installation; Cargo handling and retention equipment; Airstairs.	2 1	2 1
11.8 Fire Protection (System 26) (a) Fire and smoke detection and warning systems; Fire extinguishing systems; System tests; (b) Portable fire extinguisher.	1 1	3 1

Superseded

11.9 Flight Controls (System 27) Primary controls: aileron, elevator, rudder, spoiler; Trim control; Active load control; High lift devices; Lift dump, speed brakes; System operation: manual, hydraulic, pneumatic, electrical, fly-by-wire; Artificial feel, Yaw damper, Mach trim, rudder limiter, gust lock systems; Balancing and rigging; Stall protection/warning system.	1	3
11.10 Fuel Systems (System 28) System lay-out; Fuel tanks; Supply systems; Dumping, venting and draining; Cross-feed and transfer; Indications and warnings; Refuelling and defueling including Air to Air Refueling (AAR); Longitudinal balance fuel systems including during AAR.	1	3
11.11 Hydraulic Power (System 29) System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical, pneumatic; Emergency pressure generation; Filters; Pressure Control; Power distribution; Indication and warning systems; Interface with other systems.	1	3

Superseded

11.12 Ice and Rain Protection (System 30) Ice formation, classification and detection; Anti-icing systems: electrical, hot air and chemical; De-icing systems: electrical, hot air, pneumatic and chemical; Rain repellent; Probe and drain heating; Wiper systems.	1	3
11.13 Landing Gear (System 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning; Wheels, brakes, antiskid and autobraking; Tyres; Steering; Air-ground sensing; Drag-chute and Arresting hook/landing assistance equipment.	2 1	3 1
11.14 Lights (System 33) External: navigation, anti collision, landing, taxiing, ice, formation; Internal: cabin, cockpit, cargo, Night Vision Devices; Emergency.	2	3
11.15 Oxygen (System 35) System lay-out: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.	1	3
11.16 Pneumatic/Vacuum (System 36) System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure control; Distribution;	1	3

Superseded

Indications and warnings; Interfaces with other systems.		
11.17 Water/Waste (System 38) Water system lay-out, supply, distribution, servicing and draining; Toilet system lay-out, flushing and servicing; Corrosion aspects.	-	-
11.18 On Board Maintenance Systems (System 45) Central maintenance computers; Data loading system; Electronic library system; Printing; Structure monitoring (damage tolerance monitoring).	1	2
11.19 Integrated Modular Avionics (System 42) Functions that may be typically integrated in the Integrated Modular Avionic (IMA) modules are, among others: Bleed Management, Air Pressure Control, Air Ventilation and Control, Avionics and Cockpit Ventilation Control, Temperature Control, Air Traffic Communication, Avionics Communication Router, Electrical Load Management, Circuit Breaker Monitoring, Electrical System BITE, Fuel Management, Braking Control, Steering Control, Landing Gear Extension and Retraction, Tyre Pressure Indication, Oleo Pressure Indication, Brake Temperature Monitoring, etc; Core System; Network Components.	1	2
11.20 Cabin Systems (System 44) The units and components which provide a means of communication within the aircraft (Cabin Intercommunication Data System) and between the aircraft cabin and ground stations (Cabin Network Service). Includes voice, data, and video transmissions. The Cabin Intercommunication Data System provides an interface between cockpit/cabin crew and cabin systems. These systems support data exchange of the different related LRU's and they are typically operated via Crew Panels. The Cabin Network Service typically consists of a server, typically interfacing with, among others, the Data/Radio Communication System; The Cabin Network Service may host functions such as access to pre-departure/ departure reports; Cabin Core System;	1	2

Superseded

External Communication System; Cabin Monitoring System; Miscellaneous Cabin System.		
11.21 Information Systems (System 46) The units and components which furnish a means of storing, updating and retrieving digital information traditionally provided on paper, microfilm or microfiche. Includes units that are dedicated to the information storage and retrieval function such as the electronic library mass storage and controller. Does not include units or components installed for other uses and shared with other systems, such as flight deck printer or general use display. Typical examples include Air Traffic and Information Management Systems and Network Server Systems; Aircraft General Information System; Flight Deck Information System; Maintenance Information System; Passenger Cabin Information System; Miscellaneous Information System.	1	2

MODULE 11B - PISTON AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

	Level	
	A2	B1.2
11.1 Theory of Flight *11.1.1. Aeroplane Aerodynamics and Flight Controls* Operation and effect of: — roll control: ailerons and spoilers, — pitch control: elevators, stabilators, variable incidence stabilisers and canards, — yaw control, rudder limiters; Control using elevons, ruddervators; High lift devices, slots, slats, flaps, flaperons;	1	2

Superseded

Drag inducing devices, spoilers, lift dumpers, speed brakes; Effects of wing fences, saw tooth leading edges; Boundary layer control using, vortex generators, stall wedges or leading edge devices; Operation and effect of trim tabs, balance and antibalance (leading) tabs, servo tabs, spring tabs, mass balance, control surface bias, aerodynamic balance panels; Effects of external stores;		
11.1.2. High Speed Flight – N/A	-	-
11.2 Airframe Structures — General Concepts (a) Airworthiness requirements for structural strength/integrity; Structural classification, primary, secondary and tertiary; Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision; Aircraft bonding; (b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning, anti-corrosive protection, wing, empennage and engine attachments; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning; Airframe symmetry: methods of alignment and symmetry checks.	2 1	2 2
11.3 Airframe Structures — Aeroplanes *11.3.1 Fuselage (System 52/53/56)* Construction and pressurisation sealing; Wing, tail-plane, pylon and undercarriage attachments;	1	2

Superseded

Seat installation; Doors and emergency exits: construction and operation; Windows and windscreen attachment; Canopy construction and mechanism.		
11.3.2 Wings (System 57) Construction; Fuel storage; Landing gear, pylon, control surface and high lift/drag attachments.	1	2
11.3.3 Stabilisers (System 55) Construction; Control surface attachment.	1	2
11.3.4 Flight Control Surfaces (System 55/57) Construction and attachment; Balancing — mass and aerodynamic;	1	2
11.3.5 Nacelles/Pylons (System 54) Nacelles/Pylons: — Construction, — Firewalls, — Engine mounts.	1	2
11.4 Air Conditioning and Cabin Pressurisation (System 21) Pressurisation and air conditioning systems; Cabin pressure controllers, protection and warning devices; Heating systems.	1	3
11.5 Instruments/Avionic Systems *11.5.1 Instrument Systems (System 31)* Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Angle of attack indication, stall warning systems; Glass cockpit;	1	2

Superseded

Other aircraft system indication.		
11.5.2 Avionic Systems Fundamentals of system lay-outs and operation of: — Auto Flight (System 22), — Communications (System 23), — Navigation Systems (System 34).	1	1
11.6 Electrical Power (System 24) Batteries Installation and Operation; DC power generation; Voltage regulation; Power distribution; Circuit protection; Inverters, transformers.	1	3
11.7 Equipment and Furnishings (System 25) (a) Emergency equipment requirements; Seats, harnesses and belts; (b) Cargo handling and retention equipment; Airstairs.	2 1	2 1
11.8 Fire Protection (System 26) (a) Fire and smoke detection and warning systems; Fire extinguishing systems; System tests; (b) Portable fire extinguisher.	1 1	3 3
11.9 Flight Controls (System 27) Primary controls: aileron, elevator, rudder; Trim tabs; High lift devices; System operation: manual; Gust locks;	1	3

Superseded

Balancing and rigging; Stall warning system.		
11.10 Fuel Systems (System 28) System lay-out; Fuel tanks; Supply systems; Cross-feed and transfer; Indications and warnings; Refuelling and defueling.	1	3
11.11 Hydraulic Power (System 29) System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical; Filters; Pressure Control; Power distribution; Indication and warning systems.	1	3
11.12 Ice and Rain Protection (System 30) Ice formation, classification and detection; De-icing systems: electrical, hot air, pneumatic and chemical; Probe and drain heating; Wiper systems.	1	3
11.13 Landing Gear (System 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning; Wheels, brakes, antiskid and autobraking; Tyres; Steering; Air-ground sensing.	2	3

Superseded

11.14 Lights (System 33) External: navigation, anti collision, landing, taxiing, ice, formation; Internal: cabin, cockpit, cargo; Emergency.	2	3
11.15 Oxygen (System 35) System lay-out: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.	1	3
11.16 Pneumatic/Vacuum (System 36) System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure control; Distribution; Indications and warnings; Interfaces with other systems.	1	3
11.17 Water/Waste (System 38) Water system lay-out, supply, distribution, servicing and draining; Toilet system lay-out, flushing and servicing; Corrosion aspects.	-	-

MODULE 12 - HELICOPTER AERODYNAMICS, STRUCTURES AND SYSTEMS

	Level	
	A3	B1.3
	A4	B1.4

Superseded

12.1 Theory of Flight — Rotary Wing Aerodynamics Terminology; Effects of gyroscopic precession; Torque reaction and directional control; Dissymmetry of lift, Blade tip stall; Translating tendency and its correction; Coriolis effect and compensation; Vortex ring state, power settling, overpitching; Auto-rotation; Ground effect.	1	2
12.2 Flight Control Systems Cyclic control; Collective control; Swashplate; Yaw control: Anti-Torque Control, Tail rotor, bleed air; Main Rotor Head: Design and Operation features; Blade Dampers: Function and construction; Rotor Blades: Main and tail rotor blade construction and attachment; Trim control, fixed and adjustable stabilisers; System operation: manual, hydraulic, electrical and fly-by-wire; Artificial feel; Balancing and rigging.	2	3
12.3 Blade Tracking and Vibration Analysis Rotor alignment; Main and tail rotor tracking; Static and dynamic balancing; Vibration types, vibration reduction methods; Ground resonance.	1	3
12.4 Transmission Gear boxes, main and tail rotors; Clutches, free wheel units and rotor brake;	1	3

Superseded

Tail rotor drive shafts, flexible couplings, bearings, vibration dampers and bearing hangers.		
12.5 Airframe Structures (a) Airworthiness requirements for structural strength/integrity; Structural classification, primary, secondary and tertiary; Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision; (b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning and anti-corrosive protection; Pylon, stabiliser and undercarriage attachments; Seat installation; Doors: construction, mechanisms, operation and safety devices; Windows and windscreen construction; Fuel storage; Firewalls; Engine mounts; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning; Airframe symmetry: methods of alignment and symmetry checks.	2 1	2 2
12.6 Air Conditioning (System 21) *12.6.1 Air supply* Sources of air supply including engine bleed and ground cart.	1	2
12.6.2 Air conditioning Air conditioning systems; Distribution systems; Flow and temperature control systems;	1	3

Superseded

Protection and warning devices.		
12.7 Instruments/Avionic Systems *12.7.1 Instrument Systems (System 31)* Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Vibration indicating systems; HUMS; Glass cockpit; Other aircraft system indication.	1	2
12.7.2 Avionic Systems Fundamentals of system layouts and operation of: Auto Flight (System 22); Communications (System 23); Navigation Systems (System 34).	1	1
12.8 Electrical Power (System 24) Batteries Installation and Operation; DC power generation, AC power generation; Emergency power generation; Voltage regulation, Circuit protection; Power distribution; Inverters, transformers, rectifiers; External/Ground power.	1	3
12.9 Equipment and Furnishings (System 25) (a) Emergency equipment requirements; Seats, harnesses and belts; Lifting systems; (b) Emergency flotation systems; Cargo handling and retention equipment.	2 1	2 1
12.10 Fire Protection (System 26) Fire and smoke detection and warning systems;	1	3

Superseded

Fire extinguishing systems; System tests.		
12.11 Fuel Systems (System 28) System lay-out; Fuel tanks; Supply systems; Dumping, venting and draining; Cross-feed and transfer; Indications and warnings; Refuelling and defuelling.	1	3
12.12 Hydraulic Power (System 29) System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical, pneumatic; Emergency pressure generation; Filters; Pressure Control; Power distribution; Indication and warning systems; Interface with other systems.	1	3
12.13 Ice and Rain Protection (System 30) Ice formation, classification and detection; Anti-icing and De-icing systems: electrical, hot air and chemical; Rain repellent and removal; Probe and drain heating; Wiper system.	1	3
12.14 Landing Gear (System 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning;	2	3

Superseded

Wheels, Tyres, brakes; Steering; Air-ground sensing; Skids, floats.		
12.15 Lights (System 33) External: navigation, landing, taxiing, ice, formation; Internal: cabin, cockpit, cargo, Night Vision Devices' Lighting; Emergency.	2	3
12.16 Pneumatic/Vacuum (System 36) System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure control; Distribution; Indications and warnings; Interfaces with other systems.	1	3
12.17 Integrated Modular Avionics (System 42) Functions that may be typically integrated in the Integrated Modular Avionic (IMA) modules are, among others: Bleed Management, Air Pressure Control, Air Ventilation and Control, Avionics and Cockpit Ventilation Control, Temperature Control, Air Traffic Communication, Avionics Communication Router, Electrical Load Management, Circuit Breaker Monitoring, Electrical System BITE, Fuel Management, Braking Control, Steering Control, Landing Gear Extension and Retraction, Tyre Pressure Indication, Oleo Pressure Indication, Brake Temperature Monitoring, etc; Core System; Network Components.	1	2
12.18 On Board Maintenance Systems (System 45) Central maintenance computers; Data loading system; Electronic library system; Printing; Structure monitoring (damage tolerance monitoring).	1	2

Superseded

12.19 Information Systems (System 46) The units and components which furnish a means of storing, updating and retrieving digital information traditionally provided on paper, microfilm or microfiche. Includes units that are dedicated to the information storage and retrieval function such as the electronic library mass storage and controller. Does not include units or components installed for other uses and shared with other systems, such as flight deck printer or general use display. Typical examples include Air Traffic and Information Management Systems and Network Server Systems; Aircraft General Information System; Flight Deck Information System; Maintenance Information System; Passenger Cabin Information System; Miscellaneous Information System.	1	2

MODULE 13 - AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS

	Level
	B2
13.1 Theory of Flight (a) Aeroplane Aerodynamics and Flight Controls Operation and effect of: — roll control: ailerons and spoilers, — pitch control: elevators, stabilators, variable incidence stabilisers and canards, — yaw control, rudder limiters; Control using elevons, ruddervators; High lift devices: slots, slats, flaps; Drag inducing devices: spoilers, lift dumpers, speed brakes; Operation and effect of trim tabs, servo tabs, control surface bias; (b) High Speed Flight Speed of sound, subsonic flight, transonic flight, supersonic flight; Mach number, critical Mach number;	1 1

Superseded

(c) Rotary Wing Aerodynamics Terminology; Operation and effect of cyclic, collective and anti-torque controls.	1
13.2 Structures — General Concepts (a) Fundamentals of structural systems; (b) Zonal and station identification systems; Electrical bonding; Lightning strike protection provision.	1 2
13.3 Autoflight (System 22) Fundamentals of automatic flight control including working principles and current terminology; Command signal processing; Modes of operation: roll, pitch and yaw channels; Yaw dampers; Stability Augmentation System in helicopters; Automatic trim control; Autopilot navigation aids interface; Autothrottle systems; Automatic Landing Systems: principles and categories, modes of operation, approach, glideslope, land, go-around, system monitors and failure conditions.	3
13.4 Communication/Navigation (System 23/34) (a) Fundamentals of radio wave propagation, antennas, transmission lines, communication, receiver and transmitter; (b) Working principles of following systems: — Very High Frequency (VHF) communication, — High Frequency (HF) communication, — Audio, — Emergency Locator Transmitters (ELT), — Cockpit Voice Recorder (CVR), — Very High Frequency omnidirectional range (VOR), — Tactical air navigation system (TACAN), — Automatic Direction Finding (ADF),	3 3

Superseded

— Instrument Landing System (ILS), — Flight Director systems, Distance Measuring Equipment (DME), — Doppler navigation, — Area navigation, RNAV systems, — Flight Management Systems(FMS), — Global Positioning System (GPS), Global Navigation Satellite Systems (GNSS), GNSS Landing System (GLS), Transponder Landing System (TLS), — Inertial Navigation System (INS), — Air Traffic Control transponder, secondary surveillance radar, — Traffic Alert and Collision Avoidance System (TCAS), — Weather avoidance radar, — Radio altimeter, — Data-link communication and reporting; — Microwave Landing System (MLS), — Very Low Frequency and hyperbolic navigation (VLF/Omega).	-
13.5 Electrical Power (System 24) Batteries Installation and Operation; DC power generation; AC power generation; Emergency power generation; Voltage regulation; Power distribution; Inverters, transformers, rectifiers; Circuit protection; External/Ground power.	3
13.6 Equipment and Furnishings (System 25) (a) Electronic emergency equipment requirements; (b) Cabin entertainment equipment.	3 -

Superseded

13.7 Flight Controls (System 27) (a) Primary controls: aileron, elevator, rudder, spoiler; Trim control; Active load control; High lift devices; Lift dump, speed brakes; System operation: manual, hydraulic, pneumatic; Artificial feel, Yaw damper, Mach trim, rudder limiter, gust locks; Stall protection systems; (b) System operation: electrical, fly-by-wire.	2 3
13.8 Instruments (System 31) Classification; Atmosphere; Terminology; Pressure measuring devices and systems; Pitot static systems; Altimeters; Vertical speed indicators; Airspeed indicators; Machmeters; Altitude reporting/alerting systems; Air data computers; Instrument pneumatic systems; Direct reading pressure and temperature gauges; Temperature indicating systems; Fuel quantity indicating systems; Gyroscopic principles; Artificial horizons; Slip indicators; Directional gyros;	3

Superseded

Ground Proximity Warning Systems/Terrain Awareness Warning Systems; Compass systems; Flight Data Recording systems; Electronic Flight Instrument Systems; Instrument warning systems including master warning systems and centralised warning panels; Stall warning systems and angle of attack indicating systems; Vibration measurement and indication; Glass cockpit.	
13.9 Lights (System 33) External: navigation, landing, taxiing, ice, formation; Internal: cabin, cockpit, cargo, Night Vision Devices' Lighting; Emergency.	3
13.10 On Board Maintenance Systems (System 45) Central maintenance computers; Data loading system; Electronic library system; Printing; Structure monitoring (damage tolerance monitoring).	3
13.11 Air Conditioning and Cabin Pressurisation (System 21) *13.11.1. Air supply* Sources of air supply including engine bleed, APU and ground cart;	2
13.11.2. Air Conditioning Distribution systems; Air conditioning systems; Air cycle and vapour cycle machines; Flow, temperature and humidity control system;	1 2 3
13.11.3. Pressurisation Pressurisation systems;	3

Superseded

Control and indication including control and safety valves; Cabin pressure controllers; Canopy seal and anti-g system;	1
13.11.4. Safety and warning devices Protection and warning devices.	3
13.12 Fire Protection (System 26) (a) Fire and smoke detection and warning systems; Fire extinguishing systems; System tests; (b) Portable fire extinguisher.	3 1
13.13 Fuel Systems (System 28) (a) System lay-out; Fuel tanks; Supply systems; Dumping, venting and draining; (b) Cross-feed and transfer; Refuelling and defuelling including AAR; (c) Longitudinal balance fuel systems; Indications and warnings.	1 2 3
13.14 Hydraulic Power (System 29) (a) System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Filters; Power distribution;	1

Superseded

(b) Pressure control; Pressure generation: electrical, mechanical, pneumatic; Emergency pressure generation; Indication and warning systems; Interface with other systems.	3
13.15 Ice and Rain Protection (System 30) (a) Rain repellent; Wiper Systems; (b) Ice formation, classification and detection; Anti-icing systems: electrical, hot air and chemical; (c) De-icing systems: electrical, hot air, pneumatic, chemical; Probe and drain heating.	1 2 3
13.16 Landing Gear (System 32) (a) Construction, shock absorbing; Tyres; (b) Extension and retraction systems: normal and emergency; Indications and warnings; Wheels, brakes, antiskid and autobraking; Steering; Air-ground sensing.	1 3
13.17 Oxygen (System 35) System lay-out: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.	3
13.18 Pneumatic/Vacuum (System 36) (a) Distribution;	1
(b) System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply;	2

Superseded

(c) Pressure control; Indications and warnings; Interfaces with other systems.	3
13.19 Water/Waste (System 38) Water system lay-out, supply, distribution, servicing and draining; Toilet system lay-out, flushing and servicing.	-
13.20 Integrated Modular Avionics (System 42) Functions that may be typically integrated in the Integrated Modular Avionic (IMA) modules are, among others: Bleed Management, Air Pressure Control, Air Ventilation and Control, Avionics and Cockpit Ventilation Control, Temperature Control, Air Traffic Communication, Avionics Communication Router, Electrical Load Management, Circuit Breaker Monitoring, Electrical System BITE, Fuel Management, Braking Control, Steering Control, Landing Gear Extension and Retraction, Tyre Pressure Indication, Oleo Pressure Indication, Brake Temperature Monitoring, etc.; Core System; Network Components.	3
13.21 Cabin Systems (System 44) The units and components which provide a means of communication within the aircraft (Cabin Intercommunication Data System) and between the aircraft cabin and ground stations (Cabin Network Service). Includes voice, data transmissions. The Cabin Intercommunication Data System provides an interface between cockpit/cabin crew and cabin systems. These systems support data exchange of the different related LRU's and they are typically operated via Crew Panels. The Cabin Network Service typically consists of a server, typically interfacing with, among others, the Data/Radio Communication System; The Cabin Network Service may host functions such as access to pre-departure/departure reports; Cabin Core System; External Communication System; Cabin Monitoring System; Miscellaneous Cabin System.	3
13.22 Information Systems (System 46) The units and components which furnish a means of storing, updating and retrieving digital information traditionally provided on paper, microfilm or microfiche. Includes units that are dedicated to the information storage and retrieval function such as the electronic library mass storage and controller. Does not include units or components installed for other uses and shared with other systems, such as flight deck printer or general use display.	3

Superseded

Typical examples include Air Traffic and Information Management Systems and Network Server Systems; Aircraft General Information System; Flight Deck Information System; Maintenance Information System; Passenger Cabin Information System; Miscellaneous Information System.	

MODULE 14 - PROPULSION

	Level
	B2
14.1 Turbine Engines (a) Constructional arrangement and operation of turbojet, turbofan, turboshaft and turbopropeller engines; (b) Operation of engine control and fuel metering systems including Full Authority Digital Engine (or Electronics) Control (FADEC).	1 2
14.2 Engine Indicating Systems Exhaust gas temperature/Interstage turbine temperature systems; Engine speed; Engine Thrust Indication: Engine Pressure Ratio, engine turbine discharge pressure or jet pipe pressure systems; Oil pressure and temperature; Fuel pressure, temperature and flow; Manifold pressure; Engine torque; Propeller speed.	2
14.3 Starting and Ignition Systems Operation of engine start systems and components; Ignition systems and components; Maintenance safety requirements.	2

Superseded

MODULE 15 - GAS TURBINE ENGINE

	Level	
	A1 A3	B1.1 B1.3
15.1 Fundamentals Potential energy, kinetic energy, Newton's laws of motion, Brayton cycle; The relationship between force, work, power, energy, velocity, acceleration; Constructional arrangement and operation of turbojet, turbofan, turboshaft, turboprop.	1	2
15.2 Engine Performance Gross thrust, net thrust, choked nozzle thrust, thrust distribution, resultant thrust, thrust horsepower, equivalent shaft horsepower, specific fuel consumption; Engine efficiencies; By-pass ratio and engine pressure ratio; Pressure, temperature and velocity of the gas flow; Engine ratings, static thrust, influence of speed, altitude and hot climate, flat rating, limitations.	-	2
15.3 Inlet Compressor inlet ducts; Effects of various inlet configurations; Ice protection.	2	2
15.4 Compressors Axial and centrifugal types; Constructional features and operating principles and applications; Fan balancing; Operation: Causes and effects of compressor stall and surge; Methods of air flow control: bleed valves, variable inlet guide vanes, variable stator vanes, rotating stator blades;	1	2

Superseded

Compressor ratio.		
15.5 Combustion Section Constructional features and principles of operation.	1	2
15.6 Turbine Section Operation and characteristics of different turbine blade types; Blade to disk attachment; Nozzle guide vanes; Causes and effects of turbine blade stress and creep.	2	2
15.7 Exhaust Constructional features and principles of operation; Convergent, divergent and variable area nozzles; Engine noise reduction; Thrust reversers.	1	2
15.8 Bearings and Seals Constructional features and principles of operation.	1	2
15.9 Lubricants and Fuels Properties and specifications; Fuel additives; Safety precautions.	1	2
15.10 Lubrication Systems System operation/lay-out and components.	1	2
15.11 Fuel Systems Operation of engine control and fuel metering systems including Full Authority Digital Engine (or Electronics) Control (FADEC); Systems lay-out and components.	1	2
15.12 Air Systems Operation of engine air distribution and anti-ice control systems, including internal cooling, sealing and external air services.	1	2
15.13 Starting and Ignition Systems Operation of engine start systems and components;	1	2

Superseded

Ignition systems and components; Maintenance safety requirements.		
15.14 Engine Indication Systems Exhaust Gas Temperature/Interstage Turbine Temperature; Engine Thrust Indication: Engine Pressure Ratio, engine turbine discharge pressure or jet pipe pressure systems; Oil pressure and temperature; Fuel pressure and flow; Engine speed; Vibration measurement and indication; Torque; Power.	1	2
15.15 Power Augmentation Systems Operation and applications; Water injection, water methanol; Afterburner systems.	1	1
15.16 Turbo-prop Engines Gas coupled/free turbine and gear coupled turbines; Reduction gears; Integrated engine and propeller controls; Overspeed safety devices.	1	2
15.17 Turbo-shaft Engines Arrangements, drive systems, reduction gearing, couplings, control systems.	1	2
15.18 Auxiliary Power Units (APUs) Purpose, operation, protective systems.	1	2
15.19 Powerplant Installation Configuration of firewalls, cowlings, acoustic panels, engine mounts, anti-vibration mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, lifting points and drains.	1	2
15.20 Fire Protection Systems Operation of detection and extinguishing systems.	1	2

Superseded

15.21 Engine Monitoring and Ground Operation Procedures for starting and ground run-up; Interpretation of engine power output and parameters; Trend (including oil analysis, vibration and boroscope) monitoring; Inspection of engine and components to criteria, tolerances and data specified by engine manufacturer; Compressor washing/cleaning; Foreign Object Damage.	1	3
15.22 Engine Storage and Preservation Preservation and depreservation for the engine and accessories/systems.	-	2

MODULE 16 - PISTON ENGINE

	Level	
	A2 A4	B1.2 B1.4
16.1 Fundamentals Mechanical, thermal and volumetric efficiencies; Operating principles — 2 stroke, 4 stroke, Otto and Diesel; Piston displacement and compression ratio; Engine configuration and firing order.	1	2
16.2 Engine Performance Power calculation and measurement; Factors affecting engine power; Mixtures/leaning, pre-ignition.	1	2
16.3 Engine Construction Crank case, crank shaft, cam shafts, sumps; Accessory gearbox; Cylinder and piston assemblies;	1	2

Superseded

Connecting rods, inlet and exhaust manifolds; Valve mechanisms; Propeller reduction gearboxes.		
16.4 Engine Fuel Systems *16.4.1 Carburettors* Types, construction and principles of operation; Icing and heating.	1	2
16.4.2 Fuel injection systems Types, construction and principles of operation.	1	2
16.4.3 Electronic engine control Operation of engine control and fuel metering systems including Full Authority Digital Engine (or Electronics) Control (FADEC); Systems lay-out and components.	1	2
16.5 Starting and Ignition Systems Starting systems, pre-heat systems; Magneto types, construction and principles of operation; Ignition harnesses, spark plugs; Low and high tension systems.	1	2
16.6 Induction, Exhaust and Cooling Systems Construction and operation of: induction systems including alternate air systems; Exhaust systems, engine cooling systems — air and liquid.	1	2
16.7 Supercharging/Turbocharging Principles and purpose of supercharging and its effects on engine parameters; Construction and operation of supercharging/turbocharging systems; System terminology; Control systems; System protection.	1	2
16.8 Lubricants and Fuels Properties and specifications; Fuel additives; Safety precautions.	1	2

Superseded

16.9 Lubrication Systems System operation/lay-out and components.	1	2
16.10 Engine Indication Systems Engine speed; Cylinder head temperature; Coolant temperature; Oil pressure and temperature; Exhaust Gas Temperature; Fuel pressure and flow; Manifold pressure.	1	2
16.11 Powerplant Installation Configuration of firewalls, cowlings, acoustic panels, engine mounts, anti-vibration mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, lifting points and drains.	1	2
16.12 Engine Monitoring and Ground Operation Procedures for starting and ground run-up; Interpretation of engine power output and parameters; Inspection of engine and components: criteria, tolerances, and data specified by engine manufacturer.	1	3
16.13 Engine Storage and Preservation Preservation and depreservation for the engine and accessories/systems.	-	2

MODULE 17 - PROPELLER

	Level	
	A1 A2	B1.1 B1.2
17.1 Fundamentals Blade element theory;	1	2

Superseded

High/low blade angle, reverse angle, angle of attack, rotational speed; Propeller slip; Aerodynamic, centrifugal, and thrust forces; Torque; Relative airflow on blade angle of attack; Vibration and resonance.		
17.2 Propeller Construction Construction methods and materials used in propellers; Blade station, blade face, blade shank, blade back and hub assembly; Fixed pitch, controllable pitch, constant speeding propeller; Propeller/spinner installation.	1	2
17.3 Propeller Pitch Control Speed control and pitch change methods, mechanical and electrical/electronic; Feathering and reverse pitch; Overspeed protection.	1	2
17.4 Propeller Synchronising Synchronising and synchrophasing equipment.	-	2
17.5 Propeller Ice Protection Fluid and electrical de-icing equipment.	1	2
17.6 Propeller Maintenance Static and dynamic balancing; Blade tracking; Assessment of blade damage, erosion, corrosion, impact damage, delamination; Propeller treatment/repair schemes; Propeller engine running.	1	3
17.7 Propeller Storage and Preservation Propeller preservation and depreservation.	1	2

MODULE 50 - PRINCIPLES OF ARMAMENT

Superseded

	Level		
	A	B1	B2
50.1 Essential principles of Armament (a) Propellants and explosives; Pyrotechnics (including Flares); Stores loading / unloading (to include chaff and flares) including hang-up and misfire; Ammunitions transportation; Air-to-air missile; Air-to-ground missile; Air-to-sea missile; Aerial torpedo; Bombs (freefall and guided); (b) Missile guidance methods: radar, infrared, electro-optical, passive anti-radiation; Missile warheads and detonation mechanisms; Guided weapon (missiles) aerodynamics and flight controls; (c) Storage, de-stocking and ammunitions assembly; Documents for storage, release and transportation of explosive items and firearms and explosive regulations.	1 1 1	1 1 1	1 1 1

MODULES 50 – 55: MILITARY-SPECIFIC SYSTEMS

MODULE 51 - WEAPONS SYSTEMS

	Level		
	A	B1	B2
51.1 Weapons stores system (System 94) (a) Weapon and stores release, fire and jettison stores;	2	3	3

Superseded

Weapon suspension system; Interconnecting equipment to transport and release/fire weapons; Gunnery; (b) Weapon control, designating and acquiring a target.	1	2	3

MODULE 52 - OPERATIONAL ATTACK SYSTEMS

	Level		
	A	B1	B2
52.1 Attack System Management (System 39) Architecture, management; Attack system functions; General rules of human-machine communication; Digital Networks, hardware and software, other information networks, network for video signals, network for blanking signals, MIL-STD-1553B (STANAG 3838 and STANAG 3910), MIL-STD-1773; Stores management hardware and software; Attack system resources, contributing resources; Role during mission phases.	-	2	3
52.2 Operational attack functions (System 40) Air-to-air functions: fire control functions, bullet gun firing, short range, medium range or beyond visual range missiles firing, air-to-air management after weapons launch, management of on-board guidance; Air-to-surface functions, Air-to-sea functions; Information exchange and cooperation; Navigational functions, localisation, flight management, approach and landing management; Nap of the earth flight: terrain following and obstacle avoidance management; Self protection: defensive manoeuvers and tactics elaboration against threats;	-	2	3

Superseded

Identification: aerial and surface objects identification based on autonomous and external identification means.			
52.3 Cross-technical attack functions (System 42) Tactical situation awareness; Aircraft Mission preparation and restitution, hardware and software; Cautions and warnings management; Mission system control and management; Trajectory management; Attack system compatibilities management, electromagnetic compatibility between all the transmitters and receivers.	-	2	3

MODULE 53 - SURVEILLANCE AND ELECTRONIC WARFARE

	Level		
	A	B1	B2
53.1 Surveillance (System 93) Data processing; Data display; Recording; Identification; Infra-red and laser sensors; Surveillance radar; Magnetic sensors; Sonar sensors (active and passive).	1	2	3
53.2 Image recording (System 97) (a) Optical systems;	1	2	2
(b) Specificities of aerial photography; Cameras.	1	1	1

Superseded

53.3 Electronic warfare (System 99) Active electromagnetic; Passive electromagnetic; ELINT; Infrared and Laser systems; Electromagnetic countermeasures.	-	2	3

MODULE 54 - CREW SAFETY

	Level		
	A	B1	B2
54.1 Crew escape and safety (System 95) Ejection seats; Escape hatches/canopy, Miniature Detonating Cord (MDC); Global survival kits; Impact protection.	2	3	2

MODULE 55 - MILITARY COMMUNICATION SYSTEMS

	Level		
	A	B1	B2
55.1 Military communication systems Tactical Data Links: Link 11, Link 16, Link 22; Tactical communications systems.	-	-	3

Superseded

1. General

1.1 All basic examinations shall be carried out using the multi-choice question format and essay questions as specified below. The incorrect alternatives shall seem equally plausible to anyone ignorant of the subject. All of the alternatives shall be clearly related to the question and of similar vocabulary, grammatical construction and length. In numerical questions, the incorrect answers shall correspond to procedural errors such as corrections applied in the wrong sense or incorrect unit conversions: they shall not be mere random numbers.

1.2 Each multi-choice question shall have at least three alternative answers of which only one shall be the correct answer and the candidate shall be allowed a time per module which is based upon a nominal average of 75 seconds per question.

1.3 Each essay question requires the preparation of a written answer and the candidate shall be allowed 20 minutes to answer each such question.

1.4 Suitable essay questions shall be drafted and evaluated using the knowledge syllabus in Appendix I Modules 7, 9 and 10.

1.5 Each essay question will have a model answer drafted for it, which will also include any known alternative answers that may be relevant for other sub-modules.

1.6 The essay question model answer will also be broken down into a list of the important points known as Key Points.

1.7 The pass mark for each module and sub-module multi-choice part of the examination is 75 %.

1.8 The pass mark for each essay question is 75 % in that the candidates answer shall contain 75 % of the required key points addressed by the question and no significant error related to any required key point.

1.9 If either the multi-choice part only or the essay part only is failed, then it is only necessary to retake the multi- choice or essay part, as appropriate.

1.10 Penalty marking systems shall not be used.

1.11 A failed module may not be retaken for at least 90 days following the date of the failed module examination, except in the case of a maintenance training organisation approved in accordance with DASR 147 which conducts a course of retraining tailored to the failed subjects in the particular module when the failed module may be retaken after 30 days, unless approved otherwise by the MAA.

1.12 The time periods required by DASR 66.A.25 apply to each individual module examination, with the exception of those module examinations which were passed as part of another category licence, where the licence has already been issued.

1.13 The maximum number of consecutive attempts for each module is three. Further sets of three attempts are allowed with a 1 year waiting period between sets, unless approved by the MAA.

The applicant shall confirm in writing to the approved MTO or the MAA to which they apply for an examination, the number and dates of attempts during the last year and the MTO or

Superseded

the MAA where these attempts took place. The MTO or the MAA is responsible for checking the number of attempts within the applicable timeframes.

2. Number of questions per module

MODULE 1 — MATHEMATICS

Category A: 16 multi-choice and 0 essay questions. Time allowed 20 minutes.

Category B1: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

Category B2: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

MODULE 2 — PHYSICS

Category A: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

Category B1: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B2: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

MODULE 3 — ELECTRICAL FUNDAMENTALS

Category A: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B2: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

MODULE 4 — ELECTRONIC FUNDAMENTALS

Category B1: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2: 40 multi-choice and 0 essay questions. Time allowed 50 minutes.

MODULE 5 — DIGITAL TECHNIQUES/ELECTRONIC INSTRUMENT SYSTEMS

Category A: 16 multi-choice and 0 essay questions. Time allowed 20 minutes.

Category B1: 40 multi-choice and 0 essay questions. Time allowed 50 minutes.

Category B2: 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

MODULE 6 — MATERIALS AND HARDWARE

Category A: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B1: 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

Category B2: 60 multi-choice and 0 essay questions. Time allowed 75 minutes.

MODULE 7 — MAINTENANCE PRACTICES

Category A: 72 multi-choice and 2 essay questions. Time allowed 90 minutes plus 40 minutes.

Category B1: 80 multi-choice and 2 essay questions. Time allowed 100 minutes plus 40 minutes.

Category B2: 60 multi-choice and 2 essay questions. Time allowed 75 minutes plus 40 minutes.

Superseded

MODULE 8 — BASIC AERODYNAMICS

Category A: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

MODULE 9 — HUMAN FACTORS

Category A: 20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

Category B1: 20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

Category B2: 20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

MODULE 10 — AVIATION LEGISLATION

Category A: 32 multi-choice and 1 essay question. Time allowed 40 minutes plus 20 minutes.

Category B1: 40 multi-choice and 1 essay question. Time allowed 50 minutes plus 20 minutes.

Category B2: 40 multi-choice and 1 essay question. Time allowed 50 minutes plus 20 minutes.

MODULE 11A — TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

Category A: 108 multi-choice and 0 essay questions. Time allowed 135 minutes.

Category B1: 140 multi-choice and 0 essay questions. Time allowed 175 minutes.

MODULE 11B — PISTON AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

Category A: 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

Category B1: 100 multi-choice and 0 essay questions. Time allowed 125 minutes.

MODULE 12 — HELICOPTER AERODYNAMICS, STRUCTURES AND SYSTEMS:

Category A: 100 multi-choice and 0 essay questions. Time allowed 125 minutes.

Category B1: 128 multi-choice and 0 essay questions. Time allowed 160 minutes.

MODULE 13 — AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS

Category B2: 180 multi-choice and 0 essay questions. Time allowed 225 minutes.

Questions and time allowed may be split into two examinations as appropriate.

MODULE 14 — PROPULSION

Category B2: 24 multi-choice and 0 essay questions. Time allowed 30 minutes.

MODULE 15 — GAS TURBINE ENGINE

Category A: 60 multi-choice and 0 essay questions. Time allowed 75 minutes.

Category B1: 92 multi-choice and 0 essay questions. Time allowed 115 minutes.

MODULE 16 — PISTON ENGINE

Category A: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Superseded

Category B1: 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

MODULE 17 — PROPELLER

Category A: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

MODULE 50 — PRINCIPLES OF ARMAMENT

Category A: 12 multi-choice and 0 essay question. Time allowed 15 minutes.

Category B1: 12 multi-choice and 0 essay question. Time allowed 15 minutes.

Category B2: 12 multi-choice and 0 essay question. Time allowed 15 minutes.

MODULE 51 — WEAPONS SYSTEMS

Category A: 24 multi-choice and 0 essay question. Time allowed 30 minutes.

Category B1: 28 multi-choice and 0 essay question. Time allowed 35 minutes.

Category B2: 32 multi-choice and 0 essay question. Time allowed 40 minutes.

MODULE 52 — OPERATIONAL ATTACK SYSTEMS

Category B1: 48 multi-choice and 0 essay question. Time allowed 60 minutes.

Category B2: 80 multi-choice and 0 essay question. Time allowed 100 minutes.

MODULE 53 — SURVEILLANCE AND ELECTRONIC WARFARE

Category A: 12 multi-choice and 0 essay question. Time allowed 15 minutes.

Category B1: 32 multi-choice and 0 essay question. Time allowed 40 minutes.

Category B2: 48 multi-choice and 0 essay question. Time allowed 60 minutes.

MODULE 54 — CREW SAFETY

Category A: 16 multi-choice and 0 essay question. Time allowed 20 minutes.

Category B1: 20 multi-choice and 0 essay question. Time allowed 25 minutes.

Category B2: 16 multi-choice and 0 essay question. Time allowed 20 minutes.

MODULE 55 — MILITARY COMMUNICATION SYSTEMS

Category B2: 16 multi-choice and 0 essay question. Time allowed 20 minutes.

☐ AMC

Superseded

Appendix III to DASR 66 - Military Aircraft Type Training and Examination Standard, and On-the-Job Training (OJT)

☐ AMC ☐ AMC1 ☐ GM

1. **General** ☐ AMC

Military Aircraft Type Training shall consist of theoretical training and examination, and, except for the Category C ratings, practical training and assessment. Where Military Aircraft Type Training includes military-specific systems, the prerequisite is that the student shall have gained the relevant 50-series modules (or sub-modules) of DASR 66 Appendix I.

a. Theoretical training and examination shall comply with the following requirements:

i. Shall be conducted by an MTO appropriately approved in accordance with DASR 147 or an organisation recognised by the MAA in accordance with DASA Standing Instructions.

ii. Shall comply with the standard described in paragraph 3.1 and 4 of this Appendix III, except as permitted by the differences training described below.

iii. In the case of a Category C person qualified by holding an academic degree as specified in DASR 66.A.30(a)(5), the first relevant aircraft type theoretical training shall be at the Category B1 or B2 level or at a level recognised by the MAA.

iv. Shall have been started and completed within the 3 years preceding the application for a Military Aircraft Type Rating endorsement.

b. Practical training and assessment shall comply with the following requirements:

i. Shall be conducted by an MTO appropriately approved in accordance with DASR 147 or an organisation recognised by the MAA in accordance with DASA Standing Instructions.

ii. Shall comply with the standard described in paragraph 3.2 and 4 of this Appendix III, except as permitted by the differences training described below.

iii. Shall include a representative cross section of maintenance activities relevant to the aircraft type.

iv. Shall include demonstrations using equipment, components, simulators, other training devices or aircraft.

v. Shall have been started and completed within the 3 years preceding the application for a Military Aircraft Type Rating endorsement.

c. Differences training ☐ **AMC**

i. Differences training is the training required in order to cover the differences between two different Military Aircraft Type Ratings of the same manufacturer as determined by the MAA.

ii. Differences training has to be defined on a case-by-case basis taking into account the requirements contained in this Appendix III in respect of both theoretical and practical elements of Military Aircraft Type Rating training.

iii. A Military Aircraft Type Rating shall only be endorsed on a MAML after differences training when the applicant also complies with one of the following conditions:

– having already endorsed on the MAML the Military Aircraft Type Rating from which the differences are being identified, or

Superseded

– having completed the Military Aircraft Type Training requirements for the aircraft from which the differences are being identified.

2. **Military Aircraft Type Training levels**

The three levels listed below define the objectives, the depth of training and the level of knowledge that the training is intended to achieve.

Level 1: A brief overview of the airframe, systems and powerplant as outlined in the Systems Description Section of the Aircraft Maintenance Manual/Instructions for Continuing Airworthiness.

Course objectives: Upon completion of Level 1 training, the student will be able to:

a. provide a simple description of the whole subject, using common words and examples, using typical terms and identify safety precautions related to the airframe, its systems and powerplant;

b. identify aircraft manuals, maintenance practices important to the airframe, its systems and powerplant;

c. define the general layout of the aircraft's major systems;

d. define the general layout and characteristics of the powerplant;

e. identify special tooling and test equipment used with the aircraft.

Level 2: Basic system overview of controls, indicators, principal components, including their location and purpose, servicing and minor troubleshooting. General knowledge of the theoretical and practical aspects of the subject.

Course objectives: In addition to the information contained in the Level 1 training, at the completion of Level 2 training, the student will be able to:

a. understand the theoretical fundamentals; apply knowledge in a practical manner using detailed procedures;

b. recall the safety precautions to be observed when working on or near the aircraft, powerplant, systems and armaments;

c. describe systems and aircraft handling particularly access, power availability and sources;

d. identify the locations of the principal components;

e. explain the normal functioning of each major system, including terminology and nomenclature;

f. perform the procedures for servicing associated on aircraft systems;

g. demonstrate proficiency in interpretation of crew reports and on-board reporting systems (minor troubleshooting) and determine aircraft airworthiness per the MEL/ CDL or National equivalent;

h. demonstrate the use, interpretation and application of appropriate documentation including instructions for continuing airworthiness, maintenance manual, illustrated parts catalogue, etc.

Superseded

Level 3: Detailed description, operation, component location, removal/installation and BITE and troubleshooting procedures to maintenance manual level.

Course objectives: In addition to the information contained in Level 1 and Level 2 training, at the completion of Level 3 training, the student will be able to:

a. demonstrate a theoretical knowledge of aircraft systems and structures and interrelationships with other systems, provide a detailed description of the subject using theoretical fundamentals and specific examples and to interpret results from various sources and measurements and apply corrective action where appropriate;

b. perform system, powerplant, component and functional checks as specified in the aircraft maintenance manual;

c. demonstrate the use, interpretation and application of appropriate documentation including structural repair manual, troubleshooting manual, etc.;

d. correlate information for the purpose of making decisions in respect of fault diagnosis and rectification to maintenance manual level;

e. describe procedures for replacement of components specific to aircraft type.

3. **Military Aircraft Type Training standard**

Although Military Aircraft Type Training includes both theoretical and practical elements, courses can be approved for the theoretical element, the practical element or for a combination of both.

3.1 Theoretical element

a. Objective:
On completion of a theoretical training course the student shall be able to demonstrate, to the levels identified in the DASR 66 Appendix III syllabus, the detailed theoretical knowledge of the aircraft's applicable systems, structure, operations, maintenance, repair, and troubleshooting according to approved maintenance data. The student shall be able to demonstrate the use of manuals and approved procedures, including the knowledge of relevant inspections and limitations.

b. Level of training:
Training levels are those levels defined in point 2 above.

After the first type course for Category C certifying staff, all subsequent courses need only be to level 1.

During a level 3 theoretical training, Level 1 and 2 training material may be used to teach the full scope of the chapter if required. However, during the training the majority of the course material and training time shall be at Level 3.

c. Duration:
NOT APPLICABLE.

d. Justification of course duration: ☐ **AMC**

Training courses carried out in an MTO shall justify their hour duration and the coverage of the full syllabus by a training needs analysis based on:

Superseded

- the design of the aircraft type, its maintenance needs and the types of operation,

- detailed analysis of applicable chapters — see contents table in point 3.1(e) below,

- detailed competency analysis showing that the objectives as stated in point 3.1(a) above are fully met.

Course duration shall be approved by the MAA.

Similarly, tuition hours of differences courses or other training course combinations (such as combined B1/B2 courses), and in cases of theoretical Military Aircraft Type Training courses, these shall be justified by the training needs analysis as described above.

In addition, the course documentation must describe and justify the following:

- The minimum attendance required by the student, in order to meet the objectives of the course.

- The maximum number of hours of training per day, taking into account pedagogical and human factors principles.

If the minimum attendance required is not met, the certificate of recognition shall not be issued. Additional training may be provided by the MTO in order to meet the minimum attendance time.

e. Content:

As a minimum, the elements in the Syllabus (see table below) that are specific to the aircraft type shall be covered. Additional elements introduced due to type variations, technological changes, etc. shall also be included

f. Multimedia Based Training (MBT) methods may be used to satisfy the theoretical training element either in the classroom or in a virtual controlled environment subject to the acceptance of the MAA approving the training course.

3.2 Practical element AMC

a. Objective:

The objective of practical training is to gain the required competence in performing safe maintenance, inspections and routine work according to the maintenance manual and other relevant instructions and tasks as appropriate for the type of aircraft, for example troubleshooting, repairs, adjustments, replacements, rigging and functional checks. It includes the awareness of the use of all technical literature and documentation for the aircraft, the use of specialist/special tooling and test equipment for performing removal and replacement of components and modules unique to type, including any on-wing maintenance activity.

Content:

At least 50% of the crossed items in the table below, which are relevant to the particular aircraft type, shall be completed as part of the practical training.

Tasks crossed represent subjects that are important for practical training purposes to ensure that the operation, function, installation and safety significance of key maintenance tasks is adequately addressed; particularly where these cannot be fully explained by theoretical training alone. Although the list details the minimum practical training subjects, other items may be added where applicable to the particular aircraft type.

Tasks to be completed shall be representative of the aircraft and systems both in complexity and in the technical input required to complete that task. While relatively

Superseded

simple tasks may be included, other more complex tasks shall also be incorporated and undertaken as appropriate to the aircraft type.

Glossary of the table: LOC: Location; FOT: Functional/Operational Test; SGH: Service and Ground Handling; R/I: Removal/Installation; MEL: Minimum Equipment List; TS: TroubleShooting.

4. **Military Aircraft Type Training examination and assessment standard**

4.1 Theoretical element examination standard

After the theoretical portion of the Military Aircraft Type Training has been completed, a written examination shall be performed, which shall comply with the following:

a. Format of the examination is of the multi-choice type. Each multi-choice question shall have at least 3 alternative answers of which only one shall be the correct answer. The total time is based on the total number of questions and the time for answering is based upon a nominal average of 90 seconds per question.

b. The incorrect alternatives shall seem equally plausible to anyone ignorant of the subject. All the alternatives shall be clearly related to the question and of similar vocabulary, grammatical construction and length.

c. In numerical questions, the incorrect answers shall correspond to procedural errors such as the use of incorrect sense (+ versus -) or incorrect measurement units. They shall not be mere random numbers.

d. The level of examination for each chapter (*) shall be the one defined in point 2 "Military Aircraft Type Training levels". However, the use of a limited number of questions at a lower level is acceptable.

e. The examination shall be of the closed book type. No reference material is permitted. An exception will be made for the case of examining a B1 or B2 candidate's ability to interpret technical documents.

f. The number of questions shall be at least 1 question per hour of instruction. The number of questions for each chapter and level shall be proportionate to:

i. the effective training hours spent teaching at that chapter and level,

ii. the learning objectives as given by the training needs analysis.

The MAA will assess the number and the level of the questions when approving the course.

g. The minimum examination pass mark is 75 %. When the Military Aircraft Type Training examination is split in several examinations, each examination shall be passed with at least a 75 % mark. In order to be possible to achieve exactly a 75 % pass mark, the number of questions in the examination shall be a multiple of 4.

h. Penalty marking (negative points for failed questions) is not to be used.

i. End of module phase examinations cannot be used as part of the final examination unless they contain the correct number and level of questions required.

(*) For the purpose of this point 4, a "chapter" means each one of the rows preceded by a number in the table contained in point 3.1(e).

Superseded

4.2 Practical element assessment standard ☐ **AMC**

After the practical element of the Military Aircraft Type Training has been completed, an assessment must be performed, which must comply with the following:

a. The assessment shall be performed by designated assessors appropriately qualified.

b. The assessment shall evaluate the knowledge and skills of the trainee.

5. **Type examination standard**

NOT APPLICABLE.

6. **On the Job Training** ☐ **AMC**

On the Job Training (OJT) shall be approved by the MAA who has issued the MAML.

It shall be conducted at and under the control of a maintenance organisation appropriately approved for the maintenance of the particular aircraft type and shall be assessed by designated assessors appropriately qualified.

It shall have been started and completed within the 3 years preceding the application for a Military Aircraft Type Rating endorsement.

a. Objective:

The objective of OJT is to gain the required competence and experience in performing safe maintenance.

b. Content:

OJT shall cover a cross section of tasks acceptable to the MAA. The OJT tasks to be completed shall be representative of the aircraft and systems both in complexity and in the technical input required to complete that task. While relatively simple tasks may be included, other more complex maintenance tasks shall also be incorporated and undertaken as appropriate to the aircraft type.

Each task shall be signed off by the student and countersigned by a designated supervisor. The tasks listed shall refer to an actual job card/work sheet, etc.

The final assessment of the completed OJT is mandatory and shall be performed by a designated assessor, appropriately qualified.

The following data shall be addressed on the OJT worksheets/logbook:

1. Name of Trainee;

2. Date of Birth;

3. Service Number or Employee Number

4. Approved Maintenance Organisation;

5. Location;

6. Name of supervisor(s) and assessor, (including MAML number if applicable);

7. Date of task completion;

Superseded

8. Description of task and job card/work order/tech log, etc.;

9. Aircraft type and aircraft registration;

10. Military Aircraft Type Rating applied for.

In order to facilitate the verification by the MAA, demonstration of the OJT shall consist of:

(i) detailed worksheets/logbook and

(ii) a compliance report demonstrating how the OJT meets the requirement of DASR 66.

Appendix IV to DASR 66 - Experience requirements for an addition to a DASR 66 Military Aircraft Maintenance Licence

The table below shows the experience requirements for adding a new category or subcategory to an existing DASR 66 MAML including military-specific modules.

The experience shall be practical maintenance experience on operating aircraft in the subcategory relevant to the application.

The experience requirement will be reduced by 50% if the applicant has completed an approved DASR 147 course relevant to the subcategory.

DASR Form 26 is contained in the DASR Forms document.

Superseded

DASR 66 Annexes/Appendices

SECTION A

66.A.1 - Scope

This section defines the Military Aircraft Maintenance Licence (MAML) and establishes the requirements for application, issue and continuation of its validity.

66.A.3 - MAML categories

☐ **GM**

(a) Military Aircraft Maintenance Licences include the following categories:

– Category A

– Category B1

– Category B2

– Category C

(b) Categories A and B1 are subdivided into subcategories relative to combinations of aeroplanes, helicopters, turbine and piston engines. These subcategories are:

– A1 and B1.1 Aeroplanes Turbine

– A2 and B1.2 Aeroplanes Piston

– A3 and B1.3 Helicopters Turbine

– A4 and B1.4 Helicopters Piston

(c) NOT APPLICABLE.

66.A.5 - Aircraft groups

All military aircraft shall be considered as complex motor-powered aircraft.

66.A.10 - Application

☐ **AMC**

(a) An application for a MAML or change to such a licence shall be made on a DASR Form 19 (see Appendix V to DASR 66) in a manner established by the MAA and submitted thereto. ☐ **GM**

(b) NOT APPLICABLE.

Superseded

(c) In addition to the documents required in DASR 66.A.10(a) the applicant for additional basic categories or subcategories to a MAML shall submit their current MAML to the MAA together with the DASR Form 19. ☐ **GM**

(d) NOT APPLICABLE.

(e) NOT APPLICABLE.

(f) Each application shall be supported by documentation to demonstrate compliance with the applicable theoretical knowledge, practical training and experience requirements at the time of application. ☐ **GM**

66.A.15 - Eligibility

An applicant for a MAML shall be at least 18 years of age.

66.A.20 - Privileges

☐ **GM**

(a) The following privileges shall apply: ☐ **GM**

1. A Category A MAML permits the holder to issue certificates of release to service following minor scheduled line maintenance and simple defect rectification within the limits of tasks specifically endorsed on the certification authorisation referred to in DASR 145.A.35. The certification privileges shall be restricted to work that the licence holder has personally performed in the DASR 145 AMO that issued the certification authorisation. ☐ **GM1**

2. A Category B1 MAML shall permit the holder to issue certificates of release to service and to act as B1 support staff for the following:

   – maintenance performed on aircraft structure, powerplant, mechanical systems and electrical systems, and

   – work on avionic systems requiring only simple tests to prove their serviceability and not requiring troubleshooting. ☐ **GM**

Category B1 includes the corresponding A subcategory.

3. A Category B2 MAML shall permit the holder:

   i. to issue certificates of release to service and to act as B2 support staff for the following:

   – maintenance performed on avionic and electrical systems, and

   – electrical and avionics tasks within powerplant and mechanical systems, requiring only simple tests to prove their serviceability

   ii. to issue certificates of release to service following minor scheduled line maintenance and simple defect rectification within the limits of tasks specifically endorsed on the certification authorisation referred to in DASR 145.A.35. This certification privilege shall be restricted to work that the MAML

Superseded

holder has personally performed in the AMO which issued the certification authorisation and limited to the Military Aircraft Type Ratings already endorsed in the B2 MAML. ☐ **GM1**

Category B2 does not include any A subcategory. ☐ **GM2**

4. NOT APPLICABLE.

5. A Category C MAML shall permit the holder to issue certificates of release to service for aircraft following base maintenance on aircraft. The privileges apply to the aircraft in its entirety.

6. Categories A, B1 and B2 MAMLs can have extensions (DASR 66.A.52) to address one or more of the military-specific topics included in Appendix I to DASR 66 (Modules 50 - 55). These shall permit the holder to issue certificates of release to service and act as support staff appropriate to the basic knowledge gained from all modules and as approved by the MAA for maintenance performed on armament, rescue and escape systems and other military-specific systems.

(b) The holder of a MAML shall not exercise its privileges unless: ☐ **AMC**

1. in compliance with the applicable requirements of DASR M and DASR 145; and

2. in the preceding 2-year period the holder has, either had 6 months of maintenance experience in accordance with the privileges granted by the MAML or, met the provision for the issue of the appropriate privileges; and ☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

3. they have the adequate competence to certify maintenance on the corresponding aircraft; and ☐ **AMC**

4. they are able to read, write and communicate to an understandable level in the language(s) in which the technical documentation and procedures necessary to support the issue of the certificate of release to service are written. ☐ **GM**

66.A.25 - Basic knowledge requirements

☐ **AMC**

(a) An applicant for a MAML, the extension to a MAML or the addition of a category or subcategory to such a MAML, shall demonstrate by examination a level of knowledge in the appropriate subject modules in accordance with Appendix I. The examination shall be conducted either by an MTO appropriately approved in accordance with DASR 147 or by the MAA. ☐ **GM**

(b) The training courses and examinations shall be passed within 10 years prior to the application for a MAML, the extension to a MAML or the addition of a category or subcategory to such a MAML. Should this not be the case, examination credits may however be obtained in accordance with point (c).

(c) The applicant may apply to the MAA for full or partial examination credit to the basic knowledge requirements for:

1. basic knowledge examinations that do not meet the requirement described in point (b) above; and

Superseded

2. any other technical qualification considered by the MAA to be equivalent to the knowledge standard of this DASR. If the applicant holds an EASA Part 66 licence, the MAA may accept the EASA licence as a basis, only requiring additional training to cover the differences between the EASA licence and the MAML requirements. ☐ **AMC**

Credits shall be granted in accordance with Annex A.

(d) Credits expire 10 years after they were granted to the applicant by the MAA. The applicant may apply for new credits after expiration. ☐ **GM**

(e) Modules 50-55 shall be used to provide extensions to a MAML for military-specific systems. Module 53 includes sub-modules that can also be used to provide extensions to a MAML for military-specific systems.

66.A.30 - Basic experience requirements

(a) An applicant for a MAML shall have acquired: ☐ **GM**

1A. for Category A:

1. 3 years of practical maintenance experience on operating military aircraft, if the applicant has no previous relevant technical training; or

2. 2 years of practical maintenance experience on operating military aircraft and completion of training considered relevant by the MAA as a skilled worker, in a technical trade; or

3. 6 months of practical maintenance experience on operating military aircraft and completion of a basic training course providing the minimum practical training (as detailed in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147; or ☐ **GM**

4. 1 years of practical maintenance experience on operating military aircraft and completion of a basic training course that does not provide the recommended minimum practical training (as defined in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147.

1B. for Subcategories B1.2 and B1.4:

1. 3 years of practical maintenance experience on operating military aircraft, if the applicant has no previous relevant technical training; or

2. 2 years of practical maintenance experience on operating military aircraft and completion of training considered relevant by the MAA as a skilled worker, in a technical trade; or

3. 1 year of practical maintenance experience on operating military aircraft and completion of a basic training course providing the minimum practical training (as detailed in Column 4 of DASR 147 Appendix I) approved in accordance with DASR 147; or

4. 2 years of practical maintenance experience on operating military aircraft and completion of a basic training course that does not provide the recommended

Superseded

minimum practical training (as defined in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147.

The 2 years of practical maintenance experience can be reduced by the duration of the practical training given during the basic training course with a maximum reduction of 1 year. (**NOTE:** as a reference 20 hours of practical training will be considered as being equivalent to a duration of 1 week.)

2. for Categories B2 and Subcategories B1.1 and B1.3:

1. 5 years of practical maintenance experience on operating military aircraft if the applicant has no previous relevant technical training; or

2. 3 years of practical maintenance experience on operating military aircraft and completion of training considered relevant by the MAA as a skilled worker, in a technical trade; or

3. 2 years of practical maintenance experience on operating military aircraft and completion of a basic training course providing the minimum practical training (as detailed in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147; or

4. 3 years of practical maintenance experience on operating military aircraft and completion of a basic training course that does not provide the recommended minimum practical training (as defined in Column 4 of Appendix 1 to DASR 147) approved in accordance with DASR 147.

The 3 years of practical maintenance experience can be reduced by the duration of the practical training given during the basic training course with a maximum reduction of 1 year. (**NOTE:** as a reference 20 hours of practical training will be considered as being equivalent to a duration of 1 week.)

3. for Category C:

1. 3 years of experience exercising Category B1.1, B1.3 or B2 privileges or as support staff according to DASR 145.A.35, or a combination of both; or

2. 5 years of experience exercising Category B1.2 or B1.4 privileges or as support staff according to DASR 145.A.35, or a combination of both.

4. NOT APPLICABLE.

5. for Category C obtained through the academic route: an applicant holding an academic degree in a technical discipline, from a university or other higher educational institution, recognised by the MAA, plus: ☐ **AMC**

1. 3 years of experience working in a military aircraft maintenance environment on a representative selection of tasks directly associated with military aircraft maintenance including 6 months of observation of base maintenance tasks; or

2. experience as detailed by the MAA but not less than 6 months of observation of base maintenance tasks. ☐ **AMC** ☐ **AMC1**

(b) An applicant for an additional category or subcategory to a MAML shall have a minimum aircraft maintenance experience requirement appropriate to the additional category or subcategory of MAML applied for as defined in Appendix IV to DASR 66.

Superseded

(c) The experience shall be practical and involve a representative cross section of maintenance tasks on aircraft.

(d) At least 1 year of the required experience shall be recent maintenance experience on aircraft of the category/subcategory for which the initial MAML is sought. For subsequent category/ subcategory additions to an existing MAML, the additional recent maintenance experience required may be less than 1 year, but shall be at least 3 months. The required experience shall be dependent upon the difference between the MAML category/subcategory held and applied for. Such additional experience shall be typical of the new MAML category/ subcategory sought. ☐ **AMC**

(e) Notwithstanding paragraph (a), aircraft maintenance experience gained outside a military aircraft maintenance environment may be accepted when such maintenance is equivalent to that required by this DASR as established by the MAA. Additional experience of military aircraft maintenance shall, however, be required to ensure adequate understanding of the military aircraft maintenance environment. ☐ **AMC**

(f) Experience shall have been acquired within the 10 years preceding the application for a MAML or the addition of a category or subcategory to such a MAML.

66.A.40 - Continued validity of the Military Aircraft Maintenance Licence

☐ **GM**

(a) The MAML shall be issued for an unlimited duration. It shall remain valid subject to the holder remaining in compliance with the requirements in this DASR and the MAML not being suspended, surrendered or revoked.

(b) Upon suspension, surrendering or revocation the MAML shall be returned to the MAA.

(c) Any certification privilege based upon a MAML becomes invalid as soon as the MAML is invalid.

(d) The MAML is only valid:

1. when issued and/or changed by the MAA; and
2. when the holder has signed the document.

(e) If the MAML holder's name, service number or state ID number change, the MAML shall be resubmitted to the MAA within 30 days. ☐ **GM**

66.A.45 - Military Aircraft Type Ratings

☐ **AMC**

(a) In order to be entitled to exercise certification privileges on a specific aircraft type, the holder of a MAML shall have their MAML endorsed with the relevant Military Aircraft Type Ratings, following satisfactory completion of the relevant Military Aircraft Type Training within an DASR 147 approved MTO.

For Category A, no Military Aircraft Type Rating is required, subject to compliance with the task training requirements of DASR 145.A.35.

Superseded

(b) The issuing of a Military Aircraft Type Rating requires the satisfactory completion of the relevant Category B1, B2 or C Military Aircraft Type Training. Where relevant, the MAA may accept an appropriate EASA aircraft type rating as evidence of having undertaken a partial or full equivalent to Military Aircraft Type Training. ☐ **GM**

(c) In addition to the requirement of point (b), the issuing of the first Military Aircraft Type Rating within a given category/sub-category requires satisfactory completion of the corresponding On the Job Training, as described in Appendix III to DASR 66. Any subsequent Military Aircraft Type Rating within a given category/sub-category may require further On the Job Training as defined by the MAA.

(d) NOT APPLICABLE.

(e) NOT APPLICABLE.

(f) NOT APPLICABLE.

(g) NOT APPLICABLE.

66.A.50 - Limitations

(a) Limitations introduced on a MAML are exclusions from the certification privileges. If a new Military Aircraft Type Rating is gained, the MAML limitation(s) shall continue to apply to the new Military Aircraft Type Rating. ☐ **GM**

(b) NOT APPLICABLE.

(c) Any limitation shall be removed upon satisfactory completion of the relevant requirements of DASR 66 or as defined in the applicable conversion report.

66.A.52 - Extensions

Extensions introduced on a MAML may allow additional certification privileges. ☐ **AMC**

66.A.55 - Evidence of qualification

Personnel exercising certification privileges as well as support staff shall produce their MAML, as evidence of qualification, within 72 hours upon request by an official of the MAA.

66.A.70 - Conversion provisions

☐ **GM**

The holder of a licence or other qualification for the maintenance of aircraft gained prior to, or an individual undergoing a process to gain such a licence or other qualification prior to, a date established in national regulation shall follow the procedures for conversion into a MAML as set out in Annex B to DASR 66. ☐ **GM**

(a) NOT APPLICABLE.

(b) NOT APPLICABLE.

Superseded

(c) NOT APPLICABLE.

(d) NOT APPLICABLE.

DASR 66 Annexes/Appendices

Annex A to DASR 66 - Examination Credit Procedures (AUS)

This Annex provides the procedures for granting examination credits referred to in DASR 66.A.25(c).

1. **General**

   a. The MAA may only grant credit on the basis of a credit report prepared in accordance with paragraph 2.

   b. The credit report shall be either developed by the MAA or approved by the MAA to ensure compliance with DASR 66.

   c. Credit reports together with any change of these shall be dated and kept on record by the MAA.

2. **Examination credit report**

   a. The credit report shall include a comparison between:

      1. the modules, sub-modules, subjects and knowledge levels contained in Appendix I to DASR 66, as applicable; and

      2. the syllabus of the technical qualification concerned relevant to the particular category being sought.

      NOTE: This comparison shall state if compliance is demonstrated and contain the justifications for each statement.

   b. Credit for examinations, other than basic knowledge examinations carried out in Maintenance Training Organisations approved in accordance with DASR 147, can only be granted by the MAA.

   c. No credit can be granted unless there is a statement of compliance against each module and sub-module, stating where, in the technical qualification, the equivalent standard can be found.

   d. The MAA shall check on a regular basis if changes to the credit report are required due to changes to the national qualification standard or Appendix I to DASR 66. Such changes shall be documented, dated and recorded.

3. **Examination credit validity**

   a. The MAA shall notify the applicant in writing of any credits granted together with the reference to the credit report used.

   b. Credits shall expire 10 years after they are granted.

Superseded

c. Upon expiration of the credits, the applicant may apply for new credits. The MAA shall continue the validity of the credits for an additional period of 10 years without further consideration if basic knowledge requirements defined in Appendix I have not been changed.

Annex B to DASR 66 - Licence Conversion Procedures (AUS)

This Annex provides the procedures for the conversion of military certifying staff qualifications referred to in DASR 66.A.70 into MAMLs.

1. **General**

The MAA may only convert its own national licences or other military qualifications, without prejudice to bilateral agreements, considered valid prior to the entry into national regulation of the applicable requirements of DASR 66.

The MAA may only perform the conversion in accordance with a conversion report established pursuant to this Annex B, paragraph 2 or paragraph 3, as applicable.

Conversion reports shall be either developed by the MAA or approved by the MAA to ensure compliance with DASR 66.

Conversion reports together with any change of these shall be kept on record by the MAA.

2. Conversion report for licences or other qualifications

a. The conversion report for licences or other qualifications into a MAML shall describe the scope of each type of qualification, including the associated national licence, if any, the associated privileges and include a copy of the relevant national regulations defining these.

b. The conversion report shall show for each type of qualification referred to in point (a):

1. to which MAML it will be converted; and
2. which limitations/extensions shall be added; and
3. the conditions to remove the limitations, specifying the DASR 66 Appendix I module/subjects on which examination is needed to remove the limitations and obtain a full MAML, or to include an additional (sub-) category. This shall include the modules defined in Appendix III not covered by the national qualification.

3. **Conversion report for Approved Maintenance Organisations authorisations**

This paragraph applies to the issuance of a MAML to maintenance personnel who hold an AMO authorisation allowing them to certify aircraft work but who do not hold a formal national qualification as described in this Annex B. ☐ **GM**

Appendix I to DASR 66 - Basic Knowledge Requirements

1. Knowledge levels for Category A, B1, B2 and C Military Aircraft Maintenance Licence

Basic knowledge for Categories A, B1 and B2 are indicated by knowledge levels (1, 2 or 3) against each applicable subject. Except for the Category C obtained by the academic route (DASR

Superseded

66.A.30(a)5 refers), Category C applicants shall meet either the Category B1 or the Category B2 basic knowledge levels.

The knowledge level indicators are defined on 3 levels as follows:

- LEVEL 1: A familiarisation with the principal elements of the subject.

Objectives:

a. The applicant should be familiar with the basic elements of the subject.
b. The applicant should be able to give a simple description of the whole subject, using common words and examples.
c. The applicant should be able to use typical terms.

- LEVEL 2: A general knowledge of the theoretical and practical aspects of the subject and an ability to apply that knowledge.

Objectives:

a. The applicant should be able to understand the theoretical fundamentals of the subject.
b. The applicant should be able to give a general description of the subject using, as appropriate, typical examples.
c. The applicant should be able to use mathematical formulae in conjunction with physical laws describing the subject.
d. The applicant should be able to read and understand sketches, drawings and schematics describing the subject.
e. The applicant should be able to apply their knowledge in a practical manner using detailed procedures.

- LEVEL 3: A detailed knowledge of the theoretical and practical aspects of the subject and a capacity to combine and apply the separate elements of knowledge in a logical and comprehensive manner.

Objectives:

a. The applicant should know the theory of the subject and interrelationships with other subjects.
b. The applicant should be able to give a detailed description of the subject using theoretical fundamentals and specific examples.
c. The applicant should understand and be able to use mathematical formulae related to the subject.
d. The applicant should be able to read, understand and prepare sketches, simple drawings and schematics describing the subject.
e. The applicant should be able to apply their knowledge in a practical manner using manufacturer’s instructions.
f. The applicant should be able to interpret results from various sources and measurements and apply corrective action where appropriate.

2. Modularisation

Qualification on basic subjects for each MAML category or subcategory should be in accordance with the following matrix, where applicable subjects are indicated by an "X":

Superseded

Subject module	A or B1 aeroplane with:		A or B1 helicopter with:		B2

MODULE 1 - MATHEMATICS

	Level		
	A	B1	B2

Superseded

1.1 Arithmetic Arithmetical terms and signs, methods of multiplication and division, fractions and decimals, factors and multiples, weights, measures and conversion factors, ratio and proportion, averages and percentages, areas and volumes, squares, cubes, square and cube roots.	1	2	2
1.2 Algebra (a) Evaluating simple algebraic expressions, addition, subtraction, multiplication and division, use of brackets, simple algebraic fractions;	1	2	2
(b) Linear equations and their solutions; Indices and powers, negative and fractional indices; Binary and other applicable numbering systems; Simultaneous equations and second degree equations with one unknown; logarithms.	-	1	1
1.3 Geometry (a) Simple geometrical constructions;	-	1	1
(b) Graphical representation; nature and uses of graphs, graphs of equations/ functions;	2	2	2
(c) Simple trigonometry; trigonometrical relationships, use of tables and rectangular and polar coordinates.	-	2	2

MODULE 2 - PHYSICS

	Level		
	A	B1	B2
2.1 Matter Nature of matter: the chemical elements, structure of atoms, molecules; Chemical compounds; States: solid, liquid and gaseous; Changes between states.	1	1	1
2.2 Mechanics *2.2.1 Statics* Forces, moments and couples, representation as vectors;	1	2	1

Superseded

Centre of gravity; Elements of theory of stress, strain and elasticity: tension, compression, shear and torsion; Nature and properties of solid, fluid and gas; Pressure and buoyancy in liquids (barometers).			
2.2.2 Kinetics Linear movement: uniform motion in a straight line, motion under constant acceleration (motion under gravity); Rotational movement: uniform circular motion (centrifugal/ centripetal forces); Periodic motion: pendular movement; Simple theory of vibration, harmonics and resonance; Velocity ratio, mechanical advantage and efficiency.	1	2	1
2.2.3 Dynamics (a) Mass; Force, inertia, work, power, energy (potential, kinetic and total energy), heat, efficiency;	1	2	1
(b) Momentum, conservation of momentum; Impulse; Gyroscopic principles; Friction: nature and effects, coefficient of friction (rolling resistance).	1	2	2
2.2.4 Fluid dynamics (a) Specific gravity and density;	2	2	2
(b) Viscosity, fluid resistance, effects of streamlining; Effects of compressibility on fluids; Static, dynamic and total pressure: Bernoulli's Theorem, Venturi effect.	1	2	1
2.3 Thermodynamics (a) Temperature: thermometers and temperature scales: Celsius, Fahrenheit and Kelvin; Heat definition;	2	2	2

Superseded

(b) Heat capacity, specific heat; Heat transfer: convection, radiation and conduction; Volumetric expansion; First and second law of thermodynamics; Gases: ideal gases laws; specific heat at constant volume and constant pressure, work done by expanding gas; Isothermal, adiabatic expansion and compression, engine cycles, constant volume and constant pressure, refrigerators and heat pumps; Latent heats of fusion and evaporation, thermal energy, heat of combustion.	-	2	2
2.4 Optics (Light) Nature of light; speed of light; Laws of reflection and refraction: reflection at plane surfaces, reflection by spherical mirrors, refraction, lenses; Fibre optics.	-	2	2
2.5 Wave Motion and Sound Wave motion: mechanical waves, sinusoidal wave motion, interference phenomena, standing waves; Sound: speed of sound, production of sound, intensity, pitch and quality, Doppler effect.	-	2	2

MODULE 3 - ELECTRICAL FUNDAMENTALS

	Level		
	A	B1	B2
3.1 Electron Theory Structure and distribution of electrical charges within: atoms, molecules, ions, compounds; Molecular structure of conductors, semiconductors and insulators.	1	1	1
3.2 Static Electricity and Conduction Static electricity and distribution of electrostatic charges; Electrostatic laws of attraction and repulsion; Units of charge, Coulomb's Law;	1	2	2

Superseded

Conduction of electricity in solids, liquids, gases and a vacuum.			
3.3 Electrical Terminology The following terms, their units and factors affecting them: potential difference, electromotive force, voltage, current, resistance, conductance, charge, conventional current flow, electron flow.	1	2	2
3.4 Generation of Electricity Production of electricity by the following methods: light, heat, friction, pressure, chemical action, magnetism and motion.	1	1	1
3.5 DC Sources of Electricity Construction and basic chemical action of: primary cells, secondary cells, lead acid cells, nickel cadmium cells, Li-ion cells, other alkaline cells; Cells connected in series and parallel; Internal resistance and its effect on a battery; Construction, materials and operation of thermocouples; Operation of photo-cells.	1	2	2
3.6 DC Circuits Ohms Law, Kirchoff's Voltage and Current Laws; Calculations using the above laws to find resistance, voltage and current; Significance of the internal resistance of a supply.	1	2	2
3.7 Resistance/Resistor (a) Resistance and affecting factors; Specific resistance; Resistor colour code, values and tolerances, preferred values, wattage ratings; Resistors in series and parallel; Calculation of total resistance using series, parallel and series parallel combinations; Operation and use of potentiometers and rheostats; Operation of Wheatstone Bridge;	-	2	2
(b) Positive and negative temperature coefficient conductance; Fixed resistors, stability, tolerance and limitations, methods of construction; Variable resistors, thermistors, voltage dependent resistors; Construction of potentiometers and rheostats;	-	1	1

Superseded

Construction of Wheatstone Bridge.			
3.8 Power Power, work and energy (kinetic and potential); Dissipation of power by a resistor; Power formula; Calculations involving power, work and energy.	-	2	2
3.9 Capacitance/Capacitor Operation and function of a capacitor; Factors affecting capacitance area of plates, distance between plates, number of plates, dielectric and dielectric constant, working voltage, voltage rating; Capacitor types, construction and function; Capacitor colour coding; Calculations of capacitance and voltage in series and parallel circuits; Exponential charge and discharge of a capacitor, time constants; Testing of capacitors.	-	2	2
3.10 Magnetism (a) Theory of magnetism; Properties of a magnet; Action of a magnet suspended in the Earth's magnetic field; Magnetisation and demagnetisation; Magnetic shielding; Various types of magnetic material; Electromagnets construction and principles of operation; Hand clasp rules to determine: magnetic field around current carrying conductor; b) Magnetomotive force, field strength, magnetic flux density, permeability, hysteresis loop, retentivity, coercive force reluctance, saturation point, eddy currents; Precautions for care and storage of magnets.	- -	2 2	2 2
3.11 Inductance/Inductor Faraday's Law; Action of inducing a voltage in a conductor moving in a magnetic field; Induction principles;	-	2	2

Superseded

Effects of the following on the magnitude of an induced voltage: magnetic field strength, rate of change of flux, number of conductor turns; Mutual induction; The effect the rate of change of primary current and mutual inductance has on induced voltage; Factors affecting mutual inductance: number of turns in coil, physical size of coil, permeability of coil, position of coils with respect to each other; Lenz's Law and polarity determining rules; Back emf, self-induction; Saturation point; Principle uses of inductors.			
3.12 DC Motor/Generator Theory Basic motor and generator theory; Construction and purpose of components in DC generator; Operation of, and factors affecting output and direction of current flow in DC generators; Operation of, and factors affecting output power, torque, speed and direction of rotation of DC motors; Series wound, shunt wound and compound motors; Starter Generator construction.	-	2	2
3.13 AC Theory Sinusoidal waveform: phase, period, frequency, cycle; Instantaneous, average, root mean square, peak, peak to peak current values and calculations of these values, in relation to voltage, current and power; Triangular/Square waves; Single/3 phase principles.	1	2	2
3.14 Resistive (R), Capacitive (C) and Inductive (L) Circuits Phase relationship of voltage and current in L, C and R circuits, parallel, series and series parallel; Power dissipation in L, C and R circuits; Impedance, phase angle, power factor and current calculations; True power, apparent power and reactive power calculations.	-	2	2

Superseded

3.15 Transformers Transformer construction principles and operation; Transformer losses and methods for overcoming them; Transformer action under load and no-load conditions; Power transfer, efficiency, polarity markings; Calculation of line and phase voltages and currents; Calculation of power in a three phase system; Primary and Secondary current, voltage, turns ratio, power, efficiency; Auto transformers.	-	2	2
3.16 Filters Operation, application and uses of the following filters: low pass, high pass, band pass, band stop.	-	1	1
3.17 AC Generators Rotation of loop in a magnetic field and waveform produced; Operation and construction of revolving armature and revolving field type AC generators; Single phase, two phase and three phase alternators; Three phase star and delta connections advantages and uses; Permanent Magnet Generators.	-	2	2
3.18 AC Motors Construction, principles of operation and characteristics of: AC synchronous and induction motors both single and polyphase; Methods of speed control and direction of rotation; Methods of producing a rotating field: capacitor, inductor, shaded or split pole.	-	2	2

MODULE 4 - ELECTRONIC FUNDAMENTALS

	Level		
	A	B1	B2

Superseded

4.1 Semiconductors *4.1.1 Diodes* (a) Diode symbols; Diode characteristics and properties; Diodes in series and parallel; Main characteristics and use of silicon controlled rectifiers (thyristors), light emitting diode, photo conductive diode, varistor, rectifier diodes; Functional testing of diodes; (b) Materials, electron configuration, electrical properties; P and N type materials: effects of impurities on conduction, majority and minority characters; PN junction in a semiconductor, development of a potential across a PN junction in unbiased, forward biased and reverse biased conditions; Diode parameters: peak inverse voltage, maximum forward current, temperature, frequency, leakage current, power dissipation; Operation and function of diodes in the following circuits: clippers, clampers, full and half wave rectifiers, bridge rectifiers, voltage doublers and triplers; Detailed operation and characteristics of the following devices: silicon controlled rectifier (thyristor), light emitting diode, Schottky diode, photo conductive diode, varactor diode, varistor, rectifier diodes, Zener diode.	- -	2 -	2 2
4.1.2 Transistors (a) Transistor symbols; Component description and orientation; Transistor characteristics and properties; (b) Construction and operation of PNP and NPN transistors; Base, collector and emitter configurations; Testing of transistors; Basic appreciation of other transistor types and their uses; Application of transistors: classes of amplifier (A, B, C); Simple circuits including: bias, decoupling, feedback and stabilisation; Multistage circuit principles: cascades, push-pull, oscillators, multivibrators, flip-flop circuits.	- -	1 -	2 2

Superseded

4.1.3 Integrated Circuits (a) Description and operation of logic circuits and linear circuits/operational amplifiers; (b) Description and operation of logic circuits and linear circuits; Introduction to operation and function of an operational amplifier used as: integrator, differentiator, voltage follower, comparator; Operation and amplifier stages connecting methods: resistive capacitive, inductive (transformer), inductive resistive (IR), direct; Advantages and disadvantages of positive and negative feedback.	- - -	1 - -	- - 2
4.2 Printed Circuit Boards Description and use of printed circuit boards.	-	1	2
4.3 Servomechanisms (a) Understanding of the following terms: Open and closed loop systems, feedback, follow up, analogue transducers; Principles of operation and use of the following synchro system components/ features: resolvers, differential, control and torque, transformers, inductance and capacitance transmitters; (b) Understanding of the following terms: Open and closed loop, follow up, servomechanism, analogue, transducer, null, damping, feedback, deadband; Construction operation and use of the following synchro system components: resolvers, differential, control and torque, E and I transformers, inductance transmitters, capacitance transmitters, synchronous transmitters; Servomechanism defects, reversal of synchro leads, hunting.	- - -	1 - -	- - 2

MODULE 5 - DIGITAL TECHNIQUES/ELECTRONIC INSTRUMENT SYSTEMS

	Level		
	A	B1	B2

Superseded

5.1 Electronic Instrument Systems Typical systems arrangements and cockpit layout of electronic instrument systems.	1	2	3
5.2 Numbering Systems Numbering systems: binary, octal and hexadecimal; Demonstration of conversions between the decimal and binary, octal and hexadecimal systems and vice versa.	-	1	2
5.3 Data Conversion Analogue Data, Digital Data; Operation and application of analogue to digital, and digital to analogue converters, inputs and outputs, limitations of various types.	-	1	2
5.4 Data Buses Operation of data buses in aircraft systems, including knowledge of ARINC and other specifications; Aircraft Network/Ethernet.	-	2	2
5.5 Logic Circuits (a) Identification of common logic gate symbols, tables and equivalent circuits; Applications used for aircraft systems, schematic diagrams; (b) Interpretation of logic diagrams.	- -	2 -	2 2
5.6 Basic Computer Structure (a) Computer terminology (including bit, byte, software, hardware, CPU, IC, and various memory devices such as RAM, ROM, PROM); Computer technology (as applied in aircraft systems); (b) Computer related terminology; Operation, layout and interface of the major components in a micro-computer including their associated bus systems; Information contained in single and multi-address instruction words; Memory associated terms; Operation of typical memory devices; Operation, advantages and disadvantages of the various data storage systems.	1 -	2 -	- 2
5.7 Microprocessors Functions performed and overall operation of a microprocessor;	-	-	2

Superseded

Basic operation of each of the following microprocessor elements: control and processing unit, clock, register, arithmetic logic unit.			
5.8 Integrated Circuits Operation and use of encoders and decoders; Function of encoder types; Uses of medium, large and very large scale integration.	-	-	2
5.9 Multiplexing Operation, application and identification in logic diagrams of multiplexers and demultiplexers.	-	-	2
5.10 Fibre Optics Advantages and disadvantages of fibre optic data transmission over electrical wire propagation; Fibre optic data bus; Fibre optic related terms; Terminations; Couplers, control terminals, remote terminals; Application of fibre optics in aircraft systems.	-	1	2
5.11 Electronic Displays Principles of operation of common types of displays used in modern aircraft, including Cathode Ray Tubes, Light Emitting Diodes and Liquid Crystal Display.	-	2	2
5.12 Electrostatic Sensitive Devices Special handling of components sensitive to electrostatic discharges; Awareness of risks and possible damage, component and personnel anti-static protection devices.	1	2	2
5.13 Software Management Control Awareness of restrictions, airworthiness requirements and possible catastrophic effects of unapproved changes to software programmes.	-	2	2
5.14 Electromagnetic Environment Influence of the following phenomena on maintenance practices for electronic system: EMC-Electromagnetic Compatibility EMI-Electromagnetic Interference HIRF-High Intensity Radiated Field	-	2	2

Superseded

Lightning/lightning protection.			
5.15 Typical Electronic/Digital Aircraft Systems General arrangement of typical electronic/digital aircraft systems and associated BITE (Built In Test Equipment) such as: ACARS-ARINC Communication and Addressing and Reporting System EICAS-Engine Indication and Crew Alerting System FBW-Fly-by-Wire FMS-Flight Management System IRS-Inertial Reference System ECAM-Electronic Centralised Aircraft Monitoring EFIS-Electronic Flight Instrument System GPS-Global Positioning System TCAS-Traffic Alert Collision Avoidance System Integrated Modular Avionics Cabin Systems Information Systems.	-	2	2

MODULE 6 - MATERIALS AND HARDWARE

	Level		
	A	B1	B2
6.1 Aircraft Materials — Ferrous (a) Characteristics, properties and identification of common alloy steels used in aircraft; Heat treatment and application of alloy steels; (b) Testing of ferrous materials for hardness, tensile strength, fatigue strength and impact resistance.	1 -	2 1	1 1
6.2 Aircraft Materials — Non-Ferrous (a) Characteristics, properties and identification of common non-ferrous materials used in aircraft;	1	2	1

Superseded

Heat treatment and application of non-ferrous materials; (b) Testing of non-ferrous material for hardness, tensile strength, fatigue strength and impact resistance.	-	1	1
6.3 Aircraft Materials — Composite and Non-Metallic *6.3.1 Composite and non-metallic other than wood and fabric* (a) Characteristics, properties and identification of common composite and non-metallic materials, other than wood, used in aircraft; Sealant and bonding agents; (b) The detection of defects/deterioration in composite and non-metallic material; Repair of composite and non-metallic material.	1 1	2 2	2 -
6.3.2 Wooden structures Construction methods of wooden airframe structures; Characteristics, properties and types of wood and glue used in aeroplanes; Preservation and maintenance of wooden structure; Types of defects in wood material and wooden structures; The detection of defects in wooden structure; Repair of wooden structure.	-	-	-
6.3.3 Fabric covering Characteristics, properties and types of fabrics used in aeroplanes; Inspections methods for fabric; Types of defects in fabric; Repair of fabric covering.	-	-	-
6.4 Corrosion (a) Chemical fundamentals; Formation by, galvanic action process, microbiological, stress; (b) Types of corrosion and their identification; Causes of corrosion; Material types, susceptibility to corrosion.	1 2	1 3	1 2

Superseded

6.5 Fasteners *6.5.1 Screw threads* Screw nomenclature; Thread forms, dimensions and tolerances for standard threads used in aircraft; Measuring screw threads.	2	2	2
6.5.2 Bolts, studs and screws Bolt types: specification, identification and marking of aircraft bolts, international standards; Nuts: self-locking, anchor, standard types; Machine screws: aircraft specifications; Studs: types and uses, insertion and removal; Self tapping screws, dowels.	2	2	2
6.5.3 Locking devices Tab and spring washers, locking plates, split pins, pal-nuts, wire locking, quick release fasteners, keys, circlips, cotter pins.	2	2	2
6.5.4 Aircraft rivets Types of solid and blind rivets: specifications and identification, heat treatment.	1	2	1
6.6 Pipes and Unions (a) Identification of, and types of rigid and flexible pipes and their connectors used in aircraft; (b) Standard unions for aircraft hydraulic, fuel, oil, pneumatic and air system pipes.	2 2	2 2	2 1
6.7 Springs Types of springs, materials, characteristics and applications.	1	2	1
6.8 Bearings Purpose of bearings, loads, material, construction; Types of bearings and their application.	1	2	2

Superseded

6.9 Transmissions Gear types and their application; Gear ratios, reduction and multiplication gear systems, driven and driving gears, idler gears, mesh patterns; Belts and pulleys, chains and sprockets.	1	2	2
6.10 Control Cables Types of cables; End fittings, turnbuckles and compensation devices; Pulleys and cable system components; Bowden cables; Aircraft flexible control systems.	1	2	1
6.11 Electrical Cables and Connectors Cable types, construction and characteristics; High tension and co-axial cables; Crimping; Connector types, pins, plugs, sockets, insulators, current and voltage rating, coupling, identification codes.	1	2	2

MODULE 7 - MAINTENANCE PRACTICES

	Level		
	A	B1	B2
7.1 Safety Precautions-Aircraft and Workshop Aspects of safe working practices including precautions to take when working with electricity, gases especially oxygen, oils and chemicals; Also, instruction in the remedial action to be taken in the event of a fire or another accident with one or more of these hazards including knowledge on extinguishing agents.	3	3	3
7.2 Workshop Practices Care of tools, control of tools, use of workshop materials; Dimensions, allowances and tolerances, standards of workmanship;	3	3	3

Superseded

Calibration of tools and equipment, calibration standards.			
7.3 Tools Common hand tool types; Common power tool types; Operation and use of precision measuring tools; Lubrication equipment and methods; Operation, function and use of electrical general test equipment.	3	3	3
7.4 Avionic General Test Equipment Operation, function and use of avionic general test equipment.	-	2	3
7.5 Engineering Drawings, Diagrams and Standards Drawing types and diagrams, their symbols, dimensions, tolerances and projections; Identifying title block information; Microfilm, microfiche and computerised presentations; Specification 100 of the Air Transport Association (ATA) of America; Specification S1000D; Aeronautical and other applicable standards including ISO, AN, MS, NAS and MIL; Wiring diagrams and schematic diagrams.	1	2	2
7.6 Fits and Clearances Drill sizes for bolt holes, classes of fits; Common system of fits and clearances; Schedule of fits and clearances for aircraft and engines; Limits for bow, twist and wear; Standard methods for checking shafts, bearings and other parts.	1	2	1
7.7 Electrical Wiring Interconnection System (EWIS) Continuity, insulation and bonding techniques and testing; Use of crimp tools: hand and hydraulic operated; Testing of crimp joints; Connector pin removal and insertion; Co-axial cables: testing and installation precautions; Identification of wire types, their inspection criteria and damage tolerance;	1	3	3

Superseded

Wiring protection techniques: Cable looming and loom support, cable clamps, protective sleeving techniques including heat shrink wrapping, shielding; EWIS installations, inspection, repair, maintenance and cleanliness standards.			
7.8 Riveting Riveted joints, rivet spacing and pitch; Tools used for riveting and dimpling; Inspection of riveted joints.	1	2	-
7.9 Pipes and Hoses Bending and belling/flaring aircraft pipes; Inspection and testing of aircraft pipes and hoses; Installation and clamping of pipes.	1	2	-
7.10 Springs Inspection and testing of springs.	1	2	-
7.11 Bearings Testing, cleaning and inspection of bearings; Lubrication requirements of bearings; Defects in bearings and their causes.	1	2	-
7.12 Transmissions Inspection of gears, backlash; Inspection of belts and pulleys, chains and sprockets; Inspection of screw jacks, lever devices, push-pull rod systems.	1	2	-
7.13 Control Cables Swaging of end fittings; Inspection and testing of control cables; Bowden cables; aircraft flexible control systems.	1	2	-
7.14 Material handling *7.14.1 Sheet Metal* Marking out and calculation of bend allowance; Sheet metal working, including bending and forming; Inspection of sheet metal work.	-	2	-

Superseded

7.14.2 Composite and non-metallic Bonding practices; Environmental conditions; Inspection methods.	-	2	-
7.15 Welding, Brazing, Soldering and Bonding (a) Soldering methods; inspection of soldered joints; (b) Welding and brazing methods; Inspection of welded and brazed joints; Bonding methods and inspection of bonded joints.	- -	2 2	2 -
7.16 Aircraft Weight and Balance (a) Centre of Gravity/Balance limits calculation: use of relevant documents; (b) Preparation of aircraft for weighing; Aircraft weighing.	- -	2 2	2 -
7.17 Aircraft Handling and Storage Aircraft taxiing/towing and associated safety precautions; Aircraft jacking, chocking, securing and associated safety precautions; Aircraft storage methods; Refuelling/defuelling procedures; De-icing/anti-icing procedures; Electrical, hydraulic and pneumatic ground supplies; Effects of environmental conditions on aircraft handling and operation.	2	2	2
7.18 Disassembly, Inspection, Repair and Assembly Techniques (a) Types of defects and visual inspection techniques; Corrosion removal, assessment and reprotection; (b) General repair methods, Structural Repair Manual; Ageing, fatigue and corrosion control programmes; (c) Non-destructive inspection techniques including, penetrant, radiographic, eddy current, ultrasonic and boroscope methods;	2 - -	3 2 2	3 - 1

Superseded

(d) Disassembly and re-assembly techniques;	2	2	2
(e) Trouble shooting techniques.	-	2	2
7.19 Abnormal Events (a) Inspections following lightning strikes and HIRF penetration; (b) Inspections following abnormal events such as heavy landings and flight through turbulence.	2 2	2 2	2 -
7.20 Maintenance Procedures Maintenance planning; Modification procedures; Stores procedures; Certification/release procedures; Interface with aircraft operation; Maintenance Inspection/Quality Control/Quality Assurance; Additional maintenance procedures; Control of life limited components.	1	2	2
7.21 Armament Safety Safety principles and elements with armed aircraft, ammunitions; Safety aspects of canopy, ejection seat and other pyrotechnic devices.	2	2	2

MODULE 8 - BASIC AERODYNAMICS

	Level		
	A	B1	B2
8.1 Physics of the Atmosphere International Standard Atmosphere (ISA), application to aerodynamics.	1	2	2

Superseded

8.2 Aerodynamics Airflow around a body; Boundary layer, laminar and turbulent flow, free stream flow, relative airflow, upwash and downwash, vortices, stagnation; The terms: camber, chord, mean aerodynamic chord, profile (parasite) drag, induced drag, centre of pressure, angle of attack, wash in and wash out, fineness ratio, wing shape and aspect ratio; Thrust, Weight, Aerodynamic Resultant; Generation of Lift and Drag: Angle of Attack, Lift coefficient, Drag coefficient, polar curve, stall; Aerofoil contamination including ice, snow, frost.	1	2	2
8.3 Theory of Flight Relationship between lift, weight, thrust and drag; Glide ratio; Steady state flights, performance; Theory of the turn; Influence of load factor: stall, flight envelope and structural limitations; Lift augmentation.	1	2	2
8.4 Flight Stability and Dynamics Longitudinal, lateral and directional stability (active and passive).	1	2	2

MODULE 9 - HUMAN FACTORS

	Level		
	A	B1	B2
9.1 General The need to take human factors into account; Incidents attributable to human factors/human error; "Murphy's" law.	1	2	2

Superseded

9.2 Human Performance and Limitations Vision; Hearing; Information processing; Attention and perception; Memory; Claustrophobia and physical access.	1	2	2
9.3 Social Psychology Responsibility: individual and group; Motivation and de-motivation; Peer pressure; "Culture" issues; Team working; Management, supervision and leadership; Military environment and other military factors.	1	1	1
9.4 Factors Affecting Performance Fitness/health; Stress: domestic and work related; Time pressure and deadlines; Workload: overload and underload; Sleep and fatigue, shiftwork; Alcohol, medication, drug abuse.	2	2	2
9.5 Physical Environment Noise and fumes; Illumination; Climate and temperature; Motion and vibration; Military Working environments.	1	1	1
9.6 Tasks Physical work; Repetitive tasks; Visual inspection; Complex systems.	1	1	1

Superseded

9.7 Communication Within and between teams; Work logging and recording; Keeping up to date, currency; Dissemination of information.	2	2	2
9.8 Human Error Error models and theories; Types of error in maintenance tasks; Implications of errors (i.e. accidents); Avoiding and managing errors.	1	2	2
9.9 Hazards in the Workplace Recognising and avoiding hazards; Dealing with emergencies.	2	2	2

MODULE 10 - AVIATION LEGISLATION

	Level		
	A	B1	B2
10.1 Regulatory Framework Military/State Organisation: Role of the Military Aviation Authority; Introduction to the national military airworthiness regulations.	1	1	1
10.2 Certifying Staff — Maintenance Understanding of MAML and Certifying staff regulation.	2	2	2
10.3 Approved Maintenance Organisations Understanding of DASR 145.	2	2	2
10.4 Air operations Operating Authority's responsibilities, in particular regarding continuing airworthiness and maintenance;	1	2	2

Superseded

Aircraft Maintenance Programme; MEL/CDL or National equivalent; Documents to be carried on board; Aircraft placarding (markings).			
10.5 Certification of aircraft, parts and appliances (a) General; General understanding of DASR 21 and airworthiness codes/criteria; (b) Documents; Military Type-Certificates; Military Restricted Type-Certificates; Military Supplemental Type-Certificates; Military Certificates Of Airworthiness; Military Restricted Certificates Of Airworthiness; Military Permit To Fly; National Certificate of Registration; Weight & Balance; National Noise Certificate if required.	- - -	1 1 1	1 1 1
10.6 Continuing airworthiness Understanding of DASR 21 provisions related to continuing airworthiness; Understanding of DASR M.	1 2	1 2	1 2
10.7 Applicable Requirements a) Maintenance Programmes, Maintenance checks and inspections; Airworthiness Directives; Service Bulletins, manufacturers' service information; Modifications and repairs; Maintenance documentation: maintenance manuals, structural repair manual, illustrated parts catalogue, etc ; Master Minimum Equipment Lists, Minimum Equipment List and Dispatch Deviation Lists or National equivalent; (b) Continuing airworthiness; Minimum equipment requirements — Test flights; Maintenance and dispatch requirements.	 1 - 	 2 1 	 2 1

Superseded

MODULE 11A - TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

	Level	
	A1	B1.1
11.1 Theory of Flight *11.1.1. Aeroplane Aerodynamics and Flight Controls* Operation and effect of: — roll control: ailerons and spoilers, — pitch control: elevators, stabilators, variable incidence stabilisers and canards, — yaw control, rudder limiters; Control using elevons, ruddervators; High lift devices, slots, slats, flaps, flaperons; Drag inducing devices, spoilers, lift dumpers, speed brakes; Effects of wing fences, saw tooth leading edges; Boundary layer control using, vortex generators, stall wedges or leading edge devices; Operation and effect of trim tabs, balance and antibalance (leading) tabs, servo tabs, spring tabs, mass balance, control surface bias, aerodynamic balance panels; Effects of external stores;	1	2
11.1.2. High Speed Flight Speed of sound, subsonic flight, transonic flight, supersonic flight; Mach number, critical Mach number, compressibility buffet, shock wave, aerodynamic heating, area rule; Factors affecting airflow in engine intakes of high speed aircraft; Effects of sweepback on critical Mach number; Effects of external stores.	1	2
11.2 Airframe Structures — General Concepts (a) Airworthiness requirements for structural strength/integrity; Structural classification, primary, secondary and tertiary;	2	2

Superseded

Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision; Aircraft bonding; (b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning, anti-corrosive protection, wing, empennage and engine attachments; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning; Airframe symmetry: methods of alignment and symmetry checks.	1	2
11.3 Airframe Structures — Aeroplanes *11.3.1 Fuselage (System 52/53/56)* Construction and pressurisation sealing; Wing, stabiliser, pylon and undercarriage attachments; Seat installation and cargo loading system; Doors and emergency exits: construction, mechanisms, operation and safety devices; Windows and windscreen construction and mechanisms; Canopy construction and mechanism;	1	2
11.3.2 Wings (System 57) Construction; Fuel storage; Landing gear, pylon, control surface and high lift/drag attachments;	1	2
11.3.3 Stabilisers (System 55) Construction; Control surface attachment ;	1	2

Superseded

11.3.4 Flight Control Surfaces (System 55/57) Construction and attachment; Balancing — mass and aerodynamic;	1	2
11.3.5 Nacelles/Pylons (System 54) Nacelles/Pylons: — Construction, — Firewalls, — Engine mounts.	1	2
11.4 Air Conditioning and Cabin Pressurisation (System 21) *11.4.1 Air supply* Sources of air supply including engine bleed, APU and ground cart;	1	2
11.4.2 Air Conditioning Air conditioning systems; Air cycle and vapour cycle machines; Distribution systems; Flow, temperature and humidity control system;	1	3
11.4.3 Pressurisation Pressurisation systems; Control and indication including control and safety valves; Cabin pressure controllers; Canopy seal, anti-g system;	1 1	3 2
11.4.4 Safety and warning devices Protection and warning devices.	1	3
11.5 Instruments/Avionic Systems *11.5.1 Instrument Systems (System 31)* Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Angle of attack indication, stall warning systems;	1	2

Superseded

Glass cockpit; Other aircraft system indication.		
11.5.2 Avionic Systems Fundamentals of system lay-outs and operation of: — Auto Flight (System 22), — Communications (System 23), — Navigation Systems (System 34).	1	1
11.6 Electrical Power (System 24) Batteries Installation and Operation; DC power generation; AC power generation; Emergency power generation; Voltage regulation; Power distribution; Inverters, transformers, rectifiers; Circuit protection; External/Ground power.	1	3
11.7 Equipment and Furnishings (System 25) (a) Emergency equipment requirements; Seats, harnesses and belts; (b) Cabin lay-out; Equipment lay-out; Cabin Furnishing installation; Cargo handling and retention equipment; Airstairs.	2 1	2 1
11.8 Fire Protection (System 26) (a) Fire and smoke detection and warning systems; Fire extinguishing systems; System tests; (b) Portable fire extinguisher.	1 1	3 1

Superseded

11.9 Flight Controls (System 27) Primary controls: aileron, elevator, rudder, spoiler; Trim control; Active load control; High lift devices; Lift dump, speed brakes; System operation: manual, hydraulic, pneumatic, electrical, fly-by-wire; Artificial feel, Yaw damper, Mach trim, rudder limiter, gust lock systems; Balancing and rigging; Stall protection/warning system.	1	3
11.10 Fuel Systems (System 28) System lay-out; Fuel tanks; Supply systems; Dumping, venting and draining; Cross-feed and transfer; Indications and warnings; Refuelling and defueling including Air to Air Refueling (AAR); Longitudinal balance fuel systems including during AAR.	1	3
11.11 Hydraulic Power (System 29) System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical, pneumatic; Emergency pressure generation; Filters; Pressure Control; Power distribution; Indication and warning systems; Interface with other systems.	1	3

Superseded

11.12 Ice and Rain Protection (System 30) Ice formation, classification and detection; Anti-icing systems: electrical, hot air and chemical; De-icing systems: electrical, hot air, pneumatic and chemical; Rain repellent; Probe and drain heating; Wiper systems.	1	3
11.13 Landing Gear (System 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning; Wheels, brakes, antiskid and autobraking; Tyres; Steering; Air-ground sensing; Drag-chute and Arresting hook/landing assistance equipment.	2 1	3 1
11.14 Lights (System 33) External: navigation, anti collision, landing, taxiing, ice, formation; Internal: cabin, cockpit, cargo, Night Vision Devices; Emergency.	2	3
11.15 Oxygen (System 35) System lay-out: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.	1	3
11.16 Pneumatic/Vacuum (System 36) System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure control; Distribution;	1	3

Superseded

Indications and warnings; Interfaces with other systems.		
11.17 Water/Waste (System 38) Water system lay-out, supply, distribution, servicing and draining; Toilet system lay-out, flushing and servicing; Corrosion aspects.	-	-
11.18 On Board Maintenance Systems (System 45) Central maintenance computers; Data loading system; Electronic library system; Printing; Structure monitoring (damage tolerance monitoring).	1	2
11.19 Integrated Modular Avionics (System 42) Functions that may be typically integrated in the Integrated Modular Avionic (IMA) modules are, among others: Bleed Management, Air Pressure Control, Air Ventilation and Control, Avionics and Cockpit Ventilation Control, Temperature Control, Air Traffic Communication, Avionics Communication Router, Electrical Load Management, Circuit Breaker Monitoring, Electrical System BITE, Fuel Management, Braking Control, Steering Control, Landing Gear Extension and Retraction, Tyre Pressure Indication, Oleo Pressure Indication, Brake Temperature Monitoring, etc; Core System; Network Components.	1	2
11.20 Cabin Systems (System 44) The units and components which provide a means of communication within the aircraft (Cabin Intercommunication Data System) and between the aircraft cabin and ground stations (Cabin Network Service). Includes voice, data, and video transmissions. The Cabin Intercommunication Data System provides an interface between cockpit/cabin crew and cabin systems. These systems support data exchange of the different related LRU's and they are typically operated via Crew Panels. The Cabin Network Service typically consists of a server, typically interfacing with, among others, the Data/Radio Communication System; The Cabin Network Service may host functions such as access to pre-departure/ departure reports; Cabin Core System;	1	2

Superseded

External Communication System; Cabin Monitoring System; Miscellaneous Cabin System.		
11.21 Information Systems (System 46) The units and components which furnish a means of storing, updating and retrieving digital information traditionally provided on paper, microfilm or microfiche. Includes units that are dedicated to the information storage and retrieval function such as the electronic library mass storage and controller. Does not include units or components installed for other uses and shared with other systems, such as flight deck printer or general use display. Typical examples include Air Traffic and Information Management Systems and Network Server Systems; Aircraft General Information System; Flight Deck Information System; Maintenance Information System; Passenger Cabin Information System; Miscellaneous Information System.	1	2

MODULE 11B - PISTON AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

	Level	
	A2	B1.2
11.1 Theory of Flight *11.1.1. Aeroplane Aerodynamics and Flight Controls* Operation and effect of: — roll control: ailerons and spoilers, — pitch control: elevators, stabilators, variable incidence stabilisers and canards, — yaw control, rudder limiters; Control using elevons, ruddervators; High lift devices, slots, slats, flaps, flaperons;	1	2

Superseded

Drag inducing devices, spoilers, lift dumpers, speed brakes; Effects of wing fences, saw tooth leading edges; Boundary layer control using, vortex generators, stall wedges or leading edge devices; Operation and effect of trim tabs, balance and antibalance (leading) tabs, servo tabs, spring tabs, mass balance, control surface bias, aerodynamic balance panels; Effects of external stores;		
11.1.2. High Speed Flight – N/A	-	-
11.2 Airframe Structures — General Concepts (a) Airworthiness requirements for structural strength/integrity; Structural classification, primary, secondary and tertiary; Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision; Aircraft bonding; (b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning, anti-corrosive protection, wing, empennage and engine attachments; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning; Airframe symmetry: methods of alignment and symmetry checks.	2 1	2 2
11.3 Airframe Structures — Aeroplanes *11.3.1 Fuselage (System 52/53/56)* Construction and pressurisation sealing; Wing, tail-plane, pylon and undercarriage attachments;	1	2

Superseded

Seat installation; Doors and emergency exits: construction and operation; Windows and windscreen attachment; Canopy construction and mechanism.		
11.3.2 Wings (System 57) Construction; Fuel storage; Landing gear, pylon, control surface and high lift/drag attachments.	1	2
11.3.3 Stabilisers (System 55) Construction; Control surface attachment.	1	2
11.3.4 Flight Control Surfaces (System 55/57) Construction and attachment; Balancing — mass and aerodynamic;	1	2
11.3.5 Nacelles/Pylons (System 54) Nacelles/Pylons: — Construction, — Firewalls, — Engine mounts.	1	2
11.4 Air Conditioning and Cabin Pressurisation (System 21) Pressurisation and air conditioning systems; Cabin pressure controllers, protection and warning devices; Heating systems.	1	3
11.5 Instruments/Avionic Systems *11.5.1 Instrument Systems (System 31)* Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Angle of attack indication, stall warning systems; Glass cockpit;	1	2

Superseded

Other aircraft system indication.		
11.5.2 Avionic Systems Fundamentals of system lay-outs and operation of: — Auto Flight (System 22), — Communications (System 23), — Navigation Systems (System 34).	1	1
11.6 Electrical Power (System 24) Batteries Installation and Operation; DC power generation; Voltage regulation; Power distribution; Circuit protection; Inverters, transformers.	1	3
11.7 Equipment and Furnishings (System 25) (a) Emergency equipment requirements; Seats, harnesses and belts; (b) Cargo handling and retention equipment; Airstairs.	2 1	2 1
11.8 Fire Protection (System 26) (a) Fire and smoke detection and warning systems; Fire extinguishing systems; System tests; (b) Portable fire extinguisher.	1 1	3 3
11.9 Flight Controls (System 27) Primary controls: aileron, elevator, rudder; Trim tabs; High lift devices; System operation: manual; Gust locks;	1	3

Superseded

Balancing and rigging; Stall warning system.		
11.10 Fuel Systems (System 28) System lay-out; Fuel tanks; Supply systems; Cross-feed and transfer; Indications and warnings; Refuelling and defueling.	1	3
11.11 Hydraulic Power (System 29) System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical; Filters; Pressure Control; Power distribution; Indication and warning systems.	1	3
11.12 Ice and Rain Protection (System 30) Ice formation, classification and detection; De-icing systems: electrical, hot air, pneumatic and chemical; Probe and drain heating; Wiper systems.	1	3
11.13 Landing Gear (System 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning; Wheels, brakes, antiskid and autobraking; Tyres; Steering; Air-ground sensing.	2	3

Superseded

11.14 Lights (System 33) External: navigation, anti collision, landing, taxiing, ice, formation; Internal: cabin, cockpit, cargo; Emergency.	2	3
11.15 Oxygen (System 35) System lay-out: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.	1	3
11.16 Pneumatic/Vacuum (System 36) System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure control; Distribution; Indications and warnings; Interfaces with other systems.	1	3
11.17 Water/Waste (System 38) Water system lay-out, supply, distribution, servicing and draining; Toilet system lay-out, flushing and servicing; Corrosion aspects.	-	-

MODULE 12 - HELICOPTER AERODYNAMICS, STRUCTURES AND SYSTEMS

	Level	
	A3	B1.3
	A4	B1.4

Superseded

12.1 Theory of Flight — Rotary Wing Aerodynamics Terminology; Effects of gyroscopic precession; Torque reaction and directional control; Dissymmetry of lift, Blade tip stall; Translating tendency and its correction; Coriolis effect and compensation; Vortex ring state, power settling, overpitching; Auto-rotation; Ground effect.	1	2
12.2 Flight Control Systems Cyclic control; Collective control; Swashplate; Yaw control: Anti-Torque Control, Tail rotor, bleed air; Main Rotor Head: Design and Operation features; Blade Dampers: Function and construction; Rotor Blades: Main and tail rotor blade construction and attachment; Trim control, fixed and adjustable stabilisers; System operation: manual, hydraulic, electrical and fly-by-wire; Artificial feel; Balancing and rigging.	2	3
12.3 Blade Tracking and Vibration Analysis Rotor alignment; Main and tail rotor tracking; Static and dynamic balancing; Vibration types, vibration reduction methods; Ground resonance.	1	3
12.4 Transmission Gear boxes, main and tail rotors; Clutches, free wheel units and rotor brake;	1	3

Superseded

Tail rotor drive shafts, flexible couplings, bearings, vibration dampers and bearing hangers.		
12.5 Airframe Structures (a) Airworthiness requirements for structural strength/integrity; Structural classification, primary, secondary and tertiary; Fail safe, safe life, damage tolerance concepts; Zonal and station identification systems; Stress, strain, bending, compression, shear, torsion, tension, hoop stress, fatigue; Drains and ventilation provisions; System installation provisions; Lightning strike protection provision; (b) Construction methods of: stressed skin fuselage, formers, stringers, longerons, bulkheads, frames, doublers, struts, ties, beams, floor structures, reinforcement, methods of skinning and anti-corrosive protection; Pylon, stabiliser and undercarriage attachments; Seat installation; Doors: construction, mechanisms, operation and safety devices; Windows and windscreen construction; Fuel storage; Firewalls; Engine mounts; Structure assembly techniques: riveting, bolting, bonding; Methods of surface protection, such as chromating, anodising, painting; Surface cleaning; Airframe symmetry: methods of alignment and symmetry checks.	2 1	2 2
12.6 Air Conditioning (System 21) *12.6.1 Air supply* Sources of air supply including engine bleed and ground cart.	1	2
12.6.2 Air conditioning Air conditioning systems; Distribution systems; Flow and temperature control systems;	1	3

Superseded

Protection and warning devices.		
12.7 Instruments/Avionic Systems *12.7.1 Instrument Systems (System 31)* Pitot static: altimeter, air speed indicator, vertical speed indicator; Gyroscopic: artificial horizon, attitude director, direction indicator, horizontal situation indicator, turn and slip indicator, turn coordinator; Compasses: direct reading, remote reading; Vibration indicating systems; HUMS; Glass cockpit; Other aircraft system indication.	1	2
12.7.2 Avionic Systems Fundamentals of system layouts and operation of: Auto Flight (System 22); Communications (System 23); Navigation Systems (System 34).	1	1
12.8 Electrical Power (System 24) Batteries Installation and Operation; DC power generation, AC power generation; Emergency power generation; Voltage regulation, Circuit protection; Power distribution; Inverters, transformers, rectifiers; External/Ground power.	1	3
12.9 Equipment and Furnishings (System 25) (a) Emergency equipment requirements; Seats, harnesses and belts; Lifting systems; (b) Emergency flotation systems; Cargo handling and retention equipment.	2 1	2 1
12.10 Fire Protection (System 26) Fire and smoke detection and warning systems;	1	3

Superseded

Fire extinguishing systems; System tests.		
12.11 Fuel Systems (System 28) System lay-out; Fuel tanks; Supply systems; Dumping, venting and draining; Cross-feed and transfer; Indications and warnings; Refuelling and defuelling.	1	3
12.12 Hydraulic Power (System 29) System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Pressure generation: electric, mechanical, pneumatic; Emergency pressure generation; Filters; Pressure Control; Power distribution; Indication and warning systems; Interface with other systems.	1	3
12.13 Ice and Rain Protection (System 30) Ice formation, classification and detection; Anti-icing and De-icing systems: electrical, hot air and chemical; Rain repellent and removal; Probe and drain heating; Wiper system.	1	3
12.14 Landing Gear (System 32) Construction, shock absorbing; Extension and retraction systems: normal and emergency; Indications and warning;	2	3

Superseded

Wheels, Tyres, brakes; Steering; Air-ground sensing; Skids, floats.		
12.15 Lights (System 33) External: navigation, landing, taxiing, ice, formation; Internal: cabin, cockpit, cargo, Night Vision Devices' Lighting; Emergency.	2	3
12.16 Pneumatic/Vacuum (System 36) System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply; Pressure control; Distribution; Indications and warnings; Interfaces with other systems.	1	3
12.17 Integrated Modular Avionics (System 42) Functions that may be typically integrated in the Integrated Modular Avionic (IMA) modules are, among others: Bleed Management, Air Pressure Control, Air Ventilation and Control, Avionics and Cockpit Ventilation Control, Temperature Control, Air Traffic Communication, Avionics Communication Router, Electrical Load Management, Circuit Breaker Monitoring, Electrical System BITE, Fuel Management, Braking Control, Steering Control, Landing Gear Extension and Retraction, Tyre Pressure Indication, Oleo Pressure Indication, Brake Temperature Monitoring, etc; Core System; Network Components.	1	2
12.18 On Board Maintenance Systems (System 45) Central maintenance computers; Data loading system; Electronic library system; Printing; Structure monitoring (damage tolerance monitoring).	1	2

Superseded

12.19 Information Systems (System 46) The units and components which furnish a means of storing, updating and retrieving digital information traditionally provided on paper, microfilm or microfiche. Includes units that are dedicated to the information storage and retrieval function such as the electronic library mass storage and controller. Does not include units or components installed for other uses and shared with other systems, such as flight deck printer or general use display. Typical examples include Air Traffic and Information Management Systems and Network Server Systems; Aircraft General Information System; Flight Deck Information System; Maintenance Information System; Passenger Cabin Information System; Miscellaneous Information System.	1	2

MODULE 13 - AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS

	Level
	B2
13.1 Theory of Flight (a) Aeroplane Aerodynamics and Flight Controls Operation and effect of: — roll control: ailerons and spoilers, — pitch control: elevators, stabilators, variable incidence stabilisers and canards, — yaw control, rudder limiters; Control using elevons, ruddervators; High lift devices: slots, slats, flaps; Drag inducing devices: spoilers, lift dumpers, speed brakes; Operation and effect of trim tabs, servo tabs, control surface bias; (b) High Speed Flight Speed of sound, subsonic flight, transonic flight, supersonic flight; Mach number, critical Mach number;	1 1

Superseded

(c) Rotary Wing Aerodynamics Terminology; Operation and effect of cyclic, collective and anti-torque controls.	1
13.2 Structures — General Concepts (a) Fundamentals of structural systems; (b) Zonal and station identification systems; Electrical bonding; Lightning strike protection provision.	1 2
13.3 Autoflight (System 22) Fundamentals of automatic flight control including working principles and current terminology; Command signal processing; Modes of operation: roll, pitch and yaw channels; Yaw dampers; Stability Augmentation System in helicopters; Automatic trim control; Autopilot navigation aids interface; Autothrottle systems; Automatic Landing Systems: principles and categories, modes of operation, approach, glideslope, land, go-around, system monitors and failure conditions.	3
13.4 Communication/Navigation (System 23/34) (a) Fundamentals of radio wave propagation, antennas, transmission lines, communication, receiver and transmitter; (b) Working principles of following systems: — Very High Frequency (VHF) communication, — High Frequency (HF) communication, — Audio, — Emergency Locator Transmitters (ELT), — Cockpit Voice Recorder (CVR), — Very High Frequency omnidirectional range (VOR), — Tactical air navigation system (TACAN), — Automatic Direction Finding (ADF),	3 3

Superseded

— Instrument Landing System (ILS), — Flight Director systems, Distance Measuring Equipment (DME), — Doppler navigation, — Area navigation, RNAV systems, — Flight Management Systems(FMS), — Global Positioning System (GPS), Global Navigation Satellite Systems (GNSS), GNSS Landing System (GLS), Transponder Landing System (TLS), — Inertial Navigation System (INS), — Air Traffic Control transponder, secondary surveillance radar, — Traffic Alert and Collision Avoidance System (TCAS), — Weather avoidance radar, — Radio altimeter, — Data-link communication and reporting; — Microwave Landing System (MLS), — Very Low Frequency and hyperbolic navigation (VLF/Omega).	-
13.5 Electrical Power (System 24) Batteries Installation and Operation; DC power generation; AC power generation; Emergency power generation; Voltage regulation; Power distribution; Inverters, transformers, rectifiers; Circuit protection; External/Ground power.	3
13.6 Equipment and Furnishings (System 25) (a) Electronic emergency equipment requirements; (b) Cabin entertainment equipment.	3 -

Superseded

13.7 Flight Controls (System 27) (a) Primary controls: aileron, elevator, rudder, spoiler; Trim control; Active load control; High lift devices; Lift dump, speed brakes; System operation: manual, hydraulic, pneumatic; Artificial feel, Yaw damper, Mach trim, rudder limiter, gust locks; Stall protection systems; (b) System operation: electrical, fly-by-wire.	2 3
13.8 Instruments (System 31) Classification; Atmosphere; Terminology; Pressure measuring devices and systems; Pitot static systems; Altimeters; Vertical speed indicators; Airspeed indicators; Machmeters; Altitude reporting/alerting systems; Air data computers; Instrument pneumatic systems; Direct reading pressure and temperature gauges; Temperature indicating systems; Fuel quantity indicating systems; Gyroscopic principles; Artificial horizons; Slip indicators; Directional gyros;	3

Superseded

Ground Proximity Warning Systems/Terrain Awareness Warning Systems; Compass systems; Flight Data Recording systems; Electronic Flight Instrument Systems; Instrument warning systems including master warning systems and centralised warning panels; Stall warning systems and angle of attack indicating systems; Vibration measurement and indication; Glass cockpit.	
13.9 Lights (System 33) External: navigation, landing, taxiing, ice, formation; Internal: cabin, cockpit, cargo, Night Vision Devices' Lighting; Emergency.	3
13.10 On Board Maintenance Systems (System 45) Central maintenance computers; Data loading system; Electronic library system; Printing; Structure monitoring (damage tolerance monitoring).	3
13.11 Air Conditioning and Cabin Pressurisation (System 21) *13.11.1. Air supply* Sources of air supply including engine bleed, APU and ground cart;	2
13.11.2. Air Conditioning Distribution systems; Air conditioning systems; Air cycle and vapour cycle machines; Flow, temperature and humidity control system;	1 2 3
13.11.3. Pressurisation Pressurisation systems;	3

Superseded

Control and indication including control and safety valves; Cabin pressure controllers; Canopy seal and anti-g system;	1
13.11.4. Safety and warning devices Protection and warning devices.	3
13.12 Fire Protection (System 26) (a) Fire and smoke detection and warning systems; Fire extinguishing systems; System tests; (b) Portable fire extinguisher.	3 1
13.13 Fuel Systems (System 28) (a) System lay-out; Fuel tanks; Supply systems; Dumping, venting and draining; (b) Cross-feed and transfer; Refuelling and defuelling including AAR; (c) Longitudinal balance fuel systems; Indications and warnings.	1 2 3
13.14 Hydraulic Power (System 29) (a) System lay-out; Hydraulic fluids; Hydraulic reservoirs and accumulators; Filters; Power distribution;	1

Superseded

(b) Pressure control; Pressure generation: electrical, mechanical, pneumatic; Emergency pressure generation; Indication and warning systems; Interface with other systems.	3
13.15 Ice and Rain Protection (System 30) (a) Rain repellent; Wiper Systems; (b) Ice formation, classification and detection; Anti-icing systems: electrical, hot air and chemical; (c) De-icing systems: electrical, hot air, pneumatic, chemical; Probe and drain heating.	1 2 3
13.16 Landing Gear (System 32) (a) Construction, shock absorbing; Tyres; (b) Extension and retraction systems: normal and emergency; Indications and warnings; Wheels, brakes, antiskid and autobraking; Steering; Air-ground sensing.	1 3
13.17 Oxygen (System 35) System lay-out: cockpit, cabin; Sources, storage, charging and distribution; Supply regulation; Indications and warnings.	3
13.18 Pneumatic/Vacuum (System 36) (a) Distribution;	1
(b) System lay-out; Sources: engine/APU, compressors, reservoirs, ground supply;	2

Superseded

(c) Pressure control; Indications and warnings; Interfaces with other systems.	3
13.19 Water/Waste (System 38) Water system lay-out, supply, distribution, servicing and draining; Toilet system lay-out, flushing and servicing.	-
13.20 Integrated Modular Avionics (System 42) Functions that may be typically integrated in the Integrated Modular Avionic (IMA) modules are, among others: Bleed Management, Air Pressure Control, Air Ventilation and Control, Avionics and Cockpit Ventilation Control, Temperature Control, Air Traffic Communication, Avionics Communication Router, Electrical Load Management, Circuit Breaker Monitoring, Electrical System BITE, Fuel Management, Braking Control, Steering Control, Landing Gear Extension and Retraction, Tyre Pressure Indication, Oleo Pressure Indication, Brake Temperature Monitoring, etc.; Core System; Network Components.	3
13.21 Cabin Systems (System 44) The units and components which provide a means of communication within the aircraft (Cabin Intercommunication Data System) and between the aircraft cabin and ground stations (Cabin Network Service). Includes voice, data transmissions. The Cabin Intercommunication Data System provides an interface between cockpit/cabin crew and cabin systems. These systems support data exchange of the different related LRU's and they are typically operated via Crew Panels. The Cabin Network Service typically consists of a server, typically interfacing with, among others, the Data/Radio Communication System; The Cabin Network Service may host functions such as access to pre-departure/departure reports; Cabin Core System; External Communication System; Cabin Monitoring System; Miscellaneous Cabin System.	3
13.22 Information Systems (System 46) The units and components which furnish a means of storing, updating and retrieving digital information traditionally provided on paper, microfilm or microfiche. Includes units that are dedicated to the information storage and retrieval function such as the electronic library mass storage and controller. Does not include units or components installed for other uses and shared with other systems, such as flight deck printer or general use display.	3

Superseded

Typical examples include Air Traffic and Information Management Systems and Network Server Systems; Aircraft General Information System; Flight Deck Information System; Maintenance Information System; Passenger Cabin Information System; Miscellaneous Information System.	

MODULE 14 - PROPULSION

	Level
	B2
14.1 Turbine Engines (a) Constructional arrangement and operation of turbojet, turbofan, turboshaft and turbopropeller engines; (b) Operation of engine control and fuel metering systems including Full Authority Digital Engine (or Electronics) Control (FADEC).	1 2
14.2 Engine Indicating Systems Exhaust gas temperature/Interstage turbine temperature systems; Engine speed; Engine Thrust Indication: Engine Pressure Ratio, engine turbine discharge pressure or jet pipe pressure systems; Oil pressure and temperature; Fuel pressure, temperature and flow; Manifold pressure; Engine torque; Propeller speed.	2
14.3 Starting and Ignition Systems Operation of engine start systems and components; Ignition systems and components; Maintenance safety requirements.	2

Superseded

MODULE 15 - GAS TURBINE ENGINE

	Level	
	A1 A3	B1.1 B1.3
15.1 Fundamentals Potential energy, kinetic energy, Newton's laws of motion, Brayton cycle; The relationship between force, work, power, energy, velocity, acceleration; Constructional arrangement and operation of turbojet, turbofan, turboshaft, turboprop.	1	2
15.2 Engine Performance Gross thrust, net thrust, choked nozzle thrust, thrust distribution, resultant thrust, thrust horsepower, equivalent shaft horsepower, specific fuel consumption; Engine efficiencies; By-pass ratio and engine pressure ratio; Pressure, temperature and velocity of the gas flow; Engine ratings, static thrust, influence of speed, altitude and hot climate, flat rating, limitations.	-	2
15.3 Inlet Compressor inlet ducts; Effects of various inlet configurations; Ice protection.	2	2
15.4 Compressors Axial and centrifugal types; Constructional features and operating principles and applications; Fan balancing; Operation: Causes and effects of compressor stall and surge; Methods of air flow control: bleed valves, variable inlet guide vanes, variable stator vanes, rotating stator blades;	1	2

Superseded

Compressor ratio.		
15.5 Combustion Section Constructional features and principles of operation.	1	2
15.6 Turbine Section Operation and characteristics of different turbine blade types; Blade to disk attachment; Nozzle guide vanes; Causes and effects of turbine blade stress and creep.	2	2
15.7 Exhaust Constructional features and principles of operation; Convergent, divergent and variable area nozzles; Engine noise reduction; Thrust reversers.	1	2
15.8 Bearings and Seals Constructional features and principles of operation.	1	2
15.9 Lubricants and Fuels Properties and specifications; Fuel additives; Safety precautions.	1	2
15.10 Lubrication Systems System operation/lay-out and components.	1	2
15.11 Fuel Systems Operation of engine control and fuel metering systems including Full Authority Digital Engine (or Electronics) Control (FADEC); Systems lay-out and components.	1	2
15.12 Air Systems Operation of engine air distribution and anti-ice control systems, including internal cooling, sealing and external air services.	1	2
15.13 Starting and Ignition Systems Operation of engine start systems and components;	1	2

Superseded

Ignition systems and components; Maintenance safety requirements.		
15.14 Engine Indication Systems Exhaust Gas Temperature/Interstage Turbine Temperature; Engine Thrust Indication: Engine Pressure Ratio, engine turbine discharge pressure or jet pipe pressure systems; Oil pressure and temperature; Fuel pressure and flow; Engine speed; Vibration measurement and indication; Torque; Power.	1	2
15.15 Power Augmentation Systems Operation and applications; Water injection, water methanol; Afterburner systems.	1	1
15.16 Turbo-prop Engines Gas coupled/free turbine and gear coupled turbines; Reduction gears; Integrated engine and propeller controls; Overspeed safety devices.	1	2
15.17 Turbo-shaft Engines Arrangements, drive systems, reduction gearing, couplings, control systems.	1	2
15.18 Auxiliary Power Units (APUs) Purpose, operation, protective systems.	1	2
15.19 Powerplant Installation Configuration of firewalls, cowlings, acoustic panels, engine mounts, anti-vibration mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, lifting points and drains.	1	2
15.20 Fire Protection Systems Operation of detection and extinguishing systems.	1	2

Superseded

15.21 Engine Monitoring and Ground Operation Procedures for starting and ground run-up; Interpretation of engine power output and parameters; Trend (including oil analysis, vibration and boroscope) monitoring; Inspection of engine and components to criteria, tolerances and data specified by engine manufacturer; Compressor washing/cleaning; Foreign Object Damage.	1	3
15.22 Engine Storage and Preservation Preservation and depreservation for the engine and accessories/systems.	-	2

MODULE 16 - PISTON ENGINE

	Level	
	A2 A4	B1.2 B1.4
16.1 Fundamentals Mechanical, thermal and volumetric efficiencies; Operating principles — 2 stroke, 4 stroke, Otto and Diesel; Piston displacement and compression ratio; Engine configuration and firing order.	1	2
16.2 Engine Performance Power calculation and measurement; Factors affecting engine power; Mixtures/leaning, pre-ignition.	1	2
16.3 Engine Construction Crank case, crank shaft, cam shafts, sumps; Accessory gearbox; Cylinder and piston assemblies;	1	2

Superseded

Connecting rods, inlet and exhaust manifolds; Valve mechanisms; Propeller reduction gearboxes.		
16.4 Engine Fuel Systems *16.4.1 Carburettors* Types, construction and principles of operation; Icing and heating.	1	2
16.4.2 Fuel injection systems Types, construction and principles of operation.	1	2
16.4.3 Electronic engine control Operation of engine control and fuel metering systems including Full Authority Digital Engine (or Electronics) Control (FADEC); Systems lay-out and components.	1	2
16.5 Starting and Ignition Systems Starting systems, pre-heat systems; Magneto types, construction and principles of operation; Ignition harnesses, spark plugs; Low and high tension systems.	1	2
16.6 Induction, Exhaust and Cooling Systems Construction and operation of: induction systems including alternate air systems; Exhaust systems, engine cooling systems — air and liquid.	1	2
16.7 Supercharging/Turbocharging Principles and purpose of supercharging and its effects on engine parameters; Construction and operation of supercharging/turbocharging systems; System terminology; Control systems; System protection.	1	2
16.8 Lubricants and Fuels Properties and specifications; Fuel additives; Safety precautions.	1	2

Superseded

16.9 Lubrication Systems System operation/lay-out and components.	1	2
16.10 Engine Indication Systems Engine speed; Cylinder head temperature; Coolant temperature; Oil pressure and temperature; Exhaust Gas Temperature; Fuel pressure and flow; Manifold pressure.	1	2
16.11 Powerplant Installation Configuration of firewalls, cowlings, acoustic panels, engine mounts, anti-vibration mounts, hoses, pipes, feeders, connectors, wiring looms, control cables and rods, lifting points and drains.	1	2
16.12 Engine Monitoring and Ground Operation Procedures for starting and ground run-up; Interpretation of engine power output and parameters; Inspection of engine and components: criteria, tolerances, and data specified by engine manufacturer.	1	3
16.13 Engine Storage and Preservation Preservation and depreservation for the engine and accessories/systems.	-	2

MODULE 17 - PROPELLER

	Level	
	A1 A2	B1.1 B1.2
17.1 Fundamentals Blade element theory;	1	2

Superseded

High/low blade angle, reverse angle, angle of attack, rotational speed; Propeller slip; Aerodynamic, centrifugal, and thrust forces; Torque; Relative airflow on blade angle of attack; Vibration and resonance.		
17.2 Propeller Construction Construction methods and materials used in propellers; Blade station, blade face, blade shank, blade back and hub assembly; Fixed pitch, controllable pitch, constant speeding propeller; Propeller/spinner installation.	1	2
17.3 Propeller Pitch Control Speed control and pitch change methods, mechanical and electrical/electronic; Feathering and reverse pitch; Overspeed protection.	1	2
17.4 Propeller Synchronising Synchronising and synchrophasing equipment.	-	2
17.5 Propeller Ice Protection Fluid and electrical de-icing equipment.	1	2
17.6 Propeller Maintenance Static and dynamic balancing; Blade tracking; Assessment of blade damage, erosion, corrosion, impact damage, delamination; Propeller treatment/repair schemes; Propeller engine running.	1	3
17.7 Propeller Storage and Preservation Propeller preservation and depreservation.	1	2

MODULE 50 - PRINCIPLES OF ARMAMENT

Superseded

	Level		
	A	B1	B2
50.1 Essential principles of Armament (a) Propellants and explosives; Pyrotechnics (including Flares); Stores loading / unloading (to include chaff and flares) including hang-up and misfire; Ammunitions transportation; Air-to-air missile; Air-to-ground missile; Air-to-sea missile; Aerial torpedo; Bombs (freefall and guided); (b) Missile guidance methods: radar, infrared, electro-optical, passive anti-radiation; Missile warheads and detonation mechanisms; Guided weapon (missiles) aerodynamics and flight controls; (c) Storage, de-stocking and ammunitions assembly; Documents for storage, release and transportation of explosive items and firearms and explosive regulations.	1 1 1	1 1 1	1 1 1

MODULES 50 – 55: MILITARY-SPECIFIC SYSTEMS

MODULE 51 - WEAPONS SYSTEMS

	Level		
	A	B1	B2
51.1 Weapons stores system (System 94) (a) Weapon and stores release, fire and jettison stores;	2	3	3

Superseded

Weapon suspension system; Interconnecting equipment to transport and release/fire weapons; Gunnery; (b) Weapon control, designating and acquiring a target.	1	2	3

MODULE 52 - OPERATIONAL ATTACK SYSTEMS

	Level		
	A	B1	B2
52.1 Attack System Management (System 39) Architecture, management; Attack system functions; General rules of human-machine communication; Digital Networks, hardware and software, other information networks, network for video signals, network for blanking signals, MIL-STD-1553B (STANAG 3838 and STANAG 3910), MIL-STD-1773; Stores management hardware and software; Attack system resources, contributing resources; Role during mission phases.	-	2	3
52.2 Operational attack functions (System 40) Air-to-air functions: fire control functions, bullet gun firing, short range, medium range or beyond visual range missiles firing, air-to-air management after weapons launch, management of on-board guidance; Air-to-surface functions, Air-to-sea functions; Information exchange and cooperation; Navigational functions, localisation, flight management, approach and landing management; Nap of the earth flight: terrain following and obstacle avoidance management; Self protection: defensive manoeuvers and tactics elaboration against threats;	-	2	3

Superseded

Identification: aerial and surface objects identification based on autonomous and external identification means.			
52.3 Cross-technical attack functions (System 42) Tactical situation awareness; Aircraft Mission preparation and restitution, hardware and software; Cautions and warnings management; Mission system control and management; Trajectory management; Attack system compatibilities management, electromagnetic compatibility between all the transmitters and receivers.	-	2	3

MODULE 53 - SURVEILLANCE AND ELECTRONIC WARFARE

	Level		
	A	B1	B2
53.1 Surveillance (System 93) Data processing; Data display; Recording; Identification; Infra-red and laser sensors; Surveillance radar; Magnetic sensors; Sonar sensors (active and passive).	1	2	3
53.2 Image recording (System 97) (a) Optical systems;	1	2	2
(b) Specificities of aerial photography; Cameras.	1	1	1

Superseded

53.3 Electronic warfare (System 99) Active electromagnetic; Passive electromagnetic; ELINT; Infrared and Laser systems; Electromagnetic countermeasures.	-	2	3

MODULE 54 - CREW SAFETY

	Level		
	A	B1	B2
54.1 Crew escape and safety (System 95) Ejection seats; Escape hatches/canopy, Miniature Detonating Cord (MDC); Global survival kits; Impact protection.	2	3	2

MODULE 55 - MILITARY COMMUNICATION SYSTEMS

	Level		
	A	B1	B2
55.1 Military communication systems Tactical Data Links: Link 11, Link 16, Link 22; Tactical communications systems.	-	-	3

Superseded

1. General

1.1 All basic examinations shall be carried out using the multi-choice question format and essay questions as specified below. The incorrect alternatives shall seem equally plausible to anyone ignorant of the subject. All of the alternatives shall be clearly related to the question and of similar vocabulary, grammatical construction and length. In numerical questions, the incorrect answers shall correspond to procedural errors such as corrections applied in the wrong sense or incorrect unit conversions: they shall not be mere random numbers.

1.2 Each multi-choice question shall have at least three alternative answers of which only one shall be the correct answer and the candidate shall be allowed a time per module which is based upon a nominal average of 75 seconds per question.

1.3 Each essay question requires the preparation of a written answer and the candidate shall be allowed 20 minutes to answer each such question.

1.4 Suitable essay questions shall be drafted and evaluated using the knowledge syllabus in Appendix I Modules 7, 9 and 10.

1.5 Each essay question will have a model answer drafted for it, which will also include any known alternative answers that may be relevant for other sub-modules.

1.6 The essay question model answer will also be broken down into a list of the important points known as Key Points.

1.7 The pass mark for each module and sub-module multi-choice part of the examination is 75 %.

1.8 The pass mark for each essay question is 75 % in that the candidates answer shall contain 75 % of the required key points addressed by the question and no significant error related to any required key point.

1.9 If either the multi-choice part only or the essay part only is failed, then it is only necessary to retake the multi- choice or essay part, as appropriate.

1.10 Penalty marking systems shall not be used.

1.11 A failed module may not be retaken for at least 90 days following the date of the failed module examination, except in the case of a maintenance training organisation approved in accordance with DASR 147 which conducts a course of retraining tailored to the failed subjects in the particular module when the failed module may be retaken after 30 days, unless approved otherwise by the MAA.

1.12 The time periods required by DASR 66.A.25 apply to each individual module examination, with the exception of those module examinations which were passed as part of another category licence, where the licence has already been issued.

1.13 The maximum number of consecutive attempts for each module is three. Further sets of three attempts are allowed with a 1 year waiting period between sets, unless approved by the MAA.

The applicant shall confirm in writing to the approved MTO or the MAA to which they apply for an examination, the number and dates of attempts during the last year and the MTO or

Superseded

the MAA where these attempts took place. The MTO or the MAA is responsible for checking the number of attempts within the applicable timeframes.

2. Number of questions per module

MODULE 1 — MATHEMATICS

Category A: 16 multi-choice and 0 essay questions. Time allowed 20 minutes.

Category B1: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

Category B2: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

MODULE 2 — PHYSICS

Category A: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

Category B1: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B2: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

MODULE 3 — ELECTRICAL FUNDAMENTALS

Category A: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B2: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

MODULE 4 — ELECTRONIC FUNDAMENTALS

Category B1: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2: 40 multi-choice and 0 essay questions. Time allowed 50 minutes.

MODULE 5 — DIGITAL TECHNIQUES/ELECTRONIC INSTRUMENT SYSTEMS

Category A: 16 multi-choice and 0 essay questions. Time allowed 20 minutes.

Category B1: 40 multi-choice and 0 essay questions. Time allowed 50 minutes.

Category B2: 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

MODULE 6 — MATERIALS AND HARDWARE

Category A: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Category B1: 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

Category B2: 60 multi-choice and 0 essay questions. Time allowed 75 minutes.

MODULE 7 — MAINTENANCE PRACTICES

Category A: 72 multi-choice and 2 essay questions. Time allowed 90 minutes plus 40 minutes.

Category B1: 80 multi-choice and 2 essay questions. Time allowed 100 minutes plus 40 minutes.

Category B2: 60 multi-choice and 2 essay questions. Time allowed 75 minutes plus 40 minutes.

Superseded

MODULE 8 — BASIC AERODYNAMICS

Category A: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B2: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

MODULE 9 — HUMAN FACTORS

Category A: 20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

Category B1: 20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

Category B2: 20 multi-choice and 1 essay question. Time allowed 25 minutes plus 20 minutes.

MODULE 10 — AVIATION LEGISLATION

Category A: 32 multi-choice and 1 essay question. Time allowed 40 minutes plus 20 minutes.

Category B1: 40 multi-choice and 1 essay question. Time allowed 50 minutes plus 20 minutes.

Category B2: 40 multi-choice and 1 essay question. Time allowed 50 minutes plus 20 minutes.

MODULE 11A — TURBINE AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

Category A: 108 multi-choice and 0 essay questions. Time allowed 135 minutes.

Category B1: 140 multi-choice and 0 essay questions. Time allowed 175 minutes.

MODULE 11B — PISTON AEROPLANE AERODYNAMICS, STRUCTURES AND SYSTEMS

Category A: 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

Category B1: 100 multi-choice and 0 essay questions. Time allowed 125 minutes.

MODULE 12 — HELICOPTER AERODYNAMICS, STRUCTURES AND SYSTEMS:

Category A: 100 multi-choice and 0 essay questions. Time allowed 125 minutes.

Category B1: 128 multi-choice and 0 essay questions. Time allowed 160 minutes.

MODULE 13 — AIRCRAFT AERODYNAMICS, STRUCTURES AND SYSTEMS

Category B2: 180 multi-choice and 0 essay questions. Time allowed 225 minutes.

Questions and time allowed may be split into two examinations as appropriate.

MODULE 14 — PROPULSION

Category B2: 24 multi-choice and 0 essay questions. Time allowed 30 minutes.

MODULE 15 — GAS TURBINE ENGINE

Category A: 60 multi-choice and 0 essay questions. Time allowed 75 minutes.

Category B1: 92 multi-choice and 0 essay questions. Time allowed 115 minutes.

MODULE 16 — PISTON ENGINE

Category A: 52 multi-choice and 0 essay questions. Time allowed 65 minutes.

Superseded

Category B1: 72 multi-choice and 0 essay questions. Time allowed 90 minutes.

MODULE 17 — PROPELLER

Category A: 20 multi-choice and 0 essay questions. Time allowed 25 minutes.

Category B1: 32 multi-choice and 0 essay questions. Time allowed 40 minutes.

MODULE 50 — PRINCIPLES OF ARMAMENT

Category A: 12 multi-choice and 0 essay question. Time allowed 15 minutes.

Category B1: 12 multi-choice and 0 essay question. Time allowed 15 minutes.

Category B2: 12 multi-choice and 0 essay question. Time allowed 15 minutes.

MODULE 51 — WEAPONS SYSTEMS

Category A: 24 multi-choice and 0 essay question. Time allowed 30 minutes.

Category B1: 28 multi-choice and 0 essay question. Time allowed 35 minutes.

Category B2: 32 multi-choice and 0 essay question. Time allowed 40 minutes.

MODULE 52 — OPERATIONAL ATTACK SYSTEMS

Category B1: 48 multi-choice and 0 essay question. Time allowed 60 minutes.

Category B2: 80 multi-choice and 0 essay question. Time allowed 100 minutes.

MODULE 53 — SURVEILLANCE AND ELECTRONIC WARFARE

Category A: 12 multi-choice and 0 essay question. Time allowed 15 minutes.

Category B1: 32 multi-choice and 0 essay question. Time allowed 40 minutes.

Category B2: 48 multi-choice and 0 essay question. Time allowed 60 minutes.

MODULE 54 — CREW SAFETY

Category A: 16 multi-choice and 0 essay question. Time allowed 20 minutes.

Category B1: 20 multi-choice and 0 essay question. Time allowed 25 minutes.

Category B2: 16 multi-choice and 0 essay question. Time allowed 20 minutes.

MODULE 55 — MILITARY COMMUNICATION SYSTEMS

Category B2: 16 multi-choice and 0 essay question. Time allowed 20 minutes.

Appendix III to DASR 66 - Military Aircraft Type Training and Examination Standard, and On-the-Job Training (OJT)

☐ AMC ☐ AMC1 ☐ GM

1. **General** ☐ AMC

Military Aircraft Type Training shall consist of theoretical training and examination, and, except for the Category C ratings, practical training and assessment. Where Military Aircraft Type Training includes military-specific systems, the prerequisite is that the student shall have gained the relevant 50-series modules (or sub-modules) of DASR 66 Appendix I.

a. Theoretical training and examination shall comply with the following requirements:

i. Shall be conducted by an MTO appropriately approved in accordance with DASR 147 or an organisation recognised by the MAA in accordance with DASA Standing Instructions.

ii. Shall comply with the standard described in paragraph 3.1 and 4 of this Appendix III, except as permitted by the differences training described below.

iii. In the case of a Category C person qualified by holding an academic degree as specified in DASR 66.A.30(a)(5), the first relevant aircraft type theoretical training shall be at the Category B1 or B2 level or at a level recognised by the MAA.

iv. Shall have been started and completed within the 3 years preceding the application for a Military Aircraft Type Rating endorsement.

b. Practical training and assessment shall comply with the following requirements:

i. Shall be conducted by an MTO appropriately approved in accordance with DASR 147 or an organisation recognised by the MAA in accordance with DASA Standing Instructions.

ii. Shall comply with the standard described in paragraph 3.2 and 4 of this Appendix III, except as permitted by the differences training described below.

iii. Shall include a representative cross section of maintenance activities relevant to the aircraft type.

iv. Shall include demonstrations using equipment, components, simulators, other training devices or aircraft.

v. Shall have been started and completed within the 3 years preceding the application for a Military Aircraft Type Rating endorsement.

c. Differences training ☐ **AMC**

i. Differences training is the training required in order to cover the differences between two different Military Aircraft Type Ratings of the same manufacturer as determined by the MAA.

ii. Differences training has to be defined on a case-by-case basis taking into account the requirements contained in this Appendix III in respect of both theoretical and practical elements of Military Aircraft Type Rating training.

iii. A Military Aircraft Type Rating shall only be endorsed on a MAML after differences training when the applicant also complies with one of the following conditions:

– having already endorsed on the MAML the Military Aircraft Type Rating from which the differences are being identified, or

Superseded

– having completed the Military Aircraft Type Training requirements for the aircraft from which the differences are being identified.

2. **Military Aircraft Type Training levels**

The three levels listed below define the objectives, the depth of training and the level of knowledge that the training is intended to achieve.

Level 1: A brief overview of the airframe, systems and powerplant as outlined in the Systems Description Section of the Aircraft Maintenance Manual/Instructions for Continuing Airworthiness.

Course objectives: Upon completion of Level 1 training, the student will be able to:

a. provide a simple description of the whole subject, using common words and examples, using typical terms and identify safety precautions related to the airframe, its systems and powerplant;

b. identify aircraft manuals, maintenance practices important to the airframe, its systems and powerplant;

c. define the general layout of the aircraft's major systems;

d. define the general layout and characteristics of the powerplant;

e. identify special tooling and test equipment used with the aircraft.

Level 2: Basic system overview of controls, indicators, principal components, including their location and purpose, servicing and minor troubleshooting. General knowledge of the theoretical and practical aspects of the subject.

Course objectives: In addition to the information contained in the Level 1 training, at the completion of Level 2 training, the student will be able to:

a. understand the theoretical fundamentals; apply knowledge in a practical manner using detailed procedures;

b. recall the safety precautions to be observed when working on or near the aircraft, powerplant, systems and armaments;

c. describe systems and aircraft handling particularly access, power availability and sources;

d. identify the locations of the principal components;

e. explain the normal functioning of each major system, including terminology and nomenclature;

f. perform the procedures for servicing associated on aircraft systems;

g. demonstrate proficiency in interpretation of crew reports and on-board reporting systems (minor troubleshooting) and determine aircraft airworthiness per the MEL/ CDL or National equivalent;

h. demonstrate the use, interpretation and application of appropriate documentation including instructions for continuing airworthiness, maintenance manual, illustrated parts catalogue, etc.

Superseded

Level 3: Detailed description, operation, component location, removal/installation and BITE and troubleshooting procedures to maintenance manual level.

Course objectives: In addition to the information contained in Level 1 and Level 2 training, at the completion of Level 3 training, the student will be able to:

a. demonstrate a theoretical knowledge of aircraft systems and structures and interrelationships with other systems, provide a detailed description of the subject using theoretical fundamentals and specific examples and to interpret results from various sources and measurements and apply corrective action where appropriate;

b. perform system, powerplant, component and functional checks as specified in the aircraft maintenance manual;

c. demonstrate the use, interpretation and application of appropriate documentation including structural repair manual, troubleshooting manual, etc.;

d. correlate information for the purpose of making decisions in respect of fault diagnosis and rectification to maintenance manual level;

e. describe procedures for replacement of components specific to aircraft type.

3. **Military Aircraft Type Training standard**

Although Military Aircraft Type Training includes both theoretical and practical elements, courses can be approved for the theoretical element, the practical element or for a combination of both.

3.1 Theoretical element

a. Objective:
On completion of a theoretical training course the student shall be able to demonstrate, to the levels identified in the DASR 66 Appendix III syllabus, the detailed theoretical knowledge of the aircraft's applicable systems, structure, operations, maintenance, repair, and troubleshooting according to approved maintenance data. The student shall be able to demonstrate the use of manuals and approved procedures, including the knowledge of relevant inspections and limitations.

b. Level of training:
Training levels are those levels defined in point 2 above.

After the first type course for Category C certifying staff, all subsequent courses need only be to level 1.

During a level 3 theoretical training, Level 1 and 2 training material may be used to teach the full scope of the chapter if required. However, during the training the majority of the course material and training time shall be at Level 3.

c. Duration:
NOT APPLICABLE.

d. Justification of course duration: ☐ **AMC**

Training courses carried out in an MTO shall justify their hour duration and the coverage of the full syllabus by a training needs analysis based on:

Superseded

- the design of the aircraft type, its maintenance needs and the types of operation,

- detailed analysis of applicable chapters — see contents table in point 3.1(e) below,

- detailed competency analysis showing that the objectives as stated in point 3.1(a) above are fully met.

Course duration shall be approved by the MAA.

Similarly, tuition hours of differences courses or other training course combinations (such as combined B1/B2 courses), and in cases of theoretical Military Aircraft Type Training courses, these shall be justified by the training needs analysis as described above.

In addition, the course documentation must describe and justify the following:

- The minimum attendance required by the student, in order to meet the objectives of the course.

- The maximum number of hours of training per day, taking into account pedagogical and human factors principles.

If the minimum attendance required is not met, the certificate of recognition shall not be issued. Additional training may be provided by the MTO in order to meet the minimum attendance time.

e. Content:

As a minimum, the elements in the Syllabus (see table below) that are specific to the aircraft type shall be covered. Additional elements introduced due to type variations, technological changes, etc. shall also be included

f. Multimedia Based Training (MBT) methods may be used to satisfy the theoretical training element either in the classroom or in a virtual controlled environment subject to the acceptance of the MAA approving the training course.

3.2 Practical element AMC

a. Objective:

The objective of practical training is to gain the required competence in performing safe maintenance, inspections and routine work according to the maintenance manual and other relevant instructions and tasks as appropriate for the type of aircraft, for example troubleshooting, repairs, adjustments, replacements, rigging and functional checks. It includes the awareness of the use of all technical literature and documentation for the aircraft, the use of specialist/special tooling and test equipment for performing removal and replacement of components and modules unique to type, including any on-wing maintenance activity.

Content:

At least 50% of the crossed items in the table below, which are relevant to the particular aircraft type, shall be completed as part of the practical training.

Tasks crossed represent subjects that are important for practical training purposes to ensure that the operation, function, installation and safety significance of key maintenance tasks is adequately addressed; particularly where these cannot be fully explained by theoretical training alone. Although the list details the minimum practical training subjects, other items may be added where applicable to the particular aircraft type.

Tasks to be completed shall be representative of the aircraft and systems both in complexity and in the technical input required to complete that task. While relatively

Superseded

simple tasks may be included, other more complex tasks shall also be incorporated and undertaken as appropriate to the aircraft type.

Glossary of the table: LOC: Location; FOT: Functional/Operational Test; SGH: Service and Ground Handling; R/I: Removal/Installation; MEL: Minimum Equipment List; TS: TroubleShooting.

4. **Military Aircraft Type Training examination and assessment standard**

4.1 Theoretical element examination standard

After the theoretical portion of the Military Aircraft Type Training has been completed, a written examination shall be performed, which shall comply with the following:

a. Format of the examination is of the multi-choice type. Each multi-choice question shall have at least 3 alternative answers of which only one shall be the correct answer. The total time is based on the total number of questions and the time for answering is based upon a nominal average of 90 seconds per question.

b. The incorrect alternatives shall seem equally plausible to anyone ignorant of the subject. All the alternatives shall be clearly related to the question and of similar vocabulary, grammatical construction and length.

c. In numerical questions, the incorrect answers shall correspond to procedural errors such as the use of incorrect sense (+ versus -) or incorrect measurement units. They shall not be mere random numbers.

d. The level of examination for each chapter (*) shall be the one defined in point 2 "Military Aircraft Type Training levels". However, the use of a limited number of questions at a lower level is acceptable.

e. The examination shall be of the closed book type. No reference material is permitted. An exception will be made for the case of examining a B1 or B2 candidate’s ability to interpret technical documents.

f. The number of questions shall be at least 1 question per hour of instruction. The number of questions for each chapter and level shall be proportionate to:

i. the effective training hours spent teaching at that chapter and level,

ii. the learning objectives as given by the training needs analysis.

The MAA will assess the number and the level of the questions when approving the course.

g. The minimum examination pass mark is 75 %. When the Military Aircraft Type Training examination is split in several examinations, each examination shall be passed with at least a 75 % mark. In order to be possible to achieve exactly a 75 % pass mark, the number of questions in the examination shall be a multiple of 4.

h. Penalty marking (negative points for failed questions) is not to be used.

i. End of module phase examinations cannot be used as part of the final examination unless they contain the correct number and level of questions required.

(*) For the purpose of this point 4, a "chapter" means each one of the rows preceded by a number in the table contained in point 3.1(e).

Superseded

4.2 Practical element assessment standard ☐ **AMC**

After the practical element of the Military Aircraft Type Training has been completed, an assessment must be performed, which must comply with the following:

a. The assessment shall be performed by designated assessors appropriately qualified.

b. The assessment shall evaluate the knowledge and skills of the trainee.

5. **Type examination standard**

NOT APPLICABLE.

6. **On the Job Training** ☐ **AMC**

On the Job Training (OJT) shall be approved by the MAA who has issued the MAML.

It shall be conducted at and under the control of a maintenance organisation appropriately approved for the maintenance of the particular aircraft type and shall be assessed by designated assessors appropriately qualified.

It shall have been started and completed within the 3 years preceding the application for a Military Aircraft Type Rating endorsement.

a. Objective:

The objective of OJT is to gain the required competence and experience in performing safe maintenance.

b. Content:

OJT shall cover a cross section of tasks acceptable to the MAA. The OJT tasks to be completed shall be representative of the aircraft and systems both in complexity and in the technical input required to complete that task. While relatively simple tasks may be included, other more complex maintenance tasks shall also be incorporated and undertaken as appropriate to the aircraft type.

Each task shall be signed off by the student and countersigned by a designated supervisor. The tasks listed shall refer to an actual job card/work sheet, etc.

The final assessment of the completed OJT is mandatory and shall be performed by a designated assessor, appropriately qualified.

The following data shall be addressed on the OJT worksheets/logbook:

1. Name of Trainee;

2. Date of Birth;

3. Service Number or Employee Number

4. Approved Maintenance Organisation;

5. Location;

6. Name of supervisor(s) and assessor, (including MAML number if applicable);

7. Date of task completion;

Superseded

8. Description of task and job card/work order/tech log, etc.;

9. Aircraft type and aircraft registration;

10. Military Aircraft Type Rating applied for.

In order to facilitate the verification by the MAA, demonstration of the OJT shall consist of:

(i) detailed worksheets/logbook and

(ii) a compliance report demonstrating how the OJT meets the requirement of DASR 66.

Appendix IV to DASR 66 - Experience requirements for an addition to a DASR 66 Military Aircraft Maintenance Licence

The table below shows the experience requirements for adding a new category or subcategory to an existing DASR 66 MAML including military-specific modules.

The experience shall be practical maintenance experience on operating aircraft in the subcategory relevant to the application.

The experience requirement will be reduced by 50% if the applicant has completed an approved DASR 147 course relevant to the subcategory.

SECTION A

SUBPART A - GENERAL

147.A.05 - Scope

This section establishes the requirements to be met by an Organisation seeking approval as a Maintenance Training Organisation (MTO) to conduct training and examination as specified in DASR 66.

147.A.10 - General

An MTO shall be a legal entity, a part of a legal entity or part of a military organisation. ☐ **GM**

147.A.15 - Application

☐ **AMC**

(a) An application for an approval or for the amendment of an existing approval shall be made to the Defence Aviation Safety Authority (DASA) in an agreed form and manner.

(b) An application for or for the change to an approval shall include the following information:

1. The registered name and address of the applicant;
2. The address of the MTO requiring the approval or change to the approval;
3. The intended scope of approval or change to the scope of approval;
4. The name and signature of the Accountable Manager;
5. The date of application.

SUBPART B - ORGANISATIONAL REQUIREMENTS

147.A.100 - Facility requirements

(a) The size and structure of facilities shall ensure protection from the prevailing weather elements and proper operation of all planned training and examination.

(b) Fully enclosed appropriate accommodation shall be provided for the instruction of theory and the conduct of knowledge examinations. ☐ **AMC** ☐ **AMC1**

Superseded

1. The maximum number of students undergoing knowledge training during any training session shall not exceed a level conducive to an effective learning environment.

2. The size of accommodation for examination purposes shall be such that no student can read the paperwork or computer screen of any other student from their position during examinations.

(c) The paragraph (b) accommodation environment shall be maintained such that students are able to concentrate on their studies or examination as appropriate, without undue distraction or discomfort.

(d) In the case of a basic training course, basic training workshops and/or maintenance facilities separate from training classrooms shall be provided for practical instruction appropriate to the planned training course. If, however, the MTO is unable to provide such facilities, arrangements may be made with another organisation to provide such workshops and/or maintenance facilities, in which case a written agreement shall be made with such organisation specifying the conditions of access and use thereof. The DASA shall require access to any such organisation and the written agreement shall specify this access. ☐ **AMC**

(e) In the case of a Military Aircraft Type/Task Training course, access shall be provided to appropriate facilities containing examples of aircraft type as specified in DASR 147.A.115(d).

(f) The maximum number of students undergoing practical training during any training session shall not exceed 15 per supervisor or assessor. ☐ **AMC**

(g) Office accommodation shall be provided for instructors, knowledge examiners and practical assessors of a standard to ensure that they can prepare for their duties without undue distraction or discomfort.

(h) Secure storage facilities shall be provided for examination papers and training records. The storage environment shall be such that documents remain in good condition for the retention period as specified in DASR 147.A.125. The storage facilities and office accommodation may be combined, subject to adequate security. The requirements of this paragraph are equally applicable to other storage media, eg electronic etc.

(i) A library shall be provided containing all technical material appropriate to the scope and level of training undertaken. ☐ **AMC** ☐ **GM**

147.A.105 - Personnel requirements

(a) The MTO shall appoint an Accountable Manager who has corporate authority for ensuring that all training commitments can be carried out to the standard required by DASR 147. The Accountable Manager shall: ☐ **AMC**

1. Ensure that all necessary resources are available to accomplish training commitments in accordance with DASR 147.A.130(a) to support the organisation approval.

2. Establish and promote the quality policy specified in DASR 147.A.130(b).

3. Demonstrate a basic understanding of this DASR.

(b) A person or group of persons, whose responsibilities include ensuring that the MTO is in compliance with the requirements of this DASR, shall be nominated. Such person(s) shall be responsible to the Accountable Manager. The senior person or one person from the group of

Superseded

persons may also be the Accountable Manager subject to meeting the requirements for the Accountable Manager as defined in paragraph (a). ☐ AMC ☐ GM

(c) The MTO shall contract/appoint sufficient staff to plan/perform knowledge and practical training, conduct knowledge examinations and practical assessments in accordance with the approval. ☐ AMC

(d) By way of exception to paragraph (c), when another organisation is used to provide practical training and assessments, such other organisation's staff may be nominated to carry out practical training and assessments.

(e) Any person may carry out any combination of the roles of instructor, knowledge examiner and practical assessor, subject to compliance with paragraph (f).

(f) The experience and qualifications of instructors, knowledge examiners and practical assessors shall be established in accordance with criteria published by the DASA or in accordance with a procedure and to a standard agreed by the DASA. ☐ AMC ☐ AMC1 ☐ GM

(g) The instructors, knowledge examiners and practical assessors shall be specified in the MTO Exposition (MTOE) for the acceptance of such staff.

(h) Instructors and knowledge examiners shall undergo updating training at least every 24 months relevant to current technology, practical skills, human factors and the latest training techniques appropriate to the knowledge being trained or examined. ☐ AMC ☐ GM

147.A.110 - Records of instructors, examiners and assessors

☐ AMC ☐ GM

(a) The MTO shall maintain a record of all instructors, knowledge examiners and practical assessors for a minimum period of 5 years after termination of their employment or assignment within the MTO. These records shall reflect the experience and qualification, training history and any subsequent training undertaken. ☐ AMC ☐ GM

(b) Terms of reference shall be drawn up for all instructors, knowledge examiners and practical assessors. ☐ AMC

147.A.115 - Instructional equipment

(a) Each classroom shall have appropriate presentation equipment of a standard that ensures students can easily read presentation text/drawings/diagrams and figures from any position in the classroom. Presentation equipment may include representative synthetic training devices to assist students in their understanding of the particular subject matter where such devices are considered beneficial for such purposes. ☐ GM

(b) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have all tools and equipment necessary to perform the approved scope of training.

(c) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have an appropriate selection of aircraft, engines, aircraft parts, avionic equipment, armaments, escape systems and other relevant military-specific systems. ☐ AMC

Superseded

(d) The Military Aircraft Type Training organisation as specified in DASR 147.A.100(e) shall have access to the appropriate aircraft type. Synthetic training devices may be used when such synthetic training devices ensure adequate training standards. ☐ **AMC**

147.A.120 - Maintenance training material

(a) Maintenance training course material shall be provided to the student and cover as applicable: ☐ **AMC** ☐ **AMC1** ☐ **AMC2**

1. The basic knowledge syllabus specified in DASR 66 for the relevant Military Aircraft Maintenance Licence (MAML) category or subcategory; and

2. The type course content required by DASR 66 for the relevant aircraft type and MAML category or subcategory.

(b) Students shall have access to examples of maintenance documentation and technical information in the library as specified in DASR 147.A.100(i).

147.A.125 - Records of students

The MTO shall keep all student training, examination and assessment records for at least twenty years following completion of the particular student's course. ☐ **AMC** ☐ **GM**

147.A.130 - Training procedures and quality system

☐ **AMC**

(a) The MTO shall establish procedures acceptable to the DASA to ensure proper training standards and compliance with all relevant requirements in this DASR.

(b) The MTO shall establish a quality system including: ☐ **AMC** ☐ **GM**

1. An independent audit function to monitor training standards, the integrity of knowledge examinations and practical assessments, compliance with and adequacy of the procedures; and

2. A feedback system of audit findings to the person(s) and ultimately to the Accountable Manager referred to in DASR 147.A.105(a) to ensure, as necessary, preventive and corrective actions.

147.A.135 - Examinations

(a) The examination staff shall ensure the security of all questions. ☐ **AMC**

(b) Any student found during a knowledge examination to be cheating or in possession of material pertaining to the examination subject other than the examination papers and associated authorised documentation shall be disqualified from taking the examination. In such a case the student shall not take any examination for at least 12 months after the date of the incident unless the DASA approves otherwise. The DASA shall be informed of any such incident together with the details of any enquiry within one calendar month. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Any examiner found during a knowledge examination to be providing question answers to any student being examined shall be disqualified from acting as an examiner and the examination declared void. The DASA (DCA) shall be informed of any such occurrence within one calendar month. ☐ **AMC** ☐ **GM**

147.A.140 - Maintenance Training Organisation Exposition

☐ **AMC** ☐ **AMC1**

(a) The MTO shall provide an exposition for use by the MTO describing the organisation and its procedures and containing the following information:

1. A statement signed by the Accountable Manager confirming that the MTOE and any associated manuals define the MTO's compliance with this DASR and shall be complied with at all times. Where the Accountable Manager is not the Chief Executive Officer or the senior military commander of the organisation, the Chief Executive Officer or the senior military commander of the organisation shall countersign that statement.
2. The title(s) and name(s) of the person(s) nominated in accordance with DASR 147.A.105(b).
3. The duties and responsibilities of the person(s) specified in subparagraph (a)2, including matters on which they may deal directly with the DASA on behalf of the MTO.
4. A MTO chart showing associated lines of responsibility of the person(s) specified in subparagraph (a)2.
5. A list of the instructors, knowledge examiners and practical assessors.
6. A general description of the training and examination facilities located at each address specified in the MTO's approval certificate, and if appropriate any other location, as required by DASR 147.A.145(b).
7. A list and details of the maintenance training courses which form the extent of the approval. ☐ **GM**
8. The MTO's exposition amendment procedure.
9. The MTO's procedures, as required by DASR 147.A.130(a).
10. The MTO's control procedure, as required by DASR 147.A.145(c), when authorised to conduct training, examination and assessments in locations different from those specified in DASR 147.A.145(b).
11. A list of the locations pursuant to DASR 147.A.145(b).
12. A list of organisations, if appropriate, as specified in DASR 147.A.145(d).

(b) The MTO's exposition and any subsequent amendments shall be approved by the DASA.

(c) Notwithstanding paragraph (b) minor amendments to the exposition may be approved through an exposition procedure (also called indirect approval). ☐ **GM** ☐ **GM1**

Superseded

(d) Where an MTO has an extant EMAR / CASA/ EASA Part 147 approval, those parts of the organisation's EMAR / CASA/ EASA Part 147 exposition that are equally applicable to satisfy the DASR 147 requirements will generally be accepted by the DASA as equivalent in respect of the DASR 147 exposition. In this case it is permissible that only those regulations that are military specific need be addressed in the DASR 147 exposition; those regulations covered by read-across of the sections of the EMAR/ CASA/EASA exposition document shall be identified and the EMAR / CASA/ EASA document clause reference quoted.

147.A.145 - Privileges of the Maintenance Training Organisation

(a) The MTO may carry out the following as permitted by and in accordance with the MTOE:

1. Basic training courses to the DASR 66 syllabus, or part thereof. Show ☐ **AMC**
2. Aircraft type/task training courses in accordance with DASR 66, or part thereof.
3. The examinations on behalf of the DASA, including the examination of students who did not attend the basic or Military Aircraft Type Training course at the MTO. (The procedures for examinations are detailed in DASR 66 Appendix II or Appendix III).
4. the issue of certificates in accordance with Appendix III following successful completion of the approved basic or Military Aircraft Type Training courses and examinations specified in subparagraphs (a)(1), (a)(2) and (a)(3), as applicable. ☐ **AMC**

(b) Training, knowledge examinations and practical assessments may only be carried out at the locations identified in the approval certificate and/or at any location specified in the MTOE.

(c) By way of exception to paragraph (b), the MTO may only conduct training, knowledge examinations and practical assessments in locations different from the paragraph (b) locations in accordance with a control procedure specified in the MTOE. Such locations need not be listed in the MTOE.

(d)

1. The MTO may subcontract the conduct of basic theoretical training, Military Aircraft Type Training and related examinations to a non MTO only when under the control of the MTO quality system.
2. The subcontracting of basic theoretical training and examination is limited to DASR 66 Appendix I Modules 01 to 06, and 08 to 10. ☐ **AMC** ☐ **GM** ☐ **GM1**
3. The subcontracting of Military Aircraft Type Training and examination is limited to powerplant, avionic systems, armaments, escape systems and other relevant military-specific systems. ☐ **GM**

(e) An organisation shall not be approved to conduct examinations unless approved to conduct the corresponding training.

Superseded

147.A.150 - Changes to the Maintenance Training Organisation

(a) The MTO shall notify the DASA of any proposed changes to the organisation that affect the approval before any such change takes place, in order to enable the DASA to determine continued compliance with this DASR and to amend if necessary the MTO approval certificate.

(b) The DASA may prescribe the conditions under which the MTO may operate during such changes unless the DASA determines that the MTO approval must be suspended.

(c) Failure to inform the DASA of such changes may result in suspension or revocation of the MTO approval certificate backdated to the actual date of the changes.

147.A.155 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. The MTO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings as specified under DASR 147.A.160 ☐ **AMC**; and
2. The DASA being granted access to the MTO to determine continued compliance with this DASR; and ☐ **AMC**
3. The certificate not being surrendered or revoked.

(b) Upon surrender or revocation, the approval shall be returned to the DASA.

147.A.160 - Findings of non-compliance

Refer to GR.60 Oversight and enforcement.

SUBPART C - APPROVED BASIC TRAINING COURSE

☐ **AMC to Subpart C**

147.A.200 - The approved basic training course

(a) The approved basic training course shall consist of knowledge training, knowledge examination, practical training and a practical assessment.

(b) The knowledge training element shall cover all subjects of the relevant MAML category as specified in DASR 66. ☐ **AMC** ☐ **AMC1**

(c) The knowledge examination element shall cover a representative cross section of all subjects from the paragraph (b) training element.

(d) The practical training element shall cover the practical use of common tooling/equipment, the disassembly/assembly of a representative selection of aircraft parts and the participation in representative maintenance activities being carried out relevant to the particular DASR 66 complete module. ☐ **AMC**

Superseded

(e) The practical assessment element shall cover the practical training and determine whether the student is competent at using tools and equipment and working in accordance with maintenance manuals.

(f) The duration and minimum number of practical training hours to be completed on basic training courses shall be in accordance with Annex A to AMC 147.A.140. ☐ **AMC** ☐ **AMC1**

(g) The duration of conversion courses between (sub)categories shall be determined by the MTO through an assessment of the basic training syllabus and the related practical training needs.

147.A.205 - Basic knowledge examinations

Basic knowledge examinations shall: ☐ **AMC** ☐ **AMC1**

(a) Be in accordance with the standard defined in DASR 66.

(b) Be conducted without the use of training notes.

(c) Cover a representative cross section of subjects from the particular module of training completed in accordance with DASR 66.

147.A.210 - Basic practical assessment

(a) Basic practical assessments shall be carried out during the basic maintenance training course by the nominated practical assessors at the completion of each visit period to the practical workshops/maintenance facility.

(b) The student shall achieve an assessed pass with respect to DASR 147.A.200(e). ☐ **AMC**

SUBPART D - AIRCRAFT TYPE/TASK TRAINING

147.A.300 - Aircraft type/task training

An MTO shall be approved to carry out DASR 66 aircraft type and/or task training or part thereof, subject to compliance with the standard specified in DASR 66.A.45. ☐ **AMC**

147.A.305 - Aircraft type examinations and task assessments

An MTO approved in accordance with DASR 147.A.300 to conduct Military Aircraft Type Training or part thereof, shall conduct the related aircraft type examinations or aircraft task assessments specified in DASR 66 subject to compliance with the aircraft type and/or task standard specified in DASR 66.A.45.

Superseded

Annexes/Appendixes

Annex A to AMC 147.A.140 - Maintenance Training Organisation Exposition

MAINTENANCE TRAINING ORGANISATION EXPOSITION CONTENT

1. The following subject headings form the basis of the MTOE required by DASR 147.A.140.

2. For standardisation purposes and to facilitate the production of the MTOE by the DASR 147 Maintenance Training Organisation (MTO) DASA recommends adoption of the following format for the MTOE. It is not mandatory to assemble the MTOE in this manner as long as a cross-reference index is included in the MTOE as an Appendix and the Part 1 items remain in Part 1. The MTO should customise the document to suit their organisation and may add pages / paragraphs as necessary.

3. Part 2, 3 and 4 material may be produced as separate detailed manuals subject to the main MTOE containing the Part 2, 3 and 4 fundamental principles and policy on each item. It is then permitted to delegate the approval of these separate manuals to the senior person but this fact and the procedure for doing so should be specified in paragraph 1.10.

4. Where an MTO is approved in accordance with any other DASR which require an exposition, it is acceptable to combine the exposition requirements by merging the Part 1 items and adding the Parts 2, 3 and 4. When this method is used, it is essential to include the cross-reference index of Part 4 item 4.3.

0.2 – List of issues / amendments / record of revisions

Example:

Issue number	Revision number	Date	Reason for change
1	0	19/12/06	N/A

Superseded

2	0	01/01/12	Extension of the TB1.3 scope of approval
	1	01/01/14	New procedure for the records of students

0.3 – Distribution list

The document should include a distribution list to ensure proper distribution of the MTOE and to demonstrate to the DASA that all personnel involved in the maintenance training have access to the relevant information. This does not mean that all personnel have to be in receipt of a MTOE but that a reasonable number of copies are distributed within the organisation(s) so that all personnel may have quick and easy access to it. Reference should also be made to the location of any e-copies of the MTOE.

Accordingly, the MTOE should be distributed to:

- the Operating Organisation's management personnel (if the MTO is part of an operating Organisation),
- any relevant maintenance organisation, eg when MTO contract / task the practical type training,… or MTO,
- the MTO management personnel and any person at a lower level as necessary; and
- the DASA.

0.4 – DASR 147 requirements cross-reference list

The MTOE should contain a cross-reference list with an explanation as to where each DASR 147 Section A requirement is addressed in the MTOE.

0.5 – General information

This chapter should describe broadly how the whole organisation is organised under the management of the Accountable Manager.

PART 1 – MANAGEMENT

1.1 – Corporate commitment by the Accountable Manager

The Accountable Manager's MTOE statement should embrace the intent of the following paragraph and this statement may be used without amendment. Any modification to the statement should not alter the intent.

This MTOE defines the organisation and procedures upon which the DASR 147 MTO approval is based.

It is accepted that these procedures do not override the necessity of complying with any new or amended regulation published by the DASA from time to time where these new or amended regulations are in conflict with these procedures.

It is understood that the DASA will approve this MTO whilst the DASA is satisfied that the procedures and work standards are being followed. It is understood that the DASA reserves the right to suspend,

Superseded

vary or revoke the DASR 147 MTO approval, as applicable, if the DASA has evidence that the procedures are not followed and the standards not upheld.

These procedures are approved by the undersigned and must be complied with, as applicable, whenever knowledge or practical training is being progressed under the terms of the DASR 147 approval.

The undersigned fully accepts the duties and responsibilities of Accountable Manager as defined in paragraph 1.3.1 of this MTOE.

Signed .....

Dated .....

Accountable Manger and .....(quote position).....

For and behalf of .....(quote MTO name).....

1.2 – Management personnel

Accountable Manager .....

Training Manager .....

Quality Manager .....

Examination Manager .....

Other (as required) .....

The Managers specified above are identified and their credentials apart from the Accountable Manager have been submitted on DASR Form 4 to the DASA.

Any changes to the above personnel shall be advised to the DASA. Failure to do so may affect the status of the DASR 147 approval.

1.3 - Duties and responsibilities of management personnel, instructors, knowledge examiners and practical assessors

1.3.1 - Accountable Manager

The Accountable Manager is responsible for:

Ensuring that all instruction and examinations carried out by the MTO meet the standards required by the DASA.

Ensuring that the necessary finance, human resources and facilities are available to enable the MTO to perform the knowledge and / or practical instruction and examinations to which it is committed under the requirements of DASR 147.

Chairing the annual meeting of senior staff to review the overall performance of the MTO.

Superseded

Ensuring that during periods of absence, control will be maintained for administration purposes by (Insert name / position in MTO), who will accept full responsibility for all training issues and related decisions.

The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.

NOTES: (not for inclusion in the MTOE)

Any additional duties and responsibilities within the MTO may be added or delegated provided they do not conflict with those above, which constitute the Accountable Manager's responsibilities under DASR 147.

The MTO should decide who will be responsible for liaison with the DASA and show this in their terms of reference. If more than one person is nominated it must be clearly shown what each person is responsible for with, as a general rule, no overlapping of responsibility

1.3.2 - Training Manager

The Training Manager will undertake:

- The responsibilities of the nominated person at (insert name of DASR 147 MTO).
- The duties and responsibilities of the DASR 147 approved examiner during the absence of any nominated approved examiner(s).

The Training Manager will ensure that:

- The Accountable Manager is kept informed as to the state of compliance of the MTO with DASR 147.
- The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.
- Sufficient staff with appropriate qualifications are selected, trained and developed, to plan, perform, supervise, examine and assess students as required.
- All necessary Airworthiness data published by the DASA and Aircraft manufacturers as appropriate, is made available.
- All changes to the MTOE and associated manuals are notified immediately to the DASA.
- The MTOE and associated manuals are amended as required.
- Knowledge examiners, instructors and practical assessors are fully trained and assessed regularly for competence and that all records pertaining to these personnel are kept up to date.
- Contracted / tasked staff including any part time staff conform to the requirements of DASR 147 and the training procedures.
- Office accommodation and facilities are available appropriate to the management of the planned training and for the use of training staff.
- Staff development and update training is undertaken and recorded.

Superseded

- That all approved courses and examinations are delivered to the standard and content at the required level of knowledge, as specified in DASR 147.
- A working environment is provided appropriate to the tasks being undertaken.
- There are sufficient storage facilities, tools, equipment, materials and publications available to perform the planned practical tasks.
- Secure facilities are available for the storage of examination papers prior to the examination and for the storage of completed students answer papers.
- The interviewing of students prior to, during and on completion of the course is effective and without bias.
- Student and staff records are produced and stored in secure conditions.
- Any person to whom any of these responsibilities may be delegated is aware of current regulations.
- Corrective action is carried out for the findings of quality audits.
- The follow up and rectification of findings required to re-establish the required standards of training, examination or maintenance standards.
- That sufficient questions are available to produce the examination papers required to cover the syllabus in accordance with DASR 66 Appendix II and III. If questions are utilised for progress tests they should not be used in the final examination.
- The security and validity of all examinations are in accordance with the requirements of DASR 66 and DASR 147.
- All examinations and assessment timetables are coordinated.
- Compliance with the examination question review procedures is as required by DASR 66 and / or DASR 147.

NOTES:

This paragraph should emphasise that the nominated post holder for training is responsible to ensure that all training is carried out to an approved standard and describes the extent of their authority as regards their DASR 147 responsibility.

These duties may be adjusted to suit the requirements of the DASR 147 Approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66

1.3.3 - Quality Manager

The Quality Manager has direct access to the Accountable Manager in the event of any reported discrepancy not being adequately attended to by the relevant person, or in respect of any disagreement over the nature of the discrepancy.

The Quality Manager is responsible for:

- Establishing an independent quality system to monitor compliance with DASR 147 requirements.
- Assessing non-approved contracted/tasked MTOs working under the MTO quality system.

Superseded

- Implementing a quality audit programme in which compliance with all training procedures is reviewed at regular intervals, and any observed non-compliances or poor standards are brought to the attention of the person concerned via their Manager.
- Proposing all corrective action necessary for eliminating non-compliance and ensuring that these corrective actions are initiated and when completed are efficient and meet their intended purpose.
- Requiring remedial action, as necessary, by the Training Manager or the Accountable Manager.
- The MTOE and associated manuals are amended as required.

NOTES:

These duties may be adjusted to suit the requirements of the DASR 147 approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66.

It must be remembered that the quality audit system is required to be independent and where possible the Quality Manager and quality audit personnel should not be directly involved in the training process. Where for reasons of expediency it is necessary to utilise training staff, it would then become necessary for a second member of staff to be nominated to audit those functions performed by the Quality Manager.

Alternatively / additionally an external auditor acceptable to the DASA may be contracted / tasked in order to ensure the required independence.

1.3.4 - Examiner

The examiner is a nominated person who will determine the level of theoretical knowledge of the trainees on a particular module, element, or part thereof. The function may include the drafting and/ or the selection of questions (MCQs and Essays), the performance of the examination exercise itself for essay questions, the evaluation of the correctness of answers (except when correct answers are pre-determined) and the final judgment regarding the level of knowledge demonstrated by the trainee.

NOTE: Persons solely supervising an exam session consisting of pre-selected MCQ questions are not considered as examiners but are considered as support staffs (invigilators) and are therefore not subject to the knowledge and experience requirements but need to be trained to the examination procedure described in the MTOE.

The invigilation of examinations shall ensure that the conditions for examination comply with DASR 66 Appendix II (for basic training) or Appendix III, paragraph 3 (for type training)

1.3.5 - Instructor

The instructor is a nominated person who will carry out instructional duties for which they are qualified (type / basic training).

Additionally, the instructor can:

- Draft questions for examination banks for courses they are authorised;

Superseded

- Undertake duties of invigilator where they are not involved in the instruction of that particular phase examination.

NOTE: The instructor is not necessarily the person involved into the drafting of the course material (content, duration etc…), however they must be involved at some point into the organisation of the lessons themselves (creation of the instructor notes, slides, sequencing etc…).

1.3.6 - Practical assessor

The practical assessor is a nominated person who will determine the level of practical knowledge/ practical skills of the trainees on a particular module, element, or part thereof. The function may include the drafting and / or the selection of practical tasks and shall include the performance of the practical assessment itself, and the evaluation of the practical abilities on the tasks covered by the assessment.

1.4 - Management personnel organisation chart

A flow chart should provide a comprehensive understanding of the whole MTO. It should give further details on the management system and should clearly show the independence of the quality monitoring system, including the links between the Quality Assurance department and the other departments. This flow chart may be combined or subdivided as necessary, depending on the size and the complexity of the MTO.

NOTE: The MTOE must also define who deputises for any senior person in case of lengthy absenceList of Instructional and Examination staff

1.5 - List of Instructional and Examination staff

This paragraph should give broad figures to show that the number of people dedicated to the performance of the approved training activity is adequate. It is not necessary to give the detailed number of employees of the whole MTO but only the number of those involved in training.

This could be presented as follows:

APPOINTMENT:	**NAME:**	**COMPETENCIES:**
Training Manager Deputy Training Manager Quality Manager Examiner Examiner / Instructor Instructor Instructor Instructor Instructor / Invigilator		enter here those areas each person is qualified to instruct using DASR 66 module / sub-modules OR type of aircraft and the specific areas they are qualified to instruct, ie Airframe, Engine,

Superseded

Invigilator Practical Assessor		Electrical Instrument, Auto flight, Radio or Radar.

NOTES:

According to the size and complexity of the MTO, this table may be further developed.

The DASR 147 examiners are the only persons allowed to produce / select examination papers. They may nominate other persons to mark completed examinations. The examiners and these persons should be other than the knowledge instructors involved in the instruction of that particular module/ sub-module.

1.6 - List of approved addresses

This paragraph should list those address(es) at which instruction and/or practical training are to be carried out for the duration of the DASR 147 course.

The names, address(es) and approval numbers of any proposed DASR 145 AMO at which it is proposed to carry out student practical training in order to fulfil the requirements of DASR 147 may be kept in another document or procedure and cross referenced here.

1.7 - List of contracted / tasked organisations as per DASR 147.A.145(d)

This paragraph should list those address(s) at which training beyond the capacity of the DASR 147 MTO may be carried out. DASR 66 Modules 1 to 6 inclusive and 8 to 10 inclusive may be contracted/ tasked to organisations not specialised in aircraft maintenance and where the DASR 147.A.200 practical training element does not apply.

1.8 - General description of facilities at paragraph 1.6 addresses

Include here the facilities such as desks, chairs, lockers, overhead projectors, other teaching aids, etc for each of the offices, classrooms, practical training workshops and examination rooms provided.

1.9 - Specific list of courses and aircraft type examinations approved by the DASA

This paragraph must contain a list of the DASR 147 course(s) for which approval is held. This should also include 'Differences' courses.

For example: Airbus A319/320/321 (CFM 56) B1 - differences to A319/320/321 (V2500) B1.

1.10 - Notification procedures regarding changes to the MTO

Include here any cross references to the intended procedures for continued validity of the approval in compliance with the requirements of DASR 147.A.155.

The MTOs 'nominated person' is responsible for informing the DASA of any proposed changes. (Refer Part 1 - Management, paragraph 1.3.2 of the MTOE as an example)

1.11 - MTOE and associated manuals amendment procedure

Detail here or cross refer to the procedures to be followed for the amendment of the MTOE and any associated procedures and or documents.

PART 2 - TRAINING AND EXAMINATION PROCEDURES

Superseded

2.1 - Organisation of courses

In this paragraph, the MTO should detail the procedures in place in order to organise the courses and to ensure that all necessary means are available to deliver in good conditions and by appropriately qualified staff all the course elements as required by the DASR 66 syllabus. Such procedures may include a formalised review of the availability of required appropriate training rooms, materials, STDs, specialists… and resulting in training programme.

2.2 - Preparation of course material

Training material should meet the requirements of DASR 66. It should also state how the approved MTO produces a course for a new aircraft type (new approval scope). This would typically include the production of the Training Needs Analysis and eventually a training programme for the new aircraft that has to list what is being taught, to what level and for how long. Once completed, this should be sent to the DASA for review and approval of the course. This list must be given a unique reference number and revision status. In order to get the course approved a set of multi-choice questions and a copy of the course notes used by the student must also be submitted.

The course notes must reflect the training programme and be given the same reference number and revision status. This may cross refer to a separate procedure in which details of how the standard course lecture notes are produced which would include content, indexing, chapter and page numbering, font, etc, in the 'House Style'.

This same procedure should also be utilised to list the responsibilities by DASR 66 module / submodule for the production, review and amendment of lecture notes.

Include cross references to any procedures used for the inclusion of other course material, eg Aircraft Manuals, and/or Standard Text Books used for note preparation and available to students as reference material

2.3 - Preparation of classrooms and equipment

Cross reference to any procedures for the preparation of classrooms and reporting of faults to any classroom equipment, general maintenance procedures and the control of the teaching environment.

2.4 - Preparation of workshop / maintenance facilities and equipment

Cross reference to any procedures for the reporting of faults to any workshop equipment, general maintenance procedures and the control of the teaching environment.

Cross reference to procedures for the ordering and storage of aircraft materials used in the production of practical tasks, and for the ordering and acquisition of any new equipment required to complete the tasks.

Cross reference to the procedures for ensuring that all test equipment and/or tooling requiring calibration are correctly forecast and expedited.

2.5 - Conduct of theoretical training and practical training (during basic knowledge training and type / task training)

Describe the method utilised in teaching the Basic / Type knowledge and practical training courses for which the MTO is approved.

Cross refer to the low level document referred to in paragraph 2.1 above.

Superseded

2.6 - Records of training carried out

Cross refer to procedures for the production, maintenance and security of student files.

These should include details of all student attendance's, final knowledge examinations, practical assessments and any re-examination carried out and their results by DASR 66 complete module/sub-module for basic training courses and for type training, information of those courses completed, their content and at which levels they were instructed and examined.

There should also be reference to the basic work experience' records required to be kept by the student whilst they are undergoing their live operating aircraft experience.

The use of an "Aircraft Maintenance Engineers Log Book" is a good example.

2.7 - Storage of training Records

Cross refer to procedures for the storage of staff and student's records.

As a minimum, the procedures shall describe which are the documents that are recorded, the means that are used for recording and how long the records will be kept. These may be electronically based provided that adequate safeguards are in place to prevent unauthorised access and alteration.

2.8 - Training at locations not listed in paragraph 1.6

Should the Management wish to contract/task part of the practical training, control procedures must be in place. These procedures should effectively reflect those of the DASA in auditing the DASR 147 MTO.

Any training carried out at address not listed at 1.6 above must be approved by the DASA and control procedures must be in place to ensure that the proposed contracted/tasked organisation is in compliance with the requirements of DASR 66 and DASR 147.

A contract must be in place with the proposed organisation in which it is agreed that access is granted to the DASA for the purpose of audit.

NOTE:

The "APPLICATION TO CONDUCT TRAINING / EXAMINATIONS* AT A LOCATION REMOTE FROM THE DASR 147 APPROVED SITE" Form should be annexed to the MTOE.

2.9 - Organisation of examinations

For Military Aircraft Maintenance Licence (MAML) course a high-level document detailing the course examinations, when each DASR 66 module / sub-module is to be examined and to what DASR 66 level. This should include the knowledge, practical training elements and how the number of hours of each comply with the percentage requirements of DASR AMC 147A.200.

For aircraft type training, the course syllabus should be used to prepare an examination schedule. The examination schedule should detail the examinations to be set at the end of each major phase within the syllabus. A final examination should be conducted at the end of the type training course. The final examination should be recorded. Refer to DASR 66 Appendix III, paragraphs 4.1.

2.10 - Security and preparation of examination material

For MAML courses detail the preparation and security of Examination papers. Number of Questions and Timing must be in accordance with DASR 66 Appendix II.

Cross reference to procedures for the production of examination questions, their validation and security of the data bank.

For type training it is sufficient to detail the preparation and security procedures in place for the production and storage of examination papers.

2.11 - Preparation of examination rooms

Cross refer to procedure to be followed by the examiner and Invigilator in preparing the examination room for examinations.

An invigilator's ready reference sheet for briefing the candidates prior to the examination should be available in procedures and cross referenced here.

2.12 - Conduct of examinations (basic knowledge examinations, aircraft type / task training examinations)

A procedure should be in place to define how the MTO manage the conduction of examinations in respect of the DASR 147.A.135. The procedure should define responsibilities for the conduct and monitoring of the examination, and the instruction for the performance of the examination such as:

- information about the examination type (number of questions, type of questions, topics, maximum duration, ...)
- information about the conduct of the examination (format of the responses, distribution and collating of copies, login if electronic systems,...)
- information about rules to be respected (communication, utilisation of documents / means / personal objects,...) and measures to be taken in case of someone found cheating.

The minimum conditions to be authorised to monitor an examination should also be described.

It is recommended that examination papers of candidates should be identified through an anonymous system, eg numbering system,…), to be described in the MTOE.

A procedure should be in place for checking that all the pages of each examination paper are complete at examination completion and that all examination papers are accounted for.

Both the written element and the multi-choice question elements should be marked to 75% with no penalty marking. Refer DASR 66 Appendix II.

Nothing other than the actual examination / answer paper is permitted to be on the candidate's desk.

All wall charts and/or other visual teaching aids should be removed from the examination room.

2.13 - Conduct of practical assessments (during basic knowledge training and aircraft type / task training)

Superseded

Cross refer to procedures used for assessment of student hand skills, and the standard tasks set throughout the course. A set number of mandatory tasks should be assessed to have been completed to a satisfactory standard.

2.14 - Marking and record of examinations

A procedure should define how and by whom an examination is corrected, how and by whom is the examination result validated, how the examination result is transmitted to the student and under which format the examination is recorded.

Cross refer to procedures for the marking of completed examination papers and the recording of results.

Cross refer to a procedure for practical assessments and recording of results.

2.15 - Storage of examination records

A procedure should define as a minimum which are the documents that are recorded, the means / systems / storage locations that are used to ensure a retention period of 20 years.

Electronic means of storage may be utilised as required, provided the appropriate computer security systems are in place.

2.16 - Examinations at locations not listed in paragraph 1.6

Cross refer to the control procedure in common with part 2.8 above. This location must comply with the requirements of 2.10, 2.11, 2.12, 2.13, 2.14 and 2.15 above.

Consideration is needed for the security / control of examinations and their completed examination papers and/or practical assessment results.

2.17 - Preparation, control and issue of Basic / Type training course certificates

The procedure for issuing training certificates should define the responsibility for verifying the data, the procedures for issuing and archiving the certificates and the authorised signatories.

The certificates should be prepared to reflect that illustrated in DASR 147 Appendix III and tightly controlled prior to issue, with a system in place to ensure that each copy is numbered as part of a sequence and recorded as issued to a candidate by name.

2.18 - Control of contracted / tasked organisations

When contracted / tasked organisations are defined in paragraph 1.7, it is necessary to define how and how often these contracted / tasked organisations are controlled in terms of training and examination / evaluation and means in place.

Cross refer to procedures for the control of contracted / tasked organisations as appropriate.

PART 3 - TRAINING SYSTEM QUALITY PROCEDURES

3.1 - Audit of training

The approved MTO should develop a form / audit checklist to be used by the auditor that would demonstrate that all the requirements of DASR 147 have been reviewed during the audit process. The audit plan should indicate applicability of the various activities to be monitored and more than one

Superseded

list may be necessary (rolling audit). Each list should be shown against a timetable to indicate when the particular item is scheduled for audit and when the audit was completed. A complete audit of the DASR 147 MTO must be completed every 12 months.

For courses and depending on the approval scope (Basic and / or Type) at least one basic and/or type, theoretical and practical course should be audited each year.

Cross refer to the various procedures required for quality auditing, reporting findings and levels with any corrective actions required.

A management control and follow up system must also be in place and may not be contracted out.

Cross reference to any quality procedures manual if available is permitted, but this system must relate to and make reference to the relevant DASR 147 requirements.

3.2 - Audit of examinations

Must be audited annually but may be part of the rolling audit procedure.

3.3 - Analysis of examination results

Examination results should be analysed on completion of each examination and any questions amended as necessary. Cross refer to procedures detailing responsibilities.

3.4 - Audit and analysis remedial action

Cross refer to procedures for the reporting of findings and for corrective actions.

3.5 - Accountable Manager annual review

At least once a year a review of the activities must be made by the Accountable Manager. Points discussed on a set date should include:

- Projects requiring financial support.
- Sufficient staff employed to meet foreseen training program.
- DASR 147 MTO review.
- Examinations and assessments.
- Student achievements.
- Student support.
- Quality Assurance review.
- Continuous improvement opportunities.

3.6 - Qualifying the instructors

List of acceptable staff qualifications:

- Include procedures for the induction of inexperienced instructors as required.
- Where relevant include procedures for the employment of part time or contract instructors. All staff should have an appreciation of the contents of DASR 66 and DASR 147.

Superseded

- Cross refer to the list of present staff / qualification.

NOTE: staff employed prior to DASR 147 application who's qualifications were previously acceptable, will continue to be accepted.

- Cross refer to procedures for staff development.

3.7 - Qualifying the examiners and the practical assessors

Examiners should have a full understanding of all the requirements of DASR 66 and DASR 147. Cross refer to procedures for staff development.

Cross refer to the list of staff / qualifications.

Practical work assessors should be assessed as being competent in accordance with an approved process.

3.8 - Records of qualified instructors, examiners and practical assessors

The MTO must maintain a record of all training staff which must include details of the scope of their authorisation.

Training staff must be provided with evidence of the scope of their authorisation.

The following minimum information should be kept on record in respect of each instructor, examiner and practical assessor:

- Name
- Date of Birth
- Personnel Number
- Experience
- Qualifications relevant to the approval scope
- Training History (before entry)
- Training (basic training, type training, continuation training)
- Scope of activity
- Date of first issue of the authorisation
- If appropriate – expiry date of the authorisation
- Starting date of employment

The records may be kept in any format (hard copy or computer based) subject to the appropriate security requirements.

Persons authorised to access the system should be maintained at a minimum to ensure that records cannot be altered in an unauthorised manner or that such confidential records become accessible to unauthorised persons.

The training staff should be given reasonable access on request to their own records.

Superseded

The authorisation document should be in a style that makes its scope clear to training staff and any authorised person that may be required to review the document. Where codes are used to define scope, an interpretation document should be readily available.

Training staff are not required to carry the authorisation document at all times but should produce it within a reasonable time of a request from an authorised person. Authorised persons, apart from the MTO's quality department must include DASA.

Any member of the DASA is classed as an authorised person when investigating the records system for initial and continued approval or when the DASA has cause to doubt the competence of a particular training staff

PART 4 - APPENDICES

4.1 - Examples of documents and forms used

This section should include examples of all documents and forms used by the MTO in the conduct of its DASR 147 function.

Some examples are listed below:

- Student attendance record
- Course certificate(s)
- Certificate(s) of training
- Classroom plan (exam purposes)
- Course critique
- Course results
- Course design / change plan
- Exam answer sheet
- Exam results
- Internal audit procedure
- Internal audit schedule
- Internal audit report
- Application to conduct courses / examinations at a remote location
- Interview report form
- MTOE amendment request
- MTOE amendment request log
- Staff training record (to include qualifications, history and subjects taught)
- Staff terms of reference
- Student training / examination and assessment form

Superseded

- Training course review
- Quality system
- Aircraft visit form

4.2 - Syllabus and Training Needs Analysis (TNA) of each training course

This section should contain the syllabus for each DASA approved course and should also contain the associated Training Needs and Analysis.

4.3 - Cross-reference Index

If applicable - self-explanatory

Appendix I - Basic Training Course Duration and Minimum Practical Training Hours

1. The duration and minimum number of practical training hours to be completed on a basic training course shall be as follows:

Basic Course (See Note 3)	Duration (Theory) (See Note 1)	Duration (Practical) (See Note 1)	Minimum Practical Training Hours for maximum reduction in experience requirements (See Note 2)
A1	-	-	520
A2	-	-	420
A3	-	-	520
A4	-	-	520
B1.1	-	-	960

Superseded

B1.2	-	-	800
B1.3	-	-	960
B1.4	-	-	960
B2	-	-	960
A (Module 50-55 Extensions)	-	-	(See Note 1)
B1 (Module 50-55 Extensions)	-	-	(See Note 1)
B2 (Module 50-55 Extensions)	-	-	(See Note 1)

Superseded

NOTES:

1. To be specified by the DASA (if req'd).
2. These are the minimum practical training hours required for an individual to be able to claim reductions in the experience requirements as detailed in DASR 66.A.30(a)1(iii) and DASR 66.A.30(a)2(iii).
3. The duration of initial training (theory and practical) is determined during the training development process and it relates to trade training, not training for licences.

Appendix II - Reserved

Appendix III - Examples of Training Certificates

1. Basic Training/Examination ☐ AMC

The information contained within the example of a basic training certificate detailed below is to be used for recognition of completion of either the basic training, the basic examination or both the basic training and basic training examinations.

A training certificate shall clearly identify each individual module or sub-module examination by date passed together with the corresponding version of Appendix I to DASR 66.

DASR Form 148 - DASR 147 Approved Basic Training Course/ Examination Certificate

2. Military Aircraft Type Training

The information contained within the example of a Military Aircraft Type Training certificate as detailed below is to be used for recognition of completion of either the theoretical elements, the practical elements or both the theoretical and practical elements of the Military Aircraft Type Rating training course.

The appropriate references should be deleted as applicable and the course type box shall detail whether only the theoretical elements or the practical elements were covered or whether theoretical and practical elements were covered.

The training certificate shall clearly identify if the course is a complete course or a partial course (such as an airframe or powerplant or avionic/electrical or military specific systems only) or a difference

course based upon the applicant's previous experience, eg A400M course for C295M technicians. If the course is not a complete one, the certificate shall identify whether the interface areas have been covered or not.

[INSERT MTO BRANDING]

Superseded

SUBPART A - GENERAL

SECTION A

SUBPART A - GENERAL

147.A.05 - Scope

This section establishes the requirements to be met by an Organisation seeking approval as a Maintenance Training Organisation (MTO) to conduct training and examination as specified in DASR 66.

147.A.10 - General

An MTO shall be a legal entity, a part of a legal entity or part of a military organisation. **GM**

147.A.15 - Application

AMC

(a) An application for an approval or for the amendment of an existing approval shall be made to the Defence Aviation Safety Authority (DASA) in an agreed form and manner.

(b) An application for or for the change to an approval shall include the following information:

1. The registered name and address of the applicant;
2. The address of the MTO requiring the approval or change to the approval;
3. The intended scope of approval or change to the scope of approval;
4. The name and signature of the Accountable Manager;
5. The date of application.

SUBPART B - ORGANISATIONAL REQUIREMENTS

147.A.100 - Facility requirements

(a) The size and structure of facilities shall ensure protection from the prevailing weather elements and proper operation of all planned training and examination.

(b) Fully enclosed appropriate accommodation shall be provided for the instruction of theory and the conduct of knowledge examinations. **AMC** **AMC1**

1. The maximum number of students undergoing knowledge training during any training session shall not exceed a level conducive to an effective learning environment.

Superseded

2. The size of accommodation for examination purposes shall be such that no student can read the paperwork or computer screen of any other student from their position during examinations.

(c) The paragraph (b) accommodation environment shall be maintained such that students are able to concentrate on their studies or examination as appropriate, without undue distraction or discomfort.

(d) In the case of a basic training course, basic training workshops and/or maintenance facilities separate from training classrooms shall be provided for practical instruction appropriate to the planned training course. If, however, the MTO is unable to provide such facilities, arrangements may be made with another organisation to provide such workshops and/or maintenance facilities, in which case a written agreement shall be made with such organisation specifying the conditions of access and use thereof. The DASA shall require access to any such organisation and the written agreement shall specify this access. ☐ **AMC**

(e) In the case of a Military Aircraft Type/Task Training course, access shall be provided to appropriate facilities containing examples of aircraft type as specified in DASR 147.A.115(d).

(f) The maximum number of students undergoing practical training during any training session shall not exceed 15 per supervisor or assessor. ☐ **AMC**

(g) Office accommodation shall be provided for instructors, knowledge examiners and practical assessors of a standard to ensure that they can prepare for their duties without undue distraction or discomfort.

(h) Secure storage facilities shall be provided for examination papers and training records. The storage environment shall be such that documents remain in good condition for the retention period as specified in DASR 147.A.125. The storage facilities and office accommodation may be combined, subject to adequate security. The requirements of this paragraph are equally applicable to other storage media, eg electronic etc.

(i) A library shall be provided containing all technical material appropriate to the scope and level of training undertaken. ☐ **AMC** ☐ **GM**

147.A.105 - Personnel requirements

(a) The MTO shall appoint an Accountable Manager who has corporate authority for ensuring that all training commitments can be carried out to the standard required by DASR 147. The Accountable Manager shall: ☐ **AMC**

1. Ensure that all necessary resources are available to accomplish training commitments in accordance with DASR 147.A.130(a) to support the organisation approval.

2. Establish and promote the quality policy specified in DASR 147.A.130(b).

3. Demonstrate a basic understanding of this DASR.

(b) A person or group of persons, whose responsibilities include ensuring that the MTO is in compliance with the requirements of this DASR, shall be nominated. Such person(s) shall be responsible to the Accountable Manager. The senior person or one person from the group of persons may also be the Accountable Manager subject to meeting the requirements for the Accountable Manager as defined in paragraph (a). ☐ **AMC** ☐ **GM**

Superseded

(c) The MTO shall contract/appoint sufficient staff to plan/perform knowledge and practical training, conduct knowledge examinations and practical assessments in accordance with the approval. ☐ **AMC**

(d) By way of exception to paragraph (c), when another organisation is used to provide practical training and assessments, such other organisation's staff may be nominated to carry out practical training and assessments.

(e) Any person may carry out any combination of the roles of instructor, knowledge examiner and practical assessor, subject to compliance with paragraph (f).

(f) The experience and qualifications of instructors, knowledge examiners and practical assessors shall be established in accordance with criteria published by the DASA or in accordance with a procedure and to a standard agreed by the DASA. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(g) The instructors, knowledge examiners and practical assessors shall be specified in the MTO Exposition (MTOE) for the acceptance of such staff.

(h) Instructors and knowledge examiners shall undergo updating training at least every 24 months relevant to current technology, practical skills, human factors and the latest training techniques appropriate to the knowledge being trained or examined. ☐ **AMC** ☐ **GM**

147.A.110 - Records of instructors, examiners and assessors

☐ **AMC** ☐ **GM**

(a) The MTO shall maintain a record of all instructors, knowledge examiners and practical assessors for a minimum period of 5 years after termination of their employment or assignment within the MTO. These records shall reflect the experience and qualification, training history and any subsequent training undertaken. ☐ **AMC** ☐ **GM**

(b) Terms of reference shall be drawn up for all instructors, knowledge examiners and practical assessors. ☐ **AMC**

147.A.115 - Instructional equipment

(a) Each classroom shall have appropriate presentation equipment of a standard that ensures students can easily read presentation text/drawings/diagrams and figures from any position in the classroom. Presentation equipment may include representative synthetic training devices to assist students in their understanding of the particular subject matter where such devices are considered beneficial for such purposes. ☐ **GM**

(b) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have all tools and equipment necessary to perform the approved scope of training.

(c) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have an appropriate selection of aircraft, engines, aircraft parts, avionic equipment, armaments, escape systems and other relevant military-specific systems. ☐ **AMC**

(d) The Military Aircraft Type Training organisation as specified in DASR 147.A.100(e) shall have access to the appropriate aircraft type. Synthetic training devices may be used when such synthetic training devices ensure adequate training standards. ☐ **AMC**

Superseded

147.A.120 - Maintenance training material

(a) Maintenance training course material shall be provided to the student and cover as applicable: ☐ **AMC** ☐ **AMC1** ☐ **AMC2**

1. The basic knowledge syllabus specified in DASR 66 for the relevant Military Aircraft Maintenance Licence (MAML) category or subcategory; and

2. The type course content required by DASR 66 for the relevant aircraft type and MAML category or subcategory.

(b) Students shall have access to examples of maintenance documentation and technical information in the library as specified in DASR 147.A.100(i).

147.A.125 - Records of students

The MTO shall keep all student training, examination and assessment records for at least twenty years following completion of the particular student's course. ☐ **AMC** ☐ **GM**

147.A.130 - Training procedures and quality system

☐ **AMC**

(a) The MTO shall establish procedures acceptable to the DASA to ensure proper training standards and compliance with all relevant requirements in this DASR.

(b) The MTO shall establish a quality system including: ☐ **AMC** ☐ **GM**

1. An independent audit function to monitor training standards, the integrity of knowledge examinations and practical assessments, compliance with and adequacy of the procedures; and

2. A feedback system of audit findings to the person(s) and ultimately to the Accountable Manager referred to in DASR 147.A.105(a) to ensure, as necessary, preventive and corrective actions.

147.A.135 - Examinations

(a) The examination staff shall ensure the security of all questions. ☐ **AMC**

(b) Any student found during a knowledge examination to be cheating or in possession of material pertaining to the examination subject other than the examination papers and associated authorised documentation shall be disqualified from taking the examination. In such a case the student shall not take any examination for at least 12 months after the date of the incident unless the DASA approves otherwise. The DASA shall be informed of any such incident together with the details of any enquiry within one calendar month. ☐ **AMC** ☐ **AMC1**

(c) Any examiner found during a knowledge examination to be providing question answers to any student being examined shall be disqualified from acting as an examiner and the examination

Superseded

declared void. The DASA (DCA) shall be informed of any such occurrence within one calendar month. ☐ **AMC** ☐ **GM**

147.A.140 - Maintenance Training Organisation Exposition

☐ **AMC** ☐ **AMC1**

(a) The MTO shall provide an exposition for use by the MTO describing the organisation and its procedures and containing the following information:

1. A statement signed by the Accountable Manager confirming that the MTOE and any associated manuals define the MTO's compliance with this DASR and shall be complied with at all times. Where the Accountable Manager is not the Chief Executive Officer or the senior military commander of the organisation, the Chief Executive Officer or the senior military commander of the organisation shall countersign that statement.

2. The title(s) and name(s) of the person(s) nominated in accordance with DASR 147.A.105(b).

3. The duties and responsibilities of the person(s) specified in subparagraph (a)2, including matters on which they may deal directly with the DASA on behalf of the MTO.

4. A MTO chart showing associated lines of responsibility of the person(s) specified in subparagraph (a)2.

5. A list of the instructors, knowledge examiners and practical assessors.

6. A general description of the training and examination facilities located at each address specified in the MTO's approval certificate, and if appropriate any other location, as required by DASR 147.A.145(b).

7. A list and details of the maintenance training courses which form the extent of the approval. ☐ **GM**

8. The MTO's exposition amendment procedure.

9. The MTO's procedures, as required by DASR 147.A.130(a).

10. The MTO's control procedure, as required by DASR 147.A.145(c), when authorised to conduct training, examination and assessments in locations different from those specified in DASR 147.A.145(b).

11. A list of the locations pursuant to DASR 147.A.145(b).

12. A list of organisations, if appropriate, as specified in DASR 147.A.145(d).

(b) The MTO's exposition and any subsequent amendments shall be approved by the DASA.

(c) Notwithstanding paragraph (b) minor amendments to the exposition may be approved through an exposition procedure (also called indirect approval). ☐ **GM** ☐ **GM1**

(d) Where an MTO has an extant EMAR / CASA/ EASA Part 147 approval, those parts of the organisation's EMAR / CASA/ EASA Part 147 exposition that are equally applicable to satisfy the DASR 147 requirements will generally be accepted by the DASA as equivalent in respect of

Superseded

the DASR 147 exposition. In this case it is permissible that only those regulations that are military specific need be addressed in the DASR 147 exposition; those regulations covered by read-across of the sections of the EMAR/ CASA/EASA exposition document shall be identified and the EMAR / CASA/ EASA document clause reference quoted.

147.A.145 - Privileges of the Maintenance Training Organisation

(a) The MTO may carry out the following as permitted by and in accordance with the MTOE:

1. Basic training courses to the DASR 66 syllabus, or part thereof. Show ☐ **AMC**
2. Aircraft type/task training courses in accordance with DASR 66, or part thereof.
3. The examinations on behalf of the DASA, including the examination of students who did not attend the basic or Military Aircraft Type Training course at the MTO. (The procedures for examinations are detailed in DASR 66 Appendix II or Appendix III).
4. the issue of certificates in accordance with Appendix III following successful completion of the approved basic or Military Aircraft Type Training courses and examinations specified in subparagraphs (a)(1), (a)(2) and (a)(3), as applicable. ☐ **AMC**

(b) Training, knowledge examinations and practical assessments may only be carried out at the locations identified in the approval certificate and/or at any location specified in the MTOE.

(c) By way of exception to paragraph (b), the MTO may only conduct training, knowledge examinations and practical assessments in locations different from the paragraph (b) locations in accordance with a control procedure specified in the MTOE. Such locations need not be listed in the MTOE.

(d)

1. The MTO may subcontract the conduct of basic theoretical training, Military Aircraft Type Training and related examinations to a non MTO only when under the control of the MTO quality system.
2. The subcontracting of basic theoretical training and examination is limited to DASR 66 Appendix I Modules 01 to 06, and 08 to 10. ☐ **AMC** ☐ **GM** ☐ **GM1**
3. The subcontracting of Military Aircraft Type Training and examination is limited to powerplant, avionic systems, armaments, escape systems and other relevant military-specific systems. ☐ **GM**

(e) An organisation shall not be approved to conduct examinations unless approved to conduct the corresponding training.

147.A.150 - Changes to the Maintenance Training Organisation

(a) The MTO shall notify the DASA of any proposed changes to the organisation that affect the approval before any such change takes place, in order to enable the DASA to determine continued compliance with this DASR and to amend if necessary the MTO approval certificate.

Superseded

(b) The DASA may prescribe the conditions under which the MTO may operate during such changes unless the DASA determines that the MTO approval must be suspended.

(c) Failure to inform the DASA of such changes may result in suspension or revocation of the MTO approval certificate backdated to the actual date of the changes.

147.A.155 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. The MTO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings as specified under DASR 147.A.160 ☐ **AMC**; and
2. The DASA being granted access to the MTO to determine continued compliance with this DASR; and ☐ **AMC**
3. The certificate not being surrendered or revoked.

(b) Upon surrender or revocation, the approval shall be returned to the DASA.

147.A.160 - Findings of non-compliance

Refer to GR.60 Oversight and enforcement.

SUBPART C - APPROVED BASIC TRAINING COURSE

☐ **AMC to Subpart C**

147.A.200 - The approved basic training course

(a) The approved basic training course shall consist of knowledge training, knowledge examination, practical training and a practical assessment.

(b) The knowledge training element shall cover all subjects of the relevant MAML category as specified in DASR 66. ☐ **AMC** ☐ **AMC1**

(c) The knowledge examination element shall cover a representative cross section of all subjects from the paragraph (b) training element.

(d) The practical training element shall cover the practical use of common tooling/equipment, the disassembly/assembly of a representative selection of aircraft parts and the participation in representative maintenance activities being carried out relevant to the particular DASR 66 complete module. ☐ **AMC**

(e) The practical assessment element shall cover the practical training and determine whether the student is competent at using tools and equipment and working in accordance with maintenance manuals.

(f) The duration and minimum number of practical training hours to be completed on basic training courses shall be in accordance with Annex A to AMC 147.A.140. ☐ **AMC** ☐ **AMC1**

Superseded

(g) The duration of conversion courses between (sub)categories shall be determined by the MTO through an assessment of the basic training syllabus and the related practical training needs.

147.A.205 - Basic knowledge examinations

Basic knowledge examinations shall: ☐ **AMC** ☐ **AMC1**

(a) Be in accordance with the standard defined in DASR 66.

(b) Be conducted without the use of training notes.

(c) Cover a representative cross section of subjects from the particular module of training completed in accordance with DASR 66.

147.A.210 - Basic practical assessment

(a) Basic practical assessments shall be carried out during the basic maintenance training course by the nominated practical assessors at the completion of each visit period to the practical workshops/maintenance facility.

(b) The student shall achieve an assessed pass with respect to DASR 147.A.200(e). ☐ **AMC**

SUBPART D - AIRCRAFT TYPE/TASK TRAINING

147.A.300 - Aircraft type/task training

An MTO shall be approved to carry out DASR 66 aircraft type and/or task training or part thereof, subject to compliance with the standard specified in DASR 66.A.45. ☐ **AMC**

147.A.305 - Aircraft type examinations and task assessments

An MTO approved in accordance with DASR 147.A.300 to conduct Military Aircraft Type Training or part thereof, shall conduct the related aircraft type examinations or aircraft task assessments specified in DASR 66 subject to compliance with the aircraft type and/or task standard specified in DASR 66.A.45.

Annexes/Appendixes

Annex A to AMC 147.A.140 - Maintenance Training Organisation Exposition

MAINTENANCE TRAINING ORGANISATION EXPOSITION CONTENT

1. The following subject headings form the basis of the MTOE required by DASR 147.A.140.

2. For standardisation purposes and to facilitate the production of the MTOE by the DASR 147 Maintenance Training Organisation (MTO) DASA recommends adoption of the following format for the MTOE. It is not mandatory to assemble the MTOE in this manner as long as a cross-reference index is included in the MTOE as an Appendix and the Part 1 items remain in

Superseded

Part 1. The MTO should customise the document to suit their organisation and may add pages / paragraphs as necessary.

3. Part 2, 3 and 4 material may be produced as separate detailed manuals subject to the main MTOE containing the Part 2, 3 and 4 fundamental principles and policy on each item. It is then permitted to delegate the approval of these separate manuals to the senior person but this fact and the procedure for doing so should be specified in paragraph 1.10.

4. Where an MTO is approved in accordance with any other DASR which require an exposition, it is acceptable to combine the exposition requirements by merging the Part 1 items and adding the Parts 2, 3 and 4. When this method is used, it is essential to include the cross-reference index of Part 4 item 4.3.

PART 0 – GENERAL ORGANISATION

0.1. List of effective pages

0.2. List of issues / amendments / record of revisions

0.3. Distribution List

0.4. DASR 147 requirements cross-reference list

0.5. General information

PART 1 – MANAGEMENT

1.1. Corporate commitment by the Accountable Manager

1.2. Management personnel

1.3. Duties and responsibilities of management personnel, instructors, knowledge examiners and practical assessors

1.3.1. Accountable Manager

1.3.2. Training Manager

1.3.3. Quality Manager

1.3.4. Examiner

1.3.5. Instructor

1.3.6. Practical Assessor

1.4. Management personnel organisation chart

1.5. List of instructional and examination staff

1.6. List of approved addresses

1.7. List of contracted / tasked organisations as per DASR 147.A.145(d)

1.8. General description of facilities at paragraph 1.6 addresses

Superseded

1.9. Specific list of courses and aircraft type examinations approved by the DASA

1.10. Notification procedures regarding changes to MTO

1.11. MTOE and associated manuals amendment procedure

PART 2 – TRAINING AND EXAMINATION PROCEDURES

2.1. Organisation of courses

2.2. Preparation of course material

2.3. Preparation of classrooms and equipment

2.4. Preparation of workshops / maintenance facilities and equipment

2.5. Conduct of theoretical training and practical training (during basic knowledge training and aircraft type / task training)

2.6. Records of training carried out

2.7. Storage of training records

2.8. Training at locations not listed in paragraph 1.6

2.9. Organisation of examinations

2.10. Security and preparation of examination material

2.11. Preparation of examination rooms

2.12. Conduct of examinations (basic knowledge examinations, aircraft type / task training examinations)

2.13. Conduct of practical assessments (during basic knowledge training and aircraft type / task training)

2.14. Marking and record of examinations

2.15. Storage of examination records

2.16. Examinations at locations not listed in paragraph 1.6

2.17. Preparation, control and issue of basic / type training course certificates

2.18 Control of contracted / tasked organisations

PART 3 – TRAINING SYSTEM QUALITY PROCEDURES

3.1. Audit of training

3.2. Audit of examinations

3.3. Analysis of examination results

3.4. Audit and analysis remedial action

Superseded

3.5. Accountable Manager annual review

3.6. Qualifying the instructors

3.7. Qualifying the examiners and the practical assessors

3.8. Records of qualified instructors, examiners and practical assessors

PART 4 – APPENDICES

4.1. Example of documents and forms used

4.2. Syllabus and Training Needs Analysis (TNA) of each training course

4.3. Cross-reference index

NOTE: Where a Part is not used it should be shown in the MTOE as **NOT APPLICABLE**.

PART 0 – GENERAL ORGANISATION

0.1 – List of effective pages

Example:

Page	Revision
1	Original
2	Original

Page	Revision
3	Original
4	Original

Page	Revision
5	Original
.....	.....

0.2 – List of issues / amendments / record of revisions

Example:

Issue number	Revision number	Date	Reason for change
1	0	19/12/06	N/A
2	0	01/01/12	Extension of the TB1.3 scope of approval
	1	01/01/14	New procedure for the records of students

0.3 – Distribution list

The document should include a distribution list to ensure proper distribution of the MTOE and to demonstrate to the DASA that all personnel involved in the maintenance training have access to the relevant information. This does not mean that all personnel have to be in receipt of a MTOE but that a reasonable number of copies are distributed within the organisation(s) so that all personnel may have

Superseded

quick and easy access to it. Reference should also be made to the location of any e-copies of the MTOE.

Accordingly, the MTOE should be distributed to:

- the Operating Organisation's management personnel (if the MTO is part of an operating Organisation),
- any relevant maintenance organisation, eg when MTO contract / task the practical type training,… or MTO,
- the MTO management personnel and any person at a lower level as necessary; and
- the DASA.

0.4 – DASR 147 requirements cross-reference list

The MTOE should contain a cross-reference list with an explanation as to where each DASR 147 Section A requirement is addressed in the MTOE.

0.5 – General information

This chapter should describe broadly how the whole organisation is organised under the management of the Accountable Manager.

PART 1 – MANAGEMENT

1.1 – Corporate commitment by the Accountable Manager

The Accountable Manager's MTOE statement should embrace the intent of the following paragraph and this statement may be used without amendment. Any modification to the statement should not alter the intent.

This MTOE defines the organisation and procedures upon which the DASR 147 MTO approval is based.

It is accepted that these procedures do not override the necessity of complying with any new or amended regulation published by the DASA from time to time where these new or amended regulations are in conflict with these procedures.

It is understood that the DASA will approve this MTO whilst the DASA is satisfied that the procedures and work standards are being followed. It is understood that the DASA reserves the right to suspend, vary or revoke the DASR 147 MTO approval, as applicable, if the DASA has evidence that the procedures are not followed and the standards not upheld.

These procedures are approved by the undersigned and must be complied with, as applicable, whenever knowledge or practical training is being progressed under the terms of the DASR 147 approval.

The undersigned fully accepts the duties and responsibilities of Accountable Manager as defined in paragraph 1.3.1 of this MTOE.

Signed .....

Dated .....

Superseded

Accountable Manger and .....(quote position).....

For and behalf of .....(quote MTO name).....

1.2 – Management personnel

Accountable Manager .....

Training Manager .....

Quality Manager .....

Examination Manager .....

Other (as required) .....

The Managers specified above are identified and their credentials apart from the Accountable Manager have been submitted on DASR Form 4 to the DASA.

Any changes to the above personnel shall be advised to the DASA. Failure to do so may affect the status of the DASR 147 approval.

1.3 - Duties and responsibilities of management personnel, instructors, knowledge examiners and practical assessors

1.3.1 - Accountable Manager

The Accountable Manager is responsible for:

Ensuring that all instruction and examinations carried out by the MTO meet the standards required by the DASA.

Ensuring that the necessary finance, human resources and facilities are available to enable the MTO to perform the knowledge and / or practical instruction and examinations to which it is committed under the requirements of DASR 147.

Chairing the annual meeting of senior staff to review the overall performance of the MTO.

Ensuring that during periods of absence, control will be maintained for administration purposes by (Insert name / position in MTO), who will accept full responsibility for all training issues and related decisions.

The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.

NOTES: (not for inclusion in the MTOE)

Any additional duties and responsibilities within the MTO may be added or delegated provided they do not conflict with those above, which constitute the Accountable Manager's responsibilities under DASR 147.

Superseded

The MTO should decide who will be responsible for liaison with the DASA and show this in their terms of reference. If more than one person is nominated it must be clearly shown what each person is responsible for with, as a general rule, no overlapping of responsibility

1.3.2 - Training Manager

The Training Manager will undertake:

- The responsibilities of the nominated person at (insert name of DASR 147 MTO).
- The duties and responsibilities of the DASR 147 approved examiner during the absence of any nominated approved examiner(s).

The Training Manager will ensure that:

- The Accountable Manager is kept informed as to the state of compliance of the MTO with DASR 147.
- The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.
- Sufficient staff with appropriate qualifications are selected, trained and developed, to plan, perform, supervise, examine and assess students as required.
- All necessary Airworthiness data published by the DASA and Aircraft manufacturers as appropriate, is made available.
- All changes to the MTOE and associated manuals are notified immediately to the DASA.
- The MTOE and associated manuals are amended as required.
- Knowledge examiners, instructors and practical assessors are fully trained and assessed regularly for competence and that all records pertaining to these personnel are kept up to date.
- Contracted / tasked staff including any part time staff conform to the requirements of DASR 147 and the training procedures.
- Office accommodation and facilities are available appropriate to the management of the planned training and for the use of training staff.
- Staff development and update training is undertaken and recorded.
- That all approved courses and examinations are delivered to the standard and content at the required level of knowledge, as specified in DASR 147.
- A working environment is provided appropriate to the tasks being undertaken.
- There are sufficient storage facilities, tools, equipment, materials and publications available to perform the planned practical tasks.
- Secure facilities are available for the storage of examination papers prior to the examination and for the storage of completed students answer papers.
- The interviewing of students prior to, during and on completion of the course is effective and without bias.

Superseded

- Student and staff records are produced and stored in secure conditions.
- Any person to whom any of these responsibilities may be delegated is aware of current regulations.
- Corrective action is carried out for the findings of quality audits.
- The follow up and rectification of findings required to re-establish the required standards of training, examination or maintenance standards.
- That sufficient questions are available to produce the examination papers required to cover the syllabus in accordance with DASR 66 Appendix II and III. If questions are utilised for progress tests they should not be used in the final examination.
- The security and validity of all examinations are in accordance with the requirements of DASR 66 and DASR 147.
- All examinations and assessment timetables are coordinated.
- Compliance with the examination question review procedures is as required by DASR 66 and / or DASR 147.

NOTES:

This paragraph should emphasise that the nominated post holder for training is responsible to ensure that all training is carried out to an approved standard and describes the extent of their authority as regards their DASR 147 responsibility.

These duties may be adjusted to suit the requirements of the DASR 147 Approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66

1.3.3 - Quality Manager

The Quality Manager has direct access to the Accountable Manager in the event of any reported discrepancy not being adequately attended to by the relevant person, or in respect of any disagreement over the nature of the discrepancy.

The Quality Manager is responsible for:

- Establishing an independent quality system to monitor compliance with DASR 147 requirements.
- Assessing non-approved contracted/tasked MTOs working under the MTO quality system.
- Implementing a quality audit programme in which compliance with all training procedures is reviewed at regular intervals, and any observed non-compliances or poor standards are brought to the attention of the person concerned via their Manager.
- Proposing all corrective action necessary for eliminating non-compliance and ensuring that these corrective actions are initiated and when completed are efficient and meet their intended purpose.
- Requiring remedial action, as necessary, by the Training Manager or the Accountable Manager.
- The MTOE and associated manuals are amended as required.

Superseded

NOTES:

These duties may be adjusted to suit the requirements of the DASR 147 approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66.

It must be remembered that the quality audit system is required to be independent and where possible the Quality Manager and quality audit personnel should not be directly involved in the training process. Where for reasons of expediency it is necessary to utilise training staff, it would then become necessary for a second member of staff to be nominated to audit those functions performed by the Quality Manager.

Alternatively / additionally an external auditor acceptable to the DASA may be contracted / tasked in order to ensure the required independence.

1.3.4 - Examiner

The examiner is a nominated person who will determine the level of theoretical knowledge of the trainees on a particular module, element, or part thereof. The function may include the drafting and/ or the selection of questions (MCQs and Essays), the performance of the examination exercise itself for essay questions, the evaluation of the correctness of answers (except when correct answers are pre-determined) and the final judgment regarding the level of knowledge demonstrated by the trainee.

NOTE: Persons solely supervising an exam session consisting of pre-selected MCQ questions are not considered as examiners but are considered as support staffs (invigilators) and are therefore not subject to the knowledge and experience requirements but need to be trained to the examination procedure described in the MTOE.

The invigilation of examinations shall ensure that the conditions for examination comply with DASR 66 Appendix II (for basic training) or Appendix III, paragraph 3 (for type training)

1.3.5 - Instructor

The instructor is a nominated person who will carry out instructional duties for which they are qualified (type / basic training).

Additionally, the instructor can:

- Draft questions for examination banks for courses they are authorised;
- Undertake duties of invigilator where they are not involved in the instruction of that particular phase examination.

NOTE: The instructor is not necessarily the person involved into the drafting of the course material (content, duration etc…), however they must be involved at some point into the organisation of the lessons themselves (creation of the instructor notes, slides, sequencing etc…).

1.3.6 - Practical assessor

The practical assessor is a nominated person who will determine the level of practical knowledge/ practical skills of the trainees on a particular module, element, or part thereof. The function may include the drafting and / or the selection of practical tasks and shall include the performance of the

Superseded

practical assessment itself, and the evaluation of the practical abilities on the tasks covered by the assessment.

1.4 - Management personnel organisation chart

A flow chart should provide a comprehensive understanding of the whole MTO. It should give further details on the management system and should clearly show the independence of the quality monitoring system, including the links between the Quality Assurance department and the other departments. This flow chart may be combined or subdivided as necessary, depending on the size and the complexity of the MTO.

NOTE: The MTOE must also define who deputises for any senior person in case of lengthy absenceList of Instructional and Examination staff

1.5 - List of Instructional and Examination staff

This paragraph should give broad figures to show that the number of people dedicated to the performance of the approved training activity is adequate. It is not necessary to give the detailed number of employees of the whole MTO but only the number of those involved in training.

This could be presented as follows:

APPOINTMENT:	**NAME:**	**COMPETENCIES:**
Training Manager Deputy Training Manager Quality Manager Examiner Examiner / Instructor Instructor Instructor Instructor Instructor / Invigilator Invigilator Practical Assessor		enter here those areas each person is qualified to instruct using DASR 66 module / sub-modules OR type of aircraft and the specific areas they are qualified to instruct, ie Airframe, Engine, Electrical Instrument, Auto flight, Radio or Radar.

NOTES:

According to the size and complexity of the MTO, this table may be further developed.

The DASR 147 examiners are the only persons allowed to produce / select examination papers. They may nominate other persons to mark completed examinations. The examiners and these persons should be other than the knowledge instructors involved in the instruction of that particular module/ sub-module.

Superseded

1.6 - List of approved addresses

This paragraph should list those address(es) at which instruction and/or practical training are to be carried out for the duration of the DASR 147 course.

The names, address(es) and approval numbers of any proposed DASR 145 AMO at which it is proposed to carry out student practical training in order to fulfil the requirements of DASR 147 may be kept in another document or procedure and cross referenced here.

1.7 - List of contracted / tasked organisations as per DASR 147.A.145(d)

This paragraph should list those address(s) at which training beyond the capacity of the DASR 147 MTO may be carried out. DASR 66 Modules 1 to 6 inclusive and 8 to 10 inclusive may be contracted/ tasked to organisations not specialised in aircraft maintenance and where the DASR 147.A.200 practical training element does not apply.

1.8 - General description of facilities at paragraph 1.6 addresses

Include here the facilities such as desks, chairs, lockers, overhead projectors, other teaching aids, etc for each of the offices, classrooms, practical training workshops and examination rooms provided.

1.9 - Specific list of courses and aircraft type examinations approved by the DASA

This paragraph must contain a list of the DASR 147 course(s) for which approval is held. This should also include 'Differences' courses.

For example: Airbus A319/320/321 (CFM 56) B1 - differences to A319/320/321 (V2500) B1.

1.10 - Notification procedures regarding changes to the MTO

Include here any cross references to the intended procedures for continued validity of the approval in compliance with the requirements of DASR 147.A.155.

The MTOs 'nominated person' is responsible for informing the DASA of any proposed changes. (Refer Part 1 - Management, paragraph 1.3.2 of the MTOE as an example)

1.11 - MTOE and associated manuals amendment procedure

Detail here or cross refer to the procedures to be followed for the amendment of the MTOE and any associated procedures and or documents.

PART 2 - TRAINING AND EXAMINATION PROCEDURES

2.1 - Organisation of courses

In this paragraph, the MTO should detail the procedures in place in order to organise the courses and to ensure that all necessary means are available to deliver in good conditions and by appropriately qualified staff all the course elements as required by the DASR 66 syllabus. Such procedures may include a formalised review of the availability of required appropriate training rooms, materials, STDs, specialists… and resulting in training programme.

2.2 - Preparation of course material

Training material should meet the requirements of DASR 66. It should also state how the approved MTO produces a course for a new aircraft type (new approval scope). This would typically include the

Superseded

production of the Training Needs Analysis and eventually a training programme for the new aircraft that has to list what is being taught, to what level and for how long. Once completed, this should be sent to the DASA for review and approval of the course. This list must be given a unique reference number and revision status. In order to get the course approved a set of multi-choice questions and a copy of the course notes used by the student must also be submitted.

The course notes must reflect the training programme and be given the same reference number and revision status. This may cross refer to a separate procedure in which details of how the standard course lecture notes are produced which would include content, indexing, chapter and page numbering, font, etc, in the 'House Style'.

This same procedure should also be utilised to list the responsibilities by DASR 66 module / submodule for the production, review and amendment of lecture notes.

Include cross references to any procedures used for the inclusion of other course material, eg Aircraft Manuals, and/or Standard Text Books used for note preparation and available to students as reference material

2.3 - Preparation of classrooms and equipment

Cross reference to any procedures for the preparation of classrooms and reporting of faults to any classroom equipment, general maintenance procedures and the control of the teaching environment.

2.4 - Preparation of workshop / maintenance facilities and equipment

Cross reference to any procedures for the reporting of faults to any workshop equipment, general maintenance procedures and the control of the teaching environment.

Cross reference to procedures for the ordering and storage of aircraft materials used in the production of practical tasks, and for the ordering and acquisition of any new equipment required to complete the tasks.

Cross reference to the procedures for ensuring that all test equipment and/or tooling requiring calibration are correctly forecast and expedited.

2.5 - Conduct of theoretical training and practical training (during basic knowledge training and type / task training)

Describe the method utilised in teaching the Basic / Type knowledge and practical training courses for which the MTO is approved.

Cross refer to the low level document referred to in paragraph 2.1 above.

2.6 - Records of training carried out

Cross refer to procedures for the production, maintenance and security of student files.

These should include details of all student attendance's, final knowledge examinations, practical assessments and any re-examination carried out and their results by DASR 66 complete module/sub-module for basic training courses and for type training, information of those courses completed, their content and at which levels they were instructed and examined.

There should also be reference to the basic work experience' records required to be kept by the student whilst they are undergoing their live operating aircraft experience.

Superseded

The use of an "Aircraft Maintenance Engineers Log Book" is a good example.

2.7 - Storage of training Records

Cross refer to procedures for the storage of staff and student's records.

As a minimum, the procedures shall describe which are the documents that are recorded, the means that are used for recording and how long the records will be kept. These may be electronically based provided that adequate safeguards are in place to prevent unauthorised access and alteration.

2.8 - Training at locations not listed in paragraph 1.6

Should the Management wish to contract/task part of the practical training, control procedures must be in place. These procedures should effectively reflect those of the DASA in auditing the DASR 147 MTO.

Any training carried out at address not listed at 1.6 above must be approved by the DASA and control procedures must be in place to ensure that the proposed contracted/tasked organisation is in compliance with the requirements of DASR 66 and DASR 147.

A contract must be in place with the proposed organisation in which it is agreed that access is granted to the DASA for the purpose of audit.

NOTE:

The "APPLICATION TO CONDUCT TRAINING / EXAMINATIONS* AT A LOCATION REMOTE FROM THE DASR 147 APPROVED SITE" Form should be annexed to the MTOE.

2.9 - Organisation of examinations

For Military Aircraft Maintenance Licence (MAML) course a high-level document detailing the course examinations, when each DASR 66 module / sub-module is to be examined and to what DASR 66 level. This should include the knowledge, practical training elements and how the number of hours of each comply with the percentage requirements of DASR AMC 147A.200.

For aircraft type training, the course syllabus should be used to prepare an examination schedule. The examination schedule should detail the examinations to be set at the end of each major phase within the syllabus. A final examination should be conducted at the end of the type training course. The final examination should be recorded. Refer to DASR 66 Appendix III, paragraphs 4.1.

2.10 - Security and preparation of examination material

For MAML courses detail the preparation and security of Examination papers. Number of Questions and Timing must be in accordance with DASR 66 Appendix II.

Cross reference to procedures for the production of examination questions, their validation and security of the data bank.

For type training it is sufficient to detail the preparation and security procedures in place for the production and storage of examination papers.

2.11 - Preparation of examination rooms

Cross refer to procedure to be followed by the examiner and Invigilator in preparing the examination room for examinations.

An invigilator's ready reference sheet for briefing the candidates prior to the examination should be available in procedures and cross referenced here.

2.12 - Conduct of examinations (basic knowledge examinations, aircraft type / task training examinations)

A procedure should be in place to define how the MTO manage the conduction of examinations in respect of the DASR 147.A.135. The procedure should define responsibilities for the conduct and monitoring of the examination, and the instruction for the performance of the examination such as:

- information about the examination type (number of questions, type of questions, topics, maximum duration, ...)
- information about the conduct of the examination (format of the responses, distribution and collating of copies, login if electronic systems,...)
- information about rules to be respected (communication, utilisation of documents / means / personal objects,...) and measures to be taken in case of someone found cheating.

The minimum conditions to be authorised to monitor an examination should also be described.

It is recommended that examination papers of candidates should be identified through an anonymous system, eg numbering system,…), to be described in the MTOE.

A procedure should be in place for checking that all the pages of each examination paper are complete at examination completion and that all examination papers are accounted for.

Both the written element and the multi-choice question elements should be marked to 75% with no penalty marking. Refer DASR 66 Appendix II.

Nothing other than the actual examination / answer paper is permitted to be on the candidate's desk.

All wall charts and/or other visual teaching aids should be removed from the examination room.

2.13 - Conduct of practical assessments (during basic knowledge training and aircraft type / task training)

Superseded

Cross refer to procedures used for assessment of student hand skills, and the standard tasks set throughout the course. A set number of mandatory tasks should be assessed to have been completed to a satisfactory standard.

2.14 - Marking and record of examinations

A procedure should define how and by whom an examination is corrected, how and by whom is the examination result validated, how the examination result is transmitted to the student and under which format the examination is recorded.

Cross refer to procedures for the marking of completed examination papers and the recording of results.

Cross refer to a procedure for practical assessments and recording of results.

2.15 - Storage of examination records

A procedure should define as a minimum which are the documents that are recorded, the means / systems / storage locations that are used to ensure a retention period of 20 years.

Electronic means of storage may be utilised as required, provided the appropriate computer security systems are in place.

2.16 - Examinations at locations not listed in paragraph 1.6

Cross refer to the control procedure in common with part 2.8 above. This location must comply with the requirements of 2.10, 2.11, 2.12, 2.13, 2.14 and 2.15 above.

Consideration is needed for the security / control of examinations and their completed examination papers and/or practical assessment results.

2.17 - Preparation, control and issue of Basic / Type training course certificates

The procedure for issuing training certificates should define the responsibility for verifying the data, the procedures for issuing and archiving the certificates and the authorised signatories.

The certificates should be prepared to reflect that illustrated in DASR 147 Appendix III and tightly controlled prior to issue, with a system in place to ensure that each copy is numbered as part of a sequence and recorded as issued to a candidate by name.

2.18 - Control of contracted / tasked organisations

When contracted / tasked organisations are defined in paragraph 1.7, it is necessary to define how and how often these contracted / tasked organisations are controlled in terms of training and examination / evaluation and means in place.

Cross refer to procedures for the control of contracted / tasked organisations as appropriate.

PART 3 - TRAINING SYSTEM QUALITY PROCEDURES

3.1 - Audit of training

The approved MTO should develop a form / audit checklist to be used by the auditor that would demonstrate that all the requirements of DASR 147 have been reviewed during the audit process. The audit plan should indicate applicability of the various activities to be monitored and more than one

Superseded

list may be necessary (rolling audit). Each list should be shown against a timetable to indicate when the particular item is scheduled for audit and when the audit was completed. A complete audit of the DASR 147 MTO must be completed every 12 months.

For courses and depending on the approval scope (Basic and / or Type) at least one basic and/or type, theoretical and practical course should be audited each year.

Cross refer to the various procedures required for quality auditing, reporting findings and levels with any corrective actions required.

A management control and follow up system must also be in place and may not be contracted out.

Cross reference to any quality procedures manual if available is permitted, but this system must relate to and make reference to the relevant DASR 147 requirements.

3.2 - Audit of examinations

Must be audited annually but may be part of the rolling audit procedure.

3.3 - Analysis of examination results

Examination results should be analysed on completion of each examination and any questions amended as necessary. Cross refer to procedures detailing responsibilities.

3.4 - Audit and analysis remedial action

Cross refer to procedures for the reporting of findings and for corrective actions.

3.5 - Accountable Manager annual review

At least once a year a review of the activities must be made by the Accountable Manager. Points discussed on a set date should include:

- Projects requiring financial support.
- Sufficient staff employed to meet foreseen training program.
- DASR 147 MTO review.
- Examinations and assessments.
- Student achievements.
- Student support.
- Quality Assurance review.
- Continuous improvement opportunities.

3.6 - Qualifying the instructors

List of acceptable staff qualifications:

- Include procedures for the induction of inexperienced instructors as required.
- Where relevant include procedures for the employment of part time or contract instructors. All staff should have an appreciation of the contents of DASR 66 and DASR 147.

Superseded

- Cross refer to the list of present staff / qualification.

NOTE: staff employed prior to DASR 147 application who's qualifications were previously acceptable, will continue to be accepted.

- Cross refer to procedures for staff development.

3.7 - Qualifying the examiners and the practical assessors

Examiners should have a full understanding of all the requirements of DASR 66 and DASR 147. Cross refer to procedures for staff development.

Cross refer to the list of staff / qualifications.

Practical work assessors should be assessed as being competent in accordance with an approved process.

3.8 - Records of qualified instructors, examiners and practical assessors

The MTO must maintain a record of all training staff which must include details of the scope of their authorisation.

Training staff must be provided with evidence of the scope of their authorisation.

The following minimum information should be kept on record in respect of each instructor, examiner and practical assessor:

- Name
- Date of Birth
- Personnel Number
- Experience
- Qualifications relevant to the approval scope
- Training History (before entry)
- Training (basic training, type training, continuation training)
- Scope of activity
- Date of first issue of the authorisation
- If appropriate – expiry date of the authorisation
- Starting date of employment

The records may be kept in any format (hard copy or computer based) subject to the appropriate security requirements.

Persons authorised to access the system should be maintained at a minimum to ensure that records cannot be altered in an unauthorised manner or that such confidential records become accessible to unauthorised persons.

The training staff should be given reasonable access on request to their own records.

Superseded

The authorisation document should be in a style that makes its scope clear to training staff and any authorised person that may be required to review the document. Where codes are used to define scope, an interpretation document should be readily available.

Training staff are not required to carry the authorisation document at all times but should produce it within a reasonable time of a request from an authorised person. Authorised persons, apart from the MTO's quality department must include DASA.

Any member of the DASA is classed as an authorised person when investigating the records system for initial and continued approval or when the DASA has cause to doubt the competence of a particular training staff

PART 4 - APPENDICES

4.1 - Examples of documents and forms used

This section should include examples of all documents and forms used by the MTO in the conduct of its DASR 147 function.

Some examples are listed below:

- Student attendance record
- Course certificate(s)
- Certificate(s) of training
- Classroom plan (exam purposes)
- Course critique
- Course results
- Course design / change plan
- Exam answer sheet
- Exam results
- Internal audit procedure
- Internal audit schedule
- Internal audit report
- Application to conduct courses / examinations at a remote location
- Interview report form
- MTOE amendment request
- MTOE amendment request log
- Staff training record (to include qualifications, history and subjects taught)
- Staff terms of reference
- Student training / examination and assessment form

Superseded

- Training course review
- Quality system
- Aircraft visit form

4.2 - Syllabus and Training Needs Analysis (TNA) of each training course

This section should contain the syllabus for each DASA approved course and should also contain the associated Training Needs and Analysis.

4.3 - Cross-reference Index

If applicable - self-explanatory

Appendix I - Basic Training Course Duration and Minimum Practical Training Hours

1. The duration and minimum number of practical training hours to be completed on a basic training course shall be as follows:

Basic Course (See Note 3)	Duration (Theory) (See Note 1)	Duration (Practical) (See Note 1)	Minimum Practical Training Hours for maximum reduction in experience requirements (See Note 2)
A1	-	-	520
A2	-	-	420
A3	-	-	520
A4	-	-	520
B1.1	-	-	960

Superseded

B1.2	-	-	800
B1.3	-	-	960
B1.4	-	-	960
B2	-	-	960
A (Module 50-55 Extensions)	-	-	(See Note 1)
B1 (Module 50-55 Extensions)	-	-	(See Note 1)
B2 (Module 50-55 Extensions)	-	-	(See Note 1)

Superseded

NOTES:

1. To be specified by the DASA (if req'd).
2. These are the minimum practical training hours required for an individual to be able to claim reductions in the experience requirements as detailed in DASR 66.A.30(a)1(iii) and DASR 66.A.30(a)2(iii).
3. The duration of initial training (theory and practical) is determined during the training development process and it relates to trade training, not training for licences.

Appendix II - Reserved

Appendix III - Examples of Training Certificates

1. Basic Training/Examination ☐ AMC

The information contained within the example of a basic training certificate detailed below is to be used for recognition of completion of either the basic training, the basic examination or both the basic training and basic training examinations.

A training certificate shall clearly identify each individual module or sub-module examination by date passed together with the corresponding version of Appendix I to DASR 66.

SUBPART B - ORGANISATIONAL REQUIREMENTS

SECTION A

SUBPART A - GENERAL

147.A.05 - Scope

This section establishes the requirements to be met by an Organisation seeking approval as a Maintenance Training Organisation (MTO) to conduct training and examination as specified in DASR 66.

147.A.10 - General

An MTO shall be a legal entity, a part of a legal entity or part of a military organisation. ☐ **GM**

147.A.15 - Application

☐ **AMC**

(a) An application for an approval or for the amendment of an existing approval shall be made to the Defence Aviation Safety Authority (DASA) in an agreed form and manner.

(b) An application for or for the change to an approval shall include the following information:

1. The registered name and address of the applicant;
2. The address of the MTO requiring the approval or change to the approval;
3. The intended scope of approval or change to the scope of approval;
4. The name and signature of the Accountable Manager;
5. The date of application.

SUBPART B - ORGANISATIONAL REQUIREMENTS

147.A.100 - Facility requirements

(a) The size and structure of facilities shall ensure protection from the prevailing weather elements and proper operation of all planned training and examination.

(b) Fully enclosed appropriate accommodation shall be provided for the instruction of theory and the conduct of knowledge examinations. ☐ **AMC** ☐ **AMC1**

1. The maximum number of students undergoing knowledge training during any training session shall not exceed a level conducive to an effective learning environment.

Superseded

2. The size of accommodation for examination purposes shall be such that no student can read the paperwork or computer screen of any other student from their position during examinations.

(c) The paragraph (b) accommodation environment shall be maintained such that students are able to concentrate on their studies or examination as appropriate, without undue distraction or discomfort.

(d) In the case of a basic training course, basic training workshops and/or maintenance facilities separate from training classrooms shall be provided for practical instruction appropriate to the planned training course. If, however, the MTO is unable to provide such facilities, arrangements may be made with another organisation to provide such workshops and/or maintenance facilities, in which case a written agreement shall be made with such organisation specifying the conditions of access and use thereof. The DASA shall require access to any such organisation and the written agreement shall specify this access. ☐ **AMC**

(e) In the case of a Military Aircraft Type/Task Training course, access shall be provided to appropriate facilities containing examples of aircraft type as specified in DASR 147.A.115(d).

(f) The maximum number of students undergoing practical training during any training session shall not exceed 15 per supervisor or assessor. ☐ **AMC**

(g) Office accommodation shall be provided for instructors, knowledge examiners and practical assessors of a standard to ensure that they can prepare for their duties without undue distraction or discomfort.

(h) Secure storage facilities shall be provided for examination papers and training records. The storage environment shall be such that documents remain in good condition for the retention period as specified in DASR 147.A.125. The storage facilities and office accommodation may be combined, subject to adequate security. The requirements of this paragraph are equally applicable to other storage media, eg electronic etc.

(i) A library shall be provided containing all technical material appropriate to the scope and level of training undertaken. ☐ **AMC** ☐ **GM**

147.A.105 - Personnel requirements

(a) The MTO shall appoint an Accountable Manager who has corporate authority for ensuring that all training commitments can be carried out to the standard required by DASR 147. The Accountable Manager shall: ☐ **AMC**

1. Ensure that all necessary resources are available to accomplish training commitments in accordance with DASR 147.A.130(a) to support the organisation approval.

2. Establish and promote the quality policy specified in DASR 147.A.130(b).

3. Demonstrate a basic understanding of this DASR.

(b) A person or group of persons, whose responsibilities include ensuring that the MTO is in compliance with the requirements of this DASR, shall be nominated. Such person(s) shall be responsible to the Accountable Manager. The senior person or one person from the group of persons may also be the Accountable Manager subject to meeting the requirements for the Accountable Manager as defined in paragraph (a). ☐ **AMC** ☐ **GM**

Superseded

(c) The MTO shall contract/appoint sufficient staff to plan/perform knowledge and practical training, conduct knowledge examinations and practical assessments in accordance with the approval. ☐ **AMC**

(d) By way of exception to paragraph (c), when another organisation is used to provide practical training and assessments, such other organisation's staff may be nominated to carry out practical training and assessments.

(e) Any person may carry out any combination of the roles of instructor, knowledge examiner and practical assessor, subject to compliance with paragraph (f).

(f) The experience and qualifications of instructors, knowledge examiners and practical assessors shall be established in accordance with criteria published by the DASA or in accordance with a procedure and to a standard agreed by the DASA. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(g) The instructors, knowledge examiners and practical assessors shall be specified in the MTO Exposition (MTOE) for the acceptance of such staff.

(h) Instructors and knowledge examiners shall undergo updating training at least every 24 months relevant to current technology, practical skills, human factors and the latest training techniques appropriate to the knowledge being trained or examined. ☐ **AMC** ☐ **GM**

147.A.110 - Records of instructors, examiners and assessors

☐ **AMC** ☐ **GM**

(a) The MTO shall maintain a record of all instructors, knowledge examiners and practical assessors for a minimum period of 5 years after termination of their employment or assignment within the MTO. These records shall reflect the experience and qualification, training history and any subsequent training undertaken. ☐ **AMC** ☐ **GM**

(b) Terms of reference shall be drawn up for all instructors, knowledge examiners and practical assessors. ☐ **AMC**

147.A.115 - Instructional equipment

(a) Each classroom shall have appropriate presentation equipment of a standard that ensures students can easily read presentation text/drawings/diagrams and figures from any position in the classroom. Presentation equipment may include representative synthetic training devices to assist students in their understanding of the particular subject matter where such devices are considered beneficial for such purposes. ☐ **GM**

(b) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have all tools and equipment necessary to perform the approved scope of training.

(c) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have an appropriate selection of aircraft, engines, aircraft parts, avionic equipment, armaments, escape systems and other relevant military-specific systems. ☐ **AMC**

(d) The Military Aircraft Type Training organisation as specified in DASR 147.A.100(e) shall have access to the appropriate aircraft type. Synthetic training devices may be used when such synthetic training devices ensure adequate training standards. ☐ **AMC**

Superseded

147.A.120 - Maintenance training material

(a) Maintenance training course material shall be provided to the student and cover as applicable: ☐ **AMC** ☐ **AMC1** ☐ **AMC2**

1. The basic knowledge syllabus specified in DASR 66 for the relevant Military Aircraft Maintenance Licence (MAML) category or subcategory; and

2. The type course content required by DASR 66 for the relevant aircraft type and MAML category or subcategory.

(b) Students shall have access to examples of maintenance documentation and technical information in the library as specified in DASR 147.A.100(i).

147.A.125 - Records of students

The MTO shall keep all student training, examination and assessment records for at least twenty years following completion of the particular student's course. ☐ **AMC** ☐ **GM**

147.A.130 - Training procedures and quality system

☐ **AMC**

(a) The MTO shall establish procedures acceptable to the DASA to ensure proper training standards and compliance with all relevant requirements in this DASR.

(b) The MTO shall establish a quality system including: ☐ **AMC** ☐ **GM**

1. An independent audit function to monitor training standards, the integrity of knowledge examinations and practical assessments, compliance with and adequacy of the procedures; and

2. A feedback system of audit findings to the person(s) and ultimately to the Accountable Manager referred to in DASR 147.A.105(a) to ensure, as necessary, preventive and corrective actions.

147.A.135 - Examinations

(a) The examination staff shall ensure the security of all questions. ☐ **AMC**

(b) Any student found during a knowledge examination to be cheating or in possession of material pertaining to the examination subject other than the examination papers and associated authorised documentation shall be disqualified from taking the examination. In such a case the student shall not take any examination for at least 12 months after the date of the incident unless the DASA approves otherwise. The DASA shall be informed of any such incident together with the details of any enquiry within one calendar month. ☐ **AMC** ☐ **AMC1**

(c) Any examiner found during a knowledge examination to be providing question answers to any student being examined shall be disqualified from acting as an examiner and the examination

Superseded

declared void. The DASA (DCA) shall be informed of any such occurrence within one calendar month. ☐ **AMC** ☐ **GM**

147.A.140 - Maintenance Training Organisation Exposition

☐ **AMC** ☐ **AMC1**

(a) The MTO shall provide an exposition for use by the MTO describing the organisation and its procedures and containing the following information:

1. A statement signed by the Accountable Manager confirming that the MTOE and any associated manuals define the MTO's compliance with this DASR and shall be complied with at all times. Where the Accountable Manager is not the Chief Executive Officer or the senior military commander of the organisation, the Chief Executive Officer or the senior military commander of the organisation shall countersign that statement.

2. The title(s) and name(s) of the person(s) nominated in accordance with DASR 147.A.105(b).

3. The duties and responsibilities of the person(s) specified in subparagraph (a)2, including matters on which they may deal directly with the DASA on behalf of the MTO.

4. A MTO chart showing associated lines of responsibility of the person(s) specified in subparagraph (a)2.

5. A list of the instructors, knowledge examiners and practical assessors.

6. A general description of the training and examination facilities located at each address specified in the MTO's approval certificate, and if appropriate any other location, as required by DASR 147.A.145(b).

7. A list and details of the maintenance training courses which form the extent of the approval. ☐ **GM**

8. The MTO's exposition amendment procedure.

9. The MTO's procedures, as required by DASR 147.A.130(a).

10. The MTO's control procedure, as required by DASR 147.A.145(c), when authorised to conduct training, examination and assessments in locations different from those specified in DASR 147.A.145(b).

11. A list of the locations pursuant to DASR 147.A.145(b).

12. A list of organisations, if appropriate, as specified in DASR 147.A.145(d).

(b) The MTO's exposition and any subsequent amendments shall be approved by the DASA.

(c) Notwithstanding paragraph (b) minor amendments to the exposition may be approved through an exposition procedure (also called indirect approval). ☐ **GM** ☐ **GM1**

(d) Where an MTO has an extant EMAR / CASA/ EASA Part 147 approval, those parts of the organisation's EMAR / CASA/ EASA Part 147 exposition that are equally applicable to satisfy the DASR 147 requirements will generally be accepted by the DASA as equivalent in respect of

Superseded

the DASR 147 exposition. In this case it is permissible that only those regulations that are military specific need be addressed in the DASR 147 exposition; those regulations covered by read-across of the sections of the EMAR/ CASA/EASA exposition document shall be identified and the EMAR / CASA/ EASA document clause reference quoted.

147.A.145 - Privileges of the Maintenance Training Organisation

(a) The MTO may carry out the following as permitted by and in accordance with the MTOE:

1. Basic training courses to the DASR 66 syllabus, or part thereof. Show ☐ **AMC**
2. Aircraft type/task training courses in accordance with DASR 66, or part thereof.
3. The examinations on behalf of the DASA, including the examination of students who did not attend the basic or Military Aircraft Type Training course at the MTO. (The procedures for examinations are detailed in DASR 66 Appendix II or Appendix III).
4. the issue of certificates in accordance with Appendix III following successful completion of the approved basic or Military Aircraft Type Training courses and examinations specified in subparagraphs (a)(1), (a)(2) and (a)(3), as applicable. ☐ **AMC**

(b) Training, knowledge examinations and practical assessments may only be carried out at the locations identified in the approval certificate and/or at any location specified in the MTOE.

(c) By way of exception to paragraph (b), the MTO may only conduct training, knowledge examinations and practical assessments in locations different from the paragraph (b) locations in accordance with a control procedure specified in the MTOE. Such locations need not be listed in the MTOE.

(d)

1. The MTO may subcontract the conduct of basic theoretical training, Military Aircraft Type Training and related examinations to a non MTO only when under the control of the MTO quality system.
2. The subcontracting of basic theoretical training and examination is limited to DASR 66 Appendix I Modules 01 to 06, and 08 to 10. ☐ **AMC** ☐ **GM** ☐ **GM1**
3. The subcontracting of Military Aircraft Type Training and examination is limited to powerplant, avionic systems, armaments, escape systems and other relevant military-specific systems. ☐ **GM**

(e) An organisation shall not be approved to conduct examinations unless approved to conduct the corresponding training.

147.A.150 - Changes to the Maintenance Training Organisation

(a) The MTO shall notify the DASA of any proposed changes to the organisation that affect the approval before any such change takes place, in order to enable the DASA to determine continued compliance with this DASR and to amend if necessary the MTO approval certificate.

Superseded

(b) The DASA may prescribe the conditions under which the MTO may operate during such changes unless the DASA determines that the MTO approval must be suspended.

(c) Failure to inform the DASA of such changes may result in suspension or revocation of the MTO approval certificate backdated to the actual date of the changes.

147.A.155 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. The MTO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings as specified under DASR 147.A.160 ☐ **AMC**; and

2. The DASA being granted access to the MTO to determine continued compliance with this DASR; and ☐ **AMC**

3. The certificate not being surrendered or revoked.

(b) Upon surrender or revocation, the approval shall be returned to the DASA.

147.A.160 - Findings of non-compliance

Refer to GR.60 Oversight and enforcement.

SUBPART C - APPROVED BASIC TRAINING COURSE

☐ **AMC to Subpart C**

147.A.200 - The approved basic training course

(a) The approved basic training course shall consist of knowledge training, knowledge examination, practical training and a practical assessment.

(b) The knowledge training element shall cover all subjects of the relevant MAML category as specified in DASR 66. ☐ **AMC** ☐ **AMC1**

(c) The knowledge examination element shall cover a representative cross section of all subjects from the paragraph (b) training element.

(d) The practical training element shall cover the practical use of common tooling/equipment, the disassembly/assembly of a representative selection of aircraft parts and the participation in representative maintenance activities being carried out relevant to the particular DASR 66 complete module. ☐ **AMC**

(e) The practical assessment element shall cover the practical training and determine whether the student is competent at using tools and equipment and working in accordance with maintenance manuals.

(f) The duration and minimum number of practical training hours to be completed on basic training courses shall be in accordance with Annex A to AMC 147.A.140. ☐ **AMC** ☐ **AMC1**

Superseded

(g) The duration of conversion courses between (sub)categories shall be determined by the MTO through an assessment of the basic training syllabus and the related practical training needs.

147.A.205 - Basic knowledge examinations

Basic knowledge examinations shall: ☐ **AMC** ☐ **AMC1**

(a) Be in accordance with the standard defined in DASR 66.

(b) Be conducted without the use of training notes.

(c) Cover a representative cross section of subjects from the particular module of training completed in accordance with DASR 66.

147.A.210 - Basic practical assessment

(a) Basic practical assessments shall be carried out during the basic maintenance training course by the nominated practical assessors at the completion of each visit period to the practical workshops/maintenance facility.

(b) The student shall achieve an assessed pass with respect to DASR 147.A.200(e). ☐ **AMC**

SUBPART D - AIRCRAFT TYPE/TASK TRAINING

147.A.300 - Aircraft type/task training

An MTO shall be approved to carry out DASR 66 aircraft type and/or task training or part thereof, subject to compliance with the standard specified in DASR 66.A.45. ☐ **AMC**

147.A.305 - Aircraft type examinations and task assessments

An MTO approved in accordance with DASR 147.A.300 to conduct Military Aircraft Type Training or part thereof, shall conduct the related aircraft type examinations or aircraft task assessments specified in DASR 66 subject to compliance with the aircraft type and/or task standard specified in DASR 66.A.45.

Annexes/Appendixes

Annex A to AMC 147.A.140 - Maintenance Training Organisation Exposition

MAINTENANCE TRAINING ORGANISATION EXPOSITION CONTENT

1. The following subject headings form the basis of the MTOE required by DASR 147.A.140.

2. For standardisation purposes and to facilitate the production of the MTOE by the DASR 147 Maintenance Training Organisation (MTO) DASA recommends adoption of the following format for the MTOE. It is not mandatory to assemble the MTOE in this manner as long as a cross-reference index is included in the MTOE as an Appendix and the Part 1 items remain in

Superseded

Part 1. The MTO should customise the document to suit their organisation and may add pages / paragraphs as necessary.

3. Part 2, 3 and 4 material may be produced as separate detailed manuals subject to the main MTOE containing the Part 2, 3 and 4 fundamental principles and policy on each item. It is then permitted to delegate the approval of these separate manuals to the senior person but this fact and the procedure for doing so should be specified in paragraph 1.10.

4. Where an MTO is approved in accordance with any other DASR which require an exposition, it is acceptable to combine the exposition requirements by merging the Part 1 items and adding the Parts 2, 3 and 4. When this method is used, it is essential to include the cross-reference index of Part 4 item 4.3.

TABLE OF CONTENT

PART 0 – GENERAL ORGANISATION

0.1. List of effective pages

0.2. List of issues / amendments / record of revisions

0.3. Distribution List

0.4. DASR 147 requirements cross-reference list

0.5. General information

2.7. Storage of training records

2.8. Training at locations not listed in paragraph 1.6

2.9. Organisation of examinations

2.10. Security and preparation of examination material

2.11. Preparation of examination rooms

2.12. Conduct of examinations (basic knowledge examinations, aircraft type / task training examinations)

2.13. Conduct of practical assessments (during basic knowledge training and aircraft type / task training)

2.14. Marking and record of examinations

2.15. Storage of examination records

2.16. Examinations at locations not listed in paragraph 1.6

2.17. Preparation, control and issue of basic / type training course certificates

2.18 Control of contracted / tasked organisations

PART 3 – TRAINING SYSTEM QUALITY PROCEDURES

3.1. Audit of training

3.2. Audit of examinations

3.3. Analysis of examination results

3.4. Audit and analysis remedial action

Superseded

3.5. Accountable Manager annual review

3.6. Qualifying the instructors

3.7. Qualifying the examiners and the practical assessors

3.8. Records of qualified instructors, examiners and practical assessors

PART 4 – APPENDICES

4.1. Example of documents and forms used

4.2. Syllabus and Training Needs Analysis (TNA) of each training course

4.3. Cross-reference index

NOTE: Where a Part is not used it should be shown in the MTOE as **NOT APPLICABLE**.

PART 0 – GENERAL ORGANISATION

0.1 – List of effective pages

Example:

Page	Revision
1	Original
2	Original

Page	Revision
3	Original
4	Original

Page	Revision
5	Original
.....	.....

0.2 – List of issues / amendments / record of revisions

Example:

Issue number	Revision number	Date	Reason for change
1	0	19/12/06	N/A
2	0	01/01/12	Extension of the TB1.3 scope of approval
	1	01/01/14	New procedure for the records of students

0.3 – Distribution list

The document should include a distribution list to ensure proper distribution of the MTOE and to demonstrate to the DASA that all personnel involved in the maintenance training have access to the relevant information. This does not mean that all personnel have to be in receipt of a MTOE but that a reasonable number of copies are distributed within the organisation(s) so that all personnel may have

Superseded

quick and easy access to it. Reference should also be made to the location of any e-copies of the MTOE.

Accordingly, the MTOE should be distributed to:

- the Operating Organisation's management personnel (if the MTO is part of an operating Organisation),
- any relevant maintenance organisation, eg when MTO contract / task the practical type training,… or MTO,
- the MTO management personnel and any person at a lower level as necessary; and
- the DASA.

0.4 – DASR 147 requirements cross-reference list

The MTOE should contain a cross-reference list with an explanation as to where each DASR 147 Section A requirement is addressed in the MTOE.

0.5 – General information

This chapter should describe broadly how the whole organisation is organised under the management of the Accountable Manager.

PART 1 – MANAGEMENT

1.1 – Corporate commitment by the Accountable Manager

The Accountable Manager's MTOE statement should embrace the intent of the following paragraph and this statement may be used without amendment. Any modification to the statement should not alter the intent.

This MTOE defines the organisation and procedures upon which the DASR 147 MTO approval is based.

It is accepted that these procedures do not override the necessity of complying with any new or amended regulation published by the DASA from time to time where these new or amended regulations are in conflict with these procedures.

It is understood that the DASA will approve this MTO whilst the DASA is satisfied that the procedures and work standards are being followed. It is understood that the DASA reserves the right to suspend, vary or revoke the DASR 147 MTO approval, as applicable, if the DASA has evidence that the procedures are not followed and the standards not upheld.

These procedures are approved by the undersigned and must be complied with, as applicable, whenever knowledge or practical training is being progressed under the terms of the DASR 147 approval.

The undersigned fully accepts the duties and responsibilities of Accountable Manager as defined in paragraph 1.3.1 of this MTOE.

Signed .....

Dated .....

Superseded

Accountable Manger and .....(quote position).....

For and behalf of .....(quote MTO name).....

1.2 – Management personnel

Accountable Manager .....

Training Manager .....

Quality Manager .....

Examination Manager .....

Other (as required) .....

The Managers specified above are identified and their credentials apart from the Accountable Manager have been submitted on DASR Form 4 to the DASA.

Any changes to the above personnel shall be advised to the DASA. Failure to do so may affect the status of the DASR 147 approval.

1.3 - Duties and responsibilities of management personnel, instructors, knowledge examiners and practical assessors

1.3.1 - Accountable Manager

The Accountable Manager is responsible for:

Ensuring that all instruction and examinations carried out by the MTO meet the standards required by the DASA.

Ensuring that the necessary finance, human resources and facilities are available to enable the MTO to perform the knowledge and / or practical instruction and examinations to which it is committed under the requirements of DASR 147.

Chairing the annual meeting of senior staff to review the overall performance of the MTO.

Ensuring that during periods of absence, control will be maintained for administration purposes by (Insert name / position in MTO), who will accept full responsibility for all training issues and related decisions.

The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.

NOTES: (not for inclusion in the MTOE)

Any additional duties and responsibilities within the MTO may be added or delegated provided they do not conflict with those above, which constitute the Accountable Manager's responsibilities under DASR 147.

Superseded

The MTO should decide who will be responsible for liaison with the DASA and show this in their terms of reference. If more than one person is nominated it must be clearly shown what each person is responsible for with, as a general rule, no overlapping of responsibility

1.3.2 - Training Manager

The Training Manager will undertake:

- The responsibilities of the nominated person at (insert name of DASR 147 MTO).
- The duties and responsibilities of the DASR 147 approved examiner during the absence of any nominated approved examiner(s).

The Training Manager will ensure that:

- The Accountable Manager is kept informed as to the state of compliance of the MTO with DASR 147.
- The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.
- Sufficient staff with appropriate qualifications are selected, trained and developed, to plan, perform, supervise, examine and assess students as required.
- All necessary Airworthiness data published by the DASA and Aircraft manufacturers as appropriate, is made available.
- All changes to the MTOE and associated manuals are notified immediately to the DASA.
- The MTOE and associated manuals are amended as required.
- Knowledge examiners, instructors and practical assessors are fully trained and assessed regularly for competence and that all records pertaining to these personnel are kept up to date.
- Contracted / tasked staff including any part time staff conform to the requirements of DASR 147 and the training procedures.
- Office accommodation and facilities are available appropriate to the management of the planned training and for the use of training staff.
- Staff development and update training is undertaken and recorded.
- That all approved courses and examinations are delivered to the standard and content at the required level of knowledge, as specified in DASR 147.
- A working environment is provided appropriate to the tasks being undertaken.
- There are sufficient storage facilities, tools, equipment, materials and publications available to perform the planned practical tasks.
- Secure facilities are available for the storage of examination papers prior to the examination and for the storage of completed students answer papers.
- The interviewing of students prior to, during and on completion of the course is effective and without bias.

Superseded

- Student and staff records are produced and stored in secure conditions.
- Any person to whom any of these responsibilities may be delegated is aware of current regulations.
- Corrective action is carried out for the findings of quality audits.
- The follow up and rectification of findings required to re-establish the required standards of training, examination or maintenance standards.
- That sufficient questions are available to produce the examination papers required to cover the syllabus in accordance with DASR 66 Appendix II and III. If questions are utilised for progress tests they should not be used in the final examination.
- The security and validity of all examinations are in accordance with the requirements of DASR 66 and DASR 147.
- All examinations and assessment timetables are coordinated.
- Compliance with the examination question review procedures is as required by DASR 66 and / or DASR 147.

NOTES:

This paragraph should emphasise that the nominated post holder for training is responsible to ensure that all training is carried out to an approved standard and describes the extent of their authority as regards their DASR 147 responsibility.

These duties may be adjusted to suit the requirements of the DASR 147 Approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66

1.3.3 - Quality Manager

The Quality Manager has direct access to the Accountable Manager in the event of any reported discrepancy not being adequately attended to by the relevant person, or in respect of any disagreement over the nature of the discrepancy.

The Quality Manager is responsible for:

- Establishing an independent quality system to monitor compliance with DASR 147 requirements.
- Assessing non-approved contracted/tasked MTOs working under the MTO quality system.
- Implementing a quality audit programme in which compliance with all training procedures is reviewed at regular intervals, and any observed non-compliances or poor standards are brought to the attention of the person concerned via their Manager.
- Proposing all corrective action necessary for eliminating non-compliance and ensuring that these corrective actions are initiated and when completed are efficient and meet their intended purpose.
- Requiring remedial action, as necessary, by the Training Manager or the Accountable Manager.
- The MTOE and associated manuals are amended as required.

Superseded

NOTES:

These duties may be adjusted to suit the requirements of the DASR 147 approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66.

It must be remembered that the quality audit system is required to be independent and where possible the Quality Manager and quality audit personnel should not be directly involved in the training process. Where for reasons of expediency it is necessary to utilise training staff, it would then become necessary for a second member of staff to be nominated to audit those functions performed by the Quality Manager.

Alternatively / additionally an external auditor acceptable to the DASA may be contracted / tasked in order to ensure the required independence.

1.3.4 - Examiner

The examiner is a nominated person who will determine the level of theoretical knowledge of the trainees on a particular module, element, or part thereof. The function may include the drafting and/ or the selection of questions (MCQs and Essays), the performance of the examination exercise itself for essay questions, the evaluation of the correctness of answers (except when correct answers are pre-determined) and the final judgment regarding the level of knowledge demonstrated by the trainee.

NOTE: Persons solely supervising an exam session consisting of pre-selected MCQ questions are not considered as examiners but are considered as support staffs (invigilators) and are therefore not subject to the knowledge and experience requirements but need to be trained to the examination procedure described in the MTOE.

The invigilation of examinations shall ensure that the conditions for examination comply with DASR 66 Appendix II (for basic training) or Appendix III, paragraph 3 (for type training)

1.3.5 - Instructor

The instructor is a nominated person who will carry out instructional duties for which they are qualified (type / basic training).

Additionally, the instructor can:

- Draft questions for examination banks for courses they are authorised;
- Undertake duties of invigilator where they are not involved in the instruction of that particular phase examination.

NOTE: The instructor is not necessarily the person involved into the drafting of the course material (content, duration etc…), however they must be involved at some point into the organisation of the lessons themselves (creation of the instructor notes, slides, sequencing etc…).

1.3.6 - Practical assessor

The practical assessor is a nominated person who will determine the level of practical knowledge/ practical skills of the trainees on a particular module, element, or part thereof. The function may include the drafting and / or the selection of practical tasks and shall include the performance of the

Superseded

practical assessment itself, and the evaluation of the practical abilities on the tasks covered by the assessment.

1.4 - Management personnel organisation chart

A flow chart should provide a comprehensive understanding of the whole MTO. It should give further details on the management system and should clearly show the independence of the quality monitoring system, including the links between the Quality Assurance department and the other departments. This flow chart may be combined or subdivided as necessary, depending on the size and the complexity of the MTO.

NOTE: The MTOE must also define who deputises for any senior person in case of lengthy absenceList of Instructional and Examination staff

1.5 - List of Instructional and Examination staff

This paragraph should give broad figures to show that the number of people dedicated to the performance of the approved training activity is adequate. It is not necessary to give the detailed number of employees of the whole MTO but only the number of those involved in training.

This could be presented as follows:

APPOINTMENT:	**NAME:**	**COMPETENCIES:**
Training Manager Deputy Training Manager Quality Manager Examiner Examiner / Instructor Instructor Instructor Instructor Instructor / Invigilator Invigilator Practical Assessor		enter here those areas each person is qualified to instruct using DASR 66 module / sub-modules OR type of aircraft and the specific areas they are qualified to instruct, ie Airframe, Engine, Electrical Instrument, Auto flight, Radio or Radar.

NOTES:

According to the size and complexity of the MTO, this table may be further developed.

The DASR 147 examiners are the only persons allowed to produce / select examination papers. They may nominate other persons to mark completed examinations. The examiners and these persons should be other than the knowledge instructors involved in the instruction of that particular module/ sub-module.

Superseded

1.6 - List of approved addresses

This paragraph should list those address(es) at which instruction and/or practical training are to be carried out for the duration of the DASR 147 course.

The names, address(es) and approval numbers of any proposed DASR 145 AMO at which it is proposed to carry out student practical training in order to fulfil the requirements of DASR 147 may be kept in another document or procedure and cross referenced here.

1.7 - List of contracted / tasked organisations as per DASR 147.A.145(d)

This paragraph should list those address(s) at which training beyond the capacity of the DASR 147 MTO may be carried out. DASR 66 Modules 1 to 6 inclusive and 8 to 10 inclusive may be contracted/ tasked to organisations not specialised in aircraft maintenance and where the DASR 147.A.200 practical training element does not apply.

1.8 - General description of facilities at paragraph 1.6 addresses

Include here the facilities such as desks, chairs, lockers, overhead projectors, other teaching aids, etc for each of the offices, classrooms, practical training workshops and examination rooms provided.

1.9 - Specific list of courses and aircraft type examinations approved by the DASA

This paragraph must contain a list of the DASR 147 course(s) for which approval is held. This should also include 'Differences' courses.

For example: Airbus A319/320/321 (CFM 56) B1 - differences to A319/320/321 (V2500) B1.

1.10 - Notification procedures regarding changes to the MTO

Include here any cross references to the intended procedures for continued validity of the approval in compliance with the requirements of DASR 147.A.155.

The MTOs 'nominated person' is responsible for informing the DASA of any proposed changes. (Refer Part 1 - Management, paragraph 1.3.2 of the MTOE as an example)

1.11 - MTOE and associated manuals amendment procedure

Detail here or cross refer to the procedures to be followed for the amendment of the MTOE and any associated procedures and or documents.

PART 2 - TRAINING AND EXAMINATION PROCEDURES

2.1 - Organisation of courses

In this paragraph, the MTO should detail the procedures in place in order to organise the courses and to ensure that all necessary means are available to deliver in good conditions and by appropriately qualified staff all the course elements as required by the DASR 66 syllabus. Such procedures may include a formalised review of the availability of required appropriate training rooms, materials, STDs, specialists… and resulting in training programme.

2.2 - Preparation of course material

Training material should meet the requirements of DASR 66. It should also state how the approved MTO produces a course for a new aircraft type (new approval scope). This would typically include the

Superseded

production of the Training Needs Analysis and eventually a training programme for the new aircraft that has to list what is being taught, to what level and for how long. Once completed, this should be sent to the DASA for review and approval of the course. This list must be given a unique reference number and revision status. In order to get the course approved a set of multi-choice questions and a copy of the course notes used by the student must also be submitted.

The course notes must reflect the training programme and be given the same reference number and revision status. This may cross refer to a separate procedure in which details of how the standard course lecture notes are produced which would include content, indexing, chapter and page numbering, font, etc, in the 'House Style'.

This same procedure should also be utilised to list the responsibilities by DASR 66 module / submodule for the production, review and amendment of lecture notes.

Include cross references to any procedures used for the inclusion of other course material, eg Aircraft Manuals, and/or Standard Text Books used for note preparation and available to students as reference material

2.3 - Preparation of classrooms and equipment

Cross reference to any procedures for the preparation of classrooms and reporting of faults to any classroom equipment, general maintenance procedures and the control of the teaching environment.

2.4 - Preparation of workshop / maintenance facilities and equipment

Cross reference to any procedures for the reporting of faults to any workshop equipment, general maintenance procedures and the control of the teaching environment.

Cross reference to procedures for the ordering and storage of aircraft materials used in the production of practical tasks, and for the ordering and acquisition of any new equipment required to complete the tasks.

Cross reference to the procedures for ensuring that all test equipment and/or tooling requiring calibration are correctly forecast and expedited.

2.5 - Conduct of theoretical training and practical training (during basic knowledge training and type / task training)

Describe the method utilised in teaching the Basic / Type knowledge and practical training courses for which the MTO is approved.

Cross refer to the low level document referred to in paragraph 2.1 above.

2.6 - Records of training carried out

Cross refer to procedures for the production, maintenance and security of student files.

These should include details of all student attendance's, final knowledge examinations, practical assessments and any re-examination carried out and their results by DASR 66 complete module/sub-module for basic training courses and for type training, information of those courses completed, their content and at which levels they were instructed and examined.

There should also be reference to the basic work experience' records required to be kept by the student whilst they are undergoing their live operating aircraft experience.

Superseded

The use of an "Aircraft Maintenance Engineers Log Book" is a good example.

2.7 - Storage of training Records

Cross refer to procedures for the storage of staff and student's records.

As a minimum, the procedures shall describe which are the documents that are recorded, the means that are used for recording and how long the records will be kept. These may be electronically based provided that adequate safeguards are in place to prevent unauthorised access and alteration.

2.8 - Training at locations not listed in paragraph 1.6

Should the Management wish to contract/task part of the practical training, control procedures must be in place. These procedures should effectively reflect those of the DASA in auditing the DASR 147 MTO.

Any training carried out at address not listed at 1.6 above must be approved by the DASA and control procedures must be in place to ensure that the proposed contracted/tasked organisation is in compliance with the requirements of DASR 66 and DASR 147.

A contract must be in place with the proposed organisation in which it is agreed that access is granted to the DASA for the purpose of audit.

NOTE:

The "APPLICATION TO CONDUCT TRAINING / EXAMINATIONS* AT A LOCATION REMOTE FROM THE DASR 147 APPROVED SITE" Form should be annexed to the MTOE.

2.9 - Organisation of examinations

For Military Aircraft Maintenance Licence (MAML) course a high-level document detailing the course examinations, when each DASR 66 module / sub-module is to be examined and to what DASR 66 level. This should include the knowledge, practical training elements and how the number of hours of each comply with the percentage requirements of DASR AMC 147A.200.

For aircraft type training, the course syllabus should be used to prepare an examination schedule. The examination schedule should detail the examinations to be set at the end of each major phase within the syllabus. A final examination should be conducted at the end of the type training course. The final examination should be recorded. Refer to DASR 66 Appendix III, paragraphs 4.1.

2.10 - Security and preparation of examination material

For MAML courses detail the preparation and security of Examination papers. Number of Questions and Timing must be in accordance with DASR 66 Appendix II.

Cross reference to procedures for the production of examination questions, their validation and security of the data bank.

For type training it is sufficient to detail the preparation and security procedures in place for the production and storage of examination papers.

2.11 - Preparation of examination rooms

Cross refer to procedure to be followed by the examiner and Invigilator in preparing the examination room for examinations.

An invigilator's ready reference sheet for briefing the candidates prior to the examination should be available in procedures and cross referenced here.

2.12 - Conduct of examinations (basic knowledge examinations, aircraft type / task training examinations)

A procedure should be in place to define how the MTO manage the conduction of examinations in respect of the DASR 147.A.135. The procedure should define responsibilities for the conduct and monitoring of the examination, and the instruction for the performance of the examination such as:

- information about the examination type (number of questions, type of questions, topics, maximum duration, ...)
- information about the conduct of the examination (format of the responses, distribution and collating of copies, login if electronic systems,...)
- information about rules to be respected (communication, utilisation of documents / means / personal objects,...) and measures to be taken in case of someone found cheating.

The minimum conditions to be authorised to monitor an examination should also be described.

It is recommended that examination papers of candidates should be identified through an anonymous system, eg numbering system,…), to be described in the MTOE.

A procedure should be in place for checking that all the pages of each examination paper are complete at examination completion and that all examination papers are accounted for.

Both the written element and the multi-choice question elements should be marked to 75% with no penalty marking. Refer DASR 66 Appendix II.

Nothing other than the actual examination / answer paper is permitted to be on the candidate's desk.

All wall charts and/or other visual teaching aids should be removed from the examination room.

2.13 - Conduct of practical assessments (during basic knowledge training and aircraft type / task training)

Superseded

Cross refer to procedures used for assessment of student hand skills, and the standard tasks set throughout the course. A set number of mandatory tasks should be assessed to have been completed to a satisfactory standard.

2.14 - Marking and record of examinations

A procedure should define how and by whom an examination is corrected, how and by whom is the examination result validated, how the examination result is transmitted to the student and under which format the examination is recorded.

Cross refer to procedures for the marking of completed examination papers and the recording of results.

Cross refer to a procedure for practical assessments and recording of results.

2.15 - Storage of examination records

A procedure should define as a minimum which are the documents that are recorded, the means / systems / storage locations that are used to ensure a retention period of 20 years.

Electronic means of storage may be utilised as required, provided the appropriate computer security systems are in place.

2.16 - Examinations at locations not listed in paragraph 1.6

Cross refer to the control procedure in common with part 2.8 above. This location must comply with the requirements of 2.10, 2.11, 2.12, 2.13, 2.14 and 2.15 above.

Consideration is needed for the security / control of examinations and their completed examination papers and/or practical assessment results.

2.17 - Preparation, control and issue of Basic / Type training course certificates

The procedure for issuing training certificates should define the responsibility for verifying the data, the procedures for issuing and archiving the certificates and the authorised signatories.

The certificates should be prepared to reflect that illustrated in DASR 147 Appendix III and tightly controlled prior to issue, with a system in place to ensure that each copy is numbered as part of a sequence and recorded as issued to a candidate by name.

2.18 - Control of contracted / tasked organisations

When contracted / tasked organisations are defined in paragraph 1.7, it is necessary to define how and how often these contracted / tasked organisations are controlled in terms of training and examination / evaluation and means in place.

Cross refer to procedures for the control of contracted / tasked organisations as appropriate.

PART 3 - TRAINING SYSTEM QUALITY PROCEDURES

3.1 - Audit of training

The approved MTO should develop a form / audit checklist to be used by the auditor that would demonstrate that all the requirements of DASR 147 have been reviewed during the audit process. The audit plan should indicate applicability of the various activities to be monitored and more than one

Superseded

list may be necessary (rolling audit). Each list should be shown against a timetable to indicate when the particular item is scheduled for audit and when the audit was completed. A complete audit of the DASR 147 MTO must be completed every 12 months.

For courses and depending on the approval scope (Basic and / or Type) at least one basic and/or type, theoretical and practical course should be audited each year.

Cross refer to the various procedures required for quality auditing, reporting findings and levels with any corrective actions required.

A management control and follow up system must also be in place and may not be contracted out.

Cross reference to any quality procedures manual if available is permitted, but this system must relate to and make reference to the relevant DASR 147 requirements.

3.2 - Audit of examinations

Must be audited annually but may be part of the rolling audit procedure.

3.3 - Analysis of examination results

Examination results should be analysed on completion of each examination and any questions amended as necessary. Cross refer to procedures detailing responsibilities.

3.4 - Audit and analysis remedial action

Cross refer to procedures for the reporting of findings and for corrective actions.

3.5 - Accountable Manager annual review

At least once a year a review of the activities must be made by the Accountable Manager. Points discussed on a set date should include:

- Projects requiring financial support.
- Sufficient staff employed to meet foreseen training program.
- DASR 147 MTO review.
- Examinations and assessments.
- Student achievements.
- Student support.
- Quality Assurance review.
- Continuous improvement opportunities.

3.6 - Qualifying the instructors

List of acceptable staff qualifications:

- Include procedures for the induction of inexperienced instructors as required.
- Where relevant include procedures for the employment of part time or contract instructors. All staff should have an appreciation of the contents of DASR 66 and DASR 147.

Superseded

- Cross refer to the list of present staff / qualification.

NOTE: staff employed prior to DASR 147 application who's qualifications were previously acceptable, will continue to be accepted.

- Cross refer to procedures for staff development.

3.7 - Qualifying the examiners and the practical assessors

Examiners should have a full understanding of all the requirements of DASR 66 and DASR 147. Cross refer to procedures for staff development.

Cross refer to the list of staff / qualifications.

Practical work assessors should be assessed as being competent in accordance with an approved process.

3.8 - Records of qualified instructors, examiners and practical assessors

The MTO must maintain a record of all training staff which must include details of the scope of their authorisation.

Training staff must be provided with evidence of the scope of their authorisation.

The following minimum information should be kept on record in respect of each instructor, examiner and practical assessor:

- Name
- Date of Birth
- Personnel Number
- Experience
- Qualifications relevant to the approval scope
- Training History (before entry)
- Training (basic training, type training, continuation training)
- Scope of activity
- Date of first issue of the authorisation
- If appropriate – expiry date of the authorisation
- Starting date of employment

The records may be kept in any format (hard copy or computer based) subject to the appropriate security requirements.

Persons authorised to access the system should be maintained at a minimum to ensure that records cannot be altered in an unauthorised manner or that such confidential records become accessible to unauthorised persons.

The training staff should be given reasonable access on request to their own records.

Superseded

The authorisation document should be in a style that makes its scope clear to training staff and any authorised person that may be required to review the document. Where codes are used to define scope, an interpretation document should be readily available.

Training staff are not required to carry the authorisation document at all times but should produce it within a reasonable time of a request from an authorised person. Authorised persons, apart from the MTO's quality department must include DASA.

Any member of the DASA is classed as an authorised person when investigating the records system for initial and continued approval or when the DASA has cause to doubt the competence of a particular training staff

PART 4 - APPENDICES

4.1 - Examples of documents and forms used

This section should include examples of all documents and forms used by the MTO in the conduct of its DASR 147 function.

Some examples are listed below:

- Student attendance record
- Course certificate(s)
- Certificate(s) of training
- Classroom plan (exam purposes)
- Course critique
- Course results
- Course design / change plan
- Exam answer sheet
- Exam results
- Internal audit procedure
- Internal audit schedule
- Internal audit report
- Application to conduct courses / examinations at a remote location
- Interview report form
- MTOE amendment request
- MTOE amendment request log
- Staff training record (to include qualifications, history and subjects taught)
- Staff terms of reference
- Student training / examination and assessment form

Superseded

- Training course review
- Quality system
- Aircraft visit form

4.2 - Syllabus and Training Needs Analysis (TNA) of each training course

This section should contain the syllabus for each DASA approved course and should also contain the associated Training Needs and Analysis.

4.3 - Cross-reference Index

If applicable - self-explanatory

Appendix I - Basic Training Course Duration and Minimum Practical Training Hours

1. The duration and minimum number of practical training hours to be completed on a basic training course shall be as follows:

Basic Course (See Note 3)	Duration (Theory) (See Note 1)	Duration (Practical) (See Note 1)	Minimum Practical Training Hours for maximum reduction in experience requirements (See Note 2)
A1	-	-	520
A2	-	-	420
A3	-	-	520
A4	-	-	520
B1.1	-	-	960

Superseded

B1.2	-	-	800
B1.3	-	-	960
B1.4	-	-	960
B2	-	-	960
A (Module 50-55 Extensions)	-	-	(See Note 1)
B1 (Module 50-55 Extensions)	-	-	(See Note 1)
B2 (Module 50-55 Extensions)	-	-	(See Note 1)

Superseded

NOTES:

1. To be specified by the DASA (if req'd).
2. These are the minimum practical training hours required for an individual to be able to claim reductions in the experience requirements as detailed in DASR 66.A.30(a)1(iii) and DASR 66.A.30(a)2(iii).
3. The duration of initial training (theory and practical) is determined during the training development process and it relates to trade training, not training for licences.

Appendix II - Reserved

Appendix III - Examples of Training Certificates

1. Basic Training/Examination ☐ AMC

The information contained within the example of a basic training certificate detailed below is to be used for recognition of completion of either the basic training, the basic examination or both the basic training and basic training examinations.

A training certificate shall clearly identify each individual module or sub-module examination by date passed together with the corresponding version of Appendix I to DASR 66.

2. Military Aircraft Type Training

The information contained within the example of a Military Aircraft Type Training certificate as detailed below is to be used for recognition of completion of either the theoretical elements, the practical elements or both the theoretical and practical elements of the Military Aircraft Type Rating training course.

The appropriate references should be deleted as applicable and the course type box shall detail whether only the theoretical elements or the practical elements were covered or whether theoretical and practical elements were covered.

The training certificate shall clearly identify if the course is a complete course or a partial course (such as an airframe or powerplant or avionic/electrical or military specific systems only) or a difference

course based upon the applicant's previous experience, eg A400M course for C295M technicians. If the course is not a complete one, the certificate shall identify whether the interface areas have been covered or not.

SUBPART C - APPROVED BASIC TRAINING COURSE

SECTION A

SUBPART A - GENERAL

147.A.05 - Scope

This section establishes the requirements to be met by an Organisation seeking approval as a Maintenance Training Organisation (MTO) to conduct training and examination as specified in DASR 66.

147.A.10 - General

An MTO shall be a legal entity, a part of a legal entity or part of a military organisation. ☐ **GM**

147.A.15 - Application

☐ **AMC**

(a) An application for an approval or for the amendment of an existing approval shall be made to the Defence Aviation Safety Authority (DASA) in an agreed form and manner.

(b) An application for or for the change to an approval shall include the following information:

1. The registered name and address of the applicant;
2. The address of the MTO requiring the approval or change to the approval;
3. The intended scope of approval or change to the scope of approval;
4. The name and signature of the Accountable Manager;
5. The date of application.

SUBPART B - ORGANISATIONAL REQUIREMENTS

147.A.100 - Facility requirements

(a) The size and structure of facilities shall ensure protection from the prevailing weather elements and proper operation of all planned training and examination.

(b) Fully enclosed appropriate accommodation shall be provided for the instruction of theory and the conduct of knowledge examinations. ☐ **AMC** ☐ **AMC1**

1. The maximum number of students undergoing knowledge training during any training session shall not exceed a level conducive to an effective learning environment.

Superseded

2. The size of accommodation for examination purposes shall be such that no student can read the paperwork or computer screen of any other student from their position during examinations.

(c) The paragraph (b) accommodation environment shall be maintained such that students are able to concentrate on their studies or examination as appropriate, without undue distraction or discomfort.

(d) In the case of a basic training course, basic training workshops and/or maintenance facilities separate from training classrooms shall be provided for practical instruction appropriate to the planned training course. If, however, the MTO is unable to provide such facilities, arrangements may be made with another organisation to provide such workshops and/or maintenance facilities, in which case a written agreement shall be made with such organisation specifying the conditions of access and use thereof. The DASA shall require access to any such organisation and the written agreement shall specify this access. ☐ **AMC**

(e) In the case of a Military Aircraft Type/Task Training course, access shall be provided to appropriate facilities containing examples of aircraft type as specified in DASR 147.A.115(d).

(f) The maximum number of students undergoing practical training during any training session shall not exceed 15 per supervisor or assessor. ☐ **AMC**

(g) Office accommodation shall be provided for instructors, knowledge examiners and practical assessors of a standard to ensure that they can prepare for their duties without undue distraction or discomfort.

(h) Secure storage facilities shall be provided for examination papers and training records. The storage environment shall be such that documents remain in good condition for the retention period as specified in DASR 147.A.125. The storage facilities and office accommodation may be combined, subject to adequate security. The requirements of this paragraph are equally applicable to other storage media, eg electronic etc.

(i) A library shall be provided containing all technical material appropriate to the scope and level of training undertaken. ☐ **AMC** ☐ **GM**

147.A.105 - Personnel requirements

(a) The MTO shall appoint an Accountable Manager who has corporate authority for ensuring that all training commitments can be carried out to the standard required by DASR 147. The Accountable Manager shall: ☐ **AMC**

1. Ensure that all necessary resources are available to accomplish training commitments in accordance with DASR 147.A.130(a) to support the organisation approval.

2. Establish and promote the quality policy specified in DASR 147.A.130(b).

3. Demonstrate a basic understanding of this DASR.

(b) A person or group of persons, whose responsibilities include ensuring that the MTO is in compliance with the requirements of this DASR, shall be nominated. Such person(s) shall be responsible to the Accountable Manager. The senior person or one person from the group of persons may also be the Accountable Manager subject to meeting the requirements for the Accountable Manager as defined in paragraph (a). ☐ **AMC** ☐ **GM**

Superseded

(c) The MTO shall contract/appoint sufficient staff to plan/perform knowledge and practical training, conduct knowledge examinations and practical assessments in accordance with the approval. ☐ **AMC**

(d) By way of exception to paragraph (c), when another organisation is used to provide practical training and assessments, such other organisation's staff may be nominated to carry out practical training and assessments.

(e) Any person may carry out any combination of the roles of instructor, knowledge examiner and practical assessor, subject to compliance with paragraph (f).

(f) The experience and qualifications of instructors, knowledge examiners and practical assessors shall be established in accordance with criteria published by the DASA or in accordance with a procedure and to a standard agreed by the DASA. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(g) The instructors, knowledge examiners and practical assessors shall be specified in the MTO Exposition (MTOE) for the acceptance of such staff.

(h) Instructors and knowledge examiners shall undergo updating training at least every 24 months relevant to current technology, practical skills, human factors and the latest training techniques appropriate to the knowledge being trained or examined. ☐ **AMC** ☐ **GM**

147.A.110 - Records of instructors, examiners and assessors

☐ **AMC** ☐ **GM**

(a) The MTO shall maintain a record of all instructors, knowledge examiners and practical assessors for a minimum period of 5 years after termination of their employment or assignment within the MTO. These records shall reflect the experience and qualification, training history and any subsequent training undertaken. ☐ **AMC** ☐ **GM**

(b) Terms of reference shall be drawn up for all instructors, knowledge examiners and practical assessors. ☐ **AMC**

147.A.115 - Instructional equipment

(a) Each classroom shall have appropriate presentation equipment of a standard that ensures students can easily read presentation text/drawings/diagrams and figures from any position in the classroom. Presentation equipment may include representative synthetic training devices to assist students in their understanding of the particular subject matter where such devices are considered beneficial for such purposes. ☐ **GM**

(b) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have all tools and equipment necessary to perform the approved scope of training.

(c) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have an appropriate selection of aircraft, engines, aircraft parts, avionic equipment, armaments, escape systems and other relevant military-specific systems. ☐ **AMC**

(d) The Military Aircraft Type Training organisation as specified in DASR 147.A.100(e) shall have access to the appropriate aircraft type. Synthetic training devices may be used when such synthetic training devices ensure adequate training standards. ☐ **AMC**

Superseded

147.A.120 - Maintenance training material

(a) Maintenance training course material shall be provided to the student and cover as applicable: ☐ **AMC** ☐ **AMC1** ☐ **AMC2**

1. The basic knowledge syllabus specified in DASR 66 for the relevant Military Aircraft Maintenance Licence (MAML) category or subcategory; and

2. The type course content required by DASR 66 for the relevant aircraft type and MAML category or subcategory.

(b) Students shall have access to examples of maintenance documentation and technical information in the library as specified in DASR 147.A.100(i).

147.A.125 - Records of students

The MTO shall keep all student training, examination and assessment records for at least twenty years following completion of the particular student's course. ☐ **AMC** ☐ **GM**

147.A.130 - Training procedures and quality system

☐ **AMC**

(a) The MTO shall establish procedures acceptable to the DASA to ensure proper training standards and compliance with all relevant requirements in this DASR.

(b) The MTO shall establish a quality system including: ☐ **AMC** ☐ **GM**

1. An independent audit function to monitor training standards, the integrity of knowledge examinations and practical assessments, compliance with and adequacy of the procedures; and

2. A feedback system of audit findings to the person(s) and ultimately to the Accountable Manager referred to in DASR 147.A.105(a) to ensure, as necessary, preventive and corrective actions.

147.A.135 - Examinations

(a) The examination staff shall ensure the security of all questions. ☐ **AMC**

(b) Any student found during a knowledge examination to be cheating or in possession of material pertaining to the examination subject other than the examination papers and associated authorised documentation shall be disqualified from taking the examination. In such a case the student shall not take any examination for at least 12 months after the date of the incident unless the DASA approves otherwise. The DASA shall be informed of any such incident together with the details of any enquiry within one calendar month. ☐ **AMC** ☐ **AMC1**

(c) Any examiner found during a knowledge examination to be providing question answers to any student being examined shall be disqualified from acting as an examiner and the examination

Superseded

declared void. The DASA (DCA) shall be informed of any such occurrence within one calendar month. ☐ **AMC** ☐ **GM**

147.A.140 - Maintenance Training Organisation Exposition

☐ **AMC** ☐ **AMC1**

(a) The MTO shall provide an exposition for use by the MTO describing the organisation and its procedures and containing the following information:

1. A statement signed by the Accountable Manager confirming that the MTOE and any associated manuals define the MTO's compliance with this DASR and shall be complied with at all times. Where the Accountable Manager is not the Chief Executive Officer or the senior military commander of the organisation, the Chief Executive Officer or the senior military commander of the organisation shall countersign that statement.

2. The title(s) and name(s) of the person(s) nominated in accordance with DASR 147.A.105(b).

3. The duties and responsibilities of the person(s) specified in subparagraph (a)2, including matters on which they may deal directly with the DASA on behalf of the MTO.

4. A MTO chart showing associated lines of responsibility of the person(s) specified in subparagraph (a)2.

5. A list of the instructors, knowledge examiners and practical assessors.

6. A general description of the training and examination facilities located at each address specified in the MTO's approval certificate, and if appropriate any other location, as required by DASR 147.A.145(b).

7. A list and details of the maintenance training courses which form the extent of the approval. ☐ **GM**

8. The MTO's exposition amendment procedure.

9. The MTO's procedures, as required by DASR 147.A.130(a).

10. The MTO's control procedure, as required by DASR 147.A.145(c), when authorised to conduct training, examination and assessments in locations different from those specified in DASR 147.A.145(b).

11. A list of the locations pursuant to DASR 147.A.145(b).

12. A list of organisations, if appropriate, as specified in DASR 147.A.145(d).

(b) The MTO's exposition and any subsequent amendments shall be approved by the DASA.

(c) Notwithstanding paragraph (b) minor amendments to the exposition may be approved through an exposition procedure (also called indirect approval). ☐ **GM** ☐ **GM1**

(d) Where an MTO has an extant EMAR / CASA/ EASA Part 147 approval, those parts of the organisation's EMAR / CASA/ EASA Part 147 exposition that are equally applicable to satisfy the DASR 147 requirements will generally be accepted by the DASA as equivalent in respect of

Superseded

the DASR 147 exposition. In this case it is permissible that only those regulations that are military specific need be addressed in the DASR 147 exposition; those regulations covered by read-across of the sections of the EMAR/ CASA/EASA exposition document shall be identified and the EMAR / CASA/ EASA document clause reference quoted.

147.A.145 - Privileges of the Maintenance Training Organisation

(a) The MTO may carry out the following as permitted by and in accordance with the MTOE:

1. Basic training courses to the DASR 66 syllabus, or part thereof. Show ☐ **AMC**
2. Aircraft type/task training courses in accordance with DASR 66, or part thereof.
3. The examinations on behalf of the DASA, including the examination of students who did not attend the basic or Military Aircraft Type Training course at the MTO. (The procedures for examinations are detailed in DASR 66 Appendix II or Appendix III).
4. the issue of certificates in accordance with Appendix III following successful completion of the approved basic or Military Aircraft Type Training courses and examinations specified in subparagraphs (a)(1), (a)(2) and (a)(3), as applicable. ☐ **AMC**

(b) Training, knowledge examinations and practical assessments may only be carried out at the locations identified in the approval certificate and/or at any location specified in the MTOE.

(c) By way of exception to paragraph (b), the MTO may only conduct training, knowledge examinations and practical assessments in locations different from the paragraph (b) locations in accordance with a control procedure specified in the MTOE. Such locations need not be listed in the MTOE.

(d)

1. The MTO may subcontract the conduct of basic theoretical training, Military Aircraft Type Training and related examinations to a non MTO only when under the control of the MTO quality system.
2. The subcontracting of basic theoretical training and examination is limited to DASR 66 Appendix I Modules 01 to 06, and 08 to 10. ☐ **AMC** ☐ **GM** ☐ **GM1**
3. The subcontracting of Military Aircraft Type Training and examination is limited to powerplant, avionic systems, armaments, escape systems and other relevant military-specific systems. ☐ **GM**

(e) An organisation shall not be approved to conduct examinations unless approved to conduct the corresponding training.

147.A.150 - Changes to the Maintenance Training Organisation

(a) The MTO shall notify the DASA of any proposed changes to the organisation that affect the approval before any such change takes place, in order to enable the DASA to determine continued compliance with this DASR and to amend if necessary the MTO approval certificate.

Superseded

(b) The DASA may prescribe the conditions under which the MTO may operate during such changes unless the DASA determines that the MTO approval must be suspended.

(c) Failure to inform the DASA of such changes may result in suspension or revocation of the MTO approval certificate backdated to the actual date of the changes.

147.A.155 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. The MTO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings as specified under DASR 147.A.160 ☐ **AMC**; and

2. The DASA being granted access to the MTO to determine continued compliance with this DASR; and ☐ **AMC**

3. The certificate not being surrendered or revoked.

(b) Upon surrender or revocation, the approval shall be returned to the DASA.

147.A.160 - Findings of non-compliance

Refer to GR.60 Oversight and enforcement.

SUBPART C - APPROVED BASIC TRAINING COURSE

☐ **AMC to Subpart C**

147.A.200 - The approved basic training course

(a) The approved basic training course shall consist of knowledge training, knowledge examination, practical training and a practical assessment.

(b) The knowledge training element shall cover all subjects of the relevant MAML category as specified in DASR 66. ☐ **AMC** ☐ **AMC1**

(c) The knowledge examination element shall cover a representative cross section of all subjects from the paragraph (b) training element.

(d) The practical training element shall cover the practical use of common tooling/equipment, the disassembly/assembly of a representative selection of aircraft parts and the participation in representative maintenance activities being carried out relevant to the particular DASR 66 complete module. ☐ **AMC**

(e) The practical assessment element shall cover the practical training and determine whether the student is competent at using tools and equipment and working in accordance with maintenance manuals.

(f) The duration and minimum number of practical training hours to be completed on basic training courses shall be in accordance with Annex A to AMC 147.A.140. ☐ **AMC** ☐ **AMC1**

Superseded

(g) The duration of conversion courses between (sub)categories shall be determined by the MTO through an assessment of the basic training syllabus and the related practical training needs.

147.A.205 - Basic knowledge examinations

Basic knowledge examinations shall: ☐ **AMC** ☐ **AMC1**

(a) Be in accordance with the standard defined in DASR 66.

(b) Be conducted without the use of training notes.

(c) Cover a representative cross section of subjects from the particular module of training completed in accordance with DASR 66.

147.A.210 - Basic practical assessment

(a) Basic practical assessments shall be carried out during the basic maintenance training course by the nominated practical assessors at the completion of each visit period to the practical workshops/maintenance facility.

(b) The student shall achieve an assessed pass with respect to DASR 147.A.200(e). ☐ **AMC**

SUBPART D - AIRCRAFT TYPE/TASK TRAINING

147.A.300 - Aircraft type/task training

An MTO shall be approved to carry out DASR 66 aircraft type and/or task training or part thereof, subject to compliance with the standard specified in DASR 66.A.45. ☐ **AMC**

147.A.305 - Aircraft type examinations and task assessments

An MTO approved in accordance with DASR 147.A.300 to conduct Military Aircraft Type Training or part thereof, shall conduct the related aircraft type examinations or aircraft task assessments specified in DASR 66 subject to compliance with the aircraft type and/or task standard specified in DASR 66.A.45.

Annexes/Appendixes

Annex A to AMC 147.A.140 - Maintenance Training Organisation Exposition

MAINTENANCE TRAINING ORGANISATION EXPOSITION CONTENT

1. The following subject headings form the basis of the MTOE required by DASR 147.A.140.

2. For standardisation purposes and to facilitate the production of the MTOE by the DASR 147 Maintenance Training Organisation (MTO) DASA recommends adoption of the following format for the MTOE. It is not mandatory to assemble the MTOE in this manner as long as a cross-reference index is included in the MTOE as an Appendix and the Part 1 items remain in

Superseded

Part 1. The MTO should customise the document to suit their organisation and may add pages / paragraphs as necessary.

3. Part 2, 3 and 4 material may be produced as separate detailed manuals subject to the main MTOE containing the Part 2, 3 and 4 fundamental principles and policy on each item. It is then permitted to delegate the approval of these separate manuals to the senior person but this fact and the procedure for doing so should be specified in paragraph 1.10.

4. Where an MTO is approved in accordance with any other DASR which require an exposition, it is acceptable to combine the exposition requirements by merging the Part 1 items and adding the Parts 2, 3 and 4. When this method is used, it is essential to include the cross-reference index of Part 4 item 4.3.

TABLE OF CONTENT

PART 0 – GENERAL ORGANISATION

0.1. List of effective pages

0.2. List of issues / amendments / record of revisions

0.3. Distribution List

0.4. DASR 147 requirements cross-reference list

0.5. General information

PART 1 – MANAGEMENT

1.1. Corporate commitment by the Accountable Manager

1.2. Management personnel

1.3. Duties and responsibilities of management personnel, instructors, knowledge examiners and practical assessors

1.3.1. Accountable Manager

1.3.2. Training Manager

1.3.3. Quality Manager

1.3.4. Examiner

1.3.5. Instructor

1.3.6. Practical Assessor

1.4. Management personnel organisation chart

1.5. List of instructional and examination staff

1.6. List of approved addresses

1.7. List of contracted / tasked organisations as per DASR 147.A.145(d)

1.8. General description of facilities at paragraph 1.6 addresses

Superseded

1.9. Specific list of courses and aircraft type examinations approved by the DASA

1.10. Notification procedures regarding changes to MTO

1.11. MTOE and associated manuals amendment procedure

PART 2 – TRAINING AND EXAMINATION PROCEDURES

2.1. Organisation of courses

2.2. Preparation of course material

2.3. Preparation of classrooms and equipment

2.4. Preparation of workshops / maintenance facilities and equipment

2.5. Conduct of theoretical training and practical training (during basic knowledge training and aircraft type / task training)

2.6. Records of training carried out

2.7. Storage of training records

2.8. Training at locations not listed in paragraph 1.6

2.9. Organisation of examinations

2.10. Security and preparation of examination material

2.11. Preparation of examination rooms

2.12. Conduct of examinations (basic knowledge examinations, aircraft type / task training examinations)

2.13. Conduct of practical assessments (during basic knowledge training and aircraft type / task training)

2.14. Marking and record of examinations

2.15. Storage of examination records

2.16. Examinations at locations not listed in paragraph 1.6

2.17. Preparation, control and issue of basic / type training course certificates

2.18 Control of contracted / tasked organisations

PART 3 – TRAINING SYSTEM QUALITY PROCEDURES

3.1. Audit of training

3.2. Audit of examinations

3.3. Analysis of examination results

3.4. Audit and analysis remedial action

Superseded

3.5. Accountable Manager annual review

3.6. Qualifying the instructors

3.7. Qualifying the examiners and the practical assessors

3.8. Records of qualified instructors, examiners and practical assessors

PART 4 – APPENDICES

4.1. Example of documents and forms used

4.2. Syllabus and Training Needs Analysis (TNA) of each training course

4.3. Cross-reference index

NOTE: Where a Part is not used it should be shown in the MTOE as **NOT APPLICABLE**.

PART 0 – GENERAL ORGANISATION

0.1 – List of effective pages

Example:

Page	Revision
1	Original
2	Original

Page	Revision
3	Original
4	Original

Page	Revision
5	Original
.....	.....

0.2 – List of issues / amendments / record of revisions

Example:

Issue number	Revision number	Date	Reason for change
1	0	19/12/06	N/A
2	0	01/01/12	Extension of the TB1.3 scope of approval
	1	01/01/14	New procedure for the records of students

0.3 – Distribution list

The document should include a distribution list to ensure proper distribution of the MTOE and to demonstrate to the DASA that all personnel involved in the maintenance training have access to the relevant information. This does not mean that all personnel have to be in receipt of a MTOE but that a reasonable number of copies are distributed within the organisation(s) so that all personnel may have

Superseded

quick and easy access to it. Reference should also be made to the location of any e-copies of the MTOE.

Accordingly, the MTOE should be distributed to:

- the Operating Organisation's management personnel (if the MTO is part of an operating Organisation),
- any relevant maintenance organisation, eg when MTO contract / task the practical type training,… or MTO,
- the MTO management personnel and any person at a lower level as necessary; and
- the DASA.

0.4 – DASR 147 requirements cross-reference list

The MTOE should contain a cross-reference list with an explanation as to where each DASR 147 Section A requirement is addressed in the MTOE.

0.5 – General information

This chapter should describe broadly how the whole organisation is organised under the management of the Accountable Manager.

PART 1 – MANAGEMENT

1.1 – Corporate commitment by the Accountable Manager

The Accountable Manager's MTOE statement should embrace the intent of the following paragraph and this statement may be used without amendment. Any modification to the statement should not alter the intent.

This MTOE defines the organisation and procedures upon which the DASR 147 MTO approval is based.

It is accepted that these procedures do not override the necessity of complying with any new or amended regulation published by the DASA from time to time where these new or amended regulations are in conflict with these procedures.

It is understood that the DASA will approve this MTO whilst the DASA is satisfied that the procedures and work standards are being followed. It is understood that the DASA reserves the right to suspend, vary or revoke the DASR 147 MTO approval, as applicable, if the DASA has evidence that the procedures are not followed and the standards not upheld.

These procedures are approved by the undersigned and must be complied with, as applicable, whenever knowledge or practical training is being progressed under the terms of the DASR 147 approval.

The undersigned fully accepts the duties and responsibilities of Accountable Manager as defined in paragraph 1.3.1 of this MTOE.

Signed .....

Dated .....

Superseded

Accountable Manger and .....(quote position).....

For and behalf of .....(quote MTO name).....

1.2 – Management personnel

Accountable Manager .....

Training Manager .....

Quality Manager .....

Examination Manager .....

Other (as required) .....

The Managers specified above are identified and their credentials apart from the Accountable Manager have been submitted on DASR Form 4 to the DASA.

Any changes to the above personnel shall be advised to the DASA. Failure to do so may affect the status of the DASR 147 approval.

1.3 - Duties and responsibilities of management personnel, instructors, knowledge examiners and practical assessors

1.3.1 - Accountable Manager

The Accountable Manager is responsible for:

Ensuring that all instruction and examinations carried out by the MTO meet the standards required by the DASA.

Ensuring that the necessary finance, human resources and facilities are available to enable the MTO to perform the knowledge and / or practical instruction and examinations to which it is committed under the requirements of DASR 147.

Chairing the annual meeting of senior staff to review the overall performance of the MTO.

Ensuring that during periods of absence, control will be maintained for administration purposes by (Insert name / position in MTO), who will accept full responsibility for all training issues and related decisions.

The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.

NOTES: (not for inclusion in the MTOE)

Any additional duties and responsibilities within the MTO may be added or delegated provided they do not conflict with those above, which constitute the Accountable Manager's responsibilities under DASR 147.

Superseded

The MTO should decide who will be responsible for liaison with the DASA and show this in their terms of reference. If more than one person is nominated it must be clearly shown what each person is responsible for with, as a general rule, no overlapping of responsibility

1.3.2 - Training Manager

The Training Manager will undertake:

- The responsibilities of the nominated person at (insert name of DASR 147 MTO).
- The duties and responsibilities of the DASR 147 approved examiner during the absence of any nominated approved examiner(s).

The Training Manager will ensure that:

- The Accountable Manager is kept informed as to the state of compliance of the MTO with DASR 147.
- The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.
- Sufficient staff with appropriate qualifications are selected, trained and developed, to plan, perform, supervise, examine and assess students as required.
- All necessary Airworthiness data published by the DASA and Aircraft manufacturers as appropriate, is made available.
- All changes to the MTOE and associated manuals are notified immediately to the DASA.
- The MTOE and associated manuals are amended as required.
- Knowledge examiners, instructors and practical assessors are fully trained and assessed regularly for competence and that all records pertaining to these personnel are kept up to date.
- Contracted / tasked staff including any part time staff conform to the requirements of DASR 147 and the training procedures.
- Office accommodation and facilities are available appropriate to the management of the planned training and for the use of training staff.
- Staff development and update training is undertaken and recorded.
- That all approved courses and examinations are delivered to the standard and content at the required level of knowledge, as specified in DASR 147.
- A working environment is provided appropriate to the tasks being undertaken.
- There are sufficient storage facilities, tools, equipment, materials and publications available to perform the planned practical tasks.
- Secure facilities are available for the storage of examination papers prior to the examination and for the storage of completed students answer papers.
- The interviewing of students prior to, during and on completion of the course is effective and without bias.

Superseded

- Student and staff records are produced and stored in secure conditions.
- Any person to whom any of these responsibilities may be delegated is aware of current regulations.
- Corrective action is carried out for the findings of quality audits.
- The follow up and rectification of findings required to re-establish the required standards of training, examination or maintenance standards.
- That sufficient questions are available to produce the examination papers required to cover the syllabus in accordance with DASR 66 Appendix II and III. If questions are utilised for progress tests they should not be used in the final examination.
- The security and validity of all examinations are in accordance with the requirements of DASR 66 and DASR 147.
- All examinations and assessment timetables are coordinated.
- Compliance with the examination question review procedures is as required by DASR 66 and / or DASR 147.

NOTES:

This paragraph should emphasise that the nominated post holder for training is responsible to ensure that all training is carried out to an approved standard and describes the extent of their authority as regards their DASR 147 responsibility.

These duties may be adjusted to suit the requirements of the DASR 147 Approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66

1.3.3 - Quality Manager

The Quality Manager has direct access to the Accountable Manager in the event of any reported discrepancy not being adequately attended to by the relevant person, or in respect of any disagreement over the nature of the discrepancy.

The Quality Manager is responsible for:

- Establishing an independent quality system to monitor compliance with DASR 147 requirements.
- Assessing non-approved contracted/tasked MTOs working under the MTO quality system.
- Implementing a quality audit programme in which compliance with all training procedures is reviewed at regular intervals, and any observed non-compliances or poor standards are brought to the attention of the person concerned via their Manager.
- Proposing all corrective action necessary for eliminating non-compliance and ensuring that these corrective actions are initiated and when completed are efficient and meet their intended purpose.
- Requiring remedial action, as necessary, by the Training Manager or the Accountable Manager.
- The MTOE and associated manuals are amended as required.

Superseded

NOTES:

These duties may be adjusted to suit the requirements of the DASR 147 approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66.

It must be remembered that the quality audit system is required to be independent and where possible the Quality Manager and quality audit personnel should not be directly involved in the training process. Where for reasons of expediency it is necessary to utilise training staff, it would then become necessary for a second member of staff to be nominated to audit those functions performed by the Quality Manager.

Alternatively / additionally an external auditor acceptable to the DASA may be contracted / tasked in order to ensure the required independence.

1.3.4 - Examiner

The examiner is a nominated person who will determine the level of theoretical knowledge of the trainees on a particular module, element, or part thereof. The function may include the drafting and/ or the selection of questions (MCQs and Essays), the performance of the examination exercise itself for essay questions, the evaluation of the correctness of answers (except when correct answers are pre-determined) and the final judgment regarding the level of knowledge demonstrated by the trainee.

NOTE: Persons solely supervising an exam session consisting of pre-selected MCQ questions are not considered as examiners but are considered as support staffs (invigilators) and are therefore not subject to the knowledge and experience requirements but need to be trained to the examination procedure described in the MTOE.

The invigilation of examinations shall ensure that the conditions for examination comply with DASR 66 Appendix II (for basic training) or Appendix III, paragraph 3 (for type training)

1.3.5 - Instructor

The instructor is a nominated person who will carry out instructional duties for which they are qualified (type / basic training).

Additionally, the instructor can:

- Draft questions for examination banks for courses they are authorised;
- Undertake duties of invigilator where they are not involved in the instruction of that particular phase examination.

NOTE: The instructor is not necessarily the person involved into the drafting of the course material (content, duration etc…), however they must be involved at some point into the organisation of the lessons themselves (creation of the instructor notes, slides, sequencing etc…).

1.3.6 - Practical assessor

The practical assessor is a nominated person who will determine the level of practical knowledge/ practical skills of the trainees on a particular module, element, or part thereof. The function may include the drafting and / or the selection of practical tasks and shall include the performance of the

Superseded

practical assessment itself, and the evaluation of the practical abilities on the tasks covered by the assessment.

1.4 - Management personnel organisation chart

A flow chart should provide a comprehensive understanding of the whole MTO. It should give further details on the management system and should clearly show the independence of the quality monitoring system, including the links between the Quality Assurance department and the other departments. This flow chart may be combined or subdivided as necessary, depending on the size and the complexity of the MTO.

NOTE: The MTOE must also define who deputises for any senior person in case of lengthy absenceList of Instructional and Examination staff

1.5 - List of Instructional and Examination staff

This paragraph should give broad figures to show that the number of people dedicated to the performance of the approved training activity is adequate. It is not necessary to give the detailed number of employees of the whole MTO but only the number of those involved in training.

This could be presented as follows:

APPOINTMENT:	**NAME:**	**COMPETENCIES:**
Training Manager Deputy Training Manager Quality Manager Examiner Examiner / Instructor Instructor Instructor Instructor Instructor / Invigilator Invigilator Practical Assessor		enter here those areas each person is qualified to instruct using DASR 66 module / sub-modules OR type of aircraft and the specific areas they are qualified to instruct, ie Airframe, Engine, Electrical Instrument, Auto flight, Radio or Radar.

NOTES:

According to the size and complexity of the MTO, this table may be further developed.

The DASR 147 examiners are the only persons allowed to produce / select examination papers. They may nominate other persons to mark completed examinations. The examiners and these persons should be other than the knowledge instructors involved in the instruction of that particular module/ sub-module.

Superseded

1.6 - List of approved addresses

This paragraph should list those address(es) at which instruction and/or practical training are to be carried out for the duration of the DASR 147 course.

The names, address(es) and approval numbers of any proposed DASR 145 AMO at which it is proposed to carry out student practical training in order to fulfil the requirements of DASR 147 may be kept in another document or procedure and cross referenced here.

1.7 - List of contracted / tasked organisations as per DASR 147.A.145(d)

This paragraph should list those address(s) at which training beyond the capacity of the DASR 147 MTO may be carried out. DASR 66 Modules 1 to 6 inclusive and 8 to 10 inclusive may be contracted/ tasked to organisations not specialised in aircraft maintenance and where the DASR 147.A.200 practical training element does not apply.

1.8 - General description of facilities at paragraph 1.6 addresses

Include here the facilities such as desks, chairs, lockers, overhead projectors, other teaching aids, etc for each of the offices, classrooms, practical training workshops and examination rooms provided.

1.9 - Specific list of courses and aircraft type examinations approved by the DASA

This paragraph must contain a list of the DASR 147 course(s) for which approval is held. This should also include 'Differences' courses.

For example: Airbus A319/320/321 (CFM 56) B1 - differences to A319/320/321 (V2500) B1.

1.10 - Notification procedures regarding changes to the MTO

Include here any cross references to the intended procedures for continued validity of the approval in compliance with the requirements of DASR 147.A.155.

The MTOs 'nominated person' is responsible for informing the DASA of any proposed changes. (Refer Part 1 - Management, paragraph 1.3.2 of the MTOE as an example)

1.11 - MTOE and associated manuals amendment procedure

Detail here or cross refer to the procedures to be followed for the amendment of the MTOE and any associated procedures and or documents.

PART 2 - TRAINING AND EXAMINATION PROCEDURES

2.1 - Organisation of courses

In this paragraph, the MTO should detail the procedures in place in order to organise the courses and to ensure that all necessary means are available to deliver in good conditions and by appropriately qualified staff all the course elements as required by the DASR 66 syllabus. Such procedures may include a formalised review of the availability of required appropriate training rooms, materials, STDs, specialists… and resulting in training programme.

2.2 - Preparation of course material

Training material should meet the requirements of DASR 66. It should also state how the approved MTO produces a course for a new aircraft type (new approval scope). This would typically include the

Superseded

production of the Training Needs Analysis and eventually a training programme for the new aircraft that has to list what is being taught, to what level and for how long. Once completed, this should be sent to the DASA for review and approval of the course. This list must be given a unique reference number and revision status. In order to get the course approved a set of multi-choice questions and a copy of the course notes used by the student must also be submitted.

The course notes must reflect the training programme and be given the same reference number and revision status. This may cross refer to a separate procedure in which details of how the standard course lecture notes are produced which would include content, indexing, chapter and page numbering, font, etc, in the 'House Style'.

This same procedure should also be utilised to list the responsibilities by DASR 66 module / submodule for the production, review and amendment of lecture notes.

Include cross references to any procedures used for the inclusion of other course material, eg Aircraft Manuals, and/or Standard Text Books used for note preparation and available to students as reference material

2.3 - Preparation of classrooms and equipment

Cross reference to any procedures for the preparation of classrooms and reporting of faults to any classroom equipment, general maintenance procedures and the control of the teaching environment.

2.4 - Preparation of workshop / maintenance facilities and equipment

Cross reference to any procedures for the reporting of faults to any workshop equipment, general maintenance procedures and the control of the teaching environment.

Cross reference to procedures for the ordering and storage of aircraft materials used in the production of practical tasks, and for the ordering and acquisition of any new equipment required to complete the tasks.

Cross reference to the procedures for ensuring that all test equipment and/or tooling requiring calibration are correctly forecast and expedited.

2.5 - Conduct of theoretical training and practical training (during basic knowledge training and type / task training)

Describe the method utilised in teaching the Basic / Type knowledge and practical training courses for which the MTO is approved.

Cross refer to the low level document referred to in paragraph 2.1 above.

2.6 - Records of training carried out

Cross refer to procedures for the production, maintenance and security of student files.

These should include details of all student attendance's, final knowledge examinations, practical assessments and any re-examination carried out and their results by DASR 66 complete module/sub-module for basic training courses and for type training, information of those courses completed, their content and at which levels they were instructed and examined.

There should also be reference to the basic work experience' records required to be kept by the student whilst they are undergoing their live operating aircraft experience.

Superseded

The use of an "Aircraft Maintenance Engineers Log Book" is a good example.

2.7 - Storage of training Records

Cross refer to procedures for the storage of staff and student's records.

As a minimum, the procedures shall describe which are the documents that are recorded, the means that are used for recording and how long the records will be kept. These may be electronically based provided that adequate safeguards are in place to prevent unauthorised access and alteration.

2.8 - Training at locations not listed in paragraph 1.6

Should the Management wish to contract/task part of the practical training, control procedures must be in place. These procedures should effectively reflect those of the DASA in auditing the DASR 147 MTO.

Any training carried out at address not listed at 1.6 above must be approved by the DASA and control procedures must be in place to ensure that the proposed contracted/tasked organisation is in compliance with the requirements of DASR 66 and DASR 147.

A contract must be in place with the proposed organisation in which it is agreed that access is granted to the DASA for the purpose of audit.

NOTE:

The "APPLICATION TO CONDUCT TRAINING / EXAMINATIONS* AT A LOCATION REMOTE FROM THE DASR 147 APPROVED SITE" Form should be annexed to the MTOE.

2.9 - Organisation of examinations

For Military Aircraft Maintenance Licence (MAML) course a high-level document detailing the course examinations, when each DASR 66 module / sub-module is to be examined and to what DASR 66 level. This should include the knowledge, practical training elements and how the number of hours of each comply with the percentage requirements of DASR AMC 147A.200.

For aircraft type training, the course syllabus should be used to prepare an examination schedule. The examination schedule should detail the examinations to be set at the end of each major phase within the syllabus. A final examination should be conducted at the end of the type training course. The final examination should be recorded. Refer to DASR 66 Appendix III, paragraphs 4.1.

2.10 - Security and preparation of examination material

For MAML courses detail the preparation and security of Examination papers. Number of Questions and Timing must be in accordance with DASR 66 Appendix II.

Cross reference to procedures for the production of examination questions, their validation and security of the data bank.

For type training it is sufficient to detail the preparation and security procedures in place for the production and storage of examination papers.

2.11 - Preparation of examination rooms

Cross refer to procedure to be followed by the examiner and Invigilator in preparing the examination room for examinations.

An invigilator's ready reference sheet for briefing the candidates prior to the examination should be available in procedures and cross referenced here.

2.12 - Conduct of examinations (basic knowledge examinations, aircraft type / task training examinations)

A procedure should be in place to define how the MTO manage the conduction of examinations in respect of the DASR 147.A.135. The procedure should define responsibilities for the conduct and monitoring of the examination, and the instruction for the performance of the examination such as:

- information about the examination type (number of questions, type of questions, topics, maximum duration, ...)
- information about the conduct of the examination (format of the responses, distribution and collating of copies, login if electronic systems,...)
- information about rules to be respected (communication, utilisation of documents / means / personal objects,...) and measures to be taken in case of someone found cheating.

The minimum conditions to be authorised to monitor an examination should also be described.

It is recommended that examination papers of candidates should be identified through an anonymous system, eg numbering system,…), to be described in the MTOE.

A procedure should be in place for checking that all the pages of each examination paper are complete at examination completion and that all examination papers are accounted for.

Both the written element and the multi-choice question elements should be marked to 75% with no penalty marking. Refer DASR 66 Appendix II.

Nothing other than the actual examination / answer paper is permitted to be on the candidate's desk.

All wall charts and/or other visual teaching aids should be removed from the examination room.

2.13 - Conduct of practical assessments (during basic knowledge training and aircraft type / task training)

Superseded

Cross refer to procedures used for assessment of student hand skills, and the standard tasks set throughout the course. A set number of mandatory tasks should be assessed to have been completed to a satisfactory standard.

2.14 - Marking and record of examinations

A procedure should define how and by whom an examination is corrected, how and by whom is the examination result validated, how the examination result is transmitted to the student and under which format the examination is recorded.

Cross refer to procedures for the marking of completed examination papers and the recording of results.

Cross refer to a procedure for practical assessments and recording of results.

2.15 - Storage of examination records

A procedure should define as a minimum which are the documents that are recorded, the means / systems / storage locations that are used to ensure a retention period of 20 years.

Electronic means of storage may be utilised as required, provided the appropriate computer security systems are in place.

2.16 - Examinations at locations not listed in paragraph 1.6

Cross refer to the control procedure in common with part 2.8 above. This location must comply with the requirements of 2.10, 2.11, 2.12, 2.13, 2.14 and 2.15 above.

Consideration is needed for the security / control of examinations and their completed examination papers and/or practical assessment results.

2.17 - Preparation, control and issue of Basic / Type training course certificates

The procedure for issuing training certificates should define the responsibility for verifying the data, the procedures for issuing and archiving the certificates and the authorised signatories.

The certificates should be prepared to reflect that illustrated in DASR 147 Appendix III and tightly controlled prior to issue, with a system in place to ensure that each copy is numbered as part of a sequence and recorded as issued to a candidate by name.

2.18 - Control of contracted / tasked organisations

When contracted / tasked organisations are defined in paragraph 1.7, it is necessary to define how and how often these contracted / tasked organisations are controlled in terms of training and examination / evaluation and means in place.

Cross refer to procedures for the control of contracted / tasked organisations as appropriate.

PART 3 - TRAINING SYSTEM QUALITY PROCEDURES

3.1 - Audit of training

The approved MTO should develop a form / audit checklist to be used by the auditor that would demonstrate that all the requirements of DASR 147 have been reviewed during the audit process. The audit plan should indicate applicability of the various activities to be monitored and more than one

Superseded

list may be necessary (rolling audit). Each list should be shown against a timetable to indicate when the particular item is scheduled for audit and when the audit was completed. A complete audit of the DASR 147 MTO must be completed every 12 months.

For courses and depending on the approval scope (Basic and / or Type) at least one basic and/or type, theoretical and practical course should be audited each year.

Cross refer to the various procedures required for quality auditing, reporting findings and levels with any corrective actions required.

A management control and follow up system must also be in place and may not be contracted out.

Cross reference to any quality procedures manual if available is permitted, but this system must relate to and make reference to the relevant DASR 147 requirements.

3.2 - Audit of examinations

Must be audited annually but may be part of the rolling audit procedure.

3.3 - Analysis of examination results

Examination results should be analysed on completion of each examination and any questions amended as necessary. Cross refer to procedures detailing responsibilities.

3.4 - Audit and analysis remedial action

Cross refer to procedures for the reporting of findings and for corrective actions.

3.5 - Accountable Manager annual review

At least once a year a review of the activities must be made by the Accountable Manager. Points discussed on a set date should include:

- Projects requiring financial support.
- Sufficient staff employed to meet foreseen training program.
- DASR 147 MTO review.
- Examinations and assessments.
- Student achievements.
- Student support.
- Quality Assurance review.
- Continuous improvement opportunities.

3.6 - Qualifying the instructors

List of acceptable staff qualifications:

- Include procedures for the induction of inexperienced instructors as required.
- Where relevant include procedures for the employment of part time or contract instructors. All staff should have an appreciation of the contents of DASR 66 and DASR 147.

Superseded

- Cross refer to the list of present staff / qualification.

NOTE: staff employed prior to DASR 147 application who's qualifications were previously acceptable, will continue to be accepted.

- Cross refer to procedures for staff development.

3.7 - Qualifying the examiners and the practical assessors

Examiners should have a full understanding of all the requirements of DASR 66 and DASR 147. Cross refer to procedures for staff development.

Cross refer to the list of staff / qualifications.

Practical work assessors should be assessed as being competent in accordance with an approved process.

3.8 - Records of qualified instructors, examiners and practical assessors

The MTO must maintain a record of all training staff which must include details of the scope of their authorisation.

Training staff must be provided with evidence of the scope of their authorisation.

The following minimum information should be kept on record in respect of each instructor, examiner and practical assessor:

- Name
- Date of Birth
- Personnel Number
- Experience
- Qualifications relevant to the approval scope
- Training History (before entry)
- Training (basic training, type training, continuation training)
- Scope of activity
- Date of first issue of the authorisation
- If appropriate – expiry date of the authorisation
- Starting date of employment

The records may be kept in any format (hard copy or computer based) subject to the appropriate security requirements.

Persons authorised to access the system should be maintained at a minimum to ensure that records cannot be altered in an unauthorised manner or that such confidential records become accessible to unauthorised persons.

The training staff should be given reasonable access on request to their own records.

Superseded

The authorisation document should be in a style that makes its scope clear to training staff and any authorised person that may be required to review the document. Where codes are used to define scope, an interpretation document should be readily available.

Training staff are not required to carry the authorisation document at all times but should produce it within a reasonable time of a request from an authorised person. Authorised persons, apart from the MTO's quality department must include DASA.

Any member of the DASA is classed as an authorised person when investigating the records system for initial and continued approval or when the DASA has cause to doubt the competence of a particular training staff

PART 4 - APPENDICES

4.1 - Examples of documents and forms used

This section should include examples of all documents and forms used by the MTO in the conduct of its DASR 147 function.

Some examples are listed below:

- Student attendance record
- Course certificate(s)
- Certificate(s) of training
- Classroom plan (exam purposes)
- Course critique
- Course results
- Course design / change plan
- Exam answer sheet
- Exam results
- Internal audit procedure
- Internal audit schedule
- Internal audit report
- Application to conduct courses / examinations at a remote location
- Interview report form
- MTOE amendment request
- MTOE amendment request log
- Staff training record (to include qualifications, history and subjects taught)
- Staff terms of reference
- Student training / examination and assessment form

Superseded

- Training course review
- Quality system
- Aircraft visit form

4.2 - Syllabus and Training Needs Analysis (TNA) of each training course

This section should contain the syllabus for each DASA approved course and should also contain the associated Training Needs and Analysis.

4.3 - Cross-reference Index

If applicable - self-explanatory

Appendix I - Basic Training Course Duration and Minimum Practical Training Hours

1. The duration and minimum number of practical training hours to be completed on a basic training course shall be as follows:

Basic Course (See Note 3)	Duration (Theory) (See Note 1)	Duration (Practical) (See Note 1)	Minimum Practical Training Hours for maximum reduction in experience requirements (See Note 2)
A1	-	-	520
A2	-	-	420
A3	-	-	520
A4	-	-	520
B1.1	-	-	960

Superseded

B1.2	-	-	800
B1.3	-	-	960
B1.4	-	-	960
B2	-	-	960
A (Module 50-55 Extensions)	-	-	(See Note 1)
B1 (Module 50-55 Extensions)	-	-	(See Note 1)
B2 (Module 50-55 Extensions)	-	-	(See Note 1)

Superseded

NOTES:

1. To be specified by the DASA (if req'd).
2. These are the minimum practical training hours required for an individual to be able to claim reductions in the experience requirements as detailed in DASR 66.A.30(a)1(iii) and DASR 66.A.30(a)2(iii).
3. The duration of initial training (theory and practical) is determined during the training development process and it relates to trade training, not training for licences.

Appendix II - Reserved

Appendix III - Examples of Training Certificates

1. Basic Training/Examination ☐ AMC

The information contained within the example of a basic training certificate detailed below is to be used for recognition of completion of either the basic training, the basic examination or both the basic training and basic training examinations.

A training certificate shall clearly identify each individual module or sub-module examination by date passed together with the corresponding version of Appendix I to DASR 66.

DASR Form 148 - DASR 147 Approved Basic Training Course/ Examination Certificate

2. Military Aircraft Type Training

The information contained within the example of a Military Aircraft Type Training certificate as detailed below is to be used for recognition of completion of either the theoretical elements, the practical elements or both the theoretical and practical elements of the Military Aircraft Type Rating training course.

The appropriate references should be deleted as applicable and the course type box shall detail whether only the theoretical elements or the practical elements were covered or whether theoretical and practical elements were covered.

The training certificate shall clearly identify if the course is a complete course or a partial course (such as an airframe or powerplant or avionic/electrical or military specific systems only) or a difference

course based upon the applicant's previous experience, eg A400M course for C295M technicians. If the course is not a complete one, the certificate shall identify whether the interface areas have been covered or not.

SUBPART D - AIRCRAFT TYPE/TASK TRAINING

SECTION A

SUBPART A - GENERAL

147.A.05 - Scope

This section establishes the requirements to be met by an Organisation seeking approval as a Maintenance Training Organisation (MTO) to conduct training and examination as specified in DASR 66.

147.A.10 - General

An MTO shall be a legal entity, a part of a legal entity or part of a military organisation. **GM**

147.A.15 - Application

AMC

(a) An application for an approval or for the amendment of an existing approval shall be made to the Defence Aviation Safety Authority (DASA) in an agreed form and manner.

(b) An application for or for the change to an approval shall include the following information:

1. The registered name and address of the applicant;
2. The address of the MTO requiring the approval or change to the approval;
3. The intended scope of approval or change to the scope of approval;
4. The name and signature of the Accountable Manager;
5. The date of application.

SUBPART B - ORGANISATIONAL REQUIREMENTS

147.A.100 - Facility requirements

(a) The size and structure of facilities shall ensure protection from the prevailing weather elements and proper operation of all planned training and examination.

(b) Fully enclosed appropriate accommodation shall be provided for the instruction of theory and the conduct of knowledge examinations. **AMC** **AMC1**

1. The maximum number of students undergoing knowledge training during any training session shall not exceed a level conducive to an effective learning environment.

Superseded

2. The size of accommodation for examination purposes shall be such that no student can read the paperwork or computer screen of any other student from their position during examinations.

(c) The paragraph (b) accommodation environment shall be maintained such that students are able to concentrate on their studies or examination as appropriate, without undue distraction or discomfort.

(d) In the case of a basic training course, basic training workshops and/or maintenance facilities separate from training classrooms shall be provided for practical instruction appropriate to the planned training course. If, however, the MTO is unable to provide such facilities, arrangements may be made with another organisation to provide such workshops and/or maintenance facilities, in which case a written agreement shall be made with such organisation specifying the conditions of access and use thereof. The DASA shall require access to any such organisation and the written agreement shall specify this access. ☐ **AMC**

(e) In the case of a Military Aircraft Type/Task Training course, access shall be provided to appropriate facilities containing examples of aircraft type as specified in DASR 147.A.115(d).

(f) The maximum number of students undergoing practical training during any training session shall not exceed 15 per supervisor or assessor. ☐ **AMC**

(g) Office accommodation shall be provided for instructors, knowledge examiners and practical assessors of a standard to ensure that they can prepare for their duties without undue distraction or discomfort.

(h) Secure storage facilities shall be provided for examination papers and training records. The storage environment shall be such that documents remain in good condition for the retention period as specified in DASR 147.A.125. The storage facilities and office accommodation may be combined, subject to adequate security. The requirements of this paragraph are equally applicable to other storage media, eg electronic etc.

(i) A library shall be provided containing all technical material appropriate to the scope and level of training undertaken. ☐ **AMC** ☐ **GM**

147.A.105 - Personnel requirements

(a) The MTO shall appoint an Accountable Manager who has corporate authority for ensuring that all training commitments can be carried out to the standard required by DASR 147. The Accountable Manager shall: ☐ **AMC**

1. Ensure that all necessary resources are available to accomplish training commitments in accordance with DASR 147.A.130(a) to support the organisation approval.

2. Establish and promote the quality policy specified in DASR 147.A.130(b).

3. Demonstrate a basic understanding of this DASR.

(b) A person or group of persons, whose responsibilities include ensuring that the MTO is in compliance with the requirements of this DASR, shall be nominated. Such person(s) shall be responsible to the Accountable Manager. The senior person or one person from the group of persons may also be the Accountable Manager subject to meeting the requirements for the Accountable Manager as defined in paragraph (a). ☐ **AMC** ☐ **GM**

Superseded

(c) The MTO shall contract/appoint sufficient staff to plan/perform knowledge and practical training, conduct knowledge examinations and practical assessments in accordance with the approval. ☐ **AMC**

(d) By way of exception to paragraph (c), when another organisation is used to provide practical training and assessments, such other organisation's staff may be nominated to carry out practical training and assessments.

(e) Any person may carry out any combination of the roles of instructor, knowledge examiner and practical assessor, subject to compliance with paragraph (f).

(f) The experience and qualifications of instructors, knowledge examiners and practical assessors shall be established in accordance with criteria published by the DASA or in accordance with a procedure and to a standard agreed by the DASA. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(g) The instructors, knowledge examiners and practical assessors shall be specified in the MTO Exposition (MTOE) for the acceptance of such staff.

(h) Instructors and knowledge examiners shall undergo updating training at least every 24 months relevant to current technology, practical skills, human factors and the latest training techniques appropriate to the knowledge being trained or examined. ☐ **AMC** ☐ **GM**

147.A.110 - Records of instructors, examiners and assessors

☐ **AMC** ☐ **GM**

(a) The MTO shall maintain a record of all instructors, knowledge examiners and practical assessors for a minimum period of 5 years after termination of their employment or assignment within the MTO. These records shall reflect the experience and qualification, training history and any subsequent training undertaken. ☐ **AMC** ☐ **GM**

(b) Terms of reference shall be drawn up for all instructors, knowledge examiners and practical assessors. ☐ **AMC**

147.A.115 - Instructional equipment

(a) Each classroom shall have appropriate presentation equipment of a standard that ensures students can easily read presentation text/drawings/diagrams and figures from any position in the classroom. Presentation equipment may include representative synthetic training devices to assist students in their understanding of the particular subject matter where such devices are considered beneficial for such purposes. ☐ **GM**

(b) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have all tools and equipment necessary to perform the approved scope of training.

(c) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have an appropriate selection of aircraft, engines, aircraft parts, avionic equipment, armaments, escape systems and other relevant military-specific systems. ☐ **AMC**

(d) The Military Aircraft Type Training organisation as specified in DASR 147.A.100(e) shall have access to the appropriate aircraft type. Synthetic training devices may be used when such synthetic training devices ensure adequate training standards. ☐ **AMC**

Superseded

147.A.120 - Maintenance training material

(a) Maintenance training course material shall be provided to the student and cover as applicable: ☐ **AMC** ☐ **AMC1** ☐ **AMC2**

1. The basic knowledge syllabus specified in DASR 66 for the relevant Military Aircraft Maintenance Licence (MAML) category or subcategory; and

2. The type course content required by DASR 66 for the relevant aircraft type and MAML category or subcategory.

(b) Students shall have access to examples of maintenance documentation and technical information in the library as specified in DASR 147.A.100(i).

147.A.125 - Records of students

The MTO shall keep all student training, examination and assessment records for at least twenty years following completion of the particular student's course. ☐ **AMC** ☐ **GM**

147.A.130 - Training procedures and quality system

☐ **AMC**

(a) The MTO shall establish procedures acceptable to the DASA to ensure proper training standards and compliance with all relevant requirements in this DASR.

(b) The MTO shall establish a quality system including: ☐ **AMC** ☐ **GM**

1. An independent audit function to monitor training standards, the integrity of knowledge examinations and practical assessments, compliance with and adequacy of the procedures; and

2. A feedback system of audit findings to the person(s) and ultimately to the Accountable Manager referred to in DASR 147.A.105(a) to ensure, as necessary, preventive and corrective actions.

147.A.135 - Examinations

(a) The examination staff shall ensure the security of all questions. ☐ **AMC**

(b) Any student found during a knowledge examination to be cheating or in possession of material pertaining to the examination subject other than the examination papers and associated authorised documentation shall be disqualified from taking the examination. In such a case the student shall not take any examination for at least 12 months after the date of the incident unless the DASA approves otherwise. The DASA shall be informed of any such incident together with the details of any enquiry within one calendar month. ☐ **AMC** ☐ **AMC1**

(c) Any examiner found during a knowledge examination to be providing question answers to any student being examined shall be disqualified from acting as an examiner and the examination

Superseded

declared void. The DASA (DCA) shall be informed of any such occurrence within one calendar month. ☐ **AMC** ☐ **GM**

147.A.140 - Maintenance Training Organisation Exposition

☐ **AMC** ☐ **AMC1**

(a) The MTO shall provide an exposition for use by the MTO describing the organisation and its procedures and containing the following information:

1. A statement signed by the Accountable Manager confirming that the MTOE and any associated manuals define the MTO's compliance with this DASR and shall be complied with at all times. Where the Accountable Manager is not the Chief Executive Officer or the senior military commander of the organisation, the Chief Executive Officer or the senior military commander of the organisation shall countersign that statement.

2. The title(s) and name(s) of the person(s) nominated in accordance with DASR 147.A.105(b).

3. The duties and responsibilities of the person(s) specified in subparagraph (a)2, including matters on which they may deal directly with the DASA on behalf of the MTO.

4. A MTO chart showing associated lines of responsibility of the person(s) specified in subparagraph (a)2.

5. A list of the instructors, knowledge examiners and practical assessors.

6. A general description of the training and examination facilities located at each address specified in the MTO's approval certificate, and if appropriate any other location, as required by DASR 147.A.145(b).

7. A list and details of the maintenance training courses which form the extent of the approval. ☐ **GM**

8. The MTO's exposition amendment procedure.

9. The MTO's procedures, as required by DASR 147.A.130(a).

10. The MTO's control procedure, as required by DASR 147.A.145(c), when authorised to conduct training, examination and assessments in locations different from those specified in DASR 147.A.145(b).

11. A list of the locations pursuant to DASR 147.A.145(b).

12. A list of organisations, if appropriate, as specified in DASR 147.A.145(d).

(b) The MTO's exposition and any subsequent amendments shall be approved by the DASA.

(c) Notwithstanding paragraph (b) minor amendments to the exposition may be approved through an exposition procedure (also called indirect approval). ☐ **GM** ☐ **GM1**

(d) Where an MTO has an extant EMAR / CASA/ EASA Part 147 approval, those parts of the organisation's EMAR / CASA/ EASA Part 147 exposition that are equally applicable to satisfy the DASR 147 requirements will generally be accepted by the DASA as equivalent in respect of

Superseded

the DASR 147 exposition. In this case it is permissible that only those regulations that are military specific need be addressed in the DASR 147 exposition; those regulations covered by read-across of the sections of the EMAR/ CASA/EASA exposition document shall be identified and the EMAR / CASA/ EASA document clause reference quoted.

147.A.145 - Privileges of the Maintenance Training Organisation

(a) The MTO may carry out the following as permitted by and in accordance with the MTOE:

1. Basic training courses to the DASR 66 syllabus, or part thereof. Show ☐ **AMC**
2. Aircraft type/task training courses in accordance with DASR 66, or part thereof.
3. The examinations on behalf of the DASA, including the examination of students who did not attend the basic or Military Aircraft Type Training course at the MTO. (The procedures for examinations are detailed in DASR 66 Appendix II or Appendix III).
4. the issue of certificates in accordance with Appendix III following successful completion of the approved basic or Military Aircraft Type Training courses and examinations specified in subparagraphs (a)(1), (a)(2) and (a)(3), as applicable. ☐ **AMC**

(b) Training, knowledge examinations and practical assessments may only be carried out at the locations identified in the approval certificate and/or at any location specified in the MTOE.

(c) By way of exception to paragraph (b), the MTO may only conduct training, knowledge examinations and practical assessments in locations different from the paragraph (b) locations in accordance with a control procedure specified in the MTOE. Such locations need not be listed in the MTOE.

(d)

1. The MTO may subcontract the conduct of basic theoretical training, Military Aircraft Type Training and related examinations to a non MTO only when under the control of the MTO quality system.
2. The subcontracting of basic theoretical training and examination is limited to DASR 66 Appendix I Modules 01 to 06, and 08 to 10. ☐ **AMC** ☐ **GM** ☐ **GM1**
3. The subcontracting of Military Aircraft Type Training and examination is limited to powerplant, avionic systems, armaments, escape systems and other relevant military-specific systems. ☐ **GM**

(e) An organisation shall not be approved to conduct examinations unless approved to conduct the corresponding training.

147.A.150 - Changes to the Maintenance Training Organisation

(a) The MTO shall notify the DASA of any proposed changes to the organisation that affect the approval before any such change takes place, in order to enable the DASA to determine continued compliance with this DASR and to amend if necessary the MTO approval certificate.

Superseded

(b) The DASA may prescribe the conditions under which the MTO may operate during such changes unless the DASA determines that the MTO approval must be suspended.

(c) Failure to inform the DASA of such changes may result in suspension or revocation of the MTO approval certificate backdated to the actual date of the changes.

147.A.155 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. The MTO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings as specified under DASR 147.A.160 ☐ **AMC**; and

2. The DASA being granted access to the MTO to determine continued compliance with this DASR; and ☐ **AMC**

3. The certificate not being surrendered or revoked.

(b) Upon surrender or revocation, the approval shall be returned to the DASA.

147.A.160 - Findings of non-compliance

Refer to GR.60 Oversight and enforcement.

SUBPART C - APPROVED BASIC TRAINING COURSE

☐ **AMC to Subpart C**

147.A.200 - The approved basic training course

(a) The approved basic training course shall consist of knowledge training, knowledge examination, practical training and a practical assessment.

(b) The knowledge training element shall cover all subjects of the relevant MAML category as specified in DASR 66. ☐ **AMC** ☐ **AMC1**

(c) The knowledge examination element shall cover a representative cross section of all subjects from the paragraph (b) training element.

(d) The practical training element shall cover the practical use of common tooling/equipment, the disassembly/assembly of a representative selection of aircraft parts and the participation in representative maintenance activities being carried out relevant to the particular DASR 66 complete module. ☐ **AMC**

(e) The practical assessment element shall cover the practical training and determine whether the student is competent at using tools and equipment and working in accordance with maintenance manuals.

(f) The duration and minimum number of practical training hours to be completed on basic training courses shall be in accordance with Annex A to AMC 147.A.140. ☐ **AMC** ☐ **AMC1**

Superseded

(g) The duration of conversion courses between (sub)categories shall be determined by the MTO through an assessment of the basic training syllabus and the related practical training needs.

147.A.205 - Basic knowledge examinations

Basic knowledge examinations shall: ☐ **AMC** ☐ **AMC1**

(a) Be in accordance with the standard defined in DASR 66.

(b) Be conducted without the use of training notes.

(c) Cover a representative cross section of subjects from the particular module of training completed in accordance with DASR 66.

147.A.210 - Basic practical assessment

(a) Basic practical assessments shall be carried out during the basic maintenance training course by the nominated practical assessors at the completion of each visit period to the practical workshops/maintenance facility.

(b) The student shall achieve an assessed pass with respect to DASR 147.A.200(e). ☐ **AMC**

SUBPART D - AIRCRAFT TYPE/TASK TRAINING

147.A.300 - Aircraft type/task training

An MTO shall be approved to carry out DASR 66 aircraft type and/or task training or part thereof, subject to compliance with the standard specified in DASR 66.A.45. ☐ **AMC**

147.A.305 - Aircraft type examinations and task assessments

An MTO approved in accordance with DASR 147.A.300 to conduct Military Aircraft Type Training or part thereof, shall conduct the related aircraft type examinations or aircraft task assessments specified in DASR 66 subject to compliance with the aircraft type and/or task standard specified in DASR 66.A.45.

Annexes/Appendixes

Annex A to AMC 147.A.140 - Maintenance Training Organisation Exposition

MAINTENANCE TRAINING ORGANISATION EXPOSITION CONTENT

1. The following subject headings form the basis of the MTOE required by DASR 147.A.140.

2. For standardisation purposes and to facilitate the production of the MTOE by the DASR 147 Maintenance Training Organisation (MTO) DASA recommends adoption of the following format for the MTOE. It is not mandatory to assemble the MTOE in this manner as long as a cross-reference index is included in the MTOE as an Appendix and the Part 1 items remain in

Superseded

Part 1. The MTO should customise the document to suit their organisation and may add pages / paragraphs as necessary.

3. Part 2, 3 and 4 material may be produced as separate detailed manuals subject to the main MTOE containing the Part 2, 3 and 4 fundamental principles and policy on each item. It is then permitted to delegate the approval of these separate manuals to the senior person but this fact and the procedure for doing so should be specified in paragraph 1.10.

4. Where an MTO is approved in accordance with any other DASR which require an exposition, it is acceptable to combine the exposition requirements by merging the Part 1 items and adding the Parts 2, 3 and 4. When this method is used, it is essential to include the cross-reference index of Part 4 item 4.3.

	1	01/01/14	New procedure for the records of students

0.3 – Distribution list

The document should include a distribution list to ensure proper distribution of the MTOE and to demonstrate to the DASA that all personnel involved in the maintenance training have access to the relevant information. This does not mean that all personnel have to be in receipt of a MTOE but that a reasonable number of copies are distributed within the organisation(s) so that all personnel may have

Superseded

quick and easy access to it. Reference should also be made to the location of any e-copies of the MTOE.

Accordingly, the MTOE should be distributed to:

- the Operating Organisation's management personnel (if the MTO is part of an operating Organisation),
- any relevant maintenance organisation, eg when MTO contract / task the practical type training,… or MTO,
- the MTO management personnel and any person at a lower level as necessary; and
- the DASA.

0.4 – DASR 147 requirements cross-reference list

The MTOE should contain a cross-reference list with an explanation as to where each DASR 147 Section A requirement is addressed in the MTOE.

0.5 – General information

This chapter should describe broadly how the whole organisation is organised under the management of the Accountable Manager.

PART 1 – MANAGEMENT

1.1 – Corporate commitment by the Accountable Manager

The Accountable Manager's MTOE statement should embrace the intent of the following paragraph and this statement may be used without amendment. Any modification to the statement should not alter the intent.

This MTOE defines the organisation and procedures upon which the DASR 147 MTO approval is based.

It is accepted that these procedures do not override the necessity of complying with any new or amended regulation published by the DASA from time to time where these new or amended regulations are in conflict with these procedures.

It is understood that the DASA will approve this MTO whilst the DASA is satisfied that the procedures and work standards are being followed. It is understood that the DASA reserves the right to suspend, vary or revoke the DASR 147 MTO approval, as applicable, if the DASA has evidence that the procedures are not followed and the standards not upheld.

These procedures are approved by the undersigned and must be complied with, as applicable, whenever knowledge or practical training is being progressed under the terms of the DASR 147 approval.

The undersigned fully accepts the duties and responsibilities of Accountable Manager as defined in paragraph 1.3.1 of this MTOE.

Signed .....

Dated .....

Superseded

Accountable Manger and .....(quote position).....

For and behalf of .....(quote MTO name).....

1.2 – Management personnel

Accountable Manager .....

Training Manager .....

Quality Manager .....

Examination Manager .....

Other (as required) .....

The Managers specified above are identified and their credentials apart from the Accountable Manager have been submitted on DASR Form 4 to the DASA.

Any changes to the above personnel shall be advised to the DASA. Failure to do so may affect the status of the DASR 147 approval.

1.3 - Duties and responsibilities of management personnel, instructors, knowledge examiners and practical assessors

1.3.1 - Accountable Manager

The Accountable Manager is responsible for:

Ensuring that all instruction and examinations carried out by the MTO meet the standards required by the DASA.

Ensuring that the necessary finance, human resources and facilities are available to enable the MTO to perform the knowledge and / or practical instruction and examinations to which it is committed under the requirements of DASR 147.

Chairing the annual meeting of senior staff to review the overall performance of the MTO.

Ensuring that during periods of absence, control will be maintained for administration purposes by (Insert name / position in MTO), who will accept full responsibility for all training issues and related decisions.

The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.

NOTES: (not for inclusion in the MTOE)

Any additional duties and responsibilities within the MTO may be added or delegated provided they do not conflict with those above, which constitute the Accountable Manager's responsibilities under DASR 147.

Superseded

The MTO should decide who will be responsible for liaison with the DASA and show this in their terms of reference. If more than one person is nominated it must be clearly shown what each person is responsible for with, as a general rule, no overlapping of responsibility

1.3.2 - Training Manager

The Training Manager will undertake:

- The responsibilities of the nominated person at (insert name of DASR 147 MTO).
- The duties and responsibilities of the DASR 147 approved examiner during the absence of any nominated approved examiner(s).

The Training Manager will ensure that:

- The Accountable Manager is kept informed as to the state of compliance of the MTO with DASR 147.
- The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.
- Sufficient staff with appropriate qualifications are selected, trained and developed, to plan, perform, supervise, examine and assess students as required.
- All necessary Airworthiness data published by the DASA and Aircraft manufacturers as appropriate, is made available.
- All changes to the MTOE and associated manuals are notified immediately to the DASA.
- The MTOE and associated manuals are amended as required.
- Knowledge examiners, instructors and practical assessors are fully trained and assessed regularly for competence and that all records pertaining to these personnel are kept up to date.
- Contracted / tasked staff including any part time staff conform to the requirements of DASR 147 and the training procedures.
- Office accommodation and facilities are available appropriate to the management of the planned training and for the use of training staff.
- Staff development and update training is undertaken and recorded.
- That all approved courses and examinations are delivered to the standard and content at the required level of knowledge, as specified in DASR 147.
- A working environment is provided appropriate to the tasks being undertaken.
- There are sufficient storage facilities, tools, equipment, materials and publications available to perform the planned practical tasks.
- Secure facilities are available for the storage of examination papers prior to the examination and for the storage of completed students answer papers.
- The interviewing of students prior to, during and on completion of the course is effective and without bias.

Superseded

- Student and staff records are produced and stored in secure conditions.
- Any person to whom any of these responsibilities may be delegated is aware of current regulations.
- Corrective action is carried out for the findings of quality audits.
- The follow up and rectification of findings required to re-establish the required standards of training, examination or maintenance standards.
- That sufficient questions are available to produce the examination papers required to cover the syllabus in accordance with DASR 66 Appendix II and III. If questions are utilised for progress tests they should not be used in the final examination.
- The security and validity of all examinations are in accordance with the requirements of DASR 66 and DASR 147.
- All examinations and assessment timetables are coordinated.
- Compliance with the examination question review procedures is as required by DASR 66 and / or DASR 147.

NOTES:

This paragraph should emphasise that the nominated post holder for training is responsible to ensure that all training is carried out to an approved standard and describes the extent of their authority as regards their DASR 147 responsibility.

These duties may be adjusted to suit the requirements of the DASR 147 Approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66

1.3.3 - Quality Manager

The Quality Manager has direct access to the Accountable Manager in the event of any reported discrepancy not being adequately attended to by the relevant person, or in respect of any disagreement over the nature of the discrepancy.

The Quality Manager is responsible for:

- Establishing an independent quality system to monitor compliance with DASR 147 requirements.
- Assessing non-approved contracted/tasked MTOs working under the MTO quality system.
- Implementing a quality audit programme in which compliance with all training procedures is reviewed at regular intervals, and any observed non-compliances or poor standards are brought to the attention of the person concerned via their Manager.
- Proposing all corrective action necessary for eliminating non-compliance and ensuring that these corrective actions are initiated and when completed are efficient and meet their intended purpose.
- Requiring remedial action, as necessary, by the Training Manager or the Accountable Manager.
- The MTOE and associated manuals are amended as required.

Superseded

NOTES:

These duties may be adjusted to suit the requirements of the DASR 147 approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66.

It must be remembered that the quality audit system is required to be independent and where possible the Quality Manager and quality audit personnel should not be directly involved in the training process. Where for reasons of expediency it is necessary to utilise training staff, it would then become necessary for a second member of staff to be nominated to audit those functions performed by the Quality Manager.

Alternatively / additionally an external auditor acceptable to the DASA may be contracted / tasked in order to ensure the required independence.

1.3.4 - Examiner

The examiner is a nominated person who will determine the level of theoretical knowledge of the trainees on a particular module, element, or part thereof. The function may include the drafting and/ or the selection of questions (MCQs and Essays), the performance of the examination exercise itself for essay questions, the evaluation of the correctness of answers (except when correct answers are pre-determined) and the final judgment regarding the level of knowledge demonstrated by the trainee.

NOTE: Persons solely supervising an exam session consisting of pre-selected MCQ questions are not considered as examiners but are considered as support staffs (invigilators) and are therefore not subject to the knowledge and experience requirements but need to be trained to the examination procedure described in the MTOE.

The invigilation of examinations shall ensure that the conditions for examination comply with DASR 66 Appendix II (for basic training) or Appendix III, paragraph 3 (for type training)

1.3.5 - Instructor

The instructor is a nominated person who will carry out instructional duties for which they are qualified (type / basic training).

Additionally, the instructor can:

- Draft questions for examination banks for courses they are authorised;
- Undertake duties of invigilator where they are not involved in the instruction of that particular phase examination.

NOTE: The instructor is not necessarily the person involved into the drafting of the course material (content, duration etc…), however they must be involved at some point into the organisation of the lessons themselves (creation of the instructor notes, slides, sequencing etc…).

1.3.6 - Practical assessor

The practical assessor is a nominated person who will determine the level of practical knowledge/ practical skills of the trainees on a particular module, element, or part thereof. The function may include the drafting and / or the selection of practical tasks and shall include the performance of the

Superseded

practical assessment itself, and the evaluation of the practical abilities on the tasks covered by the assessment.

1.4 - Management personnel organisation chart

A flow chart should provide a comprehensive understanding of the whole MTO. It should give further details on the management system and should clearly show the independence of the quality monitoring system, including the links between the Quality Assurance department and the other departments. This flow chart may be combined or subdivided as necessary, depending on the size and the complexity of the MTO.

NOTE: The MTOE must also define who deputises for any senior person in case of lengthy absenceList of Instructional and Examination staff

1.5 - List of Instructional and Examination staff

This paragraph should give broad figures to show that the number of people dedicated to the performance of the approved training activity is adequate. It is not necessary to give the detailed number of employees of the whole MTO but only the number of those involved in training.

This could be presented as follows:

APPOINTMENT:	**NAME:**	**COMPETENCIES:**
Training Manager Deputy Training Manager Quality Manager Examiner Examiner / Instructor Instructor Instructor Instructor Instructor / Invigilator Invigilator Practical Assessor		enter here those areas each person is qualified to instruct using DASR 66 module / sub-modules OR type of aircraft and the specific areas they are qualified to instruct, ie Airframe, Engine, Electrical Instrument, Auto flight, Radio or Radar.

NOTES:

According to the size and complexity of the MTO, this table may be further developed.

The DASR 147 examiners are the only persons allowed to produce / select examination papers. They may nominate other persons to mark completed examinations. The examiners and these persons should be other than the knowledge instructors involved in the instruction of that particular module/ sub-module.

Superseded

1.6 - List of approved addresses

This paragraph should list those address(es) at which instruction and/or practical training are to be carried out for the duration of the DASR 147 course.

The names, address(es) and approval numbers of any proposed DASR 145 AMO at which it is proposed to carry out student practical training in order to fulfil the requirements of DASR 147 may be kept in another document or procedure and cross referenced here.

1.7 - List of contracted / tasked organisations as per DASR 147.A.145(d)

This paragraph should list those address(s) at which training beyond the capacity of the DASR 147 MTO may be carried out. DASR 66 Modules 1 to 6 inclusive and 8 to 10 inclusive may be contracted/ tasked to organisations not specialised in aircraft maintenance and where the DASR 147.A.200 practical training element does not apply.

1.8 - General description of facilities at paragraph 1.6 addresses

Include here the facilities such as desks, chairs, lockers, overhead projectors, other teaching aids, etc for each of the offices, classrooms, practical training workshops and examination rooms provided.

1.9 - Specific list of courses and aircraft type examinations approved by the DASA

This paragraph must contain a list of the DASR 147 course(s) for which approval is held. This should also include 'Differences' courses.

For example: Airbus A319/320/321 (CFM 56) B1 - differences to A319/320/321 (V2500) B1.

1.10 - Notification procedures regarding changes to the MTO

Include here any cross references to the intended procedures for continued validity of the approval in compliance with the requirements of DASR 147.A.155.

The MTOs 'nominated person' is responsible for informing the DASA of any proposed changes. (Refer Part 1 - Management, paragraph 1.3.2 of the MTOE as an example)

1.11 - MTOE and associated manuals amendment procedure

Detail here or cross refer to the procedures to be followed for the amendment of the MTOE and any associated procedures and or documents.

PART 2 - TRAINING AND EXAMINATION PROCEDURES

2.1 - Organisation of courses

In this paragraph, the MTO should detail the procedures in place in order to organise the courses and to ensure that all necessary means are available to deliver in good conditions and by appropriately qualified staff all the course elements as required by the DASR 66 syllabus. Such procedures may include a formalised review of the availability of required appropriate training rooms, materials, STDs, specialists… and resulting in training programme.

2.2 - Preparation of course material

Training material should meet the requirements of DASR 66. It should also state how the approved MTO produces a course for a new aircraft type (new approval scope). This would typically include the

Superseded

production of the Training Needs Analysis and eventually a training programme for the new aircraft that has to list what is being taught, to what level and for how long. Once completed, this should be sent to the DASA for review and approval of the course. This list must be given a unique reference number and revision status. In order to get the course approved a set of multi-choice questions and a copy of the course notes used by the student must also be submitted.

The course notes must reflect the training programme and be given the same reference number and revision status. This may cross refer to a separate procedure in which details of how the standard course lecture notes are produced which would include content, indexing, chapter and page numbering, font, etc, in the 'House Style'.

This same procedure should also be utilised to list the responsibilities by DASR 66 module / submodule for the production, review and amendment of lecture notes.

Include cross references to any procedures used for the inclusion of other course material, eg Aircraft Manuals, and/or Standard Text Books used for note preparation and available to students as reference material

2.3 - Preparation of classrooms and equipment

Cross reference to any procedures for the preparation of classrooms and reporting of faults to any classroom equipment, general maintenance procedures and the control of the teaching environment.

2.4 - Preparation of workshop / maintenance facilities and equipment

Cross reference to any procedures for the reporting of faults to any workshop equipment, general maintenance procedures and the control of the teaching environment.

Cross reference to procedures for the ordering and storage of aircraft materials used in the production of practical tasks, and for the ordering and acquisition of any new equipment required to complete the tasks.

Cross reference to the procedures for ensuring that all test equipment and/or tooling requiring calibration are correctly forecast and expedited.

2.5 - Conduct of theoretical training and practical training (during basic knowledge training and type / task training)

Describe the method utilised in teaching the Basic / Type knowledge and practical training courses for which the MTO is approved.

Cross refer to the low level document referred to in paragraph 2.1 above.

2.6 - Records of training carried out

Cross refer to procedures for the production, maintenance and security of student files.

These should include details of all student attendance's, final knowledge examinations, practical assessments and any re-examination carried out and their results by DASR 66 complete module/sub-module for basic training courses and for type training, information of those courses completed, their content and at which levels they were instructed and examined.

There should also be reference to the basic work experience' records required to be kept by the student whilst they are undergoing their live operating aircraft experience.

Superseded

The use of an "Aircraft Maintenance Engineers Log Book" is a good example.

2.7 - Storage of training Records

Cross refer to procedures for the storage of staff and student's records.

As a minimum, the procedures shall describe which are the documents that are recorded, the means that are used for recording and how long the records will be kept. These may be electronically based provided that adequate safeguards are in place to prevent unauthorised access and alteration.

2.8 - Training at locations not listed in paragraph 1.6

Should the Management wish to contract/task part of the practical training, control procedures must be in place. These procedures should effectively reflect those of the DASA in auditing the DASR 147 MTO.

Any training carried out at address not listed at 1.6 above must be approved by the DASA and control procedures must be in place to ensure that the proposed contracted/tasked organisation is in compliance with the requirements of DASR 66 and DASR 147.

A contract must be in place with the proposed organisation in which it is agreed that access is granted to the DASA for the purpose of audit.

NOTE:

The "APPLICATION TO CONDUCT TRAINING / EXAMINATIONS* AT A LOCATION REMOTE FROM THE DASR 147 APPROVED SITE" Form should be annexed to the MTOE.

2.9 - Organisation of examinations

For Military Aircraft Maintenance Licence (MAML) course a high-level document detailing the course examinations, when each DASR 66 module / sub-module is to be examined and to what DASR 66 level. This should include the knowledge, practical training elements and how the number of hours of each comply with the percentage requirements of DASR AMC 147A.200.

For aircraft type training, the course syllabus should be used to prepare an examination schedule. The examination schedule should detail the examinations to be set at the end of each major phase within the syllabus. A final examination should be conducted at the end of the type training course. The final examination should be recorded. Refer to DASR 66 Appendix III, paragraphs 4.1.

2.10 - Security and preparation of examination material

For MAML courses detail the preparation and security of Examination papers. Number of Questions and Timing must be in accordance with DASR 66 Appendix II.

Cross reference to procedures for the production of examination questions, their validation and security of the data bank.

For type training it is sufficient to detail the preparation and security procedures in place for the production and storage of examination papers.

2.11 - Preparation of examination rooms

Cross refer to procedure to be followed by the examiner and Invigilator in preparing the examination room for examinations.

An invigilator's ready reference sheet for briefing the candidates prior to the examination should be available in procedures and cross referenced here.

2.12 - Conduct of examinations (basic knowledge examinations, aircraft type / task training examinations)

A procedure should be in place to define how the MTO manage the conduction of examinations in respect of the DASR 147.A.135. The procedure should define responsibilities for the conduct and monitoring of the examination, and the instruction for the performance of the examination such as:

- information about the examination type (number of questions, type of questions, topics, maximum duration, ...)
- information about the conduct of the examination (format of the responses, distribution and collating of copies, login if electronic systems,...)
- information about rules to be respected (communication, utilisation of documents / means / personal objects,...) and measures to be taken in case of someone found cheating.

The minimum conditions to be authorised to monitor an examination should also be described.

It is recommended that examination papers of candidates should be identified through an anonymous system, eg numbering system,…), to be described in the MTOE.

A procedure should be in place for checking that all the pages of each examination paper are complete at examination completion and that all examination papers are accounted for.

Both the written element and the multi-choice question elements should be marked to 75% with no penalty marking. Refer DASR 66 Appendix II.

Nothing other than the actual examination / answer paper is permitted to be on the candidate's desk.

All wall charts and/or other visual teaching aids should be removed from the examination room.

2.13 - Conduct of practical assessments (during basic knowledge training and aircraft type / task training)

Superseded

Cross refer to procedures used for assessment of student hand skills, and the standard tasks set throughout the course. A set number of mandatory tasks should be assessed to have been completed to a satisfactory standard.

2.14 - Marking and record of examinations

A procedure should define how and by whom an examination is corrected, how and by whom is the examination result validated, how the examination result is transmitted to the student and under which format the examination is recorded.

Cross refer to procedures for the marking of completed examination papers and the recording of results.

Cross refer to a procedure for practical assessments and recording of results.

2.15 - Storage of examination records

A procedure should define as a minimum which are the documents that are recorded, the means / systems / storage locations that are used to ensure a retention period of 20 years.

Electronic means of storage may be utilised as required, provided the appropriate computer security systems are in place.

2.16 - Examinations at locations not listed in paragraph 1.6

Cross refer to the control procedure in common with part 2.8 above. This location must comply with the requirements of 2.10, 2.11, 2.12, 2.13, 2.14 and 2.15 above.

Consideration is needed for the security / control of examinations and their completed examination papers and/or practical assessment results.

2.17 - Preparation, control and issue of Basic / Type training course certificates

The procedure for issuing training certificates should define the responsibility for verifying the data, the procedures for issuing and archiving the certificates and the authorised signatories.

The certificates should be prepared to reflect that illustrated in DASR 147 Appendix III and tightly controlled prior to issue, with a system in place to ensure that each copy is numbered as part of a sequence and recorded as issued to a candidate by name.

2.18 - Control of contracted / tasked organisations

When contracted / tasked organisations are defined in paragraph 1.7, it is necessary to define how and how often these contracted / tasked organisations are controlled in terms of training and examination / evaluation and means in place.

Cross refer to procedures for the control of contracted / tasked organisations as appropriate.

PART 3 - TRAINING SYSTEM QUALITY PROCEDURES

3.1 - Audit of training

The approved MTO should develop a form / audit checklist to be used by the auditor that would demonstrate that all the requirements of DASR 147 have been reviewed during the audit process. The audit plan should indicate applicability of the various activities to be monitored and more than one

Superseded

list may be necessary (rolling audit). Each list should be shown against a timetable to indicate when the particular item is scheduled for audit and when the audit was completed. A complete audit of the DASR 147 MTO must be completed every 12 months.

For courses and depending on the approval scope (Basic and / or Type) at least one basic and/or type, theoretical and practical course should be audited each year.

Cross refer to the various procedures required for quality auditing, reporting findings and levels with any corrective actions required.

A management control and follow up system must also be in place and may not be contracted out.

Cross reference to any quality procedures manual if available is permitted, but this system must relate to and make reference to the relevant DASR 147 requirements.

3.2 - Audit of examinations

Must be audited annually but may be part of the rolling audit procedure.

3.3 - Analysis of examination results

Examination results should be analysed on completion of each examination and any questions amended as necessary. Cross refer to procedures detailing responsibilities.

3.4 - Audit and analysis remedial action

Cross refer to procedures for the reporting of findings and for corrective actions.

3.5 - Accountable Manager annual review

At least once a year a review of the activities must be made by the Accountable Manager. Points discussed on a set date should include:

- Projects requiring financial support.
- Sufficient staff employed to meet foreseen training program.
- DASR 147 MTO review.
- Examinations and assessments.
- Student achievements.
- Student support.
- Quality Assurance review.
- Continuous improvement opportunities.

3.6 - Qualifying the instructors

List of acceptable staff qualifications:

- Include procedures for the induction of inexperienced instructors as required.
- Where relevant include procedures for the employment of part time or contract instructors. All staff should have an appreciation of the contents of DASR 66 and DASR 147.

Superseded

- Cross refer to the list of present staff / qualification.

NOTE: staff employed prior to DASR 147 application who's qualifications were previously acceptable, will continue to be accepted.

- Cross refer to procedures for staff development.

3.7 - Qualifying the examiners and the practical assessors

Examiners should have a full understanding of all the requirements of DASR 66 and DASR 147. Cross refer to procedures for staff development.

Cross refer to the list of staff / qualifications.

Practical work assessors should be assessed as being competent in accordance with an approved process.

3.8 - Records of qualified instructors, examiners and practical assessors

The MTO must maintain a record of all training staff which must include details of the scope of their authorisation.

Training staff must be provided with evidence of the scope of their authorisation.

The following minimum information should be kept on record in respect of each instructor, examiner and practical assessor:

- Name
- Date of Birth
- Personnel Number
- Experience
- Qualifications relevant to the approval scope
- Training History (before entry)
- Training (basic training, type training, continuation training)
- Scope of activity
- Date of first issue of the authorisation
- If appropriate – expiry date of the authorisation
- Starting date of employment

The records may be kept in any format (hard copy or computer based) subject to the appropriate security requirements.

Persons authorised to access the system should be maintained at a minimum to ensure that records cannot be altered in an unauthorised manner or that such confidential records become accessible to unauthorised persons.

The training staff should be given reasonable access on request to their own records.

Superseded

The authorisation document should be in a style that makes its scope clear to training staff and any authorised person that may be required to review the document. Where codes are used to define scope, an interpretation document should be readily available.

Training staff are not required to carry the authorisation document at all times but should produce it within a reasonable time of a request from an authorised person. Authorised persons, apart from the MTO's quality department must include DASA.

Any member of the DASA is classed as an authorised person when investigating the records system for initial and continued approval or when the DASA has cause to doubt the competence of a particular training staff

PART 4 - APPENDICES

4.1 - Examples of documents and forms used

This section should include examples of all documents and forms used by the MTO in the conduct of its DASR 147 function.

Some examples are listed below:

- Student attendance record
- Course certificate(s)
- Certificate(s) of training
- Classroom plan (exam purposes)
- Course critique
- Course results
- Course design / change plan
- Exam answer sheet
- Exam results
- Internal audit procedure
- Internal audit schedule
- Internal audit report
- Application to conduct courses / examinations at a remote location
- Interview report form
- MTOE amendment request
- MTOE amendment request log
- Staff training record (to include qualifications, history and subjects taught)
- Staff terms of reference
- Student training / examination and assessment form

Superseded

- Training course review
- Quality system
- Aircraft visit form

4.2 - Syllabus and Training Needs Analysis (TNA) of each training course

This section should contain the syllabus for each DASA approved course and should also contain the associated Training Needs and Analysis.

4.3 - Cross-reference Index

If applicable - self-explanatory

Appendix I - Basic Training Course Duration and Minimum Practical Training Hours

1. The duration and minimum number of practical training hours to be completed on a basic training course shall be as follows:

Basic Course (See Note 3)	Duration (Theory) (See Note 1)	Duration (Practical) (See Note 1)	Minimum Practical Training Hours for maximum reduction in experience requirements (See Note 2)
A1	-	-	520
A2	-	-	420
A3	-	-	520
A4	-	-	520
B1.1	-	-	960

Superseded

B1.2	-	-	800
B1.3	-	-	960
B1.4	-	-	960
B2	-	-	960
A (Module 50-55 Extensions)	-	-	(See Note 1)
B1 (Module 50-55 Extensions)	-	-	(See Note 1)
B2 (Module 50-55 Extensions)	-	-	(See Note 1)

Superseded

NOTES:

1. To be specified by the DASA (if req'd).
2. These are the minimum practical training hours required for an individual to be able to claim reductions in the experience requirements as detailed in DASR 66.A.30(a)1(iii) and DASR 66.A.30(a)2(iii).
3. The duration of initial training (theory and practical) is determined during the training development process and it relates to trade training, not training for licences.

Appendix II - Reserved

Appendix III - Examples of Training Certificates

1. Basic Training/Examination ☐ AMC

The information contained within the example of a basic training certificate detailed below is to be used for recognition of completion of either the basic training, the basic examination or both the basic training and basic training examinations.

A training certificate shall clearly identify each individual module or sub-module examination by date passed together with the corresponding version of Appendix I to DASR 66.

2. Military Aircraft Type Training

The information contained within the example of a Military Aircraft Type Training certificate as detailed below is to be used for recognition of completion of either the theoretical elements, the practical elements or both the theoretical and practical elements of the Military Aircraft Type Rating training course.

The appropriate references should be deleted as applicable and the course type box shall detail whether only the theoretical elements or the practical elements were covered or whether theoretical and practical elements were covered.

The training certificate shall clearly identify if the course is a complete course or a partial course (such as an airframe or powerplant or avionic/electrical or military specific systems only) or a difference

course based upon the applicant's previous experience, eg A400M course for C295M technicians. If the course is not a complete one, the certificate shall identify whether the interface areas have been covered or not.

DASR Form 149 - DASR 147 Approved Military Aircraft Type Training Course Certificate

Annexes/Appendixes

SECTION A

SUBPART A - GENERAL

147.A.05 - Scope

This section establishes the requirements to be met by an Organisation seeking approval as a Maintenance Training Organisation (MTO) to conduct training and examination as specified in DASR 66.

147.A.10 - General

An MTO shall be a legal entity, a part of a legal entity or part of a military organisation. **GM**

147.A.15 - Application

AMC

(a) An application for an approval or for the amendment of an existing approval shall be made to the Defence Aviation Safety Authority (DASA) in an agreed form and manner.

(b) An application for or for the change to an approval shall include the following information:

1. The registered name and address of the applicant;
2. The address of the MTO requiring the approval or change to the approval;
3. The intended scope of approval or change to the scope of approval;
4. The name and signature of the Accountable Manager;
5. The date of application.

SUBPART B - ORGANISATIONAL REQUIREMENTS

147.A.100 - Facility requirements

(a) The size and structure of facilities shall ensure protection from the prevailing weather elements and proper operation of all planned training and examination.

(b) Fully enclosed appropriate accommodation shall be provided for the instruction of theory and the conduct of knowledge examinations. **AMC** **AMC1**

1. The maximum number of students undergoing knowledge training during any training session shall not exceed a level conducive to an effective learning environment.

Superseded

2. The size of accommodation for examination purposes shall be such that no student can read the paperwork or computer screen of any other student from their position during examinations.

(c) The paragraph (b) accommodation environment shall be maintained such that students are able to concentrate on their studies or examination as appropriate, without undue distraction or discomfort.

(d) In the case of a basic training course, basic training workshops and/or maintenance facilities separate from training classrooms shall be provided for practical instruction appropriate to the planned training course. If, however, the MTO is unable to provide such facilities, arrangements may be made with another organisation to provide such workshops and/or maintenance facilities, in which case a written agreement shall be made with such organisation specifying the conditions of access and use thereof. The DASA shall require access to any such organisation and the written agreement shall specify this access. ☐ **AMC**

(e) In the case of a Military Aircraft Type/Task Training course, access shall be provided to appropriate facilities containing examples of aircraft type as specified in DASR 147.A.115(d).

(f) The maximum number of students undergoing practical training during any training session shall not exceed 15 per supervisor or assessor. ☐ **AMC**

(g) Office accommodation shall be provided for instructors, knowledge examiners and practical assessors of a standard to ensure that they can prepare for their duties without undue distraction or discomfort.

(h) Secure storage facilities shall be provided for examination papers and training records. The storage environment shall be such that documents remain in good condition for the retention period as specified in DASR 147.A.125. The storage facilities and office accommodation may be combined, subject to adequate security. The requirements of this paragraph are equally applicable to other storage media, eg electronic etc.

(i) A library shall be provided containing all technical material appropriate to the scope and level of training undertaken. ☐ **AMC** ☐ **GM**

147.A.105 - Personnel requirements

(a) The MTO shall appoint an Accountable Manager who has corporate authority for ensuring that all training commitments can be carried out to the standard required by DASR 147. The Accountable Manager shall: ☐ **AMC**

1. Ensure that all necessary resources are available to accomplish training commitments in accordance with DASR 147.A.130(a) to support the organisation approval.

2. Establish and promote the quality policy specified in DASR 147.A.130(b).

3. Demonstrate a basic understanding of this DASR.

(b) A person or group of persons, whose responsibilities include ensuring that the MTO is in compliance with the requirements of this DASR, shall be nominated. Such person(s) shall be responsible to the Accountable Manager. The senior person or one person from the group of persons may also be the Accountable Manager subject to meeting the requirements for the Accountable Manager as defined in paragraph (a). ☐ **AMC** ☐ **GM**

Superseded

(c) The MTO shall contract/appoint sufficient staff to plan/perform knowledge and practical training, conduct knowledge examinations and practical assessments in accordance with the approval. ☐ **AMC**

(d) By way of exception to paragraph (c), when another organisation is used to provide practical training and assessments, such other organisation's staff may be nominated to carry out practical training and assessments.

(e) Any person may carry out any combination of the roles of instructor, knowledge examiner and practical assessor, subject to compliance with paragraph (f).

(f) The experience and qualifications of instructors, knowledge examiners and practical assessors shall be established in accordance with criteria published by the DASA or in accordance with a procedure and to a standard agreed by the DASA. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(g) The instructors, knowledge examiners and practical assessors shall be specified in the MTO Exposition (MTOE) for the acceptance of such staff.

(h) Instructors and knowledge examiners shall undergo updating training at least every 24 months relevant to current technology, practical skills, human factors and the latest training techniques appropriate to the knowledge being trained or examined. ☐ **AMC** ☐ **GM**

147.A.110 - Records of instructors, examiners and assessors

☐ **AMC** ☐ **GM**

(a) The MTO shall maintain a record of all instructors, knowledge examiners and practical assessors for a minimum period of 5 years after termination of their employment or assignment within the MTO. These records shall reflect the experience and qualification, training history and any subsequent training undertaken. ☐ **AMC** ☐ **GM**

(b) Terms of reference shall be drawn up for all instructors, knowledge examiners and practical assessors. ☐ **AMC**

147.A.115 - Instructional equipment

(a) Each classroom shall have appropriate presentation equipment of a standard that ensures students can easily read presentation text/drawings/diagrams and figures from any position in the classroom. Presentation equipment may include representative synthetic training devices to assist students in their understanding of the particular subject matter where such devices are considered beneficial for such purposes. ☐ **GM**

(b) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have all tools and equipment necessary to perform the approved scope of training.

(c) The basic training workshops and/or maintenance facilities as specified in DASR 147.A.100(d) shall have an appropriate selection of aircraft, engines, aircraft parts, avionic equipment, armaments, escape systems and other relevant military-specific systems. ☐ **AMC**

(d) The Military Aircraft Type Training organisation as specified in DASR 147.A.100(e) shall have access to the appropriate aircraft type. Synthetic training devices may be used when such synthetic training devices ensure adequate training standards. ☐ **AMC**

Superseded

147.A.120 - Maintenance training material

(a) Maintenance training course material shall be provided to the student and cover as applicable: ☐ **AMC** ☐ **AMC1** ☐ **AMC2**

1. The basic knowledge syllabus specified in DASR 66 for the relevant Military Aircraft Maintenance Licence (MAML) category or subcategory; and

2. The type course content required by DASR 66 for the relevant aircraft type and MAML category or subcategory.

(b) Students shall have access to examples of maintenance documentation and technical information in the library as specified in DASR 147.A.100(i).

147.A.125 - Records of students

The MTO shall keep all student training, examination and assessment records for at least twenty years following completion of the particular student's course. ☐ **AMC** ☐ **GM**

147.A.130 - Training procedures and quality system

☐ **AMC**

(a) The MTO shall establish procedures acceptable to the DASA to ensure proper training standards and compliance with all relevant requirements in this DASR.

(b) The MTO shall establish a quality system including: ☐ **AMC** ☐ **GM**

1. An independent audit function to monitor training standards, the integrity of knowledge examinations and practical assessments, compliance with and adequacy of the procedures; and

2. A feedback system of audit findings to the person(s) and ultimately to the Accountable Manager referred to in DASR 147.A.105(a) to ensure, as necessary, preventive and corrective actions.

147.A.135 - Examinations

(a) The examination staff shall ensure the security of all questions. ☐ **AMC**

(b) Any student found during a knowledge examination to be cheating or in possession of material pertaining to the examination subject other than the examination papers and associated authorised documentation shall be disqualified from taking the examination. In such a case the student shall not take any examination for at least 12 months after the date of the incident unless the DASA approves otherwise. The DASA shall be informed of any such incident together with the details of any enquiry within one calendar month. ☐ **AMC** ☐ **AMC1**

(c) Any examiner found during a knowledge examination to be providing question answers to any student being examined shall be disqualified from acting as an examiner and the examination

Superseded

declared void. The DASA (DCA) shall be informed of any such occurrence within one calendar month. ☐ **AMC** ☐ **GM**

147.A.140 - Maintenance Training Organisation Exposition

☐ **AMC** ☐ **AMC1**

(a) The MTO shall provide an exposition for use by the MTO describing the organisation and its procedures and containing the following information:

1. A statement signed by the Accountable Manager confirming that the MTOE and any associated manuals define the MTO's compliance with this DASR and shall be complied with at all times. Where the Accountable Manager is not the Chief Executive Officer or the senior military commander of the organisation, the Chief Executive Officer or the senior military commander of the organisation shall countersign that statement.

2. The title(s) and name(s) of the person(s) nominated in accordance with DASR 147.A.105(b).

3. The duties and responsibilities of the person(s) specified in subparagraph (a)2, including matters on which they may deal directly with the DASA on behalf of the MTO.

4. A MTO chart showing associated lines of responsibility of the person(s) specified in subparagraph (a)2.

5. A list of the instructors, knowledge examiners and practical assessors.

6. A general description of the training and examination facilities located at each address specified in the MTO's approval certificate, and if appropriate any other location, as required by DASR 147.A.145(b).

7. A list and details of the maintenance training courses which form the extent of the approval. ☐ **GM**

8. The MTO's exposition amendment procedure.

9. The MTO's procedures, as required by DASR 147.A.130(a).

10. The MTO's control procedure, as required by DASR 147.A.145(c), when authorised to conduct training, examination and assessments in locations different from those specified in DASR 147.A.145(b).

11. A list of the locations pursuant to DASR 147.A.145(b).

12. A list of organisations, if appropriate, as specified in DASR 147.A.145(d).

(b) The MTO's exposition and any subsequent amendments shall be approved by the DASA.

(c) Notwithstanding paragraph (b) minor amendments to the exposition may be approved through an exposition procedure (also called indirect approval). ☐ **GM** ☐ **GM1**

(d) Where an MTO has an extant EMAR / CASA/ EASA Part 147 approval, those parts of the organisation's EMAR / CASA/ EASA Part 147 exposition that are equally applicable to satisfy the DASR 147 requirements will generally be accepted by the DASA as equivalent in respect of

Superseded

the DASR 147 exposition. In this case it is permissible that only those regulations that are military specific need be addressed in the DASR 147 exposition; those regulations covered by read-across of the sections of the EMAR/ CASA/EASA exposition document shall be identified and the EMAR / CASA/ EASA document clause reference quoted.

147.A.145 - Privileges of the Maintenance Training Organisation

(a) The MTO may carry out the following as permitted by and in accordance with the MTOE:

1. Basic training courses to the DASR 66 syllabus, or part thereof. Show ☐ **AMC**
2. Aircraft type/task training courses in accordance with DASR 66, or part thereof.
3. The examinations on behalf of the DASA, including the examination of students who did not attend the basic or Military Aircraft Type Training course at the MTO. (The procedures for examinations are detailed in DASR 66 Appendix II or Appendix III).
4. the issue of certificates in accordance with Appendix III following successful completion of the approved basic or Military Aircraft Type Training courses and examinations specified in subparagraphs (a)(1), (a)(2) and (a)(3), as applicable. ☐ **AMC**

(b) Training, knowledge examinations and practical assessments may only be carried out at the locations identified in the approval certificate and/or at any location specified in the MTOE.

(c) By way of exception to paragraph (b), the MTO may only conduct training, knowledge examinations and practical assessments in locations different from the paragraph (b) locations in accordance with a control procedure specified in the MTOE. Such locations need not be listed in the MTOE.

(d)

1. The MTO may subcontract the conduct of basic theoretical training, Military Aircraft Type Training and related examinations to a non MTO only when under the control of the MTO quality system.
2. The subcontracting of basic theoretical training and examination is limited to DASR 66 Appendix I Modules 01 to 06, and 08 to 10. ☐ **AMC** ☐ **GM** ☐ **GM1**
3. The subcontracting of Military Aircraft Type Training and examination is limited to powerplant, avionic systems, armaments, escape systems and other relevant military-specific systems. ☐ **GM**

(e) An organisation shall not be approved to conduct examinations unless approved to conduct the corresponding training.

147.A.150 - Changes to the Maintenance Training Organisation

(a) The MTO shall notify the DASA of any proposed changes to the organisation that affect the approval before any such change takes place, in order to enable the DASA to determine continued compliance with this DASR and to amend if necessary the MTO approval certificate.

Superseded

(b) The DASA may prescribe the conditions under which the MTO may operate during such changes unless the DASA determines that the MTO approval must be suspended.

(c) Failure to inform the DASA of such changes may result in suspension or revocation of the MTO approval certificate backdated to the actual date of the changes.

147.A.155 - Continued validity of approval

(a) An approval shall be issued for an unlimited duration. It shall remain valid subject to:

1. The MTO remaining in compliance with this DASR, in accordance with the provisions related to the handling of findings as specified under DASR 147.A.160 ☐ **AMC**; and

2. The DASA being granted access to the MTO to determine continued compliance with this DASR; and ☐ **AMC**

3. The certificate not being surrendered or revoked.

(b) Upon surrender or revocation, the approval shall be returned to the DASA.

147.A.160 - Findings of non-compliance

Refer to GR.60 Oversight and enforcement.

SUBPART C - APPROVED BASIC TRAINING COURSE

☐ **AMC to Subpart C**

147.A.200 - The approved basic training course

(a) The approved basic training course shall consist of knowledge training, knowledge examination, practical training and a practical assessment.

(b) The knowledge training element shall cover all subjects of the relevant MAML category as specified in DASR 66. ☐ **AMC** ☐ **AMC1**

(c) The knowledge examination element shall cover a representative cross section of all subjects from the paragraph (b) training element.

(d) The practical training element shall cover the practical use of common tooling/equipment, the disassembly/assembly of a representative selection of aircraft parts and the participation in representative maintenance activities being carried out relevant to the particular DASR 66 complete module. ☐ **AMC**

(e) The practical assessment element shall cover the practical training and determine whether the student is competent at using tools and equipment and working in accordance with maintenance manuals.

(f) The duration and minimum number of practical training hours to be completed on basic training courses shall be in accordance with Annex A to AMC 147.A.140. ☐ **AMC** ☐ **AMC1**

Superseded

(g) The duration of conversion courses between (sub)categories shall be determined by the MTO through an assessment of the basic training syllabus and the related practical training needs.

147.A.205 - Basic knowledge examinations

Basic knowledge examinations shall: ☐ **AMC** ☐ **AMC1**

(a) Be in accordance with the standard defined in DASR 66.

(b) Be conducted without the use of training notes.

(c) Cover a representative cross section of subjects from the particular module of training completed in accordance with DASR 66.

147.A.210 - Basic practical assessment

(a) Basic practical assessments shall be carried out during the basic maintenance training course by the nominated practical assessors at the completion of each visit period to the practical workshops/maintenance facility.

(b) The student shall achieve an assessed pass with respect to DASR 147.A.200(e). ☐ **AMC**

SUBPART D - AIRCRAFT TYPE/TASK TRAINING

147.A.300 - Aircraft type/task training

An MTO shall be approved to carry out DASR 66 aircraft type and/or task training or part thereof, subject to compliance with the standard specified in DASR 66.A.45. ☐ **AMC**

147.A.305 - Aircraft type examinations and task assessments

An MTO approved in accordance with DASR 147.A.300 to conduct Military Aircraft Type Training or part thereof, shall conduct the related aircraft type examinations or aircraft task assessments specified in DASR 66 subject to compliance with the aircraft type and/or task standard specified in DASR 66.A.45.

Annexes/Appendixes

Annex A to AMC 147.A.140 - Maintenance Training Organisation Exposition

MAINTENANCE TRAINING ORGANISATION EXPOSITION CONTENT

1. The following subject headings form the basis of the MTOE required by DASR 147.A.140.

2. For standardisation purposes and to facilitate the production of the MTOE by the DASR 147 Maintenance Training Organisation (MTO) DASA recommends adoption of the following format for the MTOE. It is not mandatory to assemble the MTOE in this manner as long as a cross-reference index is included in the MTOE as an Appendix and the Part 1 items remain in

Superseded

Part 1. The MTO should customise the document to suit their organisation and may add pages / paragraphs as necessary.

3. Part 2, 3 and 4 material may be produced as separate detailed manuals subject to the main MTOE containing the Part 2, 3 and 4 fundamental principles and policy on each item. It is then permitted to delegate the approval of these separate manuals to the senior person but this fact and the procedure for doing so should be specified in paragraph 1.10.

4. Where an MTO is approved in accordance with any other DASR which require an exposition, it is acceptable to combine the exposition requirements by merging the Part 1 items and adding the Parts 2, 3 and 4. When this method is used, it is essential to include the cross-reference index of Part 4 item 4.3.

0.2 – List of issues / amendments / record of revisions

Example:

Issue number	Revision number	Date	Reason for change
1	0	19/12/06	N/A
2	0	01/01/12	Extension of the TB1.3 scope of approval
	1	01/01/14	New procedure for the records of students

0.3 – Distribution list

The document should include a distribution list to ensure proper distribution of the MTOE and to demonstrate to the DASA that all personnel involved in the maintenance training have access to the relevant information. This does not mean that all personnel have to be in receipt of a MTOE but that a reasonable number of copies are distributed within the organisation(s) so that all personnel may have

Superseded

quick and easy access to it. Reference should also be made to the location of any e-copies of the MTOE.

Accordingly, the MTOE should be distributed to:

- the Operating Organisation's management personnel (if the MTO is part of an operating Organisation),
- any relevant maintenance organisation, eg when MTO contract / task the practical type training,… or MTO,
- the MTO management personnel and any person at a lower level as necessary; and
- the DASA.

0.4 – DASR 147 requirements cross-reference list

The MTOE should contain a cross-reference list with an explanation as to where each DASR 147 Section A requirement is addressed in the MTOE.

0.5 – General information

This chapter should describe broadly how the whole organisation is organised under the management of the Accountable Manager.

PART 1 – MANAGEMENT

1.1 – Corporate commitment by the Accountable Manager

The Accountable Manager's MTOE statement should embrace the intent of the following paragraph and this statement may be used without amendment. Any modification to the statement should not alter the intent.

This MTOE defines the organisation and procedures upon which the DASR 147 MTO approval is based.

It is accepted that these procedures do not override the necessity of complying with any new or amended regulation published by the DASA from time to time where these new or amended regulations are in conflict with these procedures.

It is understood that the DASA will approve this MTO whilst the DASA is satisfied that the procedures and work standards are being followed. It is understood that the DASA reserves the right to suspend, vary or revoke the DASR 147 MTO approval, as applicable, if the DASA has evidence that the procedures are not followed and the standards not upheld.

These procedures are approved by the undersigned and must be complied with, as applicable, whenever knowledge or practical training is being progressed under the terms of the DASR 147 approval.

The undersigned fully accepts the duties and responsibilities of Accountable Manager as defined in paragraph 1.3.1 of this MTOE.

Signed .....

Dated .....

Superseded

Accountable Manger and .....(quote position).....

For and behalf of .....(quote MTO name).....

1.2 – Management personnel

Accountable Manager .....

Training Manager .....

Quality Manager .....

Examination Manager .....

Other (as required) .....

The Managers specified above are identified and their credentials apart from the Accountable Manager have been submitted on DASR Form 4 to the DASA.

Any changes to the above personnel shall be advised to the DASA. Failure to do so may affect the status of the DASR 147 approval.

1.3 - Duties and responsibilities of management personnel, instructors, knowledge examiners and practical assessors

1.3.1 - Accountable Manager

The Accountable Manager is responsible for:

Ensuring that all instruction and examinations carried out by the MTO meet the standards required by the DASA.

Ensuring that the necessary finance, human resources and facilities are available to enable the MTO to perform the knowledge and / or practical instruction and examinations to which it is committed under the requirements of DASR 147.

Chairing the annual meeting of senior staff to review the overall performance of the MTO.

Ensuring that during periods of absence, control will be maintained for administration purposes by (Insert name / position in MTO), who will accept full responsibility for all training issues and related decisions.

The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.

NOTES: (not for inclusion in the MTOE)

Any additional duties and responsibilities within the MTO may be added or delegated provided they do not conflict with those above, which constitute the Accountable Manager's responsibilities under DASR 147.

Superseded

The MTO should decide who will be responsible for liaison with the DASA and show this in their terms of reference. If more than one person is nominated it must be clearly shown what each person is responsible for with, as a general rule, no overlapping of responsibility

1.3.2 - Training Manager

The Training Manager will undertake:

- The responsibilities of the nominated person at (insert name of DASR 147 MTO).
- The duties and responsibilities of the DASR 147 approved examiner during the absence of any nominated approved examiner(s).

The Training Manager will ensure that:

- The Accountable Manager is kept informed as to the state of compliance of the MTO with DASR 147.
- The operation of (insert name of MTO) is efficiently managed and conforms to the requirements of DASR 147 as stipulated by the DASA.
- Sufficient staff with appropriate qualifications are selected, trained and developed, to plan, perform, supervise, examine and assess students as required.
- All necessary Airworthiness data published by the DASA and Aircraft manufacturers as appropriate, is made available.
- All changes to the MTOE and associated manuals are notified immediately to the DASA.
- The MTOE and associated manuals are amended as required.
- Knowledge examiners, instructors and practical assessors are fully trained and assessed regularly for competence and that all records pertaining to these personnel are kept up to date.
- Contracted / tasked staff including any part time staff conform to the requirements of DASR 147 and the training procedures.
- Office accommodation and facilities are available appropriate to the management of the planned training and for the use of training staff.
- Staff development and update training is undertaken and recorded.
- That all approved courses and examinations are delivered to the standard and content at the required level of knowledge, as specified in DASR 147.
- A working environment is provided appropriate to the tasks being undertaken.
- There are sufficient storage facilities, tools, equipment, materials and publications available to perform the planned practical tasks.
- Secure facilities are available for the storage of examination papers prior to the examination and for the storage of completed students answer papers.
- The interviewing of students prior to, during and on completion of the course is effective and without bias.

Superseded

- Student and staff records are produced and stored in secure conditions.
- Any person to whom any of these responsibilities may be delegated is aware of current regulations.
- Corrective action is carried out for the findings of quality audits.
- The follow up and rectification of findings required to re-establish the required standards of training, examination or maintenance standards.
- That sufficient questions are available to produce the examination papers required to cover the syllabus in accordance with DASR 66 Appendix II and III. If questions are utilised for progress tests they should not be used in the final examination.
- The security and validity of all examinations are in accordance with the requirements of DASR 66 and DASR 147.
- All examinations and assessment timetables are coordinated.
- Compliance with the examination question review procedures is as required by DASR 66 and / or DASR 147.

NOTES:

This paragraph should emphasise that the nominated post holder for training is responsible to ensure that all training is carried out to an approved standard and describes the extent of their authority as regards their DASR 147 responsibility.

These duties may be adjusted to suit the requirements of the DASR 147 Approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66

1.3.3 - Quality Manager

The Quality Manager has direct access to the Accountable Manager in the event of any reported discrepancy not being adequately attended to by the relevant person, or in respect of any disagreement over the nature of the discrepancy.

The Quality Manager is responsible for:

- Establishing an independent quality system to monitor compliance with DASR 147 requirements.
- Assessing non-approved contracted/tasked MTOs working under the MTO quality system.
- Implementing a quality audit programme in which compliance with all training procedures is reviewed at regular intervals, and any observed non-compliances or poor standards are brought to the attention of the person concerned via their Manager.
- Proposing all corrective action necessary for eliminating non-compliance and ensuring that these corrective actions are initiated and when completed are efficient and meet their intended purpose.
- Requiring remedial action, as necessary, by the Training Manager or the Accountable Manager.
- The MTOE and associated manuals are amended as required.

Superseded

NOTES:

These duties may be adjusted to suit the requirements of the DASR 147 approved MTO but should not detract from the particular requirements of DASR 147 or DASR 66.

It must be remembered that the quality audit system is required to be independent and where possible the Quality Manager and quality audit personnel should not be directly involved in the training process. Where for reasons of expediency it is necessary to utilise training staff, it would then become necessary for a second member of staff to be nominated to audit those functions performed by the Quality Manager.

Alternatively / additionally an external auditor acceptable to the DASA may be contracted / tasked in order to ensure the required independence.

1.3.4 - Examiner

The examiner is a nominated person who will determine the level of theoretical knowledge of the trainees on a particular module, element, or part thereof. The function may include the drafting and/ or the selection of questions (MCQs and Essays), the performance of the examination exercise itself for essay questions, the evaluation of the correctness of answers (except when correct answers are pre-determined) and the final judgment regarding the level of knowledge demonstrated by the trainee.

NOTE: Persons solely supervising an exam session consisting of pre-selected MCQ questions are not considered as examiners but are considered as support staffs (invigilators) and are therefore not subject to the knowledge and experience requirements but need to be trained to the examination procedure described in the MTOE.

The invigilation of examinations shall ensure that the conditions for examination comply with DASR 66 Appendix II (for basic training) or Appendix III, paragraph 3 (for type training)

1.3.5 - Instructor

The instructor is a nominated person who will carry out instructional duties for which they are qualified (type / basic training).

Additionally, the instructor can:

- Draft questions for examination banks for courses they are authorised;
- Undertake duties of invigilator where they are not involved in the instruction of that particular phase examination.

NOTE: The instructor is not necessarily the person involved into the drafting of the course material (content, duration etc…), however they must be involved at some point into the organisation of the lessons themselves (creation of the instructor notes, slides, sequencing etc…).

1.3.6 - Practical assessor

The practical assessor is a nominated person who will determine the level of practical knowledge/ practical skills of the trainees on a particular module, element, or part thereof. The function may include the drafting and / or the selection of practical tasks and shall include the performance of the

Superseded

practical assessment itself, and the evaluation of the practical abilities on the tasks covered by the assessment.

1.4 - Management personnel organisation chart

A flow chart should provide a comprehensive understanding of the whole MTO. It should give further details on the management system and should clearly show the independence of the quality monitoring system, including the links between the Quality Assurance department and the other departments. This flow chart may be combined or subdivided as necessary, depending on the size and the complexity of the MTO.

NOTE: The MTOE must also define who deputises for any senior person in case of lengthy absenceList of Instructional and Examination staff

1.5 - List of Instructional and Examination staff

This paragraph should give broad figures to show that the number of people dedicated to the performance of the approved training activity is adequate. It is not necessary to give the detailed number of employees of the whole MTO but only the number of those involved in training.

This could be presented as follows:

APPOINTMENT:	**NAME:**	**COMPETENCIES:**
Training Manager Deputy Training Manager Quality Manager Examiner Examiner / Instructor Instructor Instructor Instructor Instructor / Invigilator Invigilator Practical Assessor		enter here those areas each person is qualified to instruct using DASR 66 module / sub-modules OR type of aircraft and the specific areas they are qualified to instruct, ie Airframe, Engine, Electrical Instrument, Auto flight, Radio or Radar.

NOTES:

According to the size and complexity of the MTO, this table may be further developed.

The DASR 147 examiners are the only persons allowed to produce / select examination papers. They may nominate other persons to mark completed examinations. The examiners and these persons should be other than the knowledge instructors involved in the instruction of that particular module/ sub-module.

Superseded

1.6 - List of approved addresses

This paragraph should list those address(es) at which instruction and/or practical training are to be carried out for the duration of the DASR 147 course.

The names, address(es) and approval numbers of any proposed DASR 145 AMO at which it is proposed to carry out student practical training in order to fulfil the requirements of DASR 147 may be kept in another document or procedure and cross referenced here.

1.7 - List of contracted / tasked organisations as per DASR 147.A.145(d)

This paragraph should list those address(s) at which training beyond the capacity of the DASR 147 MTO may be carried out. DASR 66 Modules 1 to 6 inclusive and 8 to 10 inclusive may be contracted/ tasked to organisations not specialised in aircraft maintenance and where the DASR 147.A.200 practical training element does not apply.

1.8 - General description of facilities at paragraph 1.6 addresses

Include here the facilities such as desks, chairs, lockers, overhead projectors, other teaching aids, etc for each of the offices, classrooms, practical training workshops and examination rooms provided.

1.9 - Specific list of courses and aircraft type examinations approved by the DASA

This paragraph must contain a list of the DASR 147 course(s) for which approval is held. This should also include 'Differences' courses.

For example: Airbus A319/320/321 (CFM 56) B1 - differences to A319/320/321 (V2500) B1.

1.10 - Notification procedures regarding changes to the MTO

Include here any cross references to the intended procedures for continued validity of the approval in compliance with the requirements of DASR 147.A.155.

The MTOs 'nominated person' is responsible for informing the DASA of any proposed changes. (Refer Part 1 - Management, paragraph 1.3.2 of the MTOE as an example)

1.11 - MTOE and associated manuals amendment procedure

Detail here or cross refer to the procedures to be followed for the amendment of the MTOE and any associated procedures and or documents.

PART 2 - TRAINING AND EXAMINATION PROCEDURES

2.1 - Organisation of courses

In this paragraph, the MTO should detail the procedures in place in order to organise the courses and to ensure that all necessary means are available to deliver in good conditions and by appropriately qualified staff all the course elements as required by the DASR 66 syllabus. Such procedures may include a formalised review of the availability of required appropriate training rooms, materials, STDs, specialists… and resulting in training programme.

2.2 - Preparation of course material

Training material should meet the requirements of DASR 66. It should also state how the approved MTO produces a course for a new aircraft type (new approval scope). This would typically include the

Superseded

production of the Training Needs Analysis and eventually a training programme for the new aircraft that has to list what is being taught, to what level and for how long. Once completed, this should be sent to the DASA for review and approval of the course. This list must be given a unique reference number and revision status. In order to get the course approved a set of multi-choice questions and a copy of the course notes used by the student must also be submitted.

The course notes must reflect the training programme and be given the same reference number and revision status. This may cross refer to a separate procedure in which details of how the standard course lecture notes are produced which would include content, indexing, chapter and page numbering, font, etc, in the 'House Style'.

This same procedure should also be utilised to list the responsibilities by DASR 66 module / submodule for the production, review and amendment of lecture notes.

Include cross references to any procedures used for the inclusion of other course material, eg Aircraft Manuals, and/or Standard Text Books used for note preparation and available to students as reference material

2.3 - Preparation of classrooms and equipment

Cross reference to any procedures for the preparation of classrooms and reporting of faults to any classroom equipment, general maintenance procedures and the control of the teaching environment.

2.4 - Preparation of workshop / maintenance facilities and equipment

Cross reference to any procedures for the reporting of faults to any workshop equipment, general maintenance procedures and the control of the teaching environment.

Cross reference to procedures for the ordering and storage of aircraft materials used in the production of practical tasks, and for the ordering and acquisition of any new equipment required to complete the tasks.

Cross reference to the procedures for ensuring that all test equipment and/or tooling requiring calibration are correctly forecast and expedited.

2.5 - Conduct of theoretical training and practical training (during basic knowledge training and type / task training)

Describe the method utilised in teaching the Basic / Type knowledge and practical training courses for which the MTO is approved.

Cross refer to the low level document referred to in paragraph 2.1 above.

2.6 - Records of training carried out

Cross refer to procedures for the production, maintenance and security of student files.

These should include details of all student attendance's, final knowledge examinations, practical assessments and any re-examination carried out and their results by DASR 66 complete module/sub-module for basic training courses and for type training, information of those courses completed, their content and at which levels they were instructed and examined.

There should also be reference to the basic work experience' records required to be kept by the student whilst they are undergoing their live operating aircraft experience.

Superseded

The use of an "Aircraft Maintenance Engineers Log Book" is a good example.

2.7 - Storage of training Records

Cross refer to procedures for the storage of staff and student's records.

As a minimum, the procedures shall describe which are the documents that are recorded, the means that are used for recording and how long the records will be kept. These may be electronically based provided that adequate safeguards are in place to prevent unauthorised access and alteration.

2.8 - Training at locations not listed in paragraph 1.6

Should the Management wish to contract/task part of the practical training, control procedures must be in place. These procedures should effectively reflect those of the DASA in auditing the DASR 147 MTO.

Any training carried out at address not listed at 1.6 above must be approved by the DASA and control procedures must be in place to ensure that the proposed contracted/tasked organisation is in compliance with the requirements of DASR 66 and DASR 147.

A contract must be in place with the proposed organisation in which it is agreed that access is granted to the DASA for the purpose of audit.

NOTE:

The "APPLICATION TO CONDUCT TRAINING / EXAMINATIONS* AT A LOCATION REMOTE FROM THE DASR 147 APPROVED SITE" Form should be annexed to the MTOE.

2.9 - Organisation of examinations

For Military Aircraft Maintenance Licence (MAML) course a high-level document detailing the course examinations, when each DASR 66 module / sub-module is to be examined and to what DASR 66 level. This should include the knowledge, practical training elements and how the number of hours of each comply with the percentage requirements of DASR AMC 147A.200.

For aircraft type training, the course syllabus should be used to prepare an examination schedule. The examination schedule should detail the examinations to be set at the end of each major phase within the syllabus. A final examination should be conducted at the end of the type training course. The final examination should be recorded. Refer to DASR 66 Appendix III, paragraphs 4.1.

2.10 - Security and preparation of examination material

For MAML courses detail the preparation and security of Examination papers. Number of Questions and Timing must be in accordance with DASR 66 Appendix II.

Cross reference to procedures for the production of examination questions, their validation and security of the data bank.

For type training it is sufficient to detail the preparation and security procedures in place for the production and storage of examination papers.

2.11 - Preparation of examination rooms

Cross refer to procedure to be followed by the examiner and Invigilator in preparing the examination room for examinations.

An invigilator's ready reference sheet for briefing the candidates prior to the examination should be available in procedures and cross referenced here.

2.12 - Conduct of examinations (basic knowledge examinations, aircraft type / task training examinations)

A procedure should be in place to define how the MTO manage the conduction of examinations in respect of the DASR 147.A.135. The procedure should define responsibilities for the conduct and monitoring of the examination, and the instruction for the performance of the examination such as:

- information about the examination type (number of questions, type of questions, topics, maximum duration, ...)
- information about the conduct of the examination (format of the responses, distribution and collating of copies, login if electronic systems,...)
- information about rules to be respected (communication, utilisation of documents / means / personal objects,...) and measures to be taken in case of someone found cheating.

The minimum conditions to be authorised to monitor an examination should also be described.

It is recommended that examination papers of candidates should be identified through an anonymous system, eg numbering system,…), to be described in the MTOE.

A procedure should be in place for checking that all the pages of each examination paper are complete at examination completion and that all examination papers are accounted for.

Both the written element and the multi-choice question elements should be marked to 75% with no penalty marking. Refer DASR 66 Appendix II.

Nothing other than the actual examination / answer paper is permitted to be on the candidate's desk.

All wall charts and/or other visual teaching aids should be removed from the examination room.

2.13 - Conduct of practical assessments (during basic knowledge training and aircraft type / task training)

Superseded

Cross refer to procedures used for assessment of student hand skills, and the standard tasks set throughout the course. A set number of mandatory tasks should be assessed to have been completed to a satisfactory standard.

2.14 - Marking and record of examinations

A procedure should define how and by whom an examination is corrected, how and by whom is the examination result validated, how the examination result is transmitted to the student and under which format the examination is recorded.

Cross refer to procedures for the marking of completed examination papers and the recording of results.

Cross refer to a procedure for practical assessments and recording of results.

2.15 - Storage of examination records

A procedure should define as a minimum which are the documents that are recorded, the means / systems / storage locations that are used to ensure a retention period of 20 years.

Electronic means of storage may be utilised as required, provided the appropriate computer security systems are in place.

2.16 - Examinations at locations not listed in paragraph 1.6

Cross refer to the control procedure in common with part 2.8 above. This location must comply with the requirements of 2.10, 2.11, 2.12, 2.13, 2.14 and 2.15 above.

Consideration is needed for the security / control of examinations and their completed examination papers and/or practical assessment results.

2.17 - Preparation, control and issue of Basic / Type training course certificates

The procedure for issuing training certificates should define the responsibility for verifying the data, the procedures for issuing and archiving the certificates and the authorised signatories.

The certificates should be prepared to reflect that illustrated in DASR 147 Appendix III and tightly controlled prior to issue, with a system in place to ensure that each copy is numbered as part of a sequence and recorded as issued to a candidate by name.

2.18 - Control of contracted / tasked organisations

When contracted / tasked organisations are defined in paragraph 1.7, it is necessary to define how and how often these contracted / tasked organisations are controlled in terms of training and examination / evaluation and means in place.

Cross refer to procedures for the control of contracted / tasked organisations as appropriate.

PART 3 - TRAINING SYSTEM QUALITY PROCEDURES

3.1 - Audit of training

The approved MTO should develop a form / audit checklist to be used by the auditor that would demonstrate that all the requirements of DASR 147 have been reviewed during the audit process. The audit plan should indicate applicability of the various activities to be monitored and more than one

Superseded

list may be necessary (rolling audit). Each list should be shown against a timetable to indicate when the particular item is scheduled for audit and when the audit was completed. A complete audit of the DASR 147 MTO must be completed every 12 months.

For courses and depending on the approval scope (Basic and / or Type) at least one basic and/or type, theoretical and practical course should be audited each year.

Cross refer to the various procedures required for quality auditing, reporting findings and levels with any corrective actions required.

A management control and follow up system must also be in place and may not be contracted out.

Cross reference to any quality procedures manual if available is permitted, but this system must relate to and make reference to the relevant DASR 147 requirements.

3.2 - Audit of examinations

Must be audited annually but may be part of the rolling audit procedure.

3.3 - Analysis of examination results

Examination results should be analysed on completion of each examination and any questions amended as necessary. Cross refer to procedures detailing responsibilities.

3.4 - Audit and analysis remedial action

Cross refer to procedures for the reporting of findings and for corrective actions.

3.5 - Accountable Manager annual review

At least once a year a review of the activities must be made by the Accountable Manager. Points discussed on a set date should include:

- Projects requiring financial support.
- Sufficient staff employed to meet foreseen training program.
- DASR 147 MTO review.
- Examinations and assessments.
- Student achievements.
- Student support.
- Quality Assurance review.
- Continuous improvement opportunities.

3.6 - Qualifying the instructors

List of acceptable staff qualifications:

- Include procedures for the induction of inexperienced instructors as required.
- Where relevant include procedures for the employment of part time or contract instructors. All staff should have an appreciation of the contents of DASR 66 and DASR 147.

Superseded

- Cross refer to the list of present staff / qualification.

NOTE: staff employed prior to DASR 147 application who's qualifications were previously acceptable, will continue to be accepted.

- Cross refer to procedures for staff development.

3.7 - Qualifying the examiners and the practical assessors

Examiners should have a full understanding of all the requirements of DASR 66 and DASR 147. Cross refer to procedures for staff development.

Cross refer to the list of staff / qualifications.

Practical work assessors should be assessed as being competent in accordance with an approved process.

3.8 - Records of qualified instructors, examiners and practical assessors

The MTO must maintain a record of all training staff which must include details of the scope of their authorisation.

Training staff must be provided with evidence of the scope of their authorisation.

The following minimum information should be kept on record in respect of each instructor, examiner and practical assessor:

- Name
- Date of Birth
- Personnel Number
- Experience
- Qualifications relevant to the approval scope
- Training History (before entry)
- Training (basic training, type training, continuation training)
- Scope of activity
- Date of first issue of the authorisation
- If appropriate – expiry date of the authorisation
- Starting date of employment

The records may be kept in any format (hard copy or computer based) subject to the appropriate security requirements.

Persons authorised to access the system should be maintained at a minimum to ensure that records cannot be altered in an unauthorised manner or that such confidential records become accessible to unauthorised persons.

The training staff should be given reasonable access on request to their own records.

Superseded

The authorisation document should be in a style that makes its scope clear to training staff and any authorised person that may be required to review the document. Where codes are used to define scope, an interpretation document should be readily available.

Training staff are not required to carry the authorisation document at all times but should produce it within a reasonable time of a request from an authorised person. Authorised persons, apart from the MTO's quality department must include DASA.

Any member of the DASA is classed as an authorised person when investigating the records system for initial and continued approval or when the DASA has cause to doubt the competence of a particular training staff

PART 4 - APPENDICES

4.1 - Examples of documents and forms used

This section should include examples of all documents and forms used by the MTO in the conduct of its DASR 147 function.

Some examples are listed below:

- Student attendance record
- Course certificate(s)
- Certificate(s) of training
- Classroom plan (exam purposes)
- Course critique
- Course results
- Course design / change plan
- Exam answer sheet
- Exam results
- Internal audit procedure
- Internal audit schedule
- Internal audit report
- Application to conduct courses / examinations at a remote location
- Interview report form
- MTOE amendment request
- MTOE amendment request log
- Staff training record (to include qualifications, history and subjects taught)
- Staff terms of reference
- Student training / examination and assessment form

Superseded

- Training course review
- Quality system
- Aircraft visit form

4.2 - Syllabus and Training Needs Analysis (TNA) of each training course

This section should contain the syllabus for each DASA approved course and should also contain the associated Training Needs and Analysis.

4.3 - Cross-reference Index

If applicable - self-explanatory

Appendix I - Basic Training Course Duration and Minimum Practical Training Hours

1. The duration and minimum number of practical training hours to be completed on a basic training course shall be as follows:

Basic Course (See Note 3)	Duration (Theory) (See Note 1)	Duration (Practical) (See Note 1)	Minimum Practical Training Hours for maximum reduction in experience requirements (See Note 2)
A1	-	-	520
A2	-	-	420
A3	-	-	520
A4	-	-	520
B1.1	-	-	960

Superseded

B1.2	-	-	800
B1.3	-	-	960
B1.4	-	-	960
B2	-	-	960
A (Module 50-55 Extensions)	-	-	(See Note 1)
B1 (Module 50-55 Extensions)	-	-	(See Note 1)
B2 (Module 50-55 Extensions)	-	-	(See Note 1)

Superseded

NOTES:

1. To be specified by the DASA (if req'd).
2. These are the minimum practical training hours required for an individual to be able to claim reductions in the experience requirements as detailed in DASR 66.A.30(a)1(iii) and DASR 66.A.30(a)2(iii).
3. The duration of initial training (theory and practical) is determined during the training development process and it relates to trade training, not training for licences.

Appendix II - Reserved

Appendix III - Examples of Training Certificates

1. Basic Training/Examination ☐ AMC

The information contained within the example of a basic training certificate detailed below is to be used for recognition of completion of either the basic training, the basic examination or both the basic training and basic training examinations.

A training certificate shall clearly identify each individual module or sub-module examination by date passed together with the corresponding version of Appendix I to DASR 66.

DASR Form 148 - DASR 147 Approved Basic Training Course/ Examination Certificate

DASR Aircrew

AIRCREW.10 - DEFENCE AIRCREW QUALIFICATIONS AND TRAINING

(a) The MAO must ensure an aircrew training system is established that supports raise, train, sustain requirements and includes the following elements: ☐ **GM**

1. Categorisation system, defining: ☐ **AMC** ☐ **GM**
   a) level of proficiency in a role
   b) Aircrew categories
   c) currency and recency requirements.
2. Basic Qualifications ☐ **AMC**
3. Additional qualifications ☐ **AMC**
4. Airborne emergency training: ☐ **AMC**
   a) is only to be conducted in aircraft to the extent defined in OIP
   b) is to be conducted in a simulator to the maximum extent practicable.
5. Currency and recency requirements, which include: ☐ **AMC**
   a) minimum currency criteria
   b) methods of maintaining and regaining currency
   c) identification of circumstances and authority for extension.
6. Method of recording competency and currency, which must: ☐ **AMC**
   a) list in the approved OIP the authority(ies)
   b) utilise a recording method in a format determined to be enduring.
7. Aircrew Instructor training and standards requirements, which include: ☐ **AMC**
   a) qualifications through Defence-recognised courses
   b) routine instructor competency assessments.
8. Training and standards requirements, which: ☐ **AMC**
   a) reference the applicable Learning Management Plan
   b) for aircrew competency include:
      – competency for all aircraft roles and operations
      – training and assessment requirements for initial award and maintenance of competency

Superseded

– criteria that define a lapse in competency, including the requirements for requalification.

c) include the establishment of a Pilot Instrument Rating Scheme (PIRS) to support safe aircraft operation during IMC. PIRS controls must include:

– command responsibility to determine the conduct of an Instrument Rating Test (IRT), including consultation with CFS SME

– experience, currency and recency, and renewal requirements

– flexible use of command to ensure that those pilots who, for various reasons, are not entitled to an Instrument Rating, may still fly under restricted conditions

– employment strategy of relevant Assessors

– flexibility provisions that can be authorised by the command chain

– a system to ensure complete documentation of all testing and qualification awards.

(a) The MAO must ensure that aviation safety training is conducted in accordance with approved OIP that includes: ☐ **AMC** ☐ **GM**

1. aviation safety training objectives and assessment criteria

2. requirements for currency and re-qualification.

(a) The MAO must ensure that Risk Management training is conducted in accordance with approved OIP. ☐ **AMC**

(a) All aircrew must maintain a Defence flying logbook. ☐ **GM**

(b) OIP issued under this regulation shall specify a method to: ☐ **GM** ☐ **AMC**

1. record the member's endorsed qualifications

2. record all flight time undertaken as authorised crew or flight crew of a military aircraft, a civil aircraft under hire or lease to Defence, or a civil aircraft provided for any other military purpose

3. record flight time in approved FSTDs

4. ensure the logbook of an authorised crew or flight crew member is not carried on an aircraft when the member is flying on that aircraft.

(c) In the event of an accident or incident, the operating unit commander must provide all involved aircrew logbooks to an authorised person upon request. ☐ **GM**

Superseded

AO.GEN.00 - REGULATION RULES OF INTERPRETATION

☐ **GM**

AO.GEN.05 - MANAGEMENT OF OIP

(a) The Orders, Instructions and Publications (OIP) Management System must ensure that all air operational OIP are: ☐ **GM**

1. applicable, accurate and approved
2. maintained in good and legible order
3. accessible to personnel in a format and medium appropriate to the operational environment
4. applicable to the scope and level of the operation being conducted
5. supported by a master document or record allowing the amendment status and document completeness to be ascertained.

(b) The OIP Management System must ensure that each Defence produced document contains or displays:

1. authority for use
2. document name
3. document number
4. date of issue and currency (amendment status)
5. sponsor details.

(c) For OIP specific to aircraft type, the OIP Management System must ensure that:

1. OIP sponsors are appointed to ensure all OIP are applicable and authorised.
2. There are documented agreements established with the relevant Military Type Certificate (MTC) holder, or MTC holder delegate to ensure that any amendments to the aircraft flight manual, or OIP that affect operating instructions, aircrew and/or limitations, are approved by the Authority or the MTC holder or MTC holder delegate.
3. Foreign Source Data (FSD), other than that incorporated into the authorised publication management systems (AAP, NAP or DAP), are approved by the MAO, or relevant MTC holder or MTC holder delegate prior to use.

(d) OIP issued under this regulation must ensure that: ☐ **GM** ☐ **AMC**

1. OIP management appointments are identified, including their responsibility and authority.

Superseded

2. A list of OIP sponsors and approval authorities is maintained.

3. A list of OIP Sponsor approved sources of Flight Information Document (FID) is maintained.

4. Periodic review criteria are defined (Defence AIP will follow the 28 day AIRAC cycle).

5. Publication management records are accurately maintained, controlled and made accessible to applicable personnel and organisations.

6. OIP distribution requirements are defined.

Superseded

(a) A Statement of Operating Intent and Usage must be issued for all Defence registered aircraft types. ☐ **GM** ☐ **AMC**

(a) The MAO, or operational commander must cease Flight Operations under their command or management where an emergent risk compromises Aviation Safety. ☐ **GM** ☐ **AMC**

(a) An aircraft operated by or on behalf of Defence must be considered for Defence registration when: ☐ **GM**

1. The aircraft is predominantly operated in a military configuration, role or environment by Defence or non-Defence personnel.
2. The aircraft is owned by Defence.
3. The aircraft is predominantly operated by members of Defence in the course of their duties.

☐ **GM**

(a) Operation of all Defence registered aircraft must be conducted under the authority of a Military Air Operator Certificate (MAOC), issued by the Authority. ☐ **GM**

(b) Operation of civil registered aircraft by a MAO must be conducted under the authority of a MAOC, issued by the Authority. ☐ **GM**

(c) The applicant organisation must apply to the Authority for issue of, or a variation to, a MAOC or attached Operations Specification (OpSpec) by submitting a Military Air Operator's Operations Compliance Statement (OCS). The OCS must: ☐ **GM** ☐ **AMC**

1. include the following information:
   - i. the MAO organisation name
   - ii. the location of the MAO headquarters
   - iii. a statement that operations will be in accordance with the attached OpSpec
   - iv. Accountable Manager (AM)
   - v. Continuing Airworthiness Manager (CAM)
   - vi. Hazard Tracking Authority (HTA)

Superseded

vii. all Aircraft types operated by the MAO

viii. Aircraft roles in accordance with SOIU CRE

ix. specific approvals requested for Aircraft operated by the MAO.

2. identify reference to an approved SOIU for each Aircraft type operated

3. provide a summary of the status of each element of the Flying Management System required by DASR ORO.10

4. identify the availability and method of document control for MAO OIP and single Service OIP, necessary to safely conduct Flight Operations

5. identify the approval status of training and qualification requirements necessary for personnel to support Flight Operations in the required CRE

6. identify the approval status of FSTD requirements necessary to support flying operations in the required CRE

7. confirm suitable and competent personnel to support Flight Operations

8. confirm suitable operations facilities and buildings are available for use

9. utilise a Quality Management System (QMS) to achieve consistency, continuity and compliance of safe operations—through quality planning, quality assurance, quality control and quality improvement ☐ **GM** ☑ **AMC**

10. identify that the MAO can satisfactorily maintain the Airworthiness of Aircraft types listed on the certificate through a Continuing Airworthiness Management Organisation (CAMO)

11. demonstrate how the MAO will comply with DASR relevant to the operation

12. include an attestation by the AM that:

i. the AM is accountable for the organisation's compliance with DASR

ii. the OCS is complete and correct

iii. appropriate arrangements are in place to support the scope of Flight Operations contained in the OpSpec.

(d) An air operator must establish and maintain a Safety Management System (SMS), in accordance with DASR SMS.

Superseded

FSTD.05 - FLIGHT SIMULATION TRAINING DEVICE MANAGEMENT

(a) The MAO-AM must approve a Flight Simulation Training Device Installation Operating Permit prior to use of the Flight Simulation Training Device in support of flight crew training, qualification or currency. ☐ **GM** ☐ **AMC**

(b) The MAO must ensure a Flight Simulation Training Device Management System is established that details the implementation and ongoing in service management of the Flight Simulation Training Device. ☐ **GM** ☐ **AMC**

Superseded

FT.05 - FLIGHT TESTS (AUS)

(a) A Military Air Operator (MAO) conducting flight test activities shall only conduct a flight test activity of Category 1 to Category 4 as defined in DASR 21 Subpart P - Military Permit to Fly, if an appropriate privilege has been granted in the MAOC OpSpec. ☐ **AMC** ☐ **GM**

(b) Flight test activity meeting the criteria of Category 1 to 4 as defined in DASR 21 Subpart P must be conducted under the authority of a Military Permit to Fly (MPTF). ☐ **AMC** ☐ **GM**

(c) The MAO must seek advice from the Authority if there is any doubt with respect to the category of flight test. ☐ **AMC**

(d) The MAO must demonstrate that it has the organisation, personnel and processes to safely conduct flight test to the satisfaction of the Authority and within the scope of privileges for flight test as listed in the Military Air Operator Certificate OpSpec. ☐ **AMC** ☐ **GM**

(e) The MAO must provide the Authority with appropriate data and access to its organisation, when required. ☐ **GM**

Superseded

NDR.05 - OPERATION OF NON DEFENCE REGISTERED AIRCRAFT BY DEFENCE ORGANISATIONS

(a) The Sponsor that purchases, wet leases, dry leases, charters or authorises operation of a non-Defence registered aircraft by or on behalf of Defence must ensure the aircraft's operation is subject to the regulatory requirements of a Defence AA recognised CAA / MAA. ☐ **GM** ☐ **AMC**

(b) The Sponsor that purchases, wet leases, dry leases, charters or authorises operation of a non-Defence registered aircraft by or on behalf of Defence must implement safety controls to the operation of non-Defence registered aircraft such that it is reasonably expected that Aviation Safety will not be compromised. ☐ **GM** ☐ **AMC**

(c) The Sponsor that purchases, wet leases, dry leases, charters or authorises operation of a non–Defence registered aircraft by, or on behalf of Defence must suspend flight operations when Aviation Safety is believed to be compromised. ☐ **GM** ☐ **AMC**

(d) The Defence AA must approve any Defence operation of a non–Defence registered aircraft to be operated under an Experimental Certificate of Airworthiness. ☐ **GM** ☐ **AMC**

(a) Defence personnel that operate a non-Defence registered aircraft on behalf of Defence must comply with the Defence AA recognised CAA or MAA regulatory requirements and any further controls imposed by the relevant Sponsor. ☐ **GM** ☐ **AMC**

Superseded

(a) Defence registered aircraft must be operated: ☐ **GM**

1. within the approved Statement of Operating Intent and Usage (SOIU) and Configuration, Role and operating Environment (CRE) parameters
2. in accordance with the Type Certificate and MAOC limitations
3. in accordance with the procedures in Defence AIP, except as required by the CAA of the state of operation
4. as detailed in the Aircraft Flight Manual and applicable OIP
5. in accordance with Defence OIP, and
6. at certified aerodromes, non-certified aerodromes and any other non-defined areas where it is safe to do so. ☐ **GM**

(a) The MAO must ensure a flying management system (FMS) is maintained that includes: ☐ **GM**

1. appointment of key staff
2. management of the Statement of Operating Intent and Usage (SOIU)
3. aircrew competency
4. flight authorisation
5. Risk Management
6. aviation safety management
7. management of Orders, Instructions and Publications (OIP)
8. management of Flight Simulation Training Devices (FSTD).

(a) The MAO must ensure that OIP issued under this regulation includes: ☐ **GM**

1. key appointments in the management of flying operations are identified
2. the initial and continuing eligibility criteria for each appointment are identified
3. the responsibility and authority of each appointment is clear and unambiguous
4. appointed individuals receive written authorisation which includes any limitations to their responsibility or authority.

Superseded

☐ **GM**

(a) The MAO or Sponsor must utilise a defined Flying Supervision and Flight Authorisation (FLTAUTH) management system to ensure Aviation Safety for Defence Aircraft, as follows:

1. Initial Airworthiness and Continuing Airworthiness risk controls must be considered by reviewing the planned Flight against the requirements of DASR ORO.05 and, where applicable:

   i. OpSpec limitations defined though DASR ARO.100

   ii. the Flight conditions imposed through DASR 21.A.708, in respect of any approved Military Permit To Fly (MPTF)

   iii. risk controls as required by DASR SPA.10, in respect of any approved Command Clearance

   iv. the Flight conditions imposed through DASR M.A.301(a)2, in respect of any approved deferred defects

   v. for Non-Defence Registered Aircraft (NDRA), the risk controls required by the relevant CAA or MAA. ☐ **GM**

2. Flying Supervision management risk controls must be utilised. ☐ **GM** ☐ **AMC**

3. FLTAUTH system risk controls must be utilised, and include the following: ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4** ☐ **AMC**

   i. the provision of a FLTAUTH mechanism for the identification of potential Hazards and controls independent of the Aircraft Captain

   ii. by way of exception from ORO.30(a)3(i), self-authorisation provisions may apply as follows:

      a. Under certain circumstances a Flight Authorisation Officer (FLTAUTHO) may authorise Flights where they are acting as the Aircraft Captain, commonly referred to as 'self–authorisation'. ☐ **AMC**

      b. ADF Currency Flying Scheme (ACFS) participants, unless the Sponsor directs otherwise, must 'self-authorise'. ☐ **AMC**

   iii. the FLTAUTHO must have gained an initial category on Type to undertake FLTAUTH duties on the relevant Type

   iv. by way of exception from ORO.30(a)3(iii):

      a. the MAO-AM may issue a waiver against the requirement to have gained an initial category on Type if the FLTAUTHO holds, or has held, a category on Type for a similar Aircraft, or is assessed to possess the technical mastery required to compensate for the lack of a specific category on Type.

      b. an approved Flight Test organisation is exempt from category on Type requirements for Flight Test activities where the FLTAUTHO both:

Superseded

(1) holds a DASR AIRCREW.10 Flight Test (Flight Test Pilot or Flight Test System Specialist) or Flight Test Engineer qualification relevant to the Flight Test activity

(2) has been informed as to the Type Specific considerations relevant to the Flight. ☐ **GM**

v. the FLTAUTHO and Aircraft Captain must certify the FLTAUTH record before Flight

vi. by way of exception from ORO.30(a)3(v), FLTAUTH or changes to FLTAUTH may be given verbally or via electronic means. However:

a. the details of any verbal FLTAUTH should be recorded in the FLTAUTH record as soon as practicable

b. wherever possible, the Aircraft Captain or FLTAUTHO should leave a written record on the ground with a responsible person, or an electronic record, of a verbal FLTAUTH prior to the Flight, as directed by the FLTAUTHO.

(b) **Non-Defence Registered Aircraft (NDRA).** By way of exception from ORO.30(a), for NDRA Flights that are solely conducted by non-Defence Flight Crew, the requirements of ORO.30(a) do not apply.

☐ **GM**

(a) The MAO must establish an ALSE management system to enable the acquisition, integration and use of ALSE. ☐ **GM**

(b) Prior to to approving ALSE, the MAO must ensure:

1. that the ALSE is certified. ☐ **GM**

2. the ongoing use of ALSE is risk-managed under the MAO SMS, seeking Subject Matter Expert (SME) advice to identify and manage ALSE hazards. ☐ **GM**

3. that maintainers and operators of ALSE are trained and their continued competence in its use can be demonstrated. ☐ **GM**

4. the OIP contain when ALSE is to used / operated / carried. ☐ **GM**

☐ **GM**

(a) Defence registered aircraft must be crewed in accordance with minimum and normal crew compositions promulgated by the MAO. ☐ **GM**

(b) Aircraft crews operating Defence registered aircraft must be trained, qualified, competent and authorised in accordance with DASR AIRCREW.

Superseded

(c) Foreign military aircrew operation of Defence registered aircraft must only be approved by the MAO on the basis that the aircraft will be operated in accordance with the requirements of a Defence FMS.

(d) Civilian aircrew operation of Defence registered aircraft must only be approved by the MAO on the basis of: ☐ **GM**

1. Identification and attainment of prerequisite civil and military training, qualifications and competency.
2. Familiarity and adherence to applicable Defence, single-Service and type related OIPs.
3. Identification and provision of flying clothing and ALSE necessary to crew the aircraft type.
4. Approval is provided under the appropriate flight authorisation system.

☐ **GM**

(a) An aircraft captain must be assigned for each flight and must be one of the following:

1. a qualified pilot endorsed on the aircraft type and certified as a captain by the commander of the operating unit
2. a qualified pilot undergoing an approved conversion training course on the aircraft type
3. a trainee pilot undergoing an approved pilot training course.

(b) An aircraft captain is responsible for the safe and effective operation of the aircraft in carrying out the assigned task. ☐ **GM** ☐ **AMC**

(c) An aircraft captain must:

1. ensure they have received sufficient pre-flight detail by way of tasking information, authorisation guidance, mission briefing, or curriculum description
2. conduct an adequate pre-flight briefing for any crew
3. ensure the aircraft and ancillary equipment is serviceable, a certificate of release to service has been issued at the completion of any maintenance and the aircraft accepted for the flight
4. ensure the requirements of all OIPs relating to the aircraft and its operation are observed and obeyed
5. ensure the flight is conducted in accordance with authorised sequences, and relevant OIP
6. deal with occurrences outside the scope of the flight authorisation in accordance with the flight manual, SI and the principles of good airmanship
7. use all the resources at their disposal to ensure the safe recovery of their aircraft, crew and passengers

Superseded

8. contact the authorising officer for advice and guidance when necessary to deviate from the flight authorisation given, as soon as circumstances allow

9. conduct a post-flight crew debrief

10. notify the authorising officer of any unusual occurrences or deviations from the flight authorisation

11. comply with post-flight documentary requirements.

(d) OIP issued under this regulation must identify:

1. the responsibilities of aircraft captains

2. the authority of the aircraft captain in all circumstances relating to flying operations

3. the responsibilities of the aircraft captain in relation to cargo and passengers

4. considerations for flight authorisation regarding firearms and ammunition carried aboard Defence registered aircraft, the authorised degree of weapon readiness and method of carriage

5. the circumstances and requirements under which an in-flight transfer of captaincy may occur, including a mechanism to record the transfer in the appropriate documentation.

(a) The MAO must establish an oxygen management system that ensures appropriate provision and use of oxygen systems on Defence aircraft. ☐ **GM** ☐ **AMC**

(b) The MAO must ensure that flight crew who are occupants of flight crew seats on flight crew compartment duty use supplemental oxygen above 10 000 ft cabin altitude (CA). ☐ **GM** ☐ **AMC**

(c) The MAO must ensure passengers (to include parachutists) and crew not regulated under DASR ORO.60.B use supplemental oxygen whenever: ☐ **GM** ☐ **AMC**

1. flight above 10 000 ft CA but not above 13 000 ft CA exceeds 30 minutes, or

2. flight is above 13 000 ft CA.

(a) The MAO must ensure that portable electronic equipment (PEE) is only carried and used in accordance with approved Defence OIP that includes the requirements for their carriage and operation by aircrew and passengers: ☐ **GM**

(a) The MAO must ensure a system is established that assures the carriage of personnel in Defence aircraft will not compromise Aviation Safety. ☐ **GM** ☐ **AMC**

Superseded

(b) The MAO must establish a system that ensures a requirement to carry personnel using Non–standard Aircraft Restraint and Seating (NSARS) is such that risk is eliminated or otherwise minimised so far as is reasonably practicable. ☐ **GM** ☐ **AMC**

(c) The MAO must ensure that records of personnel carried in Defence aircraft are raised, maintained and preserved. ☐ **GM** ☐ **AMC**

☐ **GM**

(a) The MAO must ensure that aircraft role equipment is only carried and operated in accordance with approved OIP.

(a) The MAO must ensure Defence aircraft are fitted with flight recorder and locating equipment appropriate to its military CRE to: ☐ **GM** ☐ **AMC**

1. Locate aircraft and personnel in the event of an aircraft crash.
2. Provide data that can be downloaded, interpreted and analysed by approved personnel to assist in the prevention of further aviation safety occurrences.

Superseded

RoA.05 - RULES OF THE AIR

(a) COMAUSFLT/ COMD AVNCOMD/ ACAUST must ensure that the Rules of the Air as they apply to Defence Aviation as stipulated within Defence AIP are harmonised with ICAO and national civil practice wherever practical in order to assure Defence Aviation interoperability with non-Defence aviation activities. ☐ **GM** ☐ **AMC**

Superseded

(a) The MAO must ensure promulgation of OIP that addresses, where applicable, rules and requirements relating to:

1. Flypasts and Display Flying [1]
2. formation flying
3. airborne emergency training
4. missions and tasks involving search and rescue and aeromedical evacuation [2]
5. missions and tasks involving civil and community support activities
6. missions and tasks involving use of automated flight control, Communication, Navigation and Surveillance (CNS) and Air Traffic Management Systems (ATMS)
7. flights involving interaction with UAS
8. any other task or mission which requires special consideration.

(b) Flying rules and requirements with applicability under this regulation must be based upon a Risk Management assessment.

SPA.10 - COMMAND CLEARANCE

☐ **GM**

(a) The MAO must maintain a Command Clearance management system for approval to operate an aviation system outside the system's configuration, role, environment, limitation or condition. ☐ **GM** ☐ **AMC**

(b) the Command Clearance management system shall specify requirements for the completion of a risk assessment prior to issue of a Command Clearance. ☐ **GM** ☐ **AMC**

(c) The MAO must ensure records of Command Clearances decisions are available to the Authority.

(a) The MAO must maintain a system for the conduct of Low Flying. ☐ **GM** ☐ **AMC**

(b) The MAO must ensure OIP includes low flying orders including: ☐ **AMC**

1. low flying areas
2. routes
3. minimum heights

Superseded

4. separation requirements

5. limitations of each aircraft type

6. use of any specialised equipment (such as Terrain-Following radar, GPWS, vision enhancing equipment).

☐ **GM**

(a) MAOs and UAS Operators must ensure Air Display - related risks are managed IAW DASR SMS. ☐ **GM** ☐ **AMC**

(b) For Flypasts, MAOs and UAS Operators must:

1. obtain approval from the relevant single-Service approval authority prior to conduct ☐ **GM** ☐ **AMC**

2. document in OIP, conduct and manoeuvre limitations ☐ **GM** ☐ **AMC**

3. restrict personnel on board the Aircraft to Crew and Mission Essential Passengers only

4. ensure the release of objects and use of ground special effects will not compromise Aviation Safety or pose a risk to other Aircraft and property. ☐ **GM** ☐ **AMC**

(c) For Display Flying, MAOs and UAS Operators must, in addition to the requirements for Flypasts, ensure:

1. Display Crew, Flying Display Directors (FDD), FLTAUTHO and Display Flying Supervisors (DFS) are:

   i. selected based on their skill, experience, qualifications and airmanship ☐ **GM** ☐ **AMC**

   ii. competent and current ☐ **GM** ☐ **AMC**

2. Display Flying is appropriately supervised ☐ **GM** ☐ **AMC**

3. Display Flying OIP includes:

   i. handling notes ☐ **GM** ☐ **AMC**

   ii. approved manoeuvres and Display Sequences specific to Aircraft Type ☐ **GM** ☐ **AMC**

   iii. conduct and manoeuvre limitations ☐ **GM** ☐ **AMC**

   iv. emergency response plans (ERP) appropriate to the scale of the event. ☐ **GM**

(a) The MAO must ensure a DLRO Management System is established. ☐ **GM** ☐ **AMC**

Superseded

SPA.50 – DEFENCE NAVIGATION APPROVALS (AUS)

☐ **GM**

(a) The MAO must obtain approval IAW DASR ARO.100 for the following Defence navigation Operations: ☐ **GM1** ☐ **GM2** ☐ **AMC**

1. Performance Based Navigation (PBN)
2. Reduced Vertical Separation Minima (RVSM)
3. North Atlantic High-Level Airspace (NAT HLA).

(b) The MAO must utilise navigation equipment and management, monitoring and alerting controls for Defence navigation Operations defined at DASR SPA.50(a), that: ☐ **GM** ☐ **AMC**

1. complies with initial Airworthiness and Aircraft eligibility ☐ **GM1** ☐ **GM2** ☐ **AMC**
2. ensures operations will not compromise Aviation Safety. ☐ **GM1** ☐ **GM2** ☐ **AMC1** ☐ **AMC2**

(c) The MAO must utilise defined training and Currency requirements IAW DASR AIRCREW.10 for all Defence navigation Operations. ☐ **GM**

SPA.55 – NIGHT VISION IMAGING SYSTEM (NVIS) (AUS)

☐ **GM**

(a) The MAO or Sponsor must utilise a defined Night Vision Imaging System (NVIS) to ensure Aviation Safety for Defence Aircraft when using Night Vision Devices (NVDs) as the primary means of vision for Safety Critical tasks. The defined NVIS must include:

1. Aircraft Type Design compatibility IAW DASR 21
2. compliance to approved equipment design requirements ☐ **GM** ☐ **AMC**
3. NVIS equipment and NVIS-specific aircraft components applicable to each Aircraft Type, which meets the: ☐ **GM** ☐ **AMC**
   i. requirements of DASR ORO.40
   ii. NVIS maintenance requirements promulgated in OIP approved by the MAO or Sponsor.
4. integration into DASR ORO.10 Flying Management System (FMS), to ensure: ☐ **GM** ☐ **AMC**
   i. NVIS Aircrew composition, qualifications, Currency and training are defined IAW DASR AIRCREW.10 ☐ **GM** ☐ **AMC**
   ii. Flight Authorisation system risk controls are utilised IAW DASR ORO.30 ☐ **GM**
   iii. Safety Management System (SMS) controls are utilised, incorporating:
      a. risk management IAW DASR SMS ☐ **GM** ☐ **AMC**
      b. fatigue management IAW DASR AVFM.20 ☐ **AMC**

Superseded

c. defined environmental minimums for Aircraft Type's roles and tasks ☐ **GM** ☐ **AMC**

d. defined minimum NVIS equipment required for aided Flight operations. ☐ **AMC**

iv. OIP details:

a. the illumination level below which additional Aircrew training, qualifications and hazard controls are required ☐ **GM** ☐ **AMC**

b. normal and emergency procedures for the Aircraft Type's roles and tasks ☐ **GM** ☐ **AMC**

c. instructions and limitations for the Aircraft Type's roles and tasks. ☐ **GM** ☐ **AMC**

Superseded

DASR SPO - Special Purpose Operations

SPO.00 - AVIATION SAFETY ASSESMENT

☐ GM

SPO.05 - JOINT PERSONNEL RECOVERY (JPR)

☐ GM

SPO.10 - AEROMEDICAL EVACUATION

☐ GM

Superseded

DASR UAS - Uncrewed Aircraft Systems

UAS.10 - UAS APPROVAL AND AUTHORISATION

☐ **GM1** ☐ **GM2** ☐ **GM3**

(a) Defence UAS must only be operated if authorised by the relevant Command or Defence Group. ☐ **AMC**

(b) Persons authorising and operators of a UAS must: ☐ **GM**

1. eliminate risk to the health and safety, So Far As is Reasonably Practicable (SFARP), to other air users, and to people and critical infrastructure on the ground or water, and
2. if it is not reasonably practicable to eliminate risk to health and safety, minimise those risks SFARP.

(c) All Defence UAS must operate in accordance with the requirements and limitations of Certified, Specific or Open category. ☐ **GM** ☐ **AMC1** ☐ **AMC2**

(d) Defence UAS must be either on the Defence Register when directed by the Authority, or on a local register. ☐ **AMC** ☐ **GM**

(e) Local registers raised in accordance with DASR.UAS.10.D must be made available to the Authority on request.

UAS.20 - CERTIFIED CATEGORY UAS

(a) UAS shall only be eligible for operation under Certified category if they: ☐ **GM**

1. are Defence registered in accordance with DASA.ARO.60.
2. have a Statement of Operating Intent and Usage (SOIU) in accordance with DASR.ARO.50
3. are Type Certified in accordance with DASR.21. ☐ **AMC**
4. comply with all initial airworthiness, and continuing airworthiness DASR
5. are operated under a Military Air Operator Certificate (MAOC) in accordance with DASR.ARO.100
6. comply with DASR Air Operations and DASR Standard Rules of the Air Regulation. ☐ **AMC**
7. are controlled by a RP who is a qualified military pilot, or qualified in accordance with requirements mandated by the MAO-AM. ☐ **AMC**

UAS.30 - SPECIFIC CATEGORY UAS

(a) UAS shall only be eligible for operation under Specific category if they are operated under either: ☐ **GM**

Superseded

1. a UASOP issued by the Authority (Specific Type A), or

2. a Standard Scenario published by the Authority (Specific Type B).

(b) Specific category UAS to be operated under a UASOP (Specific Type A) must: ☐ **GM1** ☐ **GM2** ☐ **AMC**

1. be registered in accordance with DASR.UAS.10.D

2. have its role and operating environment documented in an SOIU when directed by the Authority ☐ **GM** ☐ **AMC**

3. comply with DASR initial and continuing airworthiness regulations as directed by the Authority ☐ **AMC**

4. comply with the Military Air Operator requirements of DASR.ARO.100, to the extent directed by the Authority ☐ **AMC**

5. comply with DASR under Air Operations and Standard Rules of the Air to the extent directed by the Authority ☐ **AMC**

6. be controlled by a RP who is qualified as specified in the UASOP ☐ **AMC**

7. operate within the requirements and limitations included on the UASOP. ☐ **AMC**

(c) Specific category UAS to be operated under a Standard Scenario (Specific Type B) must: ☐ **GM** ☐ **AMC**

1. be operated only under Standard Scenarios in DASR.UAS.35

2. be notified to the Authority via submission of DASR Form 150 prior to commencement of UAS operations

3. be registered in accordance with DASR.UAS.10.D.

(a) **Standard Scenario for Micro UAS**. UAS operations under the Micro UAS Standard Scenario must comply with the following requirements and limitations: ☐ **GM**

1. UAS MTOW must not exceed 0.1 kg.

2. Not operate in a Prohibited or Restricted Area unless approved by the authority controlling the area.

3. Not operate in such a manner as to create an obstruction to another aircraft.

4. Not operate over an aerodrome runway/movement area without approval from the relevant authority. ☐ **GM**

5. Not operate in the approach or departure path of a runway, landing area or ship without approval from the relevant authority. ☐ **GM**

6. Be controlled by a RP who meets training, qualification and experience requirements defined by the relevant Command/Group.

7. Allow RP intervention during all stages of the flight. ☐ **GM**

Superseded

8. Employ suitable risk controls when operating: ☐ **AMC**

   i. beyond visual line of sight

   ii. outside of daylight hours

   iii. in cloud or reduced visibility

   iv. above 400 ft Above Ground Level (AGL)

(b) **Standard Scenario for Very Small UAS.** UAS operations under the Very Small UAS Standard Scenario must comply with the following requirements and limitations: ☐ **GM**

1. UAS MTOW must not exceed 2 kg.

2. Not operate in a Prohibited or Restricted Area unless approved by the authority controlling the area.

3. Not operate over an area where a fire, police or other public safety or emergency operation is being conducted without the approval of the person in charge of the operation.

4. Not operate in such a manner as to create an obstruction to another aircraft.

5. Not operate in controlled airspace higher than 400 ft AGL without approval of the relevant airspace authority. ☐ **GM**

6. Not operate over an aerodrome runway/movement area without approval from the relevant authority. ☐ **GM**

7. Not operate in the approach or departure path of a runway, landing area or ship without approval from the relevant authority. ☐ **GM**

8. Be controlled by a RP who meets training, qualification and experience requirements defined by the relevant Command/Group.

9. For each air vehicle, have a dedicated RP.

10. Allow RP intervention during all stages of the flight. ☐ **GM**

11. Employ suitable risk controls when operating: ☐ **AMC**

    i. beyond visual line of sight

    ii. outside of daylight hours

    iii. in cloud or reduced visibility

    iv. above 400 ft AGL

    v. within 30 m horizontally of GP

    vi. over populous areas

    vii. over or in proximity of critical infrastructure

    viii. within 3 nm (5.5 km) of the movement area of a controlled aerodrome.

(c) **Standard Scenario for Defence Ranges and Exercise Areas.** UAS operations under the Defence Ranges and Exercise Areas Standard Scenario must comply with the following requirements and limitations: ☐ **GM**

Superseded

1. Operate only in a Restricted Area or Military Operating Area that excludes non-participating Aircraft. ☐ **GM**

2. Operate only over:

   i. Defence Controlled Land, or

   ii. water designated for a planned Defence exercise only during that exercise period.

3. UAS MTOW must not exceed 150 kg.

4. Not operate in a Prohibited Area or Restricted Area unless approved by the authority controlling the area.

5. Not operate over an area where a fire, police or other public safety or emergency operation is being conducted without the approval of the person in charge of the operation.

6. Not operate in such a manner as to create an obstruction to another aircraft.

7. Not operate over an aerodrome runway/movement area without approval from the relevant authority. ☐ **GM**

8. Not operate in the approach or departure path of a runway, landing area or ship without approval from the relevant authority. ☐ **GM**

9. Be controlled by a RP who meets training, qualification and experience requirements defined by the relevant Command/Group.

10. For each air vehicle, have a dedicated RP.

11. Allow RP intervention during all stages of the flight. ☐ **GM**

12. Employ suitable risk controls when operating: ☐ **AMC**

    i. beyond visual line of sight

    ii. outside of daylight hours

    iii. in cloud or reduced visibility

    iv. above 400 ft AGL

    v. over or in proximity of MEP

    vi. over or in proximity of vessels in the exercise area

    vii. over or in proximity of critical infrastructure.

(d) **Standard Scenario for High Seas.** UAS operations under the High Seas Standard Scenario must comply with the following requirements and limitations: ☐ **GM**

1. Operate no closer than 12 nm to land, except for operations within 12 nm of rocks, shoals, and islands which have no permanent human inhabitants.

2. UAS MTOW must not exceed 150 kg.

3. Not operate in a Prohibited or Restricted Area unless approved by the authority controlling the area.

Superseded

4. Not operate over an area where a fire, police or other public safety or emergency operation is being conducted without the approval of the person in charge of the operation.

5. Not operate in such a manner as to create an obstruction to another aircraft.

6. Not operate in controlled airspace without approval of the relevant airspace authority.

7. Not operate in the approach or departure path of a ship's runway/landing area without approval from the relevant authority. ☐ **GM**

8. Be controlled by a RP who meets training, qualification and experience requirements defined by the relevant Command/Group.

9. For each air vehicle, have a dedicated RP.

10. Allow RP intervention during all stages of the flight. ☐ **GM**

11. Employ suitable risk controls when operating: ☐ **AMC**

    i. beyond visual line of sight

    ii. outside of daylight hours

    iii. in cloud or reduced visibility

    iv. above 400 ft Above Mean Sea Level (AMSL)

    v. over or in proximity of MEP

    vi. over or in proximity of vessels

    vii. over or in proximity of critical infrastructure.

(e) **Standard Scenario for Trials and Experimentation.** UAS operations under the Trials and Experimentation Standard Scenario must comply with the following requirements and limitations: ☐ **GM**

1. Operate only in a Restricted Area or Military Operating Area that excludes non-participating Aircraft. ☐ **GM**

2. Operate only over:

    i. Defence Controlled Land that precludes GP access, or

    ii. water where the UAS is not in the proximity of, or overhead of, GP.

3. Operate well clear of MEP, except where operation in their proximity is essential to a trial outcome. ☐ **GM**

4. Not operate in a Prohibited Area or Restricted Area unless approved by the authority controlling the area.

5. Be controlled by a RP who meets training, qualification and experience requirements defined by the relevant Command/Group.

6. Allow RP intervention during all stages of the flight. ☐ **GM**

7. Employ suitable risk controls when operating: ☐ **AMC**

Superseded

i. beyond visual line of sight

ii. outside of daylight hours

iii. in cloud or reduced visibility

iv. above 400 ft AGL

v. in proximity of MEP

vi. more than one UA per RP.

(f) **Standard Scenario for Weaponised UAS Evaluation** ☐ **GM1** ☐ **GM2**

1. The Standard Scenario for Weaponised UAS evaluation is exclusively for MAO use. ☐ **GM**

2. MAOs must conduct weaponised UAS operations: ☐ **AMC** ☐ **GM**

i. in an approved deterministic Range Danger Area (RDA) ☐ **GM**

ii. in Airspace that excludes all Aircraft except participating UAS ☐ **AMC**

iii. that contain the RDA in the Airspace designated for the activity ☐ **AMC**

iv. over a Defence Area or beyond Territorial Seas ☐ **AMC** ☐ **GM**

v. with risk controls implemented for MEP ☐ **AMC** ☐ **GM**

vi. with an RP who meets training, qualification and experience requirements defined by the relevant Command ☐ **AMC**

vii. crewed by a dedicated RP for each air vehicle

viii. that enables RP intervention during all stages of the Flight except for Lost Link and during Terminal Guidance. ☐ **AMC**

(a) Micro, Very Small and Small UAS shall only be eligible for operation under Open Category if they comply with the requirements and limitations contained in the following Standard Operating Conditions: ☐ **GM** ☐ **AMC**

1. **Micro UAS (< 0.1 kg) must:**

i. be operated within visual line of sight

ii. be operated no higher than 400 ft above ground level (AGL)

iii. be operated during daytime and not in cloud

iv. not operate in a way that creates a hazard to another aircraft, person or critical infrastructure

v. not operate in a Prohibited Area, or a Restricted Area unless approved by the authority controlling the area

vi. not operate in the movement area or the approach or departure path of a runway of an aerodrome/ship without approval from the relevant authority

Superseded

vii. not operate in such a manner as to create an obstruction to an aircraft

viii. be controlled by a RP who meets training, qualification and experience requirements defined by the relevant Command/Group ☐ **AMC**

ix. allow RP intervention during all stages of the flight

x. be registered in accordance with DASR UAS.10.D.

2. **Very Small UAS (0.1–2 kg), in addition to the requirements and limitations for Micro UAS, must:**

i. not be operated within 30 m of the GP

ii. not operate over populous areas

iii. not operate within 3 nm (5.5 km) of the movement area of a controlled aerodrome without approval of the relevant airspace authority ☐ **AMC**

iv. not operate over an area where a fire, police or other public safety or emergency operation is being conducted without approval of the person in charge of the operation

v. for each air vehicle, have a dedicated RP.

3. **Small UAS (2–25 kg), in addition to the requirements and limitations for Very Small UAS, must:**

i. only operate over land/water controlled by Defence

ii. not operate in controlled airspace without approval of the relevant airspace authority.

(a) Integration of weapons onto Defence UAS must either: ☐ **GM**

1. require approval by the Authority, or ☐ **GM**

2. operate under the Standard Scenario for weaponised UAS evaluation in DASR UAS.35(f).

(b) Carriage of persons on Defence UAS shall require approval by the Authority. ☐ **GM**

(a) The operator of a UAS must report any identified UAS aviation safety event. ☐ **GM** ☐ **AMC**

(b) The operator of a UAS under any one of the following UAS categories must report any identified UAS aviation safety issue:

1. **Certified.**

2. **Specific Type A.** The Authority will define the minimum reporting requirements as part of the UASOP approval process.

Superseded

(a) Upon request, all data and access to support initial and on-going compliance assurance of UAS operations must be made available to the Authority. ☐ **GM**

Superseded

DASR 139 - Aerodromes

139.10 - General (AUS)

☐ **GM**

Scope. For these aerodrome regulations, the terms airport, airfield, airbase, land based or shipborne heliports are all considered appropriate when referring to an aerodrome.

(a) Defence Aerodromes must be classified as Certified or Non-certified as determined by the Authority.

(b) To operate a Certified Aerodrome, you must be an Aerodrome Operator (AD OPR) approved by the Authority.

139.20 - Organisational Approval (AUS)

☐ **GM**

(a) Certified aerodromes must only be operated by an approved Aerodrome Operator to approved standards and procedures as defined by the level and scope of the approval issued by the Authority.

139.30 - Requirements for Approval (AUS)

☐ **AMC** ☐ **GM**

(a) The applicant organisation seeking to achieve Aerodrome Operator approval must submit a Compliance Statement to the Authority.

139.40 - Organisational Structure (AUS)

(a) An Aerodrome Operator must define its organisational structure. ☐ **AMC** ☐ **GM**

139.50 - Aerodrome Manual (AUS)

(a) The Aerodrome Operator of a certified aerodrome must have an aerodrome manual that describes all relevant information and procedures that underpin the safe and effective use of the aerodrome. ☐ **AMC** ☐ **GM**

139.60 - Safety Management System (AUS)

(a) The Aerodrome Operator must establish and maintain a Safety Management System (SMS), for the operation of a Certified Aerodrome, in accordance with DASR.SMS. ☐ **AMC** ☐ **GM**

Superseded

139.70 - Quality Management System (AUS)

(a) An Aerodrome Operator must have and maintain a Quality Management System. ☐ **AMC** ☐ **GM**

139.80 - Aerodrome Certification (AUS)

☐ **GM**

AERODROME INITIAL CERTIFICATION

(a) To be issued an aerodrome certificate by the Authority, the applicant must:

1. Define the Authority-agreed certification basis for the aerodrome, ☐ **AMC** ☐ **GM**
2. demonstrate that the aerodrome design and construction complies with the agreed certification basis, ☐ **AMC** ☐ **GM**
3. Declare that the aerodrome design and construction complies with the agreed certification basis, ☐ **AMC** ☐ **GM**
4. Implement arrangements to support continued aerodrome compliance with the agreed certification basis, ☐ **AMC** ☐ **GM** and
5. Provide design information to support continuing safe operation of the aerodrome. ☐ **AMC** ☐ **GM**

CHANGES TO AERODROME CERTIFICATION

(b) Changes to the design or construction of a certified aerodrome must be presented to the Authority for certification, except where those changes have no appreciable effect on the safety of flight operations. ☐ **AMC** ☐ **GM**

139.90 - Maintenance of Aerodromes (AUS)

(a) The Aerodrome Operator must develop, document and undertake an aerodrome maintenance program to ensure the aerodrome remains in a condition to support safe flight operations. ☐ **AMC** ☐ **GM**

139.100 - Personnel Competency (AUS)

(a) Aerodrome Operators must ensure that personnel responsible for the conduct of activities in support of individual aerodromes are competent, qualified and authorised to undertake their duties. ☐ **AMC** ☐ **GM**

Superseded

DASR ABM - Air Battle Management

ABM.10 - ORGANISATIONAL APPROVAL (AUS)

☐ **GM**

(a) An Air Battle Management Operator (ABMO) must operate only to the extent approved in the ABMO Certificate (ABMOC) issued by DASA.

(b) As an exception from:

1. DASR ABM.10(a), a MAO that conducts ABM does not require a separate ABMO or OpSpec
2. DASR ABM does not apply to Joint Terminal Attack Controllers (JTACs).

ABM.20 - ABMO CERTIFICATE (AUS)

(a) An ABMO applicant organisation must utilise a Compliance Statement (CS) to apply to DASA for: ☐ **GM** ☐ **AMC**

1. issue of an ABMOC, or attached Operations Specification (OpSpec) ☐ **GM**
2. reissue of, or variation to an ABMOC, or attached OpSpec. ☐ **GM**

(b) As an exception from DASR ABM.20(a), a MAO that conducts ABM does not require a separate ABMOC or OpSpec. However, the MAO OpSpec and CS must reflect the scope of ABM operations provided IAW DASR ABM. ☐ **AMC**

ABM.30 - ORGANISATIONAL STRUCTURE (AUS)

(a) An ABMO must define its organisational structure to include: ☐ **GM** ☐ **AMC**

1. the authority, duties and responsibilities of all personnel performing ABMO functions, including the management personnel responsible for safety and quality management functions
2. the relationship and reporting lines between the personnel performing ABMO functions and other parts of the organisation
3. formal relationships with all other contributors to the ABMO that may directly influence the safety of their operations. ☐ **GM**

ABM.40 - SAFETY MANAGEMENT SYSTEM (SMS) (AUS)

(a) An ABMO must utilise an SMS in accordance with DASR SMS. ☐ **GM**

Superseded

ABM.50 - QUALITY MANAGEMENT SYSTEM (QMS) (AUS)

(a) An ABMO must utilise a QMS to achieve consistency, continuity and compliance of safe operations—through quality planning, quality assurance, quality control and quality improvement. ☐ **GM** ☐ **AMC**

ABM.60 - ORDERS, INSTRUCTIONS AND PUBLICATIONS (OIP) (AUS)

(a) An ABMO must utilise authorised ABM OIP. ABM OIP must contain the information required for the safe conduct of ABMOps. ☐ **GM** ☐ **AMC**

(b) ABM OIP must be easily accessible by relevant personnel.

ABM.70 - EQUIPMENT, SYSTEMS AND INSTALLATIONS (AUS)

DASR ABM.70 - Reserved.

ABM.80 - COMPETENCY MANAGEMENT (AUS)

(a) An ABMO must ensure personnel are competent and authorised to undertake their assigned ABM duties. ☐ **GM** ☐ **AMC**

Superseded

DASR ACD - Air Cargo Delivery

ACD.10 - ORGANISATIONAL APPROVAL (AUS)

☐ **GM1** ☐ **GM2** ☐ **GM3**

(a) An ACD Service Provider (ACDSP) must operate only to the extent approved in the ACDSP Certificate (ACDSPC) issued by DASA. ☐ **GM**

ACD.20 - ACDSP CERTIFICATE (AUS)

☐ **GM**

(a) An ACDSP applicant organisation must utilise a Compliance Statement (CS) to apply to DASA for: ☐ **GM1** ☐ **GM2** ☐ **AMC1** ☐ **AMC2**

1. issue of an ACDSPC, or attached OpSpec ☐ **GM**
2. reissue of, or variation to, an ACDSPC, or attached OpSpec. ☐ **GM**

(b) As an exception from DASR ACD.10(a) and DASR ACD.20(a), a MAO that conducts ACD does not require a separate ACDSPC or OpSpec. However, the MAO Operations Specification (OpSpec) and CS must reflect the scope of ACD services provided IAW DASR ACD. ☐ **GM** ☐ **AMC**

ACD.30 - ORGANISATIONAL STRUCTURE (AUS)

(a) An ACDSP must define its organisational structure to include: ☐ **GM1** ☐ **GM2** ☐ **AMC**

1. the authority, duties and responsibilities of all personnel performing ACDSP functions, including the management personnel responsible for safety and quality management functions
2. the relationship and reporting lines between these personnel and other parts of the organisation
3. formal relationships with all other contributors to the service provision that may directly influence the safety of their services.

ACD.40 - SAFETY MANAGEMENT SYSTEM (SMS) (AUS)

(a) An ACDSP must utilise an SMS in accordance with DASR SMS. ☐ **GM**

ACD.50 - QUALITY MANAGEMENT SYSTEM (QMS) (AUS)

(a) An ACDSP must utilise a Quality Management System (QMS) to achieve consistency, continuity and compliance of safe service provision—through quality planning, quality assurance, quality control and quality improvement. ☐ **GM1** ☐ **GM2** ☐ **AMC1** ☐ **AMC2**

Superseded

ACD.60 - ACD OPERATIONS MANUALS (AUS)

☐ **GM**

(a) MAOs conducting ACD and ACDSPs must utilise authorised ACD operations manuals. ACD operations manuals must contain the instructions, procedures and information required for safe payload preparation, composition, configuration, loading, placement, restraint and unloading of the following ACD load types on Defence Aircraft: ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **AMC1** ☐ **AMC2**

1. Passengers ☐ **GM**
2. General (standard) Cargo
3. Non-Standard Cargo. ☐ **GM** ☐ **AMC1** ☐ **AMC2**

(b) ACD operations manuals must detail procedures to ensure Aviation Safety (as relevant to the ACD load) for Defence Aircraft and must be easily accessible by relevant personnel. ☐ **AMC**

(c) An ACDSP must utilise a personnel fatigue management strategy. ☐ **AMC**

(d) MAOs or Sponsors must utilise on board emergency procedures when carrying the ACD load types listed at ACD 60(a). ☐ **GM**

ACD.70 - ACD EQUIPMENT, SYSTEMS AND INSTALLATIONS (AUS)

(a) MAOs conducting ACD and ACDSPs must ensure that ACD Equipment, systems and installations meet, and are maintained to, authorised standards; and support the safe provision of services. ☐ **GM** ☐ **AMC**

ACD.80 - ACD COMPETENCY MANAGEMENT (AUS)

(a) The ACDSP must ensure personnel are competent and authorised to undertake their ACD duties. ☐ **GM** ☐ **AMC**

Superseded

DASR ANSP - Air Navigation Service Providers

ANSP.10 – Organisational Approval (AUS)

(a) Providers of the following Air Navigation Services (ANS) must operate only to the extent approved in the ANSP Certificate (ANSPC) issued by DASA: ☐ **AMC** ☐ **GM**

ANSP.20 – ANSP Certificate (AUS)

(a) An ANSP must use an ANSP Exposition (ANSPE) to apply to DASA for: ☐ **AMC** ☐ **GM**

1. issue of an ANSPC, or attached Service Provision Conditions (SPC)
2. variation to an ANSPC, or attached SPC

ANSP.30 – Organisational Structure (AUS)

(a) A certified ANSP must define its organisational structure to include: ☐ **AMC** ☐ **GM**

1. the authority, duties and responsibilities of all positions performing ANSP functions, including the management positions responsible for safety and quality management functions
2. the relationship and reporting lines between these positions and other parts of the organisation
3. formal relationships with external contributors to the service provision that may directly influence the safety of their services

ANSP.40 – Safety Management Systems (AUS)

(a) A certified ANSP must utilise a Safety Management System (SMS) in accordance with DASR.SMS. ☐ **GM**

ANSP.50 – Quality Management Systems (AUS)

(a) A certified ANSP must utilise a quality management system (QMS) to achieve consistency, continuity and compliance of safe service provision—through quality planning, quality assurance, quality control and quality improvement. ☐ **AMC** ☐ **GM**

ANSP.60 – Operations Orders, Instructions And Publications (OIP) (AUS)

(a) A certified ANSP must utilise authorised OIP that are easily accessible and contain the procedures, instructions and information required for personnel to perform their duties. ☐ **AMC** ☐ **GM**

(b) A certified ANSP providing Air Traffic Control (ATC) must utilise OIP that: ☐ **AMC** ☐ **GM**

Superseded

1. define ATS procedures and ATC separation standards

2. are harmonised with national civil practice and International Civil Aviation Organisation (ICAO) Standards and Recommended Practices so far as is reasonably practicable

3. detail the coordination of activities and services, including the exchange of relevant information, with:

   i. Aerodrome Operators

   ii. providers of Meteorological Services

   iii. AIS providers

   iv. CNS providers

   v. other ANSPs

4. detail contingency arrangements to deal with failures or irregularities in the systems used to provide ATC

5. define ANSP personnel fitness for duty requirements.

(c) A certified ANSP that provides CNS Services must utilise OIP that define how: ☐ **AMC** ☐ **GM**

1. the availability, continuity, accuracy and integrity of services are ensured

2. interruptions to provided services are communicated to affected organisations

3. changes to extant systems are managed.

(d) A certified ANSP that provides an AIS must: ☐ **AMC** ☐ **GM**

1. utilise OIP that define Aeronautical Information product development and delivery procedures

2. operate IAW the Letter of Acceptance (LOA) issued by DASA.

(e) A certified ANSP that provides FPD Services must utilise OIP that define how: ☐ **AMC** ☐ **GM**

1. Aeronautical Data for the design of flight procedures is either obtained from authoritative sources or verified and validated by the FPD Services provider

2. flight procedures are designed, including how design criteria are determined

3. the integrity of software systems used in the design of flight procedures is assured

4. changes to software systems used in the design of flight procedures are managed to ensure no detriment to Aviation Safety

5. flight procedures are published

6. periodic reviews of published procedures are conducted.

Superseded

ANSP.70 – Equipment, Systems and Installations (AUS)

(a) A certified ANSP must ensure that equipment, systems and installations used or intended for use in the provision of ANS: ☐ **AMC** ☐ **GM**

1. support the safe and effective provision of the service
2. are verified and tested to ensure they comply with relevant technical and operational requirements and present no detriment to Aviation Safety and operational capability ☐ **AMC** ☐ **GM**
3. are protected against physical and cyber threats from external and internal sources.

ANSP.80 – Personnel Competency and Licensing (AUS)

(a) A certified ANSP must ensure that personnel are qualified, competent, current and authorised to undertake their assigned duties. ☐ **AMC** ☐ **GM**

(b) A certified ANSP must only provide an Air Traffic Control Service utilising licensed Air Traffic Controllers. ☐ **AMC** ☐ **GM**

(c) A certified ANSP that provides FPD Services must ensure all personnel who design instrument flight procedures are qualified, competent and current in instrument procedure design. ☐ **AMC**

ANSP.90 – Services Provided By Non-Certified Providers (AUS)

(a) A certified ANSP which uses data provided by a Data Services Provider (DSP) or another ANSP must ensure contractual arrangements regarding the supply of data in any form or for use by any operational system include requirements on the DSP to: ☐ **GM**

1. provide services only within the scope of a Service Level Agreement or documents issued by the relevant CAA or MAA
2. comply with the service delivery provisions of the current version of RTCA 'Standards for Processing Aeronautical Data'
3. advise the ANSP where the DSP has subsequently identified deficiencies or errors in released aeronautical databases
4. advise the ANSP where any CAA or MAA has changed the conditions of approval of the DSP as a source of Aeronautical Data.

(b) A certified ANSP that uses data provided by a DSP must advise all MAOs when released aeronautical databases, or updates to any existing aeronautical databases, are identified to have deficiencies or errors. ☐ **GM**

Superseded

DASR AVFM - Aviation Fatigue Management

AVFM.10 - SCOPE

(a) This regulation applies to organisations operating with approvals granted under DASR.ARO.100 or DASR.ANSP, or DASR ABM.

(b) Where organisations are subject to AVFM.10.A, the regulation must apply to: ☐ **GM**

1. personnel who meet the definition of DASR Glossary – Aircrew
2. personnel who provide an Air Traffic Control (ATC) service as defined in DASR Glossary – Air Traffic Control
3. personnel who provide an Air Battle Management (ABM) operation as defined in DASR Glossary – Air Battle Management
4. personnel who meet the definition of DASR Glossary – Crew and operate UAS IAW DASR.UAS 20.A Certified Category UAS or DASR.UAS.30.A(1) Specific Type A Category UAS where the Authority has identified a need to comply with DASR.AVFM.

AVFM.20 - AVIATION FATIGUE MANAGEMENT

(a) The Accountable Manager (AM) must utilise defined management controls that eliminate or otherwise minimise organisational aviation fatigue risks SFARP IAW DASR.SMS. ☐ **GM**

(b) The AM's management of aviation fatigue must:

1. define duty limitations in accordance with AVFM.30
2. be integrated with the organisation's DASR.SMS solution ☐ **GM** ☐ **AMC**
3. be contextualised to the scope of organisational activities performed and aviation systems operated by employment groups identified in AVFM.10.B ☐ **GM**
4. be defined using benchmark information acceptable to the Authority ☐ **GM** ☐ **AMC**
5. be integrated with the organisation's DASR.ARO.100 or DASR.ANSP.50 quality management solutions, as applicable ☐ **GM**
6. record aviation fatigue management training competency and currency. ☐ **AMC**

AVFM.30 - DUTY LIMITATIONS

(a) The AM must use fatigue-related principles, operational knowledge and experience to: ☐ **GM**

1. define normal and extended duty time limitations ☐ **GM1** ☐ **GM2**

(b) The AM must establish methods to:

Superseded

1. define how:

   a) fatigue hazard identification and controls will be applied prior to task commencement

   b) to re-assess the task environment on the day

   c) to assess the suitability of normal and extended duty limitations to provide aviation fatigue risk control SFARP. ☐ **GM**

2. provide aviation fatigue risk control SFARP that define how fatigue hazard identification and controls will be applied:

   a) after task commencement

   b) when circumstances arise that could place staff beyond defined duty time limitations before task completion. ☐ **GM**

3. periodically validate duty limitations against the requirements of DASR.AVFM. ☐ **GM** ☐ **AMC**

Superseded

MED.05 – AVIATION MEDICINE (AVMED) TRAINING (AUS)

☐ **GM**

(a) The MAO or Sponsor (Sponsor only applicable under DASR NDR.05 or DASR NDR.10) must ensure Aircrew complete initial AVMED training IAW the learning requirements approved by Commanding Officer (CO) Institute of Aviation Medicine (IAM), prior to conducting flight operations in a military Configuration, Role and Environment (CRE). ☐ **GM** ☐ **AMC**

(b) By way of exception from DASR MED.05(a), Aircrew who have completed initial AVMED training conducted by Air Force Interoperability Council (AFIC) member nations are exempt from the requirement to complete initial AVMED training. ☐ **GM**

(c) The MAO, ANSP, ABMO, HAPO personnel or Sponsor must ensure all AVMED related training results are recorded for all relevant personnel. ☐ **AMC**

(d) Where an MAO, ANSP, ABMO or Sponsor identifies a requirement for additional AVMED-related training to that provided by IAM, this training is to be co-ordinated and approved under the authority of CO IAM. ☐ **GM**

(e) The MAO or Sponsor must ensure Aircrew maintain AVMED Currency, as follows: ☐ **GM**

1. overall AVMED Currency is dependent on maintaining both AVMED Currency and Supplemental Aviation Medicine (SAVMED) Currency

2. SAVMED training Currency is initially set through completion of initial AVMED training, and reset through either AVMED refresher training, or SAVMED training ☐ **AMC1** ☐ **AMC2**

3. five years is the maximum Currency period for AVMED training ☐ **GM**

4. by way of exception from DASR MED.05(e)3, in consultation with CO IAM, and risk managed IAW DASR.SMS, the MAO or Sponsor may grant a currency extension ☐ **GM**

5. three years is the maximum Currency period for SAVMED training.

(f) By way of exception from DASR MED.05(e), Aircrew that hold AVMED training Currency conducted by AFIC member nations are exempt from the requirement to complete AVMED training, while that Currency remains in effect.

(g) The MAO or Sponsor must obtain endorsement from CO IAM prior to the conduct of Squadron Aviation Medicine Liaison Officer (SAMLO)-provided SAVMED training ☐ **GM**

(h) Aircrew appointed as a unit SAMLO must meet:

1. initial and ongoing training requirements (defined by CO IAM) before exercising the privilege of conducting SAVMED training

2. additional initial and ongoing training requirements (defined by CO IAM) before exercising the privilege of assisting in the conduct of Physiological Episode Recognition and Recovery Training (PERRT) by IAM.

Superseded

(i) The MAO or Sponsor must ensure that persons who authorise or operate Uncrewed Aircraft Systems (UAS) in the following categories of UAS, meet the AVMED training and Currency requirements defined by CO IAM: ☐ **GM**

1. DASR UAS.20(a) Certified Category UAS
2. DASR UAS.30(a)1 Specific Type A Category UAS, where the Authority has stipulated a requirement to comply with DASR MED.05 in the relevant UAS Operating Permit (UASOP).

(j) Aircraft Controllers within an Air Navigation Service Provider (ANSP) or ABMO must meet the AVMED training and Currency requirements defined by CO IAM. ☐ **GM**

(k) Personnel conducting High Altitude Parachute Operations (HAPO) must meet the AVMED training and Currency requirements defined by CO IAM. ☐ **GM**

(l) CO IAM must define UAS Crew, HAPO personnel and Aircraft Controller AVMED training and Currency requirements:

1. on the basis of CRE
2. consistent with AFIC Standards.

(m) DASR.MED.05 does not apply to Aircraft Passengers with the exception of HAPO personnel. ☐ **GM**

MED.10 - AVIATION MEDICAL CERTIFICATE

(a) The Accountable Manager must ensure aircrew, aircraft controllers and remote pilots have a current aviation medical certificate that is: ☐ **GM** ☐ **AMC**

1. For pilot aircrew: valid for a period not greater than 12 months.
2. For non-pilot aircrew: valid for a period not greater than 24 months.
3. For aircraft controllers and remote pilots: valid for a period not greater than 24 months.[5]

MED.15 - MEDICAL FITNESS MANAGEMENT

(a) The Accountable Manager must establish a medical fitness management system that ensures aircrew, aircraft controllers and remote pilots maintain medical fitness standards for flying related duties. ☐ **GM** ☐ **AMC**

Superseded

NTS.10 – Defence NTS construct (AUS)

☐ **GM**

(a) MAOs, ANSPs and ABMOs must utilise defined controls to eliminate NTS-related safety risks SFARP and, if it is not reasonably practicable to do so, to minimise those risks SFARP. ☐ **GM**

(b) MAOs, ANSPs and ABMOs management of NTS safety risks must:

1. include within its scope:
   - i. Aircrew
   - ii. Crew who operate UAS IAW DASR UAS.20(a) Certified Category UAS or DASR UAS.30(b) Specific Type A Category UAS, and where DASA has identified a need to comply with DASR NTS through the OpSpec or UASOP
   - iii. Aircraft Controllers.
2. be defined using benchmark information acceptable to DASA ☐ **GM**
3. be integrated into the organisation's:
   - i. Flying Management System (FMS) (or equivalent) ☐ **GM**
   - ii. Safety Management System (SMS) ☐ **GM**
   - iii. Quality Management System (QMS). ☐ **GM**
4. include the following NTS training: ☐ **GM**
   - i. initial knowledge-based training conducted prior to either: ☐ **GM** ☐ **AMC**
     - a. conducting Flight Operations
     - b. controlling Defence Aviation operations under an ANSP
     - c. managing Defence Aviation operations under an ABMO.
   - ii. by exception from DASR NTS.10(b)4(i), and risk managed IAW DASR SMS, the regulated entity may exempt personnel from the requirement to complete knowledge-based NTS training prior to conducting flight operations, or controlling or managing Defence Aviation operations ☐ **GM**
   - iii. bridging training conducted:
     - a. during Aircrew or Crew conversion training, or Aircraft Controller endorsement training or equivalent ☐ **GM** ☐ **AMC**
     - b. periodically. ☐ **GM** ☐ **AMC**
   - iv. skills-based training and assessment integrated into the organisation's FMS (or equivalent) ☐ **GM** ☐ **AMC**
   - v. continuation knowledge-based training conducted no less frequently than every two years ☐ **GM** ☐ **AMC**

Superseded

vi. by exception from DASR NTS.10(b)4(v) and risk managed IAW DASR SMS, MAOs, ANSPs and ABMOs may grant a maximum extension of up to one year ☐ **GM**

(c) MAOs, ANSPs and ABMOs must:

1. utilise defined: ☐ **GM** ☐ **AMC**

   i. selection criteria for NTS Facilitators (NTSF) and NTS Trainers (NTST)

   ii. Learning Management Plans (LMP) to train NTST

   iii. qualification processes for NTSF and NTST.

2. record NTS training in an enduring format.

Superseded

DASR SMS - Aviation Safety Management Systems

SMS.A.10 - Scope (AUS)

a. This section specifies Safety Management System (SMS) requirements that must be met by an organisation to qualify for the issue or continuation of an approval. This section only applies to organisations where the DASR SMS is listed as a requirement from the relevant section of the DASR.

SMS.A.25 - Safety Management System (AUS)

a. The approved organisation shall establish and maintain a Safety Management System (SMS). The SMS of the approved organisation shall: ☐ **AMC**

1. be established in accordance with the 4 components and 12 elements contained in paragraph (b);

2. be commensurate with the size of the organisation and the complexity of its aviation products and/or services; ☐ **GM** and

3. be maintained with a maturity level that is acceptable to the Authority. ☐ **GM**

b. The approved organisation's SMS shall comprise of, or map to, the following 4 components and 12 SMS elements:

1. SAFETY POLICY AND OBJECTIVES:

1.1 Management commitment ☐ **AMC** ☐ **GM**

1.2 Safety accountability and responsibilities ☐ **AMC** ☐ **GM**

1.3 Appointment of key safety personnel ☐ **AMC** ☐ **GM**

1.4 Coordination of emergency response planning ☐ **AMC** ☐ **GM**

1.5 SMS documentation ☐ **AMC** ☐ **GM**

2. SAFETY RISK MANAGEMENT:

2.1 Hazard identification ☐ **AMC** ☐ **GM**

2.2 Safety risk assessment and mitigation ☐ **AMC** ☐ **GM**

3. SAFETY OVERSIGHT and IMPROVEMENT: (see NOTE 1 below)

3.1 Safety performance monitoring and measurement ☐ **AMC** ☐ **GM**

3.2 The management of change ☐ **AMC** ☐ **GM**

3.3 Continuous improvement of the SMS ☐ **AMC** ☐ **GM**

4. SAFETY PROMOTION:

4.1 Training and education ☐ **AMC** ☐ **GM**

Superseded

4.2 Safety communication ☐ **AMC** ☐ **GM**

NOTES:

NOTE 1: The word ‘assurance’, as used by ICAO, has been replaced with ‘oversight and improvement’ so as to avoid confusion between oversight and improvement activities that are conducted by the organisation and the assurance activities of the Authority.

NOTE 2: The approved organisation may elect to extend one SMS across multiple organisations and organisation types. Where this is the case, approved organisations must ensure that a accountable manager and safety manager are positioned within their own organisation or an overarching organisation.

NOTE 3: The SMS framework required by this regulation is not designed to satisfy the requirements of safety management systems required by ‘major hazard facilities’. If the approved organisation believes that it may be a ‘major hazard facility’ as defined in the Work Health and Safety Regulations 2011, it should notify Safe Work Australia for further guidance on this matter.

Superseded

Volume 3 - DASP Guidance

1.1 Purpose

1.1.1 The purpose of Volume 3 of the Defence Aviation Safety Program (DASP) Manual is to:

1. promote understanding of the DASP and how its various elements work together to achieve the required Aviation Safety objective
2. support the Defence aviation community to effectively and efficiently comply with the applicable Aviation Safety requirements.

1.2 Scope

1.2.1 The material within Volume 3 is authoritative regulatory guidance. Volume 3 does not establish any requirements for the management of Aviation Safety but does discuss requirements set out in Volumes 1 and 2.

1.2.2 Volume 3 may serve as the primary source of requirements for some administrative actions and processes that enable the smooth functioning of the DASP; eg arrangements for the introduction to service of new Defence aircraft. Such requirements relate to the management of administrative risk only and are not related to the management of Aviation Safety risk.

1.3 How to Use This Document

1.3.1 Volume 3 sits within a range of regulatory supporting information published by the Defence Aviation Safety Authority (DASA), including:

1. Defence Aviation Safety Regulation (DASR) Acceptable Means of Compliance (AMC)
2. DASR Guidance Material (GM)
3. Advisory Circulars (ACs)
4. Factsheets.

1.3.2 Each type of supporting information serves a different purpose and it's likely that the reader will need to consult a variety of sources in order to gain a complete picture of any given topic. To that end, DASA will make best efforts to provide cross-references between related material. Readers are also encouraged to make use of the search functionality within the DASP Policy and Guidance Portal and, if in doubt, to contact DASA for assistance in identifying the material available on a given topic. More information about the hierarchy of Defence Aviation Safety policy and guidance can be found in Section 5.2 Aviation Safety Policy.

1. Introduction

1.1 Purpose

1.1.1 The purpose of Volume 3 of the Defence Aviation Safety Program (DASP) Manual is to:

1. promote understanding of the DASP and how its various elements work together to achieve the required Aviation Safety objective
2. support the Defence aviation community to effectively and efficiently comply with the applicable Aviation Safety requirements.

1.2 Scope

1.2.1 The material within Volume 3 is authoritative regulatory guidance. Volume 3 does not establish any requirements for the management of Aviation Safety but does discuss requirements set out in Volumes 1 and 2.

1.2.2 Volume 3 may serve as the primary source of requirements for some administrative actions and processes that enable the smooth functioning of the DASP; eg arrangements for the introduction to service of new Defence aircraft. Such requirements relate to the management of administrative risk only and are not related to the management of Aviation Safety risk.

1.3 How to Use This Document

1.3.1 Volume 3 sits within a range of regulatory supporting information published by the Defence Aviation Safety Authority (DASA), including:

1. Defence Aviation Safety Regulation (DASR) Acceptable Means of Compliance (AMC)
2. DASR Guidance Material (GM)
3. Advisory Circulars (ACs)
4. Factsheets.

1.3.2 Each type of supporting information serves a different purpose and it's likely that the reader will need to consult a variety of sources in order to gain a complete picture of any given topic. To that end, DASA will make best efforts to provide cross-references between related material. Readers are also encouraged to make use of the search functionality within the DASP Policy and Guidance Portal and, if in doubt, to contact DASA for assistance in identifying the material available on a given topic. More information about the hierarchy of Defence Aviation Safety policy and guidance can be found in Section 5.2 Aviation Safety Policy.

4.1 DASA's Assure Functions

4.1.1 Introduction

4.1.1.1 The following sections describe how DASA carries out the independent safety assurance functions identified in Chapter 3 of Volume 1. These functions are described in simple terms as:

1. **Policy prescription and interpretation.** DASA prescribes and interprets policy for the management of Defence Aviation safety, inclusive of the Defence Aviation Safety Regulation (DASR) and related standards.
2. **Certification.** Issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR.
3. **Oversight and enforcement.** Conduct ongoing oversight and enforcement activities to assure compliance with the DASR and the continued validity of authorisations issued by DASA
4. **Safety promotion.** Promote Aviation Safety through education, training, and dissemination of safety information.

4.1.2 Policy Prescription and Interpretation

4.1.2.1 DASA is accountable to the Defence Aviation Authority to prescribe and interpret Aviation Safety management policy . This is fulfilled primarily through:

1. the promulgation and management of the Defence Aviation Safety Regulation and supporting standards
2. the provision of authoritative advice and guidance in relation to compliance with those regulations and standards.

4.1.2.2 DASA is required to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR' . In fulfilment of this responsibility, DASA prescribes and interprets the minimum safety requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

4.1.2.3 In prescribing design requirements for aircraft and aircraft-related systems, DASA recognises Airworthiness Codes issued by certain CAAs and MAAs and supplements these with additional requirements identified through ADF operational experience and/or CRE considerations. DASA periodically reviews prescribed requirements and assesses their continued applicability and suitability. Finally, DASA provides advice on the appropriateness of tailoring the prescribed requirements and the impact of non-compliance.

Superseded

4.1.3 Certification

4.1.3.1 DASA is accountable to the Defence Aviation Authority to 'issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR' . This activity is known as 'certification'. The various authorisations DASA issues are described in chapter 5.3.

4.1.4. Oversight and Enforcement

Introduction

4.1.4.1 The effectiveness of the Defence Aviation Safety Program (DASP) is underpinned by the suitability of, and the level of compliance with, the Defence Aviation Safety Regulations (DASR). Entities that operate within the regulatory framework seek to maintain compliance in two ways:

1. By developing and implementing organisational systems, supported by processes and instructions, that address the regulations

2. By developing feedback mechanisms to verify that the processes and instructions have been followed, and remain suitable for the purpose of meeting regulatory requirements.

4.1.4.2 Regulatory oversight contributes to aviation safety by identifying potential compliance concerns that may then be further evaluated, and addressed if necessary. Compliance with DASR also mitigates systemic and human errors that dominate hazardous safety events. Oversight is a systematic means of monitoring entities that operate within the regulatory framework for their level of understanding and observance of the regulatory system, as indicated by their policies and instructions and their adherence to them. A natural consequence of regulatory oversight is that it also provides insight into the suitability and effectiveness of the regulatory controls themselves, which is essential for their ongoing development.

4.1.4.3 A key component of an effective regulatory framework is ensuring that regulated entities have a clear understanding of when, why and how DASA may take action in the event of regulatory breaches or unresolved safety performance issues. The DASP enforcement policy supports compliance with the DASR through application of a consistent framework, and has been developed with due consideration of the Defence Aviation environment and associated Commonwealth legislation.

4.1.4.4 Accident and incident investigation also provides opportunity for oversight of compliance with required aviation safety processes and systems, as the structured means of determining and assessing the factors that led to the accident or incident should reveal any deficiencies regarding compliance with the DASR. However, accident and incident investigation is outside the scope of this chapter and further guidance can be found under chapter 4.4 Independent Investigative Capability.

Purpose

4.1.4.5 This chapter describes the principles that comprise the 'Oversight and Enforcement (O&E)' component of the DASP. This chapter applies to all entities regulated under the DASR, and any entity performing Defence Aviation functions that are regulated by a DASA-recognised Civil Aviation Authority (CAA) or Military Aviation Authority (MAA).

Regulatory Requirement

Superseded

4.1.4.6 DASR GR.60 specifies regulated community compliance oversight and enforcement obligations; and requires all Defence, civilian and contractor entities operating within the Defence Aviation Safety regulatory framework to comply with the DASR. Regulatory compliance is subject to ongoing oversight at multiple levels within the framework, and results of the oversight are used to:

1. assure that regulated entities are complying with the DASR,
2. inform future DASR development, and
3. refine the processes and procedures that support implementation of the DASR.

4.1.4.7 Regulated entities are required to ensure that they comply with their applicable aviation safety processes and instructions. Ensuring compliance requires the systematic and routine review of organisational management elements, to assess compliance with the Authority's requirements relating to aviation safety. Each regulated entity should establish arrangements and processes, including a compliance review schedule, to ensure compliance with the DASR.

Oversight

4.1.4.8 Oversight is required to provide confidence to the Defence Aviation Authority (Defence AA) that Defence is executing Aviation operations safely, in accordance with legislated requirements. DASA's Oversight function is executed through the O&E operating model at Figure 1, which assists to define DASA's and regulated entities' obligations to effectively establish and maintain DASR compliance.

4.1.4.9 The model at Figure 1 is separated into an upper (forward-looking) cycle (i.e. DASR implementation) and a lower (DASA feedback) cycle. Both cycles must be effective in their own right for an effective regulatory outcome. This is achieved by mapping each element of the model to corresponding personal accountabilities, responsibilities, expected outcomes and associated DASA (and other local) policy.

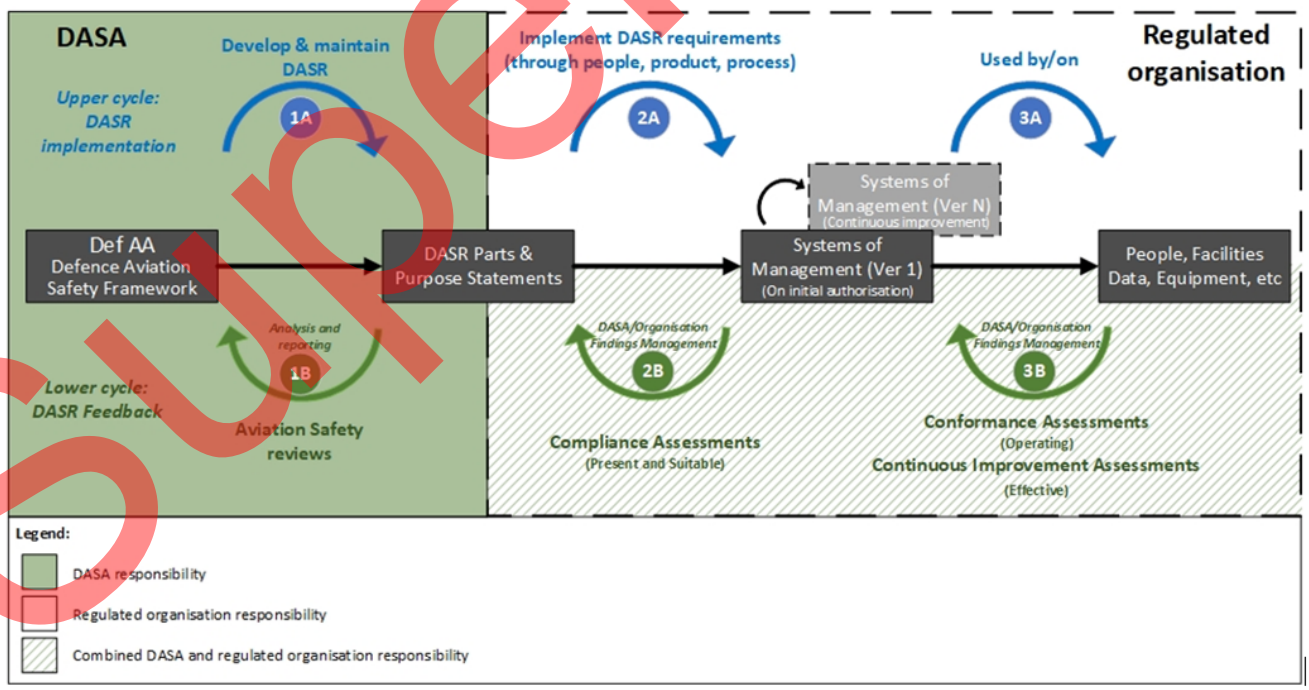

Figure 1: The Oversight and Enforcement operating model

4.1.4.10 **Operating model components.** The following model components apply:

Superseded

1. **Implementation loop 1A** – Develop and maintain DASR. Refer DASPMAN Vol 1.

2. **Feedback loop 1B – Aviation Safety reviews.** Analysis and reporting on DASR compliance and safety intelligence is designed to provide senior decision makers, who have accountabilities under JD 21/2021, with a relative picture of DASP status, contemporary Aviation Safety issues, and an assessment of the aviation safety performance of regulated organisations. Issues raised can generate actions or be recommended for further monitoring. Reporting is achieved through the Defence Aviation Safety – Annual Report (refer section 2), and Airworthiness Boards (refer section 13).

3. **Implementation loop 2A – Implement DASR requirements.** Organisations subject to DASR are expected to implement locally-tailored and contextually-appropriate management systems to effectively comply with DASR. Systems are used to define any interaction of people, products (i.e. technology) and processes. However, outcomes from systems are rarely consistent, with their effectiveness continuously varying (e.g. through changes in local application context, staff churn and competencies, competing Service and organisational policies and priorities, etc). Entities are therefore expected to self-monitor and implement corrective actions as necessary.

4. **Feedback loop 2B – Compliance assessments.** Compliance assessments detect if documented management system meet required regulatory outcomes (i.e. 'Present' and 'Suitable' in the PSOE oversight construct—see below). DASA Findings document DASR non-compliances.

5. **Implementation loop 3A – Using documented management systems.** Once entities' documented management system are approved and promulgated (i.e. found to be DASR-compliant at the time of the DASA assessment), DASA expects the entity's staff, facilities, data, equipment etc to conform to that system[1].

6. **Feedback loop 3B – Conformance and continuous improvement assessments.** Conformance assessments are designed to detect if staff, facilities, data, equipment, etc are conforming to the promulgated management system. By inference, if staff conform to DASA-approved systems, the organisation will remain compliant with DASR (i.e. 'Operating' in the PSOE oversight construct—see below). These assessments also look for local feedback data and safety intelligence that validate the documented management systems are effectively meeting DASR hazard control outcomes (i.e. 'Effective' in the PSOE oversight construct— see below).

4.1.4.11 **Present-Suitable-Operating-Effective (PSOE) model.** The PSOE Model was introduced into civil aviation with the release of ICAO Annex 19 Safety Management in 2013, defining outcome-based safety management requirements against the hazard of compromised Aviation Safety. Importantly, when ICAO Annex 19 was released, an ICAO sub-committee (the Safety Management International Collaboration Group – SMICG) published PSOE construct guidance, ICAO (2012) - SMICG Safety Management System Evaluation Tool), providing it as an effective Annex 19 oversight methodology. Specifically, the PSOE construct allowed assessment of regulated entities' maturity based on the effectiveness of hazard control implementation and incorporation of continuous improvement activities. The SMICG defined four progressive 'stages' of an entity's Safety Management System maturity (ie PSOE). In turn, defence has tailored these PSOE definitions (see section 5.4) to make them applicable to all DASR(not just SMS), due to the advantages the PSOE assurance methodology provides.

Superseded

4.1.4.12 Oversight activities are conducted against defined PSOE criteria, by qualified staff; who should be substantially independent of the area being reviewed. A PSOE assessment is carried out through two very discreet activities—the Desk Top audit and an On-Site Performance Assessment—as follows:

1. **Desk top assessment.** The Desk Top assessment (for 'Present' and 'Suitable'), is an assessment of the entity's documented management system (i.e. the organisational approval basis) including Orders, Instructions and Procedures (OIP) that are used to comply with the relevant DASR. The Desk Top assessment gathers evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable' for the scope of the entity's authorisation.

2. **On-site assessment.** The on-site assessment (for 'Operating' and 'Effective') is carried out to provide assurance that the documented management system (i.e. the basis for the organisational approval) is operating as expected and effectively providing risk mitigation to the threats that the DASRs have been implemented to treat.

3. An on-site assessment can be conducted as part of an initial application for organisational approval or as part of an ongoing oversight program. The ongoing oversight program periodicity may be influenced by adopting a risk based approach for some organisations or operational activities influenced by safety intelligence information.

Enforcement

4.1.4.13 In addition to oversighting ongoing compliance with the DASR, DASA is also required to enforce the ongoing compliance of Defence Aviation organisations. The concept of enforcement within the DASP covers the following spectrum as outlined in Figure 2 below:

1. **Reinforcement** of requirements, through mechanisms which include providing education, updating regulatory material, and reinforcing positive behaviours.

2. **Compelling** compliance, through the raising of DASR Findings or issuance of Directives.

3. **Deterrence** of ongoing operations with non-compliances through the suspension or removal of a DASR approval.

Superseded

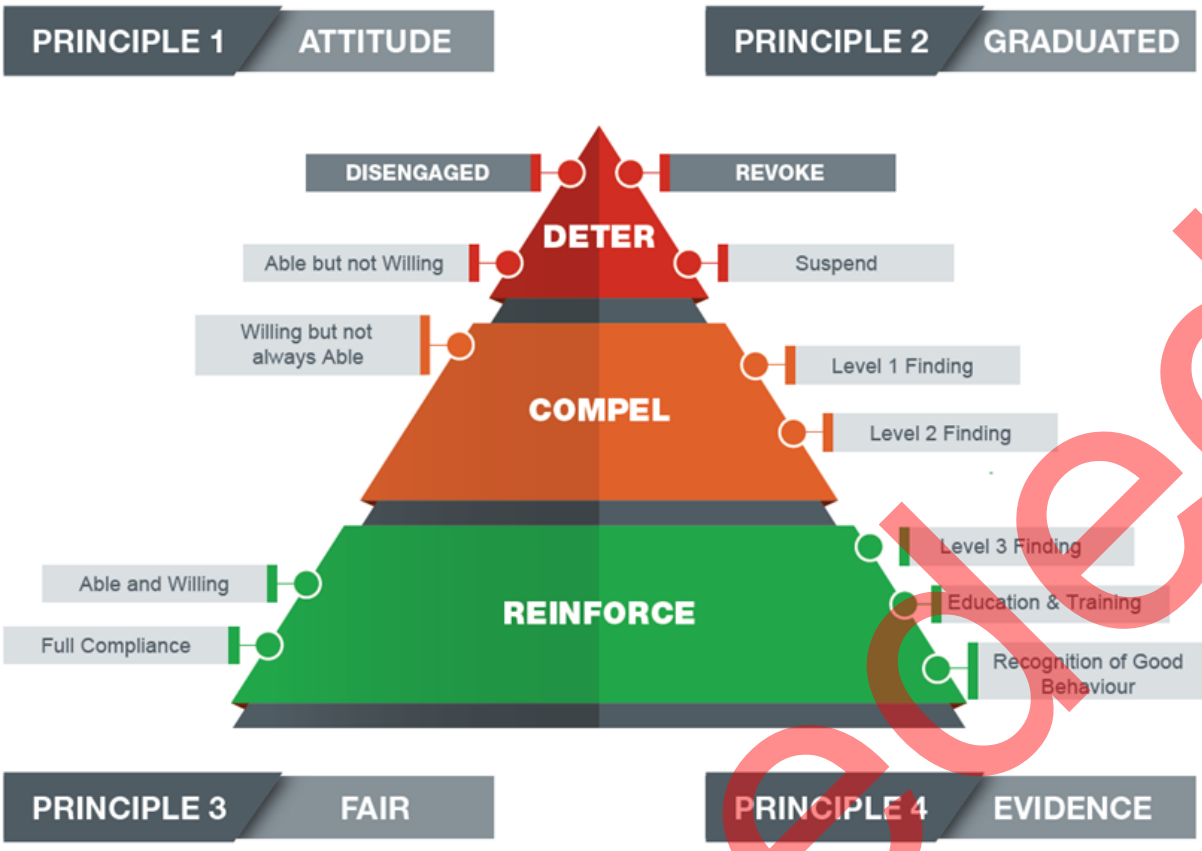

Figure 2: Enforcement Model

DASA Enforcement Principles

4.1.4.14 The DASA enforcement policy is founded on the following principles:

1. **Principle 1**: Enforcement shall consider organisations/operator attitudes.

   i. Enforcement will give due and equitable consideration to organisational attitudes and distinguish consistent or premeditated non-compliance, from non-compliance resulting from unintentional errors or deviations.

2. **Principle 2:** Enforcement action shall be graduated.

   i. Enforcement action shall commence at the lowest level commensurate with the increase in risk to aviation safety and willingness of the regulated entity to address the non-compliance, and should be escalated only when necessary to secure compliance.

   ii. The rate of escalation is cognisant of the underlying aviation safety risk, prior interaction between DASA and the non-compliant entity, and the entity's motivation and capacity to comply with the regulations.

3. **Principle 3:** Enforcement action shall be fair and proportionate.

   i. Full details of the nature of the non-compliance will be disclosed, along with supporting evidence.

   ii. The response to the non-compliance will be proportionate to the identified breach and the increased risk to aviation safety.

Superseded

iii. Enforcement action will relate directly to the non-compliance and associated increase in safety risk.

iv. In the interests of procedural fairness, regulated entities will be afforded the opportunity to review and respond to an identified non-compliance prior to enforcement action being initiated.

4. **Principle 4:** Enforcement decisions shall be independent and evidence based.

i. Enforcement decisions will be independent, transparent and underpinned by objective evidence.

ii. Enforcement decisions will not be influenced by personal, political, capability or financial considerations.

Proportionate and Graduated response

4.1.4.15 The key factors influencing a DASA decision to escalate an enforcement action include:

1. the nature, seriousness and extent of the non-compliances, including the safety implications and the intent (if applicable) of the non-compliances;
2. the willingness of the organisation to address the non-compliances and ensure that they are not systemic;
3. the nature and sufficiency of available objective evidence of the non-compliances;
4. the action required to effectively and efficiently address the aviation safety risks that have been identified or are likely to arise;
5. the need to obtain expert assistance on a complex technical or operational issue, including legal advice;
6. the obligation to be fair, consistent, impartial and proportional in taking enforcement action.

4.1.4.16 While imposing a sanction that suspends or revokes an entity's approval is a real and credible course of action, as part of a graduated response to serious and/or continuing non-compliances, this may not always be in the interests of the Service. If DASA is considering an unscheduled act of limiting, suspending or revoking an entity's approval, the relevant Environmental Commander or Group Division Head is to be consulted before any proposed sanction that suspends or revokes an entity's approval is imposed. This level of consultation is not required where a scheduled revocation takes place, for example removal or amendment of an organisational approval after an aircraft type is withdrawn from service.

Coordination with external bodies

4.1.4.17 In certain circumstances, DASA may identify a regulatory breach or safety concern that falls under the jurisdiction of an external CAA or MAA. If this occurs, DASA will consult with external agencies as necessary, to ensure a coordinated approach to any enforcement or remedial action is undertaken.

4.1.5 Promote Aviation Safety

Introduction

Superseded

4.1.5.1 The Defence Aviation Safety Authority (DASA) is responsible to the Defence Aviation Authority (Defence AA) for enhancing and promoting Aviation Safety through the implementation of a Defence Aviation Safety Program (DASP). The DASP promotes safety awareness and the sharing and exchange of safety information with the aviation community to foster the maintenance and improvement of safety; to support the development of a generative safety culture; and to assure the effective management of aviation safety risks.

4.1.5.2 The second function of the Defence Aviation Safety Program (DASP) is 'Promote Aviation Safety'. This function comprises the following elements:

1. Aviation Safety promotion and dissemination of safety information

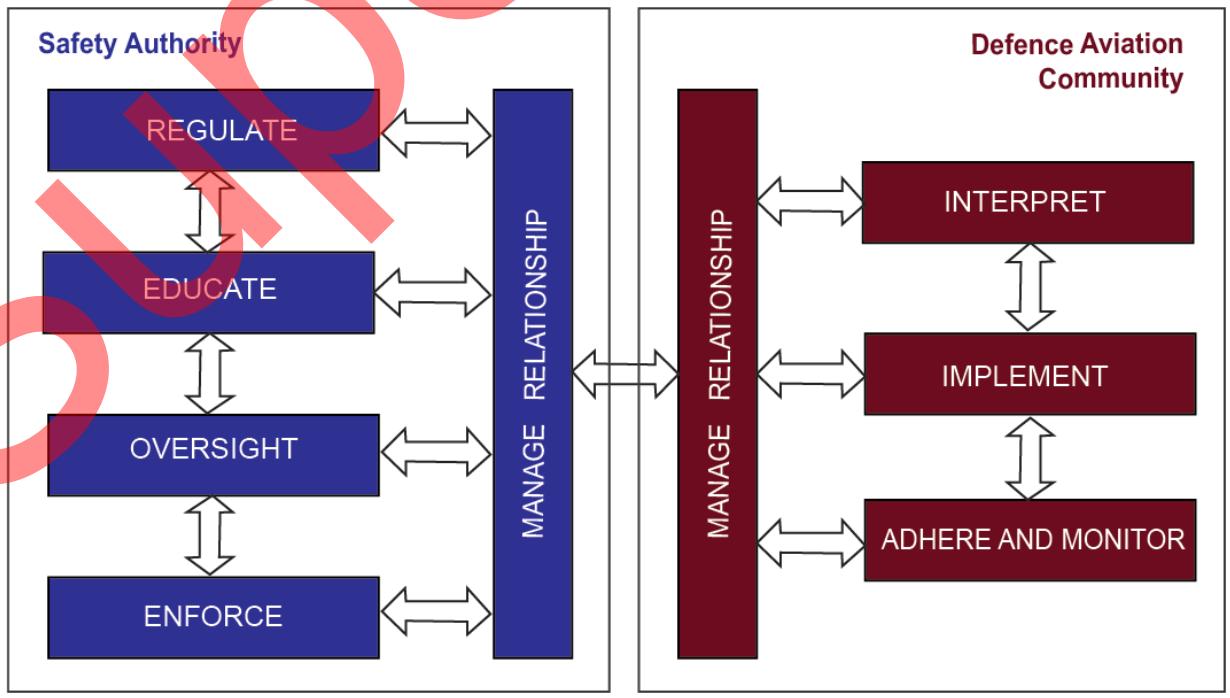
2. education, training and communication.

4.1.5.3 While Function 2 of the DASP explicitly directs 'promotion', all five functions require engagement with stakeholders. DASA cannot implement these functions in isolation. Ongoing engagement with stakeholders internal, external to the Authority, internal and external to Government is required to improve aviation safety outcomes and support capability.

Aviation Safety Promotion and Dissemination of Safety Information

4.1.5.4 A key tenet in promoting Aviation Safety is the two-way communication flow of safety information. Aviation Safety promotion can take many different forms, and cover a wide spectrum of activities— from dissemination of general information on Aviation Safety, to visits by DASA personnel. In either case, the establishment and management of relationships is paramount.

4.1.5.5 Figure 1 details the regulatory model, which includes DASA and the Defence Aviation Community. DASA uses its Engagement and Promotion Strategy to 'manage relationships' between the two entities.



Superseded

Figure 1: The Regulatory Model

4.1.5.6 The 'promoting Defence Aviation Safety through education, training and dissemination of safety information' function employs a number of strategies to disseminate Aviation Safety information, including:

1. participation in dedicated safety stand-down days
2. publication of safety and regulatory magazines, (i.e. Spotlight)
3. sponsoring conferences and convocations
4. Defence Aviation Authority (Defence AA) safety messages
5. publishing the Defence Aviation Safety - Annual Report (DAS-AR)
6. maintaining safety information recording and analysis systems, such as Sentinel and Salus
7. posting safety information, such as Defence Aviation Safety Regulation (DASR) awareness briefs on the DASA web site
8. visits by DASA personnel.

4.1.5.7 Of particular importance is the ability to disseminate safety information in a timely manner, particularly in response to investigation of an accident or serious incident. The DASP provides several ways for DASA to disseminate urgent safety information, enabling the selection of the most appropriate way, cognisant of the specific circumstances.

4.1.5.8 Visits by DASA personnel to regulated entities are also an important means of promoting Aviation Safety and disseminating aviation safety information— providing the opportunity to discuss particular safety aspects in detail.

Education and Communication

4.1.5.9 All personnel within the Defence Aviation sector, who undertake or directly support aviation activities, should receive sufficient education to provide a general understanding of Aviation Safety. Commensurate with each person's aviation safety responsibilities, they should receive further safety education. The DASA sponsors a wide range of Aviation Safety regulatory and technology training courses that personnel may nominate to attend.(see www.defence.gov.au/DASP/Training/Default.asp)

4.1.5.10 In addition to delivering and sponsoring Aviation Safety education, DASA also facilitates a number of opportunities for two way dialogue on Aviation Safety, including:

1. continuation training programs

Superseded

2. DASA Newsbreak

3. DASA workshops

4. international visits to, or by, other regulators/safety bureaus or equivalent organisations

5. conferences and symposiums

6. regulated community forums

7. Airworthiness Boards and convocations

8. audits.

4.1.5.11 Commanders and managers within the Defence Aviation sector should encourage their personnel to take maximum advantage of the opportunities afforded to discuss Aviation Safety. Additionally, personnel should endeavour to further their Aviation Safety knowledge through the various means currently available. Members of the regulated community should advise DASA of opportunities to improve Aviation Safety communication so that DASA may consider implementing appropriate improvements.

4.2 DASA's Ensure functions

4.2.1 Introduction

4.2.1.1 DASA carries out two ensure functions in direct support of the management of Aviation Safety by the Defence aviation community:

1. provision of aviation safety management system products and services
2. provision of structural integrity engineering product and services.

4.2.2 Aviation Safety Management System Products and Services

(Reserved)

4.2.3 Structural and Propulsion System Integrity Centre of Expertise (CoE) Services

Introduction

4.2.3.1 The Directorate of Aviation Engineering (DAVENG) has a mandate to support Commanders to ensure structurally-airworthy platforms, and is the Defence Centre of Expertise (CoE) for Aircraft Structural Integrity Programs (ASIPs), Propulsion System Integrity Programs (PSIPs) and Non-Destructive Testing and Composite Technologies (NDT&CT).

4.2.3.2 In this capacity, DAVENG supports associated organisations with specialist advice, design services and training in these fields to maximise Defence capability. DAVENG also provides stewardship of sovereign capability initiatives and input into relevant policy frameworks.

Superseded

4.2.3.3 For the avoidance of doubt, these services are provided by DAVENG in a separate capacity to the DASA Functions described in Chapter 4.1.

Aircraft Structural Integrity (ASI) and Propulsion System Integrity (PSI) and Services

4.2.3.4 **ASI and PSI CoE Services.** DAVENG supports the Defence ASI and PSI community with the following services:

1. advice on ASIP and PSIP establishment and execution
2. advice to CASG on ASIP and PSIP-related contracting and governance
3. CoE review of ASIP and PSIP products and outputs on behalf of CASG
4. technology specialist advice, such as supporting risk assessments
5. where appropriate, and when agreed, coordination and management of major ASI / PSI issues or tasks on behalf of CASG
6. support to Defence ASIP and PSIP policy artefacts on behalf of Capability Managers and CASG.

4.2.3.5 **SI Sovereign Capability Stewardship.** The SI Sovereign Capability encompasses the specialist technical capabilities that come to bear for critical and high-value SI activities where sovereign oversight and/or indigenous solution development is required to ensure Defence objectives are met. Under their Defence SI CoE capacity, DAVENG stewards the SI Sovereign Capability initiative, and chairs the Capability Management Board advocacy and governance forum. More information on the SI Sovereign Capability initiative and governance is available in the SI Sovereign Capability Strategy document, which can be provided by DAVENG to relevant parties upon request.

4.2.3.6 **Training Courses.** DAVENG sponsors the following three specialist courses:

a. ASI Familiarisation Course
b. Helicopter Structural Engineering Familiarisation Course
c. Propulsion Systems Engineering Familiarisation Course.

4.2.3.7 These three practitioner courses include components intended to teach ASI and PSI fundamentals and best practice, as well as components intended teach how ASI and PSI programs support DASR compliance.

NDT Appointments, Training, Certification and Authorisation

4.2.3.8 **ADF NDT Responsible Level 3 Appointment.** DASR 145.A.30(f) requires DASR 145 Maintenance Organisations (MOs) to appoint an NDT Responsible Level 3 (RL3) as the management position responsible for implementing a training and certification system compliant with European standard EN4179 Qualification and approval of personnel for non-destructive testing (refer DASP Manual Volume 3 Chapter 8.3.2).

4.2.3.9 To ensure all ADF Non-Destructive Inspection Technicians (NDITECHs) are trained to the same level of competency and to avoid the burden of each ADF DASR 145 MO appointing their own NDT RL3 and establishing NDT training and certification frameworks, DAVENG performs the Defence NDT RL3 function and manages all NDT training and certification activities for ADF members, Department of Defence employees and other staff members working within ADF DASR 145 MOs. The

Superseded

Director of Aviation Engineering appoints a suitably qualified senior NDITECH to be the Defence NDT RL3, with that individual approved by the DASA as a Form 4 Holder.

4.2.3.10 **ADF DASR 145 MO NDT Certification Framework.** ADF DASR 145 MO Quality Managers are responsible for ensuring that staff conducting NDT are certified by the Defence NDT RL3 (or delegate) before being authorised to certify maintenance. This includes:

1. staff who have obtained training from external training providers or third parties

b. external Industry or Contracted service providers working in an ADF DASR 145 MO.

4.2.3.11 In order to support ADF DASR 145 MOs, the Defence NDT RL3 maintains a NDT training and certification system (both initial and ongoing training / certification) that meets Defence's needs and complies with DASR 145.A.30(f) requirements.

4.2.3.12 **ADF DASR 145 MO Authorisation of NDT Staff.** DASR 145.A.30(f) requires personnel who conduct NDT be certified in accordance with EN4179. Under Defence's NDT certification system, the process followed is:

a. the Defence NDT RL3 (or delegate) ***certifies*** the technician as meeting the requirements of EN4179 for the applicable NDT method or technique, and subsequently,

b. the MO Quality Manager (or delegate) ***authorises*** the technician to conduct NDT maintenance within the scope and validity of the NDT certification.

4.2.3.13 The Defence NDT RL3 (or delegate) will issue Certification records via PMKeyS proficiencies (primary system) or a Minute. ADF DASR 145 MOs are to check the scope and currency of NDT proficiencies on PMKeyS prior to authorising staff to perform NDT. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiencies.

4.2.3.14 **Additional Information.** More detailed information on NDT training and certification services provided by DAVENG, including training courses and frequently asked questions, is available on the DASA NDT&CT Website.

NDT Engineering Services

4.2.3.15 DAVENG NDT&CT Engineering Section develops NDT procedures, inclusive of introducing new NDT technologies, in support of ADF capability requirements. Engineering Section provides the following services to ADF units and ADF support contractors:

1. development of DASA approved NDT Instructions for Continuing Airworthiness (ICA), including:
   i. platform specific procedures
   ii. NDT general procedures (AAP 7002.043-36)
2. CoE NDT advice on the selection of appropriate NDT techniques
3. assistance with the introduction of new NDT technologies in support of ADF capability requirements
4. testing and evaluation of NDT support equipment for introduction into the Defence inventory

Superseded

5. technical review of platform-specific NDT publications and associated procedures
6. NDT Information Review (IR) of standards, practices and equipment
7. provision of other NDT CoE advice
8. manufacture of certified NDT reference standards.

Composite Repair Training and Certification

4.2.3.16 **ADF DASR 145 MO Composite Repair Certification Framework.** Personnel who conduct composite repairs must be trained and certified in accordance with SAE AIR4938 - Composite and Bonded Structure Technician Specialist Training Document (refer DASP Manual Volume 3 Chapter 8.3.2). On behalf of all ADF DASR 145 MOs, DAVENG conducts the training and certification (including re-certification) for all personnel who perform composite repairs. DAVENG staff issue the PMKeyS proficiency P124689 *Composite & Adhesive Bonding Recertification* upon successful completion of training requirements.

4.2.3.17 **ADF DASR 145 MO Authorisation of Staff to Conduct Composite Repair.** MO Quality Managers (or delegates) are responsible for verifying that technicians hold a valid PMKeyS proficiency for composite repair prior to authorising them to conduct composite repairs within an ADF DASR 145 MO. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiency.

4.2.3.18 **Additional Information.** More detailed information on Composite Technology training and certification services provided by DAVENG, including training courses, is available on the DASA NDT&CT Website.

4.3 Delegates of the Safety Authority (DoSA)

4.3.1 Introduction

4.3.1.1 This section provides a description of Delegates of the Safety Authority (DoSA), their purpose, selection and scope of delegations.

Purpose

4.3.1.2 A DoSA is an individual who has been formally delegated a DASA responsibility (Letter of Delegation) by DG DASA and is considered an agent of the DASA when exercising that delegation. Delegations may cover general assurance function carried out by the Authority (such as Occurrence Report assessments or standards interpretation) or provision of DASA authorisations such as a Military Permits To Fly (MPTF). In all instances, the delegation scope must be linked to an explicit DASR obligation of DASA.

4.3.1.3 A DoSA performs assurance activities and critical roles that extend the competence and capacity of the DASA. DoSAs are placed within the aviation community to provide greater access and insight to regulated entities or activities. DoSA delegation scope varies, but is invariably linked to the role of an incumbent. This role may be as a senior engineer, test pilot and/or subject matter expert (SME) related to a specific platform or regulatory domain providing in-depth knowledge to support aviation safety assurance. When in proximity to the regulated entity a further benefit is realised with greater education and promotion for the organisation and DASA 'eyes and ears' in the field.

Superseded

4.3.2 Selection

4.3.2.1 DoSA applicants are suitable for nomination by virtue of the roles they fill within the aviation community as senior members within their domain. Nomination for a DoSA is via a Form 104 submitted to the DASA Registry. Within Form 104 the member identifies the need, and the qualification, training and experience (QTE) that enables them to perform the role relevant to the scope of delegation being awarded. For each type of DoSA role, there are mandatory requirements that the nominee must meet. Annex A contains a baseline set of generic QTE requirements.

4.3.2.2 DASA staff will assess nominated DoSAs through a standard process to assess their suitability and provide a recommendation to DG DASA. The assessment process will usually involve two interviews; the first a preliminary interview to broadly assess an individual's suitability to execute delegated authority functions, and a final interview with DG DASA to confirms the skills, knowledge and attitude of the applicant. If suitable, DG DASA will authorise a delegation to the individual.

4.3.2.3 A DoSA delegation is issued in the form of a letter directly from DG DASA. Delegates are provided an induction pack containing foundational information and are supported under the DASA Business Management System as a member of the DASA. Delegations are generally awarded to nominees filling a specific role. Upon leaving the position in which DoSA was awarded, eg formal posting, the members delegations are rescinded. In exceptional circumstances, extensions may be negotiated directly with DG DASA, via the applicable DASA directorate. DASA may amend or revoke a delegation at any time at the discretion of DG DASA.

4.3.3 Scope

4.3.3.1 The scope of duties and responsibilities of the DoSA depends on the capacity in which they have been delegated. The following list the categories functions delegated:

1. Occurrence Report Assessment for specific functions related to DASR 21, DASR M and DASR 145
2. Airworthiness Directives (AD) for specific functions related to DASR 21 Subpart A
3. Military Permit To Fly (MPTF) for other than flight test, including flight conditions, for specific functions related to DASR 21 Sub-part P
4. MPTF for flight test, including flight conditions, for specific functions related to ASR 21 Sub-part P
5. Military Certificate of Airworthiness (MCoA) for specific functions related to DASR 21 Sub-part H
6. Airworthiness Standards for specific functions related to DASR 21.A.16B
7. Other categories as considered necessary by the DASA for effective management of aviation safety.

4.3.3.2 The current classes of DoSA are:

1. **Platform DoSA:** A Platform DoSA has the widest scope of functions and may include assurance of Military Type Certificate Holder (MTCH) actions with respect to reportable occurrences, issue of MCoAs, approval of flight conditions and issue of Airworthiness Directives. The Platform DoSA is ostensibly delegated to the incumbent

Superseded

CENGR of the platform MTCH organisation and provides assurance in the DASR Part 21 Initial Airworthiness domain.

b. **Flight Test DoSA:** A Flight Test (FT) DoSA has a scope of functions that are relevant to assuring the safety parameters within the DASR Part 21, Subpart P Flight Test domain. Their function is to provide assurance through the approval of operational flight conditions specifically for Flight Test activities and issue of MPTF authorisations. Flight Test DoSAs will invariably have the qualifications, training and experience (QTE) of Flight Test qualified aircrew relevant to certain platforms and will provide the function as part of their position within Flight Test organisations.

c. **Standards DoSA:** A Standards DoSA has a scope of function relevant to a specific technology/design discipline domain. They perform the prescribe and interpret airworthiness design requirements and standards function for their assigned technology, and provide advice to command on the management of risk associated with non-compliance to the prescribed airworthiness design requirements. Standards DoSAs have been established to cover Aeronautical Life Support Equipment (ALSE), Air Navigation Services (ANS) and Aerial Delivery technologies, and are delegated to SMEs posted to the unit charged with managing these technologies.

d. **Training DoSA:** A Training DoSA has a scope of function to assure that the content delivered in DASR 147 Maintenance Training Organisations is suitable to meet the requirements of DASR 66 licensing.

e. **Licencing DoSA - ATC:** An ATC Licencing DoSA has a function relevant to the assurance that persons issued with a licence meet the specific requirements and are suitably qualified and experienced to perform licenced air traffic control functions.

f. There may be requirements/opportunities for other DoSA roles in the future, such as in Aircraft Type Certification. These will be identified and documented when implemented.

4.3.3.4 The concept of a Project DoSA has been discontinued since the scope was not linked to exercising any explicit DASR obligations. Notwithstanding this, the incumbent Project Engineering Manager (PEM) is required to have a comprehensive understanding of initial and continuing airworthiness DASR in order to ensure project acquisition activities enable the issue of appropriate and timely DASA authorisations, and subsequent handoff to the gaining MTCH and Continuing Airworthiness Management Organisation (CAMO).

4.3.3.5 For each class of DoSA, there are certain QTE requirements that the nominee must possess or have achieved. More information on the QTE and mandatory requirements of each DoSA will be provided through the nomination process. DASA will also endeavour to support additional training where possible to assist in the execution of the duties of the DoSA. DASA convenes a DoSA convocation to induct new DoSAs, discuss topical DoSA subjects and implement changes applicable to their duties.

4.3.3.6 When exercising their delegation, a DoSA is undertaking this function as part of the DASA, using DASA authorised procedures. Annex B contains specific functional DoSA information and reading. Whilst performing duties under the DoSA capacity, the DoSA is subject to internal DASA process audits in how they execute the functions specific for their scope.

Superseded

4.3.4 DoSA Independence and Reporting

4.3.4.1 A critical safety feature of the Defence Aviation Safety Program (DASP) is the separation between assuring and ensuring aviation safety through the application of the DASP. Given nominated individuals may be performing tasks that ensure Aviation Safety in their primary employment role, there is a natural concern for a conflict with their DoSA role of *assuring* Aviation Safety. In their capacity as DoSA, it is important that they are able to maintain objectivity (without undue pressure), evaluate their independence, have adequate time to exercise the delegation and maintain conscious awareness that the individual is representing DASA when exercising the delegation.

4.3.4.2 Where instances arise that the DoSA has been part of a decision that ensures aviation safety in their regulated community role, it is possible that their independence to assure aviation safety for the same issue is compromised. The DoSA is expected to have a level of competence and judgement to remove themselves from the assurance role and advise DASA.

4.3.4.3 Where the DoSA identifies conduct or behaviours in the regulated community that may represent DASR non-compliances, non-conformances or where associated hazards and risk are not being eliminated or minimised SFARP, the DoSA is expected to notify DASA of their concerns. DG DASA enables the DoSA to inform their office directly where the nature of the conduct is serious. It is important to note that the DoSA role only provides 'in the field' oversight/awareness and the DoSA is not expected to execute DASA enforcement policy, which remains the duty of the relevant DASA Directorate staff responsible for that oversight and enforcement.

Annexes:

(a) DoSA Qualifications, Training and Experience (QTE)

(b) Specific Functional DoSA Information and Reading

4.4 Independent Investigative Capability

4.4.1 Introduction

4.4.1.1 Joint Directive 21/2021 The Defence Aviation Safety Framework directs DASA to establish an independent investigative capability aligned to ICAO standards and recommended practices (SARPs). This capability is provided by the Defence Flight Safety Bureau (DFSB) within DASA. This chapter describes how DFSB meets the responsibilities described in the Defence Aviation Safety Program Manual Volume 1 Requirements for the DASP.

4.4.1.2 Annex 13 Aircraft Accident and Incident Investigation to the Convention on International Civil Aviation, requires that the accident investigative authority be independent from State aviation authorities and other entities that could interfere with the conduct or objectivity of an investigation. Director DFSB is accorded specific responsibilities and the power for autonomous action outside both DASA and the command chain to directly report matters of concern to the Defence Aviation Authority (Defence AA). DASP Manual Volume 1 details DFSB's functional independence of DASA Directorates and powers for autonomous action outside of DASA and the command chain.

4.4.1.3 DFSB and the Australian Transport Safety Bureau (ATSB) have a Memorandum of Understanding (MoU) for cooperation relating to transport safety investigation. The MoU deals with mutual assistance, sharing of expertise, mutual training opportunities, joint and parallel

Superseded

investigations, and the participation by members of either organisation in investigations carried out by the other organisation. The MoU is available on the DFSB intranet site.

4.4.1.4 DFSB is also responsible for promoting and enhancing aviation safety, which requires more than policy and processes. DFSB recognises the complex social and cultural work environments within the Defence aviation community, and works to positively influence safety attitudes and behaviours.

4.4.2 Functions of DASA-DFSB

4.4.2.1 In accordance with DASP Manual Volume 1, DFSB is responsible for a number of functions in support of both retrospective investigation of Defence accidents and incidents and proactive approaches to preventing military accidents and enhancing flight safety. These functions are:

1. **Aviation safety reporting framework.** DFSB maintains the Defence Aviation safety reporting framework by:

    i. Developing and maintaining the Defence Aviation safety reporting system. DFSB meets this requirement through the management of the Defence Corporate Safety Reporting Tool: ASR in Sentinel. ASR in Sentinel provides a closed loop process for the reporting, investigation, tracking and review of aviation safety events and issues. Sentinel is available to all Defence aviation personnel with access to the 3Defence Protected Environment (DPE). DFSB maintains an ASR Service desk, at asr.servicedesk@defence.gov.au or (02) 5130 7704 to provide ASR related support to the Defence aviation community.

    ii. Developing and maintaining the appropriate documentation to define the reporting framework. The Defence Aviation Safety Manual (DASM) defines the reporting framework, including reporting and notification requirements, categorisation and classification of aviation safety events, and types of reporting. Additional guidance material is available on the DFSB intranet site.

    iii. Establishing a confidential reporting scheme to enable confidential reporting of issues that effect, or might effect, aviation safety. DFSB provides and maintains a confidential reporting system that allows individuals to report aviation safety issues or concerns where they are unwilling to use the normal aviation safety reporting system for fear that they may be disciplined, ridiculed or otherwise disadvantaged if they do so. The DASM provides policy and guidance on confidential reporting. Individuals can report via email directly to Dir DFSB or through the link on the DFSB intranet site.

    iv. Defining notification requirements and mechanisms (immediate and routine) for aviation safety reports. Notification requirements and mechanisms are defined in the DASM, and guidance is provided on the DFSB intranet site. All aviation safety events and issues must be reported into ASR in Sentinel, or through the offline ASR form AE774. Immediately reportable matters (as defined in the DASM) must be notified to the DFSB Duty Officer on (02) 6144 9199.

    v. Defining taxonomies to facilitate safety information exchange that are compatible with the ICAO Accident/Incident Data Reporting system and broadly aligned with those of the Australian Transport Safety Bureau (ATSB). DFSB has embedded the aviation safety reporting taxonomies within ASR in Sentinel. More information is available on the DFSB intranet site. DFSB also

Superseded

manages the Aviation Safety Intelligence Portal, Salus, which supports the sharing, exchange and analysis of safety data within Defence, and between DFSB and the ATSB. The MoU (referenced in para 3) further supports alignment of safety reporting and information exchange.

vi. Defining the classification system for aviation safety reporting. The classification system for aviation safety reporting in Defence is described in the DASM. Aviation safety events are defined by both realised and potential consequences with reference to Personal Injury Level (PIL), Aircraft Damage Level (ADL) and Perceived Risk Level (PRL). Aviation safety events are classified in accordance with Table 1. More information is available in the DASM or on the DFSB intranet site.

Event Classification	Description
Class A	PIL of fatal ADL of destroyed
Class B	PIL of serious 3ADL of Substantial PRL of High or Very High
Class C	PIL of minor ADL of Moderate PRL of Medium
Class D	PIL of No Injury ADL of No Damage/Minor Damage PRL of Low or Very Low

Table 1: Event Classification

vii. Developing processes to monitor the health of the aviation safety reporting system. DFSB monitors the aviation safety reporting system through internal mechanisms, including daily review of aviation safety reports and periodic research activities to examine specific features of the system, such as usability and data quality.

2. Safety data collection and processing. DFSB has established and maintains safety data collection and processing systems to capture, store, and aggregate and thence enable the analysis/exchange of safety data and safety information. Safety data refers to a defined set of facts or set of safety values collected from proactive or reactive safety related activities. Safety information is created when the data has been processed, organised, integrated and analysed in a given context. DFSB collects and manages safety data and information from:

i. DFSB safety investigations.

Superseded

ii. Aviation safety reports and investigations from within the organisation's safety management systems and provided to DFSB (primarily through ASR in Sentinel).

iii. Data collected by DFSB during the course of cultural surveillance activities (e.g. cultural surveys).

3. In addition to ASR in Sentinel, DFSB also maintains the following systems:

i. **Salus.** The DASA Salus application is designed to support the sharing, exchange and analysis of safety data within and between DASA and the Defence aviation community, with the goal of enhancing aviation safety. Salus is available on the DPE, and more information and guidance can be found on the DFSB intranet site. DFSB maintains a Salus service desk, at salus.servicedesk@defence.gov.au, to provide support and guidance to users.

ii. **Snapshot Survey.** The DFSB Snapshot Survey is an annual survey administered to personnel from Air Force, Army Aviation, Fleet Air Arm, Air Domain and other selected domains. The survey captures information on a broad range of issues that impact the safety, performance and overall health of the participating organisations. DFSB generates a range of tailored Snapshot reports targeting different levels of the organisation, and aims to provide information on the workgroups safety/organisational climate, benchmarked against other units. The reports allow commanders to track changes from one year to the next, identify risks, and assess the effectiveness of recent interventions. More information is available on the DFSB intranet site.

4. Joint Agency Aviation Safety Analysis Coordination Group (JAASACG). DFSB is also a member of the JAASACG, which facilitates the data analysis and reporting function under Australia's State Safety Program. Conducting safety data exchange and analysis through the JAASACG assists in maintaining strong stakeholder relationships and allows safety data to be shared and research and analysis efforts coordinated between Government Agencies to improve aviation safety.

5. **Analysis, Research and Review.** DFSB conducts a range of applied safety data analysis and research activities to inform DASA, the Defence Aviation Authority and the broader Defence aviation community. DFSB produces a range of products, including:

i. The DFSB Annual Review of Defence Aviation Safety Statistics, input to the Defence Annual Safety Annual Report, Safety Snapshot Culture Survey Reports, and supplementary reports as identified through ASRs and safety surveys.

ii. Support to command in the use of safety data systems, including guidebooks, service desk support, training databases, and training content for DFSB safety courses. These products are available on the DFSB intranet site.

iii. DFSB staff members attend a number of aviation safety, investigation, human factors and non-technical skills forums and conferences in order to provide internal learning opportunities, benchmarking against international and domestic military and civilian agencies, and to support industry wide learning.

iv. DFSB produce and support targeted human factors programs, primarily fatigue and non-technical skills related policy and guidance. These programs are

Superseded

described in the DASM, and through guidebooks and resources on the DFSB intranet site.

6. **Independent Investigation.** DFSB provides independent investigation and reporting of all accidents, selected incidents and selected systemic safety issues. This is achieved through:

   i. All Defence Aviation Class A and select Class B events are independently investigated by a DFSB Aviation Safety Investigation Team (ASIT) which reports directly to the Appointing Authority (AA). The AA is the designated commander at the appropriate level authorised to initiate and close aviation safety investigations. The DASM describes the appropriate levels and delegations. The ASIT operates under the procedural direction of DFSB.

   ii. DFSB investigations are functionally independent of the DASA regulatory directorates, and in general, of any other party of the entity that could conflict with, or influence, its objectivity.

   iii. The sole aim of a DFSB investigation is to prevent further occurrence and enhance safety outcomes through the identification and remediation of local and systemic deficiencies, and the improvement of risk controls. DFSB investigations do not apportion blame or liability.

   iv. DFSB investigations are conducted consistent with the international standards outlined by ICAO, and those described in the Australian Transport Safety Investigation (TSI) Act 2003. Given the unique nature and demands of military flying, a DFSB investigation may deviate from these provisions in such a manner that is considered necessary or appropriate under the specific circumstances. Additional guidance can be found in the DASM and on the DFSB intranet site.

   v. In the case of Class B events, DFSB may decide not to undertake the investigation, leaving the responsibility to the command chain. This decision will be made in consultation with the relevant environmental commander, and taking into account the safety implications of the event, the suitability of the event for investigation by DFSB and the breadth of lessons likely to be learned from the event.

   vi. DFSB provide specialist advice and support to aviation safety investigations undertaken within the command aviation Safety Management System.

   vii. A Class A or Class B Defence event that involves a civil (VH registered) aircraft could be subject to an investigation by the ATSB in accordance with the TSI Act 2003, their priorities and mandates for investigation. The carriage and conduct of the investigation will be negotiated through DFSB in accordance with the extant ATSB/DFSB MoU.

   viii. DFSB is responsible for the Defence Aviation Cockpit Voice Recorder (CVR) and Flight Data Recorder (FDR) download and analysis capability. DFSB Investigation team have the specialist skills and equipment to support this capability. Policy and guidance on download and analysis of the CVR and/or FDR is found in the DASM.

Superseded

ix. DFSB must be notified of all Class A and Class B events involving Australian Air Force Cadets (AAFC) in the course of their duties; however, all reporting and investigation resides within the AAFC's Aviation Safety Report system.

7. **Safety awareness, knowledge and action.** DFSB is responsible for fostering safety awareness, knowledge and action through promotional and education programs, and utilising the outcomes from safety analysis, research and investigative functions to influence organisational learning. This is achieved through a range of programs including:

i. **Aviation safety policy.** DFSB is responsible for the development and maintenance of key aviation safety policy, including the DASM, which supports the implementation of efficient and compliant aviation Safety Management Systems, and the Aircraft Accident WHS Manual to support the safety response to military aviation accidents and incidents.

ii. **Aviation safety training.** DFSB provides aviation safety reporting, investigation and safety data related education and training, through the provision of Aviation Safety Officer Initial and Advanced courses, Non-Technical Skills Trainer Course and the one-day Aviation Incident Investigation Course. DFSB is also responsible for the integration of aviation safety and non-technical skills content into the Defence training continuum.

iii. **Aviation safety awareness.** Through investigations, analysis of safety data, research reports and engagement with industry and military partners, DFSB identifies key lessons and safety issues. DFSB has a range of products and services to support the integration of those lessons into aviation safety policy and training, and to support positive organisational learning. These products include promotional materials, guidebooks and training materials and are available through the DFSB intranet site.

Superseded

4.1. DASA's Assure functions

4.1.1 Introduction

4.1.1.1 The following sections describe how DASA carries out the independent safety assurance functions identified in Chapter 3 of Volume 1. These functions are described in simple terms as:

1. **Policy prescription and interpretation.** DASA prescribes and interprets policy for the management of Defence Aviation safety, inclusive of the Defence Aviation Safety Regulation (DASR) and related standards.
2. **Certification.** Issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR.
3. **Oversight and enforcement.** Conduct ongoing oversight and enforcement activities to assure compliance with the DASR and the continued validity of authorisations issued by DASA
4. **Safety promotion.** Promote Aviation Safety through education, training, and dissemination of safety information.

4.1.2 Policy Prescription and Interpretation

4.1.2.1 DASA is accountable to the Defence Aviation Authority to prescribe and interpret Aviation Safety management policy . This is fulfilled primarily through:

1. the promulgation and management of the Defence Aviation Safety Regulation and supporting standards
2. the provision of authoritative advice and guidance in relation to compliance with those regulations and standards.

4.1.2.2 DASA is required to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR' . In fulfilment of this responsibility, DASA prescribes and interprets the minimum safety requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

4.1.2.3 In prescribing design requirements for aircraft and aircraft-related systems, DASA recognises Airworthiness Codes issued by certain CAAs and MAAs and supplements these with additional requirements identified through ADF operational experience and/or CRE considerations. DASA periodically reviews prescribed requirements and assesses their continued applicability and suitability. Finally, DASA provides advice on the appropriateness of tailoring the prescribed requirements and the impact of non-compliance.

Superseded

4.1.3 Certification

4.1.3.1 DASA is accountable to the Defence Aviation Authority to 'issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR' . This activity is known as 'certification'. The various authorisations DASA issues are described in chapter 5.3.

4.1.4. Oversight and Enforcement

Introduction

4.1.4.1 The effectiveness of the Defence Aviation Safety Program (DASP) is underpinned by the suitability of, and the level of compliance with, the Defence Aviation Safety Regulations (DASR). Entities that operate within the regulatory framework seek to maintain compliance in two ways:

1. By developing and implementing organisational systems, supported by processes and instructions, that address the regulations

2. By developing feedback mechanisms to verify that the processes and instructions have been followed, and remain suitable for the purpose of meeting regulatory requirements.

4.1.4.2 Regulatory oversight contributes to aviation safety by identifying potential compliance concerns that may then be further evaluated, and addressed if necessary. Compliance with DASR also mitigates systemic and human errors that dominate hazardous safety events. Oversight is a systematic means of monitoring entities that operate within the regulatory framework for their level of understanding and observance of the regulatory system, as indicated by their policies and instructions and their adherence to them. A natural consequence of regulatory oversight is that it also provides insight into the suitability and effectiveness of the regulatory controls themselves, which is essential for their ongoing development.

4.1.4.3 A key component of an effective regulatory framework is ensuring that regulated entities have a clear understanding of when, why and how DASA may take action in the event of regulatory breaches or unresolved safety performance issues. The DASP enforcement policy supports compliance with the DASR through application of a consistent framework, and has been developed with due consideration of the Defence Aviation environment and associated Commonwealth legislation.

4.1.4.4 Accident and incident investigation also provides opportunity for oversight of compliance with required aviation safety processes and systems, as the structured means of determining and assessing the factors that led to the accident or incident should reveal any deficiencies regarding compliance with the DASR. However, accident and incident investigation is outside the scope of this chapter and further guidance can be found under chapter 4.4 Independent Investigative Capability.

Purpose

4.1.4.5 This chapter describes the principles that comprise the 'Oversight and Enforcement (O&E)' component of the DASP. This chapter applies to all entities regulated under the DASR, and any entity

Superseded

performing Defence Aviation functions that are regulated by a DASA-recognised Civil Aviation Authority (CAA) or Military Aviation Authority (MAA).

Regulatory Requirement

4.1.4.6 DASR GR.60 specifies regulated community compliance oversight and enforcement obligations; and requires all Defence, civilian and contractor entities operating within the Defence Aviation Safety regulatory framework to comply with the DASR. Regulatory compliance is subject to ongoing oversight at multiple levels within the framework, and results of the oversight are used to:

1. assure that regulated entities are complying with the DASR,
2. inform future DASR development, and
3. refine the processes and procedures that support implementation of the DASR.

4.1.4.7 Regulated entities are required to ensure that they comply with their applicable aviation safety processes and instructions. Ensuring compliance requires the systematic and routine review of organisational management elements, to assess compliance with the Authority's requirements relating to aviation safety. Each regulated entity should establish arrangements and processes, including a compliance review schedule, to ensure compliance with the DASR.

Oversight

4.1.4.8 Oversight is required to provide confidence to the Defence Aviation Authority (Defence AA) that Defence is executing Aviation operations safely, in accordance with legislated requirements. DASA's Oversight function is executed through the O&E operating model at Figure 1, which assists to define DASA's and regulated entities' obligations to effectively establish and maintain DASR compliance.

4.1.4.9 The model at Figure 1 is separated into an upper (forward-looking) cycle (i.e. DASR implementation) and a lower (DASA feedback) cycle. Both cycles must be effective in their own right for an effective regulatory outcome. This is achieved by mapping each element of the model to corresponding personal accountabilities, responsibilities, expected outcomes and associated DASA (and other local) policy.

Superseded

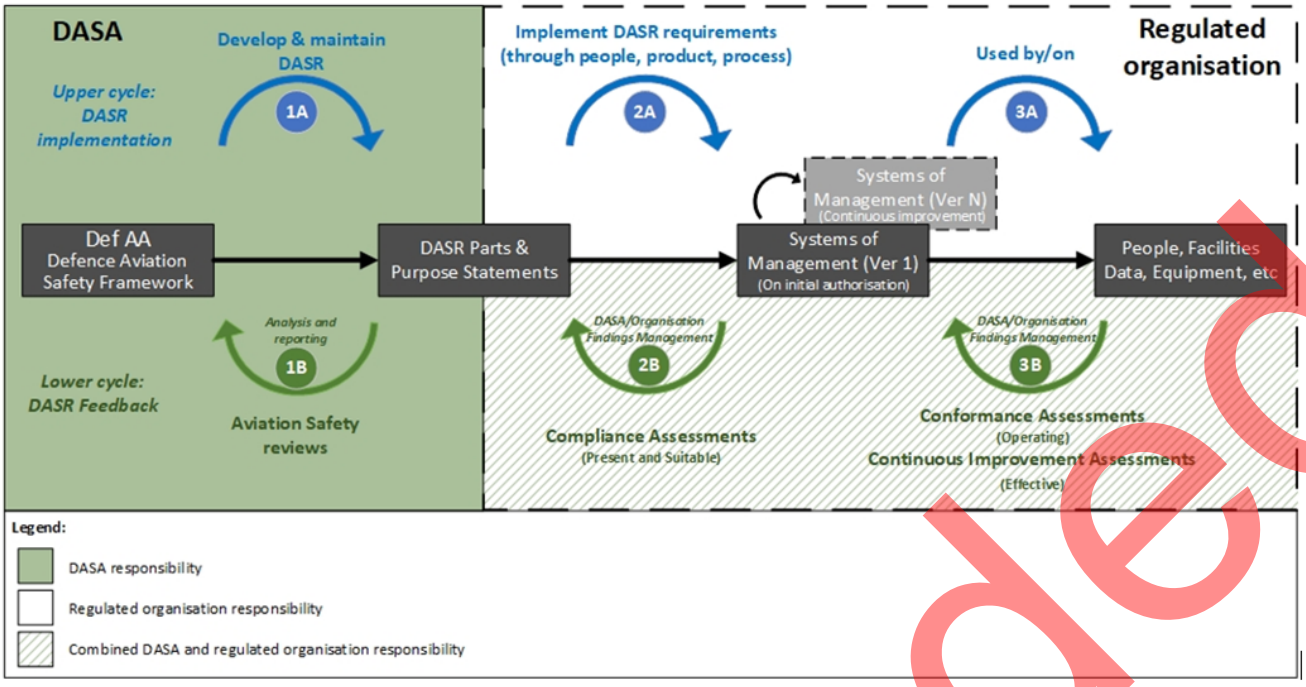

Figure 1: The Oversight and Enforcement operating model

4.1.4.10 **Operating model components.** The following model components apply:

1. **Implementation loop 1A** – Develop and maintain DASR. Refer DASPMAN Vol 1.

2. **Feedback loop 1B – Aviation Safety reviews.** Analysis and reporting on DASR compliance and safety intelligence is designed to provide senior decision makers, who have accountabilities under JD 21/2021, with a relative picture of DASP status, contemporary Aviation Safety issues, and an assessment of the aviation safety performance of regulated organisations. Issues raised can generate actions or be recommended for further monitoring. Reporting is achieved through the Defence Aviation Safety – Annual Report (refer section 2), and Airworthiness Boards (refer section 13).

3. **Implementation loop 2A – Implement DASR requirements.** Organisations subject to DASR are expected to implement locally-tailored and contextually-appropriate management systems to effectively comply with DASR. Systems are used to define any interaction of people, products (i.e. technology) and processes. However, outcomes from systems are rarely consistent, with their effectiveness continuously varying (e.g. through changes in local application context, staff churn and competencies, competing Service and organisational policies and priorities, etc). Entities are therefore expected to self-monitor and implement corrective actions as necessary.

4. **Feedback loop 2B – Compliance assessments.** Compliance assessments detect if documented management system meet required regulatory outcomes (i.e. 'Present' and 'Suitable' in the PSOE oversight construct—see below). DASA Findings document DASR non-compliances.

5. **Implementation loop 3A – Using documented management systems.** Once entities' documented management system are approved and promulgated (i.e. found to be DASR-compliant at the time of the DASA assessment), DASA expects the entity's staff, facilities, data, equipment etc to conform to that system[1].

Superseded

6. **Feedback loop 3B – Conformance and continuous improvement assessments.** Conformance assessments are designed to detect if staff, facilities, data, equipment, etc are conforming to the promulgated management system. By inference, if staff conform to DASA-approved systems, the organisation will remain compliant with DASR (i.e. 'Operating' in the PSOE oversight construct—see below). These assessments also look for local feedback data and safety intelligence that validate the documented management systems are effectively meeting DASR hazard control outcomes (i.e. 'Effective' in the PSOE oversight construct— see below).

4.1.4.11 **Present-Suitable-Operating-Effective (PSOE) model.** The PSOE Model was introduced into civil aviation with the release of ICAO Annex 19 Safety Management in 2013, defining outcome-based safety management requirements against the hazard of compromised Aviation Safety. Importantly, when ICAO Annex 19 was released, an ICAO sub-committee (the Safety Management International Collaboration Group – SMICG) published PSOE construct guidance, ICAO (2012) - SMICG Safety Management System Evaluation Tool), providing it as an effective Annex 19 oversight methodology. Specifically, the PSOE construct allowed assessment of regulated entities' maturity based on the effectiveness of hazard control implementation and incorporation of continuous improvement activities. The SMICG defined four progressive 'stages' of an entity's Safety Management System maturity (ie PSOE). In turn, defence has tailored these PSOE definitions (see section 5.4) to make them applicable to all DASR(not just SMS), due to the advantages the PSOE assurance methodology provides.

4.1.4.12 Oversight activities are conducted against defined PSOE criteria, by qualified staff; who should be substantially independent of the area being reviewed. A PSOE assessment is carried out through two very discreet activities—the Desk Top audit and an On-Site Performance Assessment—as follows:

1. **Desk top assessment.** The Desk Top assessment (for 'Present' and 'Suitable'), is an assessment of the entity's documented management system (i.e. the organisational approval basis) including Orders, Instructions and Procedures (OIP) that are used to comply with the relevant DASR. The Desk Top assessment gathers evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable' for the scope of the entity's authorisation.

2. **On-site assessment.** The on-site assessment (for 'Operating' and 'Effective') is carried out to provide assurance that the documented management system (i.e. the basis for the organisational approval) is operating as expected and effectively providing risk mitigation to the threats that the DASRs have been implemented to treat.

3. An on-site assessment can be conducted as part of an initial application for organisational approval or as part of an ongoing oversight program. The ongoing oversight program periodicity may be influenced by adopting a risk based approach for some organisations or operational activities influenced by safety intelligence information.

Enforcement

4.1.4.13 In addition to oversighting ongoing compliance with the DASR, DASA is also required to enforce the ongoing compliance of Defence Aviation organisations. The concept of enforcement within the DASP covers the following spectrum as outlined in Figure 2 below:

1. **Reinforcement** of requirements, through mechanisms which include providing education, updating regulatory material, and reinforcing positive behaviours.

Superseded

2. **Compelling** compliance, through the raising of DASR Findings or issuance of Directives.

3. **Deterrence** of ongoing operations with non-compliances through the suspension or removal of a DASR approval.

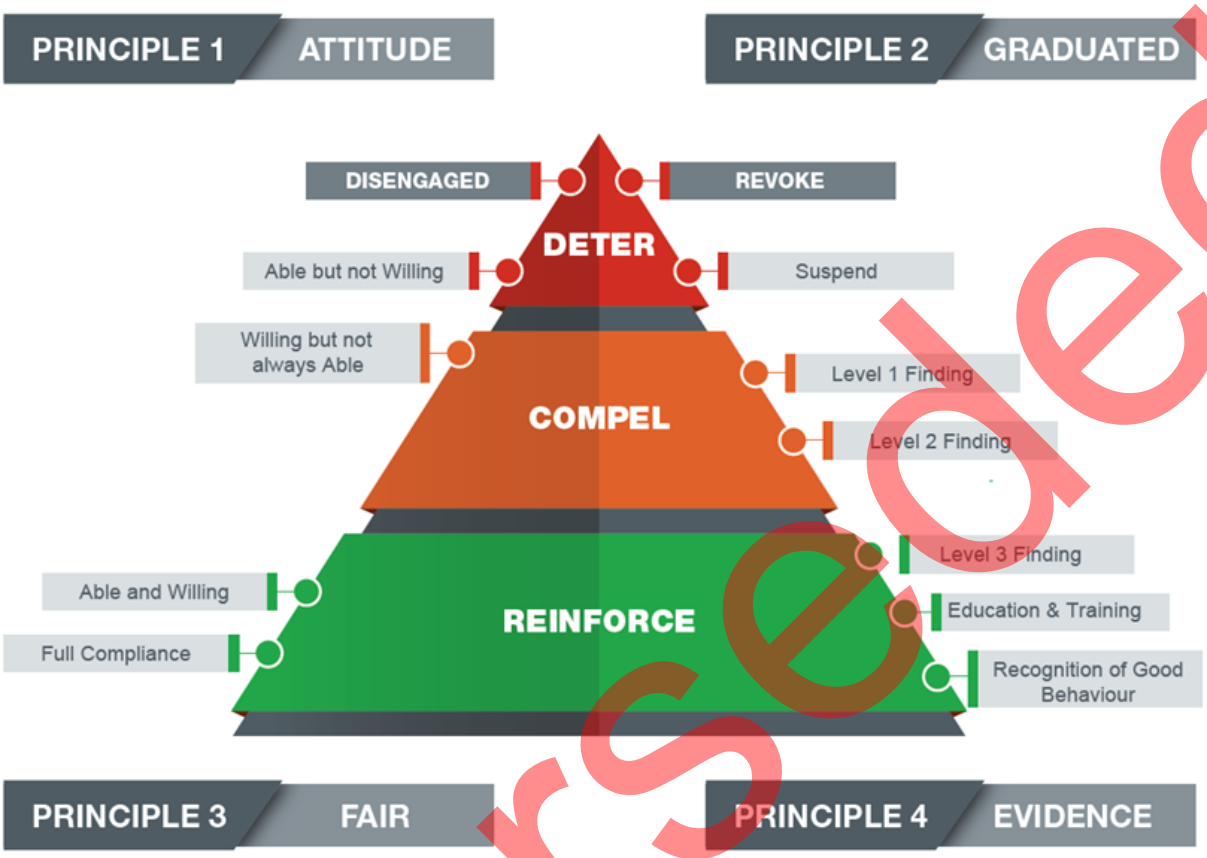

Figure 2: Enforcement Model

DASA Enforcement Principles

4.1.4.14 The DASA enforcement policy is founded on the following principles:

1. **Principle 1**: Enforcement shall consider organisations/operator attitudes.

   i. Enforcement will give due and equitable consideration to organisational attitudes and distinguish consistent or premeditated non-compliance, from non-compliance resulting from unintentional errors or deviations.

2. **Principle 2:** Enforcement action shall be graduated.

   i. Enforcement action shall commence at the lowest level commensurate with the increase in risk to aviation safety and willingness of the regulated entity to address the non-compliance, and should be escalated only when necessary to secure compliance.

   ii. The rate of escalation is cognisant of the underlying aviation safety risk, prior interaction between DASA and the non-compliant entity, and the entity's motivation and capacity to comply with the regulations.

3. **Principle 3:** Enforcement action shall be fair and proportionate.

Superseded

i. Full details of the nature of the non-compliance will be disclosed, along with supporting evidence.

ii. The response to the non-compliance will be proportionate to the identified breach and the increased risk to aviation safety.

iii. Enforcement action will relate directly to the non-compliance and associated increase in safety risk.

iv. In the interests of procedural fairness, regulated entities will be afforded the opportunity to review and respond to an identified non-compliance prior to enforcement action being initiated.

4. **Principle 4:** Enforcement decisions shall be independent and evidence based.

i. Enforcement decisions will be independent, transparent and underpinned by objective evidence.

ii. Enforcement decisions will not be influenced by personal, political, capability or financial considerations.

Proportionate and Graduated response

4.1.4.15 The key factors influencing a DASA decision to escalate an enforcement action include:

1. the nature, seriousness and extent of the non-compliances, including the safety implications and the intent (if applicable) of the non-compliances;

2. the willingness of the organisation to address the non-compliances and ensure that they are not systemic;

3. the nature and sufficiency of available objective evidence of the non-compliances;

4. the action required to effectively and efficiently address the aviation safety risks that have been identified or are likely to arise;

5. the need to obtain expert assistance on a complex technical or operational issue, including legal advice;

6. the obligation to be fair, consistent, impartial and proportional in taking enforcement action.

4.1.4.16 While imposing a sanction that suspends or revokes an entity's approval is a real and credible course of action, as part of a graduated response to serious and/or continuing non-compliances, this may not always be in the interests of the Service. If DASA is considering an unscheduled act of limiting, suspending or revoking an entity's approval, the relevant Environmental Commander or Group Division Head is to be consulted before any proposed sanction that suspends or revokes an entity's approval is imposed. This level of consultation is not required where a scheduled revocation takes place, for example removal or amendment of an organisational approval after an aircraft type is withdrawn from service.

Coordination with external bodies

4.1.4.17 In certain circumstances, DASA may identify a regulatory breach or safety concern that falls under the jurisdiction of an external CAA or MAA. If this occurs, DASA will consult with external

Superseded

agencies as necessary, to ensure a coordinated approach to any enforcement or remedial action is undertaken.

4.1.5 Promote Aviation Safety

Introduction

4.1.5.1 The Defence Aviation Safety Authority (DASA) is responsible to the Defence Aviation Authority (Defence AA) for enhancing and promoting Aviation Safety through the implementation of a Defence Aviation Safety Program (DASP). The DASP promotes safety awareness and the sharing and exchange of safety information with the aviation community to foster the maintenance and improvement of safety; to support the development of a generative safety culture; and to assure the effective management of aviation safety risks.

4.1.5.2 The second function of the Defence Aviation Safety Program (DASP) is 'Promote Aviation Safety'. This function comprises the following elements:

1. Aviation Safety promotion and dissemination of safety information

2. education, training and communication.

4.1.5.3 While Function 2 of the DASP explicitly directs 'promotion', all five functions require engagement with stakeholders. DASA cannot implement these functions in isolation. Ongoing engagement with stakeholders internal, external to the Authority, internal and external to Government is required to improve aviation safety outcomes and support capability.

Aviation Safety Promotion and Dissemination of Safety Information

4.1.5.4 A key tenet in promoting Aviation Safety is the two-way communication flow of safety information. Aviation Safety promotion can take many different forms, and cover a wide spectrum of activities— from dissemination of general information on Aviation Safety, to visits by DASA personnel. In either case, the establishment and management of relationships is paramount.

4.1.5.5 Figure 1 details the regulatory model, which includes DASA and the Defence Aviation Community. DASA uses its Engagement and Promotion Strategy to 'manage relationships' between the two entities.

Superseded

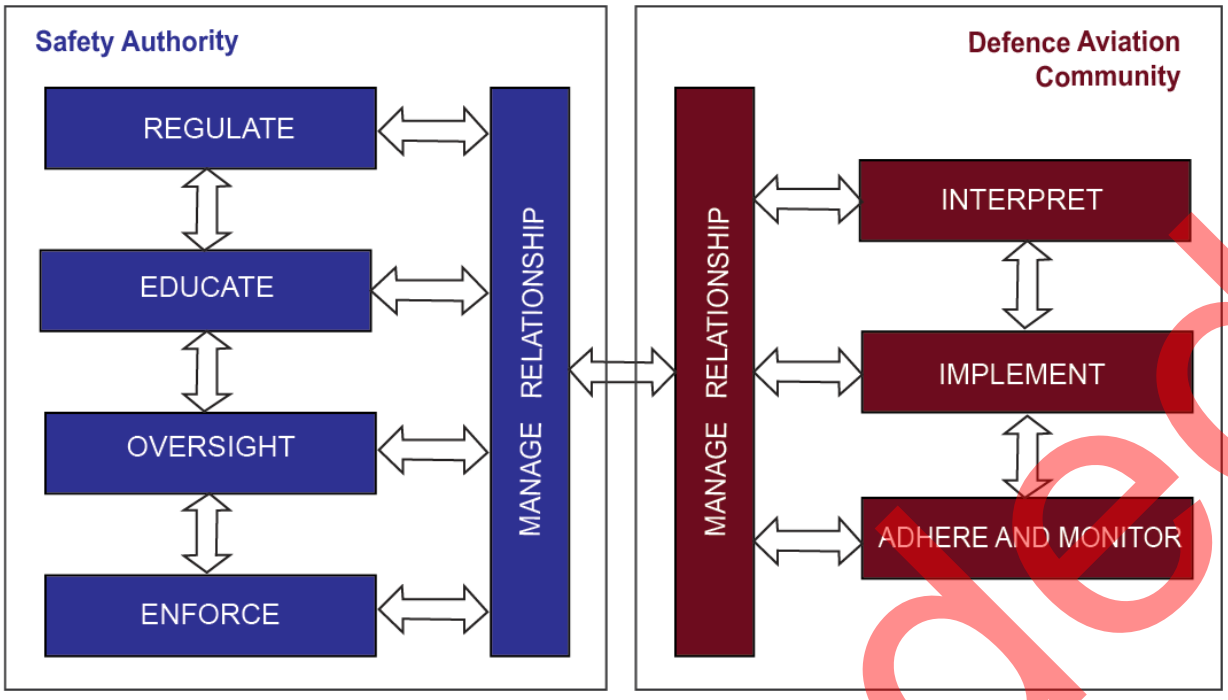

Figure 1: The Regulatory Model

4.1.5.6 The 'promoting Defence Aviation Safety through education, training and dissemination of safety information' function employs a number of strategies to disseminate Aviation Safety information, including:

1. participation in dedicated safety stand-down days
2. publication of safety and regulatory magazines, (i.e. Spotlight)
3. sponsoring conferences and convocations
4. Defence Aviation Authority (Defence AA) safety messages
5. publishing the Defence Aviation Safety - Annual Report (DAS-AR)
6. maintaining safety information recording and analysis systems, such as Sentinel and Salus
7. posting safety information, such as Defence Aviation Safety Regulation (DASR) awareness briefs on the DASA web site
8. visits by DASA personnel.

4.1.5.7 Of particular importance is the ability to disseminate safety information in a timely manner, particularly in response to investigation of an accident or serious incident. The DASP provides several ways for DASA to disseminate urgent safety information, enabling the selection of the most appropriate way, cognisant of the specific circumstances.

Superseded

4.1.5.8 Visits by DASA personnel to regulated entities are also an important means of promoting Aviation Safety and disseminating aviation safety information— providing the opportunity to discuss particular safety aspects in detail.

Education and Communication

4.1.5.9 All personnel within the Defence Aviation sector, who undertake or directly support aviation activities, should receive sufficient education to provide a general understanding of Aviation Safety. Commensurate with each person's aviation safety responsibilities, they should receive further safety education. The DASA sponsors a wide range of Aviation Safety regulatory and technology training courses that personnel may nominate to attend.(see www.defence.gov.au/DASP/Training/Default.asp)

4.1.5.10 In addition to delivering and sponsoring Aviation Safety education, DASA also facilitates a number of opportunities for two way dialogue on Aviation Safety, including:

1. continuation training programs
2. DASA Newsbreak
3. DASA workshops
4. international visits to, or by, other regulators/safety bureaus or equivalent organisations
5. conferences and symposiums
6. regulated community forums
7. Airworthiness Boards and convocations
8. audits.

4.1.5.11 Commanders and managers within the Defence Aviation sector should encourage their personnel to take maximum advantage of the opportunities afforded to discuss Aviation Safety. Additionally, personnel should endeavour to further their Aviation Safety knowledge through the various means currently available. Members of the regulated community should advise DASA of opportunities to improve Aviation Safety communication so that DASA may consider implementing appropriate improvements.

4.2 DASA's Ensure functions

4.2.1 Introduction

4.2.1.1 DASA carries out two ensure functions in direct support of the management of Aviation Safety by the Defence aviation community:

Superseded

1. provision of aviation safety management system products and services
2. provision of structural integrity engineering product and services.

4.2.2 Aviation Safety Management System Products and Services

(Reserved)

4.2.3 Structural and Propulsion System Integrity Centre of Expertise (CoE) Services

Introduction

4.2.3.1 The Directorate of Aviation Engineering (DAVENG) has a mandate to support Commanders to ensure structurally-airworthy platforms, and is the Defence Centre of Expertise (CoE) for Aircraft Structural Integrity Programs (ASIPs), Propulsion System Integrity Programs (PSIPs) and Non-Destructive Testing and Composite Technologies (NDT&CT).

4.2.3.2 In this capacity, DAVENG supports associated organisations with specialist advice, design services and training in these fields to maximise Defence capability. DAVENG also provides stewardship of sovereign capability initiatives and input into relevant policy frameworks.

4.2.3.3 For the avoidance of doubt, these services are provided by DAVENG in a separate capacity to the DASA Functions described in Chapter 4.1.

Aircraft Structural Integrity (ASI) and Propulsion System Integrity (PSI) and Services

4.2.3.4 **ASI and PSI CoE Services.** DAVENG supports the Defence ASI and PSI community with the following services:

1. advice on ASIP and PSIP establishment and execution
2. advice to CASG on ASIP and PSIP-related contracting and governance
3. CoE review of ASIP and PSIP products and outputs on behalf of CASG
4. technology specialist advice, such as supporting risk assessments
5. where appropriate, and when agreed, coordination and management of major ASI / PSI issues or tasks on behalf of CASG
6. support to Defence ASIP and PSIP policy artefacts on behalf of Capability Managers and CASG.

4.2.3.5 **SI Sovereign Capability Stewardship.** The SI Sovereign Capability encompasses the specialist technical capabilities that come to bear for critical and high-value SI activities where sovereign oversight and/or indigenous solution development is required to ensure Defence objectives are met. Under their Defence SI CoE capacity, DAVENG stewards the SI Sovereign Capability initiative, and chairs the Capability Management Board advocacy and governance forum. More information on the SI Sovereign Capability initiative and governance is available in the SI Sovereign Capability Strategy document, which can be provided by DAVENG to relevant parties upon request.

Superseded

4.2.3.6 **Training Courses.** DAVENG sponsors the following three specialist courses:

a. ASI Familiarisation Course

b. Helicopter Structural Engineering Familiarisation Course

c. Propulsion Systems Engineering Familiarisation Course.

4.2.3.7 These three practitioner courses include components intended to teach ASI and PSI fundamentals and best practice, as well as components intended teach how ASI and PSI programs support DASR compliance.

NDT Appointments, Training, Certification and Authorisation

4.2.3.8 **ADF NDT Responsible Level 3 Appointment.** DASR 145.A.30(f) requires DASR 145 Maintenance Organisations (MOs) to appoint an NDT Responsible Level 3 (RL3) as the management position responsible for implementing a training and certification system compliant with European standard EN4179 Qualification and approval of personnel for non-destructive testing (refer DASP Manual Volume 3 Chapter 8.3.2).

4.2.3.9 To ensure all ADF Non-Destructive Inspection Technicians (NDITECHs) are trained to the same level of competency and to avoid the burden of each ADF DASR 145 MO appointing their own NDT RL3 and establishing NDT training and certification frameworks, DAVENG performs the Defence NDT RL3 function and manages all NDT training and certification activities for ADF members, Department of Defence employees and other staff members working within ADF DASR 145 MOs. The Director of Aviation Engineering appoints a suitably qualified senior NDITECH to be the Defence NDT RL3, with that individual approved by the DASA as a Form 4 Holder.

4.2.3.10 **ADF DASR 145 MO NDT Certification Framework.** ADF DASR 145 MO Quality Managers are responsible for ensuring that staff conducting NDT are certified by the Defence NDT RL3 (or delegate) before being authorised to certify maintenance. This includes:

1. staff who have obtained training from external training providers or third parties

b. external Industry or Contracted service providers working in an ADF DASR 145 MO.

4.2.3.11 In order to support ADF DASR 145 MOs, the Defence NDT RL3 maintains a NDT training and certification system (both initial and ongoing training / certification) that meets Defence's needs and complies with DASR 145.A.30(f) requirements.

4.2.3.12 **ADF DASR 145 MO Authorisation of NDT Staff.** DASR 145.A.30(f) requires personnel who conduct NDT be certified in accordance with EN4179. Under Defence's NDT certification system, the process followed is:

a. the Defence NDT RL3 (or delegate) ***certifies*** the technician as meeting the requirements of EN4179 for the applicable NDT method or technique, and subsequently,

b. the MO Quality Manager (or delegate) ***authorises*** the technician to conduct NDT maintenance within the scope and validity of the NDT certification.

4.2.3.13 The Defence NDT RL3 (or delegate) will issue Certification records via PMKeyS proficiencies (primary system) or a Minute. ADF DASR 145 MOs are to check the scope and currency of NDT proficiencies on PMKeyS prior to authorising staff to perform NDT. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiencies.

Superseded

4.2.3.14 **Additional Information.** More detailed information on NDT training and certification services provided by DAVENG, including training courses and frequently asked questions, is available on the DASA NDT&CT Website.

NDT Engineering Services

4.2.3.15 DAVENG NDT&CT Engineering Section develops NDT procedures, inclusive of introducing new NDT technologies, in support of ADF capability requirements. Engineering Section provides the following services to ADF units and ADF support contractors:

1. development of DASA approved NDT Instructions for Continuing Airworthiness (ICA), including:
    i. platform specific procedures
    ii. NDT general procedures (AAP 7002.043-36)
2. CoE NDT advice on the selection of appropriate NDT techniques
3. assistance with the introduction of new NDT technologies in support of ADF capability requirements
4. testing and evaluation of NDT support equipment for introduction into the Defence inventory
5. technical review of platform-specific NDT publications and associated procedures
6. NDT Information Review (IR) of standards, practices and equipment
7. provision of other NDT CoE advice
8. manufacture of certified NDT reference standards.

Composite Repair Training and Certification

4.2.3.16 **ADF DASR 145 MO Composite Repair Certification Framework.** Personnel who conduct composite repairs must be trained and certified in accordance with SAE AIR4938 - Composite and Bonded Structure Technician Specialist Training Document (refer DASP Manual Volume 3 Chapter 8.3.2). On behalf of all ADF DASR 145 MOs, DAVENG conducts the training and certification (including re-certification) for all personnel who perform composite repairs. DAVENG staff issue the PMKeyS proficiency P124689 *Composite & Adhesive Bonding Recertification* upon successful completion of training requirements.

4.2.3.17 **ADF DASR 145 MO Authorisation of Staff to Conduct Composite Repair.** MO Quality Managers (or delegates) are responsible for verifying that technicians hold a valid PMKeyS proficiency for composite repair prior to authorising them to conduct composite repairs within an ADF DASR 145 MO. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiency.

4.2.3.18 **Additional Information.** More detailed information on Composite Technology training and certification services provided by DAVENG, including training courses, is available on the DASA NDT&CT Website.

Superseded

4.3.1 Introduction

4.3.1.1 This section provides a description of Delegates of the Safety Authority (DoSA), their purpose, selection and scope of delegations.

Purpose

4.3.1.2 A DoSA is an individual who has been formally delegated a DASA responsibility (Letter of Delegation) by DG DASA and is considered an agent of the DASA when exercising that delegation. Delegations may cover general assurance function carried out by the Authority (such as Occurrence Report assessments or standards interpretation) or provision of DASA authorisations such as a Military Permits To Fly (MPTF). In all instances, the delegation scope must be linked to an explicit DASR obligation of DASA.

4.3.1.3 A DoSA performs assurance activities and critical roles that extend the competence and capacity of the DASA. DoSAs are placed within the aviation community to provide greater access and insight to regulated entities or activities. DoSA delegation scope varies, but is invariably linked to the role of an incumbent. This role may be as a senior engineer, test pilot and/or subject matter expert (SME) related to a specific platform or regulatory domain providing in-depth knowledge to support aviation safety assurance. When in proximity to the regulated entity a further benefit is realised with greater education and promotion for the organisation and DASA 'eyes and ears' in the field.

4.3.2 Selection

4.3.2.1 DoSA applicants are suitable for nomination by virtue of the roles they fill within the aviation community as senior members within their domain. Nomination for a DoSA is via a Form 104 submitted to the DASA Registry. Within Form 104 the member identifies the need, and the qualification, training and experience (QTE) that enables them to perform the role relevant to the scope of delegation being awarded. For each type of DoSA role, there are mandatory requirements that the nominee must meet. Annex A contains a baseline set of generic QTE requirements.

4.3.2.2 DASA staff will assess nominated DoSAs through a standard process to assess their suitability and provide a recommendation to DG DASA. The assessment process will usually involve two interviews; the first a preliminary interview to broadly assess an individual's suitability to execute delegated authority functions, and a final interview with DG DASA to confirms the skills, knowledge and attitude of the applicant. If suitable, DG DASA will authorise a delegation to the individual.

4.3.2.3 A DoSA delegation is issued in the form of a letter directly from DG DASA. Delegates are provided an induction pack containing foundational information and are supported under the DASA Business Management System as a member of the DASA. Delegations are generally awarded to nominees filling a specific role. Upon leaving the position in which DoSA was awarded, eg formal posting, the members delegations are rescinded. In exceptional circumstances, extensions may be negotiated directly with DG DASA, via the applicable DASA directorate. DASA may amend or revoke a delegation at any time at the discretion of DG DASA.

Superseded

4.3.3 Scope

4.3.3.1 The scope of duties and responsibilities of the DoSA depends on the capacity in which they have been delegated. The following list the categories functions delegated:

1. Occurrence Report Assessment for specific functions related to DASR 21, DASR M and DASR 145
2. Airworthiness Directives (AD) for specific functions related to DASR 21 Subpart A
3. Military Permit To Fly (MPTF) for other than flight test, including flight conditions, for specific functions related to DASR 21 Sub-part P
4. MPTF for flight test, including flight conditions, for specific functions related to ASR 21 Sub-part P
5. Military Certificate of Airworthiness (MCoA) for specific functions related to DASR 21 Sub-part H
6. Airworthiness Standards for specific functions related to DASR 21.A.16B
7. Other categories as considered necessary by the DASA for effective management of aviation safety.

4.3.3.2 The current classes of DoSA are:

1. **Platform DoSA:** A Platform DoSA has the widest scope of functions and may include assurance of Military Type Certificate Holder (MTCH) actions with respect to reportable occurrences, issue of MCoAs, approval of flight conditions and issue of Airworthiness Directives. The Platform DoSA is ostensibly delegated to the incumbent CENGR of the platform MTCH organisation and provides assurance in the DASR Part 21 Initial Airworthiness domain.

b. **Flight Test DoSA:** A Flight Test (FT) DoSA has a scope of functions that are relevant to assuring the safety parameters within the DASR Part 21, Subpart P Flight Test domain. Their function is to provide assurance through the approval of operational flight conditions specifically for Flight Test activities and issue of MPTF authorisations. Flight Test DoSAs will invariably have the qualifications, training and experience (QTE) of Flight Test qualified aircrew relevant to certain platforms and will provide the function as part of their position within Flight Test organisations.

c. **Standards DoSA:** A Standards DoSA has a scope of function relevant to a specific technology/design discipline domain. They perform the prescribe and interpret airworthiness design requirements and standards function for their assigned technology, and provide advice to command on the management of risk associated with non-compliance to the prescribed airworthiness design requirements. Standards DoSAs have been established to cover Aeronautical Life Support Equipment (ALSE), Air Navigation Services (ANS) and Aerial Delivery technologies, and are delegated to SMEs posted to the unit charged with managing these technologies.

d. **Training DoSA:** A Training DoSA has a scope of function to assure that the content delivered in DASR 147 Maintenance Training Organisations is suitable to meet the requirements of DASR 66 licensing.

Superseded

e. **Licencing DoSA - ATC:** An ATC Licencing DoSA has a function relevant to the assurance that persons issued with a licence meet the specific requirements and are suitably qualified and experienced to perform licenced air traffic control functions.

f. There may be requirements/opportunities for other DoSA roles in the future, such as in Aircraft Type Certification. These will be identified and documented when implemented.

4.3.3.4 The concept of a Project DoSA has been discontinued since the scope was not linked to exercising any explicit DASR obligations. Notwithstanding this, the incumbent Project Engineering Manager (PEM) is required to have a comprehensive understanding of initial and continuing airworthiness DASR in order to ensure project acquisition activities enable the issue of appropriate and timely DASA authorisations, and subsequent handoff to the gaining MTCH and Continuing Airworthiness Management Organisation (CAMO).

4.3.3.5 For each class of DoSA, there are certain QTE requirements that the nominee must possess or have achieved. More information on the QTE and mandatory requirements of each DoSA will be provided through the nomination process. DASA will also endeavour to support additional training where possible to assist in the execution of the duties of the DoSA. DASA convenes a DoSA convocation to induct new DoSAs, discuss topical DoSA subjects and implement changes applicable to their duties.

4.3.3.6 When exercising their delegation, a DoSA is undertaking this function as part of the DASA, using DASA authorised procedures. Annex B contains specific functional DoSA information and reading. Whilst performing duties under the DoSA capacity, the DoSA is subject to internal DASA process audits in how they execute the functions specific for their scope.

4.3.4 DoSA Independence and Reporting

4.3.4.1 A critical safety feature of the Defence Aviation Safety Program (DASP) is the separation between assuring and ensuring aviation safety through the application of the DASP. Given nominated individuals may be performing tasks that ensure Aviation Safety in their primary employment role, there is a natural concern for a conflict with their DoSA role of *assuring* Aviation Safety. In their capacity as DoSA, it is important that they are able to maintain objectivity (without undue pressure), evaluate their independence, have adequate time to exercise the delegation and maintain conscious awareness that the individual is representing DASA when exercising the delegation.

4.3.4.2 Where instances arise that the DoSA has been part of a decision that ensures aviation safety in their regulated community role, it is possible that their independence to assure aviation safety for the same issue is compromised. The DoSA is expected to have a level of competence and judgement to remove themselves from the assurance role and advise DASA.

4.3.4.3 Where the DoSA identifies conduct or behaviours in the regulated community that may represent DASR non-compliances, non-conformances or where associated hazards and risk are not being eliminated or minimised SFARP, the DoSA is expected to notify DASA of their concerns. DG DASA enables the DoSA to inform their office directly where the nature of the conduct is serious. It is important to note that the DoSA role only provides 'in the field' oversight/awareness and the DoSA is not expected to execute DASA enforcement policy, which remains the duty of the relevant DASA Directorate staff responsible for that oversight and enforcement.

Superseded

Annexes:

(a) DoSA Qualifications, Training and Experience (QTE)

(b) Specific Functional DoSA Information and Reading

4.4 Independent Investigative Capability

4.4.1 Introduction

4.4.1.1 Joint Directive 21/2021 The Defence Aviation Safety Framework directs DASA to establish an independent investigative capability aligned to ICAO standards and recommended practices (SARPs). This capability is provided by the Defence Flight Safety Bureau (DFSB) within DASA. This chapter describes how DFSB meets the responsibilities described in the Defence Aviation Safety Program Manual Volume 1 Requirements for the DASP.

4.4.1.2 Annex 13 Aircraft Accident and Incident Investigation to the Convention on International Civil Aviation, requires that the accident investigative authority be independent from State aviation authorities and other entities that could interfere with the conduct or objectivity of an investigation. Director DFSB is accorded specific responsibilities and the power for autonomous action outside both DASA and the command chain to directly report matters of concern to the Defence Aviation Authority (Defence AA). DASP Manual Volume 1 details DFSB's functional independence of DASA Directorates and powers for autonomous action outside of DASA and the command chain.

4.4.1.3 DFSB and the Australian Transport Safety Bureau (ATSB) have a Memorandum of Understanding (MoU) for cooperation relating to transport safety investigation. The MoU deals with mutual assistance, sharing of expertise, mutual training opportunities, joint and parallel investigations, and the participation by members of either organisation in investigations carried out by the other organisation. The MoU is available on the DFSB intranet site.

4.4.1.4 DFSB is also responsible for promoting and enhancing aviation safety, which requires more than policy and processes. DFSB recognises the complex social and cultural work environments within the Defence aviation community, and works to positively influence safety attitudes and behaviours.

4.4.2 Functions of DASA-DFSB

4.4.2.1 In accordance with DASP Manual Volume 1, DFSB is responsible for a number of functions in support of both retrospective investigation of Defence accidents and incidents and proactive approaches to preventing military accidents and enhancing flight safety. These functions are:

1. **Aviation safety reporting framework.** DFSB maintains the Defence Aviation safety reporting framework by:

   i. Developing and maintaining the Defence Aviation safety reporting system. DFSB meets this requirement through the management of the Defence Corporate Safety Reporting Tool: ASR in Sentinel. ASR in Sentinel provides a closed loop process for the reporting, investigation, tracking and review of aviation safety events and issues. Sentinel is available to all Defence aviation personnel with access to the 3Defence Protected Environment (DPE). DFSB

Superseded

maintains an ASR Service desk, at asr.servicedesk@defence.gov.au or (02) 5130 7704 to provide ASR related support to the Defence aviation community.

ii. Developing and maintaining the appropriate documentation to define the reporting framework. The Defence Aviation Safety Manual (DASM) defines the reporting framework, including reporting and notification requirements, categorisation and classification of aviation safety events, and types of reporting. Additional guidance material is available on the DFSB intranet site.

iii. Establishing a confidential reporting scheme to enable confidential reporting of issues that effect, or might effect, aviation safety. DFSB provides and maintains a confidential reporting system that allows individuals to report aviation safety issues or concerns where they are unwilling to use the normal aviation safety reporting system for fear that they may be disciplined, ridiculed or otherwise disadvantaged if they do so. The DASM provides policy and guidance on confidential reporting. Individuals can report via email directly to Dir DFSB or through the link on the DFSB intranet site.

iv. Defining notification requirements and mechanisms (immediate and routine) for aviation safety reports. Notification requirements and mechanisms are defined in the DASM, and guidance is provided on the DFSB intranet site. All aviation safety events and issues must be reported into ASR in Sentinel, or through the offline ASR form AE774. Immediately reportable matters (as defined in the DASM) must be notified to the DFSB Duty Officer on (02) 6144 9199.

v. Defining taxonomies to facilitate safety information exchange that are compatible with the ICAO Accident/Incident Data Reporting system and broadly aligned with those of the Australian Transport Safety Bureau (ATSB). DFSB has embedded the aviation safety reporting taxonomies within ASR in Sentinel. More information is available on the DFSB intranet site. DFSB also manages the Aviation Safety Intelligence Portal, Salus, which supports the sharing, exchange and analysis of safety data within Defence, and between DFSB and the ATSB. The MoU (referenced in para 3) further supports alignment of safety reporting and information exchange.

vi. Defining the classification system for aviation safety reporting. The classification system for aviation safety reporting in Defence is described in the DASM. Aviation safety events are defined by both realised and potential consequences with reference to Personal Injury Level (PIL), Aircraft Damage Level (ADL) and Perceived Risk Level (PRL). Aviation safety events are classified in accordance with Table 1. More information is available in the DASM or on the DFSB intranet site.

Event Classification	Description
Class A	PIL of fatal ADL of destroyed
Class B	PIL of serious 3ADL of Substantial

Superseded

	PRL of High or Very High
Class C	PIL of minor ADL of Moderate PRL of Medium
Class D	PIL of No Injury ADL of No Damage/Minor Damage PRL of Low or Very Low

Table 1: Event Classification

vii. Developing processes to monitor the health of the aviation safety reporting system. DFSB monitors the aviation safety reporting system through internal mechanisms, including daily review of aviation safety reports and periodic research activities to examine specific features of the system, such as usability and data quality.

2. Safety data collection and processing. DFSB has established and maintains safety data collection and processing systems to capture, store, and aggregate and thence enable the analysis/exchange of safety data and safety information. Safety data refers to a defined set of facts or set of safety values collected from proactive or reactive safety related activities. Safety information is created when the data has been processed, organised, integrated and analysed in a given context. DFSB collects and manages safety data and information from:

   i. DFSB safety investigations.

   ii. Aviation safety reports and investigations from within the organisation's safety management systems and provided to DFSB (primarily through ASR in Sentinel).

   iii. Data collected by DFSB during the course of cultural surveillance activities (e.g. cultural surveys).

3. In addition to ASR in Sentinel, DFSB also maintains the following systems:

   i. **Salus.** The DASA Salus application is designed to support the sharing, exchange and analysis of safety data within and between DASA and the Defence aviation community, with the goal of enhancing aviation safety. Salus is available on the DPE, and more information and guidance can be found on the DFSB intranet site. DFSB maintains a Salus service desk, at salus.servicedesk@defence.gov.au, to provide support and guidance to users.

   ii. **Snapshot Survey.** The DFSB Snapshot Survey is an annual survey administered to personnel from Air Force, Army Aviation, Fleet Air Arm, Air Domain and other selected domains. The survey captures information on a broad range of issues that impact the safety, performance and overall health of the participating organisations. DFSB generates a range of tailored Snapshot reports targeting different levels of the organisation, and aims to provide information on the workgroups safety/organisational climate, benchmarked

Superseded

against other units. The reports allow commanders to track changes from one year to the next, identify risks, and assess the effectiveness of recent interventions. More information is available on the DFSB intranet site.

4. Joint Agency Aviation Safety Analysis Coordination Group (JAASACG). DFSB is also a member of the JAASACG, which facilitates the data analysis and reporting function under Australia's State Safety Program. Conducting safety data exchange and analysis through the JAASACG assists in maintaining strong stakeholder relationships and allows safety data to be shared and research and analysis efforts coordinated between Government Agencies to improve aviation safety.

5. **Analysis, Research and Review.** DFSB conducts a range of applied safety data analysis and research activities to inform DASA, the Defence Aviation Authority and the broader Defence aviation community. DFSB produces a range of products, including:

   i. The DFSB Annual Review of Defence Aviation Safety Statistics, input to the Defence Annual Safety Annual Report, Safety Snapshot Culture Survey Reports, and supplementary reports as identified through ASRs and safety surveys.

   ii. Support to command in the use of safety data systems, including guidebooks, service desk support, training databases, and training content for DFSB safety courses. These products are available on the DFSB intranet site.

   iii. DFSB staff members attend a number of aviation safety, investigation, human factors and non-technical skills forums and conferences in order to provide internal learning opportunities, benchmarking against international and domestic military and civilian agencies, and to support industry wide learning.

   iv. DFSB produce and support targeted human factors programs, primarily fatigue and non-technical skills related policy and guidance. These programs are described in the DASM, and through guidebooks and resources on the DFSB intranet site.

6. **Independent Investigation.** DFSB provides independent investigation and reporting of all accidents, selected incidents and selected systemic safety issues. This is achieved through:

   i. All Defence Aviation Class A and select Class B events are independently investigated by a DFSB Aviation Safety Investigation Team (ASIT) which reports directly to the Appointing Authority (AA). The AA is the designated commander at the appropriate level authorised to initiate and close aviation safety investigations. The DASM describes the appropriate levels and delegations. The ASIT operates under the procedural direction of DFSB.

   ii. DFSB investigations are functionally independent of the DASA regulatory directorates, and in general, of any other party of the entity that could conflict with, or influence, its objectivity.

   iii. The sole aim of a DFSB investigation is to prevent further occurrence and enhance safety outcomes through the identification and remediation of local and systemic deficiencies, and the improvement of risk controls. DFSB investigations do not apportion blame or liability.

Superseded

iv. DFSB investigations are conducted consistent with the international standards outlined by ICAO, and those described in the Australian Transport Safety Investigation (TSI) Act 2003. Given the unique nature and demands of military flying, a DFSB investigation may deviate from these provisions in such a manner that is considered necessary or appropriate under the specific circumstances. Additional guidance can be found in the DASM and on the DFSB intranet site.

v. In the case of Class B events, DFSB may decide not to undertake the investigation, leaving the responsibility to the command chain. This decision will be made in consultation with the relevant environmental commander, and taking into account the safety implications of the event, the suitability of the event for investigation by DFSB and the breadth of lessons likely to be learned from the event.

vi. DFSB provide specialist advice and support to aviation safety investigations undertaken within the command aviation Safety Management System.

vii. A Class A or Class B Defence event that involves a civil (VH registered) aircraft could be subject to an investigation by the ATSB in accordance with the TSI Act 2003, their priorities and mandates for investigation. The carriage and conduct of the investigation will be negotiated through DFSB in accordance with the extant ATSB/DFSB MoU.

viii. DFSB is responsible for the Defence Aviation Cockpit Voice Recorder (CVR) and Flight Data Recorder (FDR) download and analysis capability. DFSB Investigation team have the specialist skills and equipment to support this capability. Policy and guidance on download and analysis of the CVR and/or FDR is found in the DASM.

ix. DFSB must be notified of all Class A and Class B events involving Australian Air Force Cadets (AAFC) in the course of their duties; however, all reporting and investigation resides within the AAFC's Aviation Safety Report system.

7. **Safety awareness, knowledge and action.** DFSB is responsible for fostering safety awareness, knowledge and action through promotional and education programs, and utilising the outcomes from safety analysis, research and investigative functions to influence organisational learning. This is achieved through a range of programs including:

i. **Aviation safety policy.** DFSB is responsible for the development and maintenance of key aviation safety policy, including the DASM, which supports the implementation of efficient and compliant aviation Safety Management Systems, and the Aircraft Accident WHS Manual to support the safety response to military aviation accidents and incidents.

ii. **Aviation safety training.** DFSB provides aviation safety reporting, investigation and safety data related education and training, through the provision of Aviation Safety Officer Initial and Advanced courses, Non-Technical Skills Trainer Course and the one-day Aviation Incident Investigation Course. DFSB is also responsible for the integration of aviation safety and non-technical skills content into the Defence training continuum.

iii. **Aviation safety awareness.** Through investigations, analysis of safety data, research reports and engagement with industry and military partners, DFSB

Superseded

identifies key lessons and safety issues. DFSB has a range of products and services to support the integration of those lessons into aviation safety policy and training, and to support positive organisational learning. These products include promotional materials, guidebooks and training materials and are available through the DFSB intranet site.

Superseded

4.2. DASA's Ensure functions

4.1 DASA's Assure Functions

4.1.1 Introduction

4.1.1.1 The following sections describe how DASA carries out the independent safety assurance functions identified in Chapter 3 of Volume 1. These functions are described in simple terms as:

1. **Policy prescription and interpretation.** DASA prescribes and interprets policy for the management of Defence Aviation safety, inclusive of the Defence Aviation Safety Regulation (DASR) and related standards.
2. **Certification.** Issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR.
3. **Oversight and enforcement.** Conduct ongoing oversight and enforcement activities to assure compliance with the DASR and the continued validity of authorisations issued by DASA
4. **Safety promotion.** Promote Aviation Safety through education, training, and dissemination of safety information.

4.1.2 Policy Prescription and Interpretation

4.1.2.1 DASA is accountable to the Defence Aviation Authority to prescribe and interpret Aviation Safety management policy . This is fulfilled primarily through:

1. the promulgation and management of the Defence Aviation Safety Regulation and supporting standards
2. the provision of authoritative advice and guidance in relation to compliance with those regulations and standards.

4.1.2.2 DASA is required to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR' . In fulfilment of this responsibility, DASA prescribes and interprets the minimum safety requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

4.1.2.3 In prescribing design requirements for aircraft and aircraft-related systems, DASA recognises Airworthiness Codes issued by certain CAAs and MAAs and supplements these with additional requirements identified through ADF operational experience and/or CRE considerations. DASA periodically reviews prescribed requirements and assesses their continued applicability and suitability. Finally, DASA provides advice on the appropriateness of tailoring the prescribed requirements and the impact of non-compliance.

Superseded

4.1.3 Certification

4.1.3.1 DASA is accountable to the Defence Aviation Authority to 'issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR' . This activity is known as 'certification'. The various authorisations DASA issues are described in chapter 5.3.

4.1.4. Oversight and Enforcement

Introduction

4.1.4.1 The effectiveness of the Defence Aviation Safety Program (DASP) is underpinned by the suitability of, and the level of compliance with, the Defence Aviation Safety Regulations (DASR). Entities that operate within the regulatory framework seek to maintain compliance in two ways:

1. By developing and implementing organisational systems, supported by processes and instructions, that address the regulations

2. By developing feedback mechanisms to verify that the processes and instructions have been followed, and remain suitable for the purpose of meeting regulatory requirements.

4.1.4.2 Regulatory oversight contributes to aviation safety by identifying potential compliance concerns that may then be further evaluated, and addressed if necessary. Compliance with DASR also mitigates systemic and human errors that dominate hazardous safety events. Oversight is a systematic means of monitoring entities that operate within the regulatory framework for their level of understanding and observance of the regulatory system, as indicated by their policies and instructions and their adherence to them. A natural consequence of regulatory oversight is that it also provides insight into the suitability and effectiveness of the regulatory controls themselves, which is essential for their ongoing development.

4.1.4.3 A key component of an effective regulatory framework is ensuring that regulated entities have a clear understanding of when, why and how DASA may take action in the event of regulatory breaches or unresolved safety performance issues. The DASP enforcement policy supports compliance with the DASR through application of a consistent framework, and has been developed with due consideration of the Defence Aviation environment and associated Commonwealth legislation.

4.1.4.4 Accident and incident investigation also provides opportunity for oversight of compliance with required aviation safety processes and systems, as the structured means of determining and assessing the factors that led to the accident or incident should reveal any deficiencies regarding compliance with the DASR. However, accident and incident investigation is outside the scope of this chapter and further guidance can be found under chapter 4.4 Independent Investigative Capability.

Purpose

4.1.4.5 This chapter describes the principles that comprise the 'Oversight and Enforcement (O&E)' component of the DASP. This chapter applies to all entities regulated under the DASR, and any entity

Superseded

performing Defence Aviation functions that are regulated by a DASA-recognised Civil Aviation Authority (CAA) or Military Aviation Authority (MAA).

Regulatory Requirement

4.1.4.6 DASR GR.60 specifies regulated community compliance oversight and enforcement obligations; and requires all Defence, civilian and contractor entities operating within the Defence Aviation Safety regulatory framework to comply with the DASR. Regulatory compliance is subject to ongoing oversight at multiple levels within the framework, and results of the oversight are used to:

1. assure that regulated entities are complying with the DASR,
2. inform future DASR development, and
3. refine the processes and procedures that support implementation of the DASR.

4.1.4.7 Regulated entities are required to ensure that they comply with their applicable aviation safety processes and instructions. Ensuring compliance requires the systematic and routine review of organisational management elements, to assess compliance with the Authority's requirements relating to aviation safety. Each regulated entity should establish arrangements and processes, including a compliance review schedule, to ensure compliance with the DASR.

Oversight

4.1.4.8 Oversight is required to provide confidence to the Defence Aviation Authority (Defence AA) that Defence is executing Aviation operations safely, in accordance with legislated requirements. DASA's Oversight function is executed through the O&E operating model at Figure 1, which assists to define DASA's and regulated entities' obligations to effectively establish and maintain DASR compliance.

4.1.4.9 The model at Figure 1 is separated into an upper (forward-looking) cycle (i.e. DASR implementation) and a lower (DASA feedback) cycle. Both cycles must be effective in their own right for an effective regulatory outcome. This is achieved by mapping each element of the model to corresponding personal accountabilities, responsibilities, expected outcomes and associated DASA (and other local) policy.

Superseded

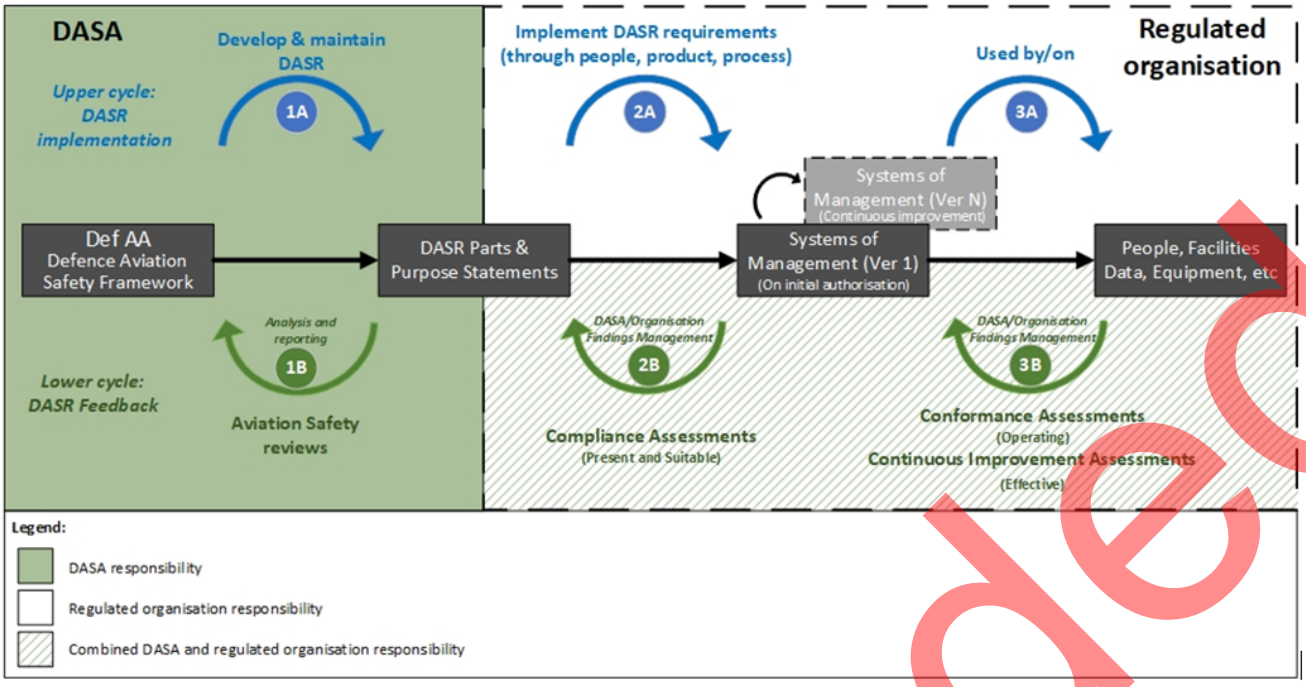

Figure 1: The Oversight and Enforcement operating model

4.1.4.10 **Operating model components.** The following model components apply:

1. **Implementation loop 1A** – Develop and maintain DASR. Refer DASPMAN Vol 1.

2. **Feedback loop 1B – Aviation Safety reviews.** Analysis and reporting on DASR compliance and safety intelligence is designed to provide senior decision makers, who have accountabilities under JD 21/2021, with a relative picture of DASP status, contemporary Aviation Safety issues, and an assessment of the aviation safety performance of regulated organisations. Issues raised can generate actions or be recommended for further monitoring. Reporting is achieved through the Defence Aviation Safety – Annual Report (refer section 2), and Airworthiness Boards (refer section 13).

3. **Implementation loop 2A – Implement DASR requirements.** Organisations subject to DASR are expected to implement locally-tailored and contextually-appropriate management systems to effectively comply with DASR. Systems are used to define any interaction of people, products (i.e. technology) and processes. However, outcomes from systems are rarely consistent, with their effectiveness continuously varying (e.g. through changes in local application context, staff churn and competencies, competing Service and organisational policies and priorities, etc). Entities are therefore expected to self-monitor and implement corrective actions as necessary.

4. **Feedback loop 2B – Compliance assessments.** Compliance assessments detect if documented management system meet required regulatory outcomes (i.e. 'Present' and 'Suitable' in the PSOE oversight construct—see below). DASA Findings document DASR non-compliances.

5. **Implementation loop 3A – Using documented management systems.** Once entities' documented management system are approved and promulgated (i.e. found to be DASR-compliant at the time of the DASA assessment), DASA expects the entity's staff, facilities, data, equipment etc to conform to that system[1].

Superseded

6. **Feedback loop 3B – Conformance and continuous improvement assessments.** Conformance assessments are designed to detect if staff, facilities, data, equipment, etc are conforming to the promulgated management system. By inference, if staff conform to DASA-approved systems, the organisation will remain compliant with DASR (i.e. 'Operating' in the PSOE oversight construct—see below). These assessments also look for local feedback data and safety intelligence that validate the documented management systems are effectively meeting DASR hazard control outcomes (i.e. 'Effective' in the PSOE oversight construct— see below).

4.1.4.11 **Present-Suitable-Operating-Effective (PSOE) model.** The PSOE Model was introduced into civil aviation with the release of ICAO Annex 19 Safety Management in 2013, defining outcome-based safety management requirements against the hazard of compromised Aviation Safety. Importantly, when ICAO Annex 19 was released, an ICAO sub-committee (the Safety Management International Collaboration Group – SMICG) published PSOE construct guidance, ICAO (2012) - SMICG Safety Management System Evaluation Tool), providing it as an effective Annex 19 oversight methodology. Specifically, the PSOE construct allowed assessment of regulated entities' maturity based on the effectiveness of hazard control implementation and incorporation of continuous improvement activities. The SMICG defined four progressive 'stages' of an entity's Safety Management System maturity (ie PSOE). In turn, defence has tailored these PSOE definitions (see section 5.4) to make them applicable to all DASR(not just SMS), due to the advantages the PSOE assurance methodology provides.

4.1.4.12 Oversight activities are conducted against defined PSOE criteria, by qualified staff; who should be substantially independent of the area being reviewed. A PSOE assessment is carried out through two very discreet activities—the Desk Top audit and an On-Site Performance Assessment—as follows:

1. **Desk top assessment.** The Desk Top assessment (for 'Present' and 'Suitable'), is an assessment of the entity's documented management system (i.e. the organisational approval basis) including Orders, Instructions and Procedures (OIP) that are used to comply with the relevant DASR. The Desk Top assessment gathers evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable' for the scope of the entity's authorisation.

2. **On-site assessment.** The on-site assessment (for 'Operating' and 'Effective') is carried out to provide assurance that the documented management system (i.e. the basis for the organisational approval) is operating as expected and effectively providing risk mitigation to the threats that the DASRs have been implemented to treat.

3. An on-site assessment can be conducted as part of an initial application for organisational approval or as part of an ongoing oversight program. The ongoing oversight program periodicity may be influenced by adopting a risk based approach for some organisations or operational activities influenced by safety intelligence information.

Enforcement

4.1.4.13 In addition to oversighting ongoing compliance with the DASR, DASA is also required to enforce the ongoing compliance of Defence Aviation organisations. The concept of enforcement within the DASP covers the following spectrum as outlined in Figure 2 below:

1. **Reinforcement** of requirements, through mechanisms which include providing education, updating regulatory material, and reinforcing positive behaviours.

Superseded

2. **Compelling** compliance, through the raising of DASR Findings or issuance of Directives.

3. **Deterrence** of ongoing operations with non-compliances through the suspension or removal of a DASR approval.

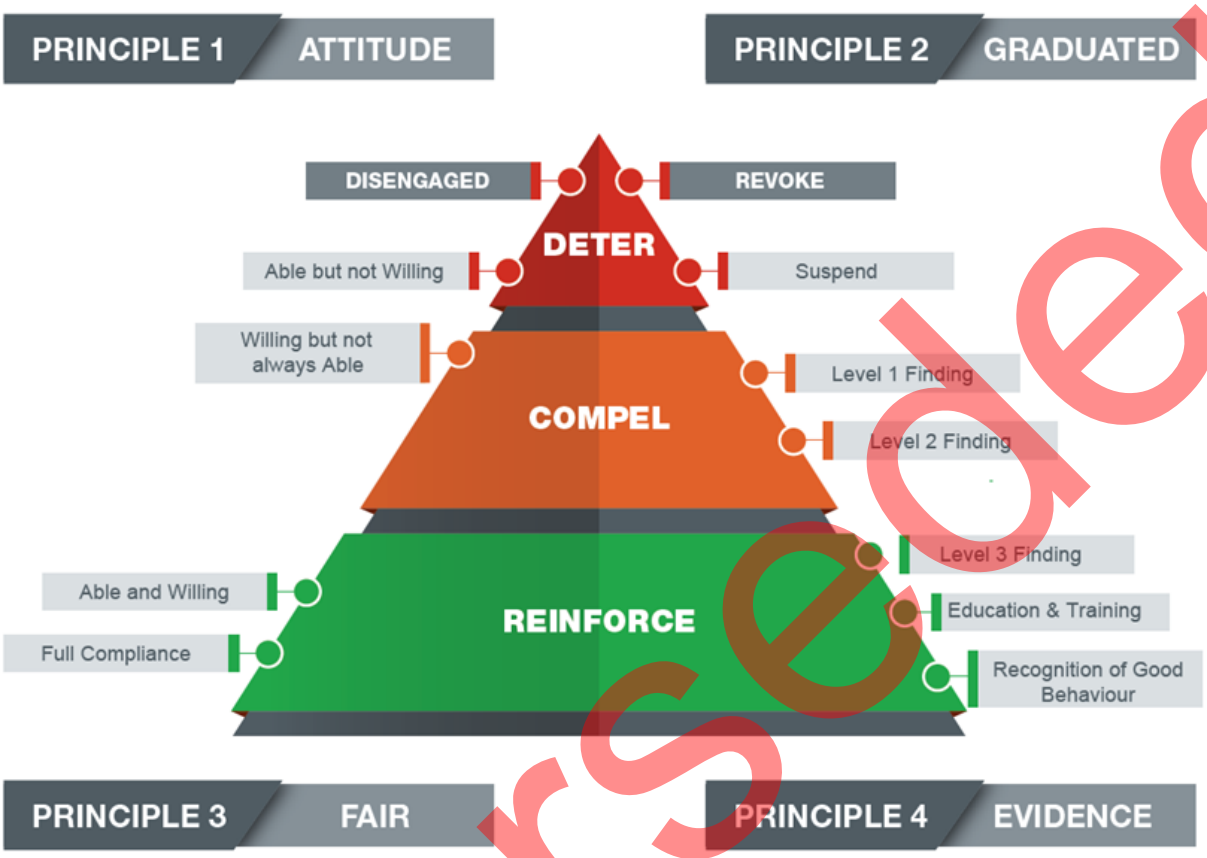

Figure 2: Enforcement Model

DASA Enforcement Principles

4.1.4.14 The DASA enforcement policy is founded on the following principles:

1. **Principle 1**: Enforcement shall consider organisations/operator attitudes.

   i. Enforcement will give due and equitable consideration to organisational attitudes and distinguish consistent or premeditated non-compliance, from non-compliance resulting from unintentional errors or deviations.

2. **Principle 2:** Enforcement action shall be graduated.

   i. Enforcement action shall commence at the lowest level commensurate with the increase in risk to aviation safety and willingness of the regulated entity to address the non-compliance, and should be escalated only when necessary to secure compliance.

   ii. The rate of escalation is cognisant of the underlying aviation safety risk, prior interaction between DASA and the non-compliant entity, and the entity's motivation and capacity to comply with the regulations.

3. **Principle 3:** Enforcement action shall be fair and proportionate.

Superseded

i. Full details of the nature of the non-compliance will be disclosed, along with supporting evidence.

ii. The response to the non-compliance will be proportionate to the identified breach and the increased risk to aviation safety.

iii. Enforcement action will relate directly to the non-compliance and associated increase in safety risk.

iv. In the interests of procedural fairness, regulated entities will be afforded the opportunity to review and respond to an identified non-compliance prior to enforcement action being initiated.

4. **Principle 4:** Enforcement decisions shall be independent and evidence based.

i. Enforcement decisions will be independent, transparent and underpinned by objective evidence.

ii. Enforcement decisions will not be influenced by personal, political, capability or financial considerations.

Proportionate and Graduated response

4.1.4.15 The key factors influencing a DASA decision to escalate an enforcement action include:

1. the nature, seriousness and extent of the non-compliances, including the safety implications and the intent (if applicable) of the non-compliances;

2. the willingness of the organisation to address the non-compliances and ensure that they are not systemic;

3. the nature and sufficiency of available objective evidence of the non-compliances;

4. the action required to effectively and efficiently address the aviation safety risks that have been identified or are likely to arise;

5. the need to obtain expert assistance on a complex technical or operational issue, including legal advice;

6. the obligation to be fair, consistent, impartial and proportional in taking enforcement action.

4.1.4.16 While imposing a sanction that suspends or revokes an entity's approval is a real and credible course of action, as part of a graduated response to serious and/or continuing non-compliances, this may not always be in the interests of the Service. If DASA is considering an unscheduled act of limiting, suspending or revoking an entity's approval, the relevant Environmental Commander or Group Division Head is to be consulted before any proposed sanction that suspends or revokes an entity's approval is imposed. This level of consultation is not required where a scheduled revocation takes place, for example removal or amendment of an organisational approval after an aircraft type is withdrawn from service.

Coordination with external bodies

4.1.4.17 In certain circumstances, DASA may identify a regulatory breach or safety concern that falls under the jurisdiction of an external CAA or MAA. If this occurs, DASA will consult with external

Superseded

agencies as necessary, to ensure a coordinated approach to any enforcement or remedial action is undertaken.

4.1.5 Promote Aviation Safety

Introduction

4.1.5.1 The Defence Aviation Safety Authority (DASA) is responsible to the Defence Aviation Authority (Defence AA) for enhancing and promoting Aviation Safety through the implementation of a Defence Aviation Safety Program (DASP). The DASP promotes safety awareness and the sharing and exchange of safety information with the aviation community to foster the maintenance and improvement of safety; to support the development of a generative safety culture; and to assure the effective management of aviation safety risks.

4.1.5.2 The second function of the Defence Aviation Safety Program (DASP) is 'Promote Aviation Safety'. This function comprises the following elements:

1. Aviation Safety promotion and dissemination of safety information

2. education, training and communication.

4.1.5.3 While Function 2 of the DASP explicitly directs 'promotion', all five functions require engagement with stakeholders. DASA cannot implement these functions in isolation. Ongoing engagement with stakeholders internal, external to the Authority, internal and external to Government is required to improve aviation safety outcomes and support capability.

Aviation Safety Promotion and Dissemination of Safety Information

4.1.5.4 A key tenet in promoting Aviation Safety is the two-way communication flow of safety information. Aviation Safety promotion can take many different forms, and cover a wide spectrum of activities— from dissemination of general information on Aviation Safety, to visits by DASA personnel. In either case, the establishment and management of relationships is paramount.

4.1.5.5 Figure 1 details the regulatory model, which includes DASA and the Defence Aviation Community. DASA uses its Engagement and Promotion Strategy to 'manage relationships' between the two entities.

Superseded

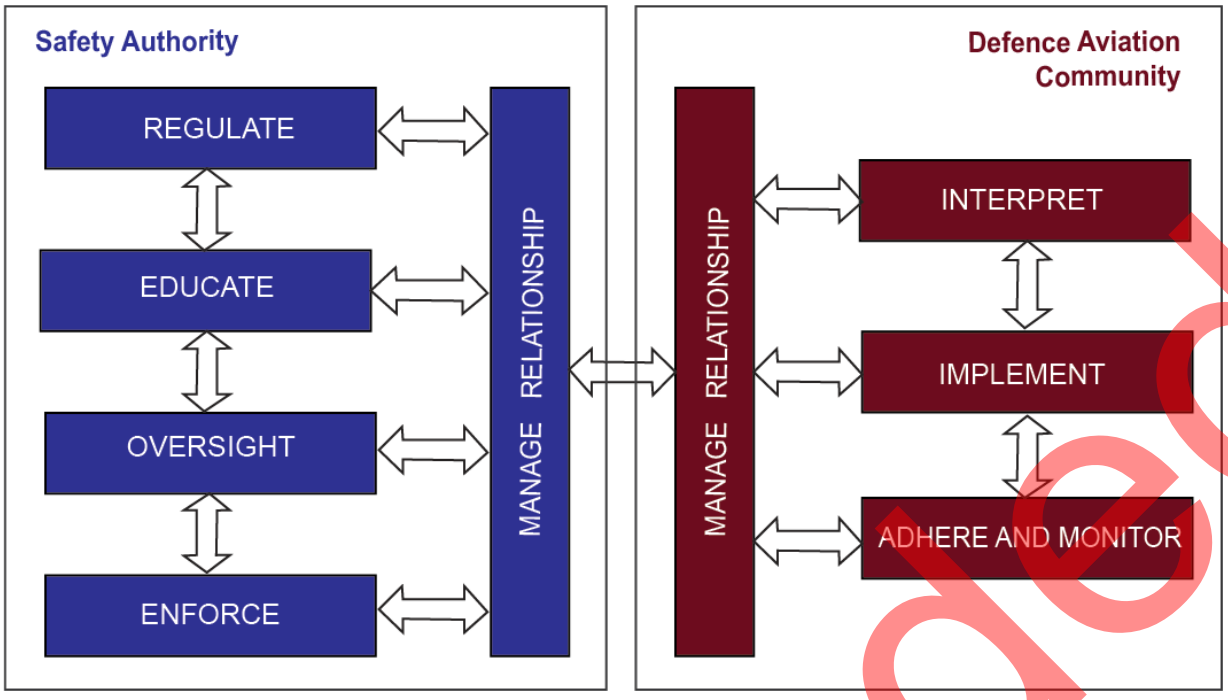

Figure 1: The Regulatory Model

4.1.5.6 The 'promoting Defence Aviation Safety through education, training and dissemination of safety information' function employs a number of strategies to disseminate Aviation Safety information, including:

1. participation in dedicated safety stand-down days
2. publication of safety and regulatory magazines, (i.e. Spotlight)
3. sponsoring conferences and convocations
4. Defence Aviation Authority (Defence AA) safety messages
5. publishing the Defence Aviation Safety - Annual Report (DAS-AR)
6. maintaining safety information recording and analysis systems, such as Sentinel and Salus
7. posting safety information, such as Defence Aviation Safety Regulation (DASR) awareness briefs on the DASA web site
8. visits by DASA personnel.

4.1.5.7 Of particular importance is the ability to disseminate safety information in a timely manner, particularly in response to investigation of an accident or serious incident. The DASP provides several ways for DASA to disseminate urgent safety information, enabling the selection of the most appropriate way, cognisant of the specific circumstances.

Superseded

4.1.5.8 Visits by DASA personnel to regulated entities are also an important means of promoting Aviation Safety and disseminating aviation safety information— providing the opportunity to discuss particular safety aspects in detail.

Education and Communication

4.1.5.9 All personnel within the Defence Aviation sector, who undertake or directly support aviation activities, should receive sufficient education to provide a general understanding of Aviation Safety. Commensurate with each person's aviation safety responsibilities, they should receive further safety education. The DASA sponsors a wide range of Aviation Safety regulatory and technology training courses that personnel may nominate to attend.(see www.defence.gov.au/DASP/Training/Default.asp)

4.1.5.10 In addition to delivering and sponsoring Aviation Safety education, DASA also facilitates a number of opportunities for two way dialogue on Aviation Safety, including:

1. continuation training programs
2. DASA Newsbreak
3. DASA workshops
4. international visits to, or by, other regulators/safety bureaus or equivalent organisations
5. conferences and symposiums
6. regulated community forums
7. Airworthiness Boards and convocations
8. audits.

4.1.5.11 Commanders and managers within the Defence Aviation sector should encourage their personnel to take maximum advantage of the opportunities afforded to discuss Aviation Safety. Additionally, personnel should endeavour to further their Aviation Safety knowledge through the various means currently available. Members of the regulated community should advise DASA of opportunities to improve Aviation Safety communication so that DASA may consider implementing appropriate improvements.

4.2 DASA's Ensure functions

4.2.1 Introduction

4.2.1.1 DASA carries out two ensure functions in direct support of the management of Aviation Safety by the Defence aviation community:

Superseded

1. provision of aviation safety management system products and services
2. provision of structural integrity engineering product and services.

4.2.2 Aviation Safety Management System Products and Services

(Reserved)

4.2.3 Structural and Propulsion System Integrity Centre of Expertise (CoE) Services

Introduction

4.2.3.1 The Directorate of Aviation Engineering (DAVENG) has a mandate to support Commanders to ensure structurally-airworthy platforms, and is the Defence Centre of Expertise (CoE) for Aircraft Structural Integrity Programs (ASIPs), Propulsion System Integrity Programs (PSIPs) and Non-Destructive Testing and Composite Technologies (NDT&CT).

4.2.3.2 In this capacity, DAVENG supports associated organisations with specialist advice, design services and training in these fields to maximise Defence capability. DAVENG also provides stewardship of sovereign capability initiatives and input into relevant policy frameworks.

4.2.3.3 For the avoidance of doubt, these services are provided by DAVENG in a separate capacity to the DASA Functions described in Chapter 4.1.

Aircraft Structural Integrity (ASI) and Propulsion System Integrity (PSI) and Services

4.2.3.4 **ASI and PSI CoE Services.** DAVENG supports the Defence ASI and PSI community with the following services:

1. advice on ASIP and PSIP establishment and execution
2. advice to CASG on ASIP and PSIP-related contracting and governance
3. CoE review of ASIP and PSIP products and outputs on behalf of CASG
4. technology specialist advice, such as supporting risk assessments
5. where appropriate, and when agreed, coordination and management of major ASI / PSI issues or tasks on behalf of CASG
6. support to Defence ASIP and PSIP policy artefacts on behalf of Capability Managers and CASG.

4.2.3.5 **SI Sovereign Capability Stewardship.** The SI Sovereign Capability encompasses the specialist technical capabilities that come to bear for critical and high-value SI activities where sovereign oversight and/or indigenous solution development is required to ensure Defence objectives are met. Under their Defence SI CoE capacity, DAVENG stewards the SI Sovereign Capability initiative, and chairs the Capability Management Board advocacy and governance forum. More information on the SI Sovereign Capability initiative and governance is available in the SI Sovereign Capability Strategy document, which can be provided by DAVENG to relevant parties upon request.

Superseded

4.2.3.6 **Training Courses.** DAVENG sponsors the following three specialist courses:

a. ASI Familiarisation Course

b. Helicopter Structural Engineering Familiarisation Course

c. Propulsion Systems Engineering Familiarisation Course.

4.2.3.7 These three practitioner courses include components intended to teach ASI and PSI fundamentals and best practice, as well as components intended teach how ASI and PSI programs support DASR compliance.

NDT Appointments, Training, Certification and Authorisation

4.2.3.8 **ADF NDT Responsible Level 3 Appointment.** DASR 145.A.30(f) requires DASR 145 Maintenance Organisations (MOs) to appoint an NDT Responsible Level 3 (RL3) as the management position responsible for implementing a training and certification system compliant with European standard EN4179 Qualification and approval of personnel for non-destructive testing (refer DASP Manual Volume 3 Chapter 8.3.2).

4.2.3.9 To ensure all ADF Non-Destructive Inspection Technicians (NDITECHs) are trained to the same level of competency and to avoid the burden of each ADF DASR 145 MO appointing their own NDT RL3 and establishing NDT training and certification frameworks, DAVENG performs the Defence NDT RL3 function and manages all NDT training and certification activities for ADF members, Department of Defence employees and other staff members working within ADF DASR 145 MOs. The Director of Aviation Engineering appoints a suitably qualified senior NDITECH to be the Defence NDT RL3, with that individual approved by the DASA as a Form 4 Holder.

4.2.3.10 **ADF DASR 145 MO NDT Certification Framework.** ADF DASR 145 MO Quality Managers are responsible for ensuring that staff conducting NDT are certified by the Defence NDT RL3 (or delegate) before being authorised to certify maintenance. This includes:

1. staff who have obtained training from external training providers or third parties

b. external Industry or Contracted service providers working in an ADF DASR 145 MO.

4.2.3.11 In order to support ADF DASR 145 MOs, the Defence NDT RL3 maintains a NDT training and certification system (both initial and ongoing training / certification) that meets Defence's needs and complies with DASR 145.A.30(f) requirements.

4.2.3.12 **ADF DASR 145 MO Authorisation of NDT Staff.** DASR 145.A.30(f) requires personnel who conduct NDT be certified in accordance with EN4179. Under Defence's NDT certification system, the process followed is:

a. the Defence NDT RL3 (or delegate) ***certifies*** the technician as meeting the requirements of EN4179 for the applicable NDT method or technique, and subsequently,

b. the MO Quality Manager (or delegate) ***authorises*** the technician to conduct NDT maintenance within the scope and validity of the NDT certification.

4.2.3.13 The Defence NDT RL3 (or delegate) will issue Certification records via PMKeyS proficiencies (primary system) or a Minute. ADF DASR 145 MOs are to check the scope and currency of NDT proficiencies on PMKeyS prior to authorising staff to perform NDT. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiencies.

Superseded

4.2.3.14 **Additional Information.** More detailed information on NDT training and certification services provided by DAVENG, including training courses and frequently asked questions, is available on the DASA NDT&CT Website.

NDT Engineering Services

4.2.3.15 DAVENG NDT&CT Engineering Section develops NDT procedures, inclusive of introducing new NDT technologies, in support of ADF capability requirements. Engineering Section provides the following services to ADF units and ADF support contractors:

1. development of DASA approved NDT Instructions for Continuing Airworthiness (ICA), including:
    i. platform specific procedures
    ii. NDT general procedures (AAP 7002.043-36)
2. CoE NDT advice on the selection of appropriate NDT techniques
3. assistance with the introduction of new NDT technologies in support of ADF capability requirements
4. testing and evaluation of NDT support equipment for introduction into the Defence inventory
5. technical review of platform-specific NDT publications and associated procedures
6. NDT Information Review (IR) of standards, practices and equipment
7. provision of other NDT CoE advice
8. manufacture of certified NDT reference standards.

Composite Repair Training and Certification

4.2.3.16 **ADF DASR 145 MO Composite Repair Certification Framework.** Personnel who conduct composite repairs must be trained and certified in accordance with SAE AIR4938 - Composite and Bonded Structure Technician Specialist Training Document (refer DASP Manual Volume 3 Chapter 8.3.2). On behalf of all ADF DASR 145 MOs, DAVENG conducts the training and certification (including re-certification) for all personnel who perform composite repairs. DAVENG staff issue the PMKeyS proficiency P124689 *Composite & Adhesive Bonding Recertification* upon successful completion of training requirements.

4.2.3.17 **ADF DASR 145 MO Authorisation of Staff to Conduct Composite Repair.** MO Quality Managers (or delegates) are responsible for verifying that technicians hold a valid PMKeyS proficiency for composite repair prior to authorising them to conduct composite repairs within an ADF DASR 145 MO. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiency.

4.2.3.18 **Additional Information.** More detailed information on Composite Technology training and certification services provided by DAVENG, including training courses, is available on the DASA NDT&CT Website.

Superseded

4.3.1 Introduction

4.3.1.1 This section provides a description of Delegates of the Safety Authority (DoSA), their purpose, selection and scope of delegations.

Purpose

4.3.1.2 A DoSA is an individual who has been formally delegated a DASA responsibility (Letter of Delegation) by DG DASA and is considered an agent of the DASA when exercising that delegation. Delegations may cover general assurance function carried out by the Authority (such as Occurrence Report assessments or standards interpretation) or provision of DASA authorisations such as a Military Permits To Fly (MPTF). In all instances, the delegation scope must be linked to an explicit DASR obligation of DASA.

4.3.1.3 A DoSA performs assurance activities and critical roles that extend the competence and capacity of the DASA. DoSAs are placed within the aviation community to provide greater access and insight to regulated entities or activities. DoSA delegation scope varies, but is invariably linked to the role of an incumbent. This role may be as a senior engineer, test pilot and/or subject matter expert (SME) related to a specific platform or regulatory domain providing in-depth knowledge to support aviation safety assurance. When in proximity to the regulated entity a further benefit is realised with greater education and promotion for the organisation and DASA 'eyes and ears' in the field.

4.3.2 Selection

4.3.2.1 DoSA applicants are suitable for nomination by virtue of the roles they fill within the aviation community as senior members within their domain. Nomination for a DoSA is via a Form 104 submitted to the DASA Registry. Within Form 104 the member identifies the need, and the qualification, training and experience (QTE) that enables them to perform the role relevant to the scope of delegation being awarded. For each type of DoSA role, there are mandatory requirements that the nominee must meet. Annex A contains a baseline set of generic QTE requirements.

4.3.2.2 DASA staff will assess nominated DoSAs through a standard process to assess their suitability and provide a recommendation to DG DASA. The assessment process will usually involve two interviews; the first a preliminary interview to broadly assess an individual's suitability to execute delegated authority functions, and a final interview with DG DASA to confirms the skills, knowledge and attitude of the applicant. If suitable, DG DASA will authorise a delegation to the individual.

4.3.2.3 A DoSA delegation is issued in the form of a letter directly from DG DASA. Delegates are provided an induction pack containing foundational information and are supported under the DASA Business Management System as a member of the DASA. Delegations are generally awarded to nominees filling a specific role. Upon leaving the position in which DoSA was awarded, eg formal posting, the members delegations are rescinded. In exceptional circumstances, extensions may be negotiated directly with DG DASA, via the applicable DASA directorate. DASA may amend or revoke a delegation at any time at the discretion of DG DASA.

Superseded

4.3.3 Scope

4.3.3.1 The scope of duties and responsibilities of the DoSA depends on the capacity in which they have been delegated. The following list the categories functions delegated:

1. Occurrence Report Assessment for specific functions related to DASR 21, DASR M and DASR 145
2. Airworthiness Directives (AD) for specific functions related to DASR 21 Subpart A
3. Military Permit To Fly (MPTF) for other than flight test, including flight conditions, for specific functions related to DASR 21 Sub-part P
4. MPTF for flight test, including flight conditions, for specific functions related to ASR 21 Sub-part P
5. Military Certificate of Airworthiness (MCoA) for specific functions related to DASR 21 Sub-part H
6. Airworthiness Standards for specific functions related to DASR 21.A.16B
7. Other categories as considered necessary by the DASA for effective management of aviation safety.

4.3.3.2 The current classes of DoSA are:

1. **Platform DoSA:** A Platform DoSA has the widest scope of functions and may include assurance of Military Type Certificate Holder (MTCH) actions with respect to reportable occurrences, issue of MCoAs, approval of flight conditions and issue of Airworthiness Directives. The Platform DoSA is ostensibly delegated to the incumbent CENGR of the platform MTCH organisation and provides assurance in the DASR Part 21 Initial Airworthiness domain.

b. **Flight Test DoSA:** A Flight Test (FT) DoSA has a scope of functions that are relevant to assuring the safety parameters within the DASR Part 21, Subpart P Flight Test domain. Their function is to provide assurance through the approval of operational flight conditions specifically for Flight Test activities and issue of MPTF authorisations. Flight Test DoSAs will invariably have the qualifications, training and experience (QTE) of Flight Test qualified aircrew relevant to certain platforms and will provide the function as part of their position within Flight Test organisations.

c. **Standards DoSA:** A Standards DoSA has a scope of function relevant to a specific technology/design discipline domain. They perform the prescribe and interpret airworthiness design requirements and standards function for their assigned technology, and provide advice to command on the management of risk associated with non-compliance to the prescribed airworthiness design requirements. Standards DoSAs have been established to cover Aeronautical Life Support Equipment (ALSE), Air Navigation Services (ANS) and Aerial Delivery technologies, and are delegated to SMEs posted to the unit charged with managing these technologies.

d. **Training DoSA:** A Training DoSA has a scope of function to assure that the content delivered in DASR 147 Maintenance Training Organisations is suitable to meet the requirements of DASR 66 licensing.

Superseded

e. **Licencing DoSA - ATC:** An ATC Licencing DoSA has a function relevant to the assurance that persons issued with a licence meet the specific requirements and are suitably qualified and experienced to perform licenced air traffic control functions.

f. There may be requirements/opportunities for other DoSA roles in the future, such as in Aircraft Type Certification. These will be identified and documented when implemented.

4.3.3.4 The concept of a Project DoSA has been discontinued since the scope was not linked to exercising any explicit DASR obligations. Notwithstanding this, the incumbent Project Engineering Manager (PEM) is required to have a comprehensive understanding of initial and continuing airworthiness DASR in order to ensure project acquisition activities enable the issue of appropriate and timely DASA authorisations, and subsequent handoff to the gaining MTCH and Continuing Airworthiness Management Organisation (CAMO).

4.3.3.5 For each class of DoSA, there are certain QTE requirements that the nominee must possess or have achieved. More information on the QTE and mandatory requirements of each DoSA will be provided through the nomination process. DASA will also endeavour to support additional training where possible to assist in the execution of the duties of the DoSA. DASA convenes a DoSA convocation to induct new DoSAs, discuss topical DoSA subjects and implement changes applicable to their duties.

4.3.3.6 When exercising their delegation, a DoSA is undertaking this function as part of the DASA, using DASA authorised procedures. Annex B contains specific functional DoSA information and reading. Whilst performing duties under the DoSA capacity, the DoSA is subject to internal DASA process audits in how they execute the functions specific for their scope.

4.3.4 DoSA Independence and Reporting

4.3.4.1 A critical safety feature of the Defence Aviation Safety Program (DASP) is the separation between assuring and ensuring aviation safety through the application of the DASP. Given nominated individuals may be performing tasks that ensure Aviation Safety in their primary employment role, there is a natural concern for a conflict with their DoSA role of *assuring* Aviation Safety. In their capacity as DoSA, it is important that they are able to maintain objectivity (without undue pressure), evaluate their independence, have adequate time to exercise the delegation and maintain conscious awareness that the individual is representing DASA when exercising the delegation.

4.3.4.2 Where instances arise that the DoSA has been part of a decision that ensures aviation safety in their regulated community role, it is possible that their independence to assure aviation safety for the same issue is compromised. The DoSA is expected to have a level of competence and judgement to remove themselves from the assurance role and advise DASA.

4.3.4.3 Where the DoSA identifies conduct or behaviours in the regulated community that may represent DASR non-compliances, non-conformances or where associated hazards and risk are not being eliminated or minimised SFARP, the DoSA is expected to notify DASA of their concerns. DG DASA enables the DoSA to inform their office directly where the nature of the conduct is serious. It is important to note that the DoSA role only provides 'in the field' oversight/awareness and the DoSA is not expected to execute DASA enforcement policy, which remains the duty of the relevant DASA Directorate staff responsible for that oversight and enforcement.

4.4 Independent Investigative Capability

4.4.1 Introduction

4.4.1.1 Joint Directive 21/2021 The Defence Aviation Safety Framework directs DASA to establish an independent investigative capability aligned to ICAO standards and recommended practices (SARPs). This capability is provided by the Defence Flight Safety Bureau (DFSB) within DASA. This chapter describes how DFSB meets the responsibilities described in the Defence Aviation Safety Program Manual Volume 1 Requirements for the DASP.

4.4.1.2 Annex 13 Aircraft Accident and Incident Investigation to the Convention on International Civil Aviation, requires that the accident investigative authority be independent from State aviation authorities and other entities that could interfere with the conduct or objectivity of an investigation. Director DFSB is accorded specific responsibilities and the power for autonomous action outside both DASA and the command chain to directly report matters of concern to the Defence Aviation Authority (Defence AA). DASP Manual Volume 1 details DFSB's functional independence of DASA Directorates and powers for autonomous action outside of DASA and the command chain.

4.4.1.3 DFSB and the Australian Transport Safety Bureau (ATSB) have a Memorandum of Understanding (MoU) for cooperation relating to transport safety investigation. The MoU deals with mutual assistance, sharing of expertise, mutual training opportunities, joint and parallel investigations, and the participation by members of either organisation in investigations carried out by the other organisation. The MoU is available on the DFSB intranet site.

4.4.1.4 DFSB is also responsible for promoting and enhancing aviation safety, which requires more than policy and processes. DFSB recognises the complex social and cultural work environments within the Defence aviation community, and works to positively influence safety attitudes and behaviours.

4.4.2 Functions of DASA-DFSB

4.4.2.1 In accordance with DASP Manual Volume 1, DFSB is responsible for a number of functions in support of both retrospective investigation of Defence accidents and incidents and proactive approaches to preventing military accidents and enhancing flight safety. These functions are:

1. **Aviation safety reporting framework.** DFSB maintains the Defence Aviation safety reporting framework by:

   i. Developing and maintaining the Defence Aviation safety reporting system. DFSB meets this requirement through the management of the Defence Corporate Safety Reporting Tool: ASR in Sentinel. ASR in Sentinel provides a closed loop process for the reporting, investigation, tracking and review of aviation safety events and issues. Sentinel is available to all Defence aviation personnel with access to the 3Defence Protected Environment (DPE). DFSB

Superseded

maintains an ASR Service desk, at asr.servicedesk@defence.gov.au or (02) 5130 7704 to provide ASR related support to the Defence aviation community.

ii. Developing and maintaining the appropriate documentation to define the reporting framework. The Defence Aviation Safety Manual (DASM) defines the reporting framework, including reporting and notification requirements, categorisation and classification of aviation safety events, and types of reporting. Additional guidance material is available on the DFSB intranet site.

iii. Establishing a confidential reporting scheme to enable confidential reporting of issues that effect, or might effect, aviation safety. DFSB provides and maintains a confidential reporting system that allows individuals to report aviation safety issues or concerns where they are unwilling to use the normal aviation safety reporting system for fear that they may be disciplined, ridiculed or otherwise disadvantaged if they do so. The DASM provides policy and guidance on confidential reporting. Individuals can report via email directly to Dir DFSB or through the link on the DFSB intranet site.

iv. Defining notification requirements and mechanisms (immediate and routine) for aviation safety reports. Notification requirements and mechanisms are defined in the DASM, and guidance is provided on the DFSB intranet site. All aviation safety events and issues must be reported into ASR in Sentinel, or through the offline ASR form AE774. Immediately reportable matters (as defined in the DASM) must be notified to the DFSB Duty Officer on (02) 6144 9199.

v. Defining taxonomies to facilitate safety information exchange that are compatible with the ICAO Accident/Incident Data Reporting system and broadly aligned with those of the Australian Transport Safety Bureau (ATSB). DFSB has embedded the aviation safety reporting taxonomies within ASR in Sentinel. More information is available on the DFSB intranet site. DFSB also manages the Aviation Safety Intelligence Portal, Salus, which supports the sharing, exchange and analysis of safety data within Defence, and between DFSB and the ATSB. The MoU (referenced in para 3) further supports alignment of safety reporting and information exchange.

vi. Defining the classification system for aviation safety reporting. The classification system for aviation safety reporting in Defence is described in the DASM. Aviation safety events are defined by both realised and potential consequences with reference to Personal Injury Level (PIL), Aircraft Damage Level (ADL) and Perceived Risk Level (PRL). Aviation safety events are classified in accordance with Table 1. More information is available in the DASM or on the DFSB intranet site.

Event Classification	Description
Class A	PIL of fatal ADL of destroyed
Class B	PIL of serious 3ADL of Substantial

Superseded

	PRL of High or Very High
Class C	PIL of minor ADL of Moderate PRL of Medium
Class D	PIL of No Injury ADL of No Damage/Minor Damage PRL of Low or Very Low

Table 1: Event Classification

vii. Developing processes to monitor the health of the aviation safety reporting system. DFSB monitors the aviation safety reporting system through internal mechanisms, including daily review of aviation safety reports and periodic research activities to examine specific features of the system, such as usability and data quality.

2. Safety data collection and processing. DFSB has established and maintains safety data collection and processing systems to capture, store, and aggregate and thence enable the analysis/exchange of safety data and safety information. Safety data refers to a defined set of facts or set of safety values collected from proactive or reactive safety related activities. Safety information is created when the data has been processed, organised, integrated and analysed in a given context. DFSB collects and manages safety data and information from:

   i. DFSB safety investigations.

   ii. Aviation safety reports and investigations from within the organisation's safety management systems and provided to DFSB (primarily through ASR in Sentinel).

   iii. Data collected by DFSB during the course of cultural surveillance activities (e.g. cultural surveys).

3. In addition to ASR in Sentinel, DFSB also maintains the following systems:

   i. **Salus.** The DASA Salus application is designed to support the sharing, exchange and analysis of safety data within and between DASA and the Defence aviation community, with the goal of enhancing aviation safety. Salus is available on the DPE, and more information and guidance can be found on the DFSB intranet site. DFSB maintains a Salus service desk, at salus.servicedesk@defence.gov.au, to provide support and guidance to users.

   ii. **Snapshot Survey.** The DFSB Snapshot Survey is an annual survey administered to personnel from Air Force, Army Aviation, Fleet Air Arm, Air Domain and other selected domains. The survey captures information on a broad range of issues that impact the safety, performance and overall health of the participating organisations. DFSB generates a range of tailored Snapshot reports targeting different levels of the organisation, and aims to provide information on the workgroups safety/organisational climate, benchmarked

Superseded

against other units. The reports allow commanders to track changes from one year to the next, identify risks, and assess the effectiveness of recent interventions. More information is available on the DFSB intranet site.

4. Joint Agency Aviation Safety Analysis Coordination Group (JAASACG). DFSB is also a member of the JAASACG, which facilitates the data analysis and reporting function under Australia's State Safety Program. Conducting safety data exchange and analysis through the JAASACG assists in maintaining strong stakeholder relationships and allows safety data to be shared and research and analysis efforts coordinated between Government Agencies to improve aviation safety.

5. **Analysis, Research and Review.** DFSB conducts a range of applied safety data analysis and research activities to inform DASA, the Defence Aviation Authority and the broader Defence aviation community. DFSB produces a range of products, including:

   i. The DFSB Annual Review of Defence Aviation Safety Statistics, input to the Defence Annual Safety Annual Report, Safety Snapshot Culture Survey Reports, and supplementary reports as identified through ASRs and safety surveys.

   ii. Support to command in the use of safety data systems, including guidebooks, service desk support, training databases, and training content for DFSB safety courses. These products are available on the DFSB intranet site.

   iii. DFSB staff members attend a number of aviation safety, investigation, human factors and non-technical skills forums and conferences in order to provide internal learning opportunities, benchmarking against international and domestic military and civilian agencies, and to support industry wide learning.

   iv. DFSB produce and support targeted human factors programs, primarily fatigue and non-technical skills related policy and guidance. These programs are described in the DASM, and through guidebooks and resources on the DFSB intranet site.

6. **Independent Investigation.** DFSB provides independent investigation and reporting of all accidents, selected incidents and selected systemic safety issues. This is achieved through:

   i. All Defence Aviation Class A and select Class B events are independently investigated by a DFSB Aviation Safety Investigation Team (ASIT) which reports directly to the Appointing Authority (AA). The AA is the designated commander at the appropriate level authorised to initiate and close aviation safety investigations. The DASM describes the appropriate levels and delegations. The ASIT operates under the procedural direction of DFSB.

   ii. DFSB investigations are functionally independent of the DASA regulatory directorates, and in general, of any other party of the entity that could conflict with, or influence, its objectivity.

   iii. The sole aim of a DFSB investigation is to prevent further occurrence and enhance safety outcomes through the identification and remediation of local and systemic deficiencies, and the improvement of risk controls. DFSB investigations do not apportion blame or liability.

Superseded

iv. DFSB investigations are conducted consistent with the international standards outlined by ICAO, and those described in the Australian Transport Safety Investigation (TSI) Act 2003. Given the unique nature and demands of military flying, a DFSB investigation may deviate from these provisions in such a manner that is considered necessary or appropriate under the specific circumstances. Additional guidance can be found in the DASM and on the DFSB intranet site.

v. In the case of Class B events, DFSB may decide not to undertake the investigation, leaving the responsibility to the command chain. This decision will be made in consultation with the relevant environmental commander, and taking into account the safety implications of the event, the suitability of the event for investigation by DFSB and the breadth of lessons likely to be learned from the event.

vi. DFSB provide specialist advice and support to aviation safety investigations undertaken within the command aviation Safety Management System.

vii. A Class A or Class B Defence event that involves a civil (VH registered) aircraft could be subject to an investigation by the ATSB in accordance with the TSI Act 2003, their priorities and mandates for investigation. The carriage and conduct of the investigation will be negotiated through DFSB in accordance with the extant ATSB/DFSB MoU.

viii. DFSB is responsible for the Defence Aviation Cockpit Voice Recorder (CVR) and Flight Data Recorder (FDR) download and analysis capability. DFSB Investigation team have the specialist skills and equipment to support this capability. Policy and guidance on download and analysis of the CVR and/or FDR is found in the DASM.

ix. DFSB must be notified of all Class A and Class B events involving Australian Air Force Cadets (AAFC) in the course of their duties; however, all reporting and investigation resides within the AAFC's Aviation Safety Report system.

7. **Safety awareness, knowledge and action.** DFSB is responsible for fostering safety awareness, knowledge and action through promotional and education programs, and utilising the outcomes from safety analysis, research and investigative functions to influence organisational learning. This is achieved through a range of programs including:

i. **Aviation safety policy.** DFSB is responsible for the development and maintenance of key aviation safety policy, including the DASM, which supports the implementation of efficient and compliant aviation Safety Management Systems, and the Aircraft Accident WHS Manual to support the safety response to military aviation accidents and incidents.

ii. **Aviation safety training.** DFSB provides aviation safety reporting, investigation and safety data related education and training, through the provision of Aviation Safety Officer Initial and Advanced courses, Non-Technical Skills Trainer Course and the one-day Aviation Incident Investigation Course. DFSB is also responsible for the integration of aviation safety and non-technical skills content into the Defence training continuum.

iii. **Aviation safety awareness.** Through investigations, analysis of safety data, research reports and engagement with industry and military partners, DFSB

Superseded

identifies key lessons and safety issues. DFSB has a range of products and services to support the integration of those lessons into aviation safety policy and training, and to support positive organisational learning. These products include promotional materials, guidebooks and training materials and are available through the DFSB intranet site.

Superseded

4.3. Delegates of the Safety Authority (DoSA)

4.1 DASA's Assure Functions

4.1.1 Introduction

4.1.1.1 The following sections describe how DASA carries out the independent safety assurance functions identified in Chapter 3 of Volume 1. These functions are described in simple terms as:

1. **Policy prescription and interpretation.** DASA prescribes and interprets policy for the management of Defence Aviation safety, inclusive of the Defence Aviation Safety Regulation (DASR) and related standards.
2. **Certification.** Issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR.
3. **Oversight and enforcement.** Conduct ongoing oversight and enforcement activities to assure compliance with the DASR and the continued validity of authorisations issued by DASA
4. **Safety promotion.** Promote Aviation Safety through education, training, and dissemination of safety information.

4.1.2 Policy Prescription and Interpretation

4.1.2.1 DASA is accountable to the Defence Aviation Authority to prescribe and interpret Aviation Safety management policy . This is fulfilled primarily through:

1. the promulgation and management of the Defence Aviation Safety Regulation and supporting standards
2. the provision of authoritative advice and guidance in relation to compliance with those regulations and standards.

4.1.2.2 DASA is required to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR' . In fulfilment of this responsibility, DASA prescribes and interprets the minimum safety requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

4.1.2.3 In prescribing design requirements for aircraft and aircraft-related systems, DASA recognises Airworthiness Codes issued by certain CAAs and MAAs and supplements these with additional requirements identified through ADF operational experience and/or CRE considerations. DASA periodically reviews prescribed requirements and assesses their continued applicability and suitability. Finally, DASA provides advice on the appropriateness of tailoring the prescribed requirements and the impact of non-compliance.

Superseded

4.1.3 Certification

4.1.3.1 DASA is accountable to the Defence Aviation Authority to 'issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR' . This activity is known as 'certification'. The various authorisations DASA issues are described in chapter 5.3.

4.1.4. Oversight and Enforcement

Introduction

4.1.4.1 The effectiveness of the Defence Aviation Safety Program (DASP) is underpinned by the suitability of, and the level of compliance with, the Defence Aviation Safety Regulations (DASR). Entities that operate within the regulatory framework seek to maintain compliance in two ways:

1. By developing and implementing organisational systems, supported by processes and instructions, that address the regulations

2. By developing feedback mechanisms to verify that the processes and instructions have been followed, and remain suitable for the purpose of meeting regulatory requirements.

4.1.4.2 Regulatory oversight contributes to aviation safety by identifying potential compliance concerns that may then be further evaluated, and addressed if necessary. Compliance with DASR also mitigates systemic and human errors that dominate hazardous safety events. Oversight is a systematic means of monitoring entities that operate within the regulatory framework for their level of understanding and observance of the regulatory system, as indicated by their policies and instructions and their adherence to them. A natural consequence of regulatory oversight is that it also provides insight into the suitability and effectiveness of the regulatory controls themselves, which is essential for their ongoing development.

4.1.4.3 A key component of an effective regulatory framework is ensuring that regulated entities have a clear understanding of when, why and how DASA may take action in the event of regulatory breaches or unresolved safety performance issues. The DASP enforcement policy supports compliance with the DASR through application of a consistent framework, and has been developed with due consideration of the Defence Aviation environment and associated Commonwealth legislation.

4.1.4.4 Accident and incident investigation also provides opportunity for oversight of compliance with required aviation safety processes and systems, as the structured means of determining and assessing the factors that led to the accident or incident should reveal any deficiencies regarding compliance with the DASR. However, accident and incident investigation is outside the scope of this chapter and further guidance can be found under chapter 4.4 Independent Investigative Capability.

Purpose

4.1.4.5 This chapter describes the principles that comprise the 'Oversight and Enforcement (O&E)' component of the DASP. This chapter applies to all entities regulated under the DASR, and any entity

Superseded

performing Defence Aviation functions that are regulated by a DASA-recognised Civil Aviation Authority (CAA) or Military Aviation Authority (MAA).

Regulatory Requirement

4.1.4.6 DASR GR.60 specifies regulated community compliance oversight and enforcement obligations; and requires all Defence, civilian and contractor entities operating within the Defence Aviation Safety regulatory framework to comply with the DASR. Regulatory compliance is subject to ongoing oversight at multiple levels within the framework, and results of the oversight are used to:

1. assure that regulated entities are complying with the DASR,
2. inform future DASR development, and
3. refine the processes and procedures that support implementation of the DASR.

4.1.4.7 Regulated entities are required to ensure that they comply with their applicable aviation safety processes and instructions. Ensuring compliance requires the systematic and routine review of organisational management elements, to assess compliance with the Authority's requirements relating to aviation safety. Each regulated entity should establish arrangements and processes, including a compliance review schedule, to ensure compliance with the DASR.

Oversight

4.1.4.8 Oversight is required to provide confidence to the Defence Aviation Authority (Defence AA) that Defence is executing Aviation operations safely, in accordance with legislated requirements. DASA's Oversight function is executed through the O&E operating model at Figure 1, which assists to define DASA's and regulated entities' obligations to effectively establish and maintain DASR compliance.

4.1.4.9 The model at Figure 1 is separated into an upper (forward-looking) cycle (i.e. DASR implementation) and a lower (DASA feedback) cycle. Both cycles must be effective in their own right for an effective regulatory outcome. This is achieved by mapping each element of the model to corresponding personal accountabilities, responsibilities, expected outcomes and associated DASA (and other local) policy.

Superseded

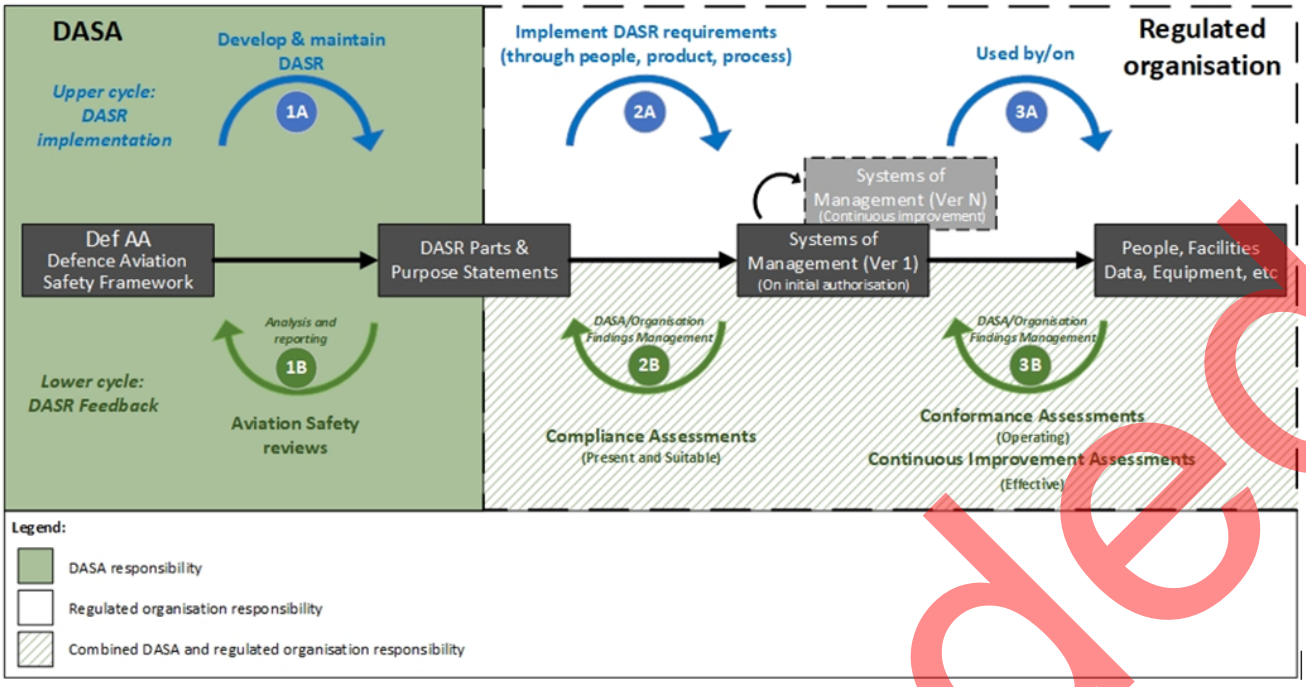

Figure 1: The Oversight and Enforcement operating model

4.1.4.10 **Operating model components.** The following model components apply:

1. **Implementation loop 1A** – Develop and maintain DASR. Refer DASPMAN Vol 1.

2. **Feedback loop 1B – Aviation Safety reviews.** Analysis and reporting on DASR compliance and safety intelligence is designed to provide senior decision makers, who have accountabilities under JD 21/2021, with a relative picture of DASP status, contemporary Aviation Safety issues, and an assessment of the aviation safety performance of regulated organisations. Issues raised can generate actions or be recommended for further monitoring. Reporting is achieved through the Defence Aviation Safety – Annual Report (refer section 2), and Airworthiness Boards (refer section 13).

3. **Implementation loop 2A – Implement DASR requirements.** Organisations subject to DASR are expected to implement locally-tailored and contextually-appropriate management systems to effectively comply with DASR. Systems are used to define any interaction of people, products (i.e. technology) and processes. However, outcomes from systems are rarely consistent, with their effectiveness continuously varying (e.g. through changes in local application context, staff churn and competencies, competing Service and organisational policies and priorities, etc). Entities are therefore expected to self-monitor and implement corrective actions as necessary.

4. **Feedback loop 2B – Compliance assessments.** Compliance assessments detect if documented management system meet required regulatory outcomes (i.e. 'Present' and 'Suitable' in the PSOE oversight construct—see below). DASA Findings document DASR non-compliances.

5. **Implementation loop 3A – Using documented management systems.** Once entities' documented management system are approved and promulgated (i.e. found to be DASR-compliant at the time of the DASA assessment), DASA expects the entity's staff, facilities, data, equipment etc to conform to that system[1].

Superseded

6. **Feedback loop 3B – Conformance and continuous improvement assessments.** Conformance assessments are designed to detect if staff, facilities, data, equipment, etc are conforming to the promulgated management system. By inference, if staff conform to DASA-approved systems, the organisation will remain compliant with DASR (i.e. 'Operating' in the PSOE oversight construct—see below). These assessments also look for local feedback data and safety intelligence that validate the documented management systems are effectively meeting DASR hazard control outcomes (i.e. 'Effective' in the PSOE oversight construct— see below).

4.1.4.11 **Present-Suitable-Operating-Effective (PSOE) model.** The PSOE Model was introduced into civil aviation with the release of ICAO Annex 19 Safety Management in 2013, defining outcome-based safety management requirements against the hazard of compromised Aviation Safety. Importantly, when ICAO Annex 19 was released, an ICAO sub-committee (the Safety Management International Collaboration Group – SMICG) published PSOE construct guidance, ICAO (2012) - SMICG Safety Management System Evaluation Tool), providing it as an effective Annex 19 oversight methodology. Specifically, the PSOE construct allowed assessment of regulated entities' maturity based on the effectiveness of hazard control implementation and incorporation of continuous improvement activities. The SMICG defined four progressive 'stages' of an entity's Safety Management System maturity (ie PSOE). In turn, defence has tailored these PSOE definitions (see section 5.4) to make them applicable to all DASR(not just SMS), due to the advantages the PSOE assurance methodology provides.

4.1.4.12 Oversight activities are conducted against defined PSOE criteria, by qualified staff; who should be substantially independent of the area being reviewed. A PSOE assessment is carried out through two very discreet activities—the Desk Top audit and an On-Site Performance Assessment—as follows:

1. **Desk top assessment.** The Desk Top assessment (for 'Present' and 'Suitable'), is an assessment of the entity's documented management system (i.e. the organisational approval basis) including Orders, Instructions and Procedures (OIP) that are used to comply with the relevant DASR. The Desk Top assessment gathers evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable' for the scope of the entity's authorisation.

2. **On-site assessment.** The on-site assessment (for 'Operating' and 'Effective') is carried out to provide assurance that the documented management system (i.e. the basis for the organisational approval) is operating as expected and effectively providing risk mitigation to the threats that the DASRs have been implemented to treat.

3. An on-site assessment can be conducted as part of an initial application for organisational approval or as part of an ongoing oversight program. The ongoing oversight program periodicity may be influenced by adopting a risk based approach for some organisations or operational activities influenced by safety intelligence information.

Enforcement

4.1.4.13 In addition to oversighting ongoing compliance with the DASR, DASA is also required to enforce the ongoing compliance of Defence Aviation organisations. The concept of enforcement within the DASP covers the following spectrum as outlined in Figure 2 below:

1. **Reinforcement** of requirements, through mechanisms which include providing education, updating regulatory material, and reinforcing positive behaviours.

Superseded

2. **Compelling** compliance, through the raising of DASR Findings or issuance of Directives.

3. **Deterrence** of ongoing operations with non-compliances through the suspension or removal of a DASR approval.

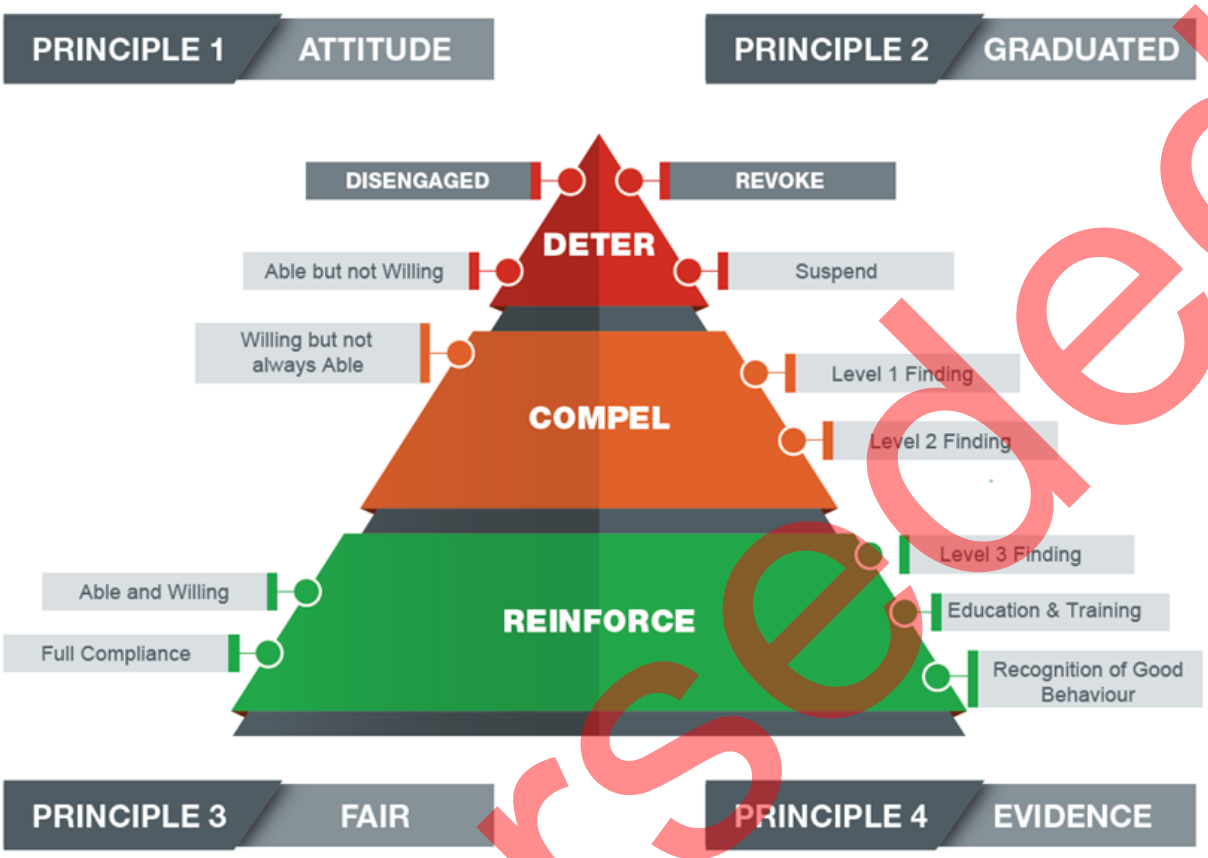

Figure 2: Enforcement Model

DASA Enforcement Principles

4.1.4.14 The DASA enforcement policy is founded on the following principles:

1. **Principle 1**: Enforcement shall consider organisations/operator attitudes.

   i. Enforcement will give due and equitable consideration to organisational attitudes and distinguish consistent or premeditated non-compliance, from non-compliance resulting from unintentional errors or deviations.

2. **Principle 2:** Enforcement action shall be graduated.

   i. Enforcement action shall commence at the lowest level commensurate with the increase in risk to aviation safety and willingness of the regulated entity to address the non-compliance, and should be escalated only when necessary to secure compliance.

   ii. The rate of escalation is cognisant of the underlying aviation safety risk, prior interaction between DASA and the non-compliant entity, and the entity's motivation and capacity to comply with the regulations.

3. **Principle 3:** Enforcement action shall be fair and proportionate.

Superseded

i. Full details of the nature of the non-compliance will be disclosed, along with supporting evidence.

ii. The response to the non-compliance will be proportionate to the identified breach and the increased risk to aviation safety.

iii. Enforcement action will relate directly to the non-compliance and associated increase in safety risk.

iv. In the interests of procedural fairness, regulated entities will be afforded the opportunity to review and respond to an identified non-compliance prior to enforcement action being initiated.

4. **Principle 4:** Enforcement decisions shall be independent and evidence based.

i. Enforcement decisions will be independent, transparent and underpinned by objective evidence.

ii. Enforcement decisions will not be influenced by personal, political, capability or financial considerations.

Proportionate and Graduated response

4.1.4.15 The key factors influencing a DASA decision to escalate an enforcement action include:

1. the nature, seriousness and extent of the non-compliances, including the safety implications and the intent (if applicable) of the non-compliances;

2. the willingness of the organisation to address the non-compliances and ensure that they are not systemic;

3. the nature and sufficiency of available objective evidence of the non-compliances;

4. the action required to effectively and efficiently address the aviation safety risks that have been identified or are likely to arise;

5. the need to obtain expert assistance on a complex technical or operational issue, including legal advice;

6. the obligation to be fair, consistent, impartial and proportional in taking enforcement action.

4.1.4.16 While imposing a sanction that suspends or revokes an entity's approval is a real and credible course of action, as part of a graduated response to serious and/or continuing non-compliances, this may not always be in the interests of the Service. If DASA is considering an unscheduled act of limiting, suspending or revoking an entity's approval, the relevant Environmental Commander or Group Division Head is to be consulted before any proposed sanction that suspends or revokes an entity's approval is imposed. This level of consultation is not required where a scheduled revocation takes place, for example removal or amendment of an organisational approval after an aircraft type is withdrawn from service.

Coordination with external bodies

4.1.4.17 In certain circumstances, DASA may identify a regulatory breach or safety concern that falls under the jurisdiction of an external CAA or MAA. If this occurs, DASA will consult with external

Superseded

agencies as necessary, to ensure a coordinated approach to any enforcement or remedial action is undertaken.

4.1.5 Promote Aviation Safety

Introduction

4.1.5.1 The Defence Aviation Safety Authority (DASA) is responsible to the Defence Aviation Authority (Defence AA) for enhancing and promoting Aviation Safety through the implementation of a Defence Aviation Safety Program (DASP). The DASP promotes safety awareness and the sharing and exchange of safety information with the aviation community to foster the maintenance and improvement of safety; to support the development of a generative safety culture; and to assure the effective management of aviation safety risks.

4.1.5.2 The second function of the Defence Aviation Safety Program (DASP) is 'Promote Aviation Safety'. This function comprises the following elements:

1. Aviation Safety promotion and dissemination of safety information

2. education, training and communication.

4.1.5.3 While Function 2 of the DASP explicitly directs 'promotion', all five functions require engagement with stakeholders. DASA cannot implement these functions in isolation. Ongoing engagement with stakeholders internal, external to the Authority, internal and external to Government is required to improve aviation safety outcomes and support capability.

Aviation Safety Promotion and Dissemination of Safety Information

4.1.5.4 A key tenet in promoting Aviation Safety is the two-way communication flow of safety information. Aviation Safety promotion can take many different forms, and cover a wide spectrum of activities— from dissemination of general information on Aviation Safety, to visits by DASA personnel. In either case, the establishment and management of relationships is paramount.

4.1.5.5 Figure 1 details the regulatory model, which includes DASA and the Defence Aviation Community. DASA uses its Engagement and Promotion Strategy to 'manage relationships' between the two entities.

Superseded

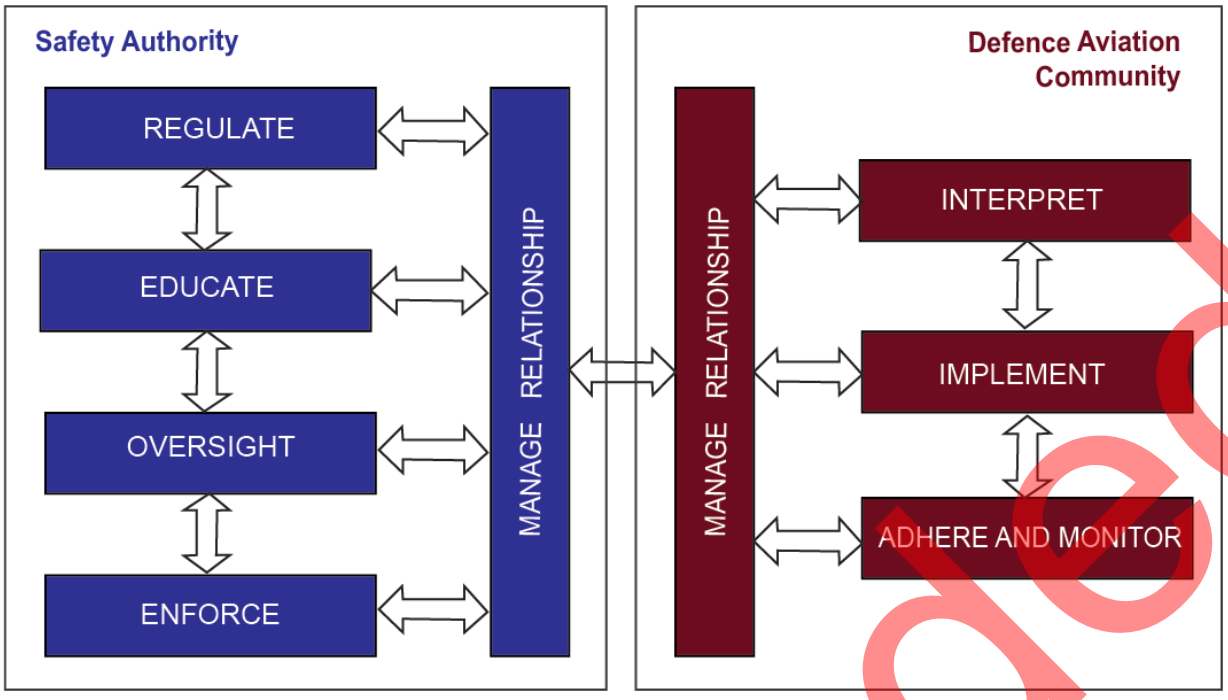

Figure 1: The Regulatory Model

4.1.5.6 The 'promoting Defence Aviation Safety through education, training and dissemination of safety information' function employs a number of strategies to disseminate Aviation Safety information, including:

1. participation in dedicated safety stand-down days
2. publication of safety and regulatory magazines, (i.e. Spotlight)
3. sponsoring conferences and convocations
4. Defence Aviation Authority (Defence AA) safety messages
5. publishing the Defence Aviation Safety - Annual Report (DAS-AR)
6. maintaining safety information recording and analysis systems, such as Sentinel and Salus
7. posting safety information, such as Defence Aviation Safety Regulation (DASR) awareness briefs on the DASA web site
8. visits by DASA personnel.

4.1.5.7 Of particular importance is the ability to disseminate safety information in a timely manner, particularly in response to investigation of an accident or serious incident. The DASP provides several ways for DASA to disseminate urgent safety information, enabling the selection of the most appropriate way, cognisant of the specific circumstances.

Superseded

4.1.5.8 Visits by DASA personnel to regulated entities are also an important means of promoting Aviation Safety and disseminating aviation safety information— providing the opportunity to discuss particular safety aspects in detail.

Education and Communication

4.1.5.9 All personnel within the Defence Aviation sector, who undertake or directly support aviation activities, should receive sufficient education to provide a general understanding of Aviation Safety. Commensurate with each person's aviation safety responsibilities, they should receive further safety education. The DASA sponsors a wide range of Aviation Safety regulatory and technology training courses that personnel may nominate to attend.(see www.defence.gov.au/DASP/Training/Default.asp)

4.1.5.10 In addition to delivering and sponsoring Aviation Safety education, DASA also facilitates a number of opportunities for two way dialogue on Aviation Safety, including:

1. continuation training programs
2. DASA Newsbreak
3. DASA workshops
4. international visits to, or by, other regulators/safety bureaus or equivalent organisations
5. conferences and symposiums
6. regulated community forums
7. Airworthiness Boards and convocations
8. audits.

4.1.5.11 Commanders and managers within the Defence Aviation sector should encourage their personnel to take maximum advantage of the opportunities afforded to discuss Aviation Safety. Additionally, personnel should endeavour to further their Aviation Safety knowledge through the various means currently available. Members of the regulated community should advise DASA of opportunities to improve Aviation Safety communication so that DASA may consider implementing appropriate improvements.

4.2 DASA's Ensure functions

4.2.1 Introduction

4.2.1.1 DASA carries out two ensure functions in direct support of the management of Aviation Safety by the Defence aviation community:

Superseded

1. provision of aviation safety management system products and services
2. provision of structural integrity engineering product and services.

4.2.2 Aviation Safety Management System Products and Services

(Reserved)

4.2.3 Structural and Propulsion System Integrity Centre of Expertise (CoE) Services

Introduction

4.2.3.1 The Directorate of Aviation Engineering (DAVENG) has a mandate to support Commanders to ensure structurally-airworthy platforms, and is the Defence Centre of Expertise (CoE) for Aircraft Structural Integrity Programs (ASIPs), Propulsion System Integrity Programs (PSIPs) and Non-Destructive Testing and Composite Technologies (NDT&CT).

4.2.3.2 In this capacity, DAVENG supports associated organisations with specialist advice, design services and training in these fields to maximise Defence capability. DAVENG also provides stewardship of sovereign capability initiatives and input into relevant policy frameworks.

4.2.3.3 For the avoidance of doubt, these services are provided by DAVENG in a separate capacity to the DASA Functions described in Chapter 4.1.

Aircraft Structural Integrity (ASI) and Propulsion System Integrity (PSI) and Services

4.2.3.4 **ASI and PSI CoE Services.** DAVENG supports the Defence ASI and PSI community with the following services:

1. advice on ASIP and PSIP establishment and execution
2. advice to CASG on ASIP and PSIP-related contracting and governance
3. CoE review of ASIP and PSIP products and outputs on behalf of CASG
4. technology specialist advice, such as supporting risk assessments
5. where appropriate, and when agreed, coordination and management of major ASI / PSI issues or tasks on behalf of CASG
6. support to Defence ASIP and PSIP policy artefacts on behalf of Capability Managers and CASG.

4.2.3.5 **SI Sovereign Capability Stewardship.** The SI Sovereign Capability encompasses the specialist technical capabilities that come to bear for critical and high-value SI activities where sovereign oversight and/or indigenous solution development is required to ensure Defence objectives are met. Under their Defence SI CoE capacity, DAVENG stewards the SI Sovereign Capability initiative, and chairs the Capability Management Board advocacy and governance forum. More information on the SI Sovereign Capability initiative and governance is available in the SI Sovereign Capability Strategy document, which can be provided by DAVENG to relevant parties upon request.

Superseded

4.2.3.6 **Training Courses.** DAVENG sponsors the following three specialist courses:

a. ASI Familiarisation Course

b. Helicopter Structural Engineering Familiarisation Course

c. Propulsion Systems Engineering Familiarisation Course.

4.2.3.7 These three practitioner courses include components intended to teach ASI and PSI fundamentals and best practice, as well as components intended teach how ASI and PSI programs support DASR compliance.

NDT Appointments, Training, Certification and Authorisation

4.2.3.8 **ADF NDT Responsible Level 3 Appointment.** DASR 145.A.30(f) requires DASR 145 Maintenance Organisations (MOs) to appoint an NDT Responsible Level 3 (RL3) as the management position responsible for implementing a training and certification system compliant with European standard EN4179 Qualification and approval of personnel for non-destructive testing (refer DASP Manual Volume 3 Chapter 8.3.2).

4.2.3.9 To ensure all ADF Non-Destructive Inspection Technicians (NDITECHs) are trained to the same level of competency and to avoid the burden of each ADF DASR 145 MO appointing their own NDT RL3 and establishing NDT training and certification frameworks, DAVENG performs the Defence NDT RL3 function and manages all NDT training and certification activities for ADF members, Department of Defence employees and other staff members working within ADF DASR 145 MOs. The Director of Aviation Engineering appoints a suitably qualified senior NDITECH to be the Defence NDT RL3, with that individual approved by the DASA as a Form 4 Holder.

4.2.3.10 **ADF DASR 145 MO NDT Certification Framework.** ADF DASR 145 MO Quality Managers are responsible for ensuring that staff conducting NDT are certified by the Defence NDT RL3 (or delegate) before being authorised to certify maintenance. This includes:

1. staff who have obtained training from external training providers or third parties

b. external Industry or Contracted service providers working in an ADF DASR 145 MO.

4.2.3.11 In order to support ADF DASR 145 MOs, the Defence NDT RL3 maintains a NDT training and certification system (both initial and ongoing training / certification) that meets Defence's needs and complies with DASR 145.A.30(f) requirements.

4.2.3.12 **ADF DASR 145 MO Authorisation of NDT Staff.** DASR 145.A.30(f) requires personnel who conduct NDT be certified in accordance with EN4179. Under Defence's NDT certification system, the process followed is:

a. the Defence NDT RL3 (or delegate) ***certifies*** the technician as meeting the requirements of EN4179 for the applicable NDT method or technique, and subsequently,

b. the MO Quality Manager (or delegate) ***authorises*** the technician to conduct NDT maintenance within the scope and validity of the NDT certification.

4.2.3.13 The Defence NDT RL3 (or delegate) will issue Certification records via PMKeyS proficiencies (primary system) or a Minute. ADF DASR 145 MOs are to check the scope and currency of NDT proficiencies on PMKeyS prior to authorising staff to perform NDT. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiencies.

Superseded

4.2.3.14 **Additional Information.** More detailed information on NDT training and certification services provided by DAVENG, including training courses and frequently asked questions, is available on the DASA NDT&CT Website.

NDT Engineering Services

4.2.3.15 DAVENG NDT&CT Engineering Section develops NDT procedures, inclusive of introducing new NDT technologies, in support of ADF capability requirements. Engineering Section provides the following services to ADF units and ADF support contractors:

1. development of DASA approved NDT Instructions for Continuing Airworthiness (ICA), including:
    i. platform specific procedures
    ii. NDT general procedures (AAP 7002.043-36)
2. CoE NDT advice on the selection of appropriate NDT techniques
3. assistance with the introduction of new NDT technologies in support of ADF capability requirements
4. testing and evaluation of NDT support equipment for introduction into the Defence inventory
5. technical review of platform-specific NDT publications and associated procedures
6. NDT Information Review (IR) of standards, practices and equipment
7. provision of other NDT CoE advice
8. manufacture of certified NDT reference standards.

Composite Repair Training and Certification

4.2.3.16 **ADF DASR 145 MO Composite Repair Certification Framework.** Personnel who conduct composite repairs must be trained and certified in accordance with SAE AIR4938 - Composite and Bonded Structure Technician Specialist Training Document (refer DASP Manual Volume 3 Chapter 8.3.2). On behalf of all ADF DASR 145 MOs, DAVENG conducts the training and certification (including re-certification) for all personnel who perform composite repairs. DAVENG staff issue the PMKeyS proficiency P124689 *Composite & Adhesive Bonding Recertification* upon successful completion of training requirements.

4.2.3.17 **ADF DASR 145 MO Authorisation of Staff to Conduct Composite Repair.** MO Quality Managers (or delegates) are responsible for verifying that technicians hold a valid PMKeyS proficiency for composite repair prior to authorising them to conduct composite repairs within an ADF DASR 145 MO. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiency.

4.2.3.18 **Additional Information.** More detailed information on Composite Technology training and certification services provided by DAVENG, including training courses, is available on the DASA NDT&CT Website.

Superseded

4.3.1 Introduction

4.3.1.1 This section provides a description of Delegates of the Safety Authority (DoSA), their purpose, selection and scope of delegations.

Purpose

4.3.1.2 A DoSA is an individual who has been formally delegated a DASA responsibility (Letter of Delegation) by DG DASA and is considered an agent of the DASA when exercising that delegation. Delegations may cover general assurance function carried out by the Authority (such as Occurrence Report assessments or standards interpretation) or provision of DASA authorisations such as a Military Permits To Fly (MPTF). In all instances, the delegation scope must be linked to an explicit DASR obligation of DASA.

4.3.1.3 A DoSA performs assurance activities and critical roles that extend the competence and capacity of the DASA. DoSAs are placed within the aviation community to provide greater access and insight to regulated entities or activities. DoSA delegation scope varies, but is invariably linked to the role of an incumbent. This role may be as a senior engineer, test pilot and/or subject matter expert (SME) related to a specific platform or regulatory domain providing in-depth knowledge to support aviation safety assurance. When in proximity to the regulated entity a further benefit is realised with greater education and promotion for the organisation and DASA 'eyes and ears' in the field.

4.3.2 Selection

4.3.2.1 DoSA applicants are suitable for nomination by virtue of the roles they fill within the aviation community as senior members within their domain. Nomination for a DoSA is via a Form 104 submitted to the DASA Registry. Within Form 104 the member identifies the need, and the qualification, training and experience (QTE) that enables them to perform the role relevant to the scope of delegation being awarded. For each type of DoSA role, there are mandatory requirements that the nominee must meet. Annex A contains a baseline set of generic QTE requirements.

4.3.2.2 DASA staff will assess nominated DoSAs through a standard process to assess their suitability and provide a recommendation to DG DASA. The assessment process will usually involve two interviews; the first a preliminary interview to broadly assess an individual's suitability to execute delegated authority functions, and a final interview with DG DASA to confirms the skills, knowledge and attitude of the applicant. If suitable, DG DASA will authorise a delegation to the individual.

4.3.2.3 A DoSA delegation is issued in the form of a letter directly from DG DASA. Delegates are provided an induction pack containing foundational information and are supported under the DASA Business Management System as a member of the DASA. Delegations are generally awarded to nominees filling a specific role. Upon leaving the position in which DoSA was awarded, eg formal posting, the members delegations are rescinded. In exceptional circumstances, extensions may be negotiated directly with DG DASA, via the applicable DASA directorate. DASA may amend or revoke a delegation at any time at the discretion of DG DASA.

Superseded

4.3.3 Scope

4.3.3.1 The scope of duties and responsibilities of the DoSA depends on the capacity in which they have been delegated. The following list the categories functions delegated:

1. Occurrence Report Assessment for specific functions related to DASR 21, DASR M and DASR 145
2. Airworthiness Directives (AD) for specific functions related to DASR 21 Subpart A
3. Military Permit To Fly (MPTF) for other than flight test, including flight conditions, for specific functions related to DASR 21 Sub-part P
4. MPTF for flight test, including flight conditions, for specific functions related to ASR 21 Sub-part P
5. Military Certificate of Airworthiness (MCoA) for specific functions related to DASR 21 Sub-part H
6. Airworthiness Standards for specific functions related to DASR 21.A.16B
7. Other categories as considered necessary by the DASA for effective management of aviation safety.

4.3.3.2 The current classes of DoSA are:

1. **Platform DoSA:** A Platform DoSA has the widest scope of functions and may include assurance of Military Type Certificate Holder (MTCH) actions with respect to reportable occurrences, issue of MCoAs, approval of flight conditions and issue of Airworthiness Directives. The Platform DoSA is ostensibly delegated to the incumbent CENGR of the platform MTCH organisation and provides assurance in the DASR Part 21 Initial Airworthiness domain.

b. **Flight Test DoSA:** A Flight Test (FT) DoSA has a scope of functions that are relevant to assuring the safety parameters within the DASR Part 21, Subpart P Flight Test domain. Their function is to provide assurance through the approval of operational flight conditions specifically for Flight Test activities and issue of MPTF authorisations. Flight Test DoSAs will invariably have the qualifications, training and experience (QTE) of Flight Test qualified aircrew relevant to certain platforms and will provide the function as part of their position within Flight Test organisations.

c. **Standards DoSA:** A Standards DoSA has a scope of function relevant to a specific technology/design discipline domain. They perform the prescribe and interpret airworthiness design requirements and standards function for their assigned technology, and provide advice to command on the management of risk associated with non-compliance to the prescribed airworthiness design requirements. Standards DoSAs have been established to cover Aeronautical Life Support Equipment (ALSE), Air Navigation Services (ANS) and Aerial Delivery technologies, and are delegated to SMEs posted to the unit charged with managing these technologies.

d. **Training DoSA:** A Training DoSA has a scope of function to assure that the content delivered in DASR 147 Maintenance Training Organisations is suitable to meet the requirements of DASR 66 licensing.

Superseded

e. **Licencing DoSA - ATC:** An ATC Licencing DoSA has a function relevant to the assurance that persons issued with a licence meet the specific requirements and are suitably qualified and experienced to perform licenced air traffic control functions.

f. There may be requirements/opportunities for other DoSA roles in the future, such as in Aircraft Type Certification. These will be identified and documented when implemented.

4.3.3.4 The concept of a Project DoSA has been discontinued since the scope was not linked to exercising any explicit DASR obligations. Notwithstanding this, the incumbent Project Engineering Manager (PEM) is required to have a comprehensive understanding of initial and continuing airworthiness DASR in order to ensure project acquisition activities enable the issue of appropriate and timely DASA authorisations, and subsequent handoff to the gaining MTCH and Continuing Airworthiness Management Organisation (CAMO).

4.3.3.5 For each class of DoSA, there are certain QTE requirements that the nominee must possess or have achieved. More information on the QTE and mandatory requirements of each DoSA will be provided through the nomination process. DASA will also endeavour to support additional training where possible to assist in the execution of the duties of the DoSA. DASA convenes a DoSA convocation to induct new DoSAs, discuss topical DoSA subjects and implement changes applicable to their duties.

4.3.3.6 When exercising their delegation, a DoSA is undertaking this function as part of the DASA, using DASA authorised procedures. Annex B contains specific functional DoSA information and reading. Whilst performing duties under the DoSA capacity, the DoSA is subject to internal DASA process audits in how they execute the functions specific for their scope.

4.3.4 DoSA Independence and Reporting

4.3.4.1 A critical safety feature of the Defence Aviation Safety Program (DASP) is the separation between assuring and ensuring aviation safety through the application of the DASP. Given nominated individuals may be performing tasks that ensure Aviation Safety in their primary employment role, there is a natural concern for a conflict with their DoSA role of *assuring* Aviation Safety. In their capacity as DoSA, it is important that they are able to maintain objectivity (without undue pressure), evaluate their independence, have adequate time to exercise the delegation and maintain conscious awareness that the individual is representing DASA when exercising the delegation.

4.3.4.2 Where instances arise that the DoSA has been part of a decision that ensures aviation safety in their regulated community role, it is possible that their independence to assure aviation safety for the same issue is compromised. The DoSA is expected to have a level of competence and judgement to remove themselves from the assurance role and advise DASA.

4.3.4.3 Where the DoSA identifies conduct or behaviours in the regulated community that may represent DASR non-compliances, non-conformances or where associated hazards and risk are not being eliminated or minimised SFARP, the DoSA is expected to notify DASA of their concerns. DG DASA enables the DoSA to inform their office directly where the nature of the conduct is serious. It is important to note that the DoSA role only provides 'in the field' oversight/awareness and the DoSA is not expected to execute DASA enforcement policy, which remains the duty of the relevant DASA Directorate staff responsible for that oversight and enforcement.

Superseded

Annexes:

(a) DoSA Qualifications, Training and Experience (QTE)

(b) Specific Functional DoSA Information and Reading

4.4 Independent Investigative Capability

4.4.1 Introduction

4.4.1.1 Joint Directive 21/2021 The Defence Aviation Safety Framework directs DASA to establish an independent investigative capability aligned to ICAO standards and recommended practices (SARPs). This capability is provided by the Defence Flight Safety Bureau (DFSB) within DASA. This chapter describes how DFSB meets the responsibilities described in the Defence Aviation Safety Program Manual Volume 1 Requirements for the DASP.

4.4.1.2 Annex 13 Aircraft Accident and Incident Investigation to the Convention on International Civil Aviation, requires that the accident investigative authority be independent from State aviation authorities and other entities that could interfere with the conduct or objectivity of an investigation. Director DFSB is accorded specific responsibilities and the power for autonomous action outside both DASA and the command chain to directly report matters of concern to the Defence Aviation Authority (Defence AA). DASP Manual Volume 1 details DFSB's functional independence of DASA Directorates and powers for autonomous action outside of DASA and the command chain.

4.4.1.3 DFSB and the Australian Transport Safety Bureau (ATSB) have a Memorandum of Understanding (MoU) for cooperation relating to transport safety investigation. The MoU deals with mutual assistance, sharing of expertise, mutual training opportunities, joint and parallel investigations, and the participation by members of either organisation in investigations carried out by the other organisation. The MoU is available on the DFSB intranet site.

4.4.1.4 DFSB is also responsible for promoting and enhancing aviation safety, which requires more than policy and processes. DFSB recognises the complex social and cultural work environments within the Defence aviation community, and works to positively influence safety attitudes and behaviours.

4.4.2 Functions of DASA-DFSB

4.4.2.1 In accordance with DASP Manual Volume 1, DFSB is responsible for a number of functions in support of both retrospective investigation of Defence accidents and incidents and proactive approaches to preventing military accidents and enhancing flight safety. These functions are:

1. **Aviation safety reporting framework.** DFSB maintains the Defence Aviation safety reporting framework by:

   i. Developing and maintaining the Defence Aviation safety reporting system. DFSB meets this requirement through the management of the Defence Corporate Safety Reporting Tool: ASR in Sentinel. ASR in Sentinel provides a closed loop process for the reporting, investigation, tracking and review of aviation safety events and issues. Sentinel is available to all Defence aviation personnel with access to the 3Defence Protected Environment (DPE). DFSB

Superseded

maintains an ASR Service desk, at asr.servicedesk@defence.gov.au or (02) 5130 7704 to provide ASR related support to the Defence aviation community.

ii. Developing and maintaining the appropriate documentation to define the reporting framework. The Defence Aviation Safety Manual (DASM) defines the reporting framework, including reporting and notification requirements, categorisation and classification of aviation safety events, and types of reporting. Additional guidance material is available on the DFSB intranet site.

iii. Establishing a confidential reporting scheme to enable confidential reporting of issues that effect, or might effect, aviation safety. DFSB provides and maintains a confidential reporting system that allows individuals to report aviation safety issues or concerns where they are unwilling to use the normal aviation safety reporting system for fear that they may be disciplined, ridiculed or otherwise disadvantaged if they do so. The DASM provides policy and guidance on confidential reporting. Individuals can report via email directly to Dir DFSB or through the link on the DFSB intranet site.

iv. Defining notification requirements and mechanisms (immediate and routine) for aviation safety reports. Notification requirements and mechanisms are defined in the DASM, and guidance is provided on the DFSB intranet site. All aviation safety events and issues must be reported into ASR in Sentinel, or through the offline ASR form AE774. Immediately reportable matters (as defined in the DASM) must be notified to the DFSB Duty Officer on (02) 6144 9199.

v. Defining taxonomies to facilitate safety information exchange that are compatible with the ICAO Accident/Incident Data Reporting system and broadly aligned with those of the Australian Transport Safety Bureau (ATSB). DFSB has embedded the aviation safety reporting taxonomies within ASR in Sentinel. More information is available on the DFSB intranet site. DFSB also manages the Aviation Safety Intelligence Portal, Salus, which supports the sharing, exchange and analysis of safety data within Defence, and between DFSB and the ATSB. The MoU (referenced in para 3) further supports alignment of safety reporting and information exchange.

vi. Defining the classification system for aviation safety reporting. The classification system for aviation safety reporting in Defence is described in the DASM. Aviation safety events are defined by both realised and potential consequences with reference to Personal Injury Level (PIL), Aircraft Damage Level (ADL) and Perceived Risk Level (PRL). Aviation safety events are classified in accordance with Table 1. More information is available in the DASM or on the DFSB intranet site.

Event Classification	Description
Class A	PIL of fatal ADL of destroyed
Class B	PIL of serious 3ADL of Substantial

Superseded

	PRL of High or Very High
Class C	PIL of minor ADL of Moderate PRL of Medium
Class D	PIL of No Injury ADL of No Damage/Minor Damage PRL of Low or Very Low

Table 1: Event Classification

vii. Developing processes to monitor the health of the aviation safety reporting system. DFSB monitors the aviation safety reporting system through internal mechanisms, including daily review of aviation safety reports and periodic research activities to examine specific features of the system, such as usability and data quality.

2. Safety data collection and processing. DFSB has established and maintains safety data collection and processing systems to capture, store, and aggregate and thence enable the analysis/exchange of safety data and safety information. Safety data refers to a defined set of facts or set of safety values collected from proactive or reactive safety related activities. Safety information is created when the data has been processed, organised, integrated and analysed in a given context. DFSB collects and manages safety data and information from:

   i. DFSB safety investigations.

   ii. Aviation safety reports and investigations from within the organisation's safety management systems and provided to DFSB (primarily through ASR in Sentinel).

   iii. Data collected by DFSB during the course of cultural surveillance activities (e.g. cultural surveys).

3. In addition to ASR in Sentinel, DFSB also maintains the following systems:

   i. **Salus.** The DASA Salus application is designed to support the sharing, exchange and analysis of safety data within and between DASA and the Defence aviation community, with the goal of enhancing aviation safety. Salus is available on the DPE, and more information and guidance can be found on the DFSB intranet site. DFSB maintains a Salus service desk, at salus.servicedesk@defence.gov.au, to provide support and guidance to users.

   ii. **Snapshot Survey.** The DFSB Snapshot Survey is an annual survey administered to personnel from Air Force, Army Aviation, Fleet Air Arm, Air Domain and other selected domains. The survey captures information on a broad range of issues that impact the safety, performance and overall health of the participating organisations. DFSB generates a range of tailored Snapshot reports targeting different levels of the organisation, and aims to provide information on the workgroups safety/organisational climate, benchmarked

Superseded

against other units. The reports allow commanders to track changes from one year to the next, identify risks, and assess the effectiveness of recent interventions. More information is available on the DFSB intranet site.

4. Joint Agency Aviation Safety Analysis Coordination Group (JAASACG). DFSB is also a member of the JAASACG, which facilitates the data analysis and reporting function under Australia's State Safety Program. Conducting safety data exchange and analysis through the JAASACG assists in maintaining strong stakeholder relationships and allows safety data to be shared and research and analysis efforts coordinated between Government Agencies to improve aviation safety.

5. **Analysis, Research and Review.** DFSB conducts a range of applied safety data analysis and research activities to inform DASA, the Defence Aviation Authority and the broader Defence aviation community. DFSB produces a range of products, including:

   i. The DFSB Annual Review of Defence Aviation Safety Statistics, input to the Defence Annual Safety Annual Report, Safety Snapshot Culture Survey Reports, and supplementary reports as identified through ASRs and safety surveys.

   ii. Support to command in the use of safety data systems, including guidebooks, service desk support, training databases, and training content for DFSB safety courses. These products are available on the DFSB intranet site.

   iii. DFSB staff members attend a number of aviation safety, investigation, human factors and non-technical skills forums and conferences in order to provide internal learning opportunities, benchmarking against international and domestic military and civilian agencies, and to support industry wide learning.

   iv. DFSB produce and support targeted human factors programs, primarily fatigue and non-technical skills related policy and guidance. These programs are described in the DASM, and through guidebooks and resources on the DFSB intranet site.

6. **Independent Investigation.** DFSB provides independent investigation and reporting of all accidents, selected incidents and selected systemic safety issues. This is achieved through:

   i. All Defence Aviation Class A and select Class B events are independently investigated by a DFSB Aviation Safety Investigation Team (ASIT) which reports directly to the Appointing Authority (AA). The AA is the designated commander at the appropriate level authorised to initiate and close aviation safety investigations. The DASM describes the appropriate levels and delegations. The ASIT operates under the procedural direction of DFSB.

   ii. DFSB investigations are functionally independent of the DASA regulatory directorates, and in general, of any other party of the entity that could conflict with, or influence, its objectivity.

   iii. The sole aim of a DFSB investigation is to prevent further occurrence and enhance safety outcomes through the identification and remediation of local and systemic deficiencies, and the improvement of risk controls. DFSB investigations do not apportion blame or liability.

Superseded

iv. DFSB investigations are conducted consistent with the international standards outlined by ICAO, and those described in the Australian Transport Safety Investigation (TSI) Act 2003. Given the unique nature and demands of military flying, a DFSB investigation may deviate from these provisions in such a manner that is considered necessary or appropriate under the specific circumstances. Additional guidance can be found in the DASM and on the DFSB intranet site.

v. In the case of Class B events, DFSB may decide not to undertake the investigation, leaving the responsibility to the command chain. This decision will be made in consultation with the relevant environmental commander, and taking into account the safety implications of the event, the suitability of the event for investigation by DFSB and the breadth of lessons likely to be learned from the event.

vi. DFSB provide specialist advice and support to aviation safety investigations undertaken within the command aviation Safety Management System.

vii. A Class A or Class B Defence event that involves a civil (VH registered) aircraft could be subject to an investigation by the ATSB in accordance with the TSI Act 2003, their priorities and mandates for investigation. The carriage and conduct of the investigation will be negotiated through DFSB in accordance with the extant ATSB/DFSB MoU.

viii. DFSB is responsible for the Defence Aviation Cockpit Voice Recorder (CVR) and Flight Data Recorder (FDR) download and analysis capability. DFSB Investigation team have the specialist skills and equipment to support this capability. Policy and guidance on download and analysis of the CVR and/or FDR is found in the DASM.

ix. DFSB must be notified of all Class A and Class B events involving Australian Air Force Cadets (AAFC) in the course of their duties; however, all reporting and investigation resides within the AAFC's Aviation Safety Report system.

7. **Safety awareness, knowledge and action.** DFSB is responsible for fostering safety awareness, knowledge and action through promotional and education programs, and utilising the outcomes from safety analysis, research and investigative functions to influence organisational learning. This is achieved through a range of programs including:

i. **Aviation safety policy.** DFSB is responsible for the development and maintenance of key aviation safety policy, including the DASM, which supports the implementation of efficient and compliant aviation Safety Management Systems, and the Aircraft Accident WHS Manual to support the safety response to military aviation accidents and incidents.

ii. **Aviation safety training.** DFSB provides aviation safety reporting, investigation and safety data related education and training, through the provision of Aviation Safety Officer Initial and Advanced courses, Non-Technical Skills Trainer Course and the one-day Aviation Incident Investigation Course. DFSB is also responsible for the integration of aviation safety and non-technical skills content into the Defence training continuum.

iii. **Aviation safety awareness.** Through investigations, analysis of safety data, research reports and engagement with industry and military partners, DFSB

Superseded

identifies key lessons and safety issues. DFSB has a range of products and services to support the integration of those lessons into aviation safety policy and training, and to support positive organisational learning. These products include promotional materials, guidebooks and training materials and are available through the DFSB intranet site.

Superseded

Annexes

4.1 DASA's Assure Functions

4.1.1 Introduction

4.1.1.1 The following sections describe how DASA carries out the independent safety assurance functions identified in Chapter 3 of Volume 1. These functions are described in simple terms as:

1. **Policy prescription and interpretation.** DASA prescribes and interprets policy for the management of Defence Aviation safety, inclusive of the Defence Aviation Safety Regulation (DASR) and related standards.
2. **Certification.** Issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR.
3. **Oversight and enforcement.** Conduct ongoing oversight and enforcement activities to assure compliance with the DASR and the continued validity of authorisations issued by DASA
4. **Safety promotion.** Promote Aviation Safety through education, training, and dissemination of safety information.

4.1.2 Policy Prescription and Interpretation

4.1.2.1 DASA is accountable to the Defence Aviation Authority to prescribe and interpret Aviation Safety management policy . This is fulfilled primarily through:

1. the promulgation and management of the Defence Aviation Safety Regulation and supporting standards
2. the provision of authoritative advice and guidance in relation to compliance with those regulations and standards.

4.1.2.2 DASA is required to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR' . In fulfilment of this responsibility, DASA prescribes and interprets the minimum safety requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

4.1.2.3 In prescribing design requirements for aircraft and aircraft-related systems, DASA recognises Airworthiness Codes issued by certain CAAs and MAAs and supplements these with additional requirements identified through ADF operational experience and/or CRE considerations. DASA periodically reviews prescribed requirements and assesses their continued applicability and suitability. Finally, DASA provides advice on the appropriateness of tailoring the prescribed requirements and the impact of non-compliance.

Superseded

4.1.3 Certification

4.1.3.1 DASA is accountable to the Defence Aviation Authority to 'issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR' . This activity is known as 'certification'. The various authorisations DASA issues are described in chapter 5.3.

4.1.4. Oversight and Enforcement

Introduction

4.1.4.1 The effectiveness of the Defence Aviation Safety Program (DASP) is underpinned by the suitability of, and the level of compliance with, the Defence Aviation Safety Regulations (DASR). Entities that operate within the regulatory framework seek to maintain compliance in two ways:

1. By developing and implementing organisational systems, supported by processes and instructions, that address the regulations

2. By developing feedback mechanisms to verify that the processes and instructions have been followed, and remain suitable for the purpose of meeting regulatory requirements.

4.1.4.2 Regulatory oversight contributes to aviation safety by identifying potential compliance concerns that may then be further evaluated, and addressed if necessary. Compliance with DASR also mitigates systemic and human errors that dominate hazardous safety events. Oversight is a systematic means of monitoring entities that operate within the regulatory framework for their level of understanding and observance of the regulatory system, as indicated by their policies and instructions and their adherence to them. A natural consequence of regulatory oversight is that it also provides insight into the suitability and effectiveness of the regulatory controls themselves, which is essential for their ongoing development.

4.1.4.3 A key component of an effective regulatory framework is ensuring that regulated entities have a clear understanding of when, why and how DASA may take action in the event of regulatory breaches or unresolved safety performance issues. The DASP enforcement policy supports compliance with the DASR through application of a consistent framework, and has been developed with due consideration of the Defence Aviation environment and associated Commonwealth legislation.

4.1.4.4 Accident and incident investigation also provides opportunity for oversight of compliance with required aviation safety processes and systems, as the structured means of determining and assessing the factors that led to the accident or incident should reveal any deficiencies regarding compliance with the DASR. However, accident and incident investigation is outside the scope of this chapter and further guidance can be found under chapter 4.4 Independent Investigative Capability.

Purpose

4.1.4.5 This chapter describes the principles that comprise the 'Oversight and Enforcement (O&E)' component of the DASP. This chapter applies to all entities regulated under the DASR, and any entity performing Defence Aviation functions that are regulated by a DASA-recognised Civil Aviation Authority (CAA) or Military Aviation Authority (MAA).

Superseded

Regulatory Requirement

4.1.4.6 DASR GR.60 specifies regulated community compliance oversight and enforcement obligations; and requires all Defence, civilian and contractor entities operating within the Defence Aviation Safety regulatory framework to comply with the DASR. Regulatory compliance is subject to ongoing oversight at multiple levels within the framework, and results of the oversight are used to:

1. assure that regulated entities are complying with the DASR,
2. inform future DASR development, and
3. refine the processes and procedures that support implementation of the DASR.

4.1.4.7 Regulated entities are required to ensure that they comply with their applicable aviation safety processes and instructions. Ensuring compliance requires the systematic and routine review of organisational management elements, to assess compliance with the Authority's requirements relating to aviation safety. Each regulated entity should establish arrangements and processes, including a compliance review schedule, to ensure compliance with the DASR.

Oversight

4.1.4.8 Oversight is required to provide confidence to the Defence Aviation Authority (Defence AA) that Defence is executing Aviation operations safely, in accordance with legislated requirements. DASA's Oversight function is executed through the O&E operating model at Figure 1, which assists to define DASA's and regulated entities' obligations to effectively establish and maintain DASR compliance.

4.1.4.9 The model at Figure 1 is separated into an upper (forward-looking) cycle (i.e. DASR implementation) and a lower (DASA feedback) cycle. Both cycles must be effective in their own right for an effective regulatory outcome. This is achieved by mapping each element of the model to corresponding personal accountabilities, responsibilities, expected outcomes and associated DASA (and other local) policy.

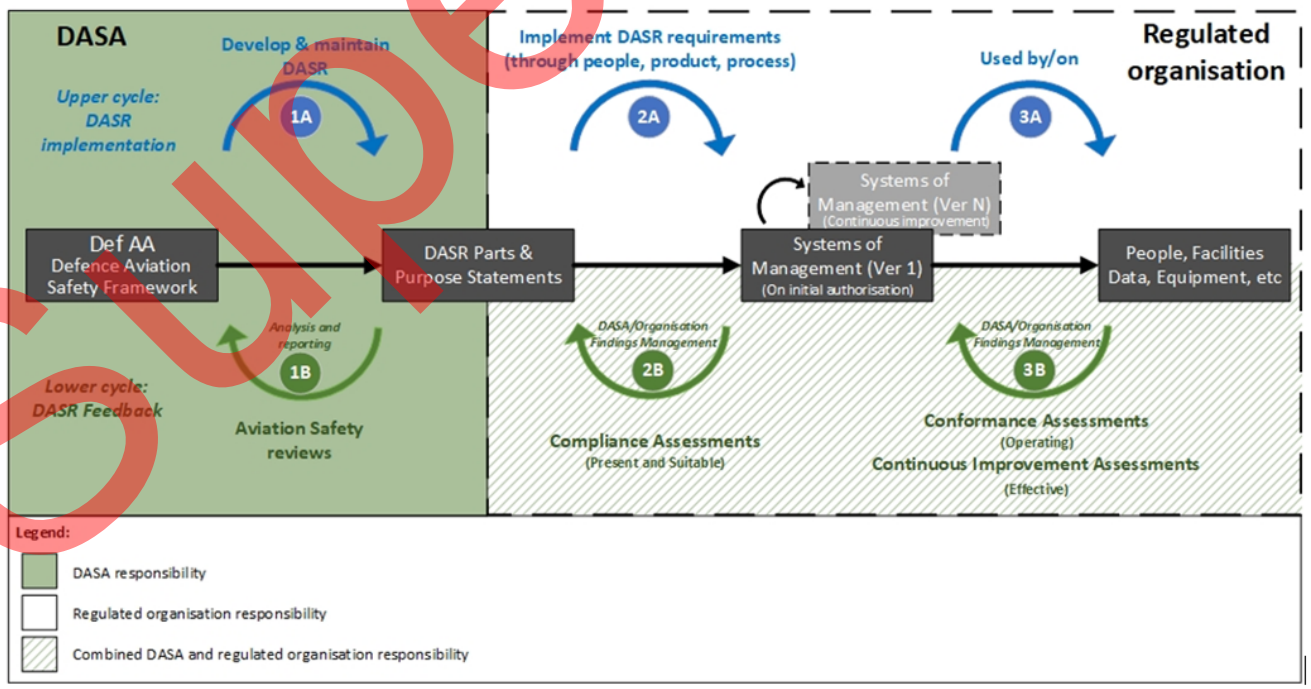

Figure 1: The Oversight and Enforcement operating model

Superseded

4.1.4.10 **Operating model components.** The following model components apply:

1. **Implementation loop 1A** – Develop and maintain DASR. Refer DASPMAN Vol 1.

2. **Feedback loop 1B – Aviation Safety reviews.** Analysis and reporting on DASR compliance and safety intelligence is designed to provide senior decision makers, who have accountabilities under JD 21/2021, with a relative picture of DASP status, contemporary Aviation Safety issues, and an assessment of the aviation safety performance of regulated organisations. Issues raised can generate actions or be recommended for further monitoring. Reporting is achieved through the Defence Aviation Safety – Annual Report (refer section 2), and Airworthiness Boards (refer section 13).

3. **Implementation loop 2A – Implement DASR requirements.** Organisations subject to DASR are expected to implement locally-tailored and contextually-appropriate management systems to effectively comply with DASR. Systems are used to define any interaction of people, products (i.e. technology) and processes. However, outcomes from systems are rarely consistent, with their effectiveness continuously varying (e.g. through changes in local application context, staff churn and competencies, competing Service and organisational policies and priorities, etc). Entities are therefore expected to self-monitor and implement corrective actions as necessary.

4. **Feedback loop 2B – Compliance assessments.** Compliance assessments detect if documented management system meet required regulatory outcomes (i.e. 'Present' and 'Suitable' in the PSOE oversight construct—see below). DASA Findings document DASR non-compliances.

5. **Implementation loop 3A – Using documented management systems.** Once entities' documented management system are approved and promulgated (i.e. found to be DASR-compliant at the time of the DASA assessment), DASA expects the entity's staff, facilities, data, equipment etc to conform to that system[1].

6. **Feedback loop 3B – Conformance and continuous improvement assessments.** Conformance assessments are designed to detect if staff, facilities, data, equipment, etc are conforming to the promulgated management system. By inference, if staff conform to DASA-approved systems, the organisation will remain compliant with DASR (i.e. 'Operating' in the PSOE oversight construct—see below). These assessments also look for local feedback data and safety intelligence that validate the documented management systems are effectively meeting DASR hazard control outcomes (i.e. 'Effective' in the PSOE oversight construct— see below).

4.1.4.11 **Present-Suitable-Operating-Effective (PSOE) model.** The PSOE Model was introduced into civil aviation with the release of ICAO Annex 19 Safety Management in 2013, defining outcome-based safety management requirements against the hazard of compromised Aviation Safety. Importantly, when ICAO Annex 19 was released, an ICAO sub-committee (the Safety Management International Collaboration Group – SMICG) published PSOE construct guidance, ICAO (2012) - SMICG Safety Management System Evaluation Tool), providing it as an effective Annex 19 oversight methodology. Specifically, the PSOE construct allowed assessment of regulated entities' maturity based on the effectiveness of hazard control implementation and incorporation of continuous improvement activities. The SMICG defined four progressive 'stages' of an entity's Safety Management System maturity (ie PSOE). In turn, defence has tailored these PSOE definitions (see section 5.4) to make

Superseded

them applicable to all DASR(not just SMS), due to the advantages the PSOE assurance methodology provides.

4.1.4.12 Oversight activities are conducted against defined PSOE criteria, by qualified staff; who should be substantially independent of the area being reviewed. A PSOE assessment is carried out through two very discreet activities—the Desk Top audit and an On-Site Performance Assessment—as follows:

1. **Desk top assessment.** The Desk Top assessment (for 'Present' and 'Suitable'), is an assessment of the entity's documented management system (i.e. the organisational approval basis) including Orders, Instructions and Procedures (OIP) that are used to comply with the relevant DASR. The Desk Top assessment gathers evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable' for the scope of the entity's authorisation.

2. **On-site assessment.** The on-site assessment (for 'Operating' and 'Effective') is carried out to provide assurance that the documented management system (i.e. the basis for the organisational approval) is operating as expected and effectively providing risk mitigation to the threats that the DASRs have been implemented to treat.

3. An on-site assessment can be conducted as part of an initial application for organisational approval or as part of an ongoing oversight program. The ongoing oversight program periodicity may be influenced by adopting a risk based approach for some organisations or operational activities influenced by safety intelligence information.

Enforcement

4.1.4.13 In addition to oversighting ongoing compliance with the DASR, DASA is also required to enforce the ongoing compliance of Defence Aviation organisations. The concept of enforcement within the DASP covers the following spectrum as outlined in Figure 2 below:

1. **Reinforcement** of requirements, through mechanisms which include providing education, updating regulatory material, and reinforcing positive behaviours.

2. **Compelling** compliance, through the raising of DASR Findings or issuance of Directives.

3. **Deterrence** of ongoing operations with non-compliances through the suspension or removal of a DASR approval.

Superseded

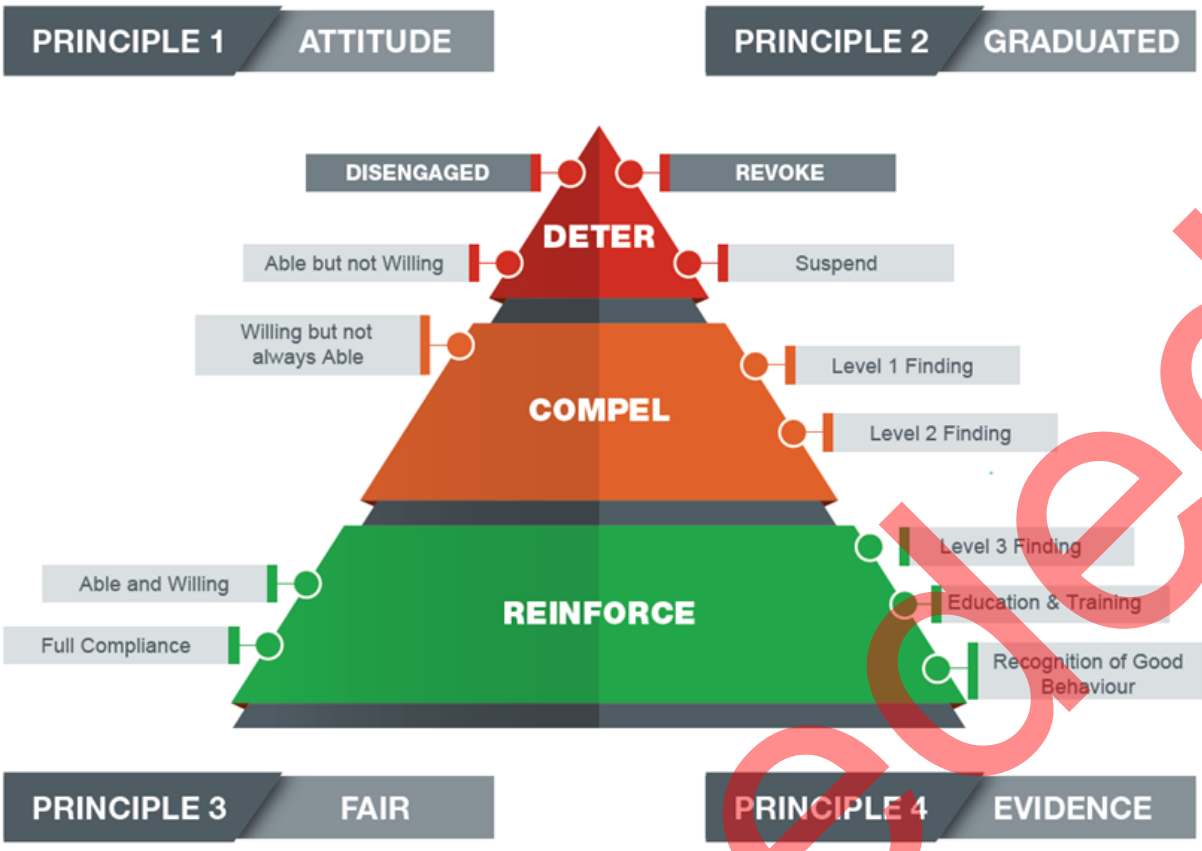

Figure 2: Enforcement Model

DASA Enforcement Principles

4.1.4.14 The DASA enforcement policy is founded on the following principles:

1. **Principle 1**: Enforcement shall consider organisations/operator attitudes.

   i. Enforcement will give due and equitable consideration to organisational attitudes and distinguish consistent or premeditated non-compliance, from non-compliance resulting from unintentional errors or deviations.

2. **Principle 2:** Enforcement action shall be graduated.

   i. Enforcement action shall commence at the lowest level commensurate with the increase in risk to aviation safety and willingness of the regulated entity to address the non-compliance, and should be escalated only when necessary to secure compliance.

   ii. The rate of escalation is cognisant of the underlying aviation safety risk, prior interaction between DASA and the non-compliant entity, and the entity's motivation and capacity to comply with the regulations.

3. **Principle 3:** Enforcement action shall be fair and proportionate.

   i. Full details of the nature of the non-compliance will be disclosed, along with supporting evidence.

   ii. The response to the non-compliance will be proportionate to the identified breach and the increased risk to aviation safety.

Superseded

iii. Enforcement action will relate directly to the non-compliance and associated increase in safety risk.

iv. In the interests of procedural fairness, regulated entities will be afforded the opportunity to review and respond to an identified non-compliance prior to enforcement action being initiated.

4. **Principle 4:** Enforcement decisions shall be independent and evidence based.

i. Enforcement decisions will be independent, transparent and underpinned by objective evidence.

ii. Enforcement decisions will not be influenced by personal, political, capability or financial considerations.

Proportionate and Graduated response

4.1.4.15 The key factors influencing a DASA decision to escalate an enforcement action include:

1. the nature, seriousness and extent of the non-compliances, including the safety implications and the intent (if applicable) of the non-compliances;

2. the willingness of the organisation to address the non-compliances and ensure that they are not systemic;

3. the nature and sufficiency of available objective evidence of the non-compliances;

4. the action required to effectively and efficiently address the aviation safety risks that have been identified or are likely to arise;

5. the need to obtain expert assistance on a complex technical or operational issue, including legal advice;

6. the obligation to be fair, consistent, impartial and proportional in taking enforcement action.

4.1.4.16 While imposing a sanction that suspends or revokes an entity's approval is a real and credible course of action, as part of a graduated response to serious and/or continuing non-compliances, this may not always be in the interests of the Service. If DASA is considering an unscheduled act of limiting, suspending or revoking an entity's approval, the relevant Environmental Commander or Group Division Head is to be consulted before any proposed sanction that suspends or revokes an entity's approval is imposed. This level of consultation is not required where a scheduled revocation takes place, for example removal or amendment of an organisational approval after an aircraft type is withdrawn from service.

Coordination with external bodies

4.1.4.17 In certain circumstances, DASA may identify a regulatory breach or safety concern that falls under the jurisdiction of an external CAA or MAA. If this occurs, DASA will consult with external agencies as necessary, to ensure a coordinated approach to any enforcement or remedial action is undertaken.

4.1.5 Promote Aviation Safety

Introduction

Superseded

4.1.5.1 The Defence Aviation Safety Authority (DASA) is responsible to the Defence Aviation Authority (Defence AA) for enhancing and promoting Aviation Safety through the implementation of a Defence Aviation Safety Program (DASP). The DASP promotes safety awareness and the sharing and exchange of safety information with the aviation community to foster the maintenance and improvement of safety; to support the development of a generative safety culture; and to assure the effective management of aviation safety risks.

4.1.5.2 The second function of the Defence Aviation Safety Program (DASP) is 'Promote Aviation Safety'. This function comprises the following elements:

1. Aviation Safety promotion and dissemination of safety information

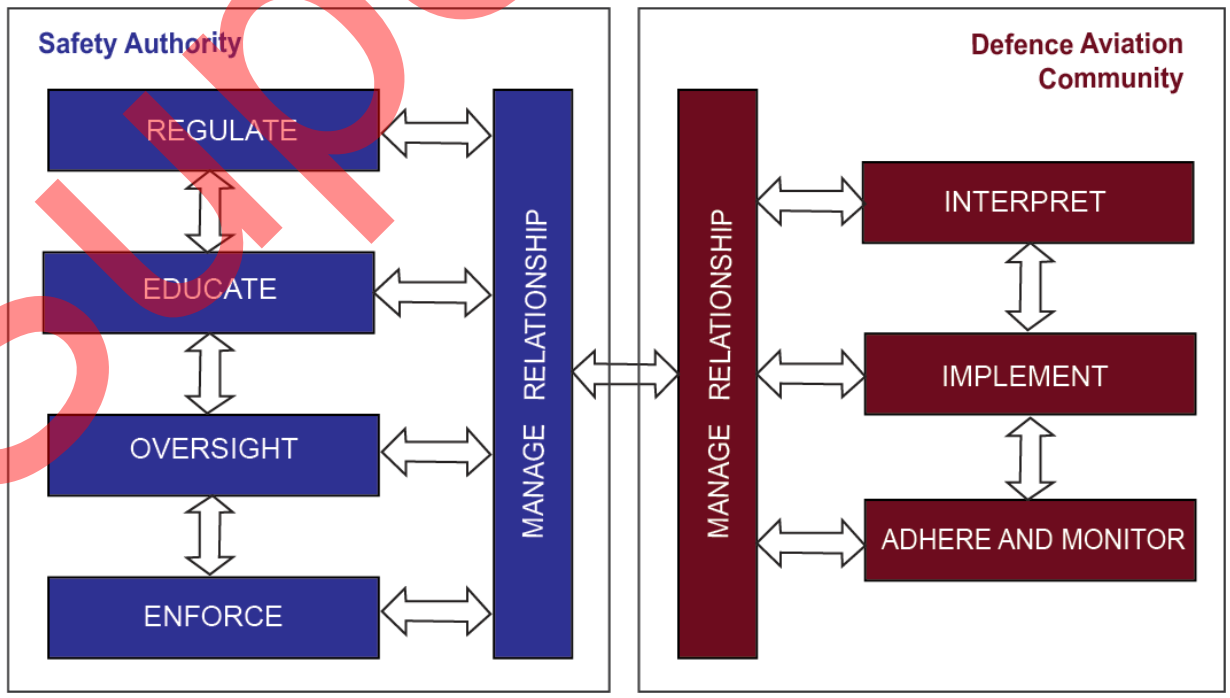
2. education, training and communication.

4.1.5.3 While Function 2 of the DASP explicitly directs 'promotion', all five functions require engagement with stakeholders. DASA cannot implement these functions in isolation. Ongoing engagement with stakeholders internal, external to the Authority, internal and external to Government is required to improve aviation safety outcomes and support capability.

Aviation Safety Promotion and Dissemination of Safety Information

4.1.5.4 A key tenet in promoting Aviation Safety is the two-way communication flow of safety information. Aviation Safety promotion can take many different forms, and cover a wide spectrum of activities— from dissemination of general information on Aviation Safety, to visits by DASA personnel. In either case, the establishment and management of relationships is paramount.

4.1.5.5 Figure 1 details the regulatory model, which includes DASA and the Defence Aviation Community. DASA uses its Engagement and Promotion Strategy to 'manage relationships' between the two entities.



Superseded

Figure 1: The Regulatory Model

4.1.5.6 The 'promoting Defence Aviation Safety through education, training and dissemination of safety information' function employs a number of strategies to disseminate Aviation Safety information, including:

1. participation in dedicated safety stand-down days
2. publication of safety and regulatory magazines, (i.e. Spotlight)
3. sponsoring conferences and convocations
4. Defence Aviation Authority (Defence AA) safety messages
5. publishing the Defence Aviation Safety - Annual Report (DAS-AR)
6. maintaining safety information recording and analysis systems, such as Sentinel and Salus
7. posting safety information, such as Defence Aviation Safety Regulation (DASR) awareness briefs on the DASA web site
8. visits by DASA personnel.

4.1.5.7 Of particular importance is the ability to disseminate safety information in a timely manner, particularly in response to investigation of an accident or serious incident. The DASP provides several ways for DASA to disseminate urgent safety information, enabling the selection of the most appropriate way, cognisant of the specific circumstances.

4.1.5.8 Visits by DASA personnel to regulated entities are also an important means of promoting Aviation Safety and disseminating aviation safety information— providing the opportunity to discuss particular safety aspects in detail.

Education and Communication

4.1.5.9 All personnel within the Defence Aviation sector, who undertake or directly support aviation activities, should receive sufficient education to provide a general understanding of Aviation Safety. Commensurate with each person's aviation safety responsibilities, they should receive further safety education. The DASA sponsors a wide range of Aviation Safety regulatory and technology training courses that personnel may nominate to attend.(see www.defence.gov.au/DASP/Training/Default.asp)

4.1.5.10 In addition to delivering and sponsoring Aviation Safety education, DASA also facilitates a number of opportunities for two way dialogue on Aviation Safety, including:

1. continuation training programs

Superseded

2. DASA Newsbreak

3. DASA workshops

4. international visits to, or by, other regulators/safety bureaus or equivalent organisations

5. conferences and symposiums

6. regulated community forums

7. Airworthiness Boards and convocations

8. audits.

4.1.5.11 Commanders and managers within the Defence Aviation sector should encourage their personnel to take maximum advantage of the opportunities afforded to discuss Aviation Safety. Additionally, personnel should endeavour to further their Aviation Safety knowledge through the various means currently available. Members of the regulated community should advise DASA of opportunities to improve Aviation Safety communication so that DASA may consider implementing appropriate improvements.

4.2 DASA's Ensure functions

4.2.1 Introduction

4.2.1.1 DASA carries out two ensure functions in direct support of the management of Aviation Safety by the Defence aviation community:

1. provision of aviation safety management system products and services
2. provision of structural integrity engineering product and services.

4.2.2 Aviation Safety Management System Products and Services

(Reserved)

4.2.3 Structural and Propulsion System Integrity Centre of Expertise (CoE) Services

Introduction

4.2.3.1 The Directorate of Aviation Engineering (DAVENG) has a mandate to support Commanders to ensure structurally-airworthy platforms, and is the Defence Centre of Expertise (CoE) for Aircraft Structural Integrity Programs (ASIPs), Propulsion System Integrity Programs (PSIPs) and Non-Destructive Testing and Composite Technologies (NDT&CT).

4.2.3.2 In this capacity, DAVENG supports associated organisations with specialist advice, design services and training in these fields to maximise Defence capability. DAVENG also provides stewardship of sovereign capability initiatives and input into relevant policy frameworks.

Superseded

4.2.3.3 For the avoidance of doubt, these services are provided by DAVENG in a separate capacity to the DASA Functions described in Chapter 4.1.

Aircraft Structural Integrity (ASI) and Propulsion System Integrity (PSI) and Services

4.2.3.4 **ASI and PSI CoE Services.** DAVENG supports the Defence ASI and PSI community with the following services:

1. advice on ASIP and PSIP establishment and execution
2. advice to CASG on ASIP and PSIP-related contracting and governance
3. CoE review of ASIP and PSIP products and outputs on behalf of CASG
4. technology specialist advice, such as supporting risk assessments
5. where appropriate, and when agreed, coordination and management of major ASI / PSI issues or tasks on behalf of CASG
6. support to Defence ASIP and PSIP policy artefacts on behalf of Capability Managers and CASG.

4.2.3.5 **SI Sovereign Capability Stewardship.** The SI Sovereign Capability encompasses the specialist technical capabilities that come to bear for critical and high-value SI activities where sovereign oversight and/or indigenous solution development is required to ensure Defence objectives are met. Under their Defence SI CoE capacity, DAVENG stewards the SI Sovereign Capability initiative, and chairs the Capability Management Board advocacy and governance forum. More information on the SI Sovereign Capability initiative and governance is available in the SI Sovereign Capability Strategy document, which can be provided by DAVENG to relevant parties upon request.

4.2.3.6 **Training Courses.** DAVENG sponsors the following three specialist courses:

a. ASI Familiarisation Course
b. Helicopter Structural Engineering Familiarisation Course
c. Propulsion Systems Engineering Familiarisation Course.

4.2.3.7 These three practitioner courses include components intended to teach ASI and PSI fundamentals and best practice, as well as components intended teach how ASI and PSI programs support DASR compliance.

NDT Appointments, Training, Certification and Authorisation

4.2.3.8 **ADF NDT Responsible Level 3 Appointment.** DASR 145.A.30(f) requires DASR 145 Maintenance Organisations (MOs) to appoint an NDT Responsible Level 3 (RL3) as the management position responsible for implementing a training and certification system compliant with European standard EN4179 Qualification and approval of personnel for non-destructive testing (refer DASP Manual Volume 3 Chapter 8.3.2).

4.2.3.9 To ensure all ADF Non-Destructive Inspection Technicians (NDITECHs) are trained to the same level of competency and to avoid the burden of each ADF DASR 145 MO appointing their own NDT RL3 and establishing NDT training and certification frameworks, DAVENG performs the Defence NDT RL3 function and manages all NDT training and certification activities for ADF members, Department of Defence employees and other staff members working within ADF DASR 145 MOs. The

Superseded

Director of Aviation Engineering appoints a suitably qualified senior NDITECH to be the Defence NDT RL3, with that individual approved by the DASA as a Form 4 Holder.

4.2.3.10 **ADF DASR 145 MO NDT Certification Framework.** ADF DASR 145 MO Quality Managers are responsible for ensuring that staff conducting NDT are certified by the Defence NDT RL3 (or delegate) before being authorised to certify maintenance. This includes:

1. staff who have obtained training from external training providers or third parties

b. external Industry or Contracted service providers working in an ADF DASR 145 MO.

4.2.3.11 In order to support ADF DASR 145 MOs, the Defence NDT RL3 maintains a NDT training and certification system (both initial and ongoing training / certification) that meets Defence's needs and complies with DASR 145.A.30(f) requirements.

4.2.3.12 **ADF DASR 145 MO Authorisation of NDT Staff.** DASR 145.A.30(f) requires personnel who conduct NDT be certified in accordance with EN4179. Under Defence's NDT certification system, the process followed is:

a. the Defence NDT RL3 (or delegate) ***certifies*** the technician as meeting the requirements of EN4179 for the applicable NDT method or technique, and subsequently,

b. the MO Quality Manager (or delegate) ***authorises*** the technician to conduct NDT maintenance within the scope and validity of the NDT certification.

4.2.3.13 The Defence NDT RL3 (or delegate) will issue Certification records via PMKeyS proficiencies (primary system) or a Minute. ADF DASR 145 MOs are to check the scope and currency of NDT proficiencies on PMKeyS prior to authorising staff to perform NDT. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiencies.

4.2.3.14 **Additional Information.** More detailed information on NDT training and certification services provided by DAVENG, including training courses and frequently asked questions, is available on the DASA NDT&CT Website.

NDT Engineering Services

4.2.3.15 DAVENG NDT&CT Engineering Section develops NDT procedures, inclusive of introducing new NDT technologies, in support of ADF capability requirements. Engineering Section provides the following services to ADF units and ADF support contractors:

1. development of DASA approved NDT Instructions for Continuing Airworthiness (ICA), including:
   i. platform specific procedures
   ii. NDT general procedures (AAP 7002.043-36)
2. CoE NDT advice on the selection of appropriate NDT techniques
3. assistance with the introduction of new NDT technologies in support of ADF capability requirements
4. testing and evaluation of NDT support equipment for introduction into the Defence inventory

Superseded

5. technical review of platform-specific NDT publications and associated procedures
6. NDT Information Review (IR) of standards, practices and equipment
7. provision of other NDT CoE advice
8. manufacture of certified NDT reference standards.

Composite Repair Training and Certification

4.2.3.16 **ADF DASR 145 MO Composite Repair Certification Framework.** Personnel who conduct composite repairs must be trained and certified in accordance with SAE AIR4938 - Composite and Bonded Structure Technician Specialist Training Document (refer DASP Manual Volume 3 Chapter 8.3.2). On behalf of all ADF DASR 145 MOs, DAVENG conducts the training and certification (including re-certification) for all personnel who perform composite repairs. DAVENG staff issue the PMKeyS proficiency P124689 *Composite & Adhesive Bonding Recertification* upon successful completion of training requirements.

4.2.3.17 **ADF DASR 145 MO Authorisation of Staff to Conduct Composite Repair.** MO Quality Managers (or delegates) are responsible for verifying that technicians hold a valid PMKeyS proficiency for composite repair prior to authorising them to conduct composite repairs within an ADF DASR 145 MO. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiency.

4.2.3.18 **Additional Information.** More detailed information on Composite Technology training and certification services provided by DAVENG, including training courses, is available on the DASA NDT&CT Website.

4.3 Delegates of the Safety Authority (DoSA)

4.3.1 Introduction

4.3.1.1 This section provides a description of Delegates of the Safety Authority (DoSA), their purpose, selection and scope of delegations.

Purpose

4.3.1.2 A DoSA is an individual who has been formally delegated a DASA responsibility (Letter of Delegation) by DG DASA and is considered an agent of the DASA when exercising that delegation. Delegations may cover general assurance function carried out by the Authority (such as Occurrence Report assessments or standards interpretation) or provision of DASA authorisations such as a Military Permits To Fly (MPTF). In all instances, the delegation scope must be linked to an explicit DASR obligation of DASA.

4.3.1.3 A DoSA performs assurance activities and critical roles that extend the competence and capacity of the DASA. DoSAs are placed within the aviation community to provide greater access and insight to regulated entities or activities. DoSA delegation scope varies, but is invariably linked to the role of an incumbent. This role may be as a senior engineer, test pilot and/or subject matter expert (SME) related to a specific platform or regulatory domain providing in-depth knowledge to support aviation safety assurance. When in proximity to the regulated entity a further benefit is realised with greater education and promotion for the organisation and DASA ‘eyes and ears’ in the field.

Superseded

4.3.2 Selection

4.3.2.1 DoSA applicants are suitable for nomination by virtue of the roles they fill within the aviation community as senior members within their domain. Nomination for a DoSA is via a Form 104 submitted to the DASA Registry. Within Form 104 the member identifies the need, and the qualification, training and experience (QTE) that enables them to perform the role relevant to the scope of delegation being awarded. For each type of DoSA role, there are mandatory requirements that the nominee must meet. Annex A contains a baseline set of generic QTE requirements.

4.3.2.2 DASA staff will assess nominated DoSAs through a standard process to assess their suitability and provide a recommendation to DG DASA. The assessment process will usually involve two interviews; the first a preliminary interview to broadly assess an individual's suitability to execute delegated authority functions, and a final interview with DG DASA to confirms the skills, knowledge and attitude of the applicant. If suitable, DG DASA will authorise a delegation to the individual.

4.3.2.3 A DoSA delegation is issued in the form of a letter directly from DG DASA. Delegates are provided an induction pack containing foundational information and are supported under the DASA Business Management System as a member of the DASA. Delegations are generally awarded to nominees filling a specific role. Upon leaving the position in which DoSA was awarded, eg formal posting, the members delegations are rescinded. In exceptional circumstances, extensions may be negotiated directly with DG DASA, via the applicable DASA directorate. DASA may amend or revoke a delegation at any time at the discretion of DG DASA.

4.3.3 Scope

4.3.3.1 The scope of duties and responsibilities of the DoSA depends on the capacity in which they have been delegated. The following list the categories functions delegated:

1. Occurrence Report Assessment for specific functions related to DASR 21, DASR M and DASR 145
2. Airworthiness Directives (AD) for specific functions related to DASR 21 Subpart A
3. Military Permit To Fly (MPTF) for other than flight test, including flight conditions, for specific functions related to DASR 21 Sub-part P
4. MPTF for flight test, including flight conditions, for specific functions related to ASR 21 Sub-part P
5. Military Certificate of Airworthiness (MCoA) for specific functions related to DASR 21 Sub-part H
6. Airworthiness Standards for specific functions related to DASR 21.A.16B
7. Other categories as considered necessary by the DASA for effective management of aviation safety.

4.3.3.2 The current classes of DoSA are:

1. **Platform DoSA:** A Platform DoSA has the widest scope of functions and may include assurance of Military Type Certificate Holder (MTCH) actions with respect to reportable occurrences, issue of MCoAs, approval of flight conditions and issue of Airworthiness Directives. The Platform DoSA is ostensibly delegated to the incumbent

Superseded

CENGR of the platform MTCH organisation and provides assurance in the DASR Part 21 Initial Airworthiness domain.

b. **Flight Test DoSA:** A Flight Test (FT) DoSA has a scope of functions that are relevant to assuring the safety parameters within the DASR Part 21, Subpart P Flight Test domain. Their function is to provide assurance through the approval of operational flight conditions specifically for Flight Test activities and issue of MPTF authorisations. Flight Test DoSAs will invariably have the qualifications, training and experience (QTE) of Flight Test qualified aircrew relevant to certain platforms and will provide the function as part of their position within Flight Test organisations.

c. **Standards DoSA:** A Standards DoSA has a scope of function relevant to a specific technology/design discipline domain. They perform the prescribe and interpret airworthiness design requirements and standards function for their assigned technology, and provide advice to command on the management of risk associated with non-compliance to the prescribed airworthiness design requirements. Standards DoSAs have been established to cover Aeronautical Life Support Equipment (ALSE), Air Navigation Services (ANS) and Aerial Delivery technologies, and are delegated to SMEs posted to the unit charged with managing these technologies.

d. **Training DoSA:** A Training DoSA has a scope of function to assure that the content delivered in DASR 147 Maintenance Training Organisations is suitable to meet the requirements of DASR 66 licensing.

e. **Licencing DoSA - ATC:** An ATC Licencing DoSA has a function relevant to the assurance that persons issued with a licence meet the specific requirements and are suitably qualified and experienced to perform licenced air traffic control functions.

f. There may be requirements/opportunities for other DoSA roles in the future, such as in Aircraft Type Certification. These will be identified and documented when implemented.

4.3.3.4 The concept of a Project DoSA has been discontinued since the scope was not linked to exercising any explicit DASR obligations. Notwithstanding this, the incumbent Project Engineering Manager (PEM) is required to have a comprehensive understanding of initial and continuing airworthiness DASR in order to ensure project acquisition activities enable the issue of appropriate and timely DASA authorisations, and subsequent handoff to the gaining MTCH and Continuing Airworthiness Management Organisation (CAMO).

4.3.3.5 For each class of DoSA, there are certain QTE requirements that the nominee must possess or have achieved. More information on the QTE and mandatory requirements of each DoSA will be provided through the nomination process. DASA will also endeavour to support additional training where possible to assist in the execution of the duties of the DoSA. DASA convenes a DoSA convocation to induct new DoSAs, discuss topical DoSA subjects and implement changes applicable to their duties.

4.3.3.6 When exercising their delegation, a DoSA is undertaking this function as part of the DASA, using DASA authorised procedures. Annex B contains specific functional DoSA information and reading. Whilst performing duties under the DoSA capacity, the DoSA is subject to internal DASA process audits in how they execute the functions specific for their scope.

Superseded

4.3.4 DoSA Independence and Reporting

4.3.4.1 A critical safety feature of the Defence Aviation Safety Program (DASP) is the separation between assuring and ensuring aviation safety through the application of the DASP. Given nominated individuals may be performing tasks that ensure Aviation Safety in their primary employment role, there is a natural concern for a conflict with their DoSA role of *assuring* Aviation Safety. In their capacity as DoSA, it is important that they are able to maintain objectivity (without undue pressure), evaluate their independence, have adequate time to exercise the delegation and maintain conscious awareness that the individual is representing DASA when exercising the delegation.

4.3.4.2 Where instances arise that the DoSA has been part of a decision that ensures aviation safety in their regulated community role, it is possible that their independence to assure aviation safety for the same issue is compromised. The DoSA is expected to have a level of competence and judgement to remove themselves from the assurance role and advise DASA.

4.3.4.3 Where the DoSA identifies conduct or behaviours in the regulated community that may represent DASR non-compliances, non-conformances or where associated hazards and risk are not being eliminated or minimised SFARP, the DoSA is expected to notify DASA of their concerns. DG DASA enables the DoSA to inform their office directly where the nature of the conduct is serious. It is important to note that the DoSA role only provides 'in the field' oversight/awareness and the DoSA is not expected to execute DASA enforcement policy, which remains the duty of the relevant DASA Directorate staff responsible for that oversight and enforcement.

Annexes:

(a) DoSA Qualifications, Training and Experience (QTE)

(b) Specific Functional DoSA Information and Reading

4.4 Independent Investigative Capability

4.4.1 Introduction

4.4.1.1 Joint Directive 21/2021 The Defence Aviation Safety Framework directs DASA to establish an independent investigative capability aligned to ICAO standards and recommended practices (SARPs). This capability is provided by the Defence Flight Safety Bureau (DFSB) within DASA. This chapter describes how DFSB meets the responsibilities described in the Defence Aviation Safety Program Manual Volume 1 Requirements for the DASP.

4.4.1.2 Annex 13 Aircraft Accident and Incident Investigation to the Convention on International Civil Aviation, requires that the accident investigative authority be independent from State aviation authorities and other entities that could interfere with the conduct or objectivity of an investigation. Director DFSB is accorded specific responsibilities and the power for autonomous action outside both DASA and the command chain to directly report matters of concern to the Defence Aviation Authority (Defence AA). DASP Manual Volume 1 details DFSB's functional independence of DASA Directorates and powers for autonomous action outside of DASA and the command chain.

4.4.1.3 DFSB and the Australian Transport Safety Bureau (ATSB) have a Memorandum of Understanding (MoU) for cooperation relating to transport safety investigation. The MoU deals with mutual assistance, sharing of expertise, mutual training opportunities, joint and parallel

Superseded

investigations, and the participation by members of either organisation in investigations carried out by the other organisation. The MoU is available on the DFSB intranet site.

4.4.1.4 DFSB is also responsible for promoting and enhancing aviation safety, which requires more than policy and processes. DFSB recognises the complex social and cultural work environments within the Defence aviation community, and works to positively influence safety attitudes and behaviours.

4.4.2 Functions of DASA-DFSB

4.4.2.1 In accordance with DASP Manual Volume 1, DFSB is responsible for a number of functions in support of both retrospective investigation of Defence accidents and incidents and proactive approaches to preventing military accidents and enhancing flight safety. These functions are:

1. **Aviation safety reporting framework.** DFSB maintains the Defence Aviation safety reporting framework by:

    i. Developing and maintaining the Defence Aviation safety reporting system. DFSB meets this requirement through the management of the Defence Corporate Safety Reporting Tool: ASR in Sentinel. ASR in Sentinel provides a closed loop process for the reporting, investigation, tracking and review of aviation safety events and issues. Sentinel is available to all Defence aviation personnel with access to the 3Defence Protected Environment (DPE). DFSB maintains an ASR Service desk, at asr.servicedesk@defence.gov.au or (02) 5130 7704 to provide ASR related support to the Defence aviation community.

    ii. Developing and maintaining the appropriate documentation to define the reporting framework. The Defence Aviation Safety Manual (DASM) defines the reporting framework, including reporting and notification requirements, categorisation and classification of aviation safety events, and types of reporting. Additional guidance material is available on the DFSB intranet site.

    iii. Establishing a confidential reporting scheme to enable confidential reporting of issues that effect, or might effect, aviation safety. DFSB provides and maintains a confidential reporting system that allows individuals to report aviation safety issues or concerns where they are unwilling to use the normal aviation safety reporting system for fear that they may be disciplined, ridiculed or otherwise disadvantaged if they do so. The DASM provides policy and guidance on confidential reporting. Individuals can report via email directly to Dir DFSB or through the link on the DFSB intranet site.

    iv. Defining notification requirements and mechanisms (immediate and routine) for aviation safety reports. Notification requirements and mechanisms are defined in the DASM, and guidance is provided on the DFSB intranet site. All aviation safety events and issues must be reported into ASR in Sentinel, or through the offline ASR form AE774. Immediately reportable matters (as defined in the DASM) must be notified to the DFSB Duty Officer on (02) 6144 9199.

    v. Defining taxonomies to facilitate safety information exchange that are compatible with the ICAO Accident/Incident Data Reporting system and broadly aligned with those of the Australian Transport Safety Bureau (ATSB). DFSB has embedded the aviation safety reporting taxonomies within ASR in Sentinel. More information is available on the DFSB intranet site. DFSB also

Superseded

manages the Aviation Safety Intelligence Portal, Salus, which supports the sharing, exchange and analysis of safety data within Defence, and between DFSB and the ATSB. The MoU (referenced in para 3) further supports alignment of safety reporting and information exchange.

vi. Defining the classification system for aviation safety reporting. The classification system for aviation safety reporting in Defence is described in the DASM. Aviation safety events are defined by both realised and potential consequences with reference to Personal Injury Level (PIL), Aircraft Damage Level (ADL) and Perceived Risk Level (PRL). Aviation safety events are classified in accordance with Table 1. More information is available in the DASM or on the DFSB intranet site.

Event Classification	Description
Class A	PIL of fatal ADL of destroyed
Class B	PIL of serious 3ADL of Substantial PRL of High or Very High
Class C	PIL of minor ADL of Moderate PRL of Medium
Class D	PIL of No Injury ADL of No Damage/Minor Damage PRL of Low or Very Low

Table 1: Event Classification

vii. Developing processes to monitor the health of the aviation safety reporting system. DFSB monitors the aviation safety reporting system through internal mechanisms, including daily review of aviation safety reports and periodic research activities to examine specific features of the system, such as usability and data quality.

2. Safety data collection and processing. DFSB has established and maintains safety data collection and processing systems to capture, store, and aggregate and thence enable the analysis/exchange of safety data and safety information. Safety data refers to a defined set of facts or set of safety values collected from proactive or reactive safety related activities. Safety information is created when the data has been processed, organised, integrated and analysed in a given context. DFSB collects and manages safety data and information from:

i. DFSB safety investigations.

Superseded

ii. Aviation safety reports and investigations from within the organisation's safety management systems and provided to DFSB (primarily through ASR in Sentinel).

iii. Data collected by DFSB during the course of cultural surveillance activities (e.g. cultural surveys).

3. In addition to ASR in Sentinel, DFSB also maintains the following systems:

i. **Salus.** The DASA Salus application is designed to support the sharing, exchange and analysis of safety data within and between DASA and the Defence aviation community, with the goal of enhancing aviation safety. Salus is available on the DPE, and more information and guidance can be found on the DFSB intranet site. DFSB maintains a Salus service desk, at salus.servicedesk@defence.gov.au, to provide support and guidance to users.

ii. **Snapshot Survey.** The DFSB Snapshot Survey is an annual survey administered to personnel from Air Force, Army Aviation, Fleet Air Arm, Air Domain and other selected domains. The survey captures information on a broad range of issues that impact the safety, performance and overall health of the participating organisations. DFSB generates a range of tailored Snapshot reports targeting different levels of the organisation, and aims to provide information on the workgroups safety/organisational climate, benchmarked against other units. The reports allow commanders to track changes from one year to the next, identify risks, and assess the effectiveness of recent interventions. More information is available on the DFSB intranet site.

4. Joint Agency Aviation Safety Analysis Coordination Group (JAASACG). DFSB is also a member of the JAASACG, which facilitates the data analysis and reporting function under Australia's State Safety Program. Conducting safety data exchange and analysis through the JAASACG assists in maintaining strong stakeholder relationships and allows safety data to be shared and research and analysis efforts coordinated between Government Agencies to improve aviation safety.

5. **Analysis, Research and Review.** DFSB conducts a range of applied safety data analysis and research activities to inform DASA, the Defence Aviation Authority and the broader Defence aviation community. DFSB produces a range of products, including:

i. The DFSB Annual Review of Defence Aviation Safety Statistics, input to the Defence Annual Safety Annual Report, Safety Snapshot Culture Survey Reports, and supplementary reports as identified through ASRs and safety surveys.

ii. Support to command in the use of safety data systems, including guidebooks, service desk support, training databases, and training content for DFSB safety courses. These products are available on the DFSB intranet site.

iii. DFSB staff members attend a number of aviation safety, investigation, human factors and non-technical skills forums and conferences in order to provide internal learning opportunities, benchmarking against international and domestic military and civilian agencies, and to support industry wide learning.

iv. DFSB produce and support targeted human factors programs, primarily fatigue and non-technical skills related policy and guidance. These programs are

Superseded

described in the DASM, and through guidebooks and resources on the DFSB intranet site.

6. **Independent Investigation.** DFSB provides independent investigation and reporting of all accidents, selected incidents and selected systemic safety issues. This is achieved through:

   i. All Defence Aviation Class A and select Class B events are independently investigated by a DFSB Aviation Safety Investigation Team (ASIT) which reports directly to the Appointing Authority (AA). The AA is the designated commander at the appropriate level authorised to initiate and close aviation safety investigations. The DASM describes the appropriate levels and delegations. The ASIT operates under the procedural direction of DFSB.

   ii. DFSB investigations are functionally independent of the DASA regulatory directorates, and in general, of any other party of the entity that could conflict with, or influence, its objectivity.

   iii. The sole aim of a DFSB investigation is to prevent further occurrence and enhance safety outcomes through the identification and remediation of local and systemic deficiencies, and the improvement of risk controls. DFSB investigations do not apportion blame or liability.

   iv. DFSB investigations are conducted consistent with the international standards outlined by ICAO, and those described in the Australian Transport Safety Investigation (TSI) Act 2003. Given the unique nature and demands of military flying, a DFSB investigation may deviate from these provisions in such a manner that is considered necessary or appropriate under the specific circumstances. Additional guidance can be found in the DASM and on the DFSB intranet site.

   v. In the case of Class B events, DFSB may decide not to undertake the investigation, leaving the responsibility to the command chain. This decision will be made in consultation with the relevant environmental commander, and taking into account the safety implications of the event, the suitability of the event for investigation by DFSB and the breadth of lessons likely to be learned from the event.

   vi. DFSB provide specialist advice and support to aviation safety investigations undertaken within the command aviation Safety Management System.

   vii. A Class A or Class B Defence event that involves a civil (VH registered) aircraft could be subject to an investigation by the ATSB in accordance with the TSI Act 2003, their priorities and mandates for investigation. The carriage and conduct of the investigation will be negotiated through DFSB in accordance with the extant ATSB/DFSB MoU.

   viii. DFSB is responsible for the Defence Aviation Cockpit Voice Recorder (CVR) and Flight Data Recorder (FDR) download and analysis capability. DFSB Investigation team have the specialist skills and equipment to support this capability. Policy and guidance on download and analysis of the CVR and/or FDR is found in the DASM.

Superseded

ix. DFSB must be notified of all Class A and Class B events involving Australian Air Force Cadets (AAFC) in the course of their duties; however, all reporting and investigation resides within the AAFC's Aviation Safety Report system.

7. **Safety awareness, knowledge and action.** DFSB is responsible for fostering safety awareness, knowledge and action through promotional and education programs, and utilising the outcomes from safety analysis, research and investigative functions to influence organisational learning. This is achieved through a range of programs including:

i. **Aviation safety policy.** DFSB is responsible for the development and maintenance of key aviation safety policy, including the DASM, which supports the implementation of efficient and compliant aviation Safety Management Systems, and the Aircraft Accident WHS Manual to support the safety response to military aviation accidents and incidents.

ii. **Aviation safety training.** DFSB provides aviation safety reporting, investigation and safety data related education and training, through the provision of Aviation Safety Officer Initial and Advanced courses, Non-Technical Skills Trainer Course and the one-day Aviation Incident Investigation Course. DFSB is also responsible for the integration of aviation safety and non-technical skills content into the Defence training continuum.

iii. **Aviation safety awareness.** Through investigations, analysis of safety data, research reports and engagement with industry and military partners, DFSB identifies key lessons and safety issues. DFSB has a range of products and services to support the integration of those lessons into aviation safety policy and training, and to support positive organisational learning. These products include promotional materials, guidebooks and training materials and are available through the DFSB intranet site.

Superseded

Annex A - DoSA Qualifications, Training and Experience (QTE)

1. For platform related DoSA functions, having the following QTE will be considered as either required or highly desirable depending on the delegation scope.

    a. Bachelor or higher degree qualification in Aerospace, Aeronautical, Mechanical, Mechatronics, Electronics, Electrical and/or Software Engineering. (Qualifications should be Australian accredited or assessed to be equivalent to Australian qualification by Engineers Australia, the Australian Computer Society, or the Australian Institute of Project Management).

    b. Chartered Professional Engineer (CPEng) in the Institute of Engineers Australia (IEAust) or equivalent.

    c. Ten years of aviation experience. At least two out of the 10 years should be experience as staff of DASA, or an organisation holding a Design Organisation Approval under EASA, CASA, EMAR or DASR 21 Section A Subpart J—Military Design Organisation Approval.

    d. Undertaken DASR 21, M and 145 practitioner courses (or equivalent courses) and DASA Type Certification Course.

2. For a DoSA nominating for a Flight Test function, the following QTE is mandatory:

    a. Bachelor or higher degree qualification within the Science or Engineering field.

    b. Graduate of an Experimental Flight Test course (long course). A ‘long course’ requires a graduate from a minimum 10 month course by any of the following established Test Pilot schools:

        (1) Empire Test Pilot School.

        (2) U.S. Navy Test Pilot School.

        (3) U.S. Air Force Test Pilot School.

        (4) French Test Pilot School (EPNER).

        (5) National Test Pilot School.

        (6) International Test Pilot School (ITPS).

        (7) Indian Air Force Test Pilot School.

    c. Attained B-category Flight Test Aircrew or higher.

    d. Ten years of aviation experience, with at least five years of experience in categorised Flight Test.

3. For a DoSA nominating for a Flight Test function, the following additional QTE is desirable:

    a. Full member of the Society of Experimental Test Pilots or the Society of Flight Test Engineers.

    b. At least three years of experience in Capability Development.

    c. DASR 21 and Type Certification Practitioner Courses.

Superseded

4. For a DoSA nominating for an ATC Licencing function the following QTE is required:

   a. Hold or have held an ADF ATC Licence.

   b. At least 10 years' experience as a licenced air traffic controller (desirable).

Superseded

Annex B - Specific Functional DoSA Information and Reading

1. **Occurrence Report Assessment** (DASR 21, DASR M & DASR 145)

   - DASR
     - GR.40 – Occurrence Reporting
     - DASR 21 – Subpart A – General Provisions
     - DASR M – Subpart B – Accountability
     - DASR 145.A.60 Occurrence Reporting
   - DASA(I) IINV 03-001 – Assessment of Unsafe Conditions: U8629413
   - General awareness of ICAO requirements relating to reporting of faults, malfunctions and defects : reporting of faults, malfunctions and defects ICAO Doc 9760 – Airworthiness Manual
     - Part 3, Chapter 9.1-9.9
     - Part 5, Chapter 6.1-6.4

2. **Airworthiness Directives** (DASR 21 Subpart A)

   - DASR
     - DASR 21 – Subpart A – General Provisions
   - DASA(I) SAPROD 01-001 Management of Airworthiness Directives: U8620708
   - General awareness of ICAO requirements relating to Mandatory Continuing Airworthiness Information: ICAO Doc 9760 – Airworthiness Manual
     - Part 2, Chapter 1.4
     - Part 3, Chapter 9.1-9.9
     - Part 5, Chapter 6.5-6.9

3. **Flight Conditions and Military Permit to Fly (MPTF)** (DASR 21 Subpart P)

   - DASR
     - DASR 21 – Subpart P – Military Permit to Fly
   - AC 003/2017 DASR Implementation of Military Permit to Fly
   - DASA(I) SAPROD 01-008 Approve Flight Conditions and Issue Military Permit to Fly: U9376648
   - General awareness of ICAO requirements relating to the approval of special flights: ICAO Doc 9760 – Airworthiness Manual
     - Part 3, Chapter 5

4. **Flight Test (DASR Flight Test)**

Superseded

- In addition to “Flight Conditions and Military Permit to Fly (MPTF) (DASR 21 Subpart P)”:
- DASR
  - DASR FT – Flight Tests

5. Military Certificates of Airworthiness (MCoA) and Military Restricted Certificates of Airworthiness (MRCoA) (DASR Subpart H)

- DASR
  - DASR 21 – Subpart H – Military Certificates of Airworthiness
- DASA(I) SAPROD 01-002 Issue Military Certificate of Airworthiness: U8880433
- General awareness of ICAO requirements relating to registration and the issue of Certificate of Airworthiness: ICAO Doc 9760 – Airworthiness Manual
  - Part 3, Chapter 2
  - Part 3, Chapter 4

6. **Airworthiness Standards (DASR 21.A.16B)**

- DASR
  - DASR 21 – Subpart B – Military Type Certificate and Military Restricted Type Certificate
- General awareness of ICAO requirements relating to Type Certification: ICAO Doc 9760 – Airworthiness Manual
  - Part 2, Chapter 2.1-2.9
  - Part 3, Chapter 4.3
  - Part 3, Chapter 8.7

7. **Inspection of Compliance Demonstration Evidence (DASR 21.A.33) and Project**

- General awareness of ICAO requirements relating to Type Certification and authority involvement: ICAO Doc 9760 – Airworthiness Manual
  - Part 2, Chapter 2.1-2.

(h) **ATC Licencing (DASR ANSP.80)**

- DASR
  - DASR ANSP
- General awareness of ICAO requirements relating to ATC Licencing: Annex 1
  - Manual of Procedures for Establishment and Management of a State’s Personnel Licensing System (Doc 9379)
  - Manual on the Approval of Training Organizations (Doc 9841)

Superseded

- Procedures for Air Navigation Services — Training (Doc 9868,PANS-TRG).
- Human Factors Training Manual (Doc 9683).
- Manual on Air Traffic Control
- On-the-Job Training Instructor Competency-based Training and Assessment (Doc 10056, Volumes I and II)

- General awareness of CASA requirements relating to ATC Licencing:
  - CASR Part 65 – ATC Licencing
  - AC 065 – ATC Licencing

Superseded

4.1 DASA's Assure Functions

4.1.1 Introduction

4.1.1.1 The following sections describe how DASA carries out the independent safety assurance functions identified in Chapter 3 of Volume 1. These functions are described in simple terms as:

1. **Policy prescription and interpretation.** DASA prescribes and interprets policy for the management of Defence Aviation safety, inclusive of the Defence Aviation Safety Regulation (DASR) and related standards.
2. **Certification.** Issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR.
3. **Oversight and enforcement.** Conduct ongoing oversight and enforcement activities to assure compliance with the DASR and the continued validity of authorisations issued by DASA
4. **Safety promotion.** Promote Aviation Safety through education, training, and dissemination of safety information.

4.1.2 Policy Prescription and Interpretation

4.1.2.1 DASA is accountable to the Defence Aviation Authority to prescribe and interpret Aviation Safety management policy . This is fulfilled primarily through:

1. the promulgation and management of the Defence Aviation Safety Regulation and supporting standards
2. the provision of authoritative advice and guidance in relation to compliance with those regulations and standards.

4.1.2.2 DASA is required to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR' . In fulfilment of this responsibility, DASA prescribes and interprets the minimum safety requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

4.1.2.3 In prescribing design requirements for aircraft and aircraft-related systems, DASA recognises Airworthiness Codes issued by certain CAAs and MAAs and supplements these with additional requirements identified through ADF operational experience and/or CRE considerations. DASA periodically reviews prescribed requirements and assesses their continued applicability and suitability. Finally, DASA provides advice on the appropriateness of tailoring the prescribed requirements and the impact of non-compliance.

Superseded

4.1.3 Certification

4.1.3.1 DASA is accountable to the Defence Aviation Authority to 'issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR' . This activity is known as 'certification'. The various authorisations DASA issues are described in chapter 5.3.

4.1.4. Oversight and Enforcement

Introduction

4.1.4.1 The effectiveness of the Defence Aviation Safety Program (DASP) is underpinned by the suitability of, and the level of compliance with, the Defence Aviation Safety Regulations (DASR). Entities that operate within the regulatory framework seek to maintain compliance in two ways:

1. By developing and implementing organisational systems, supported by processes and instructions, that address the regulations

2. By developing feedback mechanisms to verify that the processes and instructions have been followed, and remain suitable for the purpose of meeting regulatory requirements.

4.1.4.2 Regulatory oversight contributes to aviation safety by identifying potential compliance concerns that may then be further evaluated, and addressed if necessary. Compliance with DASR also mitigates systemic and human errors that dominate hazardous safety events. Oversight is a systematic means of monitoring entities that operate within the regulatory framework for their level of understanding and observance of the regulatory system, as indicated by their policies and instructions and their adherence to them. A natural consequence of regulatory oversight is that it also provides insight into the suitability and effectiveness of the regulatory controls themselves, which is essential for their ongoing development.

4.1.4.3 A key component of an effective regulatory framework is ensuring that regulated entities have a clear understanding of when, why and how DASA may take action in the event of regulatory breaches or unresolved safety performance issues. The DASP enforcement policy supports compliance with the DASR through application of a consistent framework, and has been developed with due consideration of the Defence Aviation environment and associated Commonwealth legislation.

4.1.4.4 Accident and incident investigation also provides opportunity for oversight of compliance with required aviation safety processes and systems, as the structured means of determining and assessing the factors that led to the accident or incident should reveal any deficiencies regarding compliance with the DASR. However, accident and incident investigation is outside the scope of this chapter and further guidance can be found under chapter 4.4 Independent Investigative Capability.

Purpose

4.1.4.5 This chapter describes the principles that comprise the 'Oversight and Enforcement (O&E)' component of the DASP. This chapter applies to all entities regulated under the DASR, and any entity

Superseded

performing Defence Aviation functions that are regulated by a DASA-recognised Civil Aviation Authority (CAA) or Military Aviation Authority (MAA).

Regulatory Requirement

4.1.4.6 DASR GR.60 specifies regulated community compliance oversight and enforcement obligations; and requires all Defence, civilian and contractor entities operating within the Defence Aviation Safety regulatory framework to comply with the DASR. Regulatory compliance is subject to ongoing oversight at multiple levels within the framework, and results of the oversight are used to:

1. assure that regulated entities are complying with the DASR,
2. inform future DASR development, and
3. refine the processes and procedures that support implementation of the DASR.

4.1.4.7 Regulated entities are required to ensure that they comply with their applicable aviation safety processes and instructions. Ensuring compliance requires the systematic and routine review of organisational management elements, to assess compliance with the Authority's requirements relating to aviation safety. Each regulated entity should establish arrangements and processes, including a compliance review schedule, to ensure compliance with the DASR.

Oversight

4.1.4.8 Oversight is required to provide confidence to the Defence Aviation Authority (Defence AA) that Defence is executing Aviation operations safely, in accordance with legislated requirements. DASA's Oversight function is executed through the O&E operating model at Figure 1, which assists to define DASA's and regulated entities' obligations to effectively establish and maintain DASR compliance.

4.1.4.9 The model at Figure 1 is separated into an upper (forward-looking) cycle (i.e. DASR implementation) and a lower (DASA feedback) cycle. Both cycles must be effective in their own right for an effective regulatory outcome. This is achieved by mapping each element of the model to corresponding personal accountabilities, responsibilities, expected outcomes and associated DASA (and other local) policy.

Superseded

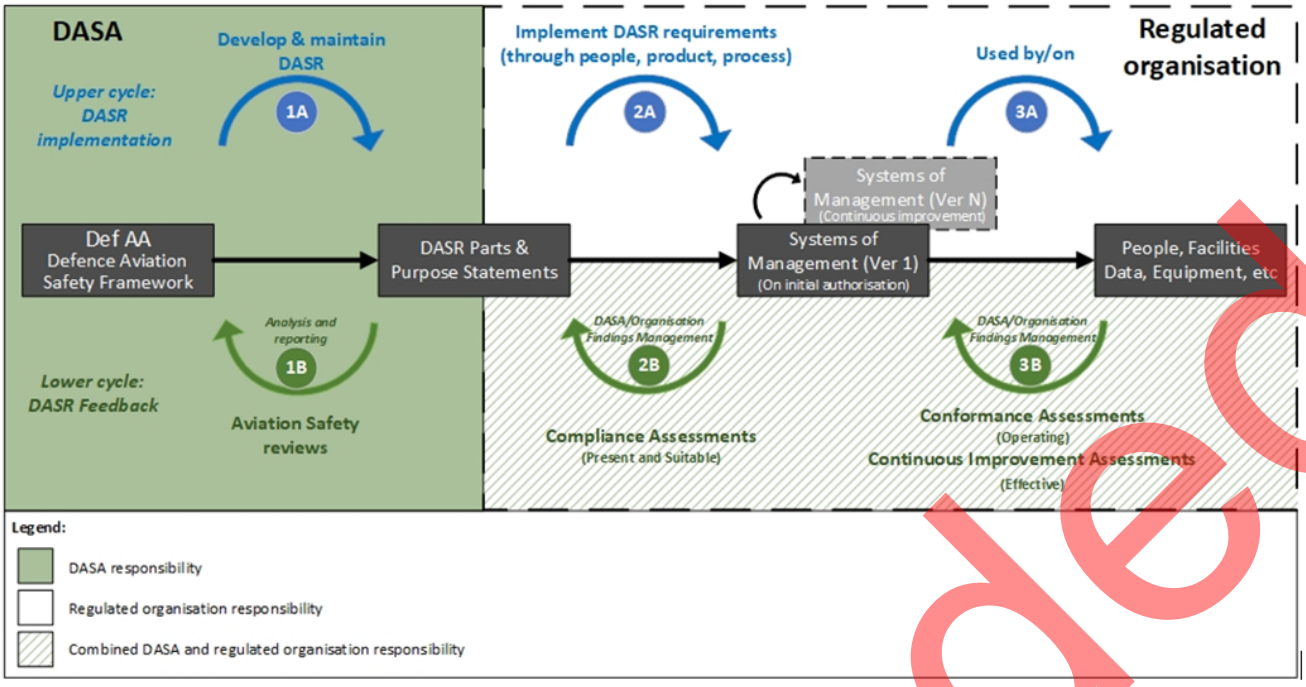


Figure 1: The Oversight and Enforcement operating model

4.1.4.10 **Operating model components.** The following model components apply:

1. **Implementation loop 1A** – Develop and maintain DASR. Refer DASPMAN Vol 1.

2. **Feedback loop 1B – Aviation Safety reviews.** Analysis and reporting on DASR compliance and safety intelligence is designed to provide senior decision makers, who have accountabilities under JD 21/2021, with a relative picture of DASP status, contemporary Aviation Safety issues, and an assessment of the aviation safety performance of regulated organisations. Issues raised can generate actions or be recommended for further monitoring. Reporting is achieved through the Defence Aviation Safety – Annual Report (refer section 2), and Airworthiness Boards (refer section 13).

3. **Implementation loop 2A – Implement DASR requirements.** Organisations subject to DASR are expected to implement locally-tailored and contextually-appropriate management systems to effectively comply with DASR. Systems are used to define any interaction of people, products (i.e. technology) and processes. However, outcomes from systems are rarely consistent, with their effectiveness continuously varying (e.g. through changes in local application context, staff churn and competencies, competing Service and organisational policies and priorities, etc). Entities are therefore expected to self-monitor and implement corrective actions as necessary.

4. **Feedback loop 2B – Compliance assessments.** Compliance assessments detect if documented management system meet required regulatory outcomes (i.e. 'Present' and 'Suitable' in the PSOE oversight construct—see below). DASA Findings document DASR non-compliances.

5. **Implementation loop 3A – Using documented management systems.** Once entities' documented management system are approved and promulgated (i.e. found to be DASR-compliant at the time of the DASA assessment), DASA expects the entity's staff, facilities, data, equipment etc to conform to that system[1].

Superseded

6. **Feedback loop 3B – Conformance and continuous improvement assessments.** Conformance assessments are designed to detect if staff, facilities, data, equipment, etc are conforming to the promulgated management system. By inference, if staff conform to DASA-approved systems, the organisation will remain compliant with DASR (i.e. 'Operating' in the PSOE oversight construct—see below). These assessments also look for local feedback data and safety intelligence that validate the documented management systems are effectively meeting DASR hazard control outcomes (i.e. 'Effective' in the PSOE oversight construct— see below).

4.1.4.11 **Present-Suitable-Operating-Effective (PSOE) model.** The PSOE Model was introduced into civil aviation with the release of ICAO Annex 19 Safety Management in 2013, defining outcome-based safety management requirements against the hazard of compromised Aviation Safety. Importantly, when ICAO Annex 19 was released, an ICAO sub-committee (the Safety Management International Collaboration Group – SMICG) published PSOE construct guidance, ICAO (2012) - SMICG Safety Management System Evaluation Tool), providing it as an effective Annex 19 oversight methodology. Specifically, the PSOE construct allowed assessment of regulated entities' maturity based on the effectiveness of hazard control implementation and incorporation of continuous improvement activities. The SMICG defined four progressive 'stages' of an entity's Safety Management System maturity (ie PSOE). In turn, defence has tailored these PSOE definitions (see section 5.4) to make them applicable to all DASR(not just SMS), due to the advantages the PSOE assurance methodology provides.

4.1.4.12 Oversight activities are conducted against defined PSOE criteria, by qualified staff; who should be substantially independent of the area being reviewed. A PSOE assessment is carried out through two very discreet activities—the Desk Top audit and an On-Site Performance Assessment—as follows:

1. **Desk top assessment.** The Desk Top assessment (for 'Present' and 'Suitable'), is an assessment of the entity's documented management system (i.e. the organisational approval basis) including Orders, Instructions and Procedures (OIP) that are used to comply with the relevant DASR. The Desk Top assessment gathers evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable' for the scope of the entity's authorisation.

2. **On-site assessment.** The on-site assessment (for 'Operating' and 'Effective') is carried out to provide assurance that the documented management system (i.e. the basis for the organisational approval) is operating as expected and effectively providing risk mitigation to the threats that the DASRs have been implemented to treat.

3. An on-site assessment can be conducted as part of an initial application for organisational approval or as part of an ongoing oversight program. The ongoing oversight program periodicity may be influenced by adopting a risk based approach for some organisations or operational activities influenced by safety intelligence information.

Enforcement

4.1.4.13 In addition to oversighting ongoing compliance with the DASR, DASA is also required to enforce the ongoing compliance of Defence Aviation organisations. The concept of enforcement within the DASP covers the following spectrum as outlined in Figure 2 below:

1. **Reinforcement** of requirements, through mechanisms which include providing education, updating regulatory material, and reinforcing positive behaviours.

Superseded

2. **Compelling** compliance, through the raising of DASR Findings or issuance of Directives.

3. **Deterrence** of ongoing operations with non-compliances through the suspension or removal of a DASR approval.

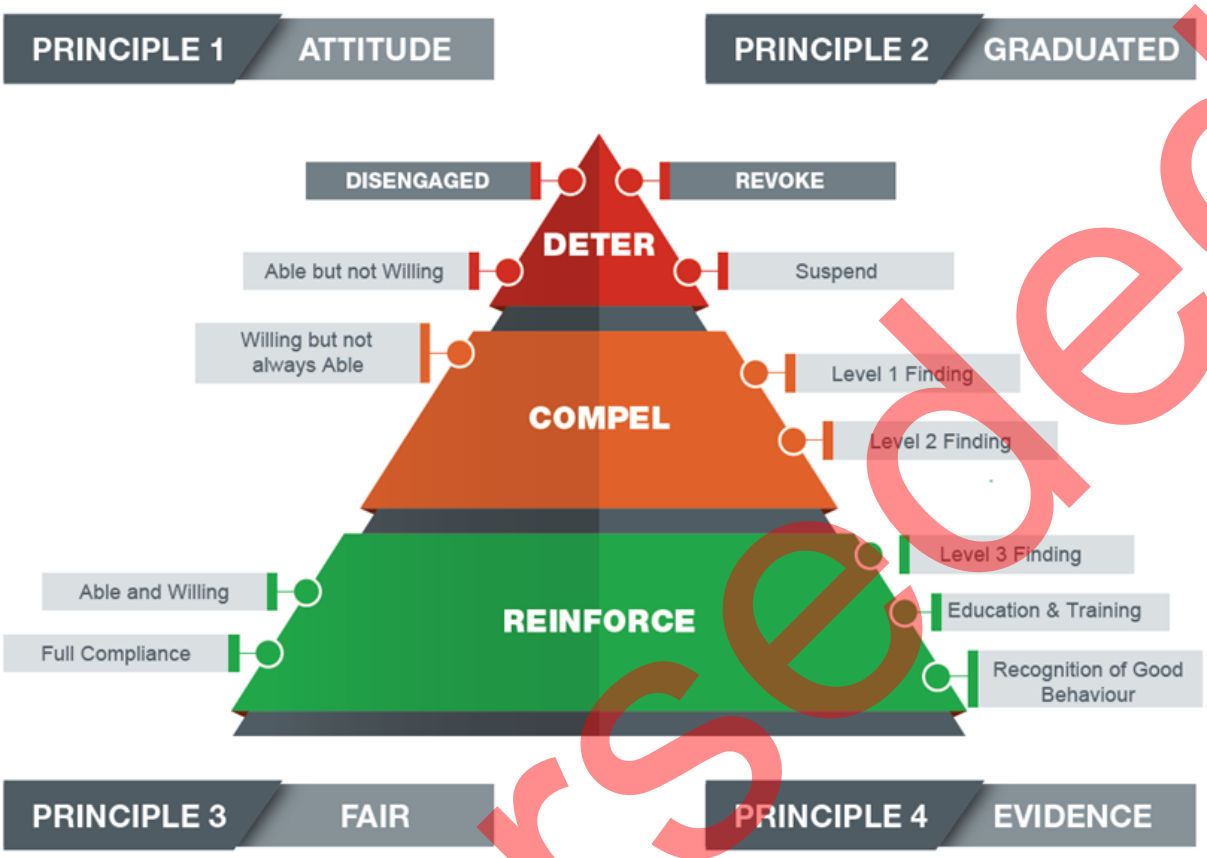

Figure 2: Enforcement Model

DASA Enforcement Principles

4.1.4.14 The DASA enforcement policy is founded on the following principles:

1. **Principle 1**: Enforcement shall consider organisations/operator attitudes.

   i. Enforcement will give due and equitable consideration to organisational attitudes and distinguish consistent or premeditated non-compliance, from non-compliance resulting from unintentional errors or deviations.

2. **Principle 2:** Enforcement action shall be graduated.

   i. Enforcement action shall commence at the lowest level commensurate with the increase in risk to aviation safety and willingness of the regulated entity to address the non-compliance, and should be escalated only when necessary to secure compliance.

   ii. The rate of escalation is cognisant of the underlying aviation safety risk, prior interaction between DASA and the non-compliant entity, and the entity's motivation and capacity to comply with the regulations.

3. **Principle 3:** Enforcement action shall be fair and proportionate.

Superseded

i. Full details of the nature of the non-compliance will be disclosed, along with supporting evidence.

ii. The response to the non-compliance will be proportionate to the identified breach and the increased risk to aviation safety.

iii. Enforcement action will relate directly to the non-compliance and associated increase in safety risk.

iv. In the interests of procedural fairness, regulated entities will be afforded the opportunity to review and respond to an identified non-compliance prior to enforcement action being initiated.

4. **Principle 4:** Enforcement decisions shall be independent and evidence based.

i. Enforcement decisions will be independent, transparent and underpinned by objective evidence.

ii. Enforcement decisions will not be influenced by personal, political, capability or financial considerations.

Proportionate and Graduated response

4.1.4.15 The key factors influencing a DASA decision to escalate an enforcement action include:

1. the nature, seriousness and extent of the non-compliances, including the safety implications and the intent (if applicable) of the non-compliances;

2. the willingness of the organisation to address the non-compliances and ensure that they are not systemic;

3. the nature and sufficiency of available objective evidence of the non-compliances;

4. the action required to effectively and efficiently address the aviation safety risks that have been identified or are likely to arise;

5. the need to obtain expert assistance on a complex technical or operational issue, including legal advice;

6. the obligation to be fair, consistent, impartial and proportional in taking enforcement action.

4.1.4.16 While imposing a sanction that suspends or revokes an entity's approval is a real and credible course of action, as part of a graduated response to serious and/or continuing non-compliances, this may not always be in the interests of the Service. If DASA is considering an unscheduled act of limiting, suspending or revoking an entity's approval, the relevant Environmental Commander or Group Division Head is to be consulted before any proposed sanction that suspends or revokes an entity's approval is imposed. This level of consultation is not required where a scheduled revocation takes place, for example removal or amendment of an organisational approval after an aircraft type is withdrawn from service.

Coordination with external bodies

4.1.4.17 In certain circumstances, DASA may identify a regulatory breach or safety concern that falls under the jurisdiction of an external CAA or MAA. If this occurs, DASA will consult with external

Superseded

agencies as necessary, to ensure a coordinated approach to any enforcement or remedial action is undertaken.

4.1.5 Promote Aviation Safety

Introduction

4.1.5.1 The Defence Aviation Safety Authority (DASA) is responsible to the Defence Aviation Authority (Defence AA) for enhancing and promoting Aviation Safety through the implementation of a Defence Aviation Safety Program (DASP). The DASP promotes safety awareness and the sharing and exchange of safety information with the aviation community to foster the maintenance and improvement of safety; to support the development of a generative safety culture; and to assure the effective management of aviation safety risks.

4.1.5.2 The second function of the Defence Aviation Safety Program (DASP) is 'Promote Aviation Safety'. This function comprises the following elements:

1. Aviation Safety promotion and dissemination of safety information

2. education, training and communication.

4.1.5.3 While Function 2 of the DASP explicitly directs 'promotion', all five functions require engagement with stakeholders. DASA cannot implement these functions in isolation. Ongoing engagement with stakeholders internal, external to the Authority, internal and external to Government is required to improve aviation safety outcomes and support capability.

Aviation Safety Promotion and Dissemination of Safety Information

4.1.5.4 A key tenet in promoting Aviation Safety is the two-way communication flow of safety information. Aviation Safety promotion can take many different forms, and cover a wide spectrum of activities— from dissemination of general information on Aviation Safety, to visits by DASA personnel. In either case, the establishment and management of relationships is paramount.

4.1.5.5 Figure 1 details the regulatory model, which includes DASA and the Defence Aviation Community. DASA uses its Engagement and Promotion Strategy to 'manage relationships' between the two entities.

Superseded

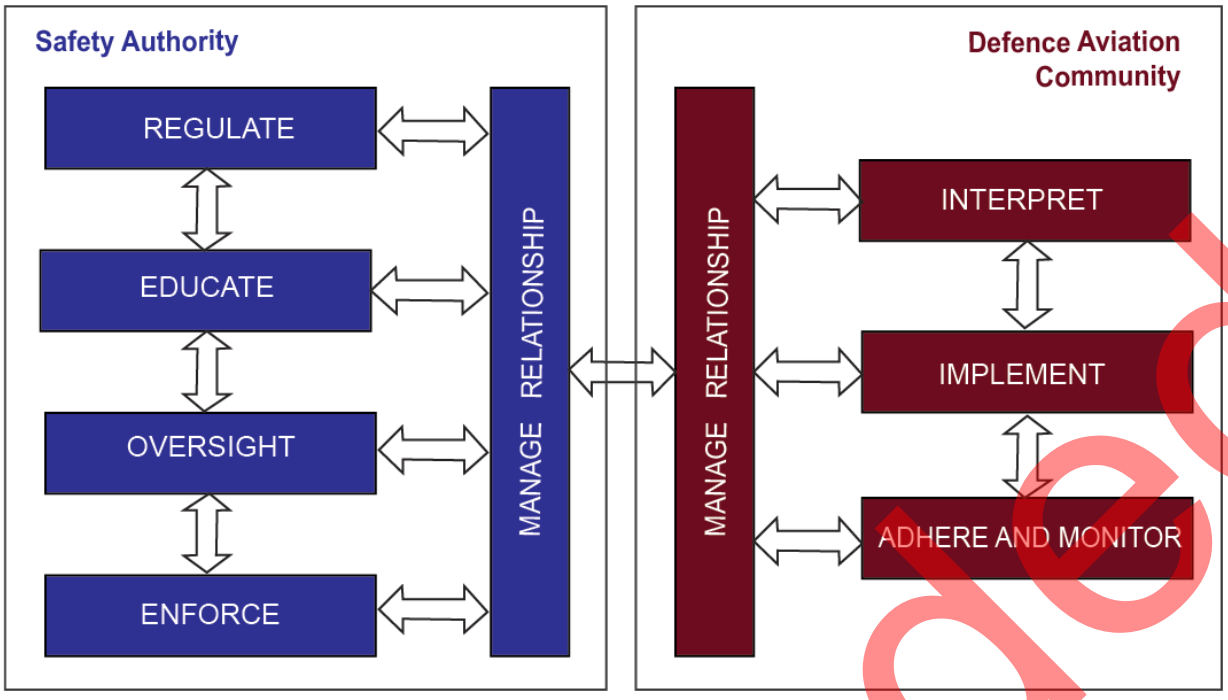

Figure 1: The Regulatory Model

4.1.5.6 The 'promoting Defence Aviation Safety through education, training and dissemination of safety information' function employs a number of strategies to disseminate Aviation Safety information, including:

1. participation in dedicated safety stand-down days
2. publication of safety and regulatory magazines, (i.e. Spotlight)
3. sponsoring conferences and convocations
4. Defence Aviation Authority (Defence AA) safety messages
5. publishing the Defence Aviation Safety - Annual Report (DAS-AR)
6. maintaining safety information recording and analysis systems, such as Sentinel and Salus
7. posting safety information, such as Defence Aviation Safety Regulation (DASR) awareness briefs on the DASA web site
8. visits by DASA personnel.

4.1.5.7 Of particular importance is the ability to disseminate safety information in a timely manner, particularly in response to investigation of an accident or serious incident. The DASP provides several ways for DASA to disseminate urgent safety information, enabling the selection of the most appropriate way, cognisant of the specific circumstances.

Superseded

4.1.5.8 Visits by DASA personnel to regulated entities are also an important means of promoting Aviation Safety and disseminating aviation safety information— providing the opportunity to discuss particular safety aspects in detail.

Education and Communication

4.1.5.9 All personnel within the Defence Aviation sector, who undertake or directly support aviation activities, should receive sufficient education to provide a general understanding of Aviation Safety. Commensurate with each person's aviation safety responsibilities, they should receive further safety education. The DASA sponsors a wide range of Aviation Safety regulatory and technology training courses that personnel may nominate to attend.(see www.defence.gov.au/DASP/Training/Default.asp)

4.1.5.10 In addition to delivering and sponsoring Aviation Safety education, DASA also facilitates a number of opportunities for two way dialogue on Aviation Safety, including:

1. continuation training programs
2. DASA Newsbreak
3. DASA workshops
4. international visits to, or by, other regulators/safety bureaus or equivalent organisations
5. conferences and symposiums
6. regulated community forums
7. Airworthiness Boards and convocations
8. audits.

4.1.5.11 Commanders and managers within the Defence Aviation sector should encourage their personnel to take maximum advantage of the opportunities afforded to discuss Aviation Safety. Additionally, personnel should endeavour to further their Aviation Safety knowledge through the various means currently available. Members of the regulated community should advise DASA of opportunities to improve Aviation Safety communication so that DASA may consider implementing appropriate improvements.

4.2 DASA's Ensure functions

4.2.1 Introduction

4.2.1.1 DASA carries out two ensure functions in direct support of the management of Aviation Safety by the Defence aviation community:

Superseded

1. provision of aviation safety management system products and services
2. provision of structural integrity engineering product and services.

4.2.2 Aviation Safety Management System Products and Services

(Reserved)

4.2.3 Structural and Propulsion System Integrity Centre of Expertise (CoE) Services

Introduction

4.2.3.1 The Directorate of Aviation Engineering (DAVENG) has a mandate to support Commanders to ensure structurally-airworthy platforms, and is the Defence Centre of Expertise (CoE) for Aircraft Structural Integrity Programs (ASIPs), Propulsion System Integrity Programs (PSIPs) and Non-Destructive Testing and Composite Technologies (NDT&CT).

4.2.3.2 In this capacity, DAVENG supports associated organisations with specialist advice, design services and training in these fields to maximise Defence capability. DAVENG also provides stewardship of sovereign capability initiatives and input into relevant policy frameworks.

4.2.3.3 For the avoidance of doubt, these services are provided by DAVENG in a separate capacity to the DASA Functions described in Chapter 4.1.

Aircraft Structural Integrity (ASI) and Propulsion System Integrity (PSI) and Services

4.2.3.4 **ASI and PSI CoE Services.** DAVENG supports the Defence ASI and PSI community with the following services:

1. advice on ASIP and PSIP establishment and execution
2. advice to CASG on ASIP and PSIP-related contracting and governance
3. CoE review of ASIP and PSIP products and outputs on behalf of CASG
4. technology specialist advice, such as supporting risk assessments
5. where appropriate, and when agreed, coordination and management of major ASI / PSI issues or tasks on behalf of CASG
6. support to Defence ASIP and PSIP policy artefacts on behalf of Capability Managers and CASG.

4.2.3.5 **SI Sovereign Capability Stewardship.** The SI Sovereign Capability encompasses the specialist technical capabilities that come to bear for critical and high-value SI activities where sovereign oversight and/or indigenous solution development is required to ensure Defence objectives are met. Under their Defence SI CoE capacity, DAVENG stewards the SI Sovereign Capability initiative, and chairs the Capability Management Board advocacy and governance forum. More information on the SI Sovereign Capability initiative and governance is available in the SI Sovereign Capability Strategy document, which can be provided by DAVENG to relevant parties upon request.

Superseded

4.2.3.6 **Training Courses.** DAVENG sponsors the following three specialist courses:

a. ASI Familiarisation Course

b. Helicopter Structural Engineering Familiarisation Course

c. Propulsion Systems Engineering Familiarisation Course.

4.2.3.7 These three practitioner courses include components intended to teach ASI and PSI fundamentals and best practice, as well as components intended teach how ASI and PSI programs support DASR compliance.

NDT Appointments, Training, Certification and Authorisation

4.2.3.8 **ADF NDT Responsible Level 3 Appointment.** DASR 145.A.30(f) requires DASR 145 Maintenance Organisations (MOs) to appoint an NDT Responsible Level 3 (RL3) as the management position responsible for implementing a training and certification system compliant with European standard EN4179 Qualification and approval of personnel for non-destructive testing (refer DASP Manual Volume 3 Chapter 8.3.2).

4.2.3.9 To ensure all ADF Non-Destructive Inspection Technicians (NDITECHs) are trained to the same level of competency and to avoid the burden of each ADF DASR 145 MO appointing their own NDT RL3 and establishing NDT training and certification frameworks, DAVENG performs the Defence NDT RL3 function and manages all NDT training and certification activities for ADF members, Department of Defence employees and other staff members working within ADF DASR 145 MOs. The Director of Aviation Engineering appoints a suitably qualified senior NDITECH to be the Defence NDT RL3, with that individual approved by the DASA as a Form 4 Holder.

4.2.3.10 **ADF DASR 145 MO NDT Certification Framework.** ADF DASR 145 MO Quality Managers are responsible for ensuring that staff conducting NDT are certified by the Defence NDT RL3 (or delegate) before being authorised to certify maintenance. This includes:

1. staff who have obtained training from external training providers or third parties

b. external Industry or Contracted service providers working in an ADF DASR 145 MO.

4.2.3.11 In order to support ADF DASR 145 MOs, the Defence NDT RL3 maintains a NDT training and certification system (both initial and ongoing training / certification) that meets Defence's needs and complies with DASR 145.A.30(f) requirements.

4.2.3.12 **ADF DASR 145 MO Authorisation of NDT Staff.** DASR 145.A.30(f) requires personnel who conduct NDT be certified in accordance with EN4179. Under Defence's NDT certification system, the process followed is:

a. the Defence NDT RL3 (or delegate) ***certifies*** the technician as meeting the requirements of EN4179 for the applicable NDT method or technique, and subsequently,

b. the MO Quality Manager (or delegate) ***authorises*** the technician to conduct NDT maintenance within the scope and validity of the NDT certification.

4.2.3.13 The Defence NDT RL3 (or delegate) will issue Certification records via PMKeyS proficiencies (primary system) or a Minute. ADF DASR 145 MOs are to check the scope and currency of NDT proficiencies on PMKeyS prior to authorising staff to perform NDT. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiencies.

Superseded

4.2.3.14 **Additional Information.** More detailed information on NDT training and certification services provided by DAVENG, including training courses and frequently asked questions, is available on the DASA NDT&CT Website.

NDT Engineering Services

4.2.3.15 DAVENG NDT&CT Engineering Section develops NDT procedures, inclusive of introducing new NDT technologies, in support of ADF capability requirements. Engineering Section provides the following services to ADF units and ADF support contractors:

1. development of DASA approved NDT Instructions for Continuing Airworthiness (ICA), including:
    i. platform specific procedures
    ii. NDT general procedures (AAP 7002.043-36)
2. CoE NDT advice on the selection of appropriate NDT techniques
3. assistance with the introduction of new NDT technologies in support of ADF capability requirements
4. testing and evaluation of NDT support equipment for introduction into the Defence inventory
5. technical review of platform-specific NDT publications and associated procedures
6. NDT Information Review (IR) of standards, practices and equipment
7. provision of other NDT CoE advice
8. manufacture of certified NDT reference standards.

Composite Repair Training and Certification

4.2.3.16 **ADF DASR 145 MO Composite Repair Certification Framework.** Personnel who conduct composite repairs must be trained and certified in accordance with SAE AIR4938 - Composite and Bonded Structure Technician Specialist Training Document (refer DASP Manual Volume 3 Chapter 8.3.2). On behalf of all ADF DASR 145 MOs, DAVENG conducts the training and certification (including re-certification) for all personnel who perform composite repairs. DAVENG staff issue the PMKeyS proficiency P124689 *Composite & Adhesive Bonding Recertification* upon successful completion of training requirements.

4.2.3.17 **ADF DASR 145 MO Authorisation of Staff to Conduct Composite Repair.** MO Quality Managers (or delegates) are responsible for verifying that technicians hold a valid PMKeyS proficiency for composite repair prior to authorising them to conduct composite repairs within an ADF DASR 145 MO. MO authorisations should only remain valid for the validity period of the applicable PMKeyS proficiency.

4.2.3.18 **Additional Information.** More detailed information on Composite Technology training and certification services provided by DAVENG, including training courses, is available on the DASA NDT&CT Website.

Superseded

4.3.1 Introduction

4.3.1.1 This section provides a description of Delegates of the Safety Authority (DoSA), their purpose, selection and scope of delegations.

Purpose

4.3.1.2 A DoSA is an individual who has been formally delegated a DASA responsibility (Letter of Delegation) by DG DASA and is considered an agent of the DASA when exercising that delegation. Delegations may cover general assurance function carried out by the Authority (such as Occurrence Report assessments or standards interpretation) or provision of DASA authorisations such as a Military Permits To Fly (MPTF). In all instances, the delegation scope must be linked to an explicit DASR obligation of DASA.

4.3.1.3 A DoSA performs assurance activities and critical roles that extend the competence and capacity of the DASA. DoSAs are placed within the aviation community to provide greater access and insight to regulated entities or activities. DoSA delegation scope varies, but is invariably linked to the role of an incumbent. This role may be as a senior engineer, test pilot and/or subject matter expert (SME) related to a specific platform or regulatory domain providing in-depth knowledge to support aviation safety assurance. When in proximity to the regulated entity a further benefit is realised with greater education and promotion for the organisation and DASA 'eyes and ears' in the field.

4.3.2 Selection

4.3.2.1 DoSA applicants are suitable for nomination by virtue of the roles they fill within the aviation community as senior members within their domain. Nomination for a DoSA is via a Form 104 submitted to the DASA Registry. Within Form 104 the member identifies the need, and the qualification, training and experience (QTE) that enables them to perform the role relevant to the scope of delegation being awarded. For each type of DoSA role, there are mandatory requirements that the nominee must meet. Annex A contains a baseline set of generic QTE requirements.

4.3.2.2 DASA staff will assess nominated DoSAs through a standard process to assess their suitability and provide a recommendation to DG DASA. The assessment process will usually involve two interviews; the first a preliminary interview to broadly assess an individual's suitability to execute delegated authority functions, and a final interview with DG DASA to confirms the skills, knowledge and attitude of the applicant. If suitable, DG DASA will authorise a delegation to the individual.

4.3.2.3 A DoSA delegation is issued in the form of a letter directly from DG DASA. Delegates are provided an induction pack containing foundational information and are supported under the DASA Business Management System as a member of the DASA. Delegations are generally awarded to nominees filling a specific role. Upon leaving the position in which DoSA was awarded, eg formal posting, the members delegations are rescinded. In exceptional circumstances, extensions may be negotiated directly with DG DASA, via the applicable DASA directorate. DASA may amend or revoke a delegation at any time at the discretion of DG DASA.

Superseded

4.3.3 Scope

4.3.3.1 The scope of duties and responsibilities of the DoSA depends on the capacity in which they have been delegated. The following list the categories functions delegated:

1. Occurrence Report Assessment for specific functions related to DASR 21, DASR M and DASR 145
2. Airworthiness Directives (AD) for specific functions related to DASR 21 Subpart A
3. Military Permit To Fly (MPTF) for other than flight test, including flight conditions, for specific functions related to DASR 21 Sub-part P
4. MPTF for flight test, including flight conditions, for specific functions related to ASR 21 Sub-part P
5. Military Certificate of Airworthiness (MCoA) for specific functions related to DASR 21 Sub-part H
6. Airworthiness Standards for specific functions related to DASR 21.A.16B
7. Other categories as considered necessary by the DASA for effective management of aviation safety.

4.3.3.2 The current classes of DoSA are:

1. **Platform DoSA:** A Platform DoSA has the widest scope of functions and may include assurance of Military Type Certificate Holder (MTCH) actions with respect to reportable occurrences, issue of MCoAs, approval of flight conditions and issue of Airworthiness Directives. The Platform DoSA is ostensibly delegated to the incumbent CENGR of the platform MTCH organisation and provides assurance in the DASR Part 21 Initial Airworthiness domain.

b. **Flight Test DoSA:** A Flight Test (FT) DoSA has a scope of functions that are relevant to assuring the safety parameters within the DASR Part 21, Subpart P Flight Test domain. Their function is to provide assurance through the approval of operational flight conditions specifically for Flight Test activities and issue of MPTF authorisations. Flight Test DoSAs will invariably have the qualifications, training and experience (QTE) of Flight Test qualified aircrew relevant to certain platforms and will provide the function as part of their position within Flight Test organisations.

c. **Standards DoSA:** A Standards DoSA has a scope of function relevant to a specific technology/design discipline domain. They perform the prescribe and interpret airworthiness design requirements and standards function for their assigned technology, and provide advice to command on the management of risk associated with non-compliance to the prescribed airworthiness design requirements. Standards DoSAs have been established to cover Aeronautical Life Support Equipment (ALSE), Air Navigation Services (ANS) and Aerial Delivery technologies, and are delegated to SMEs posted to the unit charged with managing these technologies.

d. **Training DoSA:** A Training DoSA has a scope of function to assure that the content delivered in DASR 147 Maintenance Training Organisations is suitable to meet the requirements of DASR 66 licensing.

Superseded

e. **Licencing DoSA - ATC:** An ATC Licencing DoSA has a function relevant to the assurance that persons issued with a licence meet the specific requirements and are suitably qualified and experienced to perform licenced air traffic control functions.

f. There may be requirements/opportunities for other DoSA roles in the future, such as in Aircraft Type Certification. These will be identified and documented when implemented.

4.3.3.4 The concept of a Project DoSA has been discontinued since the scope was not linked to exercising any explicit DASR obligations. Notwithstanding this, the incumbent Project Engineering Manager (PEM) is required to have a comprehensive understanding of initial and continuing airworthiness DASR in order to ensure project acquisition activities enable the issue of appropriate and timely DASA authorisations, and subsequent handoff to the gaining MTCH and Continuing Airworthiness Management Organisation (CAMO).

4.3.3.5 For each class of DoSA, there are certain QTE requirements that the nominee must possess or have achieved. More information on the QTE and mandatory requirements of each DoSA will be provided through the nomination process. DASA will also endeavour to support additional training where possible to assist in the execution of the duties of the DoSA. DASA convenes a DoSA convocation to induct new DoSAs, discuss topical DoSA subjects and implement changes applicable to their duties.

4.3.3.6 When exercising their delegation, a DoSA is undertaking this function as part of the DASA, using DASA authorised procedures. Annex B contains specific functional DoSA information and reading. Whilst performing duties under the DoSA capacity, the DoSA is subject to internal DASA process audits in how they execute the functions specific for their scope.

4.3.4 DoSA Independence and Reporting

4.3.4.1 A critical safety feature of the Defence Aviation Safety Program (DASP) is the separation between assuring and ensuring aviation safety through the application of the DASP. Given nominated individuals may be performing tasks that ensure Aviation Safety in their primary employment role, there is a natural concern for a conflict with their DoSA role of *assuring* Aviation Safety. In their capacity as DoSA, it is important that they are able to maintain objectivity (without undue pressure), evaluate their independence, have adequate time to exercise the delegation and maintain conscious awareness that the individual is representing DASA when exercising the delegation.

4.3.4.2 Where instances arise that the DoSA has been part of a decision that ensures aviation safety in their regulated community role, it is possible that their independence to assure aviation safety for the same issue is compromised. The DoSA is expected to have a level of competence and judgement to remove themselves from the assurance role and advise DASA.

4.3.4.3 Where the DoSA identifies conduct or behaviours in the regulated community that may represent DASR non-compliances, non-conformances or where associated hazards and risk are not being eliminated or minimised SFARP, the DoSA is expected to notify DASA of their concerns. DG DASA enables the DoSA to inform their office directly where the nature of the conduct is serious. It is important to note that the DoSA role only provides 'in the field' oversight/awareness and the DoSA is not expected to execute DASA enforcement policy, which remains the duty of the relevant DASA Directorate staff responsible for that oversight and enforcement.

Superseded

Annexes:

(a) DoSA Qualifications, Training and Experience (QTE)

(b) Specific Functional DoSA Information and Reading

4.4 Independent Investigative Capability

4.4.1 Introduction

4.4.1.1 Joint Directive 21/2021 The Defence Aviation Safety Framework directs DASA to establish an independent investigative capability aligned to ICAO standards and recommended practices (SARPs). This capability is provided by the Defence Flight Safety Bureau (DFSB) within DASA. This chapter describes how DFSB meets the responsibilities described in the Defence Aviation Safety Program Manual Volume 1 Requirements for the DASP.

4.4.1.2 Annex 13 Aircraft Accident and Incident Investigation to the Convention on International Civil Aviation, requires that the accident investigative authority be independent from State aviation authorities and other entities that could interfere with the conduct or objectivity of an investigation. Director DFSB is accorded specific responsibilities and the power for autonomous action outside both DASA and the command chain to directly report matters of concern to the Defence Aviation Authority (Defence AA). DASP Manual Volume 1 details DFSB's functional independence of DASA Directorates and powers for autonomous action outside of DASA and the command chain.

4.4.1.3 DFSB and the Australian Transport Safety Bureau (ATSB) have a Memorandum of Understanding (MoU) for cooperation relating to transport safety investigation. The MoU deals with mutual assistance, sharing of expertise, mutual training opportunities, joint and parallel investigations, and the participation by members of either organisation in investigations carried out by the other organisation. The MoU is available on the DFSB intranet site.

4.4.1.4 DFSB is also responsible for promoting and enhancing aviation safety, which requires more than policy and processes. DFSB recognises the complex social and cultural work environments within the Defence aviation community, and works to positively influence safety attitudes and behaviours.

4.4.2 Functions of DASA-DFSB

4.4.2.1 In accordance with DASP Manual Volume 1, DFSB is responsible for a number of functions in support of both retrospective investigation of Defence accidents and incidents and proactive approaches to preventing military accidents and enhancing flight safety. These functions are:

1. **Aviation safety reporting framework.** DFSB maintains the Defence Aviation safety reporting framework by:

   i. Developing and maintaining the Defence Aviation safety reporting system. DFSB meets this requirement through the management of the Defence Corporate Safety Reporting Tool: ASR in Sentinel. ASR in Sentinel provides a closed loop process for the reporting, investigation, tracking and review of aviation safety events and issues. Sentinel is available to all Defence aviation personnel with access to the 3Defence Protected Environment (DPE). DFSB

Superseded

maintains an ASR Service desk, at asr.servicedesk@defence.gov.au or (02) 5130 7704 to provide ASR related support to the Defence aviation community.

ii. Developing and maintaining the appropriate documentation to define the reporting framework. The Defence Aviation Safety Manual (DASM) defines the reporting framework, including reporting and notification requirements, categorisation and classification of aviation safety events, and types of reporting. Additional guidance material is available on the DFSB intranet site.

iii. Establishing a confidential reporting scheme to enable confidential reporting of issues that effect, or might effect, aviation safety. DFSB provides and maintains a confidential reporting system that allows individuals to report aviation safety issues or concerns where they are unwilling to use the normal aviation safety reporting system for fear that they may be disciplined, ridiculed or otherwise disadvantaged if they do so. The DASM provides policy and guidance on confidential reporting. Individuals can report via email directly to Dir DFSB or through the link on the DFSB intranet site.

iv. Defining notification requirements and mechanisms (immediate and routine) for aviation safety reports. Notification requirements and mechanisms are defined in the DASM, and guidance is provided on the DFSB intranet site. All aviation safety events and issues must be reported into ASR in Sentinel, or through the offline ASR form AE774. Immediately reportable matters (as defined in the DASM) must be notified to the DFSB Duty Officer on (02) 6144 9199.

v. Defining taxonomies to facilitate safety information exchange that are compatible with the ICAO Accident/Incident Data Reporting system and broadly aligned with those of the Australian Transport Safety Bureau (ATSB). DFSB has embedded the aviation safety reporting taxonomies within ASR in Sentinel. More information is available on the DFSB intranet site. DFSB also manages the Aviation Safety Intelligence Portal, Salus, which supports the sharing, exchange and analysis of safety data within Defence, and between DFSB and the ATSB. The MoU (referenced in para 3) further supports alignment of safety reporting and information exchange.

vi. Defining the classification system for aviation safety reporting. The classification system for aviation safety reporting in Defence is described in the DASM. Aviation safety events are defined by both realised and potential consequences with reference to Personal Injury Level (PIL), Aircraft Damage Level (ADL) and Perceived Risk Level (PRL). Aviation safety events are classified in accordance with Table 1. More information is available in the DASM or on the DFSB intranet site.

Event Classification	Description
Class A	PIL of fatal ADL of destroyed
Class B	PIL of serious 3ADL of Substantial

Superseded

	PRL of High or Very High
Class C	PIL of minor ADL of Moderate PRL of Medium
Class D	PIL of No Injury ADL of No Damage/Minor Damage PRL of Low or Very Low

Table 1: Event Classification

vii. Developing processes to monitor the health of the aviation safety reporting system. DFSB monitors the aviation safety reporting system through internal mechanisms, including daily review of aviation safety reports and periodic research activities to examine specific features of the system, such as usability and data quality.

2. Safety data collection and processing. DFSB has established and maintains safety data collection and processing systems to capture, store, and aggregate and thence enable the analysis/exchange of safety data and safety information. Safety data refers to a defined set of facts or set of safety values collected from proactive or reactive safety related activities. Safety information is created when the data has been processed, organised, integrated and analysed in a given context. DFSB collects and manages safety data and information from:

   i. DFSB safety investigations.

   ii. Aviation safety reports and investigations from within the organisation's safety management systems and provided to DFSB (primarily through ASR in Sentinel).

   iii. Data collected by DFSB during the course of cultural surveillance activities (e.g. cultural surveys).

3. In addition to ASR in Sentinel, DFSB also maintains the following systems:

   i. **Salus.** The DASA Salus application is designed to support the sharing, exchange and analysis of safety data within and between DASA and the Defence aviation community, with the goal of enhancing aviation safety. Salus is available on the DPE, and more information and guidance can be found on the DFSB intranet site. DFSB maintains a Salus service desk, at salus.servicedesk@defence.gov.au, to provide support and guidance to users.

   ii. **Snapshot Survey.** The DFSB Snapshot Survey is an annual survey administered to personnel from Air Force, Army Aviation, Fleet Air Arm, Air Domain and other selected domains. The survey captures information on a broad range of issues that impact the safety, performance and overall health of the participating organisations. DFSB generates a range of tailored Snapshot reports targeting different levels of the organisation, and aims to provide information on the workgroups safety/organisational climate, benchmarked

Superseded

against other units. The reports allow commanders to track changes from one year to the next, identify risks, and assess the effectiveness of recent interventions. More information is available on the DFSB intranet site.

4. Joint Agency Aviation Safety Analysis Coordination Group (JAASACG). DFSB is also a member of the JAASACG, which facilitates the data analysis and reporting function under Australia's State Safety Program. Conducting safety data exchange and analysis through the JAASACG assists in maintaining strong stakeholder relationships and allows safety data to be shared and research and analysis efforts coordinated between Government Agencies to improve aviation safety.

5. **Analysis, Research and Review.** DFSB conducts a range of applied safety data analysis and research activities to inform DASA, the Defence Aviation Authority and the broader Defence aviation community. DFSB produces a range of products, including:

   i. The DFSB Annual Review of Defence Aviation Safety Statistics, input to the Defence Annual Safety Annual Report, Safety Snapshot Culture Survey Reports, and supplementary reports as identified through ASRs and safety surveys.

   ii. Support to command in the use of safety data systems, including guidebooks, service desk support, training databases, and training content for DFSB safety courses. These products are available on the DFSB intranet site.

   iii. DFSB staff members attend a number of aviation safety, investigation, human factors and non-technical skills forums and conferences in order to provide internal learning opportunities, benchmarking against international and domestic military and civilian agencies, and to support industry wide learning.

   iv. DFSB produce and support targeted human factors programs, primarily fatigue and non-technical skills related policy and guidance. These programs are described in the DASM, and through guidebooks and resources on the DFSB intranet site.

6. **Independent Investigation.** DFSB provides independent investigation and reporting of all accidents, selected incidents and selected systemic safety issues. This is achieved through:

   i. All Defence Aviation Class A and select Class B events are independently investigated by a DFSB Aviation Safety Investigation Team (ASIT) which reports directly to the Appointing Authority (AA). The AA is the designated commander at the appropriate level authorised to initiate and close aviation safety investigations. The DASM describes the appropriate levels and delegations. The ASIT operates under the procedural direction of DFSB.

   ii. DFSB investigations are functionally independent of the DASA regulatory directorates, and in general, of any other party of the entity that could conflict with, or influence, its objectivity.

   iii. The sole aim of a DFSB investigation is to prevent further occurrence and enhance safety outcomes through the identification and remediation of local and systemic deficiencies, and the improvement of risk controls. DFSB investigations do not apportion blame or liability.

Superseded

iv. DFSB investigations are conducted consistent with the international standards outlined by ICAO, and those described in the Australian Transport Safety Investigation (TSI) Act 2003. Given the unique nature and demands of military flying, a DFSB investigation may deviate from these provisions in such a manner that is considered necessary or appropriate under the specific circumstances. Additional guidance can be found in the DASM and on the DFSB intranet site.

v. In the case of Class B events, DFSB may decide not to undertake the investigation, leaving the responsibility to the command chain. This decision will be made in consultation with the relevant environmental commander, and taking into account the safety implications of the event, the suitability of the event for investigation by DFSB and the breadth of lessons likely to be learned from the event.

vi. DFSB provide specialist advice and support to aviation safety investigations undertaken within the command aviation Safety Management System.

vii. A Class A or Class B Defence event that involves a civil (VH registered) aircraft could be subject to an investigation by the ATSB in accordance with the TSI Act 2003, their priorities and mandates for investigation. The carriage and conduct of the investigation will be negotiated through DFSB in accordance with the extant ATSB/DFSB MoU.

viii. DFSB is responsible for the Defence Aviation Cockpit Voice Recorder (CVR) and Flight Data Recorder (FDR) download and analysis capability. DFSB Investigation team have the specialist skills and equipment to support this capability. Policy and guidance on download and analysis of the CVR and/or FDR is found in the DASM.

ix. DFSB must be notified of all Class A and Class B events involving Australian Air Force Cadets (AAFC) in the course of their duties; however, all reporting and investigation resides within the AAFC's Aviation Safety Report system.

7. **Safety awareness, knowledge and action.** DFSB is responsible for fostering safety awareness, knowledge and action through promotional and education programs, and utilising the outcomes from safety analysis, research and investigative functions to influence organisational learning. This is achieved through a range of programs including:

i. **Aviation safety policy.** DFSB is responsible for the development and maintenance of key aviation safety policy, including the DASM, which supports the implementation of efficient and compliant aviation Safety Management Systems, and the Aircraft Accident WHS Manual to support the safety response to military aviation accidents and incidents.

ii. **Aviation safety training.** DFSB provides aviation safety reporting, investigation and safety data related education and training, through the provision of Aviation Safety Officer Initial and Advanced courses, Non-Technical Skills Trainer Course and the one-day Aviation Incident Investigation Course. DFSB is also responsible for the integration of aviation safety and non-technical skills content into the Defence training continuum.

iii. **Aviation safety awareness.** Through investigations, analysis of safety data, research reports and engagement with industry and military partners, DFSB

Superseded

identifies key lessons and safety issues. DFSB has a range of products and services to support the integration of those lessons into aviation safety policy and training, and to support positive organisational learning. These products include promotional materials, guidebooks and training materials and are available through the DFSB intranet site.

Superseded

5. Regulation of Aviation Safety

5.1 Introduction

(Reserved)

5.2. Aviation Safety Policy and Guidance

5.2.1 Introduction

5.2.1.1 This section describes the hierarchy of policy and guidance within the Defence Aviation Safety Program.

5.2.2 The DASP Manual

5.2.2.1 The DASP Manual is the central policy and guidance document within the DASP. It is issued by the Defence AA in three volumes:

1. Volume 1 *Requirements for the DASP* expands on Joint Directive 21/2021 to establish requirements for the implementation of the DASP; in particular:
    i. legal and governance arrangements
    ii. independent safety assurance
    iii. the Defence Aviation Safety Regulation
    iv. the independent investigation of accidents and incidents
    v. independent reviews of Aviation Safety.
2. Volume 2 *Defence Aviation Safety Regulation* establishes all requirements and provisions for the management of Aviation Safety by commanders and managers.
3. Volume 3 *DASP Guidance* provides an overview of the DASP and how its various elements collectively achieve the required safety objectives. Volume 3 also provides supporting information to promote understanding of concepts and processes spanning multiple requirements or provisions established through Volumes 1 and 2.

5.2.3 Defence Aviation Safety Regulation

5.2.3.1 The DASR are contained within DASP Manual Volume 2. Their structure and naming convention are based on those applied by CASA and EASA.

5.2.3.2 The DASR comprise:

1. **General Requirements,** which define the scope and applicability of the DASR parts as well as establish requirements and provisions that are applicable to a significant proportion of regulated entities.
2. **DASR parts,** which are outcome based and specify requirements for each of the specifically regulated Aviation Safety topics. They may include associated supporting

Superseded

information in the form of Acceptable Means of Compliance (AMC) and Guidance Material (GM).

5.2.4 Regulatory Supporting Information

5.2.4.1 The AMC and GM embedded within the DASR are part of a broader range of supporting information published by DASA to promote understanding of, and compliance with, the regulations. All such supporting information is authoritative and does not mandate any action but may address regulatory requirements and provisions established elsewhere.

5.2.4.2 **Acceptable Means of Compliance.** AMC provides a generic and widely applicable approach to meeting the respective DASR requirements. DASA publishes AMC to provide certainty as to how the required safety outcomes may be achieved. Choosing to implement an AMC relieves the regulated entity of the burden of proving that the means of compliance achieves the intended safety outcome. The regulated entity demonstrates compliance with the DASR by appropriately implementing AMC. Regulated entities are free to propose Alternative Means of Compliance (AltMoC); however, the nature of Aviation Safety regulation means that the use of AltMoC may not be suitable in every instance.

5.2.4.3 **Guidance Material.** GM helps to illustrate the meaning of a requirement or provision in the DASR. It may provide relevant background, context or an explanation of the policy intent underpinning the respective regulation.

5.2.4.4 **Advisory Circulars.** Advisory Circulars (ACs) are typically issued to bring an issue to the attention of the target audience or to address a complex topic. ACs may be used to identify acceptable ways to achieve regulatory compliance, either as a temporary transition arrangement or in advance of promulgation as AMC in the DASR. Examples include information regarding emerging Aviation Safety matters, information that enhances compliance understanding for existing regulation, or policy guidance for aviation issues that are not yet regulated but require further understanding.

5.2.4.5 **Factsheets.** Factsheets are typically issued to provide concise information that may assist those interested in a particular topic.

5.2.5 Design Requirements

5.2.5.1 Volume 1 of the DASP Manual requires DASA to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR'. DASA fulfils this responsibility through prescribing and interpreting the minimum requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

Prescribing design requirements

5.2.5.2 DASA employs three foundational principles when prescribing design requirements for aviation safety:

1. DASA recognises the design requirements prescribed by several CAAs and MAAs as providing a sound foundation for the safe design of Defence aircraft and aircraft-related systems and equipment
2. DASA may prescribe supplementation to these design requirements, where an aspect of a requirement is judged deficient or to support application to Defence's unique role and operating environment

Superseded

3. DASA requires the conduct of a system safety program, to provide a robust means for identifying and analysing aviation hazards during the design process, and for eliminating or minimising the resultant risks so far as is reasonably practicable.

5.2.5.3 To provide assurance that safe flight is achieved through aircraft design, many CAAs/MAAs prescribe airworthiness design requirements, which are usually documented in an 'Airworthiness Code' (DASR 21.A.16A refers). An Airworthiness Code is a complete and consistent suite of design requirements that define those attributes of aircraft systems or equipment that underpin safe flight. As the development and maintenance of an Airworthiness Code is a substantial undertaking, rather than define and publish its own Code, DASA recognises Airworthiness Codes prescribed by other CAAs/MAAs (i.e. DASA accepts that these Codes provide a safe foundation for aircraft and aircraft-related systems design).

5.2.5.4 DASA may recognise an Airworthiness Code when the Code as a minimum:

1. is prescribed by a recognised CAA/MAA
2. has demonstrated a sound safety record
3. prescribes a complete and consistent suite of airworthiness design requirements
4. is supported by associated guidance on how to achieve compliance with the airworthiness design requirements
5. is accessible, i.e. published by the CAA/MAA in a consolidated and easily accessed format.

5.2.5.5 While aircraft and aircraft-related systems/equipment designs developed to a DASA recognised Airworthiness Code should substantially meet the level of safety expected by Defence, supplementary airworthiness design requirements may need to be prescribed by DASA as a result of:

1. known inadequacies in the Code
2. novel features included in the proposed design that are not accommodated by the Code
3. proposed Defence-unique roles and/or operating environments that are outside the scope of the Code and/or
4. Defence policies or Australian legislated requirements not being covered by the Code.

5.2.5.6 Compliance with DASA-recognised Codes and prescribed supplementation is the principal means by which safe design of an aircraft and aircraft-related systems/equipment is achieved. However, in isolation, a standards-based approach may not provide a complete basis for certification of an aircraft, or approval of aircraft-related systems/equipment having an effect on aviation safety. Many standards are inherently stove-piped, and therefore further analytical effort is required to identify and control system-level hazards. Further, standards are often written with 'vanilla' applications in mind; novel aircraft or systems design features are likely to pose novel hazards, which are not catered for within the standard. As a result, in addition to compliance with design standards, DASA requires the conduct of a system safety program for aircraft designs.

5.2.5.7 System safety is an engineering discipline that embraces safety as a core aspect of any given system design (or design change). System safety programs employ a suite of engineering tools and techniques to identify and analyse aviation safety hazards during the design process, and provide a

Superseded

management framework to evaluate and control the resultant risks. When applied well, a system safety program is an essential adjunct to a standards-based design approach.

5.2.5.8 DASA prescribes supplementation to recognised Codes within a framework of 'essential' and 'recommended' design requirements. While essential airworthiness design requirements define the level of safety that must be achieved by a design, they are not immutable. DASA, in consultation with the relevant capability manager where applicable, may approve an alternative design requirement in the following circumstances:

1. where analysis confirms the alternative design requirement achieves an equivalent level of safety
2. where analysis shows the alternative design requirement, supplemented by operational risk treatments, should achieve an equivalent level of safety or
3. where enforcing the Essential design requirement would have a marked negative effect on capability or cost, and an alternative (but less safe) design requirement is in Defence's best interests.

Interpreting design requirements

5.2.5.9 Like other MAAs, DASA accepts that tailoring of design requirements may be necessary to achieve essential military capability. Provided DASA concludes the proposed tailoring is judicious (i.e. that the tailoring represents good judgement or sense) in the ADF operational context, DASA may approve tailoring to the prescribed requirement. Certification or approval against the tailored requirement(s) would then be pursued by the applicant. Any proposed tailoring of design requirements by an applicant for type certification and/or design approval from DASA, which results in changes to prescribed safety criteria, must be supported by documented rationale that includes:

1. the capability manager's confirmation that a clear (well-defined) and documented capability imperative for the proposed tailoring exists
2. the applicant's confirmation that compliance with the prescribed standard impedes that capability imperative
3. the applicant's characterisation of the delta between the prescribed standard and the tailored standard
4. the applicant's, with the assistance of the capability manager (or delegate), characterisation of the risk due to this delta and
5. the capability manager's (or delegate's) formal conclusion that the tailored safety criteria presents a credible and defensible level of safety for that Defence aircraft or aircraft-related system/equipment, contextualised for ADF operations.

5.2.5.10 Agreed tailoring, including any essential risk controls to achieve the defined level of safety, will usually be documented in a Military Certification Review Item (MCRI) or equivalent approved by DASA. Detailed MCRI guidance is contained in Section 7.2 Certification.

5.2.5.11 DASA may have two separate roles in the above process. First, as the repository of standards and certification expertise, DASA may advise the capability manager and applicant on how to wisely complete each step. Secondly, DASA needs to gain sufficient confidence in the conduct of the process to assure the Defence AA that the tailoring is indeed judicious. If this second role cannot be achieved, the tailoring of the prescribed requirement(s) cannot be approved and consequently certification or approval of the design would be precluded.

Superseded

5.2.5.12 DASA also provides interpretation advice and direction on the intent and meaning of airworthiness design requirements, often but not exclusively related to:

1. the approval of tailored means of compliance for a design requirement
2. advice on the relevance of proposed design requirements to the design under consideration
3. advice on pragmatic tailoring of design requirements/standards.

5.2.5.13 The prescription and interpretation of design requirements and standards may be delegated to a Standards-Delegate of the Safety Authority (Standards-DoSA). The functions and responsibilities of DoSAs are detailed in Section 4.3.

Design requirements and WHS

5.2.5.14 Defence aircraft and aircraft-related systems/equipment can present a hazard to aircrew, other aircraft occupants, other airspace users, persons near or under the aircraft flight path, and maintenance and other ground personnel. The Australian Work Health and Safety Act and the Work Health and Safety Regulations (collectively, WHS Legislation) apply to Defence aviation, and therefore Defence has a legal obligation to ensure the health and safety of these persons. The design of the Defence aircraft can, in part, contribute to Defence satisfying this legal obligation, for example:

1. the aircraft design can promote a safe airborne workplace for aircrew and other occupants through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. improving crash survivability for aircraft occupants
    iii. implementing design controls for in-aircraft hazards that might injure aircraft occupants
    iv. implementing design controls for in-aircraft hazards that might affect the future (post-flight) health of aircraft occupants
2. the aircraft design can promote the safety of persons near or under the aircraft flight path through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. reducing the ground impact energy (mainly relevant to uncrewed aircraft)
3. the aircraft design can promote the safety of persons in close proximity to a stationary aircraft through:
    i. implementing design controls for aircraft hazards that might injure ground personnel
    ii. implementing design controls for aircraft hazards that might affect the future health of ground personnel
    iii. incorporating aircraft maintenance instructions that identify reasonably foreseeable hazards to maintenance personnel and present safe maintenance practices.

Superseded

5.2.5.15 Importantly, DASA approval of prescribed design requirements for a Defence aircraft or aircraft-related systems/equipment, and proposed tailoring, does not constitute endorsement/ agreement of the determination that risk has been eliminated or otherwise minimised SFARP. Rather, this must remain a decision for the capability manager (or delegate), as does the enduring management of the residual risk due to the tailoring/alternative standard.

Defence Aviation Safety Design Requirements Manual

5.2.5.16 The Defence Aviation Safety Design Requirements Manual (DASDRM) is DASA's repository for recognised Codes, and associated prescribed supplementary design requirements, with respect to Defence aircraft and aviation support systems/equipment design.

5.2.5.17 The DASDRM prescribes design requirements for aircraft systems and functions, and aircraft support systems and equipment that have an effect on aviation safety, that are necessary to achieve safe flight in Defence's proposed Configuration, Role and Environment (CRE). It also prescribes additional design requirements that may further improve the level of safety, and that should be implemented where reasonably practicable. In each case, the DASDRM identifies the hazard(s) that the design requirement is intended to treat, to provide a basis for informed risk management where an aircraft design fails to meet the design requirement.

5.2.5.18 While capability and interoperability is not a specific consideration when establishing that an aircraft is capable of safe flight, robust design for capability and interoperability contributes to mission success, and therefore the safety of the crew. Consequently, while capability and interoperability design requirements are not a primary focus of the DASDRM, design requirements that support capability and interoperability outcomes are included where appropriate.

5.2.5.19 The DASDRM comprises the following six sections:

1. Section 1 – Application of Airworthiness Design Requirements. This section defines the purpose and scope of the DASDRM and defines the Airworthiness Codes that have been recognised by the Authority as providing a sound foundation for the design of Defence aircraft. It also describes the extent to which airworthiness design requirements contribute to Defence meeting its WHS Legislation obligations. Finally, Section 1 describes the application of capability and interoperability standards to aircraft designs.
2. Section 2 – Integrated Design Requirements. This section prescribes airworthiness design requirements for those engineering disciplines that pervade most aspects of aircraft systems design or affect multiple systems such as system safety, electromagnetic environmental effects and crash protection.
3. Section 3 – Aircraft System Design Requirements. This section prescribes airworthiness design requirements for aircraft systems such as communications, navigation, structures (fixed and rotary wing) and propulsion. The only systems included in this section are those where the Authority recognised Airworthiness Codes do not provide satisfactory coverage for Defence aircraft designs.
4. Section 4 – Uncrewed Aircraft Design Requirements. This section prescribes airworthiness design requirements for UAS.
5. Section 5 – Aircraft Support Systems. This section prescribes design requirements for non-aircraft systems and ground based equipment, where the systems/equipment

Superseded

have a direct effect on safe flight or aviation safety, such as aeronautical life support equipment, mission planning systems and aerial delivery.

6. Section 6 - Aerodrome Design Requirements. This section prescribes airworthiness design requirements for Defence aerodromes and heliports.

5.2.6 Formal Regulatory Advice

Introduction

5.2.6.1 DASA may provide formal regulatory advice on any Defence Aviation Safety policy within its remit in order to assist with understanding and compliance. This section provides guidance on seeking such advice. Other queries, such as those concerning DASA business matters, availability of training, staff duties, contact details and updates to ongoing activities do not warrant a formal process and may be addressed through normal lines of communication.

When to make a formal request

5.2.6.2 Only certain types of queries warrant the application of a formal process. Such queries fall into the following broad categories:

1. requesting interpretation of DASR or other policy:
   i. where the intent is unclear
   ii. relating to a situation not explicitly covered by existing policy.
2. requesting advice regarding implementation of DASR or other policy, such as:
   i. whether a particular approach is compliant
   ii. applicability of policy to a particular activity.

Before making a formal request

5.2.6.3 DASA publishes a number of educational and promotional artefacts, which may answer a query without the need to request advice. See Section 5.2.4 *Regulatory supporting information* and the *Education and Promotion* page on the DASA web site.

5.2.6.4 The DASP Policy and Guidance Portal (PGP) contains a functional search engine that may assist in searching for specific terminology or phrases. Tips for navigation and searching are contained within the PGP User Guide.

How to make a formal request

5.2.6.5 If formal regulatory advice is required, the preferred method to request advice is via a DASR Query Form (DQF). In the case of uncertainty as to whether a DQF is suitable, email dasa.dasr@defence.gov.au.

5.2.6.6 While an email or phone call directly to a desk officer may seem more efficient, it does not always result in appropriate DASA registration and oversight. Registration informs DASA which areas of policy may require review or additional educational material and builds traceability for future updates. Oversight of queries is important for managing and prioritising DASA workload and ensures that advice follows an appropriate approval process before release. Therefore, DASA reserves the right to redirect any query to written form.

Superseded

Turnaround Times

5.2.6.7 DASA will negotiate and agree upon a turnaround time with the query initiator as the first action following receipt of a query. DASA will communicate any subsequent changes to that timeline to all involved parties when they become apparent.

5.3 Aviation Safety Authorisations

5.3.1 Purpose

5.3.1.1 The DASR make provision for DASA to issue a range of 'authorisations' if assured that the regulated community has met, and continues to meet, the requirements and constraints of the DASR. These authorisations may be in the form of certificates, permits, approvals or licenses.

5.3.1.2 This chapter presents an overview of each common aviation safety authorisation.

5.3.2 Aviation Safety Authorisations

5.3.2.1 DASA-issued authorisations can broadly be characterised as pertaining to organisations, products and/or personnel. These authorisations are as follows:

1. organisational authorisations:
    - i. Military Air Operator (MAO)
    - ii. Aerodrome Operator (ADOPR)
    - iii. Air Cargo Delivery Service Provider (ACDSP)
    - iv. Air Navigation Service Provider (ANSP)
    - v. Air Battle Management Operator (ABMO)
    - vi. Military Design Organisation (MDO)
    - vii. Military Production Organisation (MPO)
    - viii. Approved Maintenance Organisation (AMO)
    - ix. Continuing Airworthiness Management Organisation (CAMO)
    - x. Maintenance Training Organisation (MTO)
    - xi. Military Type Certificate Holder (MTCH) (currently an implicit approval)
2. product authorisations:
    - i. Military Type Certificate (MTC)
    - ii. Military Restricted Type Certificate (MRTC)
    - iii. Military Supplemental Type Certificate (MSTC)
    - iv. Military Permit to Fly (MPTF)
    - v. Military Certificate of Airworthiness (CoA)
    - vi. Military Restricted Certificate of Airworthiness (RCoA)

Superseded

vii. Australian Military Technical Standard Order (AUSMTSO)

viii. Approval of Repair Design

ix. Airworthiness Directive (AD)

x. Aircraft Maintenance Programme (AMP)

xi. Uncrewed Aircraft System Operating Permit (UASOP)

xii. Aerodrome Certificate (ADC)

xiii. Other[1]

3. personnel authorisations:

i. Military Aircraft Maintenance Licence (MAML)

Note: DASA directly authorises certain management personnel within approved organisations. These are commonly referred to as 'Form 4 authorisations', since they are approved on DASA Form 4, Acceptance of Nominated Management Personnel. In the context of this chapter, those authorisations are considered to be part of the organisational approval process, so they are not listed separately here.

5.3.2.2 The type and scope of authorisations needed for a particular aircraft, aerodrome or air navigation service will depend on a range of factors, for example the involvement of other civil or military Aviation Authorities, the support arrangements implemented by Defence, and so on. These issues are explored elsewhere in this Manual.

5.3.2.3 Annexes A to X individually examine the authorisations listed in paragraph 3. Each annex explains the purpose of the authorisation, the relevant DASR requirements, applying for the authorisation, the responsibilities of the authorisation holder, and DASA's approach to compliance assurance.

Annexes:

(a) Military Air Operator

(b) Aerodrome Operator

(c) Air Cargo Delivery Service Provider (To be issued)

(d) Air Navigation Service Provider (To be issued)

(e) Military Design Organisation

(f) Military Production Organisation

(g) Approved Maintenance Organisation

(h) Continuing Airworthiness Management Organisation

(i) Maintenance Training Organisation

(j) Military Type Certificate Holder

Superseded

(k) Military Type Certificate

(l) Military Restricted Type Certificate (To be issued)

(m) Military Supplemental Type Certificate

(n) Military Permit to Fly

(o) Military Certificate of Airworthiness

(p) Military Restricted Certificate of Airworthiness (To be issued)

(q) Australian Military Technical Standard Order

(r) Approval of Repair Design

(s) Airworthiness Directive (To be issued)

(t) Aircraft Maintenance Programme

(u) Uncrewed Aircraft System Operating Permit

(v) Aerodrome Certificate

(w) Military Aircraft Maintenance Licence

(x) Air Battle Management Operator (To be issued)

5.4 Oversight and enforcement

5.4.1 Introduction

5.4.1.1 This section expands on the Oversight and Enforcement (O&E) policy described in section 4.1.4. Specifically, it explains how regulated entities can expect to be engaged by DASA in assessing initial and ongoing compliance.

5.4.1.2 **Regulated entity.** The term 'regulated entity' is used to describe the different organisations and personnel within the Aviation Safety community that are regulated under DASR, and who are subsequently oversighted by DASA. These entities are typically awarded DASA-issued authorisations, as listed in section DASPMAN Vol 3 Chapter 5.3.2 Aviation Safety Authorisations.

5.4.2 DASA O&E-related responsibilities

5.4.2.1 The DASA regulatory facing directorates accountable for O&E functions are DAVNOPS, DIA and DCA. The remit of each is detailed below:

1. **DAVNOPS.** DAVNOPS responsibilities include:

   i. conducting regulatory compliance assessments of organisations to enable the issuing of:

      – a Military Air Operator Certificate (MAOC) and corresponding Operational Specification (OpSpec) under DASR.ARO

      – an Air Navigation Service Provider Certificate (ANSPC) and Service Provision Conditions (SPC) under DASR.ANSP

Superseded

- an Aerodrome Operator Certificate (ADOPRC) and Aerodrome Operator Specification (ADOpSpec) under DASR 139
- an Air Cargo Delivery Service Provider Certificate (ACDSPC) and Air Cargo Delivery Operational Specification (ACDOpSpec) under DASR ACD
- an Air Battle Management Operator Certificate (ABMOC) and Operational Specification (OpSpec) under DASR ABM

ii. conducting oversight to allow the retention of existing organisation authorisations.

2. **DIA.** DIA responsibilities include:

i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:

- a Military Type Certificate Holder (MTCH) organisation approval and the corresponding platform Type Certificate under DASR Part 21 Subpart B
- a Design Organisation Approval (DOA) for engineering design services under DASR Part 21 Subpart J.
- a Design Production Organisation Approval (POA) for parts production services under DASR Part 21 Subpart G or DASR Part 21 Subpart F.

ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.

3. **DCA.** DCA responsibilities include:

i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:

- DASR Part M Continuing Airworthiness Management Organisations (CAMO) authorisations
- DASR Part 145 Maintenance Organisation (DASR 145 MO) authorisations
- DASR Part 147 Aircraft Maintenance Training Organisation (DASR 145 AMTO) authorisations
- DASR Part 66 Military Aircraft Maintenance Licences (DASR 66 MAML)

ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.

5.4.3 Initial authorisation process

5.4.3.1 To gain an initial authorisation, the applicant:

1. organisation must demonstrate:

Superseded

i. a Defence need for the award of the authorisation

ii. a local documented management system that complies with DASR requirements for the proposed scope and level of activities, as defined by their organisation approval basis (ie the set of documents which provides the objective quality evidence necessary to prove compliance with the relevant DASR)

2. Nominated Management Personnel must demonstrate:

i. a Defence need for the award of the authorisation

ii. compliance with specific qualification, training and experience requirements.

5.4.3.2 **Application.** An application for initial authorisation is made on the relevant DASR form, in a manner established by DASA within the respective DASR. Each form describes the information to be included to demonstrate compliance, how the form is to be submitted and who to. Where the DASR does not prescribe a format or manner for the application, the applicant should contact the relevant DASA Directorate for guidance.

5.4.3.3 **Initial DASA assessment.** The process by which DASA assesses applications varies between organisations and Nominated Management Personnel. For organisations, the assessment process begins with a desk top audit of the organisation's relevant documentation (i.e. evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable'—see below). For Nominated Management Personnel, DASA assesses compliance with specific qualification, training, and experience requirements.

5.4.3.4 If the applicant is found to be deficient in required content or non-compliant with any relevant DASR requirement, DASA will endeavour to request additional information where practicable. Post assessment the outcome of the application will be notified to the organisation as:

1. progressed to the next stage

2. rejected, providing reasons

3. conditionally progressed, with actions taken by DASA and the applicant to ensure non-compliances are resolved.

5.4.3.5 **On-site DASA assessment.** An on-site assessment is not an essential part of the initial authorisation process for any DASR authorisation and will be dependent on the nature of the request. DASA will determine if there is a need to conduct an on-site assessment, based on the outcome of the initial assessment, and the scope, level, and complexity of the application. Where conducted, the on-site assessment may include inspection of physical facilities and additional documents, and further face-to-face discussion with applicant staff (for additional 'Present', 'Suitable' and 'Operating' evidence—see below).

5.4.3.6 **DASA Organisational Approval.** Following the initial assessment and, if conducted, on-site assessment, the DASA team will provide a recommendation for authorisation to the DASA assessment lead. Where appropriate, an authorisation package will be compiled for DG DASA approval. Once approved, authorisation artefacts are dispatched to the applicant at which point the applicant may utilise privileges granted, noting any limitations.

5.4.3.7 **Timeline.** DASA timelines for the assessment and approval of authorisation applications will depend on the scope and complexity of the authorisation sought, and the level of DASA involvement to support the applicant through the process. DASA will endeavour to collaborate with applicants and

Superseded

action authorisation requests in a timely manner. Approvals may be expedited based on operational or safety imperatives and negotiated accordingly.

5.4.3.8 **Post approval.** The organisation and Nominated Management Personnel transition from the 'initial authorisation' phase to ongoing DASA oversight to retain their authorisation. The applicant is responsible for maintaining ongoing compliance with the relevant DASR and rectifying any future internally identified non-compliances through their own Quality Management System.

5.4.4 Authorisation change and retention process

5.4.4.1 **Changes to authorisations**. Should a regulated entity identify a need for authorisation scope/limitations/privilege changes, the entity must apply to DASA (except where otherwise permitted by DASR). Applications for changes to authorisations are made on a form and in a manner established by DASA within the respective DASR, as per their initial authorisation. In actioning the application, DASA will follow the same process as for initial authorisations, adjusting the scope and extent of the assessment to suit the nature of the change. The organisation and Nominated Management Personnel must not implement the proposed change until DASA has issued updated authorisations (except where otherwise permitted by DASR and previously agreed by DASA).

5.4.4.2 **Retention of authorisation.** DASA authorisations remain extant provided regulated entities retain a Defence need and continue to comply with respective DASR. Once the initial authorisation is awarded, ongoing DASA surveillance and oversight of authorisation holders commences. A key component of an effective regulatory framework is ensuring that regulated organisations have a clear understanding of when, why and how DASA will review ongoing compliance. DASA assures the validity of authorisations by applying an oversight cycle commensurate with the perceived risk to Aviation Safety (generally every 24 months). DASA's risk-based approach continually reviews safety intelligence collected from active and passive surveillance activities. Based on collected safety intelligence, DASA conducts oversight of authorisation holders, adjusting frequency and scope of oversight to suit the perceived risk.

5.4.5 PSOE for Regulatory Oversight

5.4.5.1 The DASP O&E policy is documented in section 4.1.4, and supports compliance with the DASR through application of a consistent O&E operating model. This section provides Defence tailoring of the civil PSOE model for broader DASR application; noting the PSOE model developed for ICAO Annex 19 is heavily oriented towards Management System maturity assessment vice broader regulation compliance. When considering the Defence aviation context it is important to understand the hazard-based nature of DASR and the regulated community's SFARP obligation in achieving an acceptable level of safety through a baseline level of compliance.

5.4.5.2 Within this context, DASA will execute oversight activities of a regulated entity using the following Defence-tailored PSOE definitions:

1. **'Present' (P).** There is evidence that the process, behavior and technology indicators required for DASR compliance are clearly visible and documented within the organisation's systems.

2. **'Suitable' (S).** There is evidence the process, behavior and technology indicators are suitable (i.e. regulatory compliant) for the size, nature, context, complexity of the organisation and its services, and the Aviation Safety hazard expected to be mitigated (including consideration of industry expectation for standards, codes, guidance etc).

Superseded

3. **'Operating' (O).** There is evidence that the process, behavior and technology indicators are in use and an output is being produced.

4. **'Effective' (E).** There is evidence that the process outputs , behavior and technology indicators are effective in achieving the desired DASR Aviation Safety hazard control outcome.

    i. Note, effectiveness assessments represent an evolution in compliance methodology, beyond traditional compliance/conformance assessments. In executing an effectiveness assessment, a thorough understanding of the applicable regulation's aviation safety hazard is required, to ascertain if the process outputs are effectively preventing realisation of that hazard (based on evidence collected during an oversight activity).

5.4.5.3 Where non-compliances or potential problems are identified through PSOE application enforcement action will be taken against the organisation.

5.4.6 Management of DASA Findings

5.4.6.1 Findings are issued to highlight an actual or potential non-compliance against DASR. All findings are supported by objective quality evidence and contain adequate detail to support the finding.

5.4.6.2 A Finding will only be issued to remedy an identified non-compliance to a specific regulatory outcome. Once Findings are issued, the regulated entity is responsible for identifying immediate actions, root causes, developing a corrective action plan and implementing corrective actions to address the non-compliance.

5.4.6.3 **Finding levels.** DASA issues Level 1, 2 and 3 findings, as follows:

1. **Level 1.** Any non-compliance with DASR requirements which lowers the safety standard and seriously hazards flight safety.

2. **Level 2.** Any non-compliance with DASR requirements which lowers the safety standard and possibly hazards flight safety.

3. **Level 3.** Any non-compliance with DASR requirements, or potential problem, that could lower the safety standard and possibly hazards flight safety.

5.4.6.4 **DASA Level 1 and 2 Findings.** Once a DASA Finding is issued to an organisation, DASA will monitor that actions required to address non-compliances or potential non-compliances are managed and tracked until closure of the Finding. The DASA Level 1 and 2 Findings lifecycle has six distinct stages for regulated organisations, defined on DASR Form 1299 as follows:

1. **Organisational acceptance of Finding.** Organisations accept the Finding based on a DASA assessment of the evidence, and respond with proposed dates for the completion of their Immediate Actions and development of their Corrective Action Plan. DASA will assess the response and agree to timeframes, or consult for revised dates.

2. Where organisations does not agree with the DASA Findings issued, they must formally write to DASA, providing objective evidence as to why the Finding is inappropriate. DASA will assess the additional evidence and respond.

Superseded

3. **Implementation of Immediate Actions.** Organisations implement short-term solutions to contain the non-compliance and manage the associated risk mitigated SFARP. DASA will use DASR Form 1299 to assess the organisation's actions and document acceptance, or request rework as appropriate.

4. **Root cause analysis.** Organisations assess the root causes of the non-compliance. Multiple root cause analysis tools are available to organisations, including the '5-Whys', Bow Tie, Ishikawa diagrams, Apollo Reality Charting, and Tree Diagram. Importantly, there is never just one root cause to a non-compliance, and 'human error' is never a valid conclusion.

5. DASR Form 1299 provides (as a non-compulsory use tool) a '5-Whys' template against which a root cause analysis can be conducted. DASA will use DASR Form 1299 to assess the organisation's analysis and document acceptance, or request rework as appropriate.

6. **Development of the Corrective Action Plan.** Organisations identify a corrective action for each root cause identified, to prevent recurrence. For each corrective action, the organisation defines:

    i. a means by which the effectiveness of the corrective action to prevent reoccurrence will be assessed

    ii. the objective quality evidence required to substantiate corrective action effectiveness

    iii. a lead person for its implementation, and for reporting implementation and substantiation status

    iv. the due date for corrective action completion, cognisant of the need to validate the effectiveness of the corrective action prior to closure

    v. any justification supporting the completion date choice (e.g. time to collect validation evidence, or co-dependency/secondary effects).

7. DASR Form 1299 provides a Corrective Action Plan template. DASA will use the form to assess the organisation's plan and document acceptance, or request rework as appropriate.

8. **Implementation of Corrective Actions.** Organisations implement the DASA-agreed corrective actions, progressively submitting each completed Corrective Action to DASA for consideration on DASR Form 1299. DASA will track and manage the progress of approved Corrective Action Plans so that a Finding will not fall overdue unless an individual Corrective Action due date has passed.

9. DASA will use the DASR Form 1299 to assess the organisation's assessment and document acceptance, or request rework as appropriate.

10. **Finding closure.** Once DASA is satisfied that the organisation has implemented and validated the effectiveness of all actions that address the non-compliance, DASA will close the Finding and notify the organisation.

5.4.6.5 **Findings Requiring Re-work.** Where DASA assesses issues with the quality of the response provided by an organisation in developing/implementing Immediate Actions, Root Cause Analysis, Corrective Action Plan or Corrective Actions it will be returned to the organisation for re-work. In doing so, DASA will provide the necessary details of the cause for re-work for further organisational

Superseded

consideration and action. As part of the re-work process the organisation will generally be required to consider if a Finding Extension is required based upon the impact of the quality issue relative to the extant hazard retention. Where extension to originally agreed submission timelines is necessary the criteria under 5.4.6.6 will be required.

5.4.6.6 **DASA Level 3 Findings.** Level 3 Findings are notified to the organisation through DASA correspondence (usually an initial authorisation notification or an oversight report). Level 3 Findings are expected to be managed to closure under the organisation's QMS. DASA will review Level 3 Finding progress during subsequent O&E activities. Inaction against a Level 3 finding does not automatically equate to a Level 2 Finding being issued. However, it may serve as evidence that, when coupled with other safety intelligence, may lead to issue of a Level 2 Finding.

5.4.6.7 **DASA Findings extensions.** An organisation can request an extension (usually through email to the respective Desk Officer) at any stage in the Findings management process. However, as the organisation owns the Aviation Safety risk associated with the Finding until DASA Finding closure, DASA will only consider these requests based on an assessment of the Finding's residual risk being mitigated SFARP. Evidence expected to be provided in an extension request should include:

1. the reason further time is required to complete actions,
2. details of what has already been completed against Findings root causes and agreed Corrective Actions,
3. what outstanding Corrective Actions remain and their revised dates for completion, and
4. justification of how residual aviation safety risk will be controlled SFARP until Corrective Action completion.

5.4.6.8 DASA assesses all extension requests in accordance with the DASA Enforcement Principles at section 4.1.4 and notifies organisations of the outcome. However, organisations should not assume automatic extension approval.

5.5 Education and training

5.2. Aviation Safety Policy and Guidance

5.1 Introduction

(Reserved)

5.2. Aviation Safety Policy and Guidance

5.2.1 Introduction

5.2.1.1 This section describes the hierarchy of policy and guidance within the Defence Aviation Safety Program.

5.2.2 The DASP Manual

5.2.2.1 The DASP Manual is the central policy and guidance document within the DASP. It is issued by the Defence AA in three volumes:

1. Volume 1 *Requirements for the DASP* expands on Joint Directive 21/2021 to establish requirements for the implementation of the DASP; in particular:
    i. legal and governance arrangements
    ii. independent safety assurance
    iii. the Defence Aviation Safety Regulation
    iv. the independent investigation of accidents and incidents
    v. independent reviews of Aviation Safety.
2. Volume 2 *Defence Aviation Safety Regulation* establishes all requirements and provisions for the management of Aviation Safety by commanders and managers.
3. Volume 3 *DASP Guidance* provides an overview of the DASP and how its various elements collectively achieve the required safety objectives. Volume 3 also provides supporting information to promote understanding of concepts and processes spanning multiple requirements or provisions established through Volumes 1 and 2.

5.2.3 Defence Aviation Safety Regulation

5.2.3.1 The DASR are contained within DASP Manual Volume 2. Their structure and naming convention are based on those applied by CASA and EASA.

5.2.3.2 The DASR comprise:

Superseded

1. **General Requirements,** which define the scope and applicability of the DASR parts as well as establish requirements and provisions that are applicable to a significant proportion of regulated entities.

2. **DASR parts,** which are outcome based and specify requirements for each of the specifically regulated Aviation Safety topics. They may include associated supporting information in the form of Acceptable Means of Compliance (AMC) and Guidance Material (GM).

5.2.4 Regulatory Supporting Information

5.2.4.1 The AMC and GM embedded within the DASR are part of a broader range of supporting information published by DASA to promote understanding of, and compliance with, the regulations. All such supporting information is authoritative and does not mandate any action but may address regulatory requirements and provisions established elsewhere.

5.2.4.2 **Acceptable Means of Compliance.** AMC provides a generic and widely applicable approach to meeting the respective DASR requirements. DASA publishes AMC to provide certainty as to how the required safety outcomes may be achieved. Choosing to implement an AMC relieves the regulated entity of the burden of proving that the means of compliance achieves the intended safety outcome. The regulated entity demonstrates compliance with the DASR by appropriately implementing AMC. Regulated entities are free to propose Alternative Means of Compliance (AltMoC); however, the nature of Aviation Safety regulation means that the use of AltMoC may not be suitable in every instance.

5.2.4.3 **Guidance Material.** GM helps to illustrate the meaning of a requirement or provision in the DASR. It may provide relevant background, context or an explanation of the policy intent underpinning the respective regulation.

5.2.4.4 **Advisory Circulars.** Advisory Circulars (ACs) are typically issued to bring an issue to the attention of the target audience or to address a complex topic. ACs may be used to identify acceptable ways to achieve regulatory compliance, either as a temporary transition arrangement or in advance of promulgation as AMC in the DASR. Examples include information regarding emerging Aviation Safety matters, information that enhances compliance understanding for existing regulation, or policy guidance for aviation issues that are not yet regulated but require further understanding.

5.2.4.5 **Factsheets.** Factsheets are typically issued to provide concise information that may assist those interested in a particular topic.

5.2.5 Design Requirements

5.2.5.1 Volume 1 of the DASP Manual requires DASA to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR'. DASA fulfils this responsibility through prescribing and interpreting the minimum requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

Prescribing design requirements

Superseded

5.2.5.2 DASA employs three foundational principles when prescribing design requirements for aviation safety:

1. DASA recognises the design requirements prescribed by several CAAs and MAAs as providing a sound foundation for the safe design of Defence aircraft and aircraft-related systems and equipment
2. DASA may prescribe supplementation to these design requirements, where an aspect of a requirement is judged deficient or to support application to Defence's unique role and operating environment
3. DASA requires the conduct of a system safety program, to provide a robust means for identifying and analysing aviation hazards during the design process, and for eliminating or minimising the resultant risks so far as is reasonably practicable.

5.2.5.3 To provide assurance that safe flight is achieved through aircraft design, many CAAs/MAAs prescribe airworthiness design requirements, which are usually documented in an 'Airworthiness Code' (DASR 21.A.16A refers). An Airworthiness Code is a complete and consistent suite of design requirements that define those attributes of aircraft systems or equipment that underpin safe flight. As the development and maintenance of an Airworthiness Code is a substantial undertaking, rather than define and publish its own Code, DASA recognises Airworthiness Codes prescribed by other CAAs/MAAs (i.e. DASA accepts that these Codes provide a safe foundation for aircraft and aircraft-related systems design).

5.2.5.4 DASA may recognise an Airworthiness Code when the Code as a minimum:

1. is prescribed by a recognised CAA/MAA
2. has demonstrated a sound safety record
3. prescribes a complete and consistent suite of airworthiness design requirements
4. is supported by associated guidance on how to achieve compliance with the airworthiness design requirements
5. is accessible, i.e. published by the CAA/MAA in a consolidated and easily accessed format.

5.2.5.5 While aircraft and aircraft-related systems/equipment designs developed to a DASA recognised Airworthiness Code should substantially meet the level of safety expected by Defence, supplementary airworthiness design requirements may need to be prescribed by DASA as a result of:

1. known inadequacies in the Code
2. novel features included in the proposed design that are not accommodated by the Code
3. proposed Defence-unique roles and/or operating environments that are outside the scope of the Code and/or
4. Defence policies or Australian legislated requirements not being covered by the Code.

5.2.5.6 Compliance with DASA-recognised Codes and prescribed supplementation is the principal means by which safe design of an aircraft and aircraft-related systems/equipment is achieved. However, in isolation, a standards-based approach may not provide a complete basis for certification of an aircraft, or approval of aircraft-related systems/equipment having an effect on aviation safety.

Superseded

Many standards are inherently stove-piped, and therefore further analytical effort is required to identify and control system-level hazards. Further, standards are often written with 'vanilla' applications in mind; novel aircraft or systems design features are likely to pose novel hazards, which are not catered for within the standard. As a result, in addition to compliance with design standards, DASA requires the conduct of a system safety program for aircraft designs.

5.2.5.7 System safety is an engineering discipline that embraces safety as a core aspect of any given system design (or design change). System safety programs employ a suite of engineering tools and techniques to identify and analyse aviation safety hazards during the design process, and provide a management framework to evaluate and control the resultant risks. When applied well, a system safety program is an essential adjunct to a standards-based design approach.

5.2.5.8 DASA prescribes supplementation to recognised Codes within a framework of 'essential' and 'recommended' design requirements. While essential airworthiness design requirements define the level of safety that must be achieved by a design, they are not immutable. DASA, in consultation with the relevant capability manager where applicable, may approve an alternative design requirement in the following circumstances:

1. where analysis confirms the alternative design requirement achieves an equivalent level of safety
2. where analysis shows the alternative design requirement, supplemented by operational risk treatments, should achieve an equivalent level of safety or
3. where enforcing the Essential design requirement would have a marked negative effect on capability or cost, and an alternative (but less safe) design requirement is in Defence's best interests.

Interpreting design requirements

5.2.5.9 Like other MAAs, DASA accepts that tailoring of design requirements may be necessary to achieve essential military capability. Provided DASA concludes the proposed tailoring is judicious (i.e. that the tailoring represents good judgement or sense) in the ADF operational context, DASA may approve tailoring to the prescribed requirement. Certification or approval against the tailored requirement(s) would then be pursued by the applicant. Any proposed tailoring of design requirements by an applicant for type certification and/or design approval from DASA, which results in changes to prescribed safety criteria, must be supported by documented rationale that includes:

1. the capability manager's confirmation that a clear (well-defined) and documented capability imperative for the proposed tailoring exists
2. the applicant's confirmation that compliance with the prescribed standard impedes that capability imperative
3. the applicant's characterisation of the delta between the prescribed standard and the tailored standard
4. the applicant's, with the assistance of the capability manager (or delegate), characterisation of the risk due to this delta and
5. the capability manager's (or delegate's) formal conclusion that the tailored safety criteria presents a credible and defensible level of safety for that Defence aircraft or aircraft-related system/equipment, contextualised for ADF operations.

Superseded

5.2.5.10 Agreed tailoring, including any essential risk controls to achieve the defined level of safety, will usually be documented in a Military Certification Review Item (MCRI) or equivalent approved by DASA. Detailed MCRI guidance is contained in Section 7.2 Certification.

5.2.5.11 DASA may have two separate roles in the above process. First, as the repository of standards and certification expertise, DASA may advise the capability manager and applicant on how to wisely complete each step. Secondly, DASA needs to gain sufficient confidence in the conduct of the process to assure the Defence AA that the tailoring is indeed judicious. If this second role cannot be achieved, the tailoring of the prescribed requirement(s) cannot be approved and consequently certification or approval of the design would be precluded.

5.2.5.12 DASA also provides interpretation advice and direction on the intent and meaning of airworthiness design requirements, often but not exclusively related to:

1. the approval of tailored means of compliance for a design requirement
2. advice on the relevance of proposed design requirements to the design under consideration
3. advice on pragmatic tailoring of design requirements/standards.

5.2.5.13 The prescription and interpretation of design requirements and standards may be delegated to a Standards-Delegate of the Safety Authority (Standards-DoSA). The functions and responsibilities of DoSAs are detailed in Section 4.3.

Design requirements and WHS

5.2.5.14 Defence aircraft and aircraft-related systems/equipment can present a hazard to aircrew, other aircraft occupants, other airspace users, persons near or under the aircraft flight path, and maintenance and other ground personnel. The Australian Work Health and Safety Act and the Work Health and Safety Regulations (collectively, WHS Legislation) apply to Defence aviation, and therefore Defence has a legal obligation to ensure the health and safety of these persons. The design of the Defence aircraft can, in part, contribute to Defence satisfying this legal obligation, for example:

1. the aircraft design can promote a safe airborne workplace for aircrew and other occupants through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. improving crash survivability for aircraft occupants
    iii. implementing design controls for in-aircraft hazards that might injure aircraft occupants
    iv. implementing design controls for in-aircraft hazards that might affect the future (post-flight) health of aircraft occupants
2. the aircraft design can promote the safety of persons near or under the aircraft flight path through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. reducing the ground impact energy (mainly relevant to uncrewed aircraft)
3. the aircraft design can promote the safety of persons in close proximity to a stationary aircraft through:

Superseded

i. implementing design controls for aircraft hazards that might injure ground personnel

ii. implementing design controls for aircraft hazards that might affect the future health of ground personnel

iii. incorporating aircraft maintenance instructions that identify reasonably foreseeable hazards to maintenance personnel and present safe maintenance practices.

5.2.5.15 Importantly, DASA approval of prescribed design requirements for a Defence aircraft or aircraft-related systems/equipment, and proposed tailoring, does not constitute endorsement/ agreement of the determination that risk has been eliminated or otherwise minimised SFARP. Rather, this must remain a decision for the capability manager (or delegate), as does the enduring management of the residual risk due to the tailoring/alternative standard.

Defence Aviation Safety Design Requirements Manual

5.2.5.16 The Defence Aviation Safety Design Requirements Manual (DASDRM) is DASA's repository for recognised Codes, and associated prescribed supplementary design requirements, with respect to Defence aircraft and aviation support systems/equipment design.

5.2.5.17 The DASDRM prescribes design requirements for aircraft systems and functions, and aircraft support systems and equipment that have an effect on aviation safety, that are necessary to achieve safe flight in Defence's proposed Configuration, Role and Environment (CRE). It also prescribes additional design requirements that may further improve the level of safety, and that should be implemented where reasonably practicable. In each case, the DASDRM identifies the hazard(s) that the design requirement is intended to treat, to provide a basis for informed risk management where an aircraft design fails to meet the design requirement.

5.2.5.18 While capability and interoperability is not a specific consideration when establishing that an aircraft is capable of safe flight, robust design for capability and interoperability contributes to mission success, and therefore the safety of the crew. Consequently, while capability and interoperability design requirements are not a primary focus of the DASDRM, design requirements that support capability and interoperability outcomes are included where appropriate.

5.2.5.19 The DASDRM comprises the following six sections:

1. Section 1 – Application of Airworthiness Design Requirements. This section defines the purpose and scope of the DASDRM and defines the Airworthiness Codes that have been recognised by the Authority as providing a sound foundation for the design of Defence aircraft. It also describes the extent to which airworthiness design requirements contribute to Defence meeting its WHS Legislation obligations. Finally, Section 1 describes the application of capability and interoperability standards to aircraft designs.

2. Section 2 – Integrated Design Requirements. This section prescribes airworthiness design requirements for those engineering disciplines that pervade most aspects of aircraft systems design or affect multiple systems such as system safety, electromagnetic environmental effects and crash protection.

3. Section 3 – Aircraft System Design Requirements. This section prescribes airworthiness design requirements for aircraft systems such as communications, navigation, structures (fixed and rotary wing) and propulsion. The only systems

Superseded

included in this section are those where the Authority recognised Airworthiness Codes do not provide satisfactory coverage for Defence aircraft designs.

4. Section 4 – Uncrewed Aircraft Design Requirements. This section prescribes airworthiness design requirements for UAS.

5. Section 5 – Aircraft Support Systems. This section prescribes design requirements for non-aircraft systems and ground based equipment, where the systems/equipment have a direct effect on safe flight or aviation safety, such as aeronautical life support equipment, mission planning systems and aerial delivery.

6. Section 6 - Aerodrome Design Requirements. This section prescribes airworthiness design requirements for Defence aerodromes and heliports.

5.2.6 Formal Regulatory Advice

Introduction

5.2.6.1 DASA may provide formal regulatory advice on any Defence Aviation Safety policy within its remit in order to assist with understanding and compliance. This section provides guidance on seeking such advice. Other queries, such as those concerning DASA business matters, availability of training, staff duties, contact details and updates to ongoing activities do not warrant a formal process and may be addressed through normal lines of communication.

When to make a formal request

5.2.6.2 Only certain types of queries warrant the application of a formal process. Such queries fall into the following broad categories:

1. requesting interpretation of DASR or other policy:
   i. where the intent is unclear
   ii. relating to a situation not explicitly covered by existing policy.
2. requesting advice regarding implementation of DASR or other policy, such as:
   i. whether a particular approach is compliant
   ii. applicability of policy to a particular activity.

Before making a formal request

5.2.6.3 DASA publishes a number of educational and promotional artefacts, which may answer a query without the need to request advice. See Section 5.2.4 *Regulatory supporting information* and the *Education and Promotion* page on the DASA web site.

5.2.6.4 The DASP Policy and Guidance Portal (PGP) contains a functional search engine that may assist in searching for specific terminology or phrases. Tips for navigation and searching are contained within the PGP User Guide.

How to make a formal request

Superseded

5.2.6.5 If formal regulatory advice is required, the preferred method to request advice is via a DASR Query Form (DQF). In the case of uncertainty as to whether a DQF is suitable, email dasa.dasr@defence.gov.au.

5.2.6.6 While an email or phone call directly to a desk officer may seem more efficient, it does not always result in appropriate DASA registration and oversight. Registration informs DASA which areas of policy may require review or additional educational material and builds traceability for future updates. Oversight of queries is important for managing and prioritising DASA workload and ensures that advice follows an appropriate approval process before release. Therefore, DASA reserves the right to redirect any query to written form.

Turnaround Times

5.2.6.7 DASA will negotiate and agree upon a turnaround time with the query initiator as the first action following receipt of a query. DASA will communicate any subsequent changes to that timeline to all involved parties when they become apparent.

5.3 Aviation Safety Authorisations

5.3.1 Purpose

5.3.1.1 The DASR make provision for DASA to issue a range of 'authorisations' if assured that the regulated community has met, and continues to meet, the requirements and constraints of the DASR. These authorisations may be in the form of certificates, permits, approvals or licenses.

5.3.1.2 This chapter presents an overview of each common aviation safety authorisation.

5.3.2 Aviation Safety Authorisations

5.3.2.1 DASA-issued authorisations can broadly be characterised as pertaining to organisations, products and/or personnel. These authorisations are as follows:

1. organisational authorisations:
    i. Military Air Operator (MAO)
    ii. Aerodrome Operator (ADOPR)
    iii. Air Cargo Delivery Service Provider (ACDSP)
    iv. Air Navigation Service Provider (ANSP)
    v. Air Battle Management Operator (ABMO)
    vi. Military Design Organisation (MDO)
    vii. Military Production Organisation (MPO)
    viii. Approved Maintenance Organisation (AMO)
    ix. Continuing Airworthiness Management Organisation (CAMO)
    x. Maintenance Training Organisation (MTO)

Superseded

xi. Military Type Certificate Holder (MTCH) (currently an implicit approval)

2. product authorisations:

i. Military Type Certificate (MTC)

ii. Military Restricted Type Certificate (MRTC)

iii. Military Supplemental Type Certificate (MSTC)

iv. Military Permit to Fly (MPTF)

v. Military Certificate of Airworthiness (CoA)

vi. Military Restricted Certificate of Airworthiness (RCoA)

vii. Australian Military Technical Standard Order (AUSMTSO)

viii. Approval of Repair Design

ix. Airworthiness Directive (AD)

x. Aircraft Maintenance Programme (AMP)

xi. Uncrewed Aircraft System Operating Permit (UASOP)

xii. Aerodrome Certificate (ADC)

xiii. Other[1]

3. personnel authorisations:

i. Military Aircraft Maintenance Licence (MAML)

Note: DASA directly authorises certain management personnel within approved organisations. These are commonly referred to as 'Form 4 authorisations', since they are approved on DASA Form 4, Acceptance of Nominated Management Personnel. In the context of this chapter, those authorisations are considered to be part of the organisational approval process, so they are not listed separately here.

5.3.2.2 The type and scope of authorisations needed for a particular aircraft, aerodrome or air navigation service will depend on a range of factors, for example the involvement of other civil or military Aviation Authorities, the support arrangements implemented by Defence, and so on. These issues are explored elsewhere in this Manual.

5.3.2.3 Annexes A to X individually examine the authorisations listed in paragraph 3. Each annex explains the purpose of the authorisation, the relevant DASR requirements, applying for the authorisation, the responsibilities of the authorisation holder, and DASA's approach to compliance assurance.

Superseded

Annexes:

(a) Military Air Operator

(b) Aerodrome Operator

(c) Air Cargo Delivery Service Provider (To be issued)

(d) Air Navigation Service Provider (To be issued)

(e) Military Design Organisation

(f) Military Production Organisation

(g) Approved Maintenance Organisation

(h) Continuing Airworthiness Management Organisation

(i) Maintenance Training Organisation

(j) Military Type Certificate Holder

(k) Military Type Certificate

(l) Military Restricted Type Certificate (To be issued)

(m) Military Supplemental Type Certificate

(n) Military Permit to Fly

(o) Military Certificate of Airworthiness

(p) Military Restricted Certificate of Airworthiness (To be issued)

(q) Australian Military Technical Standard Order

(r) Approval of Repair Design

(s) Airworthiness Directive (To be issued)

(t) Aircraft Maintenance Programme

(u) Uncrewed Aircraft System Operating Permit

(v) Aerodrome Certificate

(w) Military Aircraft Maintenance Licence

(x) Air Battle Management Operator (To be issued)

5.4.1 Introduction

5.4.1.1 This section expands on the Oversight and Enforcement (O&E) policy described in section 4.1.4. Specifically, it explains how regulated entities can expect to be engaged by DASA in assessing initial and ongoing compliance.

5.4.1.2 **Regulated entity.** The term 'regulated entity' is used to describe the different organisations and personnel within the Aviation Safety community that are regulated under DASR, and who are subsequently oversighted by DASA. These entities are typically awarded DASA-issued authorisations, as listed in section DASPMAN Vol 3 Chapter 5.3.2 Aviation Safety Authorisations.

Superseded

5.4.2 DASA O&E-related responsibilities

5.4.2.1 The DASA regulatory facing directorates accountable for O&E functions are DAVNOPS, DIA and DCA. The remit of each is detailed below:

1. **DAVNOPS.** DAVNOPS responsibilities include:
    i. conducting regulatory compliance assessments of organisations to enable the issuing of:
        – a Military Air Operator Certificate (MAOC) and corresponding Operational Specification (OpSpec) under DASR.ARO
        – an Air Navigation Service Provider Certificate (ANSPC) and Service Provision Conditions (SPC) under DASR.ANSP
        – an Aerodrome Operator Certificate (ADOPRC) and Aerodrome Operator Specification (ADOpSpec) under DASR 139
        – an Air Cargo Delivery Service Provider Certificate (ACDSPC) and Air Cargo Delivery Operational Specification (ACDOpSpec) under DASR ACD
        – an Air Battle Management Operator Certificate (ABMOC) and Operational Specification (OpSpec) under DASR ABM
    ii. conducting oversight to allow the retention of existing organisation authorisations.
2. **DIA.** DIA responsibilities include:
    i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:
        – a Military Type Certificate Holder (MTCH) organisation approval and the corresponding platform Type Certificate under DASR Part 21 Subpart B
        – a Design Organisation Approval (DOA) for engineering design services under DASR Part 21 Subpart J.
        – a Design Production Organisation Approval (POA) for parts production services under DASR Part 21 Subpart G or DASR Part 21 Subpart F.
    ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.
3. **DCA.** DCA responsibilities include:
    i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:
        – DASR Part M Continuing Airworthiness Management Organisations (CAMO) authorisations
        – DASR Part 145 Maintenance Organisation (DASR 145 MO) authorisations

Superseded

– DASR Part 147 Aircraft Maintenance Training Organisation (DASR 145 AMTO) authorisations

– DASR Part 66 Military Aircraft Maintenance Licences (DASR 66 MAML)

ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.

5.4.3 Initial authorisation process

5.4.3.1 To gain an initial authorisation, the applicant:

1. organisation must demonstrate:

   i. a Defence need for the award of the authorisation

   ii. a local documented management system that complies with DASR requirements for the proposed scope and level of activities, as defined by their organisation approval basis (ie the set of documents which provides the objective quality evidence necessary to prove compliance with the relevant DASR)

2. Nominated Management Personnel must demonstrate:

   i. a Defence need for the award of the authorisation

   ii. compliance with specific qualification, training and experience requirements.

5.4.3.2 **Application.** An application for initial authorisation is made on the relevant DASR form, in a manner established by DASA within the respective DASR. Each form describes the information to be included to demonstrate compliance, how the form is to be submitted and who to. Where the DASR does not prescribe a format or manner for the application, the applicant should contact the relevant DASA Directorate for guidance.

5.4.3.3 **Initial DASA assessment.** The process by which DASA assesses applications varies between organisations and Nominated Management Personnel. For organisations, the assessment process begins with a desk top audit of the organisation's relevant documentation (i.e. evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable'—see below). For Nominated Management Personnel, DASA assesses compliance with specific qualification, training, and experience requirements.

5.4.3.4 If the applicant is found to be deficient in required content or non-compliant with any relevant DASR requirement, DASA will endeavour to request additional information where practicable. Post assessment the outcome of the application will be notified to the organisation as:

1. progressed to the next stage

2. rejected, providing reasons

3. conditionally progressed, with actions taken by DASA and the applicant to ensure non-compliances are resolved.

Superseded

5.4.3.5 **On-site DASA assessment.** An on-site assessment is not an essential part of the initial authorisation process for any DASR authorisation and will be dependent on the nature of the request. DASA will determine if there is a need to conduct an on-site assessment, based on the outcome of the initial assessment, and the scope, level, and complexity of the application. Where conducted, the on-site assessment may include inspection of physical facilities and additional documents, and further face-to-face discussion with applicant staff (for additional 'Present', 'Suitable' and 'Operating' evidence—see below).

5.4.3.6 **DASA Organisational Approval.** Following the initial assessment and, if conducted, on-site assessment, the DASA team will provide a recommendation for authorisation to the DASA assessment lead. Where appropriate, an authorisation package will be compiled for DG DASA approval. Once approved, authorisation artefacts are dispatched to the applicant at which point the applicant may utilise privileges granted, noting any limitations.

5.4.3.7 **Timeline.** DASA timelines for the assessment and approval of authorisation applications will depend on the scope and complexity of the authorisation sought, and the level of DASA involvement to support the applicant through the process. DASA will endeavour to collaborate with applicants and action authorisation requests in a timely manner. Approvals may be expedited based on operational or safety imperatives and negotiated accordingly.

5.4.3.8 **Post approval.** The organisation and Nominated Management Personnel transition from the 'initial authorisation' phase to ongoing DASA oversight to retain their authorisation. The applicant is responsible for maintaining ongoing compliance with the relevant DASR and rectifying any future internally identified non-compliances through their own Quality Management System.

5.4.4 Authorisation change and retention process

5.4.4.1 **Changes to authorisations**. Should a regulated entity identify a need for authorisation scope/limitations/privilege changes, the entity must apply to DASA (except where otherwise permitted by DASR). Applications for changes to authorisations are made on a form and in a manner established by DASA within the respective DASR, as per their initial authorisation. In actioning the application, DASA will follow the same process as for initial authorisations, adjusting the scope and extent of the assessment to suit the nature of the change. The organisation and Nominated Management Personnel must not implement the proposed change until DASA has issued updated authorisations (except where otherwise permitted by DASR and previously agreed by DASA).

5.4.4.2 **Retention of authorisation.** DASA authorisations remain extant provided regulated entities retain a Defence need and continue to comply with respective DASR. Once the initial authorisation is awarded, ongoing DASA surveillance and oversight of authorisation holders commences. A key component of an effective regulatory framework is ensuring that regulated organisations have a clear understanding of when, why and how DASA will review ongoing compliance. DASA assures the validity of authorisations by applying an oversight cycle commensurate with the perceived risk to Aviation Safety (generally every 24 months). DASA's risk-based approach continually reviews safety intelligence collected from active and passive surveillance activities. Based on collected safety intelligence, DASA conducts oversight of authorisation holders, adjusting frequency and scope of oversight to suit the perceived risk.

Superseded

5.4.5 PSOE for Regulatory Oversight

5.4.5.1 The DASP O&E policy is documented in section 4.1.4, and supports compliance with the DASR through application of a consistent O&E operating model. This section provides Defence tailoring of the civil PSOE model for broader DASR application; noting the PSOE model developed for ICAO Annex 19 is heavily oriented towards Management System maturity assessment vice broader regulation compliance. When considering the Defence aviation context it is important to understand the hazard-based nature of DASR and the regulated community's SFARP obligation in achieving an acceptable level of safety through a baseline level of compliance.

5.4.5.2 Within this context, DASA will execute oversight activities of a regulated entity using the following Defence-tailored PSOE definitions:

1. **'Present' (P).** There is evidence that the process, behavior and technology indicators required for DASR compliance are clearly visible and documented within the organisation's systems.

2. **'Suitable' (S).** There is evidence the process, behavior and technology indicators are suitable (i.e. regulatory compliant) for the size, nature, context, complexity of the organisation and its services, and the Aviation Safety hazard expected to be mitigated (including consideration of industry expectation for standards, codes, guidance etc).

3. **'Operating' (O).** There is evidence that the process, behavior and technology indicators are in use and an output is being produced.

4. **'Effective' (E).** There is evidence that the process outputs , behavior and technology indicators are effective in achieving the desired DASR Aviation Safety hazard control outcome.

    i. Note, effectiveness assessments represent an evolution in compliance methodology, beyond traditional compliance/conformance assessments. In executing an effectiveness assessment, a thorough understanding of the applicable regulation's aviation safety hazard is required, to ascertain if the process outputs are effectively preventing realisation of that hazard (based on evidence collected during an oversight activity).

5.4.5.3 Where non-compliances or potential problems are identified through PSOE application enforcement action will be taken against the organisation.

5.4.6 Management of DASA Findings

5.4.6.1 Findings are issued to highlight an actual or potential non-compliance against DASR. All findings are supported by objective quality evidence and contain adequate detail to support the finding.

5.4.6.2 A Finding will only be issued to remedy an identified non-compliance to a specific regulatory outcome. Once Findings are issued, the regulated entity is responsible for identifying immediate actions, root causes, developing a corrective action plan and implementing corrective actions to address the non-compliance.

5.4.6.3 **Finding levels.** DASA issues Level 1, 2 and 3 findings, as follows:

Superseded

1. **Level 1.** Any non-compliance with DASR requirements which lowers the safety standard and seriously hazards flight safety.

2. **Level 2.** Any non-compliance with DASR requirements which lowers the safety standard and possibly hazards flight safety.

3. **Level 3.** Any non-compliance with DASR requirements, or potential problem, that could lower the safety standard and possibly hazards flight safety.

5.4.6.4 **DASA Level 1 and 2 Findings.** Once a DASA Finding is issued to an organisation, DASA will monitor that actions required to address non-compliances or potential non-compliances are managed and tracked until closure of the Finding. The DASA Level 1 and 2 Findings lifecycle has six distinct stages for regulated organisations, defined on DASR Form 1299 as follows:

1. **Organisational acceptance of Finding.** Organisations accept the Finding based on a DASA assessment of the evidence, and respond with proposed dates for the completion of their Immediate Actions and development of their Corrective Action Plan. DASA will assess the response and agree to timeframes, or consult for revised dates.

2. Where organisations does not agree with the DASA Findings issued, they must formally write to DASA, providing objective evidence as to why the Finding is inappropriate. DASA will assess the additional evidence and respond.

3. **Implementation of Immediate Actions.** Organisations implement short-term solutions to contain the non-compliance and manage the associated risk mitigated SFARP. DASA will use DASR Form 1299 to assess the organisation's actions and document acceptance, or request rework as appropriate.

4. **Root cause analysis.** Organisations assess the root causes of the non-compliance. Multiple root cause analysis tools are available to organisations, including the '5-Whys', Bow Tie, Ishikawa diagrams, Apollo Reality Charting, and Tree Diagram. Importantly, there is never just one root cause to a non-compliance, and 'human error' is never a valid conclusion.

5. DASR Form 1299 provides (as a non-compulsory use tool) a '5-Whys' template against which a root cause analysis can be conducted. DASA will use DASR Form 1299 to assess the organisation's analysis and document acceptance, or request rework as appropriate.

6. **Development of the Corrective Action Plan.** Organisations identify a corrective action for each root cause identified, to prevent recurrence. For each corrective action, the organisation defines:

    i. a means by which the effectiveness of the corrective action to prevent reoccurrence will be assessed

    ii. the objective quality evidence required to substantiate corrective action effectiveness

    iii. a lead person for its implementation, and for reporting implementation and substantiation status

    iv. the due date for corrective action completion, cognisant of the need to validate the effectiveness of the corrective action prior to closure

Superseded

v. any justification supporting the completion date choice (e.g. time to collect validation evidence, or co-dependency/secondary effects).

7. DASR Form 1299 provides a Corrective Action Plan template. DASA will use the form to assess the organisation's plan and document acceptance, or request rework as appropriate.

8. **Implementation of Corrective Actions.** Organisations implement the DASA-agreed corrective actions, progressively submitting each completed Corrective Action to DASA for consideration on DASR Form 1299. DASA will track and manage the progress of approved Corrective Action Plans so that a Finding will not fall overdue unless an individual Corrective Action due date has passed.

9. DASA will use the DASR Form 1299 to assess the organisation's assessment and document acceptance, or request rework as appropriate.

10. **Finding closure.** Once DASA is satisfied that the organisation has implemented and validated the effectiveness of all actions that address the non-compliance, DASA will close the Finding and notify the organisation.

5.4.6.5 **Findings Requiring Re-work.** Where DASA assesses issues with the quality of the response provided by an organisation in developing/implementing Immediate Actions, Root Cause Analysis, Corrective Action Plan or Corrective Actions it will be returned to the organisation for re-work. In doing so, DASA will provide the necessary details of the cause for re-work for further organisational consideration and action. As part of the re-work process the organisation will generally be required to consider if a Finding Extension is required based upon the impact of the quality issue relative to the extant hazard retention. Where extension to originally agreed submission timelines is necessary the criteria under 5.4.6.6 will be required.

5.4.6.6 **DASA Level 3 Findings.** Level 3 Findings are notified to the organisation through DASA correspondence (usually an initial authorisation notification or an oversight report). Level 3 Findings are expected to be managed to closure under the organisation's QMS. DASA will review Level 3 Finding progress during subsequent O&E activities. Inaction against a Level 3 finding does not automatically equate to a Level 2 Finding being issued. However, it may serve as evidence that, when coupled with other safety intelligence, may lead to issue of a Level 2 Finding.

5.4.6.7 **DASA Findings extensions.** An organisation can request an extension (usually through email to the respective Desk Officer) at any stage in the Findings management process. However, as the organisation owns the Aviation Safety risk associated with the Finding until DASA Finding closure, DASA will only consider these requests based on an assessment of the Finding's residual risk being mitigated SFARP. Evidence expected to be provided in an extension request should include:

1. the reason further time is required to complete actions,

2. details of what has already been completed against Findings root causes and agreed Corrective Actions,

3. what outstanding Corrective Actions remain and their revised dates for completion, and

4. justification of how residual aviation safety risk will be controlled SFARP until Corrective Action completion.

Superseded

5.4.6.8 DASA assesses all extension requests in accordance with the DASA Enforcement Principles at section 4.1.4 and notifies organisations of the outcome. However, organisations should not assume automatic extension approval.

5.5 Education and training

(Reserved)

Superseded

5.3. Aviation Safety Authorisations

5.1 Introduction

(Reserved)

5.2. Aviation Safety Policy and Guidance

5.2.1 Introduction

5.2.1.1 This section describes the hierarchy of policy and guidance within the Defence Aviation Safety Program.

5.2.2 The DASP Manual

5.2.2.1 The DASP Manual is the central policy and guidance document within the DASP. It is issued by the Defence AA in three volumes:

1. Volume 1 *Requirements for the DASP* expands on Joint Directive 21/2021 to establish requirements for the implementation of the DASP; in particular:
    i. legal and governance arrangements
    ii. independent safety assurance
    iii. the Defence Aviation Safety Regulation
    iv. the independent investigation of accidents and incidents
    v. independent reviews of Aviation Safety.
2. Volume 2 *Defence Aviation Safety Regulation* establishes all requirements and provisions for the management of Aviation Safety by commanders and managers.
3. Volume 3 *DASP Guidance* provides an overview of the DASP and how its various elements collectively achieve the required safety objectives. Volume 3 also provides supporting information to promote understanding of concepts and processes spanning multiple requirements or provisions established through Volumes 1 and 2.

5.2.3 Defence Aviation Safety Regulation

5.2.3.1 The DASR are contained within DASP Manual Volume 2. Their structure and naming convention are based on those applied by CASA and EASA.

5.2.3.2 The DASR comprise:

Superseded

1. **General Requirements,** which define the scope and applicability of the DASR parts as well as establish requirements and provisions that are applicable to a significant proportion of regulated entities.

2. **DASR parts,** which are outcome based and specify requirements for each of the specifically regulated Aviation Safety topics. They may include associated supporting information in the form of Acceptable Means of Compliance (AMC) and Guidance Material (GM).

5.2.4 Regulatory Supporting Information

5.2.4.1 The AMC and GM embedded within the DASR are part of a broader range of supporting information published by DASA to promote understanding of, and compliance with, the regulations. All such supporting information is authoritative and does not mandate any action but may address regulatory requirements and provisions established elsewhere.

5.2.4.2 **Acceptable Means of Compliance.** AMC provides a generic and widely applicable approach to meeting the respective DASR requirements. DASA publishes AMC to provide certainty as to how the required safety outcomes may be achieved. Choosing to implement an AMC relieves the regulated entity of the burden of proving that the means of compliance achieves the intended safety outcome. The regulated entity demonstrates compliance with the DASR by appropriately implementing AMC. Regulated entities are free to propose Alternative Means of Compliance (AltMoC); however, the nature of Aviation Safety regulation means that the use of AltMoC may not be suitable in every instance.

5.2.4.3 **Guidance Material.** GM helps to illustrate the meaning of a requirement or provision in the DASR. It may provide relevant background, context or an explanation of the policy intent underpinning the respective regulation.

5.2.4.4 **Advisory Circulars.** Advisory Circulars (ACs) are typically issued to bring an issue to the attention of the target audience or to address a complex topic. ACs may be used to identify acceptable ways to achieve regulatory compliance, either as a temporary transition arrangement or in advance of promulgation as AMC in the DASR. Examples include information regarding emerging Aviation Safety matters, information that enhances compliance understanding for existing regulation, or policy guidance for aviation issues that are not yet regulated but require further understanding.

5.2.4.5 **Factsheets.** Factsheets are typically issued to provide concise information that may assist those interested in a particular topic.

5.2.5 Design Requirements

5.2.5.1 Volume 1 of the DASP Manual requires DASA to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR'. DASA fulfils this responsibility through prescribing and interpreting the minimum requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

Prescribing design requirements

Superseded

5.2.5.2 DASA employs three foundational principles when prescribing design requirements for aviation safety:

1. DASA recognises the design requirements prescribed by several CAAs and MAAs as providing a sound foundation for the safe design of Defence aircraft and aircraft-related systems and equipment
2. DASA may prescribe supplementation to these design requirements, where an aspect of a requirement is judged deficient or to support application to Defence's unique role and operating environment
3. DASA requires the conduct of a system safety program, to provide a robust means for identifying and analysing aviation hazards during the design process, and for eliminating or minimising the resultant risks so far as is reasonably practicable.

5.2.5.3 To provide assurance that safe flight is achieved through aircraft design, many CAAs/MAAs prescribe airworthiness design requirements, which are usually documented in an 'Airworthiness Code' (DASR 21.A.16A refers). An Airworthiness Code is a complete and consistent suite of design requirements that define those attributes of aircraft systems or equipment that underpin safe flight. As the development and maintenance of an Airworthiness Code is a substantial undertaking, rather than define and publish its own Code, DASA recognises Airworthiness Codes prescribed by other CAAs/MAAs (i.e. DASA accepts that these Codes provide a safe foundation for aircraft and aircraft-related systems design).

5.2.5.4 DASA may recognise an Airworthiness Code when the Code as a minimum:

1. is prescribed by a recognised CAA/MAA
2. has demonstrated a sound safety record
3. prescribes a complete and consistent suite of airworthiness design requirements
4. is supported by associated guidance on how to achieve compliance with the airworthiness design requirements
5. is accessible, i.e. published by the CAA/MAA in a consolidated and easily accessed format.

5.2.5.5 While aircraft and aircraft-related systems/equipment designs developed to a DASA recognised Airworthiness Code should substantially meet the level of safety expected by Defence, supplementary airworthiness design requirements may need to be prescribed by DASA as a result of:

1. known inadequacies in the Code
2. novel features included in the proposed design that are not accommodated by the Code
3. proposed Defence-unique roles and/or operating environments that are outside the scope of the Code and/or
4. Defence policies or Australian legislated requirements not being covered by the Code.

5.2.5.6 Compliance with DASA-recognised Codes and prescribed supplementation is the principal means by which safe design of an aircraft and aircraft-related systems/equipment is achieved. However, in isolation, a standards-based approach may not provide a complete basis for certification of an aircraft, or approval of aircraft-related systems/equipment having an effect on aviation safety.

Superseded

Many standards are inherently stove-piped, and therefore further analytical effort is required to identify and control system-level hazards. Further, standards are often written with 'vanilla' applications in mind; novel aircraft or systems design features are likely to pose novel hazards, which are not catered for within the standard. As a result, in addition to compliance with design standards, DASA requires the conduct of a system safety program for aircraft designs.

5.2.5.7 System safety is an engineering discipline that embraces safety as a core aspect of any given system design (or design change). System safety programs employ a suite of engineering tools and techniques to identify and analyse aviation safety hazards during the design process, and provide a management framework to evaluate and control the resultant risks. When applied well, a system safety program is an essential adjunct to a standards-based design approach.

5.2.5.8 DASA prescribes supplementation to recognised Codes within a framework of 'essential' and 'recommended' design requirements. While essential airworthiness design requirements define the level of safety that must be achieved by a design, they are not immutable. DASA, in consultation with the relevant capability manager where applicable, may approve an alternative design requirement in the following circumstances:

1. where analysis confirms the alternative design requirement achieves an equivalent level of safety
2. where analysis shows the alternative design requirement, supplemented by operational risk treatments, should achieve an equivalent level of safety or
3. where enforcing the Essential design requirement would have a marked negative effect on capability or cost, and an alternative (but less safe) design requirement is in Defence's best interests.

Interpreting design requirements

5.2.5.9 Like other MAAs, DASA accepts that tailoring of design requirements may be necessary to achieve essential military capability. Provided DASA concludes the proposed tailoring is judicious (i.e. that the tailoring represents good judgement or sense) in the ADF operational context, DASA may approve tailoring to the prescribed requirement. Certification or approval against the tailored requirement(s) would then be pursued by the applicant. Any proposed tailoring of design requirements by an applicant for type certification and/or design approval from DASA, which results in changes to prescribed safety criteria, must be supported by documented rationale that includes:

1. the capability manager's confirmation that a clear (well-defined) and documented capability imperative for the proposed tailoring exists
2. the applicant's confirmation that compliance with the prescribed standard impedes that capability imperative
3. the applicant's characterisation of the delta between the prescribed standard and the tailored standard
4. the applicant's, with the assistance of the capability manager (or delegate), characterisation of the risk due to this delta and
5. the capability manager's (or delegate's) formal conclusion that the tailored safety criteria presents a credible and defensible level of safety for that Defence aircraft or aircraft-related system/equipment, contextualised for ADF operations.

Superseded

5.2.5.10 Agreed tailoring, including any essential risk controls to achieve the defined level of safety, will usually be documented in a Military Certification Review Item (MCRI) or equivalent approved by DASA. Detailed MCRI guidance is contained in Section 7.2 Certification.

5.2.5.11 DASA may have two separate roles in the above process. First, as the repository of standards and certification expertise, DASA may advise the capability manager and applicant on how to wisely complete each step. Secondly, DASA needs to gain sufficient confidence in the conduct of the process to assure the Defence AA that the tailoring is indeed judicious. If this second role cannot be achieved, the tailoring of the prescribed requirement(s) cannot be approved and consequently certification or approval of the design would be precluded.

5.2.5.12 DASA also provides interpretation advice and direction on the intent and meaning of airworthiness design requirements, often but not exclusively related to:

1. the approval of tailored means of compliance for a design requirement
2. advice on the relevance of proposed design requirements to the design under consideration
3. advice on pragmatic tailoring of design requirements/standards.

5.2.5.13 The prescription and interpretation of design requirements and standards may be delegated to a Standards-Delegate of the Safety Authority (Standards-DoSA). The functions and responsibilities of DoSAs are detailed in Section 4.3.

Design requirements and WHS

5.2.5.14 Defence aircraft and aircraft-related systems/equipment can present a hazard to aircrew, other aircraft occupants, other airspace users, persons near or under the aircraft flight path, and maintenance and other ground personnel. The Australian Work Health and Safety Act and the Work Health and Safety Regulations (collectively, WHS Legislation) apply to Defence aviation, and therefore Defence has a legal obligation to ensure the health and safety of these persons. The design of the Defence aircraft can, in part, contribute to Defence satisfying this legal obligation, for example:

1. the aircraft design can promote a safe airborne workplace for aircrew and other occupants through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. improving crash survivability for aircraft occupants
    iii. implementing design controls for in-aircraft hazards that might injure aircraft occupants
    iv. implementing design controls for in-aircraft hazards that might affect the future (post-flight) health of aircraft occupants
2. the aircraft design can promote the safety of persons near or under the aircraft flight path through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. reducing the ground impact energy (mainly relevant to uncrewed aircraft)
3. the aircraft design can promote the safety of persons in close proximity to a stationary aircraft through:

Superseded

i. implementing design controls for aircraft hazards that might injure ground personnel

ii. implementing design controls for aircraft hazards that might affect the future health of ground personnel

iii. incorporating aircraft maintenance instructions that identify reasonably foreseeable hazards to maintenance personnel and present safe maintenance practices.

5.2.5.15 Importantly, DASA approval of prescribed design requirements for a Defence aircraft or aircraft-related systems/equipment, and proposed tailoring, does not constitute endorsement/ agreement of the determination that risk has been eliminated or otherwise minimised SFARP. Rather, this must remain a decision for the capability manager (or delegate), as does the enduring management of the residual risk due to the tailoring/alternative standard.

Defence Aviation Safety Design Requirements Manual

5.2.5.16 The Defence Aviation Safety Design Requirements Manual (DASDRM) is DASA's repository for recognised Codes, and associated prescribed supplementary design requirements, with respect to Defence aircraft and aviation support systems/equipment design.

5.2.5.17 The DASDRM prescribes design requirements for aircraft systems and functions, and aircraft support systems and equipment that have an effect on aviation safety, that are necessary to achieve safe flight in Defence's proposed Configuration, Role and Environment (CRE). It also prescribes additional design requirements that may further improve the level of safety, and that should be implemented where reasonably practicable. In each case, the DASDRM identifies the hazard(s) that the design requirement is intended to treat, to provide a basis for informed risk management where an aircraft design fails to meet the design requirement.

5.2.5.18 While capability and interoperability is not a specific consideration when establishing that an aircraft is capable of safe flight, robust design for capability and interoperability contributes to mission success, and therefore the safety of the crew. Consequently, while capability and interoperability design requirements are not a primary focus of the DASDRM, design requirements that support capability and interoperability outcomes are included where appropriate.

5.2.5.19 The DASDRM comprises the following six sections:

1. Section 1 – Application of Airworthiness Design Requirements. This section defines the purpose and scope of the DASDRM and defines the Airworthiness Codes that have been recognised by the Authority as providing a sound foundation for the design of Defence aircraft. It also describes the extent to which airworthiness design requirements contribute to Defence meeting its WHS Legislation obligations. Finally, Section 1 describes the application of capability and interoperability standards to aircraft designs.

2. Section 2 – Integrated Design Requirements. This section prescribes airworthiness design requirements for those engineering disciplines that pervade most aspects of aircraft systems design or affect multiple systems such as system safety, electromagnetic environmental effects and crash protection.

3. Section 3 – Aircraft System Design Requirements. This section prescribes airworthiness design requirements for aircraft systems such as communications, navigation, structures (fixed and rotary wing) and propulsion. The only systems

Superseded

included in this section are those where the Authority recognised Airworthiness Codes do not provide satisfactory coverage for Defence aircraft designs.

4. Section 4 – Uncrewed Aircraft Design Requirements. This section prescribes airworthiness design requirements for UAS.

5. Section 5 – Aircraft Support Systems. This section prescribes design requirements for non-aircraft systems and ground based equipment, where the systems/equipment have a direct effect on safe flight or aviation safety, such as aeronautical life support equipment, mission planning systems and aerial delivery.

6. Section 6 - Aerodrome Design Requirements. This section prescribes airworthiness design requirements for Defence aerodromes and heliports.

5.2.6 Formal Regulatory Advice

Introduction

5.2.6.1 DASA may provide formal regulatory advice on any Defence Aviation Safety policy within its remit in order to assist with understanding and compliance. This section provides guidance on seeking such advice. Other queries, such as those concerning DASA business matters, availability of training, staff duties, contact details and updates to ongoing activities do not warrant a formal process and may be addressed through normal lines of communication.

When to make a formal request

5.2.6.2 Only certain types of queries warrant the application of a formal process. Such queries fall into the following broad categories:

1. requesting interpretation of DASR or other policy:
    i. where the intent is unclear
    ii. relating to a situation not explicitly covered by existing policy.
2. requesting advice regarding implementation of DASR or other policy, such as:
    i. whether a particular approach is compliant
    ii. applicability of policy to a particular activity.

Before making a formal request

5.2.6.3 DASA publishes a number of educational and promotional artefacts, which may answer a query without the need to request advice. See Section 5.2.4 *Regulatory supporting information* and the *Education and Promotion* page on the DASA web site.

5.2.6.4 The DASP Policy and Guidance Portal (PGP) contains a functional search engine that may assist in searching for specific terminology or phrases. Tips for navigation and searching are contained within the PGP User Guide.

How to make a formal request

Superseded

5.2.6.5 If formal regulatory advice is required, the preferred method to request advice is via a DASR Query Form (DQF). In the case of uncertainty as to whether a DQF is suitable, email dasa.dasr@defence.gov.au.

5.2.6.6 While an email or phone call directly to a desk officer may seem more efficient, it does not always result in appropriate DASA registration and oversight. Registration informs DASA which areas of policy may require review or additional educational material and builds traceability for future updates. Oversight of queries is important for managing and prioritising DASA workload and ensures that advice follows an appropriate approval process before release. Therefore, DASA reserves the right to redirect any query to written form.

Turnaround Times

5.2.6.7 DASA will negotiate and agree upon a turnaround time with the query initiator as the first action following receipt of a query. DASA will communicate any subsequent changes to that timeline to all involved parties when they become apparent.

5.3 Aviation Safety Authorisations

5.3.1 Purpose

5.3.1.1 The DASR make provision for DASA to issue a range of 'authorisations' if assured that the regulated community has met, and continues to meet, the requirements and constraints of the DASR. These authorisations may be in the form of certificates, permits, approvals or licenses.

5.3.1.2 This chapter presents an overview of each common aviation safety authorisation.

5.3.2 Aviation Safety Authorisations

5.3.2.1 DASA-issued authorisations can broadly be characterised as pertaining to organisations, products and/or personnel. These authorisations are as follows:

1. organisational authorisations:
    i. Military Air Operator (MAO)
    ii. Aerodrome Operator (ADOPR)
    iii. Air Cargo Delivery Service Provider (ACDSP)
    iv. Air Navigation Service Provider (ANSP)
    v. Air Battle Management Operator (ABMO)
    vi. Military Design Organisation (MDO)
    vii. Military Production Organisation (MPO)
    viii. Approved Maintenance Organisation (AMO)
    ix. Continuing Airworthiness Management Organisation (CAMO)
    x. Maintenance Training Organisation (MTO)

Superseded

xi. Military Type Certificate Holder (MTCH) (currently an implicit approval)

2. product authorisations:

i. Military Type Certificate (MTC)

ii. Military Restricted Type Certificate (MRTC)

iii. Military Supplemental Type Certificate (MSTC)

iv. Military Permit to Fly (MPTF)

v. Military Certificate of Airworthiness (CoA)

vi. Military Restricted Certificate of Airworthiness (RCoA)

vii. Australian Military Technical Standard Order (AUSMTSO)

viii. Approval of Repair Design

ix. Airworthiness Directive (AD)

x. Aircraft Maintenance Programme (AMP)

xi. Uncrewed Aircraft System Operating Permit (UASOP)

xii. Aerodrome Certificate (ADC)

xiii. Other[1]

3. personnel authorisations:

i. Military Aircraft Maintenance Licence (MAML)

Note: DASA directly authorises certain management personnel within approved organisations. These are commonly referred to as 'Form 4 authorisations', since they are approved on DASA Form 4, Acceptance of Nominated Management Personnel. In the context of this chapter, those authorisations are considered to be part of the organisational approval process, so they are not listed separately here.

5.3.2.2 The type and scope of authorisations needed for a particular aircraft, aerodrome or air navigation service will depend on a range of factors, for example the involvement of other civil or military Aviation Authorities, the support arrangements implemented by Defence, and so on. These issues are explored elsewhere in this Manual.

5.3.2.3 Annexes A to X individually examine the authorisations listed in paragraph 3. Each annex explains the purpose of the authorisation, the relevant DASR requirements, applying for the authorisation, the responsibilities of the authorisation holder, and DASA's approach to compliance assurance.

Annexes:

(a) Military Air Operator

(b) Aerodrome Operator

Superseded

(c) Air Cargo Delivery Service Provider (To be issued)

(d) Air Navigation Service Provider (To be issued)

(e) Military Design Organisation

(f) Military Production Organisation

(g) Approved Maintenance Organisation

(h) Continuing Airworthiness Management Organisation

(i) Maintenance Training Organisation

(j) Military Type Certificate Holder

(k) Military Type Certificate

(l) Military Restricted Type Certificate (To be issued)

(m) Military Supplemental Type Certificate

(n) Military Permit to Fly

(o) Military Certificate of Airworthiness

(p) Military Restricted Certificate of Airworthiness (To be issued)

(q) Australian Military Technical Standard Order

(r) Approval of Repair Design

(s) Airworthiness Directive (To be issued)

(t) Aircraft Maintenance Programme

(u) Uncrewed Aircraft System Operating Permit

(v) Aerodrome Certificate

(w) Military Aircraft Maintenance Licence

(x) Air Battle Management Operator (To be issued)

5.4.1 Introduction

5.4.1.1 This section expands on the Oversight and Enforcement (O&E) policy described in section 4.1.4. Specifically, it explains how regulated entities can expect to be engaged by DASA in assessing initial and ongoing compliance.

5.4.1.2 **Regulated entity.** The term 'regulated entity' is used to describe the different organisations and personnel within the Aviation Safety community that are regulated under DASR, and who are subsequently oversighted by DASA. These entities are typically awarded DASA-issued authorisations, as listed in section DASPMAN Vol 3 Chapter 5.3.2 Aviation Safety Authorisations.

Superseded

5.4.2 DASA O&E-related responsibilities

5.4.2.1 The DASA regulatory facing directorates accountable for O&E functions are DAVNOPS, DIA and DCA. The remit of each is detailed below:

1. **DAVNOPS.** DAVNOPS responsibilities include:
   - i. conducting regulatory compliance assessments of organisations to enable the issuing of:
     - a Military Air Operator Certificate (MAOC) and corresponding Operational Specification (OpSpec) under DASR.ARO
     - an Air Navigation Service Provider Certificate (ANSPC) and Service Provision Conditions (SPC) under DASR.ANSP
     - an Aerodrome Operator Certificate (ADOPRC) and Aerodrome Operator Specification (ADOpSpec) under DASR 139
     - an Air Cargo Delivery Service Provider Certificate (ACDSPC) and Air Cargo Delivery Operational Specification (ACDOpSpec) under DASR ACD
     - an Air Battle Management Operator Certificate (ABMOC) and Operational Specification (OpSpec) under DASR ABM
   - ii. conducting oversight to allow the retention of existing organisation authorisations.
2. **DIA.** DIA responsibilities include:
   - i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:
     - a Military Type Certificate Holder (MTCH) organisation approval and the corresponding platform Type Certificate under DASR Part 21 Subpart B
     - a Design Organisation Approval (DOA) for engineering design services under DASR Part 21 Subpart J.
     - a Design Production Organisation Approval (POA) for parts production services under DASR Part 21 Subpart G or DASR Part 21 Subpart F.
   - ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.
3. **DCA.** DCA responsibilities include:
   - i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:
     - DASR Part M Continuing Airworthiness Management Organisations (CAMO) authorisations
     - DASR Part 145 Maintenance Organisation (DASR 145 MO) authorisations

Superseded

– DASR Part 147 Aircraft Maintenance Training Organisation (DASR 145 AMTO) authorisations

– DASR Part 66 Military Aircraft Maintenance Licences (DASR 66 MAML)

ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.

5.4.3 Initial authorisation process

5.4.3.1 To gain an initial authorisation, the applicant:

1. organisation must demonstrate:

   i. a Defence need for the award of the authorisation

   ii. a local documented management system that complies with DASR requirements for the proposed scope and level of activities, as defined by their organisation approval basis (ie the set of documents which provides the objective quality evidence necessary to prove compliance with the relevant DASR)

2. Nominated Management Personnel must demonstrate:

   i. a Defence need for the award of the authorisation

   ii. compliance with specific qualification, training and experience requirements.

5.4.3.2 **Application.** An application for initial authorisation is made on the relevant DASR form, in a manner established by DASA within the respective DASR. Each form describes the information to be included to demonstrate compliance, how the form is to be submitted and who to. Where the DASR does not prescribe a format or manner for the application, the applicant should contact the relevant DASA Directorate for guidance.

5.4.3.3 **Initial DASA assessment.** The process by which DASA assesses applications varies between organisations and Nominated Management Personnel. For organisations, the assessment process begins with a desk top audit of the organisation's relevant documentation (i.e. evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable'—see below). For Nominated Management Personnel, DASA assesses compliance with specific qualification, training, and experience requirements.

5.4.3.4 If the applicant is found to be deficient in required content or non-compliant with any relevant DASR requirement, DASA will endeavour to request additional information where practicable. Post assessment the outcome of the application will be notified to the organisation as:

1. progressed to the next stage

2. rejected, providing reasons

3. conditionally progressed, with actions taken by DASA and the applicant to ensure non-compliances are resolved.

Superseded

5.4.3.5 **On-site DASA assessment.** An on-site assessment is not an essential part of the initial authorisation process for any DASR authorisation and will be dependent on the nature of the request. DASA will determine if there is a need to conduct an on-site assessment, based on the outcome of the initial assessment, and the scope, level, and complexity of the application. Where conducted, the on-site assessment may include inspection of physical facilities and additional documents, and further face-to-face discussion with applicant staff (for additional 'Present', 'Suitable' and 'Operating' evidence—see below).

5.4.3.6 **DASA Organisational Approval.** Following the initial assessment and, if conducted, on-site assessment, the DASA team will provide a recommendation for authorisation to the DASA assessment lead. Where appropriate, an authorisation package will be compiled for DG DASA approval. Once approved, authorisation artefacts are dispatched to the applicant at which point the applicant may utilise privileges granted, noting any limitations.

5.4.3.7 **Timeline.** DASA timelines for the assessment and approval of authorisation applications will depend on the scope and complexity of the authorisation sought, and the level of DASA involvement to support the applicant through the process. DASA will endeavour to collaborate with applicants and action authorisation requests in a timely manner. Approvals may be expedited based on operational or safety imperatives and negotiated accordingly.

5.4.3.8 **Post approval.** The organisation and Nominated Management Personnel transition from the 'initial authorisation' phase to ongoing DASA oversight to retain their authorisation. The applicant is responsible for maintaining ongoing compliance with the relevant DASR and rectifying any future internally identified non-compliances through their own Quality Management System.

5.4.4 Authorisation change and retention process

5.4.4.1 **Changes to authorisations**. Should a regulated entity identify a need for authorisation scope/limitations/privilege changes, the entity must apply to DASA (except where otherwise permitted by DASR). Applications for changes to authorisations are made on a form and in a manner established by DASA within the respective DASR, as per their initial authorisation. In actioning the application, DASA will follow the same process as for initial authorisations, adjusting the scope and extent of the assessment to suit the nature of the change. The organisation and Nominated Management Personnel must not implement the proposed change until DASA has issued updated authorisations (except where otherwise permitted by DASR and previously agreed by DASA).

5.4.4.2 **Retention of authorisation.** DASA authorisations remain extant provided regulated entities retain a Defence need and continue to comply with respective DASR. Once the initial authorisation is awarded, ongoing DASA surveillance and oversight of authorisation holders commences. A key component of an effective regulatory framework is ensuring that regulated organisations have a clear understanding of when, why and how DASA will review ongoing compliance. DASA assures the validity of authorisations by applying an oversight cycle commensurate with the perceived risk to Aviation Safety (generally every 24 months). DASA's risk-based approach continually reviews safety intelligence collected from active and passive surveillance activities. Based on collected safety intelligence, DASA conducts oversight of authorisation holders, adjusting frequency and scope of oversight to suit the perceived risk.

Superseded

5.4.5 PSOE for Regulatory Oversight

5.4.5.1 The DASP O&E policy is documented in section 4.1.4, and supports compliance with the DASR through application of a consistent O&E operating model. This section provides Defence tailoring of the civil PSOE model for broader DASR application; noting the PSOE model developed for ICAO Annex 19 is heavily oriented towards Management System maturity assessment vice broader regulation compliance. When considering the Defence aviation context it is important to understand the hazard-based nature of DASR and the regulated community's SFARP obligation in achieving an acceptable level of safety through a baseline level of compliance.

5.4.5.2 Within this context, DASA will execute oversight activities of a regulated entity using the following Defence-tailored PSOE definitions:

1. **'Present' (P).** There is evidence that the process, behavior and technology indicators required for DASR compliance are clearly visible and documented within the organisation's systems.

2. **'Suitable' (S).** There is evidence the process, behavior and technology indicators are suitable (i.e. regulatory compliant) for the size, nature, context, complexity of the organisation and its services, and the Aviation Safety hazard expected to be mitigated (including consideration of industry expectation for standards, codes, guidance etc).

3. **'Operating' (O).** There is evidence that the process, behavior and technology indicators are in use and an output is being produced.

4. **'Effective' (E).** There is evidence that the process outputs , behavior and technology indicators are effective in achieving the desired DASR Aviation Safety hazard control outcome.

    i. Note, effectiveness assessments represent an evolution in compliance methodology, beyond traditional compliance/conformance assessments. In executing an effectiveness assessment, a thorough understanding of the applicable regulation's aviation safety hazard is required, to ascertain if the process outputs are effectively preventing realisation of that hazard (based on evidence collected during an oversight activity).

5.4.5.3 Where non-compliances or potential problems are identified through PSOE application enforcement action will be taken against the organisation.

5.4.6 Management of DASA Findings

5.4.6.1 Findings are issued to highlight an actual or potential non-compliance against DASR. All findings are supported by objective quality evidence and contain adequate detail to support the finding.

5.4.6.2 A Finding will only be issued to remedy an identified non-compliance to a specific regulatory outcome. Once Findings are issued, the regulated entity is responsible for identifying immediate actions, root causes, developing a corrective action plan and implementing corrective actions to address the non-compliance.

5.4.6.3 **Finding levels.** DASA issues Level 1, 2 and 3 findings, as follows:

Superseded

1. **Level 1.** Any non-compliance with DASR requirements which lowers the safety standard and seriously hazards flight safety.

2. **Level 2.** Any non-compliance with DASR requirements which lowers the safety standard and possibly hazards flight safety.

3. **Level 3.** Any non-compliance with DASR requirements, or potential problem, that could lower the safety standard and possibly hazards flight safety.

5.4.6.4 **DASA Level 1 and 2 Findings.** Once a DASA Finding is issued to an organisation, DASA will monitor that actions required to address non-compliances or potential non-compliances are managed and tracked until closure of the Finding. The DASA Level 1 and 2 Findings lifecycle has six distinct stages for regulated organisations, defined on DASR Form 1299 as follows:

1. **Organisational acceptance of Finding.** Organisations accept the Finding based on a DASA assessment of the evidence, and respond with proposed dates for the completion of their Immediate Actions and development of their Corrective Action Plan. DASA will assess the response and agree to timeframes, or consult for revised dates.

2. Where organisations does not agree with the DASA Findings issued, they must formally write to DASA, providing objective evidence as to why the Finding is inappropriate. DASA will assess the additional evidence and respond.

3. **Implementation of Immediate Actions.** Organisations implement short-term solutions to contain the non-compliance and manage the associated risk mitigated SFARP. DASA will use DASR Form 1299 to assess the organisation's actions and document acceptance, or request rework as appropriate.

4. **Root cause analysis.** Organisations assess the root causes of the non-compliance. Multiple root cause analysis tools are available to organisations, including the '5-Whys', Bow Tie, Ishikawa diagrams, Apollo Reality Charting, and Tree Diagram. Importantly, there is never just one root cause to a non-compliance, and 'human error' is never a valid conclusion.

5. DASR Form 1299 provides (as a non-compulsory use tool) a '5-Whys' template against which a root cause analysis can be conducted. DASA will use DASR Form 1299 to assess the organisation's analysis and document acceptance, or request rework as appropriate.

6. **Development of the Corrective Action Plan.** Organisations identify a corrective action for each root cause identified, to prevent recurrence. For each corrective action, the organisation defines:

    i. a means by which the effectiveness of the corrective action to prevent reoccurrence will be assessed

    ii. the objective quality evidence required to substantiate corrective action effectiveness

    iii. a lead person for its implementation, and for reporting implementation and substantiation status

    iv. the due date for corrective action completion, cognisant of the need to validate the effectiveness of the corrective action prior to closure

Superseded

v. any justification supporting the completion date choice (e.g. time to collect validation evidence, or co-dependency/secondary effects).

7. DASR Form 1299 provides a Corrective Action Plan template. DASA will use the form to assess the organisation's plan and document acceptance, or request rework as appropriate.

8. **Implementation of Corrective Actions.** Organisations implement the DASA-agreed corrective actions, progressively submitting each completed Corrective Action to DASA for consideration on DASR Form 1299. DASA will track and manage the progress of approved Corrective Action Plans so that a Finding will not fall overdue unless an individual Corrective Action due date has passed.

9. DASA will use the DASR Form 1299 to assess the organisation's assessment and document acceptance, or request rework as appropriate.

10. **Finding closure.** Once DASA is satisfied that the organisation has implemented and validated the effectiveness of all actions that address the non-compliance, DASA will close the Finding and notify the organisation.

5.4.6.5 **Findings Requiring Re-work.** Where DASA assesses issues with the quality of the response provided by an organisation in developing/implementing Immediate Actions, Root Cause Analysis, Corrective Action Plan or Corrective Actions it will be returned to the organisation for re-work. In doing so, DASA will provide the necessary details of the cause for re-work for further organisational consideration and action. As part of the re-work process the organisation will generally be required to consider if a Finding Extension is required based upon the impact of the quality issue relative to the extant hazard retention. Where extension to originally agreed submission timelines is necessary the criteria under 5.4.6.6 will be required.

5.4.6.6 **DASA Level 3 Findings.** Level 3 Findings are notified to the organisation through DASA correspondence (usually an initial authorisation notification or an oversight report). Level 3 Findings are expected to be managed to closure under the organisation's QMS. DASA will review Level 3 Finding progress during subsequent O&E activities. Inaction against a Level 3 finding does not automatically equate to a Level 2 Finding being issued. However, it may serve as evidence that, when coupled with other safety intelligence, may lead to issue of a Level 2 Finding.

5.4.6.7 **DASA Findings extensions.** An organisation can request an extension (usually through email to the respective Desk Officer) at any stage in the Findings management process. However, as the organisation owns the Aviation Safety risk associated with the Finding until DASA Finding closure, DASA will only consider these requests based on an assessment of the Finding's residual risk being mitigated SFARP. Evidence expected to be provided in an extension request should include:

1. the reason further time is required to complete actions,

2. details of what has already been completed against Findings root causes and agreed Corrective Actions,

3. what outstanding Corrective Actions remain and their revised dates for completion, and

4. justification of how residual aviation safety risk will be controlled SFARP until Corrective Action completion.

Superseded

5.4.6.8 DASA assesses all extension requests in accordance with the DASA Enforcement Principles at section 4.1.4 and notifies organisations of the outcome. However, organisations should not assume automatic extension approval.

5.2. Aviation Safety Policy and Guidance

5.2.1 Introduction

5.2.1.1 This section describes the hierarchy of policy and guidance within the Defence Aviation Safety Program.

5.2.2 The DASP Manual

5.2.2.1 The DASP Manual is the central policy and guidance document within the DASP. It is issued by the Defence AA in three volumes:

1. Volume 1 *Requirements for the DASP* expands on Joint Directive 21/2021 to establish requirements for the implementation of the DASP; in particular:
    i. legal and governance arrangements
    ii. independent safety assurance
    iii. the Defence Aviation Safety Regulation
    iv. the independent investigation of accidents and incidents
    v. independent reviews of Aviation Safety.
2. Volume 2 *Defence Aviation Safety Regulation* establishes all requirements and provisions for the management of Aviation Safety by commanders and managers.
3. Volume 3 *DASP Guidance* provides an overview of the DASP and how its various elements collectively achieve the required safety objectives. Volume 3 also provides supporting information to promote understanding of concepts and processes spanning multiple requirements or provisions established through Volumes 1 and 2.

5.2.3 Defence Aviation Safety Regulation

5.2.3.1 The DASR are contained within DASP Manual Volume 2. Their structure and naming convention are based on those applied by CASA and EASA.

5.2.3.2 The DASR comprise:

1. **General Requirements,** which define the scope and applicability of the DASR parts as well as establish requirements and provisions that are applicable to a significant proportion of regulated entities.
2. **DASR parts,** which are outcome based and specify requirements for each of the specifically regulated Aviation Safety topics. They may include associated supporting

Superseded

information in the form of Acceptable Means of Compliance (AMC) and Guidance Material (GM).

5.2.4 Regulatory Supporting Information

5.2.4.1 The AMC and GM embedded within the DASR are part of a broader range of supporting information published by DASA to promote understanding of, and compliance with, the regulations. All such supporting information is authoritative and does not mandate any action but may address regulatory requirements and provisions established elsewhere.

5.2.4.2 **Acceptable Means of Compliance.** AMC provides a generic and widely applicable approach to meeting the respective DASR requirements. DASA publishes AMC to provide certainty as to how the required safety outcomes may be achieved. Choosing to implement an AMC relieves the regulated entity of the burden of proving that the means of compliance achieves the intended safety outcome. The regulated entity demonstrates compliance with the DASR by appropriately implementing AMC. Regulated entities are free to propose Alternative Means of Compliance (AltMoC); however, the nature of Aviation Safety regulation means that the use of AltMoC may not be suitable in every instance.

5.2.4.3 **Guidance Material.** GM helps to illustrate the meaning of a requirement or provision in the DASR. It may provide relevant background, context or an explanation of the policy intent underpinning the respective regulation.

5.2.4.4 **Advisory Circulars.** Advisory Circulars (ACs) are typically issued to bring an issue to the attention of the target audience or to address a complex topic. ACs may be used to identify acceptable ways to achieve regulatory compliance, either as a temporary transition arrangement or in advance of promulgation as AMC in the DASR. Examples include information regarding emerging Aviation Safety matters, information that enhances compliance understanding for existing regulation, or policy guidance for aviation issues that are not yet regulated but require further understanding.

5.2.4.5 **Factsheets.** Factsheets are typically issued to provide concise information that may assist those interested in a particular topic.

5.2.5 Design Requirements

5.2.5.1 Volume 1 of the DASP Manual requires DASA to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR'. DASA fulfils this responsibility through prescribing and interpreting the minimum requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

Prescribing design requirements

5.2.5.2 DASA employs three foundational principles when prescribing design requirements for aviation safety:

1. DASA recognises the design requirements prescribed by several CAAs and MAAs as providing a sound foundation for the safe design of Defence aircraft and aircraft-related systems and equipment
2. DASA may prescribe supplementation to these design requirements, where an aspect of a requirement is judged deficient or to support application to Defence's unique role and operating environment

Superseded

3. DASA requires the conduct of a system safety program, to provide a robust means for identifying and analysing aviation hazards during the design process, and for eliminating or minimising the resultant risks so far as is reasonably practicable.

5.2.5.3 To provide assurance that safe flight is achieved through aircraft design, many CAAs/MAAs prescribe airworthiness design requirements, which are usually documented in an 'Airworthiness Code' (DASR 21.A.16A refers). An Airworthiness Code is a complete and consistent suite of design requirements that define those attributes of aircraft systems or equipment that underpin safe flight. As the development and maintenance of an Airworthiness Code is a substantial undertaking, rather than define and publish its own Code, DASA recognises Airworthiness Codes prescribed by other CAAs/MAAs (i.e. DASA accepts that these Codes provide a safe foundation for aircraft and aircraft-related systems design).

5.2.5.4 DASA may recognise an Airworthiness Code when the Code as a minimum:

1. is prescribed by a recognised CAA/MAA
2. has demonstrated a sound safety record
3. prescribes a complete and consistent suite of airworthiness design requirements
4. is supported by associated guidance on how to achieve compliance with the airworthiness design requirements
5. is accessible, i.e. published by the CAA/MAA in a consolidated and easily accessed format.

5.2.5.5 While aircraft and aircraft-related systems/equipment designs developed to a DASA recognised Airworthiness Code should substantially meet the level of safety expected by Defence, supplementary airworthiness design requirements may need to be prescribed by DASA as a result of:

1. known inadequacies in the Code
2. novel features included in the proposed design that are not accommodated by the Code
3. proposed Defence-unique roles and/or operating environments that are outside the scope of the Code and/or
4. Defence policies or Australian legislated requirements not being covered by the Code.

5.2.5.6 Compliance with DASA-recognised Codes and prescribed supplementation is the principal means by which safe design of an aircraft and aircraft-related systems/equipment is achieved. However, in isolation, a standards-based approach may not provide a complete basis for certification of an aircraft, or approval of aircraft-related systems/equipment having an effect on aviation safety. Many standards are inherently stove-piped, and therefore further analytical effort is required to identify and control system-level hazards. Further, standards are often written with 'vanilla' applications in mind; novel aircraft or systems design features are likely to pose novel hazards, which are not catered for within the standard. As a result, in addition to compliance with design standards, DASA requires the conduct of a system safety program for aircraft designs.

5.2.5.7 System safety is an engineering discipline that embraces safety as a core aspect of any given system design (or design change). System safety programs employ a suite of engineering tools and techniques to identify and analyse aviation safety hazards during the design process, and provide a

Superseded

management framework to evaluate and control the resultant risks. When applied well, a system safety program is an essential adjunct to a standards-based design approach.

5.2.5.8 DASA prescribes supplementation to recognised Codes within a framework of 'essential' and 'recommended' design requirements. While essential airworthiness design requirements define the level of safety that must be achieved by a design, they are not immutable. DASA, in consultation with the relevant capability manager where applicable, may approve an alternative design requirement in the following circumstances:

1. where analysis confirms the alternative design requirement achieves an equivalent level of safety
2. where analysis shows the alternative design requirement, supplemented by operational risk treatments, should achieve an equivalent level of safety or
3. where enforcing the Essential design requirement would have a marked negative effect on capability or cost, and an alternative (but less safe) design requirement is in Defence's best interests.

Interpreting design requirements

5.2.5.9 Like other MAAs, DASA accepts that tailoring of design requirements may be necessary to achieve essential military capability. Provided DASA concludes the proposed tailoring is judicious (i.e. that the tailoring represents good judgement or sense) in the ADF operational context, DASA may approve tailoring to the prescribed requirement. Certification or approval against the tailored requirement(s) would then be pursued by the applicant. Any proposed tailoring of design requirements by an applicant for type certification and/or design approval from DASA, which results in changes to prescribed safety criteria, must be supported by documented rationale that includes:

1. the capability manager's confirmation that a clear (well-defined) and documented capability imperative for the proposed tailoring exists
2. the applicant's confirmation that compliance with the prescribed standard impedes that capability imperative
3. the applicant's characterisation of the delta between the prescribed standard and the tailored standard
4. the applicant's, with the assistance of the capability manager (or delegate), characterisation of the risk due to this delta and
5. the capability manager's (or delegate's) formal conclusion that the tailored safety criteria presents a credible and defensible level of safety for that Defence aircraft or aircraft-related system/equipment, contextualised for ADF operations.

5.2.5.10 Agreed tailoring, including any essential risk controls to achieve the defined level of safety, will usually be documented in a Military Certification Review Item (MCRI) or equivalent approved by DASA. Detailed MCRI guidance is contained in Section 7.2 Certification.

5.2.5.11 DASA may have two separate roles in the above process. First, as the repository of standards and certification expertise, DASA may advise the capability manager and applicant on how to wisely complete each step. Secondly, DASA needs to gain sufficient confidence in the conduct of the process to assure the Defence AA that the tailoring is indeed judicious. If this second role cannot be achieved, the tailoring of the prescribed requirement(s) cannot be approved and consequently certification or approval of the design would be precluded.

Superseded

5.2.5.12 DASA also provides interpretation advice and direction on the intent and meaning of airworthiness design requirements, often but not exclusively related to:

1. the approval of tailored means of compliance for a design requirement
2. advice on the relevance of proposed design requirements to the design under consideration
3. advice on pragmatic tailoring of design requirements/standards.

5.2.5.13 The prescription and interpretation of design requirements and standards may be delegated to a Standards-Delegate of the Safety Authority (Standards-DoSA). The functions and responsibilities of DoSAs are detailed in Section 4.3.

Design requirements and WHS

5.2.5.14 Defence aircraft and aircraft-related systems/equipment can present a hazard to aircrew, other aircraft occupants, other airspace users, persons near or under the aircraft flight path, and maintenance and other ground personnel. The Australian Work Health and Safety Act and the Work Health and Safety Regulations (collectively, WHS Legislation) apply to Defence aviation, and therefore Defence has a legal obligation to ensure the health and safety of these persons. The design of the Defence aircraft can, in part, contribute to Defence satisfying this legal obligation, for example:

1. the aircraft design can promote a safe airborne workplace for aircrew and other occupants through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. improving crash survivability for aircraft occupants
    iii. implementing design controls for in-aircraft hazards that might injure aircraft occupants
    iv. implementing design controls for in-aircraft hazards that might affect the future (post-flight) health of aircraft occupants
2. the aircraft design can promote the safety of persons near or under the aircraft flight path through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. reducing the ground impact energy (mainly relevant to uncrewed aircraft)
3. the aircraft design can promote the safety of persons in close proximity to a stationary aircraft through:
    i. implementing design controls for aircraft hazards that might injure ground personnel
    ii. implementing design controls for aircraft hazards that might affect the future health of ground personnel
    iii. incorporating aircraft maintenance instructions that identify reasonably foreseeable hazards to maintenance personnel and present safe maintenance practices.

Superseded

5.2.5.15 Importantly, DASA approval of prescribed design requirements for a Defence aircraft or aircraft-related systems/equipment, and proposed tailoring, does not constitute endorsement/ agreement of the determination that risk has been eliminated or otherwise minimised SFARP. Rather, this must remain a decision for the capability manager (or delegate), as does the enduring management of the residual risk due to the tailoring/alternative standard.

Defence Aviation Safety Design Requirements Manual

5.2.5.16 The Defence Aviation Safety Design Requirements Manual (DASDRM) is DASA's repository for recognised Codes, and associated prescribed supplementary design requirements, with respect to Defence aircraft and aviation support systems/equipment design.

5.2.5.17 The DASDRM prescribes design requirements for aircraft systems and functions, and aircraft support systems and equipment that have an effect on aviation safety, that are necessary to achieve safe flight in Defence's proposed Configuration, Role and Environment (CRE). It also prescribes additional design requirements that may further improve the level of safety, and that should be implemented where reasonably practicable. In each case, the DASDRM identifies the hazard(s) that the design requirement is intended to treat, to provide a basis for informed risk management where an aircraft design fails to meet the design requirement.

5.2.5.18 While capability and interoperability is not a specific consideration when establishing that an aircraft is capable of safe flight, robust design for capability and interoperability contributes to mission success, and therefore the safety of the crew. Consequently, while capability and interoperability design requirements are not a primary focus of the DASDRM, design requirements that support capability and interoperability outcomes are included where appropriate.

5.2.5.19 The DASDRM comprises the following six sections:

1. Section 1 – Application of Airworthiness Design Requirements. This section defines the purpose and scope of the DASDRM and defines the Airworthiness Codes that have been recognised by the Authority as providing a sound foundation for the design of Defence aircraft. It also describes the extent to which airworthiness design requirements contribute to Defence meeting its WHS Legislation obligations. Finally, Section 1 describes the application of capability and interoperability standards to aircraft designs.
2. Section 2 – Integrated Design Requirements. This section prescribes airworthiness design requirements for those engineering disciplines that pervade most aspects of aircraft systems design or affect multiple systems such as system safety, electromagnetic environmental effects and crash protection.
3. Section 3 – Aircraft System Design Requirements. This section prescribes airworthiness design requirements for aircraft systems such as communications, navigation, structures (fixed and rotary wing) and propulsion. The only systems included in this section are those where the Authority recognised Airworthiness Codes do not provide satisfactory coverage for Defence aircraft designs.
4. Section 4 – Uncrewed Aircraft Design Requirements. This section prescribes airworthiness design requirements for UAS.
5. Section 5 – Aircraft Support Systems. This section prescribes design requirements for non-aircraft systems and ground based equipment, where the systems/equipment

Superseded

have a direct effect on safe flight or aviation safety, such as aeronautical life support equipment, mission planning systems and aerial delivery.

6. Section 6 - Aerodrome Design Requirements. This section prescribes airworthiness design requirements for Defence aerodromes and heliports.

5.2.6 Formal Regulatory Advice

Introduction

5.2.6.1 DASA may provide formal regulatory advice on any Defence Aviation Safety policy within its remit in order to assist with understanding and compliance. This section provides guidance on seeking such advice. Other queries, such as those concerning DASA business matters, availability of training, staff duties, contact details and updates to ongoing activities do not warrant a formal process and may be addressed through normal lines of communication.

When to make a formal request

5.2.6.2 Only certain types of queries warrant the application of a formal process. Such queries fall into the following broad categories:

1. requesting interpretation of DASR or other policy:
   i. where the intent is unclear
   ii. relating to a situation not explicitly covered by existing policy.
2. requesting advice regarding implementation of DASR or other policy, such as:
   i. whether a particular approach is compliant
   ii. applicability of policy to a particular activity.

Before making a formal request

5.2.6.3 DASA publishes a number of educational and promotional artefacts, which may answer a query without the need to request advice. See Section 5.2.4 *Regulatory supporting information* and the *Education and Promotion* page on the DASA web site.

5.2.6.4 The DASP Policy and Guidance Portal (PGP) contains a functional search engine that may assist in searching for specific terminology or phrases. Tips for navigation and searching are contained within the PGP User Guide.

How to make a formal request

5.2.6.5 If formal regulatory advice is required, the preferred method to request advice is via a DASR Query Form (DQF). In the case of uncertainty as to whether a DQF is suitable, email dasa.dasr@defence.gov.au.

5.2.6.6 While an email or phone call directly to a desk officer may seem more efficient, it does not always result in appropriate DASA registration and oversight. Registration informs DASA which areas of policy may require review or additional educational material and builds traceability for future updates. Oversight of queries is important for managing and prioritising DASA workload and ensures that advice follows an appropriate approval process before release. Therefore, DASA reserves the right to redirect any query to written form.

Superseded

Turnaround Times

5.2.6.7 DASA will negotiate and agree upon a turnaround time with the query initiator as the first action following receipt of a query. DASA will communicate any subsequent changes to that timeline to all involved parties when they become apparent.

5.3 Aviation Safety Authorisations

5.3.1 Purpose

5.3.1.1 The DASR make provision for DASA to issue a range of 'authorisations' if assured that the regulated community has met, and continues to meet, the requirements and constraints of the DASR. These authorisations may be in the form of certificates, permits, approvals or licenses.

5.3.1.2 This chapter presents an overview of each common aviation safety authorisation.

5.3.2 Aviation Safety Authorisations

5.3.2.1 DASA-issued authorisations can broadly be characterised as pertaining to organisations, products and/or personnel. These authorisations are as follows:

1. organisational authorisations:
    - i. Military Air Operator (MAO)
    - ii. Aerodrome Operator (ADOPR)
    - iii. Air Cargo Delivery Service Provider (ACDSP)
    - iv. Air Navigation Service Provider (ANSP)
    - v. Air Battle Management Operator (ABMO)
    - vi. Military Design Organisation (MDO)
    - vii. Military Production Organisation (MPO)
    - viii. Approved Maintenance Organisation (AMO)
    - ix. Continuing Airworthiness Management Organisation (CAMO)
    - x. Maintenance Training Organisation (MTO)
    - xi. Military Type Certificate Holder (MTCH) (currently an implicit approval)
2. product authorisations:
    - i. Military Type Certificate (MTC)
    - ii. Military Restricted Type Certificate (MRTC)
    - iii. Military Supplemental Type Certificate (MSTC)
    - iv. Military Permit to Fly (MPTF)
    - v. Military Certificate of Airworthiness (CoA)
    - vi. Military Restricted Certificate of Airworthiness (RCoA)
    - vii. Australian Military Technical Standard Order (AUSMTSO)

Superseded

viii. Approval of Repair Design

ix. Airworthiness Directive (AD)

x. Aircraft Maintenance Programme (AMP)

xi. Uncrewed Aircraft System Operating Permit (UASOP)

xii. Aerodrome Certificate (ADC)

xiii. Other[1]

3. personnel authorisations:

i. Military Aircraft Maintenance Licence (MAML)

Note: DASA directly authorises certain management personnel within approved organisations. These are commonly referred to as 'Form 4 authorisations', since they are approved on DASA Form 4, Acceptance of Nominated Management Personnel. In the context of this chapter, those authorisations are considered to be part of the organisational approval process, so they are not listed separately here.

5.3.2.2 The type and scope of authorisations needed for a particular aircraft, aerodrome or air navigation service will depend on a range of factors, for example the involvement of other civil or military Aviation Authorities, the support arrangements implemented by Defence, and so on. These issues are explored elsewhere in this Manual.

5.3.2.3 Annexes A to X individually examine the authorisations listed in paragraph 3. Each annex explains the purpose of the authorisation, the relevant DASR requirements, applying for the authorisation, the responsibilities of the authorisation holder, and DASA's approach to compliance assurance.

Annexes:

(a) Military Air Operator

(b) Aerodrome Operator

(c) Air Cargo Delivery Service Provider (To be issued)

(d) Air Navigation Service Provider (To be issued)

(e) Military Design Organisation

(f) Military Production Organisation

(g) Approved Maintenance Organisation

(h) Continuing Airworthiness Management Organisation

(i) Maintenance Training Organisation

(j) Military Type Certificate Holder

(k) Military Type Certificate

Superseded

(l) Military Restricted Type Certificate (To be issued)

(m) Military Supplemental Type Certificate

(n) Military Permit to Fly

(o) Military Certificate of Airworthiness

(p) Military Restricted Certificate of Airworthiness (To be issued)

(q) Australian Military Technical Standard Order

(r) Approval of Repair Design

(s) Airworthiness Directive (To be issued)

(t) Aircraft Maintenance Programme

(u) Uncrewed Aircraft System Operating Permit

(v) Aerodrome Certificate

(w) Military Aircraft Maintenance Licence

(x) Air Battle Management Operator (To be issued)

5.4 Oversight and enforcement

5.4.1 Introduction

5.4.1.1 This section expands on the Oversight and Enforcement (O&E) policy described in section 4.1.4. Specifically, it explains how regulated entities can expect to be engaged by DASA in assessing initial and ongoing compliance.

5.4.1.2 **Regulated entity.** The term 'regulated entity' is used to describe the different organisations and personnel within the Aviation Safety community that are regulated under DASR, and who are subsequently oversighted by DASA. These entities are typically awarded DASA-issued authorisations, as listed in section DASPMAN Vol 3 Chapter 5.3.2 Aviation Safety Authorisations.

5.4.2 DASA O&E-related responsibilities

5.4.2.1 The DASA regulatory facing directorates accountable for O&E functions are DAVNOPS, DIA and DCA. The remit of each is detailed below:

1. **DAVNOPS.** DAVNOPS responsibilities include:

   i. conducting regulatory compliance assessments of organisations to enable the issuing of:

      – a Military Air Operator Certificate (MAOC) and corresponding Operational Specification (OpSpec) under DASR.ARO

      – an Air Navigation Service Provider Certificate (ANSPC) and Service Provision Conditions (SPC) under DASR.ANSP

      – an Aerodrome Operator Certificate (ADOPRC) and Aerodrome Operator Specification (ADOpSpec) under DASR 139

Superseded

- an Air Cargo Delivery Service Provider Certificate (ACDSPC) and Air Cargo Delivery Operational Specification (ACDOpSpec) under DASR ACD
- an Air Battle Management Operator Certificate (ABMOC) and Operational Specification (OpSpec) under DASR ABM

ii. conducting oversight to allow the retention of existing organisation authorisations.

2. **DIA.** DIA responsibilities include:

i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:

- a Military Type Certificate Holder (MTCH) organisation approval and the corresponding platform Type Certificate under DASR Part 21 Subpart B
- a Design Organisation Approval (DOA) for engineering design services under DASR Part 21 Subpart J.
- a Design Production Organisation Approval (POA) for parts production services under DASR Part 21 Subpart G or DASR Part 21 Subpart F.

ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.

3. **DCA.** DCA responsibilities include:

i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:

- DASR Part M Continuing Airworthiness Management Organisations (CAMO) authorisations
- DASR Part 145 Maintenance Organisation (DASR 145 MO) authorisations
- DASR Part 147 Aircraft Maintenance Training Organisation (DASR 145 AMTO) authorisations
- DASR Part 66 Military Aircraft Maintenance Licences (DASR 66 MAML)

ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.

5.4.3 Initial authorisation process

5.4.3.1 To gain an initial authorisation, the applicant:

1. organisation must demonstrate:

i. a Defence need for the award of the authorisation

Superseded

ii. a local documented management system that complies with DASR requirements for the proposed scope and level of activities, as defined by their organisation approval basis (ie the set of documents which provides the objective quality evidence necessary to prove compliance with the relevant DASR)

2. Nominated Management Personnel must demonstrate:

i. a Defence need for the award of the authorisation

ii. compliance with specific qualification, training and experience requirements.

5.4.3.2 **Application.** An application for initial authorisation is made on the relevant DASR form, in a manner established by DASA within the respective DASR. Each form describes the information to be included to demonstrate compliance, how the form is to be submitted and who to. Where the DASR does not prescribe a format or manner for the application, the applicant should contact the relevant DASA Directorate for guidance.

5.4.3.3 **Initial DASA assessment.** The process by which DASA assesses applications varies between organisations and Nominated Management Personnel. For organisations, the assessment process begins with a desk top audit of the organisation's relevant documentation (i.e. evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable'—see below). For Nominated Management Personnel, DASA assesses compliance with specific qualification, training, and experience requirements.

5.4.3.4 If the applicant is found to be deficient in required content or non-compliant with any relevant DASR requirement, DASA will endeavour to request additional information where practicable. Post assessment the outcome of the application will be notified to the organisation as:

1. progressed to the next stage

2. rejected, providing reasons

3. conditionally progressed, with actions taken by DASA and the applicant to ensure non-compliances are resolved.

5.4.3.5 **On-site DASA assessment.** An on-site assessment is not an essential part of the initial authorisation process for any DASR authorisation and will be dependent on the nature of the request. DASA will determine if there is a need to conduct an on-site assessment, based on the outcome of the initial assessment, and the scope, level, and complexity of the application. Where conducted, the on-site assessment may include inspection of physical facilities and additional documents, and further face-to-face discussion with applicant staff (for additional 'Present', 'Suitable' and 'Operating' evidence—see below).

5.4.3.6 **DASA Organisational Approval.** Following the initial assessment and, if conducted, on-site assessment, the DASA team will provide a recommendation for authorisation to the DASA assessment lead. Where appropriate, an authorisation package will be compiled for DG DASA approval. Once approved, authorisation artefacts are dispatched to the applicant at which point the applicant may utilise privileges granted, noting any limitations.

5.4.3.7 **Timeline.** DASA timelines for the assessment and approval of authorisation applications will depend on the scope and complexity of the authorisation sought, and the level of DASA involvement to support the applicant through the process. DASA will endeavour to collaborate with applicants and

Superseded

action authorisation requests in a timely manner. Approvals may be expedited based on operational or safety imperatives and negotiated accordingly.

5.4.3.8 **Post approval.** The organisation and Nominated Management Personnel transition from the 'initial authorisation' phase to ongoing DASA oversight to retain their authorisation. The applicant is responsible for maintaining ongoing compliance with the relevant DASR and rectifying any future internally identified non-compliances through their own Quality Management System.

5.4.4 Authorisation change and retention process

5.4.4.1 **Changes to authorisations**. Should a regulated entity identify a need for authorisation scope/limitations/privilege changes, the entity must apply to DASA (except where otherwise permitted by DASR). Applications for changes to authorisations are made on a form and in a manner established by DASA within the respective DASR, as per their initial authorisation. In actioning the application, DASA will follow the same process as for initial authorisations, adjusting the scope and extent of the assessment to suit the nature of the change. The organisation and Nominated Management Personnel must not implement the proposed change until DASA has issued updated authorisations (except where otherwise permitted by DASR and previously agreed by DASA).

5.4.4.2 **Retention of authorisation.** DASA authorisations remain extant provided regulated entities retain a Defence need and continue to comply with respective DASR. Once the initial authorisation is awarded, ongoing DASA surveillance and oversight of authorisation holders commences. A key component of an effective regulatory framework is ensuring that regulated organisations have a clear understanding of when, why and how DASA will review ongoing compliance. DASA assures the validity of authorisations by applying an oversight cycle commensurate with the perceived risk to Aviation Safety (generally every 24 months). DASA's risk-based approach continually reviews safety intelligence collected from active and passive surveillance activities. Based on collected safety intelligence, DASA conducts oversight of authorisation holders, adjusting frequency and scope of oversight to suit the perceived risk.

5.4.5 PSOE for Regulatory Oversight

5.4.5.1 The DASP O&E policy is documented in section 4.1.4, and supports compliance with the DASR through application of a consistent O&E operating model. This section provides Defence tailoring of the civil PSOE model for broader DASR application; noting the PSOE model developed for ICAO Annex 19 is heavily oriented towards Management System maturity assessment vice broader regulation compliance. When considering the Defence aviation context it is important to understand the hazard-based nature of DASR and the regulated community's SFARP obligation in achieving an acceptable level of safety through a baseline level of compliance.

5.4.5.2 Within this context, DASA will execute oversight activities of a regulated entity using the following Defence-tailored PSOE definitions:

1. **'Present' (P).** There is evidence that the process, behavior and technology indicators required for DASR compliance are clearly visible and documented within the organisation's systems.

2. **'Suitable' (S).** There is evidence the process, behavior and technology indicators are suitable (i.e. regulatory compliant) for the size, nature, context, complexity of the organisation and its services, and the Aviation Safety hazard expected to be mitigated (including consideration of industry expectation for standards, codes, guidance etc).

Superseded

3. **'Operating' (O).** There is evidence that the process, behavior and technology indicators are in use and an output is being produced.

4. **'Effective' (E).** There is evidence that the process outputs , behavior and technology indicators are effective in achieving the desired DASR Aviation Safety hazard control outcome.

    i. Note, effectiveness assessments represent an evolution in compliance methodology, beyond traditional compliance/conformance assessments. In executing an effectiveness assessment, a thorough understanding of the applicable regulation's aviation safety hazard is required, to ascertain if the process outputs are effectively preventing realisation of that hazard (based on evidence collected during an oversight activity).

5.4.5.3 Where non-compliances or potential problems are identified through PSOE application enforcement action will be taken against the organisation.

5.4.6 Management of DASA Findings

5.4.6.1 Findings are issued to highlight an actual or potential non-compliance against DASR. All findings are supported by objective quality evidence and contain adequate detail to support the finding.

5.4.6.2 A Finding will only be issued to remedy an identified non-compliance to a specific regulatory outcome. Once Findings are issued, the regulated entity is responsible for identifying immediate actions, root causes, developing a corrective action plan and implementing corrective actions to address the non-compliance.

5.4.6.3 **Finding levels.** DASA issues Level 1, 2 and 3 findings, as follows:

1. **Level 1.** Any non-compliance with DASR requirements which lowers the safety standard and seriously hazards flight safety.

2. **Level 2.** Any non-compliance with DASR requirements which lowers the safety standard and possibly hazards flight safety.

3. **Level 3.** Any non-compliance with DASR requirements, or potential problem, that could lower the safety standard and possibly hazards flight safety.

5.4.6.4 **DASA Level 1 and 2 Findings.** Once a DASA Finding is issued to an organisation, DASA will monitor that actions required to address non-compliances or potential non-compliances are managed and tracked until closure of the Finding. The DASA Level 1 and 2 Findings lifecycle has six distinct stages for regulated organisations, defined on DASR Form 1299 as follows:

1. **Organisational acceptance of Finding.** Organisations accept the Finding based on a DASA assessment of the evidence, and respond with proposed dates for the completion of their Immediate Actions and development of their Corrective Action Plan. DASA will assess the response and agree to timeframes, or consult for revised dates.

2. Where organisations does not agree with the DASA Findings issued, they must formally write to DASA, providing objective evidence as to why the Finding is inappropriate. DASA will assess the additional evidence and respond.

Superseded

3. **Implementation of Immediate Actions.** Organisations implement short-term solutions to contain the non-compliance and manage the associated risk mitigated SFARP. DASA will use DASR Form 1299 to assess the organisation's actions and document acceptance, or request rework as appropriate.

4. **Root cause analysis.** Organisations assess the root causes of the non-compliance. Multiple root cause analysis tools are available to organisations, including the '5-Whys', Bow Tie, Ishikawa diagrams, Apollo Reality Charting, and Tree Diagram. Importantly, there is never just one root cause to a non-compliance, and 'human error' is never a valid conclusion.

5. DASR Form 1299 provides (as a non-compulsory use tool) a '5-Whys' template against which a root cause analysis can be conducted. DASA will use DASR Form 1299 to assess the organisation's analysis and document acceptance, or request rework as appropriate.

6. **Development of the Corrective Action Plan.** Organisations identify a corrective action for each root cause identified, to prevent recurrence. For each corrective action, the organisation defines:

    i. a means by which the effectiveness of the corrective action to prevent reoccurrence will be assessed

    ii. the objective quality evidence required to substantiate corrective action effectiveness

    iii. a lead person for its implementation, and for reporting implementation and substantiation status

    iv. the due date for corrective action completion, cognisant of the need to validate the effectiveness of the corrective action prior to closure

    v. any justification supporting the completion date choice (e.g. time to collect validation evidence, or co-dependency/secondary effects).

7. DASR Form 1299 provides a Corrective Action Plan template. DASA will use the form to assess the organisation's plan and document acceptance, or request rework as appropriate.

8. **Implementation of Corrective Actions.** Organisations implement the DASA-agreed corrective actions, progressively submitting each completed Corrective Action to DASA for consideration on DASR Form 1299. DASA will track and manage the progress of approved Corrective Action Plans so that a Finding will not fall overdue unless an individual Corrective Action due date has passed.

9. DASA will use the DASR Form 1299 to assess the organisation's assessment and document acceptance, or request rework as appropriate.

10. **Finding closure.** Once DASA is satisfied that the organisation has implemented and validated the effectiveness of all actions that address the non-compliance, DASA will close the Finding and notify the organisation.

5.4.6.5 **Findings Requiring Re-work.** Where DASA assesses issues with the quality of the response provided by an organisation in developing/implementing Immediate Actions, Root Cause Analysis, Corrective Action Plan or Corrective Actions it will be returned to the organisation for re-work. In doing so, DASA will provide the necessary details of the cause for re-work for further organisational

Superseded

consideration and action. As part of the re-work process the organisation will generally be required to consider if a Finding Extension is required based upon the impact of the quality issue relative to the extant hazard retention. Where extension to originally agreed submission timelines is necessary the criteria under 5.4.6.6 will be required.

5.4.6.6 **DASA Level 3 Findings.** Level 3 Findings are notified to the organisation through DASA correspondence (usually an initial authorisation notification or an oversight report). Level 3 Findings are expected to be managed to closure under the organisation's QMS. DASA will review Level 3 Finding progress during subsequent O&E activities. Inaction against a Level 3 finding does not automatically equate to a Level 2 Finding being issued. However, it may serve as evidence that, when coupled with other safety intelligence, may lead to issue of a Level 2 Finding.

5.4.6.7 **DASA Findings extensions.** An organisation can request an extension (usually through email to the respective Desk Officer) at any stage in the Findings management process. However, as the organisation owns the Aviation Safety risk associated with the Finding until DASA Finding closure, DASA will only consider these requests based on an assessment of the Finding's residual risk being mitigated SFARP. Evidence expected to be provided in an extension request should include:

1. the reason further time is required to complete actions,
2. details of what has already been completed against Findings root causes and agreed Corrective Actions,
3. what outstanding Corrective Actions remain and their revised dates for completion, and
4. justification of how residual aviation safety risk will be controlled SFARP until Corrective Action completion.

5.4.6.8 DASA assesses all extension requests in accordance with the DASA Enforcement Principles at section 4.1.4 and notifies organisations of the outcome. However, organisations should not assume automatic extension approval.

5.5 Education and training

(Reserved)

Superseded

Annex A - Military Air Operator

Purpose of the authorisation

(a) DASR require that Defence registered aircraft are operated by a Military Air Operator (MAO) organisation (DASR ARO.100). MAOs are ADF organisations approved by DASA through the issue of a MAO Certificate (MAOC).

(b) An independent organisational approval of an organisation provides assurance of the ongoing safety of aircraft flight operations. The MAOC is the mechanism to achieve this approval and assurance.

(c) Seeking initial organisation approval and maintaining this organisation approval involves close liaison between both DASA and the MAO, and carries mutual accountabilities. The outcome sought by both parties is the establishment and maintenance of an approval basis.

DASR requirements

(d) DASA must approve a MAO seeking to operate within the Defence Aviation Safety Framework (DASF) against DASR for the scope and level of operations required by their organisation, before their organisation can operate. Once approved, they become an 'Approved Organisation' for the defined scope and level of operations shown on their MAOC.

(e) MAO is a regulatory term that is applicable to an organisation approved by the DASA to conduct Defence aircraft flight operations. To become a MAO the commander of the organisation nominated by their Service must apply to DASA by submitting an Operations Compliance Statement (OCS). DASA assesses information in the OCS to assure that it forms the basis of judgement for the suitability of flight operations of an airworthy aircraft, maintained operated to approved standards and limitations, by competent and authorised individuals, who are acting as a member of an approved organisation.

(f) DASA may award a MAOC when satisfied that the MAO can safely conduct flight operations. The MAOC is accompanied with an Operations Specification (OpSpec) issued by DASA. The OpSpec contains the details of the scope of operations with any specific DASA approvals, conditions or limitations. An OpSpec annex is applied to the OpSpec to define the operations of each aircraft type to be operated.

(g) While changes to a MAOC are infrequent, the OCS and OpSpec require amendment when circumstances change and OpSpec authorisations require updating. When an MAO identifies the need for an amendment to the MAOC or OpSpec, they are to apply to DASA using an OCS to seek those changes. The OCS must include factual and documented evidence that supports the proposed amendment. Subjective material or unsigned documents do not meet the suitable evidence requirement to support a submission.

(h) Beyond initial approval, if an MAO is to keep operating under DASR, they must maintain their organisation approval basis. DASA approved updates to the approval basis are required for the introduction of new capabilities, changes to DASR, or for significant improvements to the organisational system of management. Maintenance of OpSpec currency is essential to ensure it accurately reflects current operations.

Superseded

(i) **Accountability.** The commander of a MAO organisation nominated by a Service is the Accountable Manager (AM) and their position listed in the OCS. Throughout the DASRs there are specific requirements placed on the AM. While delegation of the execution of these requirements is permissible, accountability for DASR compliance remains with the AM as part of their command responsibilities and cannot be delegated.

(j) The AM appointment in the DASR establishes an accountable officer responsible for the implementation of DASR within an organisation and subordinate units. All authority for an AM to implement DASR comes from their appointment to command of that organisation and not their nomination as an AM. The nomination as an AM does not empower the officer, rather it establishes, within the DASF, their accountability for DASR compliance under the WHS Act 2011.

(k) **Chain of command.** DASR compliance does not affect the chain of command. A MAO's higher commander may elect to retain or direct implementation of DASR compliance at their level. Should this occur, the higher commander's directions must be compliant with applicable DASR. This will create a situation where the higher commander and the MAO-AM become shared duty holders and accountable for their respective implementation of DASR[1]. The MAO OCS should reflect all specific circumstances, and from this, DASA will conduct oversight and enforcement appropriate to the context of the organisations.

(l) Where DASR 21, Part M, 66, 145 and 147 call for and place requirements on an AM, the MAO-AM is the AM for their subordinate units subject to those regulations.

Applying for the authorisation

(m) **Initial Issue and variation of MAOC and OpSpec.** The applicant organisation is to submit DASR Form 139a accompanied by an initial or updated OCS. When satisfied that all the requirements have been met DASA will issue or vary a MAOC and OpSpec.

(n) **Operations Compliance Statement.** An OCS, submitted in accordance with the requirements detailed in DASR ARO.100, demonstrates readiness to conduct flight operations in accordance with the requirements of a MAOC.

(o) With the exception of editorial and some administrative amendments, all applications for initial issue and variations of a MAOC or an OpSpec must provide factual and documented evidence. This evidence can take the form of published orders, instructions and publications (OIP), reports or certificates issued by a competent authority or other factual data. Draft documents or opinions do not constitute suitable evidence.

(p) The OCS must include an attestation by the MAO-AM that:

1. the AM is accountable for the Organisation's compliance with DASR
2. the OCS is complete and correct
3. appropriate arrangements are in place to support the scope of flight operations contained in the Operations Specification.

(q) The task of establishing or varying the MAOC may be conceptualised through steps shown below in Figure 1.

Superseded

Figure 1: Generic Steps of MAOC establishment and amendment

1. **Step 1: Establish Operational Parameters.** The DASR Flight Operations regulations are a structured suite of requirements applicable to military aviation. These rules apply to all MAOs; however, a MAO will only need to demonstrate compliance to regulations that pertain to their planned operations.

2. **Step 2: Determine Applicability.** The DASR Flight Operations regulations apply to all MAOs; however, a MAO will only need to demonstrate compliance to regulations that pertain to the Configuration, Role and Environment (CRE) described in each aircrafts' Statement of Operating Intent and Usage (SOIU). At the outset of any Introduction Into Service program, the MAO or relevant organisation should review the SOIU and determine the scope of flight operations regulations that will be applicable to the new or modified aircraft's CRE.

3. **Step 3: Planning.** Successful introduction into service usually involves multiple lines of effort from a variety of different stakeholders. These activities include establishing or modifying the flying management system, developing and approving OIP, implementing training (including flight simulation and training devices), approving aeronautical life support equipment, role equipment and portable electronic equipment and risk management. These activities often relate to outcomes in the initial or continuing airworthiness streams of work. Given the potential for multiple interrelated lines of effort, it is recommend practise to develop a program of work plan to implement flight operations arrangements. Whilst not compulsory for all programs, it is advisable to produce a DASA endorsed Operational Authorisations Plan[2] (OAP).

4. **Step 4.a: Documentation.** A MAO demonstrates compliance to the flight operations regulations by producing a suite of orders, instructions and publications, which record all aspects of the flying management system. At the apex of this documentation suite is the Operations Compliance Statement (OCS). The OCS records essential information about the proposed operations and limitations and provides traceability to relevant OIP, to establish the means of compliance to each applicable flight operations regulation. For a MAO to apply for a new OpSpec annex or to amend the existing OpSpec, the OCS must include the approval and references in the documentation applicable to the change.

5. **Step 4.b: MAO Application and Attestation.** The MAO must make a formal application to DASA to request a variation of the MAOC or OpSpec (see DASR ARO.100.C). This application must contain details of the changes required, evidence of compliance to the relevant regulations and an attestation from the MAO-AM confirming the OCS is complete and that that appropriate arrangements are in place to support the scope of flight operations contained in the OpSpec. DASA considers the MAO-AM attestation to be a significant part of the MAO approval process. As a result, the prior work done on applicability, planning and documentation stages should all support this attestation.

Superseded

Furthermore, at the time the MAO AM makes the attestation all documentation should be completed and available for review.

6. **Step 5: DASA Assurance and OpSpec Issue.** Submission of an application is via the DASA registry. Upon notification, DAVNOPS staff will review the application and conduct a desktop audit of the evidence to gain confidence that the MAO flying management system is suitable to the proposed scope of operations. Depending on the nature of the proposed changes, DAVNOPS may also conduct other safety assurance activities such as an on-site audit. When DASA is satisfied that the MAO has enacted suitable measures, it will prepare and approve a revised OpSpec.

DASA approval

(r) The DASA is the issuing authority for a MAOC[3] and the associated OpSpec, and any subsequent amendments to the MAOC and OpSpec.

(s) DASA may issue a MAOC when satisfied that the MAO can safely conduct flight operations. Submission of an OCS, in accordance with DASR Part ARO.100, demonstrates readiness to conduct flight operations in accordance with the requirements of an MAOC.

(t) **MAO Certificate.** The MAOC is a single page certificate to authorise flight operations. Submission of an OCS in accordance with DASR ARO.100 demonstrates readiness to conduct flight operations.

(u) **MAOC Operations Specifications.** The OpSpec contains the detail of the MAO operations conducted under the MAOC.

(v) **Key personnel.** The entry in the 'Key personnel' list is by appointment. An individual posted to the appointment becomes accountable for requirements of that position. A commander may determine the duties of the appointment. When an individual is temporarily assigned the duty of one the 'Key personnel' appointments, they become accountable for those duties for duration of the appointment unless there is a limitation specified in the promulgation.

(w) **Specific Approvals (if required).** Aircraft require specific approvals that detail performance based navigation system capability to access designated airspace with reduced separation criteria[4] or conduct nominated terminal flight procedures. DASA provide specific approval for performance-based navigation systems and record that in the OpSpec[5]. A MAO applying to DASA for a Specific Approval must support the application with factual and documented evidence that may include technical assessments, training documentation and other FIC elements.

(x) **Limitations or conditions (if required).** Limitations or conditions prescribed by DASA are to assure safe operations of a particular aircraft type within the ability/experience of the MAO. Operational limitations do not replicate airworthiness limitations contained in airworthiness instruments / documents such as the MRTC, or flight manual. Typically, an operational limitation will include reference to a plan and timeline to remove the limitation by the closure authority. When the appointment of closure authority is outside of DASA or the MAO, the appointment holder is to support the MAO raising an OCS for submission to DASA to amend the OpSpec. Once the closure authority has approved closure of a limitation or condition, the MAO may conduct operations without the imposition of the limitation or condition. However, the MAO should provide DASA with an updated OCS, minimising the period of a conflict

Superseded

between the published limitation or condition and the conduct of operation. This will alert DASA to the change, which may affect the conduct of DASA assurance activities.

(y) **Adding new aircraft type to the OpSpec.** When acquiring a new aircraft type an applicant (MAO or their representative, such as a Project Office) should seek allocation of an Application Identifier (AI) for the aircraft once Government has approved the acquisition. On receipt of an application for a new AI, DASA will add a new annex to the OpSpec annotated as 'Reserved'. When ready to conduct operations, the MAO will submit an OCS with applicable documentation seeking to vary the OpSpec.

(z) **Fleet addition.** The acquisition of additional aircraft for a fleet is a process known as 'fleet addition'. The extant OpSpec should not require amendment when the additional aircraft are conformant with the extant CRE, and will operate with existing OIP. If there are significant differences between the CRE or OIP, then consideration should be given to adding a new annex to the OpSpec for the fleet addition aircraft.

(aa) **Interaction and timing.** An SOIU and OpSpec are linked. An SOIU must have DASA endorsement and approval before proceeding with an application to add an aircraft to an OpSpec. The roles and tasks, CRE and aircraft usage defined in the SOIU forms the OpSpec operational boundaries.

(ab) Approval of an application for a MAOC and initial OpSpec nominally takes six to eight weeks upon receipt by DASA. This timeframe does not take into account an application for PBN approvals, which is an independent process. PBN approvals nominally take six weeks dependent on the factual and documented evidence. Recommend early engagement with DASA-DAVNOPS.

Responsibilities of the authorisation holder

(ac) **Initial Approval.** To gain an initial Organisational Approval, the MAO must first create a local system of management that reflects DASR requirements for the proposed scope and level of activities, as captured in the approval basis. The expectation is that a MAO will liaise with DASA as part of the development process, before the system is ready for DASA evaluation.

Ongoing DASA compliance assurance

(ad) DASPMAN Volume 3 Chapter 5 provides further guidance on regulatory oversight and enforcement activities.

Superseded

Annex B - Aerodrome Operator

Purpose of the Aerodrome Operator approval

(a) DASR 139 establishes the Authority's requirements for the regulatory oversight of Defence certified Aerodromes and Aerodrome Operators (AD OPR). Aerodrome Operators are ADF organisations approved by DASA through the issue of an AD OPR Certificate (AD OPRC). Each Service is responsible for selecting which organisation(s) shall be AD OPR(s).

(b) Authority approval provides the Defence AA assurance that the AD OPR will provide effective management of aerodrome design, OIP, and personnel competencies in order to support safe flight operations.

Aerodrome Operator – Accountable Manager

(c) **Accountability.** The commander of an AD OPR organisation nominated by a Service is the AD OPR Accountable Manager (AM). The DASR place specific requirements on the AM. While delegation of the execution of these requirements is permissible, accountability for DASR compliance remains with the AM — as part of their command responsibilities — and cannot be delegated.

(d) The AM appointment establishes an accountable officer responsible for the implementation of the DASR within the organisation and subordinate units. However, *the Defence Act 1903* provides the authority for the Commander to implement the DASR. The AM appointment establishes — within the DASF — accountability for DASR 139 compliance.

(e) **Chain of command.** DASR compliance does not alter the chain of command. An AD OPR's higher commander may elect to retain or direct implementation of DASR compliance at their level. In this event, the higher commander and the AD OPR-AM become shared duty holders and are accountable for their respective implementation of, and compliance with, the DASR[1]. The AD OPR Compliance Statement (CS) should reflect any such specific circumstances, and DASA will conduct oversight and enforcement appropriate to the context of the organisations.

(f) Defence operations and exercises may impose a temporary variation to the chain of command. For example, an AD OPR expeditionary squadron may be force assigned to an operational commander for activation of a Certified Aerodrome bare base (such as RAAF Scherger) during an exercise. In such circumstances, a shared duty arises out of the *Work Health and Safety (WHS) Act 2011, s. 16.* Both the AM and operational commander are considered 'Officers' for the purposes of the WHS Act, and must individually discharge their duties to the extent that they have capacity to influence and control these duties. The AM will retain responsibility for the operation of the aerodrome including continued compliance with DASR 139, and conformance with the DASR 139 compliant processes as described in the AD OPRC. In practice, this responsibility is discharged through deployment of aerodrome operations personnel who are suitably trained, competent and /or qualified to perform their role, and will operate the aerodrome in accordance with approved DASR 139 procedures.

Superseded

(g) **Initial issue of AD OPRC and OpSpec.** To gain an initial organisational approval, the AD OPR must first develop a system of management that meets DASR 139 requirements for the proposed scope and level of aerodrome operations.

(h) The applicant organisation must apply to DASA for an initial organisational approval. The application must include a CS, with AM Attestation and evidence supporting compliance with the regulation.

(i) DASA will award an AD OPRC when satisfied that the organisation complies with the requirements of DASR 139. DASA also issues an Operations Specification (OpSpec) to accompany the AD OPRC. The OpSpec details the scope of operations with any specific DASA approvals, conditions or limitations. Annexes to the OpSpec contain details of each Certified Aerodrome[2] operated by the AD OPR.

Compliance Statement

(j) The organisation is to provide a CS — approved by the AM — that details how the organisation achieves compliance with the DASR 139. The AD OPR must review the CS to capture changes to the organisation, the aerodromes and operating systems. The AM is to approve each version of the CS.

(k) The CS must demonstrate readiness to operate an aerodrome in accordance with the requirements of DASR 139. The CS details the organisation's compliance with DASR 139 through the provision of evidence and artefacts demonstrating suitable systems for the maintenance and operation of the aerodrome. Artefacts include Orders, Instructions and Publications (OIP) related to Safety Management Systems (SMS), Quality Management Systems (QMS), aerodrome manual, aerodrome maintenance programs, personnel competency frameworks and other aerodrome-specific management plans. DASR 139.30 details the content of the AD OPR CS.

(l) The CS records essential information about the proposed operations and limitations and provides traceability to relevant OIP, to establish the means of compliance withDASR 139. The CS should contain a compliance matrix — which references/hyperlinks the evidence supporting compliance.

(m) **AD OPR AM Attestation.** The CS must contain an AD OPR AM attestation, attesting that:

1. The AM is accountable for the Organisation's compliance with DASR
2. The CS is complete and correct
3. Appropriate arrangements are in place to support the scope of operations contained in the OpSpec.

(n) The AD OPR-AM attestation is a significant part of the AD OPR approval process. Work completed during the applicability, planning and documentation stages should all support the AM attestation. Furthermore, at the time the AD OPR AM makes the attestation, all documentation should be completed and available for their review.

(o) **Key personnel.** Entries in the 'Key personnel' list are by appointment. An individual posted to the appointment becomes accountable for the duties of that appointment. A commander

Superseded

may determine the duties of the appointment. When an individual is temporarily conducting 'Key personnel' appointment duties, they become accountable for those duties for the duration of the appointment unless there is a limitation specified in the promulgation.

(p) **Limitations or conditions (if required).** DASA may prescribe limitations or conditions to assure safe operations of a particular aerodrome of the AD OPR. The intent of an operational limitation is not to replicate limitations contained in documents such as the Aerodrome Certificate or aerodrome manual. A limitation will typically reference a plan and timeline to remove the limitation by the closure authority.

Maintaining an approval

(q) The AD OPR must operate in accordance with the DASA approved system, ie the system DASA approved, in order to maintain the AD OPRC. The AD OPR-AM is accountable for ensuring DASA-issued approvals remain current for their organisation and aerodrome operations.

(r) The AD OPR must seek DASA approval for:

1. updates to the level or scope of the organisational approval
2. introduction of new capabilities
3. changes to DASR
4. significant changes to the organisational management system.

(s) When an AD OPR identifies the need for an amendment to the AD OPRC and/or OpSpec, they must apply to DASA with an updated CS containing documented evidence to support the proposed amendment. An updated AM attestation is required with each updated CS.

(t) Changes that may require CS updates include:

1. substantial changes to the AD OPR organisation
2. changes to an aerodrome's Statement of Operating Intent and Usage (SOIU)[3]
3. change or withdrawal of a condition or limitation
4. addition or withdrawal of an aerodrome by the AD OPR
5. changes resulting from a regulation update
6. change or withdrawal of a regulation-based requirement.

DASA assurance and OpSpec issue

(u) The AD OPR must submit the application to the DASA Registry. Upon notification, DASA staff will review the application and conduct a desktop audit of the evidence to confirm whether the AD OPR management system is suitable for the proposed scope of operations. DASA may also conduct other safety assurance activities such as an on-site audit. DASA will prepare and approve AD OPRC and/or OpSpec when satisfied that the AD OPR has implemented suitable measures to comply with DASR 139.

Superseded

(v) Once DASA issues an Aerodrome Certificate*4*, the AD OPR may submit an application to update the AD OPRC OpSpec to include the Certified Aerodrome. On determining that the Certified Aerodrome operations meet all DASR 139 requirements, DASA will amend the AD OPRC OpSpec, thereby approving the AD OPR to operate the DASR 139 Certified Aerodrome. Figure 1 provides an overview of the process.

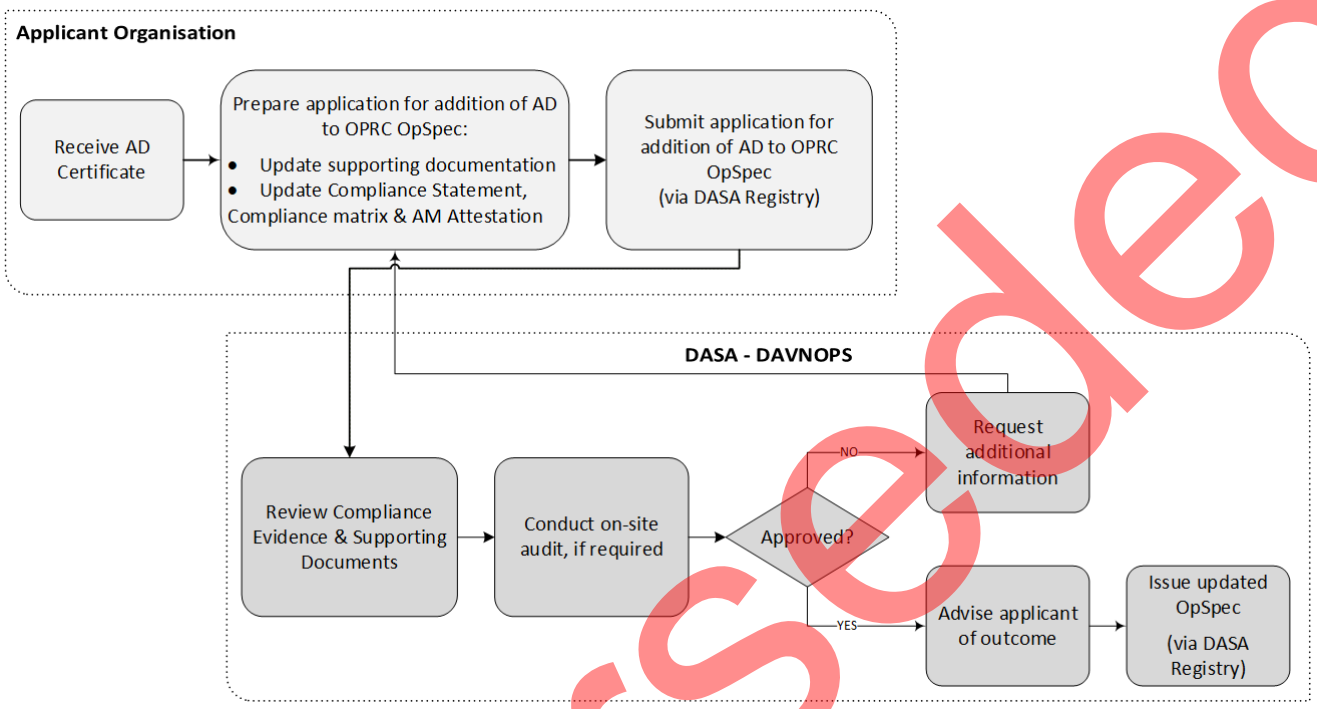

Figure 1: Addition of Certified Aerodrome to the OpSpec

(w) DASPMAN Volume 3 Section 5 contains further guidance on regulatory oversight and enforcement activities.

Superseded

Annex C - Air Cargo Delivery Provider*

Superseded

Annex D - Air Navigation Service Provider*

Superseded

Annex E - Military Design Organisation

Purpose of the authorisation

(a) Every aircraft requires support from one or more aircraft design organisations throughout its life to provide a range of design-related services. These services may include, for example, designing modifications, designing repairs, provision of design data, advice on risks due to design or maintenance deficiencies, investigations of defects, and so on. Of these services, a subset are regulated under DASR, primarily those related to design changes and repairs.

(b) An organisation that has been approved by DASA to provide aircraft design services for a Defence aircraft is termed a Military Design Organisation (MDO). These MDOs may be a Military or Industry organisation, may be located in Australia or overseas, and may encompass one or multiple aircraft types.

DASR requirements

(c) A Military Design Organisation Approval (MDOA) may be awarded by DASA when satisfied that the design organisation complies with the requirements of DASR Part 21 Subpart J (hence MDOs are sometimes called '21J organisations'). The DASR presents eligibility criteria, requirements for the design assurance system, terms of approval, candidate privileges (approved at DASA's discretion), and obligations. It also specifically requires the organisation to establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

(d) DASA's approval of an MDO is reflected on a Form 83 – MDO Approval Certificate, which summarises the terms of that approval, including:

1. Scope of approval: The type of design activities for which approval is granted, including fields of expertise
2. Platforms: The specific Defence aircraft types within the scope of the approval.
3. List of products: (not currently used)
4. Privileges: Any activities that may be performed independently by the MDO without further Authority verification
5. Limitations: Any limitations on the above

Applying for the Authorisation

(e) DASA does not accept unsolicited applications for MDO approval; rather, there must be a Defence capability need for that MDO. An application for MDO Approval is made via DASA Form 80 - Application For Military Design Organisation Approval.

(f) Per DASR 21.A.243, the primary application artefact is the design organisation handbook (also known as the Design Organisation Exposition (DOE)), which describes, directly or by cross-reference, the organisation, the relevant procedures and the products (or changes to products) to be designed. Furthermore, where partner organisations or subcontractors are to be employed, the handbook also includes information on how the design organisation is to ensure those organisations comply with certain DASRs. Finally, the MDO is required to furnish

Superseded

a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness in the organisation. Appendix 1 provides further insight into DASA's expectations for a design organisation handbook.

(g) **DASA Approval.** DASA's approval of a new MDO will usually be based on a desktop assessment of the handbook, particularly where the candidate organisation is yet to produce relevant aircraft designs. DASA will then conduct a deeper assessment, usually including an on-site visit, once the organisation has exercised and started to evolve its key design systems. Particular emphasis will be placed on the effectiveness of the SMS.

(h) Where an extant MDO is requesting an expansion of its current MDOA, for example the addition of an aircraft type or an expanded privilege, the DASA assessment may be proportionately reduced. Applications for MDO changes are made via DASA Form 82 - Application For Significant Changes To Design Organisation Approval.

(i) DASA's evaluation processes and templates are contained in the DASA Instruction, DASA(I) SAPO 01-003, DASR Organisational Approvals, which is available on the DASA intranet site.

(j) **Interaction and timing.** Where Defence decides to engage a new Industry MDO, the Defence contracting organisation should engage with DASA well before a Request for Tender (or similar) is released. DASA will help the contracting organisation explore its options and identify essential contract inclusions. DASA may also help the contracting organisation with pre-contract assessments of the prospective MDO.

(k) Prospective MDOs should engage with DASA soon after the formal decision is made for them to take on that role. DASA will educate the prospective MDO on application requirements, and will assign an internal point of contact. In DASA's experience, the time from first contact to approval of the MDO can vary between three and six months.

Responsibilities of the authorisation holder

(l) Responsibilities of a MDOA holder are presented at DASR 21.A.265. Amongst other things, the MDOA holder is required to:

1. determine that the design of products, changes or repairs comply with applicable airworthiness requirements and have no unsafe features, and
2. maintain the handbook in conformity with the design assurance system, and ensure the handbook is used as a basic working document within the organisation

Ongoing DASA compliance assurance

(m) Once an MDOA is achieved, DASA will commence ongoing MDO compliance assurance, to gain confidence that the MDO remains a professional and effective design organisation. While compliance with DASR is cornerstone to this confidence, DASA will also explore the broader safety outcomes that the MDO is achieving, for example how its SMS interfaces with other related platform SMS.

(n) DASA compliance assurance is normally achieved through on-site visits, remote assessments, and ongoing monitoring. Summarised:

Superseded

1. **On-site visits.** On-site visits may be informal or formal. Informal visits are usually to provide regulatory support and guidance, and for engagement with an organisation, while formal visit are used to validate the management of previous DASA findings and to conduct oversight.

2. **Remote assessments.** Remote assessments may be suitable if a visit to the organisation is not feasible for reasons of security, health, budget and availability of personnel, or the area to be assessed doesn't justify a full onsite visit. Business Intelligence and the use of Strategic Data techniques are often used to assist in the targeting of areas to be reviewed.

3. **Ongoing monitoring.** DASA desk officers will identify other ways of gaining ongoing confidence in MDO performance without necessarily engaging the MDO. This may include, for example, monitoring the quality of MDO products that are evaluated by other DASA sections, engaging with customers of the MDO, exploring the outcomes of other DASA review activities, and so on.

(o) DASA's oversight processes for MDOs are contained in the DASA Instructions, DASA(I) SAPO 01-002, DASA Oversight (On-Site and Remote) and DASA(I) 01-009, DASR Findings. Both are available on the DASA intranet site.

Appendix:

(a) Design Organisation Handbook Requirements

Superseded

(a) Where an aircraft design organisation is pursuing approval by DASA as a Military Design Organisation (MDO), DASA will rely extensively on the design organisation handbook to gain confidence that the organisation has the potential to provide professional aircraft design services. The information below provides an overview of the requirements of the handbook for MDOs; further information can be found in DASR 21.A.243.

(b) Pivotal to the handbook is a description of the Design Assurance System (DAS) that is to be employed by the MDO, which shows how the MDO intends to:

1. ensure their design of products, parts and appliances, design changes and repair designs, all comply with the type certification basis (TCB) for the aircraft
2. provide independent checking of the showings of compliance with the TCB
3. account for design input provided by other organisations
4. implement an effective Safety Management System (SMS)
5. provide for independent monitoring and improvement of the DAS.

(c) The DAS must specifically address, either directly or by reference to other documents, the organisational structure and key responsibilities, procedures and resources that will be employed by MDO, as summarised below.

(d) **Organisational structure and key responsibilities.** In addition to presenting the proposed MDO structure, the handbook will document the incumbents for the following roles: the Chief Executive, any authorised signatories (including Compliance Verification Engineers (CVEs), and the following three individuals that are formally accepted by DASA via the issue of Form 4 - Acceptance of Nominated Management Personnel:

1. Head of Design Organisation - responsible for the design organisation's output
2. Chief of the Office of Airworthiness - responsible for the preparation of certification program plans, interpreting airworthiness requirements, classifying design changes and repair designs, independent checking of showings of compliance, approval of minor changes and repair designs, and other functions.
3. Chief of Independent System Monitoring - responsible for continual evaluation of the DAS to ensure it remains effective (which must also cover design suppliers)

(e) **Procedures.** The design organisation handbook will document key MDO procedures for a range of functions, including design, compliance documents, independent checking, independent monitoring, and accounting for external input. It will also document the selection, training, ongoing competence and identification of authorised signatories (including CVEs).

(f) **Resources.** The handbook will describe the available resources to support the provision of professional design services, including human resources, equipment, tools, facilities, design data, and so on.

Superseded

Annex F - Military Production Organisation

(a) This guidance is complementary to the requirements of DASR 21 Subpart G - Military Production Organisational Approval, and not supersede nor replace the information defined within it.

Purpose of the authorisation

(b) Every aircraft requires support from one or more production organisations which have approval to manufacture aircraft parts and appliances in conformity with approved data.

(c) An organisation that has been approved by DASA to provide aircraft production services for a Defence aircraft is termed a Military Production Organisation (MPO). These MPOs may be a Military or Industry organisation, and may receive an approval for the production of aviation Products (aircraft, engine or propeller), Parts and Appliances.

DASR Requirements

(d) A Military Production Organisation Approval (MPOA) may be awarded by DASA when satisfied that the production organisation complies with the requirements of DASR 21 Subpart G (hence MPOs are sometimes called '21G organisations'). The DASR presents eligibility criteria, requirements for the production quality system, terms of approval, candidate privileges (approved at DASA's discretion), and obligations. It also specifically requires the organisation to establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

(e) DASA's approval of an MPO is reflected on a Form 55 – MPO Approval Certificate, which summarises the terms of that approval, including the Privileges granted in accordance with DASR 21.A.263:

1. Scope of Work: The type of production activities for which approval is granted, including products and categories of parts and appliances
2. Location: The location of any production facilities
3. Privileges: Perform production activities and issue conformity certification, and certification of release to service artefacts in accordance with the privileges granted.
4. Limitations: Any limitations on the above

Applying for the Authorisation

(f) DASA does not accept unsolicited applications for MPO approval; rather, evidence must be provided for a Defence capability need. An application for MPO Approval is made via DASA Form 50 - Application For Military Production Organisation Approval.

(g) Per DASR 21.A.143, the primary application artefact is the Production Organisation Exposition (POE), which provides an accurate definition and description of the production organisation. Furthermore, where partner organisations or subcontractors are to be employed, the

Superseded

exposition also includes information on how the production organisation is to ensure those organisations comply with certain DASRs applicable to production activities.

(h) The applicant is required to nominate an Accountable Manager who has corporate authority for ensuring that all production work is carried out to the required standard. The MPO is also required to furnish a statement of the qualifications and experience of the management staff. Dependent on the size of the organisation the applicant shall nominate two or more managers for the roles of Responsible Manager and Quality Manager. Appendix 1 provides further insight into DASA's expectations for a production organisation exposition.

(i) **DASA Approval.** DASA's approval of a new MPO will be based on a desktop assessment of the exposition and supporting procedures. A site visit will be made to perform an initial assessment of the facilities and manufacturing equipment. At this visit meetings will take place with the Form 4 holders nominated by the applicant, at which they will present the organisation, quality system and demonstrate their understanding of the regulatory requirements of DASR 21 Subpart G.

(j) At approximately 12 months post the granting of MPOA, DASA will conduct an onsite oversight activity of the MPO, once the organisation has exercised its privileges and started to mature the elements of its production system. Particular emphasis will be placed on the effectiveness of the SMS.

(k) Where an extant MPO is merely requesting an expansion of its current MPOA the DASA assessment may be proportionately reduced. Applications for MPO changes are made via DASA Form 51 - Application for Significant Changes or Variation of Scope and Terms of DASR 21 Production Organisation Approval.

(l) **Interaction and timing.** Where Defence decides to engage a new Industry MPO, the Defence contracting organisation should engage with DASA well before a Request for Tender (or similar) is released. DASA will help the contracting organisation explore its contract options and identify essential contract inclusions. DASA may also help the contracting organisation with pre-contract assessments of the prospective MPO.

(m) Prospective MPOs should engage with DASA soon after the formal decision is made for them to take on that role. DASA will educate the prospective MPO on application requirements, and will assign an internal point of contact. In DASA's experience, the time from first contact to approval of the MPO can vary between three and six months.

Responsibilities of the authorisation holder

(n) Responsibilities of a MPOA holder are presented at DASR 21.A.165. Amongst other things, the MPOA holder is required to:

1. maintain the production organisation in conformity with the data and procedures approved for the production organisation approval
2. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority
3. determine that products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate.

Superseded

Ongoing DASA compliance assurance

(o) Once an MPOA is achieved, DASA will commence ongoing MPO compliance assurance, to gain confidence that the MPO remains a professional and effective production organisation. While compliance with DASR is cornerstone to this confidence, DASA will also explore the broader safety outcomes that the MPO is achieving, for example how its SMS interfaces with other related platform SMS.

(p) Routine scheduled oversight visits will occur periodically, nominally every 24 months, however timings may be shortened dependent on information received from various sources indicating possible non-compliance including quality lapses.

(q) DASA's oversight processes for MPOs are contained in the DASA Instructions, DASA(I) SAPO 01-002, DASA Oversight (On-Site and Remote) and DASA(I) 01-009, DASR Findings. Both are available on the DASA intranet site.

Appendix:

(a) Production Organisation Exposition Requirements

Superseded

(a) Where an aircraft production organisation is pursuing approval by DASA as a Military Production Organisation (MPO), DASA will rely extensively on the production organisation exposition to gain confidence that the organisation has the potential to provide professional aircraft production services. The information below provides an overview of the requirements of the exposition for MPOs; further information can be found in DASR 21.A.143.

(b) Pivotal to the exposition is a description of the Production Quality System that is to be employed by the MPO, which shows how the MPO intends to:

1. ensure their production of products, parts and appliances conform to the applicable design data and is in condition for safe operation
2. account for production input provided by other organisations
3. implement an effective Safety Management System (SMS)
4. implement an independent quality assurance function for confirming the adequacy of the documented procedures and monitoring compliance with those procedures.

(c) The exposition must specifically address, either directly or by reference to other documents, the organisational structure and key responsibilities, procedures and resources that will be employed by MPO, as summarised below.

(d) **Organisational structure and key responsibilities.** In addition to presenting the proposed MPO structure, the exposition will document the incumbents for the following roles: the Accountable Manager, and the following two individuals that are formally accepted by DASA via the issue of Form 4 - Acceptance of Nominated Management Personnel:

1. Responsible Manager (RM) of the Production Organisation - responsible for the production organisation's output
2. Quality Manager (QM) – responsible for the independent quality assurance function.

(e) **Procedures.** The exposition will document key MPO procedures for a range of functions, including production, compliance documents, independent quality monitoring, and accounting for external subcontractors and suppliers. It will also document the selection, training, ongoing competence and identification of certifying staff.

(f) In addition, depending on the specific roles of the MPO, the exposition may also present procedures for exercising assigned MPO privileges.

(g) **Resources.** The exposition will describe the available resources to support the provision of airworthiness production, including human resources, equipment, tools, facilities, production data, and so on.

Superseded

Annex G - Approved Maintenance Organisation

Purpose of the authorisation

(a) The DASR 145 – establish the requirements to be met by an Organisation seeking approval to perform aircraft maintenance activities; thereby completing the actions required for restoring and maintaining an item in a serviceable condition including servicing, repair, modification, overhaul, inspection and determination of condition to maintain aircraft safety and airworthiness.

(b) The requirements pertain to all aircraft maintenance organisations who seek to obtain a DASR 145 approval.

(c) An organisation that has been approved by DASA to provide aircraft maintenance services (including engines and components) for a Defence aircraft is termed an Approved Maintenance Organisation (AMO). These AMOs may be a Military or Defence Industry organisation, may be located in Australia or overseas, and may encompass one or multiple aircraft types.

DASR Requirements

(d) A Maintenance Organisation Approval may be granted by DASA when satisfied that the maintenance organisation complies with the requirements of DASR 145. The DASR presents eligibility criteria, requirements for the maintenance organisation, terms of approval, obligations and organisational privileges that are approved by DASA. It also specifically requires the organisation to establish and maintain an Aviation Safety Management System (ASMS), in accordance with DASR SMS.

(e) DASA's approval of an AMO is reflected on a DASR Form 3 – Approval Certificate and Schedule DASR 145, which summarises the terms of the approval, including:

1. Conditions: The conditions on which the approval is based
2. Approval Schedule: The scope of work for which approval is granted, ranging from a single class and rating with limitations to all classes and ratings limitations. These include aircraft, engines/auxiliary power unit (APU), components and specialised maintenance services
3. Limitations: Any limitations on the above
4. Exposition reference: DASA's Objective reference for the approved Exposition.

Applying for the authorisation

(f) DASA does not accept unsolicited applications for AMO approval; rather, a Defence capability need must be demonstrated before DASA will commence processing of DASR 145 approval applications. An application for a DASR 145 approval is made using a DASR Form 2 – *Application for DASR 145 Approval.*

(g) Per DASR 145.A.70, the primary application document is the Maintenance Organisation Exposition (MOE) (including any related procedures/documents), which specifies the scope of

Superseded

work deemed to constitute approval and details how the maintenance organisation intends to comply with the DASR 145 requirements. The MOE should cover four main parts:

1. The Organisational management part of the MOE, including organisational structure, key management personnel qualifications, duties and responsibilities and scope of work

2. The maintenance procedures detailing how the aircraft/engine/components will be maintained to the required standard and how aircraft components may be accepted from external sources

3. The quality system procedures including the methods of qualifying personnel (for example certifying staff, support staff and quality audit personnel)

4. Contracting procedures and paperwork.

(h) Appendix 1 provides further insight into DASA's expectations for a MOE.

(i) **DASA approval.** DASA approval of an AMO will consist of a desktop assessment of the MOE, including all referenced related procedures/documents that detail DASR 145 compliance and an on-site visit once the organisation has commenced work. The approval process involves a thorough evaluation of the organisation's facilities, scope of work, personnel and the qualification requirements of staff including training and authorisations. The organisation must also demonstrate that it has a quality management system in place, establishing maintenance procedures to ensure good maintenance practices and compliance with DASR 145 requirements.

(j) **Interaction and timing.** Where Defence decides to engage an organisation not yet approved by DASA, the Defence contracting organisation should engage with DASA well before a Request for Tender (or similar) is released. DASA will assist the contracting organisation explore its contract options and identify essential contract inclusions. DASA may also assist the contracting organisation with pre-contract assessments of the prospective AMO.

(k) Prospective AMOs should engage with DASA at the earliest opportunity after the formal decision awarding them as the preferred maintenance contractor is made. DASA will assign an internal point of contact who will be available to assist the prospective AMO with application requirements. In DASA's experience, the time from first contact to approval of the AMO can vary between three and six months.

Responsibilities of the authorisation holder

(l) Responsibilities a AMO holder is required to ensure:

1. all maintenance can be carried out to the standard required by DASR 145

2. the necessary resources are available to accomplish maintenance in accordance with DASR 145 to support the AMO approval

3. to establish and promote the safety and quality policy

4. maintain a MOE and maintenance procedures to remain a current description of the AMO

5. to notify the DASA of significant changes to the AMO to enable the DASA to determine continued compliance with DASR 145.

Superseded

(m) Once an AMO authorisation is achieved, DASA will commence ongoing AMO compliance assurance. These activities provide a measure of the regulated entity's compliance with the DASR and also act to provide a level of confidence that appropriate arrangements are in place to support the compliance of subordinate organisations with the DASR, ensuring they are effective.

(n) DASA compliance assurance is normally achieved through on-site visits, remote assessments, and ongoing monitoring. Summarised:

1. **On-site visits.** On-site visits may be informal or formal. Informal visits provide regulatory support, guidance and engagement with an organisation, while formal visits are used to conduct oversight and enforcement activities and to validate the management of previous DASR findings

2. **Remote assessments.** Remote assessments may be suitable if a visit to the organisation is not feasible for reasons such as security, health, budget and availability of personnel or the area to be assessed does not justify a full on-site visit. Business Intelligence and the use of Strategic Data techniques are often used to assist in the targeting of areas to be reviewed

3. **Ongoing monitoring.** DASA desk officers review an approved organisation's compliance through the conduct of various desktop evaluations and interviews to gain ongoing confidence in AMO performance without necessarily engaging the AMO.

(o) DASA's oversight processes for AMOs are contained in the DASA Instructions, DASA(I) SAPO 01-002, DASA Oversight (On-Site and Remote) and DASA(I) SAPO 01-009, DASR Findings. These are available on the DASA intranet site.

Appendix:

1. Maintenance Organisation Exposition Requirements

Superseded

(a) Where a maintenance organisation is pursuing approval by DASA as an AMO, DASA will rely extensively on the MOE and any associated supporting procedures to gain confidence that the organisation can provide the maintenance services to the required standards.

(b) **Organisational Management.** The MOE management section shall identify the AMO organisational structure, the maintenance management personnel, including 'nominated personnel' to ensure all DASR 145 functions are covered as detailed under their respective duties and responsibilities. The following nominated management personnel are responsible for ensuring the AMO complies with the DASR 145 requirements and are formally accepted by DASA via the issue of a DASR Form 4 – Acceptance of Nominated Management Personnel:

1. Responsible Manager (RM)
2. Quality Manager (QM)
3. Non-Destructive Testing Responsible Level 3 (NDT Responsible Lvl 3).

(c) In addition, the organisation's intended scope of work must clearly show the range of work performed at each approved location and may include the following class and ratings that are appropriately limited by DASA to customise the approval to a particular AMO:

1. **Aircraft maintenance.** A category A class rating means the AMO may perform maintenance on the aircraft and any component (including engines/APUs) in accordance with (in accordance with) aircraft maintenance data or, if agreed by the DASA in accordance with component maintenance data, only whilst such components are fitted to the aircraft
2. **Engine maintenance.** A category B class rating means the AMO may perform maintenance on an uninstalled engine and/or APU and its components in accordance with engine and/or APU maintenance data or, if agreed by DASA in accordance with component maintenance data, only whilst such components are fitted to the engine and/or APU
3. **Component maintenance.** A category C class rating means the AMO may perform maintenance on uninstalled components (excluding engines and APUs) intended for fitment to the aircraft or engine/APU
4. **Specialised maintenance services.** A category D class rating is only necessary if the AMO intends to provide the specialised maintenance service for another maintenance organisation (for example D1 NDT rating to release tasks using a DASR Form 1). An AMO with a class rating in A or B or C category may perform specialised maintenance tasks on products it is maintaining "in the course of maintenance" subject to the MOE containing procedures, without the need for a D class rating. These specialised maintenance tasks include and are not limited to, composite repairs, painting, welding, NDT.

(d) **Maintenance procedures.** The MOE maintenance procedures established by the maintenance organisation to ensure compliance to DASR 145.A.25 to DASR 145.A.95, that shall cover all aspects of performing the maintenance activities, including the provision and control of any specialised services, therefore setting the standards to which the maintenance organisation

Superseded

intends to work. These procedures should be held current in that they reflect best practice and remain an up to date description of the maintenance organisation.

(e) **Quality system procedures.** The maintenance organisation shall establish a quality system with procedures to ensure compliance to DASR 145 requirements, including performing independent audits to monitor compliance with required standards and to confirm adequacy of the procedures to enable the maintenance organisation to ensure it can deliver a safe product. These procedures shall cover all aspects of performing the quality activities, including defining the audit program and audit procedures, qualifying requirements for quality audit personnel and maintenance personnel (inspectors, certifying staff, support staff and specialised services staff).

(f) **Contracting procedures and paperwork.** This section should describe the procedures, paperwork and records associated with the CAMO/s that place tasks on the maintenance organisation. It is recommended to have a separate procedure for each CAMO.

Appendix V to DASR AMC 145.A.70 – is an additional resource developed in a check list format to facilitate a compliance check of the minimum expected content of the MOE.

Superseded

Annex H - Continuing Airworthiness Management Organisation

Purpose of the authorisation

(a) The DASR M – establish the requirements to be met by an Organisation to qualify for the issue or continuation of an approval for the management of aircraft continuing airworthiness, including the measures to be taken to ensure that airworthiness is maintained.

(b) The requirements pertain to all organisations who seek to obtain and retain a DASR M approval.

(c) The Operating Organisation is accountable for the continuing airworthiness of an aircraft and shall be appropriately approved, in accordance with DASR M Subpart G, for the management of the continuing airworthiness of the aircraft it operates. An Operating Organisation that has been approved by DASA to provide aircraft continuing airworthiness management for a Defence aircraft (including engines and components) is termed a Continuing Airworthiness Management Organisation (CAMO). All ADF CAMOs are supplemented by a contracted Defence Industry organisations and may encompass one or multiple aircraft types.

DASR requirements

(d) A CAMO Approval may be granted by DASA when satisfied that the organisation complies with the requirements of DASR M. The DASR presents eligibility criteria, requirements for the organisation, terms of approval, obligations and organisational privileges that are approved by DASA. It also specifically requires the organisation to establish and maintain an Aviation Safety Management System (ASMS), in accordance with DASR SMS.

(e) DASA's approval of an CAMO is reflected on a DASR Form 14 – Approval Certificate and Schedule DASR M, which summarises the terms of the approval, including:

1. Aircraft type/series/group: the scope of work for which approval is granted, ranging from a single aircraft type/model/series to multiple aircraft types
2. Privileges: privileges include arranging for any of the continuing airworthiness management tasks to be carried out by another organisation, development and control of Aircraft Maintenance Program, performance and extension of Airworthiness Reviews
3. Contracted organisations performing continuing airworthiness tasks on behalf of the CAMO shall be listed in the application and form part of the CAMOs Quality Management System
4. Exposition reference: DASA's Objective reference for the approved Exposition.

Applying for the authorisation

(f) An application for a CAMO approval shall be made in accordance with DASR M.A.702 using a DASR Form 2 – Application for DASR M Subpart G Approval. This application Form shall be sent directly to DASA for assessment.

Superseded

(g) Upon receipt of the package, DASA shall acknowledge the application and check the submission for eligibility and completeness. When incorrect or incomplete information is supplied, DASA shall notify the applicant as soon as possible detailing the omissions and errors. In case of refusal of an application, DASA shall notify this decision in writing to the applicant together with the reasons leading to that outcome.

(h) Per DASR M.A.704, the primary application document is the Continuing Airworthiness Management Exposition (CAME) (including related procedures/documents), which specifies the scope of work deemed to constitute approval and details how the organisation intends to comply with the DASR M requirements. The CAME should cover five main parts:

1. Organisational details such as locations, facilities, management structure, including key management personnel qualifications, duties and responsibilities and a list of nominated Form 4 holders

2. Continuing airworthiness management procedures detailing how the continuing airworthiness tasks for the aircraft (including engine/components) are carried out

3. Quality Management System and procedures to ensure that the organisation remain in compliance with the DASR M requirements, including the monitoring functions and conduct of independent audits of all DASR M.A Subpart G activities

4. Details about organisational interdependencies including operating organisations for which the CAMO provides services, and other contracted/tasked organisations responsible to support the CAMO during the delivery of continuing airworthiness management services.

5. Airworthiness review procedures shall encompass all the tasks and activities necessary for determining the airworthiness status of an aircraft based on a documented review of its records and a physical survey.

(i) To summarise, an initial application package for a CAMO approval should include:

1. The DASR Form 2

2. The DASR Form 4

3. The CAME (including related procedures/documents);

4. The AMP(s) for aircraft managed by the CAMO

5. The Aircraft Technical Log used by the CAMO (if IT based, access should be provided);

6. Details regarding maintenance contracts/tasking with maintenance providers (DASR 145 or equivalent) where appropriate and organisations tasked to carry out Continuing Airworthiness functions on behalf of the CAMO (CAM Service Providers)

(j) Appendix 1 provides further insight into DASA's expectations for a CAME.

(k) **DASA assessment and approval.** DASA approval of a CAMO will consist of a desktop assessment of the CAME, including all referenced related procedures/documents that detail DASR M compliance. The approval process involves a comprehensive evaluation of the facilities, organisation scope, personnel, qualification requirements for staff, management of continuing airworthiness functions and management of Aircraft Maintenance Program and Airworthiness Review Process. The organisation must also demonstrate that it has a quality

Superseded

and safety management systems in place and procedures to ensure good practices and compliance with DASR M requirements.

(l) A review of the CAME is carried out utilising the DASR M Compliance Matrix. The assessment, carried out by DCA, uses the Present, Suitable, Operating and Effective (PSOE) methodology to identify that elements of the CAME are present and suitable to the scope, complexity and types of operations defined by the applicant (Refer to DASPMAN Vol. 3 Chapter 5.4). Based on the nature and quantity of any identified issues, a decision shall be made as to whether approval of the CAMO is recommended.

(m) Once an approval is recommended, a decision brief and CAMO Certificate (Form 14) is developed for signature by DG DASA. Where discrepancies with the CAME are identified, these shall be documented in the Decision Brief. DCA personnel will consider the issues that are documented in the decision brief and decide if raising findings is warranted using DASA Oversight and Enforcement (O&E) principles. This process is intended to establish agreement or otherwise with the issues that have been identified in the decision brief.

(n) Following signature of the decision brief and Form 14, the Form 2 application and certificate are forwarded to the CAMO.

(o) **Interaction and timing.** Prospective CAMOs should engage with DASA at the earliest opportunity after the Operator has appointed the organisation as responsible for the management of Continuing Airworthiness obligations. DASA will assign an internal point of contact who will be available to assist the prospective CAMO with application requirements. In DASA's experience, the time from first contact to approval of the CAMO can vary between three to six months.

Responsibilities of the authorisation holder

(p) A CAMO holder is required to ensure:

1. All continuing airworthiness management tasks can be carried out to the standard required by DASR M
2. the necessary resources are available to support the CAMO approval
3. to establish and promote the safety and quality policy
4. maintain a CAME and associated procedures in line with current CAMO practices
5. to notify DASA of significant changes to the CAMO to enable DASA to determine continued compliance with DASR M.

Ongoing DASA compliance assurance

(q) Once a CAMO authorisation is granted, DASA will commence ongoing CAMO compliance assurance. These activities provide a measure of the regulated entity's compliance with the DASR and also act to provide a level of confidence that appropriate arrangements are in place to support the compliance of subordinate organisations with the DASR, ensuring they are effective.

Superseded

(r) DASA compliance assurance is achieved through a range of methods including on-site visits, remote assessments, and ongoing monitoring. For further details regarding DASA Oversight and Enforcement methodology refer to DASPMAN Vol. 3 Chapter 5.4.

(s) DASA's oversight processes for CAMOs are contained in the DASA Instructions, DASA(I) SAPO 01-002, DASA Oversight (On-Site and Remote) and DASA(I) SAPO 01-009, DASR Findings. These are available on the DASA intranet site.

Appendix:

(a) Continuing Airworthiness Management Exposition Requirements

Superseded

(a) Where an organisation is pursuing approval by DASA as a CAMO, DASA will rely extensively on the CAME and any associated supporting procedures to gain confidence that the organisation can provide the services to the required standards.

(b) The CAME (including procedure(s) as applicable) should identify full compliance to the applicable DASR M requirements. More specifically, the expected content of the CAME should follow the guidelines of AMC M.A.704.

(c) The CAME should be comprised of:

1. **General organisation details.** This section shall detail the CAMO enterprise, providing a brief description of the organisation, its structure, aircraft managed, fleet composition, personnel details including 'nominated management personnel, relationships with other organisations and ongoing administration arrangements of the CAME.

2. **Continuing airworthiness management procedures.** This section shall detail how the CAMO performs their continuing airworthiness functions. Categorically, the CAME should cover as a minimum, utilisation and management of continuing airworthiness records, development, amendment and approval of AMP, monitoring and analysis of the effectiveness of AMP, reliability program, accomplishment and control of Airworthiness Directives, non-mandatory modification embodiment policy, major repairs and modifications, defect reporting, pre-flight inspections, aircraft weight and balance management and maintenance check procedures.

3. **Quality system.** The CAMO shall establish a quality system with procedures to ensure compliance to DASR M requirements, including performing independent audits to monitor compliance with required standards and to confirm adequacy of the procedures to enable the safe delivery of continuing airworthiness management services. These procedures shall cover all aspects of performing the quality activities, including defining the audit program and audit procedures, qualifying requirements for quality audit personnel and CAMO personnel. In addition, the Quality system is expected to include the monitoring that maintenance is carried out by appropriately approved maintenance organisations (DASR 145 or equivalent), monitoring that contracted tasks are carried out in accordance with the contract/task order.

4. **Contracted/tasked maintenance.** This section should explain how a Maintenance Organisation is selected by the CAMO. Selection should not be limited to the verification that the Maintenance Organisation is appropriately approved for the type/ model/series of aircraft, but also that the Maintenance Organisation has the capacity and resources to undertake the required maintenance. This selection procedure should preferably include a contract/tasking review process in order to ensure that:

   i. the contract/tasking is comprehensive and that no gap or unclear area remains,

   ii. everyone involved in the contract/tasking (both at the CAMO and at the Maintenance Organisation) agrees with the terms of the contract/tasking and fully understand their responsibilities.

   iii. that functional responsibilities of all parties are clearly identified

Superseded

5. **Airworthiness review procedures (if applicable).** A CAMO seeking the privilege to manage and issue Military Airworthiness Review Certificates (MARC) should establish the working procedures for the assessment of the airworthiness review staff (experience, qualification and training), issuance, management and revocation of authorisations. Moreover, the section should describe how the document review and physical survey will be conducted, indicating the records to be reviewed, details to be reviewed and number of items to be sampled during the process. Additionally, this section should also cover how the MARC can be issued or criteria for extension, and ongoing management/retention of records.

6. **Appendices (as required).** Section may include:

   i. Sample documents used by the CAMO

   ii. List of airworthiness review staff

   iii. List of contracted organisations delivering CAM services to the CAMO (M.A.711(a)3)

   iv. List of contracted maintenance organisations, either DASR 145 or equivalent organisations (via Airworthiness Recognition)

   v. Details of functions being contracted to CAM services organisations

   vi. List of operating organisations to which the CAMO provides the management of continuing airworthiness

Superseded

Annex I - Maintenance Training Organisation

Purpose of the authorisation

(a) The Defence Aviation Safety Regulations (DASR) 147 – Aircraft Maintenance Training Organisation, establish the requirements to be met by an organisation seeking approval to conduct aviation technical training or military aircraft type rating training and examinations as specified in DASR 66 to be eligible for a Military Aircraft Maintenance Licence (MAML).

(b) An organisation that has been approved by DASA to provide maintenance training for a Defence aircraft is termed a Maintenance Training Organisation (MTO). An MTO may be a Military or Defence Industry organisation, located in Australia, and may encompass one or multiple military aircraft type ratings.

DASR requirements

(c) An MTO may be awarded by DASA when satisfied that the organisation complies with the requirements of DASR 147. The DASR presents eligibility criteria, requirements for either the Basic Knowledge or military aircraft type rating training, terms of approval, scope of approval and obligations. The MTO approval is an essential requirement for organisations that wish to provide approved maintenance training courses for Defence aircraft. The certification provides assurance that the organisation has the necessary facilities, resources and expertise to deliver high-quality training programs that comply with DASA safety standards.

Applying for the Authorisation

(d) DASA does not accept unsolicited applications for MDO approval; rather, there must be a Defence capability need for that MTO. An application for MTO approval is made via Form 12 - Application for DASR 147 Initial-Changes of Approval.

(e) Where an extant MTO is merely requesting an expansion of its current MTO approval, for example the addition of an aircraft type or an expanded privilege, the DASA assessment may be proportionately reduced. Applications for such changes are made via DASA Form 12A - Military Aircraft Type Rating Initial Change Course Approval.

(f) DASA's approval of an MTO is reflected on a Form 11 – Maintenance Training Organisation Approval Certificate, which summarises the terms of that approval, including:

1. Scope of approval: The type of aircraft maintenance training activities (Basic or Type) for which approval is granted
2. Category/Type: The specific Military aircraft types or category within the scope of the approval.
3. Conditions: Any requirements that are provisional to this approval
4. Limitations: Any limitations on the above.

(g) IAW DASR 147.A.140, the primary application artefact is the Maintenance Training Organisation Exposition (MTOE), which describes, directly or by cross-reference, the

Superseded

organisation, the relevant procedures and the products (or changes to products) to be trained. Furthermore, where partner organisations or subcontractors are to be employed, the MTOE also includes information on how the MTO is to ensure those organisations under their QMS comply with relevant DASRs.

(h) **DASA Approval.** DASA's approval of a new MTO will usually be based on a desktop assessment of the MTOE. Particularly where the candidate organisation is 'new' DASA may then conduct a deeper assessment, usually consisting an on-site visit, once the organisation has exercised and started to mature its maintenance training systems. The approval process involves a thorough evaluation of the organisation's facilities, training programs, training materials, personnel and the qualifications of its instructors. The organisation must also demonstrate that it has a quality management system in place to ensure that the training is delivered consistently and to a high standard.

(i) **Interaction and timing.** Where Defence decides to engage a new Industry MTO, the Defence contracting organisation should engage with DASA well before a Request for Tender (or similar) is released. DASA will help the contracting organisation explore its contract options and identify essential contract inclusions. DASA may also help the contracting organisation with pre-contract assessments of the prospective MTO.

(j) Prospective MTO should engage with DASA soon after the formal decision is made for them to take on that role. DASA will educate the prospective MTO on application requirements, and will assign an internal point of contact. In DASA's experience, the time from first contact to approval of the MTO can vary between three and six months.

Responsibilities of the authorisation holder

(k) Responsibilities of a MTO approval are required to:

1. ensure that all instruction and examinations carried out by the MTO meet the standards required by the DASA, and
2. maintain the MTOE in conformity, ensuring that the necessary finance, human resources and facilities are available and conform to the requirements of DASR 147 as stipulated by the DASA.
3. all necessary Airworthiness data published by the DASA and aircraft manufacturers as appropriate, is made available and course material is updated accordingly.

Ongoing DASA compliance assurance

(l) Once an MTO approval is achieved, DASA will commence ongoing MTO compliance assurance, to gain confidence that the MTO remains a professional and effective training organisation.

(m) DASA compliance assurance is normally achieved through on-site visits, remote assessments, and ongoing monitoring. Summarised:

1. **On-site visits.** On-site visits may be informal or formal. Informal visits are usually to provide regulatory support and guidance, and for engagement with an organisation, while formal visit are used to validate the management of previous DASA findings and to conduct oversight which may result in new findings.

Superseded

2. **Remote assessments.** Remote assessments may be suitable if a visit to the organisation is not feasible for reasons of security, health, budget and availability of personnel or the area to be assessed doesn't justify a full onsite visit. Business Intelligence and the use of Strategic Data techniques are often used to assist in the targeting of areas to be reviewed.

3. **Ongoing monitoring.** DASA desk officers may identify other ways of gaining ongoing confidence in MTO performance without necessarily engaging the MTO.

(n) DASA's oversight processes for MTO are contained in the DASA Instructions, DASA(I) SAPO 01-002, DASA Oversight (On-Site and Remote) and DASA(I) 01-009, DASR Findings. Both are available on the DASA intranet site.

Appendix:

(a) MTOE Requirements

Superseded

(a) Where a maintenance training organisation is pursuing approval by DASA as a Maintenance Training Organisation (MTO), DASA will rely extensively on the Maintenance Training Organisation Exposition (MTOE) and associated supporting documentations to gain confidence that the organisation has the potential to provide professional maintenance training services.

(b) **Organisational structure and key responsibilities.** In addition to presenting the proposed MTO structure, the MTOE will document the incumbents for the following roles: the Accountable Manager confirming that the MTOE and any associated manuals conforms to MTO's compliance with this DASR and shall be complied with at all times and ensures necessary resources to provide effective training. Where the Accountable Manager is not the Chief Executive Officer or the senior military commander of the organisation, the Chief Executive Officer or the senior military commander of the organisation shall countersign that statement. The following three individuals that are formally accepted by DASA via the issue of Form 4 - *Acceptance of Nominated Management Personnel:*

1. Training Manager - responsible for monitoring and coordinating the training needs in the organization, selection of instructors and design, plan, and implement training programs, policies, and procedures to fulfil those needs.

2. Examination Manager – responsible for determining the level of theoretical knowledge of the trainees on a particular module, element, or part thereof. Development of examination materials, administering and grading exams, maintaining exam records, ensuring examination process complies with the regulatory requirements. Ensures the integrity, effectiveness and continuous improvement of the examination process so that students receive fair and accurate evaluations of their skills and knowledge.

   Note: *Per AMC 147.A.105(a), the larger MTO (an organisation with the capacity to provide training for 50 students or more) should appoint a training manager with the responsibility of managing the MTO on a day-to-day basis. Such person could also be the Accountable Manager. In addition, the MTO should appoint a quality manager with the responsibility of managing the quality system as specified in DASR 147.A.130(b) and an examination manager with the responsibility of managing the relevant DASR 147 Subpart C or Subpart D examination system. Such person(s) may also be an instructor and/or examiner.*

3. Quality Manager - responsible for establishing an independent quality management system to monitor compliance with DASR 147 requirements, managing any observed non-compliances and proposing corrective actions necessary for eliminating and recurrence of non-compliance. Development of policies, procedures and processes to ensure that the training provided meets the required standards and is of high quality.

4. Instructor – responsible for delivering the training programs to students. They must have the necessary qualifications and experience to provide effective training and must also stay current with the latest industry developments.

5. Practical Assessor – responsible for determining the level of practical knowledge/ practical skills of the trainees on a particular module, element, or part thereof. Ensures that students have the required knowledge and skills to perform maintenance

Superseded

tasks competently on aircraft and that they can apply this knowledge in a practical setting. Provide feedback to students on their performance and make recommendations for improvement.

6. Invigilator – responsible for supporting candidates whilst maintaining examination integrity. Ensures that the exam is conducted fairly and in a secure and conducive environment.

(c) **Facilities and Equipment.** The MTO must have appropriate facilities and equipment to support the training programme, including classrooms, workshops and aircraft maintenance equipment.

(d) **Curriculum and Syllabus.** The MTO must develop and maintain a curriculum and syllabus to support learning objectives and outcomes that meets the requirements of DASR 66. To ensure that the course curriculum remain current with the manufacturer's certified standards, the MTO must regularly review and update the course materials as needed. To ensure that the course materials remain effective, the MTO should seek feedback from students, instructors, SMEs and other stakeholders in the aviation industry to identify areas for improvement and innovation.

(e) **Training Procedures.** The MTO must have documented procedures for all aspects of the training process, including admission requirements and student evaluation.

(f) **Quality Management System.** The MTO must have a QMS in place to ensure that training is delivered in a consistent and effective manner. It should include regular independent audits and reviews of training processes as well as ongoing training and professional development for instructors. Must have a process for continually evaluating and improving the training programme to ensure it meets the evolving needs of the military aviation industry. Must comply with all relevant regulations and standards set by DASA to obtain and maintain the MTO approval.

(g) **Examination and Assessment.** The MTO must have a system in place for assessing student performance and providing feedback. This should include written and practical exams as well as evaluations of student performance during on-the-job training.

Superseded

Annex J - Military Type Certificate Holder Organisation

Purpose of the authorisation

(a) Every Type certified platform operating in the ADF requires an entity to hold the issued Military Type Certificate (MTC) and undertake holder obligations relating to continued airworthiness. This function ensures the continued airworthiness of the platform through its lifecycle. At a platform sustainment level supporting capability, the role of the holder is to ensure the platform remains consistent with its type certification basis and to facilitate design implementation (repairs, capability upgrades, safety rectification) with support from one or more aircraft design organisations. This is enabled through links back to the Original Equipment Manufacturer (OEM) who have the type design data. Other functions where the holder is critical is the provision of technical risk advice and assessment to the Operator where the inherent level of safety is compromised or an elevated level of risk may/does exist against the type.

(b) An organisation that has been assessed by DASA to undertake the MTC holder obligations is termed a Military Type Certificate Holder (MTCH) organisation. In the DASR construct, the nominated MTCH is nominally the System Program Office (SPO) that will manage the capability for the Capability Acquisition and Sustainment Group (CASG).

DASR requirements

(c) A MTCH organisation may hold an MTC when DASA is satisfied that the organisation complies with the requirements of DASR Part 21 Subpart B. The relevant DASRs describe the eligibility criteria, including requirements for a supporting arrangement with an appropriate design organisation (or multiple such organisations) with access to type design data.

Applying for the Authorisation

(d) DASA will not authorise a MTCH organisation where an MTC has either not been issued or is not expected to be issued.

(e) The primary application artefact is the Type Continued Airworthiness Exposition (TCAE), which describes, directly or by cross-reference, the organisation and the relevant procedures for the undertaking of holder obligations. Furthermore, where partner organisations and/or subcontractors are inherent to the MTCH arrangement, the TCAE will also describe how the MTCH organisation proposes to collaborate with their design organisations to execute the obligations. Appendix 1 describes DASA's expectations for a TCAE.

(f) **DASA Approval.** DASA's assessment of a MTCH organisation is based on a desktop assessment of the TCAE in concert with an on-site readiness review where the candidate organisation has been newly formed. DASA will then follow-up the initial approval through the regular oversight and enforcement functions.

(g) **Interaction and timing.** Prospective MTCH organisations should engage with DASA soon after the formal decision is made for them to take on that role. DASA will educate and guide the prospective MTCH through eligibility requirements, and will assign an internal point of contact.

Superseded

(h) **Existing MTCH organisations.** DASA has not yet finalised its approach to authorising existing MTCH organisations. This is scheduled to be completed in 2024.

Responsibilities of the authorisation holder

(i) The responsibilities and obligations of a MTCH holder are described in DASR 21.A.44. For a comprehensive description on these, refer to DASPMAN Volume 3 Section 7.

Ongoing DASA compliance assurance

(j) DASA will carry out periodic oversight and enforcement (O&E) of the MTCH organisation to gain confidence that the MTCH remains effective in undertaking their obligations. While compliance with DASR is fundamental, DASA will also explore the broader safety outcomes that the MTCH is achieving, for example how the organisation supports the CAMO/MAO or co-ordinates system safety working groups.

(k) DASA compliance assurance is normally achieved through on-site visits, remote assessments, and ongoing monitoring. Summarised:

1. **On-site visits.** On-site visits may be informal or formal. Informal visits are usually to provide regulatory support and guidance, and for engagement with an organisation, while formal visit are used to validate the management of previous DASA findings and to conduct oversight.

2. **Remote assessments.** Remote assessments may be suitable if a visit to the organisation is not feasible for reasons of security, health, budget and availability of personnel, or the area to be assessed doesn't justify a full onsite visit. Business Intelligence and the use of Strategic Data techniques are often used to assist in the targeting of areas to be reviewed.

3. **Ongoing monitoring.** DASA desk officers will identify other ways of gaining ongoing confidence in MTCH performance without necessarily engaging the MTCH directly. This may include, for example, monitoring the quality of MTCH applications (F31a, MPTFs), unsafe condition minimisation/rectification, and/or intelligence received from other DASA directorates and independent Review Boards. Intelligence on MTCH effectiveness in real-time will also be increasingly assessed as data mining methods mature.

(l) DASA's oversight processes for MTCH are contained in the DASA Instructions, DASA(I) SAPO 01-002, DASA Oversight (On-Site and Remote) and DASA(I) 01-009, DASR Findings. Both are available on the DASA intranet site.

Appendix:

(a) Type Continued Airworthiness Exposition Requirements

Superseded

(a) For a SPO to be assessed as a MTCH, DASA will rely extensively on a TCAE that provides confidence that the organisation has the necessary processes/systems and arrangements in place to undertake the holder obligations as well as some additional DASR specific requirements associated with MTC holder duties.

(b) The information in this appendix provides an overview of the requirements of the TCAE for a MTCH; further information can be found in Acceptable Means of Compliance (AMC) to DASR 21.A.14(c). Additionally, DASA is currently developing a system for evaluating TCAEs that will underpin the MTCH authorisation.

(c) The TCAE should describe the MTC holder's management system and arrangements for executing their continued airworthiness obligations for the platform type. The TCAE should broadly cover the following areas[1]:

1. **Introduction.** The TCAE shall provide some context covering platform, certification history/genesis, certification basis, description of relevant foreign frameworks/ operators and any other platform nuances that contextualises the ADF type.

2. **Organisational Structure.** The TCAE shall outline the organisational structure of the MTCH and the key support organisations (e.g. the MDO), how the MTCH interfaces with supporting organisations and eligibility requirements under DASR 21.A.14. This section should also describe the interfaces with foreign framework arrangements and how access to type design data is secured. This is further described in DASPMAN Volume 3 Section 7.

3. **Assigned Responsibilities.** The TCAE shall describe key responsibilities associated with the MTCH functioning including those of their design support network. Where partner organisations and/or subcontractors are utilised, the TCAE shall describe how the MTCH organisation proposes to collaborate with their design organisation(s).

4. **Procedures.** The TCAE shall document key procedures for a range of functions covering how the MTCH intends to carry out the holder obligations under DASR 21.A.44. This should include any processes that propose an Alternative Means of Compliance (AltMoC) to meeting the holder obligations or privileges the MTCH may be eligible for under DASR 21.A.263.

5. **Resources** The TCAE shall describe the available resources through a supporting design service that has access to type design data. This can be either local MDOA support and/or through to a foreign OEM or service.

6. **Compliance Matrix.** As a means to detail how the MTCH organisation meets the applicable DASR obligations, a compliance matrix may be presented clearly outlining the regulatory requirements of the MTCH organisation and how the organisation complies with or proposes to meet each requirement (e.g. by referring to the

DASR Ref	Reg Name	Requirement	MTCH Org addressment summary or means of compliance	Procedure/Form Ref	Document Version/date
21.A.2					
21.A.3A					
21.A.3B					
21.A.4					

Superseded

7. **Internal Governance.** The TCAE shall describe internal governance arrangements within the MTCH, and external arrangements between the MTCH and any support organisations.

8. **Hazard Management.** The TCAE shall describe the internal communication channels, regular safety forums, working groups and systems in place across the broader platform enterprise to manage and communicate ongoing hazards and risks.

(d) Finally, documents constituting TCAEs are not “approved” by DASA. Rather, they are MTC holder’s document(s), and are intended to be working documents that could be expanded to reflect arrangements for subsequent MTC changes, MSTC issues, and major repair design approvals.

Superseded

Annex K - Military Type Certificate

Purpose of the authorisation

(a) A Military Type Certificate (MTC) is issued by DASA to certify that an aircraft design is safe for the intended Defence operations. It is the outcome of a program demonstrating aircraft type design data complies with designated airworthiness requirements.

(b) An MTC is only applicable to Defence registered aircraft. All Defence registered aircraft must have an MTC. An MTC is required before an aircraft's first flight, however for some new aircraft where certification hasn't been completed yet, initial flight operations may commence under a Military Permit to Fly.

(c) The safety inherent in an aircraft design is demonstrated to the authority by the applicant showing evidence to the authority that the design meets certain airworthiness requirements. These airworthiness requirements are derived from recognised certification codes and Defence specific supplementation from the Defence Aviation Safety Design Requirements Manual. The set of applicable airworthiness requirements, termed the Type Certification Basis (TCB) is agreed between the applicant for the authorisation and the authority. The TCB must account for Defence's intended usage of the aircraft and thus the Statement of Operating Intent and Usage (SOIU) is required before a TCB can be agreed upon. Military Certification Review Items (MCRI) are used to document supplementation of the airworthiness requirements in the TCB to account for Defence's intended usage.

(d) The MTC certification only considers airworthiness (safety) requirements, and will not cover capability requirements, thus functionality of mission systems is not normally covered within the scope of an MTC (Other than to demonstrate it is safe to operate).

(e) The MTC is accompanied by a Type Certificate Data Sheet (TCDS) which provides a concise definition of the configuration of the aircraft and includes the condition, limitations, and restrictions necessary to safely operate the aircraft. The TCDS also includes reference to the approved operating instructions (The Aircraft Flight Manual) as well as approved maintenance instructions (Instructions for Continued/Continuing Airworthiness)

(f) In order to show the authority evidence of compliance to the TCB, the applicant for a MTC authorisation completes a certification programme. This programme is agreed with the Authority through the Certification Programme Plan (CPP). The CPP forms the pivotal agreement between the authority and the applicant and is a requirement for MTC approval. The CPP documents agreement to the TCB (and applicable airworthiness requirements), as well as the means by which the applicant will show compliance and how the authority will confirm compliance has been achieved.

Applying for the authorisation

(g) An application for a MTC can be achieved through notifying DASA in writing of the intent to apply, otherwise the submission of the first version of the Certification Programme Plan (CPP) will be taken as the initial application. A final application for a MTC is also to be provided in writing to DASA and shall address the requirements of DASR 21.A.21. An application is valid for five years (unless otherwise agreed) to ensure that the standards used to establish the TCB remain current.

Superseded

(h) **DASA approval.** DASA's approval of a new MTC is based on an assessment of the evidence of compliance against the requirements of the TCB. DASA may also establish a Level of Involvement in the certification program that requires DASA to assess the acceptability of compliance demonstration evidence prior to finalisation of the certification programme by the applicant.

(i) **Interaction and timing.** A schedule for achieving issuance of a MTC will be agreed with DASA via the CPP. The CPP is a living document with major certification milestones included in the schedule that are updated as necessary.

(j) DASPMAN Volume 3 Section 7 provides further information on the Type Certification process.

Holding the authorisation

(k) MTCs are normally issued to a Government organisation who is responsible for ensuring the obligations associated with the authorisation are carried out. Once a MTC is issued by DASA, compliance assurance is achieved through oversight and enforcement activities as they relate to the MTC holder obligations. Major Changes to Type Design, Major Repairs, Military Permits to Fly and Occurrence Reports can also provide regular opportunities for DASA to assess the performance of the MTCH.

Superseded

Annex L - Military Restricted Type Certificate*

Superseded

Annex M - Military Supplemental Type Certificate

Purpose of the authorisation

(a) A Military Supplemental Type Certificate (MSTC) is issued by DASA to approve a Major Change to Type Design where it is undesirable to have the change approved as a change to the existing Military Type Certificate (MTC). Under the DASRs there are four reasons an application for a MSTC may be made:

1. To manage a subfleet where one or more aircraft in a fleet are intended to be configured or operated in a significantly different manner to the remainder of the fleet.

2. To manage a change that involves a distinct change to the Type Certification Basis (TCB). Generally this will be the result of reliance on prior certification which has adopted a different Primary Certification Code (PCC) than the original MTC. While the change to the PCC may be able to be managed via Military Certification Review Items (MCRIs), it may reduce the complexity of ongoing management of the authorisations by covering the change under an MSTC.

3. To encompass large and complex changes. While the process for review and approval of a major change to the existing MTC or an MSTC is the same, use of an MSTC provides greater visibility, and as a result greater clarity, of the precise nature and scope of the change. MSTCs are often understood by Defence Operators as being a change of more significance, which warrants greater operational consideration.

4. To ease management from the perspective of the Military Type Certificate Holder (MTCH). This may be required to provide alignment between the DASR authorisations and authorisations being leveraged via recognition. It may be simpler for an MTCH to manage their obligations if the Defence authorisations are aligned with the OEM authorisations.

(b) A MSTC is usually issued to a Military Type Certificate Holder (MTCH) organisation, which for the ADF context is a government System Program Office (SPO). The MTCH has obligations to ensure they remain eligible to hold the MSTC. A MSTC is required before the aircraft is authorised for flight authorisations subsequent to incorporation of the modification covered by the change to type design.

Applying for the authorisation

(c) An application for a MSTC can be made through notifying DASA in writing of the intent to seek issue of a MSTC. This can be achieved by submitting a DASR Form 31, otherwise the submission of the first version of the Certification Programme Plan (CPP) will be taken as the initial application. An application is valid for five years (unless otherwise agreed) to ensure that the standards used to establish the TCB remain current.

(d) In addition to the information required by DASR 21.A.93(b), the application must specify whether the certification data has been prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(e) A final application for a MSTC should be made using a DASR Form 31a.

Superseded

(f) **DASA approval.** DASA's approval of a MSTC must be to an eligible applicant and based on an assessment of the demonstration of compliance against the requirements of the TCB[1]. Where the applicant has specified that it has provided certification data on the basis of an arrangement with the owner of the type-certification data, the MTC holder must have indicated it has no technical objection to the information submitted in the application, and must have agreed to collaborate with the MSTC holder to ensure discharge of all obligations for continued airworthiness of the changed product.

(g) **Interaction and timing.** A schedule for achieving issuance of a MSTC will be agreed with DASA via the CPP. The CPP is a living document with major certification milestones included in the schedule that are updated as necessary.

(h) DASPMAN Volume 3 Section 7 provides further information on the Major Change Certification process.

Holding the authorisation

(i) MSTCs are normally issued to a Government organisation who is responsible for ensuring the obligations associated with the authorisation are carried out. Once a MSTC is issued by DASA, compliance assurance is achieved through oversight and enforcement activities as they relate to the MSTC holder obligations. Major Changes to Type Design, Major Repairs, Military Permits to Fly and Occurrence Reports can also provide regular opportunities for DASA to assess the performance of the holder.

Superseded

Annex N - Military Permit To Fly

Purpose of the authorisation

(a) A Military Permit to Fly (MPTF) is a 'product authorisation' issued by DASA to aircraft that do not meet, or have not been shown to meet, the requirements of the Type-Certification Basis (TCB) and/or Military Air Operator Certificate (MAOC), but are nonetheless capable of safe flight under defined conditions and for specified purposes. An MPTF is always associated with a set of flight conditions that may be approved prior to, or in conjunction with, the MPTF application.

(b) Whilst DASR 21.A.701(a) provides a non-exhaustive list of examples illustrating situations when an MPTF should be used, the majority of those examples are EASA/EMAR-based, and focused more on development of aircraft design, production, delivery and initial training within an OEM organisation (operating under privilege), as opposed to in-service scenarios that are typical for Defence aviation. For the Defence context, and as outlined within GM to DASR GR.80(c), aircraft operation in the following circumstances potentially entails flight at an elevated level of risk (ELOR) that may require an MPTF:

1. Flight Test, for either for new aircraft development or modification to existing aircraft, or to support role expansion activities. This includes both the OEM-centric scenarios conducted under DASR 21J and/or 21G privileges, as well as development, compliance demonstration and/or flight test using Defence-registered, Military Air Operator (MAO)-controlled aircraft.

2. Flights where the design has not yet been certified and/or Military Certificate of Airworthiness (MCoA) is yet to be issued. This includes operation of new aircraft prior to awarding of a Military Type-Certificate (MTC) or operation with major design modifications fitted prior to award of a Military Supplemental Type-Certificate (MSTC).

3. Flights where the aircraft is not conforming to the Type Design. Predominately this includes ferry flights to suitable maintenance venues when damaged beyond approved limits (and un-repaired damage assessment is not an option), operation with overdue scheduled maintenance requirements not completed, and for operation outside of the bounds of Instructions for Continuing Airworthiness (ICA), including operational limits.

(c) Hence, an MPTF is a risk-based authorisation, within the suite of Defence aviation flexibility provisions provided under DASR GR.80. An MPTF facilitates military flexibility in support of a capability imperative, which is valid for a defined period of time, underpinned by a seven-step risk assessment with both technical and operational input. Importantly, MPTFs should not be continually extended/reissued, nor considered an enduring authorisation to address TCB non compliances. In these instances, alternate approaches should be pursued as discussed in DASPMAN Volume 3 Section 7.

DASR requirements

(d) An MPTF is issued by DASA (including Delegates of the Safety Authority (DoSAs), within the scope of their delegation) when satisfied that the application complies with the requirements of DASR Part 21 Subpart P Military Permit To Fly. Per DASR 21.A.707(b), the application must include the purpose of the flight (and in particular, the capability imperative), the ways in

Superseded

which the aircraft does not comply with its TCB or MAOC Operations Specification (OpSpec), and the approved flight conditions necessary for safe operation of the aircraft.

(e) Per DASR 21.A.708, the flight conditions include the configuration of the aircraft for which the MPTF is requested, any condition and/or restriction necessary for safe operation of the aircraft and the substantiation that the aircraft is capable of safe flight under the conditions and/or restrictions. Given that an MPTF constitutes operations at an ELOR, the determination of safe flight should eliminate safety hazards and risks So Far As is Reasonably Practicable (SFARP), or if it is not reasonably practicable to do so, minimise these hazards and risks SFARP. This is achieved by following the seven-step risk management process, as outlined in GM to DASR SMS.A.25(b)(2)(2.2). DASA AC 003/2018—Risk Management in the Defence Aviation Safety Program provides further aviation-specific guidance and describes the key elements of safety risk management that must be implemented by organisations to ensure compliance with the Work Health and Safety Act 2011.

Applying for the authorisation

(f) **MAOs**. In the Defence context, the applicant for an MPTF will typically be the MAO. MAOs are responsible for applying to DASA for the approval of flight conditions and the issue of an MPTF. They must fulfil the responsibilities of the applicant including the conduct of a risk assessment that fully integrates all technical and operational considerations. MAOs should engage relevant external organisations in the course of preparing the application in order to effectively conduct an integrated risk assessment. These organisations may include the product's MTC holder, design organisations, continuing airworthiness management organisation (CAMO) service providers, flight test organisations, and/or relevant maintenance organisations.

(g) The application process to obtain an MPTF is relatively straightforward, but does require clear identification of the participants and an understanding of the associated responsibilities. Whilst two separate applications are required, DASRs do not prohibit both being submitted concurrently. Relevant DASR Forms for the applicant are as follows:

1. **DASR Form 18b.** Application for, and approval of, flight conditions that enable the aircraft to operate safely. This form is raised and submitted by an applicant to DASA. DASA approves the application and returns the approved form to the applicant.
2. **DASR Form 21**. Application for issue of an MPTF. Raised by the applicant and submitted to DASA. This may reference pre-existing and approved flight conditions within DASR Form 18b.

(h) Specific detail of the information and supporting documentation required to complete DASR Form 18b - Application for Approval of Flight Conditions and DASR Form 21 - Application for a Military Permit to Fly is provided in the instruction sheets covering the forms. See also DASR 21.A.707, 21.A.708 and 21.A.709.

(i) **DASA approval.** Upon receipt of an application(s), DASA[1] will provide independent assurance that there is evidence that the MAO met their obligations and has eliminated or otherwise minimised all risks SFARP. Moreover, in order to approve the flight conditions and the associated MPTF, DASA must be satisfied that the aircraft is capable of safe flight under the specified conditions and/or restrictions (i.e. risk controls). DASA assurance will focus on credible and defensible risk management, which provides advice to Commanders if the capability imperative has been sufficiently described and would support a decision-to-

Superseded

proceed with the identified ELOR; however the decision-to-proceed always remains with the applicant. When assured, DASA utilises the following form:

1. **DASR Form 20a.** Issue of an MPTF in response to a DASR Form 21 application. Raised by DASA and issued to the applicant; that is, the organisation responsible for conducting the associated flight(s) and ensuring the flight conditions are adhered to.

(j) MPTFs will typically be issued to MAOs, who are then responsible for discharging the obligations of the holder of an MPTF.

(k) **Interaction and timing.** To support DASA approval of MPTFs (along with other priorities) as much notice as possible allows for prioritisation, adjustment if necessary and independent assurance of a credible and defensible position. That said, emerging and exigent circumstances may prevail in support of a capability imperative, which may necessitate short-notice MPTF applications to be submitted to DASA for approval. In these circumstances, it is still important to provide DASA with as much notice as possible, and in particular, that the application is completed to a suitable standard (to avoid the need for rework).

(l) Further detail for flight conditions and MPTFs is provided in Chapter 7.5 and DASA AC 003/2018 - Risk Management in the Defence Aviation Safety Program.

Responsibilities of the authorisation holder

(m) Responsibilities of an MPTF holder are presented at DASR 21.A.727. Amongst other things, the MPTF holder is required to ensure that all the conditions and/or restrictions associated with the MPTF are continuously satisfied and maintained.

Ongoing DASA compliance assurance

(n) Once an MPTF is issued by DASA, compliance assurance is achieved through oversight activities as they relate to the holder obligations.

(o) DASA's oversight processes are contained in the DASA Instructions: DASA(I) SAPO 01-002 - DASA Oversight (On-Site and Remote), DASA(I) SAPO 01-009 - DASR Findings and DASA(I) IINV 03-001 - Assurance of Reportable Occurrences. These are available on the DASA intranet site. See also Chapter 5.4 for further information.

Superseded

Annex O - Military Certificates of Airworthiness

Purpose of the Authorisation

(a) An MCoA is an aircraft operating authorisation issued against an aircraft tail that has the purpose to validate that the aircraft conforms to the type design as specified on the Military Type Certificate (MTC). It serves as the final assurance artefact that the aircraft is in a state of airworthiness per the inherent level of safety afforded by the type design and the underlying MTC basis. It is enabled by an organisation or operator, who has registered the aircraft on the Australian Defence register, and has ensured conformity through meeting various requirements.

DASR requirements

(b) An Operator organisation may hold an MCoA when DASA are satisfied that the requirements of DASR Part 21 Subpart H have been met. To enable eligibility, the relevant DASRs describe the criteria that must be verified to enable issue.

Applying for the Authorisation

(c) MCoAs in the Australian Defence context can only be issued by the DASA or a Delegate of the Safety Authority (DoSA). The release document is via a DASR Form 25 - Military Certificate of Airworthiness and applies only to aircraft that are registered on the Defence register in Australia.

(d) An application for an MCoA shall be made by an eligible organisation via DASR Form 25a - Application for Certificate Of Airworthiness. In the Australian Defence context, the MAO and/ or their CAMO are eligible to be applicants for an MCoA as holders of a MAOC. Aircraft that are Non-Defence Registered (NDR), do not have a corresponding DASA Military Type Certificate and therefore cannot be issued a MCoA.

(e) An MCoA application shall be made in a form and manner established by the Authority (DASA in Australia) of the State of Registry[1], per DASR.21.A.174(a). When considering an MCoA application, the Authority will consider all documentation in support of the state of the aircraft at application. This has particular significance for used aircraft, where records of usage, maintenance, modifications and repairs may not be to the standard normally required by Defence.

(f) The MCoA application presents documentation that the aircraft conforms to the type design approved under the relevant MTC. The required documentation, artefacts, reports and historical evidence (if applicable) to support the application shall be in accordance with DASR.21.A.174(b). Any deviations from the certified type design must be approved by an appropriately authorised design organisation.

(g) For used aircraft, DASA will require a Military Airworthiness Review Certificate (MARC) conducted in accordance with DASR Part M regulations before issuing an MCoA. The MARC review is a physical survey of the aircraft and supports issue of the MCoA to satisfy DASA that the submitted documentation is reflective of the physical aircraft. The MARC process is further discussed as part of paragraphs 17 and 18 of this section.

Superseded

Issue of an MCoA

(h) An MCoA can only be approved and issued if any modifications, repairs and/or production deviations implemented on the aircraft are approved under DASR 21, or under a recognised national civil or military airworthiness framework.

(i) For new aircraft being delivered to Defence originating from a civil derivative, the acquisition project should seek a civil export CoA, via the prime aircraft OEM, where there is a civil Type Certificate (TC) in place via the relevant Civil Aviation Authority (CAA). This export CoA can form a foundation for the issue of an Australian MCoA.

(j) For instances where Defence is leasing/acquiring an aircraft that has been in civilian use, the requirement for an export CoA should still be sought from the applicable CAAs. If the lease is of a continuous nature that will not warrant transfer to the Defence register, then Defence will need to gain sufficient evidence to confirm that the extant civil CoA remains valid and that the aircraft has remained in a controlled environment. Defence will accept only a Standard CoA under DASR 21.A.172, DASR 21.A.173 and DASR 21.A.174. DASA-DIA staff should be consulted for specific advice.

(k) Where national regulations allow ownership (either nationally or to another State/Nation) of a Defence registered aircraft to be changed, the Authority should be engaged as early as possible for specific advice. Such ownership changes may be allowed in certain circumstances.

Responsibilities of the Authorisation Holder

(l) The MCoA Holder (typically the MAO) is responsible for the continuing validity of an MCoA. An MCoA may be amended or modified only by the Authority (DASA in Australia) of the State of registry1. An MCoA may be issued for an unlimited duration, and remains valid subject to the conditions described in DASR.21.A.181.

(m) Additionally, the ongoing validity of an MCoA requires that damage be assessed, and all applicable modifications and repairs carried out, using as appropriate the data requirements of DASR.M.A.304.

(n) The validity of an MCoA is periodically renewed via the MARC process, as per DASR.M.A.901. This involves an airworthiness review of the aircraft and its continuing airworthiness records. The initial airworthiness review is due within 12 months of the issue date of the aircraft's initial MCoA.

(o) The MAO is accountable for the continuing airworthiness of an aircraft and shall ensure that no flight takes place unless the MCoA and the MARC remain valid, as per DASR.M.A.201. If an MCoA becomes invalid, the MAO must return the aircraft to an airworthy condition before operating the aircraft or seek an alternate DASR authorisation. A new MCoA is only required if the aircraft is being returned to the Defence register after removal, or the certificate is revoked by the Authority (DASA in Australia) of the State of registry[1].

Annex P - Military Restricted Certificate of Airworthiness*

Superseded

Annex Q - Australian Military Technical Standard Order

Purpose of the authorisation

(a) An Australian Military Technical Standard Order (AUSMTSO) authorisation may be awarded to organisations for the production and design of an article[1] to a Technical Standard Order (TSO). A Technical Standard Order (TSO) allows the streamlining of integration of parts and appliances into the type design of a product. The TSO is an airworthiness specification detailing the minimum safety performance standard for a specified article.

(b) The AUSMTSO authorisation represents one way (and not the only way) to have parts and appliances approved. This is an optional step which ensures that a part or appliance complies with a minimum performance standard. Receiving an AUSMTSO authorisation is not an approval to install and use the article in the aircraft. Rather, it means that the article meets the specific TSO and the holder is authorised to manufacture it.

(c) AUSMTSO authorisations are often awarded to organisations that design and manufacture common items that are fitted onto multiple aircraft types, for example: avionics line replaceable units, wheels, tyres, batteries, seat belts, lights, etc. Rather than those items having to be separately certified as part of each aircraft type design they are to be used on, the AUSMTSO article can be incorporated into the type design provided it meets the relevant type certification basis elements of the product. This then allows different manufacturers to apply for an authorisation to design and produce those items, provided they meet the minimum safety and performance standards as set out in the TSO.

(d) In general, DASA will recognise items certified to either European Aviation Safety Agency (EASA) or Federal Aviation Administration (FAA) TSOs for integration into Defence products. DASA may also promulgate its own AUSMTSO performance standards and issue associated authorisations.

DASR requirement

(e) DASR 21 Subpart O, AUSMTSO – establishes the requirements for authorisation, application, obligations and privileges that apply to organisations seeking AUSMTSO authorisations. The AUSMTSO authorisation holder must show that the design of the article meets the standards in the AUSMTSO, and that the production of the article is assured under the Defence Aviation Safety Program (DASP).

(f) For production of the article, an applicant for AUSMTSO authorisation must hold:

1. a Military Production Organisation Approval (MPOA) under DASR 21 Subpart G; or
2. a Letter of agreement under DASR 21 Subpart F.

(g) For design of the article, an applicant for AUSMTSO authorisation must:

1. use procedures for the specific design practices and activities necessary to comply with DASR 21 Subpart O, or for Auxiliary Power Units (APUs) show it holds a Military Design Organisation Approval (MDOA), under DASR 21 Subpart J;
2. show compliance of the article with the TSO;

Superseded

3. declare compliance via Declaration of Design and Performance (DPP) - this is the central summary document containing the definition and all relevant references of the article. Its informational content could be compared to the one of a Type Certificate Data Sheet for products. In the DDP the applicant is required to state that the article is designed, tested and manufactured in compliance with the applicable sections of DASR 21; and

4. carry out the continued airworthiness obligations for the item (DASR 21.A.609).

Applying for the authorisation

(h) Application for an AUSMTSO authorisation can be made to DASA using DASR Form 34 - Application for Australian Military Technical Standard Order (AUSMTSO) Authorisation by the Accountable Manager of the organisation with appropriate evidence to support the application.

(i) The applicant must declare compliance of the item through a declaration of design and performance. The Declaration of Design and Performance (DDP) is required with the application and is to contain information per DASR 21.A.608.

(j) **DASA approval.** DASA's AUSMTSO authorisation is based on the applicant demonstrating its capability to produce and design the TSO article.

(k) DASA will issue an AUSMTSO authorisation when it is satisfied that the applicant has:

1. demonstrated its capability in accordance with DASR 21.A.602B (this may also include assessing the organisation for award of a Military Production Organisation Approval (DASR 21 Subpart G), Military Design Organisation Approval (DASR 21 Subpart J) or issue of a letter of agreement (DASR 21 Subpart F));

2. demonstrated that the article complies with TSO, and submitted the corresponding statement of compliance; and

3. stated that it is prepared to comply with ongoing obligations (DASR 21.A.609).

(l) DASA may also approve requests for the AUSMTSO authorisation holder to deviate from any performance requirements of the technical standards or airworthiness specifications in the AUSMTSO as per DASR 21.A.610. Any deviation from standards must be compensated by design features providing an equivalent level of safety.

Responsibilities of the authorisation holder

(m) The holder of an AUSMTSO authorisation must undertake continued airworthiness obligations listed under DASR 21.A.609. This includes keeping appropriate records; producing and maintaining manuals, and making these available to users and maintainers of the article; and having a system for collecting failures, malfunctions and defects.

(n) AUSMTSO authorisation holders may make minor design changes without further authorisation by DASA, and shall forward any revised data to DASA for compliance per DASR 21.A.611.

Superseded

(o) DASA will conduct an oversight program of all AUSMSTO authorisation holders to assure the continuing validity of their authorisation.

(p) AUSMTSO authorisation holders are responsible for the continued airworthiness of the article, in a similar manner that Military Type Certificate (MTC) holders are for a product.

Superseded

Annex R - Approval of Repair Design

Purpose of the authorisation

(a) Throughout the service life of a military aviation product (aircraft, engine or propeller), degradation (damage) of the systems/structures supporting safe flight and certification may be compromised through direct (accidental impact and battle damage) overload, normal wear and tear, or insidious (fatigue, corrosion, moisture ingress, dis-bond, ultraviolet light etc.) environmental sources. Repairs are those actions developed and implemented to restore damaged products to the minimum airworthy state dictated by their respective Type Certification Basis (or equivalent) established at Initial Certification (or as supplemented/ tailored over time).

(b) The approval process ensures that the product the repair applies to will be returned to the risk inherent in the Type Certification Basis (or equivalent) as a result of the repair's incorporation. The scenarios under which repair data can be used and under which repairs are designed, approved and embodied can vary significantly depending on the organisations fulfilling the respective roles in the repair process. However, in terms of repair design approval, the fundamental principles applied to safety assurance considerations are the same regardless of the organisation performing them.

DASR requirements

(c) Data to be used in repairs may come through a repair design approval process where DASA is the certifying Authority (either approved by DASA or by an appropriately privileged organisation), or through a process where the recognition framework is used. The overarching DASRs governing the design development, approval and associated obligations as they relate to repairs to Australian Military Aviation Product are:

1. DASR 21 Subpart M: This Subpart establishes the procedure for the approval and classification of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals.

2. DASR 21 Subpart J: A Military Design Organisation (MDO) complies with the requirements ofDASR 21 Subpart J. The DASR presents eligibility criteria, requirements for a design assurance system, terms of approval, candidate privileges (approved at DASA's discretion), and obligations. It also specifically requires the organisation to establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

3. DASR M Subpart C: This Subpart at Section M.A.304 provides requirements for data to be used in repairs. DASR M.A.304(a) and (b) allow data to be used that has been approved by DASA, and by a Design Organisation approved under DASR 21 Subpart J. In each of these cases, DASA is the certifying Authority and the requirements of DASR 21 Subpart M are applicable.

Superseded

(d) **Approved by DASA:** Notification of an intended major[1] repair requiring DASA approval can be made using a DASR Form 31– Notification of Major Change/Major Repair. Submission of a DASR Form 31 initiates dialogue that enables DASA to guide the applicant through the major repair approval process

(e) A submission for a major repair must include a Certification Programme (CP) containing among other elements;

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made
2. an identification of all areas of the type design that are changed/affected by the repair, and
3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design with the Type Certification Basis (or equivalent)

(f) The requirement for a detailed CP is determined in consultation with DASA. In the case of major repairs, if long and complex compliance demonstration activities are deemed to not be required, the CP can be submitted in simplified form as part of the application. Application for approval of a major repair design should be made using a DASR Form 31b. (Refer to DASR 21.A.432C for details)

(g) DASA may grant the applicant relief from some or all showings of compliance if the repair design has been previously approved by a recognised CAA/MAA and is suitable for the Defence Configuration, Role and Environment (CRE) - Refer to GM 21.A.435(b) for details.

(h) **Approved by a privileged organisation:** An organisation awarded a privilege by DASA to approve repairs will execute those privileges within the constraints of the scope and limitations defined by DASA in the MDO Terms of Approval. The relevant procedures are defined in the MDO's Design Organisation Handbook (DOH). (Refer to DASR 21.A.263 for details).

Responsibilities of the authorisation holder

(i) Holder obligations apply to applications from (or on behalf of) Commonwealth organisations awarded the authorisation, or DASR 21J MDOA organisations making approvals under privilege. Responsibilities of a holder are presented at DASR 21.A.451(a) and (b) for a major repair and minor repair respectively. Amongst other things, the holder is required to:

1. establish a system for reporting failures, malfunctions and defects of major repairs
2. propose to DASA corrective actions, where those failures, malfunctions and defects of major repairs constitute an Unsafe Condition being subject to an Airworthiness Directive (AD)
3. ensure collaboration between the design organisation and the production organisation as necessary

Superseded

4. provide at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair (or any subsequent update to the repair), to any operator of the affected product incorporating the repair.

5. retain all relevant repair design information at the disposal of DASA and in order to provide the information necessary to ensure the continued airworthiness of the repaired product.

Ongoing DASA compliance assurance

(j) Once a repair design is approved by DASA or an appropriately privileged organisation, DASA compliance assurance is achieved through Oversight and Enforcement activities as they relate to holder obligations and the ongoing safety of individual repair designs. These two aspects effectively are encompassed by:

1. periodic compliance assurance of MDOA organisations and MTCH organisations, either through on site visits or remote assessments to gain confidence in the effectiveness of the systems in place to meet the requirements of DASR 21.A.451

2. DASA safety assurance of Reported Occurrences as they pertain to approved repair designs

(k) DASA's oversight processes are contained in the DASA Instructions, DASA(I) SAPO 01-002, DASA Oversight (On-Site and Remote),DASA(I) 01-009, DASR Findings and DASA(I) IINV 03-001 (Assurance of Reportable Occurrences) Available on the DASA intranet site.

Superseded

Annex S - Airworthiness Directive*

Superseded

Annex T - Aircraft Maintenance Programme

Purpose of the authorisation

(a) An Aircraft Maintenance Programme (AMP) is an authorisation issued against a single tail or fleet of aircraft. The document describes or incorporates by reference the specific scheduled maintenance tasks and their frequency of completion, the associated maintenance procedures and related maintenance standards and practices necessary to preserve the airworthiness of those aircraft to which it applies.

DASR requirements

(b) An Operator organisation is accountable for the continuing airworthiness of the aircraft they operate and shall ensure that no flight take place unless the maintenance of the aircraft is performed in accordance with the applicable AMP. DASR M.A.302 and Appendix I to AMC M.A.302 describe the criteria and content of an AMP.

Applying for the authorisation

(c) The AMP and any subsequent amendments shall be approved by DASA. Notwithstanding, a CAMO may perform changes to the AMP, if granted the privilege by DASA, under an indirect approval[1] procedure established by the CAMO as part of their CAME submission.

(d) The CAMO is responsible for the development and management of the AMP for the aircraft managed including any applicable Reliability Programme (RP) and shall present the AMP and its amendments to DASA for approval, unless covered by indirect approval procedure.

(e) An application for an AMP shall be made to meet the minimum standards specified in DASR M.A.302 by an eligible organisation via a DASR Form 42 - Application for Initial Approval and Approval of Variation(s) to Approved Aircraft Maintenance Programme. In the Australian Defence context, the CAMO is eligible to be the applicant for an AMP on behalf of the MAO.

(f) When reviewing an AMP application, DASA will consider all documentation in support of the programme and associated document dependencies, including applicable RP.

DASA approval

(g) Upon receipt of a request for initial approval or variation to an existing platform AMP, DASA will initiate the task and engage with CASG RAMP team[2] to secure SME support throughout the process. For changes and updates to the AMP that are within the indirect approval privilege held by the CAMO, DASA assessment will not be necessary. However, the updated AMP shall be submitted to DASA to assure that changes were executed within indirect approval privilege and update DASA AMP records.

(h) A review of the AMP should be carried out utilising the AMP and RP Compliance Matrix designed to cover the requirements of DASR M.A.302 and Appendix I to AMC M.A.302. The assessment, carried out by DASA and RAMP teams, uses the Present, Suitable, Operating, and Effective (PSOE) methodology to identify that elements of the AMP are present and suitable

Superseded

to the scope, complexity and types of operations defined by the applicant. Based on the nature and quantity of any identified issues, a decision shall be made as to whether Approval of the AMP is recommended.

(i) Where issues with the AMP are identified, DASA will consider the issues and decide if raising findings are warranted using O&E principles. This process is intended to establish agreement or otherwise with the issues that have been identified.

(j) AMP approval is provided to the CAMO.

Interactions and timings

(k) For AMP submissions, DASA and RAMP staff will conduct a review of the document for completeness. If insufficient data is provided, DASA will contact the CAMO to discuss additional requirements.

(l) In the case where the AMP application may affect aircraft structural integrity or propulsion system integrity, specialist engineering input within DASA may be required.

(m) For AMP applications it is advisable that applicants engage with DASA as early as possible as the review process and approval has a turnaround time of approximately 4 months.

Responsibilities of the authorisation holder

(n) The CAMO is responsible for the continuing validity of the AMP and associated RP. The AMP shall be subject to periodic reviews (at least annually) and amended accordingly when necessary. These reviews shall ensure that the AMP continues to be valid in light of the operating experience, directions from DASA, new and/or modified Instructions for Continuing Airworthiness (ICA) promulgated by the MTCH and any other organisation that publishes such data in accordance with DASR 21.

(o) When granted indirect approval privilege under DASR M.A.711(d) the CAMO shall appoint a maintenance program approval employee (MPAE) to approve aircraft maintenance programs, or variations to an approved maintenance program.

(p) The MPAE should be experienced in the development, management of a maintenance program for aircraft that are the same, or of a similar type, as the aircraft for which the employee is authorised and shall meet the minimum QT&E requirements of DASR AMC M.A.706(f).

(q) MPAE shall be authorised by the CAMO, in writing, to approve a maintenance program and/or variations to a maintenance program on behalf of the CAMO in accordance with the procedures detailed in the CAME.

Ongoing DASA compliance assurance

(r) Once an AMP is approved by DASA, compliance assurance will be achieved through CAMO oversight and enforcement activities. Consistent with PSOE methodology, DASA will assess that elements of the AMP are operating and effective to the scope, complexity and types of operations defined by CAMO.

Superseded

(s) Through oversight and enforcement DASA can ascertain as whether the CAMO is meeting their obligations of conducting regular reviews of the AMP to ensure validity and use of indirect approval privilege.

(t) DASA's oversight processes related to CAMO approvals are contained in the DASA Instructions:

1. DASA(I) SAPO 01-002 - DASA Oversight (On-Site and Remote)

2. DASA(I) SAPO 01-009 - DASR Findings. These are available on the DASA intranet site

Annex U - Uncrewed Aircraft System Operating Permit

Purpose of the authorisation

(a) An Uncrewed Aircraft System Operating Permit (UASOP) enables the relevant Command/ Group Head within Defence to authorise the operation of an Uncrewed Aircraft System (UAS) under the DASR UAS Specific Type A category.

(b) The UASOP is a permit issued by DASA approving UAS operations that exceed the specified limitations and requirements of Open and Specific Type B category and cannot meet the requirements of certified category. The UASOP considers the full spectrum of risks associated with those operations and lists out the limitations and requirements to be met. DASA issues the permit to the relevant Command/Group Head on completion of a compliance assessment against relevant DASRs.

DASR requirements

(c) DASR UAS presents eligibility criteria for Defence UAS operating under the Specific Type A category. In order to support the full spectrum of Specific Type A UAS operations, the DASR UAS regulations include scalable hazard and administrative controls that DASA will require on a case-by-case basis, including:

1. the type of registration (whether on a local or Defence register)
2. whether a Statement of Operating Intent and Usage (SOIU) is required
3. initial and continuing airworthiness requirements
4. whether the operation must be conducted by a Military Air Operator (MAO)
5. the level of compliance required against the Standard Rules of the Air
6. Remote Pilot qualifications
7. UAS operating requirements and limitations.

(d) DASA will issue a UASOP when satisfied that the applicant complies with DASR UAS requirements outlined in the Uncrewed Aircraft System Operator Compliance Statement (UOCS), DASR Form 152. For higher-risk UAS operations, the DASR UAS requirements are likely to be closer to that of crewed aircraft, whereas for lower-risk UAS operations (still within the Specific Type A category), requirements will be commensurately lower. The applicant may propose compliance requirements for DASA approval. However, DASA will ultimately determine the final set of requirements as outlined in paragraph 3.

(e) DASA will issue the UASOP via DASR Form 153 – Uncrewed Aircraft System Operating Permit[1]. The UASOP will include:

1. the UAS type(s) that DASA authorised to operate and the registration requirements
2. the validity period of the UASOP
3. the approved operating areas and airspace

Superseded

4. any requirements or limitations placed on the UAS

5. any management and support requirements, including any requirements to comply with DASR ARO.100, DASR ORO.10 and AMC UAS.30B (4)

6. detailed Initial and Continuing Airworthiness requirements, where necessary

7. UASOP management requirements, such as managing changes to operating scope or the UAS Configuration, Role and Environment (CRE), among other elements.

Applying for the approval

(f) An application for a UASOP is a multi-step process:

1. Firstly, the applicant notifies DASA of an upcoming UASOP application via a DASR Form 151.

2. Secondly, DASA develops a tailored list of DASR requirements that the applicant must comply with, documented in a DASR Form 152.

3. Thirdly, the applicant completes their bespoke DASR Form 152 with evidence and references.

4. Finally, DASA develops and approves a bespoke UASOP, via a DASR Form 153—and distributes this Form 153 to the applicant.

(g) Submission of DASR Form 151 – Notification of Upcoming UASOP Submission is the initial step. This provides DASA sufficient information to determine if a UASOP is the most appropriate mechanism for the particular UAS operation and to begin the process of developing a bespoke set of DASR requirements for the applicant. Importantly, DASR Form 151 provides a means for the applicant to engage DASA and begin planning activities required to achieve the requirements of DASR UAS.

(h) As per GM2 UAS.30.B, normal practice would be for the UASOP applicant to propose a suitable extent of compliance for DASA approval. The applicant may choose to propose tailoring to a DASR Form 152 – UAS Operator Compliance Statement (UOCS), for DASA to assess. Applicants should first await DASA confirmation from their submission of DASR Form 151 to ensure they address areas of concern prior to the development of a Form 152. The preferred approach is for DASA to tailor the DASR Form 152 (in consultation with the applicant).

(i) Based on the information provided to DASA in the DASR Form 151, DASA may direct the following:

1. Defence Registration (DASR Part UAS.10.D) – DASA will determine whether Defence registration is required after considering internal policy decision criteria. These criteria may include[2]:

   i. the ownership of the platform (such as whether the UAS will be owned by or operated on behalf of Defence)

   ii. the operational nature of the UAS (such as whether the UAS is considered expendable, what equipment is on-board, whether the UAS will be operated overseas)

Superseded

iii. the platform's ongoing maintenance and continuing airworthiness program

2. Adding a UAS to the Defence Register invokes the requirement for an SOIU (IAW DASR ARO.50).

3. Complying with MAO requirements IAW DASR ARO.100 (DASR UAS.30.B.4. refers). As part of the DASR Form 152 development, DASA will direct the compliance requirements. Before operation of a UAS under Specific Type A, the MAO applicant must submit a Form 139a to update their Operations Specifications (OpSpec).

DASA approval

(j) DASA will base initial approval or update of a UASOP on a program that may range from a desktop assessment of the submitted compliance demonstration evidence (detailed within the DASR Form 151 and contained within DASR Form 152), to iterative on-site assessments, oversight and other activities. DASA may conduct on-site visits prior to the approval of a UASOP as part of its education and assurance efforts.

(k) Where an extant UASOP requires expansion or amendment (e.g. the removal of imposed limitations due to the applicant providing new compliance evidence), applicants must submit a DASR Form 154 – UOCS Request for Variation. DASA will assess the request, applying rigour proportionate to the change requested.

UASOP withdrawal

(l) A UASOP will be withdrawn when either:

1. the applicant advises DASA that the operation of the UAS under the Specific Type A category is no longer applicable

2. DASA determines that the MAO Accountable Manager (AM), or Command/Group Head authorising the operation of a UAS can no longer ensure the operation in accordance with the conditions of the UASOP.

(m) The MAO AM or Command/Group Head should address a minute to DG-DASA, including evidence to demonstrate that operators have been instructed to cease operations under the UASOP. DASA will provide a minute back to the relevant AM to confirm the UASOP has been withdrawn.

(n) The MAO AM or Command/Group Head should advise whether the withdrawal of the UASOP impacts on any Defence registration requirements. The MAO AM or Command/Group must apply to DASA to remove a UAS from the Defence Register. Guidance on applying to remove a UAS from the Defence register is available at DASPMAN Volume 3 Chapter 6.1.1.

Interaction and timing

(o) A Defence organisation bringing on a new UAS capability should engage DASA early in the acquisition life cycle to allow DASA to provide support and guidance to ensure acquisition and planning decisions are compatible with DASRs. While DASR UAS does not require UAS to operate within a fixed category from acquisition, the decisions made during acquisition may affect the operational flexibility afforded to the capability.

Superseded

(p) Prospective UAS operators are encouraged to engage DASA before making formal decisions on a new UAS capability to ensure giving consideration to likely future DASR requirements. DASA may educate the UAS organisation on the UASOP requirements and can appoint an internal contact.

(q) The UASOP process, from initial contact to issue of the permit, can vary from six months to multiple years depending on the complexity of the operation. Early engagement with DASA generally correlates with a quicker UASOP turnaround.

Responsibilities of the authorisation holder

(r) Once approved, the UASOP details the responsibilities of a UASOP holder. The UASOP is only the permit providing Command/Group Head the ability to authorise operation of a Specific Type A UAS. Among other things, throughout the UASOP validity period, the UASOP holder is required to:

1. ensure key staff are appointed and competent
2. manage OIP changes, and where required, request a variation to the UASOP
3. ensure operation of the UAS is within the requirements and limitations as specified in the UASOP.

Ongoing DASA compliance assurance

(s) On approval of a UASOP, DASA may conduct ongoing compliance assurance activities to gain confidence that the UAS organisation is meeting the requirements of DASR UAS and the requirements and limitations included on the UASOP.

(t) DASA UAS compliance assurance is nominally achieved through the following:

1. **Oversight and on-site assurance.** DASA may conduct on-site assurance activities for UAS organisations. Formal visits are usually part of oversight activities and may investigate compliance with DASRs, UASOP requirements and limitations, and internal OIP. DASA may also use oversight activities to validate the management of any prior findings and to conduct other oversight activities. DASA will tailor activities using a risk-based approach. UAS organisations may also request a DASA visit for educational purposes. DASA may provide incidental regulatory advice and education.
2. **Initial approvals (including desktop assessments).** DASA predominantly conducts desktop assessments of UAS organisations in considering UASOP approvals. The DASA UAS team conducting these assessments are usually from DAVNOPS, DIA and DCA, although DAVENG may provide specialist engineering assurance as required. DASA may also conduct desktop assessments in preparation for more complex on-site audits.

Appendix:

(a) Summary of UASOP Form Suite

Superseded

(a) UASOP are the approval mechanism for a variety of operations, from small platforms that exceed published limitations and requirements in DASR UAS.35 standard scenarios and Open category, to much larger experimental platforms or platforms that are unable to meet the criteria for Certified category.

(b) Use the following DASA forms to obtain an approved UASOP.

Form 151 – Notification of upcoming UASOP submission

(c) **Purpose.** The DASR Form 151 presents DASA with advice that an organisation seeks to operate a UAS under a UASOP. The form extracts from the applicant the UAS operating intent, to validate that a UASOP is the most appropriate approval mechanism. The form also highlights elements the applicant must consider to begin the development around the risk controls, operating requirements and limitations that will be required for the operation, assuring that they are developed commensurate for the operation. The information presented in the DASR Form 151 by the applicant enables DASA to provide direction back to the applicant on the extent of compliance expected with DASR UAS.30 (b) requirements, or at least initial expectations and/or guidance.

(d) **Content.** The DASR Form 151 contains the following:

1. rationale by the applicant for the UASOP
2. a summary of the UAS capability
3. an outline of the UAS operating environment and intent
4. a description of the operating organisation
5. timelines and other pertinent information.

(e) **DASA assessment.** DASA will confirm receipt of the DASR Form 151 to the applicant via a response email and will begin the tailoring of a DASR Form 152 based on the submission details. The email will provide DASA points of contact as well as a timeframe to expect a formal response from DASA.

(f) **Approving authority.** The capability Sponsor or Group/Command Capability Manager must sign the DASR Form 151.

Form 152 – UAS Specific Type A Operations Compliance Statement

(g) **Purpose.** The DASR Form 152 is the tailorable UAS compliance assurance framework. This document assures DASA that the UAS organisation has the commensurate requirements in place to support the UAS operation under a UASOP.

(h) **Content.** The DASR Form 152 comprises four sections:

1. **Scope of operations.** This section will offer guidance back to the applicant around what sections are DASA directed, eg registration requirements.
2. **Risk controls and assessments.** This section provides DASA the opportunity to review the applicant's risk management.

Superseded

3. **Regulatory compliance.** This section clarifies which DASR requirements, outside of DASR UAS, are applicable to the operation.

4. **Description of the organisation.** This section focuses on requirements for non-MAO and MAO entities.

(i) **DASA Assessment.** An applicant may present a draft Form 152 to DASA for acceptance (generally submitted by a mature aviation organisation). Alternatively, DASA will develop the DASR Form 152 (in consultation with the applicant organisation).

(j) **Approving authority.** The DASR Form 152 is a document that will have multiple reviews in its draft state. The capability Sponsor or Group/Command Capability Manager signs the final DASR Form 152 when it is ready. The signatory is normally the same appointment that signed off on the DASR Form 151.

Form 153 – Uncrewed Aircraft System Operating Permit

(k) **Purpose.** DASA develops the UASOP based on an assessment of the applicant's compliance demonstration evidence and applicable risk controls.

(l) **Content.** The UASOP holds the following information:

1. the UAS model(s) authorised to operate and registration requirements
2. the UASOP validity period
3. the approved operating areas and airspace
4. any requirements and limitations placed on the UAS
5. any management and support requirements, including any requirements to comply with DASR ARO.100, DASR ORO.10 and AMC UAS.30B(4)
6. detailed Initial and Continuing Airworthiness requirements, if applicable
7. UASOP management requirements, such as managing changes to operating scope or the UAS Configuration, Role and Environment (CRE), among other elements.

Form 154 - Request for Variation

(m) **Purpose.** Applicants must submit a DASR Form 154 to DASA to seek changes to an extant UASOP.

(n) **Content.** The DASR Form 154 comprises the following sections:

1. rationale for change (including reference to the extant UOCS and UASOP)
2. specific line item changes
3. applicant's declaration.

(o) **DASA assessment.** DASA will tailor the assurance assessment process to the extent of the proposed change, and the risk of the proposed operation. This may involve conduct of a number of assurance activities (audits, reviews, desktop assessments) or be as simple as a desktop assessment of the final submission. A successful UASOP update relies on the submission of suitable evidence.

Superseded

(p) **Approving position.** The capability Sponsor or Group/Command Capability Manager must sign the Form 154 prior to submitting to DASA. The signatory is normally the same appointment that signed off on the DASR Form 151 and DASR Form 152.

Superseded

Annex V - Aerodrome Certificate

Purpose of the authorisation

(a) To support safe aircraft operations at Defence aerodromes, DASA released DASR 139 - Aerodromes regulations. These regulations require all Defence aerodromes to be classified as Certified or Non Certified. For those aerodromes requiring certification, DASR 139.80 outlines the activities an Applicant (the Aerodrome Operator – AD OPR) needs to undertake to attain an Aerodrome Certificate (ADC).

(b) Whilst the ADC provides approval for the Aerodrome to be classified as Certified, the certification process provides assurance to the AD OPR that they have indeed provided an aerodrome that comprehensively supports safe aircraft operations. Independent assurance and certification by DASA will provide Defence stakeholders with additional confidence.

DASR requirements

(c) DASR 139.80 in particular focuses on aerodrome design and construction, and supports responsible parties by:

1. identifying credible standards for the design and construction of Aerodromes, and applying defensible bounds to how far these standards can be tailored
2. presenting a structured approach to demonstrating that the final aerodrome design and construction meets those standards
3. requiring independent assurance (by DASA) of the above two outcomes.

(d) To achieve aerodrome certification and be awarded an ADC, an Applicant must undertake the following five primary activities:

1. define an Authority-agreed Certification Basis (CB) for the aerodrome.
2. demonstrate that the aerodrome design and construction complies with the agreed CB.
3. declare that the aerodrome design and construction complies with the agreed CB.
4. implement arrangements to support continued aerodrome compliance with the CB.
5. provide design information to support continuing safe operation of the aerodrome.

(e) Each of these mandated activities (and other supporting aspects) form the basis of the certification process developed by the Authority.

Applying for the authorisation

(f) An application to DASA for an aerodrome certificate should use DASA Form 1186 – Application for Aerodrome Certificate. There are multiple stages and artefacts required to support the Application for Aerodrome Certificate which are outlined in Chapter 11.2.

Superseded

(g) DASA will be available to support the Applicant throughout the certification process and provide guidance and feedback where needed. This will reduce the likelihood of an application being incomplete at the time of submission.

(h) **DASA approval.** DASA will issue an ADC based on satisfactory evidence that the design of the aerodrome complies with the aerodrome's CB, including all the technical data required for the certification program as well as compliance to the other requirements under DASR 139.80. Once an ADC has been issued, the Aerodrome Operator may submit an application for certified aerodrome approval, as described in Annex B of this DASPMAN Chapter.

Responsibilities of the authorisation holder

(i) As part of the aerodrome certification process, the Applicant is required to implement arrangements to support continued aerodrome compliance with the agreed CB and provide design information to support continuing safe flight operations of the Aerodrome. For the purposes of initial aerodrome certification, the Applicant is expected to establish these systems and procedures. Continued implementation and monitoring of these systems and procedures is the responsibility of the Aerodrome Operator. The ultimate liability for safe flight operations rests with the Aerodrome Operator.

(j) Responsibilities of an AD OPR operating a Certified Aerodrome are presented at DASR 139.90 – Maintenance of Aerodromes. Amongst other things, the AD OPR is required to:

1. present to the Authority any changes to the design or construction of a certified aerodrome for certification, except where those changes have no appreciable effect on the safety of flight operations.

2. develop, document and undertake an aerodrome maintenance program to ensure the aerodrome remains in a condition to support safe flight operations.

(k) **Changes to Aerodrome Certification.** Following presentation of any changes to the design or construction of a certified aerodrome for certification, an abbreviated certification program, applying some or all of the steps in the process, will be required. The program will focus on the changes to the certified design, and the complexity of the program will be influenced by whether the design changes:

1. will still maintain compliance to the extant CB. In this case, re-certification is likely to only require compliance to the CB be demonstrated and declared prior to application

2. will not maintain compliance to the extant CB. In this case, re-certification will require new or modified CB requirements to be approved prior to demonstrating and declaring compliance to the CB.

(l) **Aerodrome Maintenance Programs (ADMP).** An ADMP is required at Defence Certified Aerodromes to maintain continued compliance with the aerodrome's CB. The Defence AD OPR is responsible for the development, documentation and execution of the ADMP to ensure the aerodrome remains in a condition to support safe flight operations, as required by DASR 139.90.

(m) The ADMP also helps the AD OPR to ensure continued compliance to the CB by means of conducting required maintenance at the aerodrome. At a minimum, the ADMP should include (see AMC to DASR 139.90): the maintenance schedule and routines to ensure the aerodrome continues to meet the design requirements; technical inspections that confirm the facilities

Superseded

are fit for their intended purpose and acceptable for use; and the engagement of suitably qualified personnel to conduct maintenance.

Ongoing DASA compliance assurance

(n) Whilst it is the responsibility of the AD OPR to ensure continued compliance with the agreed CB in order to support continuing safe flight operations of the Aerodrome, DASA may from time to time initiate compliance review activities to provide ongoing assurance. These may be achieved through on-site visits, remote assessments or ongoing monitoring, summarised below:

1. **On-site visits.** On-site visits may be informal or formal. Informal visits are usually to provide regulatory support and guidance, and for engagement with an Aerodrome stakeholders, while formal visits are used to validate the management of previous DASA findings and to conduct oversight.

2. **Remote assessments.** Remote assessments may be suitable if a visit to the aerodrome if the area to be assessed doesn't justify a full onsite visit.

3. **Ongoing monitoring.** DASA desk officers will identify other ways of monitoring continuing compliance with the aerodrome's CB without necessarily engaging the AD OPR. This may include, for example, monitoring Continued Aerodrome Compliance products including Aerodrome Maintenance Programs, Aerodrome Technical Inspections, exploring the outcomes of other DASA review activities (eg Independent Review Boards), and so on.

Superseded

Annex W - Military Aircraft Maintenance License

Purpose of the personnel authorisation

(a) DASR 66 - Military Aircraft Maintenance Licencing establishes the requirements to be met by an individual within the Australian Defence Organisation (ADO), consisting of both the ADF and Department of Defence, seeking approval for privileges to issue a Certificate of Release to Service (CRS) for maintenance on military aircraft, within a DASR 145 approved organisation. As the regulatory authority, DASA will control and coordinate the issue, oversight and enforcement of licences under DASR 66.

DASR requirements

(b) DASR 66 identifies the skill, knowledge and experience requirements for each Military Aircraft Maintenance Licence (MAML) category and Military Aircraft Type Rating (MATR) within the ADO.

(c) The MAML is an attestation that the holder has met the DASR 66 skill, knowledge and experience requirements. In order to obtain a DASR 66 MAML the applicant requires:

1. Basic Knowledge (DASR 66.A.25), and
2. Basic Experience (DASR 66.A.30).

(d) To enable the MAML holder to issue a CRS following on-from aircraft maintenance at B and C category level, the licence must have a specific Military Aircraft Type Rating endorsement, and the holder must be authorised by the 145 AMO to operate within their approved quality system. In order to obtain a type rating, an applicant needs:

1. Type Training (Theory & Practical) (DASR 66.A.45), and
2. On the Job Training (OJT) for first MATR (DASR 66.A.45)

(e) There are four basic licence categories:

1. **Category A** – for minor scheduled and unscheduled maintenance, equating to those activities regularly carried out to operate aircraft in the Line maintenance environment. The Category A licence is a non-type rated licence and the privileges of a Category A licence are not applicable to Base maintenance.
2. **Category B1** – Being applicable to B1.1 (Aeroplane Turbine) and/or B1.3 (Helicopter Turbine) in the ADO, enabling the licence holder to perform scheduled and unscheduled aircraft structure, powerplant, mechanical systems and simple electrical systems maintenance. The B1 license also permits minor avionics maintenance (eg 'black box' changes, where no specialised GSE/GTE is required and requires only a simple test to determine serviceability).
3. **Category B2** – Being applicable to either Aeroplane Turbine or Helicopter Turbine aircraft and covers complex avionics and complex electrical maintenance, scheduled and unscheduled maintenance.

Superseded

4. **Category C** - is required for personnel who issue the Certificate of Release to Service following Base maintenance only.

(f) DASR 66 category B1, B2 and C licences are military aircraft type rated licences and permit the holder to CRS only on military aircraft types endorsed on their licence.

(g) MAML Exclusions (Limitations) and Inclusions (Extensions) are defined as follows:

1. Exclusions

   i. Limitations introduced on a MAML are exclusions from the certification privileges.

   ii. Limitations are a result of gaps in training.

2. Inclusions

   i. Extensions introduced on a MAML allow additional certification privileges.

   ii. Extensions are a result of additional training

Personnel Authorisation

(h) DASR 145.A.30 (g) and (h) requires any organisation maintaining military aircraft to have appropriate military aircraft type rated certifying staff, qualified as category B1, B2 or C in accordance with DASR 66.

(i) Individuals having undergone appropriate training can be authorised by a DASR 145 AMO to perform and Task Sign for simple maintenance on an aircraft or component to the standard required by the maintenance data. These individuals who conduct the maintenance and task sign for these activities, do not necessarily need a MAML.

Responsibilities of the authorisation holder

(j) MAML holders have a professional responsibility to ensure the maintenance they perform and certify, meets airworthiness requirements. MAML holders are expected to maintain currency of knowledge, develop and exercise good judgement and apply sound principles of technical decision making, within the scope of their privileges.

MAML Application Process

(k) Individuals seeking the initial award of a MAML category, or applying for a variation to an existing MAML, must apply to DASA using the latest DASA Form 19 or 19A (ADF ONLY), available from the DASA website. All applications must be submitted to DASA 66 Licensing via the group mailbox 'dasa.dcadasr66@defence.gov.au' along with all relevant supporting documentation.

(l) DASA are able to extract relevant qualification, training, experience and authorisation information for current ADF personnel from PMKeyS as supporting evidence to enable issuance of licences for eligible ADF maintenance personnel. However, there is no data repository for contractor personnel, with each company retaining their own records. Consequently, DASA is not able to automatically issue licences to Defence Industry contractor

Superseded

personnel, who will have to provide the supporting evidence when applying for licences or variations.

Form 19a Applications

(m) The DASA Form 19a is to be used for MAML applications for ADF personnel only, as the application is relying mainly on evidence contained in PMKeyS. Unit Quality Manager delegates must sign the declaration confirming that:

1. all records provided by the applicant(s) meet the requirements of DASR 66;
2. PMKeyS has been updated to include all relevant evidence
3. all QT&E records provided as evidence with the application have been sighted and have been certified true and correct; and
4. copies of records supporting the application are kept on the applicant's personal file(s) for verification by DASA staff if required.

Guidance information is contained in Page 1 of the DASR Form 19a.

Form 19 Applications

(n) All DASA Form 19 applications must be vetted and endorsed by the organisation's Quality Manager / delegate for accuracy, ensuring:

1. all relevant QTE is validated;
2. all QT&E records provided as evidence with the application have been sighted and have been certified true and correct;
3. all supporting records will be retained by the organisation.

(o) Submission must be in electronic format, to the dasa.dcadasr66@defence.gov.au group mailbox, scanned copies of the form will not be processed. Guidance can be found on the form to assist with completion of the form.

(p) In addition to the above Form 19 requirements, the applicant's Quality Manager or delegate is to ensure that:

1. if applicants are claiming recognition of other Aviation Maintenance Licences, e.g. CASA LAME, then a certified true copy must be attached to the MAML application;
2. for licence category training through DASA/CASA MTOs, the RPL assessment can be made against the DASR/Part 66 Module requirements or the MEA Aeroskills training package competency standards, within the units of competencies (UOCs).
3. non-Australian competencies/qualification to be used to apply for a MAML, a DASA/ CASA MTO RPL assessment must be performed using objective evidence to provide an individual with an RPL report clearly outline the required theory and practical training requirements.
4. category training MTO's who conduct DASR/Part 66 basic knowledge examination requirements, are to ensure that the DASR 66.A.25 basic knowledge examination standard is to confirm 75% pass mark.

Superseded

5. Any practical maintenance experience recognition to meet DASR 66.A.30 (Basic Experience Requirements) must be provided with evidence of exercising the foreign licence and/or authorisation.

6. DASA/CASA MTO approval must include RPL for that country or pathway. (Refer CASA AC 147-02 - Approved Part 147 Training Organisations).

(q) For applicants with a CASR Part 66 issued licence, the DASR 66 MAML will be based upon the existing licence, but with DASA specific exclusions/inclusions.

(r) DASA will only accept assessments attained via approved/recognised DASA 147/CASA Part 147 organisations.

(s) Any Australian Vocational Education and Training qualifications prior to 2011 must be assessed and converted to meet DASR 66.A.25 Basic knowledge requirements by a DASA 147/ CASA Part 147 organisation to confirm 75% pass mark. Practical maintenance experience recognition may be gained with evidence of exercising any relevant authorisation.

Ongoing DASA compliance assurance

(t) A MAML can be made invalid by the Authority (Suspended / Revoked) IAW DASR 66.A.40 & DASR 145.A.35. This is managed IAW DASA Instruction DASA(I) SAPO 01-003.

Annex X - Air Battle Management Operator

Superseded

5.4. Oversight and Enforcement

5.1 Introduction

(Reserved)

5.2. Aviation Safety Policy and Guidance

5.2.1 Introduction

5.2.1.1 This section describes the hierarchy of policy and guidance within the Defence Aviation Safety Program.

5.2.2 The DASP Manual

5.2.2.1 The DASP Manual is the central policy and guidance document within the DASP. It is issued by the Defence AA in three volumes:

1. Volume 1 *Requirements for the DASP* expands on Joint Directive 21/2021 to establish requirements for the implementation of the DASP; in particular:
    i. legal and governance arrangements
    ii. independent safety assurance
    iii. the Defence Aviation Safety Regulation
    iv. the independent investigation of accidents and incidents
    v. independent reviews of Aviation Safety.
2. Volume 2 *Defence Aviation Safety Regulation* establishes all requirements and provisions for the management of Aviation Safety by commanders and managers.
3. Volume 3 *DASP Guidance* provides an overview of the DASP and how its various elements collectively achieve the required safety objectives. Volume 3 also provides supporting information to promote understanding of concepts and processes spanning multiple requirements or provisions established through Volumes 1 and 2.

5.2.3 Defence Aviation Safety Regulation

5.2.3.1 The DASR are contained within DASP Manual Volume 2. Their structure and naming convention are based on those applied by CASA and EASA.

5.2.3.2 The DASR comprise:

Superseded

1. **General Requirements,** which define the scope and applicability of the DASR parts as well as establish requirements and provisions that are applicable to a significant proportion of regulated entities.

2. **DASR parts,** which are outcome based and specify requirements for each of the specifically regulated Aviation Safety topics. They may include associated supporting information in the form of Acceptable Means of Compliance (AMC) and Guidance Material (GM).

5.2.4 Regulatory Supporting Information

5.2.4.1 The AMC and GM embedded within the DASR are part of a broader range of supporting information published by DASA to promote understanding of, and compliance with, the regulations. All such supporting information is authoritative and does not mandate any action but may address regulatory requirements and provisions established elsewhere.

5.2.4.2 **Acceptable Means of Compliance.** AMC provides a generic and widely applicable approach to meeting the respective DASR requirements. DASA publishes AMC to provide certainty as to how the required safety outcomes may be achieved. Choosing to implement an AMC relieves the regulated entity of the burden of proving that the means of compliance achieves the intended safety outcome. The regulated entity demonstrates compliance with the DASR by appropriately implementing AMC. Regulated entities are free to propose Alternative Means of Compliance (AltMoC); however, the nature of Aviation Safety regulation means that the use of AltMoC may not be suitable in every instance.

5.2.4.3 **Guidance Material.** GM helps to illustrate the meaning of a requirement or provision in the DASR. It may provide relevant background, context or an explanation of the policy intent underpinning the respective regulation.

5.2.4.4 **Advisory Circulars.** Advisory Circulars (ACs) are typically issued to bring an issue to the attention of the target audience or to address a complex topic. ACs may be used to identify acceptable ways to achieve regulatory compliance, either as a temporary transition arrangement or in advance of promulgation as AMC in the DASR. Examples include information regarding emerging Aviation Safety matters, information that enhances compliance understanding for existing regulation, or policy guidance for aviation issues that are not yet regulated but require further understanding.

5.2.4.5 **Factsheets.** Factsheets are typically issued to provide concise information that may assist those interested in a particular topic.

5.2.5 Design Requirements

5.2.5.1 Volume 1 of the DASP Manual requires DASA to 'issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR'. DASA fulfils this responsibility through prescribing and interpreting the minimum requirements for the design of Defence aircraft, engines, propellers, and other aircraft-related systems and equipment that have an effect on aviation safety.

Prescribing design requirements

Superseded

5.2.5.2 DASA employs three foundational principles when prescribing design requirements for aviation safety:

1. DASA recognises the design requirements prescribed by several CAAs and MAAs as providing a sound foundation for the safe design of Defence aircraft and aircraft-related systems and equipment
2. DASA may prescribe supplementation to these design requirements, where an aspect of a requirement is judged deficient or to support application to Defence's unique role and operating environment
3. DASA requires the conduct of a system safety program, to provide a robust means for identifying and analysing aviation hazards during the design process, and for eliminating or minimising the resultant risks so far as is reasonably practicable.

5.2.5.3 To provide assurance that safe flight is achieved through aircraft design, many CAAs/MAAs prescribe airworthiness design requirements, which are usually documented in an 'Airworthiness Code' (DASR 21.A.16A refers). An Airworthiness Code is a complete and consistent suite of design requirements that define those attributes of aircraft systems or equipment that underpin safe flight. As the development and maintenance of an Airworthiness Code is a substantial undertaking, rather than define and publish its own Code, DASA recognises Airworthiness Codes prescribed by other CAAs/MAAs (i.e. DASA accepts that these Codes provide a safe foundation for aircraft and aircraft-related systems design).

5.2.5.4 DASA may recognise an Airworthiness Code when the Code as a minimum:

1. is prescribed by a recognised CAA/MAA
2. has demonstrated a sound safety record
3. prescribes a complete and consistent suite of airworthiness design requirements
4. is supported by associated guidance on how to achieve compliance with the airworthiness design requirements
5. is accessible, i.e. published by the CAA/MAA in a consolidated and easily accessed format.

5.2.5.5 While aircraft and aircraft-related systems/equipment designs developed to a DASA recognised Airworthiness Code should substantially meet the level of safety expected by Defence, supplementary airworthiness design requirements may need to be prescribed by DASA as a result of:

1. known inadequacies in the Code
2. novel features included in the proposed design that are not accommodated by the Code
3. proposed Defence-unique roles and/or operating environments that are outside the scope of the Code and/or
4. Defence policies or Australian legislated requirements not being covered by the Code.

5.2.5.6 Compliance with DASA-recognised Codes and prescribed supplementation is the principal means by which safe design of an aircraft and aircraft-related systems/equipment is achieved. However, in isolation, a standards-based approach may not provide a complete basis for certification of an aircraft, or approval of aircraft-related systems/equipment having an effect on aviation safety.

Superseded

Many standards are inherently stove-piped, and therefore further analytical effort is required to identify and control system-level hazards. Further, standards are often written with 'vanilla' applications in mind; novel aircraft or systems design features are likely to pose novel hazards, which are not catered for within the standard. As a result, in addition to compliance with design standards, DASA requires the conduct of a system safety program for aircraft designs.

5.2.5.7 System safety is an engineering discipline that embraces safety as a core aspect of any given system design (or design change). System safety programs employ a suite of engineering tools and techniques to identify and analyse aviation safety hazards during the design process, and provide a management framework to evaluate and control the resultant risks. When applied well, a system safety program is an essential adjunct to a standards-based design approach.

5.2.5.8 DASA prescribes supplementation to recognised Codes within a framework of 'essential' and 'recommended' design requirements. While essential airworthiness design requirements define the level of safety that must be achieved by a design, they are not immutable. DASA, in consultation with the relevant capability manager where applicable, may approve an alternative design requirement in the following circumstances:

1. where analysis confirms the alternative design requirement achieves an equivalent level of safety
2. where analysis shows the alternative design requirement, supplemented by operational risk treatments, should achieve an equivalent level of safety or
3. where enforcing the Essential design requirement would have a marked negative effect on capability or cost, and an alternative (but less safe) design requirement is in Defence's best interests.

Interpreting design requirements

5.2.5.9 Like other MAAs, DASA accepts that tailoring of design requirements may be necessary to achieve essential military capability. Provided DASA concludes the proposed tailoring is judicious (i.e. that the tailoring represents good judgement or sense) in the ADF operational context, DASA may approve tailoring to the prescribed requirement. Certification or approval against the tailored requirement(s) would then be pursued by the applicant. Any proposed tailoring of design requirements by an applicant for type certification and/or design approval from DASA, which results in changes to prescribed safety criteria, must be supported by documented rationale that includes:

1. the capability manager's confirmation that a clear (well-defined) and documented capability imperative for the proposed tailoring exists
2. the applicant's confirmation that compliance with the prescribed standard impedes that capability imperative
3. the applicant's characterisation of the delta between the prescribed standard and the tailored standard
4. the applicant's, with the assistance of the capability manager (or delegate), characterisation of the risk due to this delta and
5. the capability manager's (or delegate's) formal conclusion that the tailored safety criteria presents a credible and defensible level of safety for that Defence aircraft or aircraft-related system/equipment, contextualised for ADF operations.

Superseded

5.2.5.10 Agreed tailoring, including any essential risk controls to achieve the defined level of safety, will usually be documented in a Military Certification Review Item (MCRI) or equivalent approved by DASA. Detailed MCRI guidance is contained in Section 7.2 Certification.

5.2.5.11 DASA may have two separate roles in the above process. First, as the repository of standards and certification expertise, DASA may advise the capability manager and applicant on how to wisely complete each step. Secondly, DASA needs to gain sufficient confidence in the conduct of the process to assure the Defence AA that the tailoring is indeed judicious. If this second role cannot be achieved, the tailoring of the prescribed requirement(s) cannot be approved and consequently certification or approval of the design would be precluded.

5.2.5.12 DASA also provides interpretation advice and direction on the intent and meaning of airworthiness design requirements, often but not exclusively related to:

1. the approval of tailored means of compliance for a design requirement
2. advice on the relevance of proposed design requirements to the design under consideration
3. advice on pragmatic tailoring of design requirements/standards.

5.2.5.13 The prescription and interpretation of design requirements and standards may be delegated to a Standards-Delegate of the Safety Authority (Standards-DoSA). The functions and responsibilities of DoSAs are detailed in Section 4.3.

Design requirements and WHS

5.2.5.14 Defence aircraft and aircraft-related systems/equipment can present a hazard to aircrew, other aircraft occupants, other airspace users, persons near or under the aircraft flight path, and maintenance and other ground personnel. The Australian Work Health and Safety Act and the Work Health and Safety Regulations (collectively, WHS Legislation) apply to Defence aviation, and therefore Defence has a legal obligation to ensure the health and safety of these persons. The design of the Defence aircraft can, in part, contribute to Defence satisfying this legal obligation, for example:

1. the aircraft design can promote a safe airborne workplace for aircrew and other occupants through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. improving crash survivability for aircraft occupants
    iii. implementing design controls for in-aircraft hazards that might injure aircraft occupants
    iv. implementing design controls for in-aircraft hazards that might affect the future (post-flight) health of aircraft occupants
2. the aircraft design can promote the safety of persons near or under the aircraft flight path through:
    i. reducing the likelihood of a catastrophic in-flight mishap
    ii. reducing the ground impact energy (mainly relevant to uncrewed aircraft)
3. the aircraft design can promote the safety of persons in close proximity to a stationary aircraft through:

Superseded

i. implementing design controls for aircraft hazards that might injure ground personnel

ii. implementing design controls for aircraft hazards that might affect the future health of ground personnel

iii. incorporating aircraft maintenance instructions that identify reasonably foreseeable hazards to maintenance personnel and present safe maintenance practices.

5.2.5.15 Importantly, DASA approval of prescribed design requirements for a Defence aircraft or aircraft-related systems/equipment, and proposed tailoring, does not constitute endorsement/ agreement of the determination that risk has been eliminated or otherwise minimised SFARP. Rather, this must remain a decision for the capability manager (or delegate), as does the enduring management of the residual risk due to the tailoring/alternative standard.

Defence Aviation Safety Design Requirements Manual

5.2.5.16 The Defence Aviation Safety Design Requirements Manual (DASDRM) is DASA's repository for recognised Codes, and associated prescribed supplementary design requirements, with respect to Defence aircraft and aviation support systems/equipment design.

5.2.5.17 The DASDRM prescribes design requirements for aircraft systems and functions, and aircraft support systems and equipment that have an effect on aviation safety, that are necessary to achieve safe flight in Defence's proposed Configuration, Role and Environment (CRE). It also prescribes additional design requirements that may further improve the level of safety, and that should be implemented where reasonably practicable. In each case, the DASDRM identifies the hazard(s) that the design requirement is intended to treat, to provide a basis for informed risk management where an aircraft design fails to meet the design requirement.

5.2.5.18 While capability and interoperability is not a specific consideration when establishing that an aircraft is capable of safe flight, robust design for capability and interoperability contributes to mission success, and therefore the safety of the crew. Consequently, while capability and interoperability design requirements are not a primary focus of the DASDRM, design requirements that support capability and interoperability outcomes are included where appropriate.

5.2.5.19 The DASDRM comprises the following six sections:

1. Section 1 – Application of Airworthiness Design Requirements. This section defines the purpose and scope of the DASDRM and defines the Airworthiness Codes that have been recognised by the Authority as providing a sound foundation for the design of Defence aircraft. It also describes the extent to which airworthiness design requirements contribute to Defence meeting its WHS Legislation obligations. Finally, Section 1 describes the application of capability and interoperability standards to aircraft designs.

2. Section 2 – Integrated Design Requirements. This section prescribes airworthiness design requirements for those engineering disciplines that pervade most aspects of aircraft systems design or affect multiple systems such as system safety, electromagnetic environmental effects and crash protection.

3. Section 3 – Aircraft System Design Requirements. This section prescribes airworthiness design requirements for aircraft systems such as communications, navigation, structures (fixed and rotary wing) and propulsion. The only systems

Superseded

included in this section are those where the Authority recognised Airworthiness Codes do not provide satisfactory coverage for Defence aircraft designs.

4. Section 4 – Uncrewed Aircraft Design Requirements. This section prescribes airworthiness design requirements for UAS.

5. Section 5 – Aircraft Support Systems. This section prescribes design requirements for non-aircraft systems and ground based equipment, where the systems/equipment have a direct effect on safe flight or aviation safety, such as aeronautical life support equipment, mission planning systems and aerial delivery.

6. Section 6 - Aerodrome Design Requirements. This section prescribes airworthiness design requirements for Defence aerodromes and heliports.

5.2.6 Formal Regulatory Advice

Introduction

5.2.6.1 DASA may provide formal regulatory advice on any Defence Aviation Safety policy within its remit in order to assist with understanding and compliance. This section provides guidance on seeking such advice. Other queries, such as those concerning DASA business matters, availability of training, staff duties, contact details and updates to ongoing activities do not warrant a formal process and may be addressed through normal lines of communication.

When to make a formal request

5.2.6.2 Only certain types of queries warrant the application of a formal process. Such queries fall into the following broad categories:

1. requesting interpretation of DASR or other policy:
   i. where the intent is unclear
   ii. relating to a situation not explicitly covered by existing policy.
2. requesting advice regarding implementation of DASR or other policy, such as:
   i. whether a particular approach is compliant
   ii. applicability of policy to a particular activity.

Before making a formal request

5.2.6.3 DASA publishes a number of educational and promotional artefacts, which may answer a query without the need to request advice. See Section 5.2.4 *Regulatory supporting information* and the *Education and Promotion* page on the DASA web site.

5.2.6.4 The DASP Policy and Guidance Portal (PGP) contains a functional search engine that may assist in searching for specific terminology or phrases. Tips for navigation and searching are contained within the PGP User Guide.

How to make a formal request

Superseded

5.2.6.5 If formal regulatory advice is required, the preferred method to request advice is via a DASR Query Form (DQF). In the case of uncertainty as to whether a DQF is suitable, email dasa.dasr@defence.gov.au.

5.2.6.6 While an email or phone call directly to a desk officer may seem more efficient, it does not always result in appropriate DASA registration and oversight. Registration informs DASA which areas of policy may require review or additional educational material and builds traceability for future updates. Oversight of queries is important for managing and prioritising DASA workload and ensures that advice follows an appropriate approval process before release. Therefore, DASA reserves the right to redirect any query to written form.

Turnaround Times

5.2.6.7 DASA will negotiate and agree upon a turnaround time with the query initiator as the first action following receipt of a query. DASA will communicate any subsequent changes to that timeline to all involved parties when they become apparent.

5.3 Aviation Safety Authorisations

5.3.1 Purpose

5.3.1.1 The DASR make provision for DASA to issue a range of 'authorisations' if assured that the regulated community has met, and continues to meet, the requirements and constraints of the DASR. These authorisations may be in the form of certificates, permits, approvals or licenses.

5.3.1.2 This chapter presents an overview of each common aviation safety authorisation.

5.3.2 Aviation Safety Authorisations

5.3.2.1 DASA-issued authorisations can broadly be characterised as pertaining to organisations, products and/or personnel. These authorisations are as follows:

1. organisational authorisations:
    i. Military Air Operator (MAO)
    ii. Aerodrome Operator (ADOPR)
    iii. Air Cargo Delivery Service Provider (ACDSP)
    iv. Air Navigation Service Provider (ANSP)
    v. Air Battle Management Operator (ABMO)
    vi. Military Design Organisation (MDO)
    vii. Military Production Organisation (MPO)
    viii. Approved Maintenance Organisation (AMO)
    ix. Continuing Airworthiness Management Organisation (CAMO)
    x. Maintenance Training Organisation (MTO)

Superseded

xi. Military Type Certificate Holder (MTCH) (currently an implicit approval)

2. product authorisations:

i. Military Type Certificate (MTC)

ii. Military Restricted Type Certificate (MRTC)

iii. Military Supplemental Type Certificate (MSTC)

iv. Military Permit to Fly (MPTF)

v. Military Certificate of Airworthiness (CoA)

vi. Military Restricted Certificate of Airworthiness (RCoA)

vii. Australian Military Technical Standard Order (AUSMTSO)

viii. Approval of Repair Design

ix. Airworthiness Directive (AD)

x. Aircraft Maintenance Programme (AMP)

xi. Uncrewed Aircraft System Operating Permit (UASOP)

xii. Aerodrome Certificate (ADC)

xiii. Other[1]

3. personnel authorisations:

i. Military Aircraft Maintenance Licence (MAML)

Note: DASA directly authorises certain management personnel within approved organisations. These are commonly referred to as 'Form 4 authorisations', since they are approved on DASA Form 4, Acceptance of Nominated Management Personnel. In the context of this chapter, those authorisations are considered to be part of the organisational approval process, so they are not listed separately here.

5.3.2.2 The type and scope of authorisations needed for a particular aircraft, aerodrome or air navigation service will depend on a range of factors, for example the involvement of other civil or military Aviation Authorities, the support arrangements implemented by Defence, and so on. These issues are explored elsewhere in this Manual.

5.3.2.3 Annexes A to X individually examine the authorisations listed in paragraph 3. Each annex explains the purpose of the authorisation, the relevant DASR requirements, applying for the authorisation, the responsibilities of the authorisation holder, and DASA's approach to compliance assurance.

Annexes:

(a) Military Air Operator

(b) Aerodrome Operator

Superseded

(c) Air Cargo Delivery Service Provider (To be issued)

(d) Air Navigation Service Provider (To be issued)

(e) Military Design Organisation

(f) Military Production Organisation

(g) Approved Maintenance Organisation

(h) Continuing Airworthiness Management Organisation

(i) Maintenance Training Organisation

(j) Military Type Certificate Holder

(k) Military Type Certificate

(l) Military Restricted Type Certificate (To be issued)

(m) Military Supplemental Type Certificate

(n) Military Permit to Fly

(o) Military Certificate of Airworthiness

(p) Military Restricted Certificate of Airworthiness (To be issued)

(q) Australian Military Technical Standard Order

(r) Approval of Repair Design

(s) Airworthiness Directive (To be issued)

(t) Aircraft Maintenance Programme

(u) Uncrewed Aircraft System Operating Permit

(v) Aerodrome Certificate

(w) Military Aircraft Maintenance Licence

(x) Air Battle Management Operator (To be issued)

5.4.1 Introduction

5.4.1.1 This section expands on the Oversight and Enforcement (O&E) policy described in section 4.1.4. Specifically, it explains how regulated entities can expect to be engaged by DASA in assessing initial and ongoing compliance.

5.4.1.2 **Regulated entity.** The term 'regulated entity' is used to describe the different organisations and personnel within the Aviation Safety community that are regulated under DASR, and who are subsequently oversighted by DASA. These entities are typically awarded DASA-issued authorisations, as listed in section DASPMAN Vol 3 Chapter 5.3.2 Aviation Safety Authorisations.

Superseded

5.4.2 DASA O&E-related responsibilities

5.4.2.1 The DASA regulatory facing directorates accountable for O&E functions are DAVNOPS, DIA and DCA. The remit of each is detailed below:

1. **DAVNOPS.** DAVNOPS responsibilities include:

   i. conducting regulatory compliance assessments of organisations to enable the issuing of:

      – a Military Air Operator Certificate (MAOC) and corresponding Operational Specification (OpSpec) under DASR.ARO

      – an Air Navigation Service Provider Certificate (ANSPC) and Service Provision Conditions (SPC) under DASR.ANSP

      – an Aerodrome Operator Certificate (ADOPRC) and Aerodrome Operator Specification (ADOpSpec) under DASR 139

      – an Air Cargo Delivery Service Provider Certificate (ACDSPC) and Air Cargo Delivery Operational Specification (ACDOpSpec) under DASR ACD

      – an Air Battle Management Operator Certificate (ABMOC) and Operational Specification (OpSpec) under DASR ABM

   ii. conducting oversight to allow the retention of existing organisation authorisations.

2. **DIA.** DIA responsibilities include:

   i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:

      – a Military Type Certificate Holder (MTCH) organisation approval and the corresponding platform Type Certificate under DASR Part 21 Subpart B

      – a Design Organisation Approval (DOA) for engineering design services under DASR Part 21 Subpart J.

      – a Design Production Organisation Approval (POA) for parts production services under DASR Part 21 Subpart G or DASR Part 21 Subpart F.

   ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.

3. **DCA.** DCA responsibilities include:

   i. conducting regulatory compliance assessments of organisations and nominated management personnel, to enable the issuing of:

      – DASR Part M Continuing Airworthiness Management Organisations (CAMO) authorisations

      – DASR Part 145 Maintenance Organisation (DASR 145 MO) authorisations

Superseded

– DASR Part 147 Aircraft Maintenance Training Organisation (DASR 145 AMTO) authorisations

– DASR Part 66 Military Aircraft Maintenance Licences (DASR 66 MAML)

ii. conducting oversight to allow the retention of existing organisation and approval holder authorisations, both within the ADF and those contracted to Defence.

5.4.3 Initial authorisation process

5.4.3.1 To gain an initial authorisation, the applicant:

1. organisation must demonstrate:

   i. a Defence need for the award of the authorisation

   ii. a local documented management system that complies with DASR requirements for the proposed scope and level of activities, as defined by their organisation approval basis (ie the set of documents which provides the objective quality evidence necessary to prove compliance with the relevant DASR)

2. Nominated Management Personnel must demonstrate:

   i. a Defence need for the award of the authorisation

   ii. compliance with specific qualification, training and experience requirements.

5.4.3.2 **Application.** An application for initial authorisation is made on the relevant DASR form, in a manner established by DASA within the respective DASR. Each form describes the information to be included to demonstrate compliance, how the form is to be submitted and who to. Where the DASR does not prescribe a format or manner for the application, the applicant should contact the relevant DASA Directorate for guidance.

5.4.3.3 **Initial DASA assessment.** The process by which DASA assesses applications varies between organisations and Nominated Management Personnel. For organisations, the assessment process begins with a desk top audit of the organisation's relevant documentation (i.e. evidence which demonstrates the proposed DASR compliance means are 'Present' and 'Suitable'—see below). For Nominated Management Personnel, DASA assesses compliance with specific qualification, training, and experience requirements.

5.4.3.4 If the applicant is found to be deficient in required content or non-compliant with any relevant DASR requirement, DASA will endeavour to request additional information where practicable. Post assessment the outcome of the application will be notified to the organisation as:

1. progressed to the next stage

2. rejected, providing reasons

3. conditionally progressed, with actions taken by DASA and the applicant to ensure non-compliances are resolved.

Superseded

5.4.3.5 **On-site DASA assessment.** An on-site assessment is not an essential part of the initial authorisation process for any DASR authorisation and will be dependent on the nature of the request. DASA will determine if there is a need to conduct an on-site assessment, based on the outcome of the initial assessment, and the scope, level, and complexity of the application. Where conducted, the on-site assessment may include inspection of physical facilities and additional documents, and further face-to-face discussion with applicant staff (for additional 'Present', 'Suitable' and 'Operating' evidence—see below).

5.4.3.6 **DASA Organisational Approval.** Following the initial assessment and, if conducted, on-site assessment, the DASA team will provide a recommendation for authorisation to the DASA assessment lead. Where appropriate, an authorisation package will be compiled for DG DASA approval. Once approved, authorisation artefacts are dispatched to the applicant at which point the applicant may utilise privileges granted, noting any limitations.

5.4.3.7 **Timeline.** DASA timelines for the assessment and approval of authorisation applications will depend on the scope and complexity of the authorisation sought, and the level of DASA involvement to support the applicant through the process. DASA will endeavour to collaborate with applicants and action authorisation requests in a timely manner. Approvals may be expedited based on operational or safety imperatives and negotiated accordingly.

5.4.3.8 **Post approval.** The organisation and Nominated Management Personnel transition from the 'initial authorisation' phase to ongoing DASA oversight to retain their authorisation. The applicant is responsible for maintaining ongoing compliance with the relevant DASR and rectifying any future internally identified non-compliances through their own Quality Management System.

5.4.4 Authorisation change and retention process

5.4.4.1 **Changes to authorisations**. Should a regulated entity identify a need for authorisation scope/limitations/privilege changes, the entity must apply to DASA (except where otherwise permitted by DASR). Applications for changes to authorisations are made on a form and in a manner established by DASA within the respective DASR, as per their initial authorisation. In actioning the application, DASA will follow the same process as for initial authorisations, adjusting the scope and extent of the assessment to suit the nature of the change. The organisation and Nominated Management Personnel must not implement the proposed change until DASA has issued updated authorisations (except where otherwise permitted by DASR and previously agreed by DASA).

5.4.4.2 **Retention of authorisation.** DASA authorisations remain extant provided regulated entities retain a Defence need and continue to comply with respective DASR. Once the initial authorisation is awarded, ongoing DASA surveillance and oversight of authorisation holders commences. A key component of an effective regulatory framework is ensuring that regulated organisations have a clear understanding of when, why and how DASA will review ongoing compliance. DASA assures the validity of authorisations by applying an oversight cycle commensurate with the perceived risk to Aviation Safety (generally every 24 months). DASA's risk-based approach continually reviews safety intelligence collected from active and passive surveillance activities. Based on collected safety intelligence, DASA conducts oversight of authorisation holders, adjusting frequency and scope of oversight to suit the perceived risk.

Superseded

5.4.5 PSOE for Regulatory Oversight

5.4.5.1 The DASP O&E policy is documented in section 4.1.4, and supports compliance with the DASR through application of a consistent O&E operating model. This section provides Defence tailoring of the civil PSOE model for broader DASR application; noting the PSOE model developed for ICAO Annex 19 is heavily oriented towards Management System maturity assessment vice broader regulation compliance. When considering the Defence aviation context it is important to understand the hazard-based nature of DASR and the regulated community's SFARP obligation in achieving an acceptable level of safety through a baseline level of compliance.

5.4.5.2 Within this context, DASA will execute oversight activities of a regulated entity using the following Defence-tailored PSOE definitions:

1. **'Present' (P).** There is evidence that the process, behavior and technology indicators required for DASR compliance are clearly visible and documented within the organisation's systems.

2. **'Suitable' (S).** There is evidence the process, behavior and technology indicators are suitable (i.e. regulatory compliant) for the size, nature, context, complexity of the organisation and its services, and the Aviation Safety hazard expected to be mitigated (including consideration of industry expectation for standards, codes, guidance etc).

3. **'Operating' (O).** There is evidence that the process, behavior and technology indicators are in use and an output is being produced.

4. **'Effective' (E).** There is evidence that the process outputs , behavior and technology indicators are effective in achieving the desired DASR Aviation Safety hazard control outcome.

    i. Note, effectiveness assessments represent an evolution in compliance methodology, beyond traditional compliance/conformance assessments. In executing an effectiveness assessment, a thorough understanding of the applicable regulation's aviation safety hazard is required, to ascertain if the process outputs are effectively preventing realisation of that hazard (based on evidence collected during an oversight activity).

5.4.5.3 Where non-compliances or potential problems are identified through PSOE application enforcement action will be taken against the organisation.

5.4.6 Management of DASA Findings

5.4.6.1 Findings are issued to highlight an actual or potential non-compliance against DASR. All findings are supported by objective quality evidence and contain adequate detail to support the finding.

5.4.6.2 A Finding will only be issued to remedy an identified non-compliance to a specific regulatory outcome. Once Findings are issued, the regulated entity is responsible for identifying immediate actions, root causes, developing a corrective action plan and implementing corrective actions to address the non-compliance.

5.4.6.3 **Finding levels.** DASA issues Level 1, 2 and 3 findings, as follows:

Superseded

1. **Level 1.** Any non-compliance with DASR requirements which lowers the safety standard and seriously hazards flight safety.

2. **Level 2.** Any non-compliance with DASR requirements which lowers the safety standard and possibly hazards flight safety.

3. **Level 3.** Any non-compliance with DASR requirements, or potential problem, that could lower the safety standard and possibly hazards flight safety.

5.4.6.4 **DASA Level 1 and 2 Findings.** Once a DASA Finding is issued to an organisation, DASA will monitor that actions required to address non-compliances or potential non-compliances are managed and tracked until closure of the Finding. The DASA Level 1 and 2 Findings lifecycle has six distinct stages for regulated organisations, defined on DASR Form 1299 as follows:

1. **Organisational acceptance of Finding.** Organisations accept the Finding based on a DASA assessment of the evidence, and respond with proposed dates for the completion of their Immediate Actions and development of their Corrective Action Plan. DASA will assess the response and agree to timeframes, or consult for revised dates.

2. Where organisations does not agree with the DASA Findings issued, they must formally write to DASA, providing objective evidence as to why the Finding is inappropriate. DASA will assess the additional evidence and respond.

3. **Implementation of Immediate Actions.** Organisations implement short-term solutions to contain the non-compliance and manage the associated risk mitigated SFARP. DASA will use DASR Form 1299 to assess the organisation's actions and document acceptance, or request rework as appropriate.

4. **Root cause analysis.** Organisations assess the root causes of the non-compliance. Multiple root cause analysis tools are available to organisations, including the '5-Whys', Bow Tie, Ishikawa diagrams, Apollo Reality Charting, and Tree Diagram. Importantly, there is never just one root cause to a non-compliance, and 'human error' is never a valid conclusion.

5. DASR Form 1299 provides (as a non-compulsory use tool) a '5-Whys' template against which a root cause analysis can be conducted. DASA will use DASR Form 1299 to assess the organisation's analysis and document acceptance, or request rework as appropriate.

6. **Development of the Corrective Action Plan.** Organisations identify a corrective action for each root cause identified, to prevent recurrence. For each corrective action, the organisation defines:

    i. a means by which the effectiveness of the corrective action to prevent reoccurrence will be assessed

    ii. the objective quality evidence required to substantiate corrective action effectiveness

    iii. a lead person for its implementation, and for reporting implementation and substantiation status

    iv. the due date for corrective action completion, cognisant of the need to validate the effectiveness of the corrective action prior to closure

Superseded

v. any justification supporting the completion date choice (e.g. time to collect validation evidence, or co-dependency/secondary effects).

7. DASR Form 1299 provides a Corrective Action Plan template. DASA will use the form to assess the organisation's plan and document acceptance, or request rework as appropriate.

8. **Implementation of Corrective Actions.** Organisations implement the DASA-agreed corrective actions, progressively submitting each completed Corrective Action to DASA for consideration on DASR Form 1299. DASA will track and manage the progress of approved Corrective Action Plans so that a Finding will not fall overdue unless an individual Corrective Action due date has passed.

9. DASA will use the DASR Form 1299 to assess the organisation's assessment and document acceptance, or request rework as appropriate.

10. **Finding closure.** Once DASA is satisfied that the organisation has implemented and validated the effectiveness of all actions that address the non-compliance, DASA will close the Finding and notify the organisation.

5.4.6.5 **Findings Requiring Re-work.** Where DASA assesses issues with the quality of the response provided by an organisation in developing/implementing Immediate Actions, Root Cause Analysis, Corrective Action Plan or Corrective Actions it will be returned to the organisation for re-work. In doing so, DASA will provide the necessary details of the cause for re-work for further organisational consideration and action. As part of the re-work process the organisation will generally be required to consider if a Finding Extension is required based upon the impact of the quality issue relative to the extant hazard retention. Where extension to originally agreed submission timelines is necessary the criteria under 5.4.6.6 will be required.

5.4.6.6 **DASA Level 3 Findings.** Level 3 Findings are notified to the organisation through DASA correspondence (usually an initial authorisation notification or an oversight report). Level 3 Findings are expected to be managed to closure under the organisation's QMS. DASA will review Level 3 Finding progress during subsequent O&E activities. Inaction against a Level 3 finding does not automatically equate to a Level 2 Finding being issued. However, it may serve as evidence that, when coupled with other safety intelligence, may lead to issue of a Level 2 Finding.

5.4.6.7 **DASA Findings extensions.** An organisation can request an extension (usually through email to the respective Desk Officer) at any stage in the Findings management process. However, as the organisation owns the Aviation Safety risk associated with the Finding until DASA Finding closure, DASA will only consider these requests based on an assessment of the Finding's residual risk being mitigated SFARP. Evidence expected to be provided in an extension request should include:

1. the reason further time is required to complete actions,

2. details of what has already been completed against Findings root causes and agreed Corrective Actions,

3. what outstanding Corrective Actions remain and their revised dates for completion, and

4. justification of how residual aviation safety risk will be controlled SFARP until Corrective Action completion.

Superseded

5.4.6.8 DASA assesses all extension requests in accordance with the DASA Enforcement Principles at section 4.1.4 and notifies organisations of the outcome. However, organisations should not assume automatic extension approval.

6. General Concepts

6.1 Introduction of New Defence Aircraft Capabilities

6.1.1 Introduction

Background

6.1.1.1 Defence periodically adds aircraft to its inventory to meet a capability need. The aircraft may be purchased or leased, crewed or uncrewed, Defence or civil registered. An essential prerequisite for Defence operation of a new aircraft, regardless of the acquisition arrangement, is for Defence to confirm that it is safe for flight. This encompasses the safety of aircraft occupants, other airspace users, and overflown people and facilities.

6.1.1.2 The acquisition process for a new aircraft begins during the capability development phase of the life cycle, where operational requirements are defined and potential solutions investigated. The Aviation Safety management process commences concurrently with the acquisition process, and remains inextricably linked. Decisions made early in the acquisition process can have an enduring effect on Aviation Safety.

6.1.1.3 For a Defence aircraft to be safe for flight, the aircraft to be appropriately designed, constructed, maintained and operated, as explained in DASP Manual Volume 3 Chapter 3, The Defence Aviation Safety Program. It is the responsibility of aircraft acquisition organisations in Defence, relevant in-service organisations and Defence industry partners, to ensure a Defence aircraft is safe for flight, both from the initial design and throughout its Defence lifecycle. In turn, the relevant Aviation Safety authorities need to gain assurance that the aircraft is safe for flight. If suitably assured, the Aviation Safety authorities can issue a range of 'authorisations', usually in the form of certificates, permits, approvals or licenses.

Purpose

6.1.1.4 This series of chapters aims to guide Defence aircraft acquisition organisations, relevant in-service organisations and Defence industry partners through the aviation safety requirements and recommended practices during the aircraft acquisition process.

6.1.1.5 This first chapter provides a general introduction to acquiring new Defence aircraft, including registration requirements, Aviation Safety responsibilities, engagement with Aviation Safety authorities and other common concepts.

Applicability

6.1.1.6 This chapter is applicable to the acquisition (whether through purchase, lease or other arrangement) of the following Defence aircraft:

1. Defence registered crewed aircraft
2. Non-Defence registered crewed aircraft (short term)
3. Defence registered certified uncrewed aircraft systems (UAS)

6.1.1.7 While the concepts in this chapter are also broadly applicable to Open and Specific category (ie non-certified) UAS, the regulatory approaches for these UAS are substantially different to certified

Superseded

aircraft, so DASP Manual Volume 3 Chapter 10, Uncrewed Aircraft Systems, separately covers their acquisition.

Structure

6.1.1.8 This chapter will provide context for the next four chapters, which will individually cover the three different arrangements for Defence aircraft acquisitions listed in paragraph 6, and as shown in Figure 1.

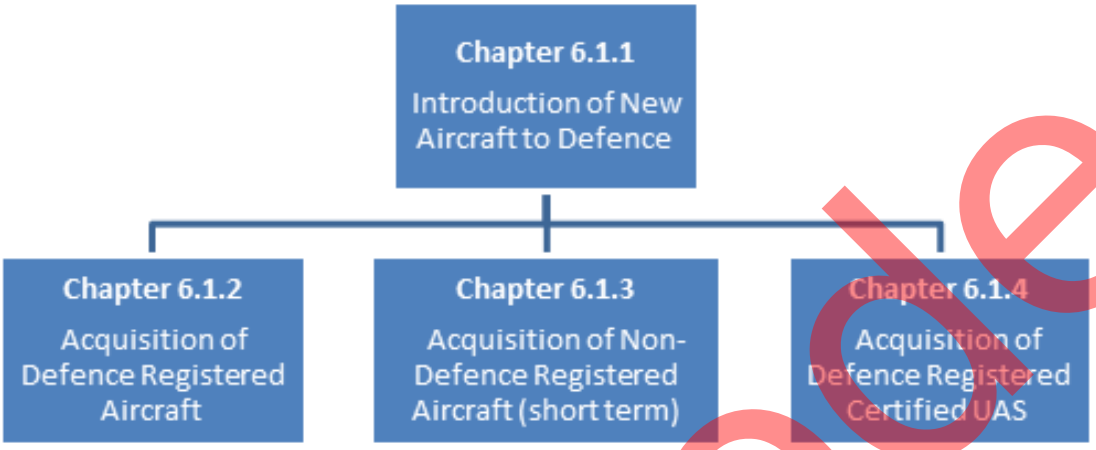

Figure 1: Chapter 6.1 structure

6.1.1.9 This chapter will also provide content that is common to the next four chapters, to avoid duplication.

Aircraft Registration

6.1.1.10 All Defence aircraft, apart from some non-certified UAS, must be included on the Register of a military or civil aviation authority. DASR separates these registrations into two categories; Defence registered aircraft and non-Defence registered aircraft. The latter are almost universally regulated by CASA. While other registrations are occasionally employed, they are always transitory arrangements[1].

6.1.1.11 A Defence registered aircraft is subject to Defence Aviation Safety Regulations (DASR) and DASA safety assurance oversight. An Australian civil registered aircraft, on the other hand, is subject to Civil Aviation Safety Regulations (CASR) and CASA safety assurance oversight as well as some limited DASA oversight.

6.1.1.12 When Defence is procuring an aircraft type that is also used under the civil regulatory framework, an important decision by the Capability Manager, required early in the acquisition process, is to determine whether the Defence aircraft will be Defence registered or civil[2] registered. This registration can have an enduring effect on Defence aviation capability, as summarised below:

1. **Defence registration.** Defence registration ensures the aircraft is within the exclusive jurisdiction of the DASR, which make specific allowance for:
   i. uniquely military roles, including weapons carriage and deployment, low flying, aerial delivery, clandestine flying, formation flying, transporting hazardous materials and dangerous goods etc — types of operations that may be heavily restricted or unsupportable under civil regulatory requirements
   ii. flexibility in the approach to achieving compliance with the DASR

Superseded

iii. the application of risk management where DASR compliance cannot be shown, provided a credible and defensible level of aviation safety performance is achieved

iv. Commanders to deviate from requirements (2) and (3) above in the event of compelling operational imperatives or emergencies.

DASA is experienced in regulating for the unique military operational context. Consequently, DASA is well-placed to advise Commanders on military aviation safety issues and to provide tailored independent safety assurance of military organisations and products.

2. **Civil registration.** Civil registration can initially be attractive to Capability Managers and acquisition organisations due to the simplicity of contractual and ongoing management, and potential faster introduction of the aircraft into service. However civil registration should only be considered for short term arrangements, or where an aircraft will not be considered a continuous 'State' aircraft. Complicating factors include that:

i. it can bind Defence to civil aviation safety regulations for design, maintenance and operation, and these regulations have not been customised to the unique military aviation context

ii. there may be a lack of risk-managed operational flexibility, which is the hallmark of Defence's aviation safety regulations

iii. it can bind Defence to the potential inflexibilities of the civil regulator

iv. there may be adverse diplomatic and security implications of Defence operating a non-Defence registered aircraft overseas.

6.1.1.13 Where a Capability Manager is considering civil registration for a temporary Defence aircraft, DASA should be engaged at the earliest practicable opportunity for consultation. Annex A presents a list of issues that should be explored during this engagement, to assist the Capability Manager in making an informed decision on Defence registration versus civil registration.

6.1.1.14 Annex B presents guidance on the structure and administration of the Defence Register.

Aviation Safety Responsibilities

6.1.1.15 DASP Manual Volume 1 states that aviation safety is a command responsibility, so commanders and managers are accountable for ensuring aviation systems under their command or control are designed, constructed, maintained, and operated to approved standards and limitations by competent and authorised personnel acting as members of an approved organisation.

6.1.1.16 The responsibility for ensuring (ie making sure) a new Defence aircraft is safe for flight falls directly on the Defence acquisition organisations and the relevant in-service support organisations. This includes, amongst other things, ensuring:

1. the aircraft design is safe for flight in the intended role and operating environment (ie aircraft design and certification)

2. the physical aircraft standard of construction meets that design (ie aircraft production)

3. arrangements are in place to ensure the design remains safe (ie continued airworthiness)

Superseded

4. arrangements are in place to ensure the aircraft remains in a condition for safe operation (ie continuing airworthiness)

5. arrangements are in place to design future changes and repairs (ie aircraft design)

6. operators are able to safely operate the aircraft (ie flight operations).

6.1.1.17 The role of DASA, on the other hand, is to gain assurance that the above elements have been executed effectively.

Aviation safety authorisations

6.1.1.18 When assured of safety, the relevant military or civil aviation safety authority (whether DASA or CASA) may issue a range of authorisations, often in the form of certificates, permits, approvals or licenses. For Defence registered aircraft, the list of authorisations is expansive, potentially comprising up to 12 different types of organisational, product and personnel authorisations. For civil registered aircraft, CASA will issue the civil equivalents to some or many of these 12 authorisations. Chapters 6.1.2 to 6.1.5 explore the Aviation Safety authorisations that may be issued by DASA and CASA for each acquisition category.

6.1.1.19 While DASA does not issue authorisations for civil registered aircraft, DASA may require that the aircraft are included within the scope of the Military Air Operator (MAO), issue a relevant Operations Specification (OpSpec) and conduct limited safety assurance oversight.

6.1.1.20 **Planning and coordination.** Aviation Safety authorisations issued by DASA or CASA are a major milestone in the aircraft acquisition process. Establishing the contracts, systems and people to merit each authorisation is usually complex, with considerable potential to waste time and resources. Effective engagement with the appropriate Aviation Safety authority (DASA for Defence registered aircraft, and both CASA and DASA for civil registered aircraft) is therefore in the best interests of all parties.

6.1.1.21 Engagement should ideally commence as soon as the Defence acquisition organisation has a reasonable view on the candidate aircraft, the need for Defence-unique design changes, and the probable operating and support constructs[3]. Engagement should be well advanced before Defence publishes any tender documents (eg Requests for Tender, Foreign Military Sales requests, etc) that may later affect an authorisation.

6.1.1.22. For civil registered aircraft, CASA will provide guidance on how to achieve the civil authorisations that will be required. DASA will do likewise for the new OpSpec, if one is to be published. This development of this DASA authorisation is far from a trivial endeavour. Not only does it cover the flying management of the MAO and other operational systems for the new aircraft, it also assesses whether the entire aviation safety construct (inclusive of all CASA authorisations) is likely to support safe Defence aviation.

6.1.1.23 For Defence registered aircraft, DASA will provide guidance on how to achieve the required DASA authorisations. Some additional guidance is available through DASA-sponsored courses and website resources.

6.1.1.24 Chapters 6.1.2 to 6.1.4 provide tailored guidance on how engage with the relevant Aviation Safety authorities, since this varies widely between civil and Defence registered aircraft, and crewed and uncrewed aircraft.

Superseded

6.1.1.25 **Documented agreements.** DASRs do not mandate any formal plans or agreements for achieving DASA authorisations. However, it is a practice that DASA highly recommends, given the substantial complexities in establishing the organisations and systems to manage Aviation Safety, and therefore the potential impacts (both positive and negative) on cost and schedule - and ultimately Defence capability.

6.1.1.26 For both Defence and civil registered aircraft, DASA advocates the production of an Aviation Safety Acquisition Management Plan (ASAMP). The ASAMP is an iterative agreement between applicants and DASA on the path to achieving DASA authorisations, and supports commanders and managers in accounting for parallel lines of effort and cross-regulation dependencies. It describes, amongst other things, the overarching acquisition strategy in the context of Aviation Safety and brings together the planned outcomes of the operational, technical, logistical and safety management activities.

6.1.1.27 The ASAMP should be drafted after the acquisition strategy solidifies, nominally following government acquisition approval, but before RFTs (or equivalent) are released. While ASAMPs have previously been drafted before initial contact with DASA has been made, this is rarely an efficient approach. The ideal time to draft the ASAMP is soon after the initial meeting with DASA, given that meeting will influence much of the ASAMP content. The ASAMP would normally be updated after contracts and agreements are signed, since this is the stage where the scope of most authorisations should be clear.

6.1.1.28 Chapters 6.1.2 to 6.1.5 provide guidance on the production of ASAMPs, tailored to the particular acquisition arrangement. ASAMP content varies widely between civil and Defence registered aircraft, with the latter including plans for achieving up to 12 different DASA authorisations. While the differences between crewed and uncrewed aircraft ASAMPs are less significant, the latter will focus on the unique challenges of separating the crew from the aircraft and the additional transitional authorisations that may be available for certified UAS.

Common Concepts

6.1.1.29 The next four chapters are dedicated to the four acquisition arrangements listed at Paragraph 6.1.1.6. To avoid duplication in those chapters, the remainder of this chapter will introduce several concepts that are likely to be common to each acquisition arrangement.

Recognition

6.1.1.30 Aviation Safety authority may acknowledge that products, services and data received from another Aviation Safety authority and the respective system they oversight are compatible within their own Aviation Safety framework. This concept, known as ‘recognition’, is extensively employed for new Defence aircraft acquisitions. Regardless of whether a new aircraft is Defence registered or not, recognition will almost certainly be applied for aircraft design and production. For non-Defence registered aircraft, recognition will also contribute to Defence’s confidence in aircraft maintenance and operation. DASP Manual Volume 3 Chapter 6.5, Recognition of Other Aviation Safety Authorities, provides further guidance on the application of recognition.

6.1.1.31 Where recognition is being considered for a certified UAS, DASA advice should be sought. Certified UAS are not yet commonplace, so the competence and capability of international Aviation Safety authorities in regulating and oversighting certified UAS is still evolving.

Statement of Operating Intent and Usage (SOIU)

Superseded

6.1.1.32 DASRs require all Defence registered aircraft and certified UAS (and certain other UAS when directed by the Authority) to have a Statement of Operating Intent (SOIU) that has been approved by the relevant Environmental Commander and DASA. The SOIU describes the approved roles, operating envelope, usage spectrum and operating environment for a particular aircraft type.

6.1.1.33 Development of an SOIU is not mandatory for a non-Defence registered aircraft, but may assist MAOs with establishing the operational context of their intended operations, to assist with identification of any additional safety controls required to provide an equivalent level of safety to that of Defence registered aircraft.

6.1.1.34 Annex C presents further information and development guidance for SOIUs.

Independent Review of Aviation Safety

6.1.1.35 DASP Manual Volume 3 Chapter 6, Independent Review of Aviation Safety, provides information on the scope and role of Airworthiness Boards (AwBs) within the framework of capability acquisition.

6.1.1.36 Historically, AwBs were identified as a 'gate' for issuance of some DASA authorisations. The contemporary role of the AwB in the acquisition process is to complement the role of the regulator in addressing parts of the 'system of systems' that are not adequately covered through regulatory oversight activity. DASA identifies that this increases flexibility and reduces the impost on the regulated community.

6.1.1.37 Chapters 6.1.2 to 6.1.4 provide guidance on the documentation package provided to Introduction into Service (IIS) AwBs for each acquisition type. The documentation will commonly consist of:

1. the extant submissions for the relevant DASA authorisations
2. an updated ASAMP which reflects the status of the acquisition program, details and plans for outstanding activities, and impact statements and associated risk management for outstanding activities
3. checklists and other artefacts.

6.1.1.38 An AwB is commonly convened prior to the first operation of a Defence registered aircraft, due to the often complex nature of organisational, risk management and other elements. Notwithstanding the aforementioned, there is no regulatory impediment to commencing limited operations, commensurate with risk, prior to the conduct and reporting of an IIS AwB. Progressive AwBs may be convened as the organisations and operational capabilities evolve.

6.1.1.39 An IIS AwB may be less common for non-Defence registered aircraft given that Defence aircraft that are continuous 'State' aircraft should be Defence registered. When determining whether an AwB is required, the Defence AA may take into account the complexity of support arrangements, whether Defence's operations are closely aligned to civil norms, and other similar factors.

6.1.2 Acquisition of (Crewed) Defence Registered Aircraft

Introduction

6.1.2.1 Aviation safety is a command and management responsibility. Commanders and senior managers are accountable for ensuring aviation systems under their command or control are designed, constructed, maintained, and operated to approved standards and limitations by competent and authorised personnel acting as members of an approved organisation.

6.1.2.2 Provided the aircraft and its support and operating arrangements meet the relevant Defence Aviation Safety Regulation (DASR) requirements, DASA may issue a range of 'authorisations', in the form of certificates, permits, approvals or licenses. These authorisations provide confidence to both the Capability Manager and the Australian Government that the aircraft is capable of safe flight.

6.1.2.3 While the respective DASRs define the required safety outcomes for these DASA authorisations, history has shown that additional guidance is needed if safety risks are to be efficiently and effectively eliminated or otherwise minimised so far as is reasonably practicable.

Purpose

6.1.2.4 This chapter guides Defence's aircraft acquisition organisations, relevant in-service organisations and Defence industry partners through the aviation safety requirements and recommended practices during the acquisition (whether through purchase, lease or other arrangement) of crewed aircraft that will be Defence registered.

Regulatory outcomes from the acquisition process

6.1.2.5 For a new Defence registered aircraft to operate, Command must ensure it is safe for flight. Command achieves this by ensuring the aircraft are designed, constructed, maintained and operated to approved standards and limitations by competent and authorised personnel acting as members of an approved organisation. In turn, if suitably assured of safety, DASA may issue a range of authorisations. Depending on the acquisition and support arrangements, this can extend to 12 different types of organisational, product and personnel authorisations, as follows:

1. organisational authorisations:
    - i. Military Air Operator (MAO)
    - ii. Military Design Organisation (MDO)
    - iii. Military Production Organisation (MPO)
    - iv. Approved Maintenance Organisation (AMO)
    - v. Continuing Airworthiness Management Organisation (CAMO)
    - vi. Maintenance Training Organisation (MTO)
    - vii. Military Type Certificate Holder (MTCH) (currently an implicit authorisation)
2. product authorisations:
    - i. Military Type Certificate (MTC) and associated Type Certificate Data Sheet (TCDS)
    - ii. Military Permit to Fly (MPTF)
    - iii. Aircraft Management Programme (AMP)

Superseded

iv. Military Certificate of Airworthiness (CoA)

Note: *In addition, it may include a range of niche authorisations, for example a product conformity agreement, master minimum equipment list, and so on.*

3. personnel authorisations:

i. Military Aircraft Maintenance Licence (MAML)

Note: *DASA directly authorises certain management personnel within approved organisations. However, those authorisations are considered to be part of the organisational approval process in this chapter, so they are not separately listed here.*

6.1.2.6 Figure 1 summarises the range of DASA authorisations that are usually relevant to a new aircraft acquisition, grouped according to their relevance to aircraft design, construction, maintenance or operation. The subsequent paragraphs separately explore each group.

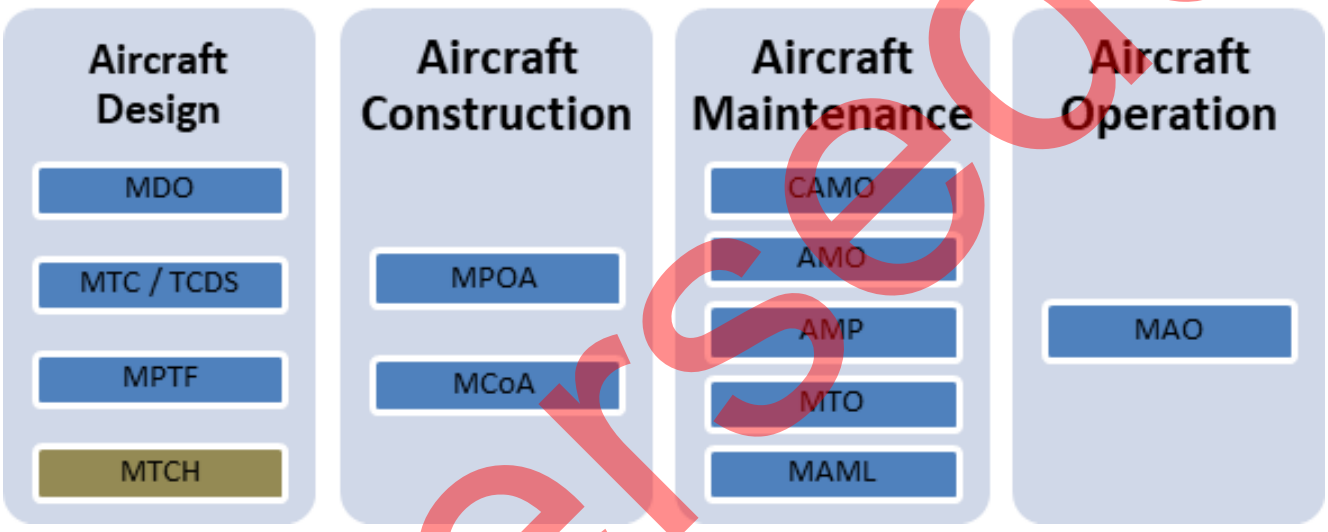

Figure 1: DASA authorisations relevant to Defence aircraft acquisitions[4]

Aircraft design (and certification)

6.1.2.7 New Defence crewed aircraft will normally be civil or military 'off-the-shelf' aircraft that are subsequently modified to meet Defence's capability requirements. Ensuring the final aircraft design is safe for flight in Defence's intended Configuration, Role and Environment (CRE) is a critical step in the acquisition process. Four separate DASA authorisations are relevant to this process, design, construction, maintenance or operation.

6.1.2.8 **Military Design Organisation (for initial aircraft design).** An organisation that has been approved by DASA to provide aircraft design services for a new Defence aircraft is termed a Military Design Organisation (MDO). These MDOs may be a military or industry organisation, and may be located in Australia or overseas. MDOs are often required for the design of new Defence aircraft, although as explored in the next four paragraphs, this requirement can be reduced, or even eliminated, in some circumstances.

6.1.2.9 **Military Type Certificate.** The Defence type certification process is central to confirming that the aircraft design is safe for Defence's intended Configuration, Role and Configuration (CRE) for the aircraft. At its core is the Type Certification Basis (TCB), which is a DASA-agreed set of

Superseded

airworthiness design requirements, including an airworthiness code and other standards, and tailoring to both as required.

6.1.2.10 At its extreme, type certification requires a DASA-approved MDO to create an aircraft design that complies with the TCB, and to produce evidence that demonstrates this compliance. In turn, DASA examines the evidence on a non-exhaustive basis, and if assured of safety, issues a Military Type Certificate (MTC)[5] and associated TCDS.

6.1.2.11 There is, however, a shortcut to the above approach that is employed for most Defence aircraft acquisitions. When Defence is procuring off-the-shelf aircraft or equipment, the Applicant[6] may seek relief from the need to develop new compliance demonstration evidence, to the extent an extant certification by a recognised National or Military Aviation Authority (NAA/MAA) is relevant to Defence's CRE. This is known as 'recognition of prior certification'. In rare circumstances, DASA can certify an entire new aircraft based solely on the prior certification of another NAA/MAA.

6.1.2.12 More commonly, however, Defence aircraft acquisitions employ a combination of the above two processes. That is, recognition of prior certification is used to cover the design of the off-the-shelf aircraft, and a DASA-approved MDO designs the Defence-unique modifications and produces the requisite compliance demonstration evidence. Sometimes another NAA/MAA may agree to certify some or all of the Defence-unique modifications, which may reduce or even remove the need for a DASA-approved MDO.

6.1.2.13 **Military Type Certificate Holder.** The MTC for a new Defence aircraft is issued by DASA to the Military Type Certificate Holder (MTCH), who takes on responsibility for ensuring the 'continued airworthiness' of the design[7]. This role is normally assigned to the relevant Defence SPO, who will implement standing arrangements with other Defence organisations, industry partners, and perhaps other militaries, to support the function. Amongst other things, the MTCH organisation is responsible for implementing systems for collecting, investigating and analysing aircraft occurrences which may affect its airworthiness, and holding (or providing access to) aircraft design information.

6.1.2.14 Note that DASA does not currently issue an explicit organisational approval for MTCHs, although this may change. Instead, the proposed MTCH arrangement is evaluated by DASA as part of its deliberations on whether to issue a MTC.

6.1.2.15 **Military Permit to Fly.** It is possible for DASA to issue a MTC for a new aircraft type immediately upon its addition to the Defence Register. More likely, however, there will be a period where the aircraft is not yet ready for a MTC because, for example:

1. the aircraft design is still under development
2. compliance demonstration evidence is still being created or compiled
3. Defence's MTC will leverage off the certification of another NAA/MAA, which is yet to be finalised

6.1.2.16 DASA can issue a Military Permit to Fly (MPTF) to a MAO[8] in advance of the MTC if satisfied the aircraft design substantially complies with its agreed TCB, the configuration of the subject aircraft is clearly defined, the aircraft is capable of safe flight under defined conditions and for specified purposes, and any elevated risk has been justifiably retained. However, since the MPTF will usually impose (often significant) risk controls that limit the operation of the aircraft, extended operations under an MPTF are not common.

Superseded

6.1.2.17 **Military Design Organisations (for in-service support).** Finally, throughout an aircraft's operational life, design changes are inevitable to remedy design defects, address obsolescence issues, design repairs, implement capability enhancements, and so on. These design changes will often be the purview of one or more DASA-approved MDOs, which are typically (but not essentially) the same as the MDOs that support the MTCH function.

6.1.2.18 Ultimately, both the MTCH and Continuing Airworthiness Management Organisation (CAMO – see below) must be able to demonstrate that sufficient design support arrangements are in place to maintain the safety of the aircraft[9], before a new aircraft is operated on the Defence Register. Depending on the aircraft acquisition contract, this design support function might initially be provided by the aircraft Original Equipment Manufacturer (OEM); if so, the in-service MDOs might not be needed immediately.

6.1.2.19 **Summary.** Summarised, the four DASA design-related authorisations that are usually relevant to aircraft acquisitions are presented in Figure 2. The MTCH is depicted in a different colour, to show that DASA does not (yet) directly issue an MTCH approval.

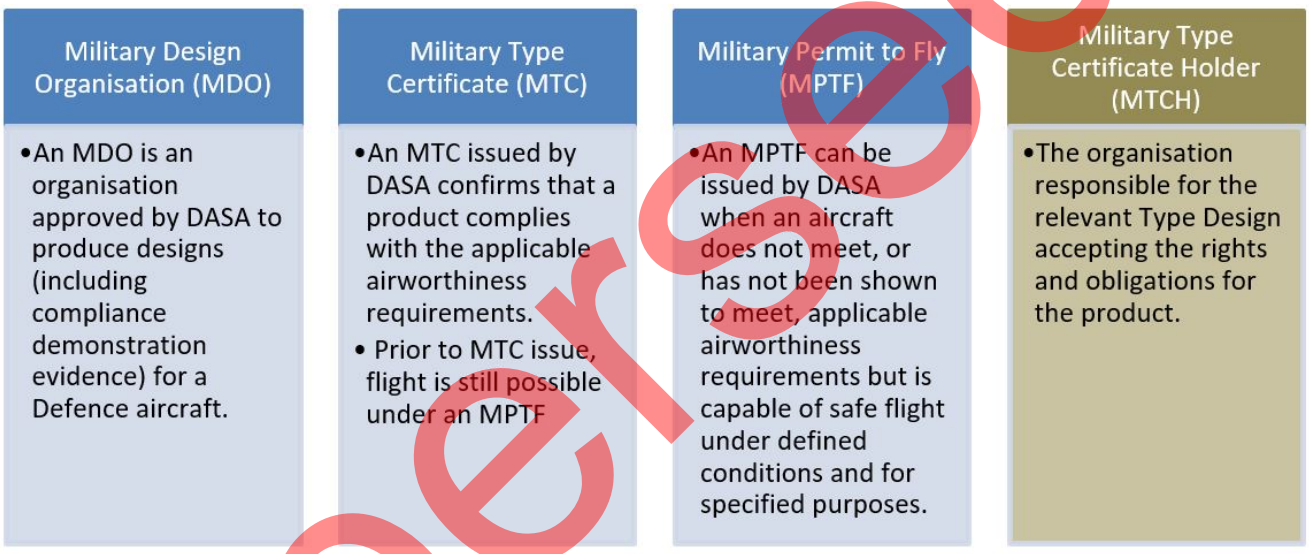

Figure 2: DASA authorisations related to aircraft design

6.1.2.20 DASP Manual Volume 3 Chapter 5.3, Aviation Safety Authorisations, provides additional insight into MDOs, MTCs, MPTFs and MTCHs.

Aircraft production (or construction)

6.1.2.21 A MTC focuses on the safety of an aircraft's design. It does not consider the subsequent manufacture and assembly of the design, which is the purview of aircraft production (or 'construction' in historic Defence parlance). The two DASA authorisations relevant to new aircraft production are Military Production Organisations and Military Certificates of Airworthiness.

6.1.2.22 **Military Production Organisation.** A Military Production Organisation (MPO) is a DASA-approved organisation that can manufacture and assemble parts, appliances, aircraft, engines or propellers to approved design data[10]. In the context of a Defence aircraft acquisition, MPOs can manufacture and assemble both the baseline aircraft (often called the 'green' aircraft) and the

Superseded

Defence-unique modifications to the green aircraft. They may be the same organisation, or there may be multiple different MPOs.

6.1.2.23 More commonly for new aircraft, however, Defence leverages the oversight provided by a DASA-recognised NAA/MAA of certain production organisations. This can reduce, or even eliminate, the need for DASA-approved MPOs.

6.1.2.24 **Military Certificate of Airworthiness.** As noted previously, a MTC is issued for an aircraft type. A separate DASA authorisation needs to subsequently be issued for each aircraft tail, namely the Military Certificate of Airworthiness (MCoA)[11], once DASA is satisfied the produced aircraft conforms to the design covered by the MTC. Central to DASA issuance of a MCoA is evidence that each product, part or appliance conforms to the approved design data and is in condition for safe operation.

6.1.2.25 A MCoA cannot be issued prior to the MTC. Where a new Defence aircraft is to be flown under a MPTF prior to the issue of a MTC, the MPTF effectively provides the function of the MCoA. As part of the process for seeking a MPTF, an applicant will need to demonstrate that the produced aircraft does indeed conform to the currently approved design data.

6.1.2.26 **Summary.** Summarised, the two DASA production-related authorisations that are usually relevant to new aircraft acquisitions are presented in Figure 3.

Figure 3: DASA authorisations related to production

6.1.2.27 DASP Manual Volume 3 Chapter 5.3, Aviation Safety Authorisations, provides additional insight into MPOs and MCoAs.

Aircraft maintenance (continuing airworthiness)

6.1.2.28 While Defence has long used the colloquial term of 'aircraft maintenance' to cover airworthiness activities beyond aircraft design and production, the DASRs purposely use the more expansive term of 'continuing airworthiness'. Aircraft maintenance is any one or combination of overhaul, repair, inspection, replacement, modification or defect/fault rectification of an aircraft or component. Continuing airworthiness encompasses this, plus maintenance management,

Superseded

maintenance training and maintenance licensing. For completeness, this section will use the term 'continuing airworthiness'.

6.1.2.29 Robust continuing airworthiness arrangements must be in place prior to the operation of a new Defence aircraft. Once assured of the sufficiency of these arrangements, DASA may issue three relevant organisational approvals, namely Continuing Airworthiness Management Organisations, Approved Maintenance Organisations and Maintenance Training Organisations. DASA may also approve Aircraft Maintenance Programmes and issue Military Aircraft Maintenance Licences to eligible personnel.

6.1.2.30 **Continuing Airworthiness Management Organisation.** Continuing Airworthiness covers all processes that ensure an aircraft continues to comply with initial airworthiness requirements and supports the ongoing validity of the aircraft's MCoA. The Continuing Airworthiness Management Organisation (CAMO), while not directly responsible for actual aircraft maintenance, is responsible for engaging organisations to conduct design and maintenance services. The CAMO will:

1. engage MDO(s) for design services as required
2. engage the MTCH for any matters that impact the aircraft's type design and type certification under MTC or an individual aircraft's CoA]
3. task AMOs to maintain products (aircraft, engines and propellers), parts and appliances and
4. provide governance and oversight to organisations performing DASR M functions on its behalf.

6.1.2.31 In most cases, the acquisition of a new aircraft type will not result in the creation of a new CAMO; rather, the scope of an extant CAMO will be expanded to include the new aircraft type. The presence of a suitable CAMO is integral to DASA's approval of a new MAO, or adding an additional aircraft to an extant MAO's scope.

6.1.2.32 **Aircraft Maintenance Organisations.** DASR provides two avenues for the maintenance of an aircraft and its components. The first is a DASA-approved Approved Maintenance Organisation (AMO), and the second is 'another maintenance organisation accepted by DASA'. A combination of both is usually employed for Defence aircraft.

6.1.2.33 An AMO is an organisation approved by DASA to conduct aircraft maintenance activities. This includes all actions required for restoring and maintaining an item in a serviceable condition including servicing, repair, modification, overhaul, inspection and determination of condition to maintain aircraft safety and airworthiness. AMOs may be a military or Defence Industry organisation, may be located in Australia or overseas, and may encompass one or multiple aircraft types. New Defence aircraft may be supported by one or several AMOs.

6.1.2.34 DASR Part M makes provision for maintenance services to be consumed from other maintenance organisations that are accepted by DASA. While the regulation infers that DASA explicitly accepts each of these maintenance organisations, this is not normally the case. Rather, DASA will automatically accept a maintenance organisation provided it is oversighted by a NAA/MAA that is 'recognised' as competent by DASA, and provided the CAMO ensures the conditions and caveats on the relevant 'recognition certificate' are met. Recognition certificates for each NAA/MAA recognised by DASA are available on DASA's website.

6.1.2.35 Prior to operation of a new Defence aircraft, the CAMO must demonstrate that arrangements are in place to maintain the aircraft in an airworthy condition. In limited circumstances,

Superseded

DASA may agree to the temporary absence of some maintenance arrangements, but only where this does not affect the near-term support of the aircraft.

6.1.2.36 **Aircraft Maintenance Programme.** An Aircraft Maintenance Programme (AMP) describes the scheduled maintenance tasks, their frequency of completion, the associated maintenance procedures, and so on, necessary to preserve the airworthiness of the aircraft. For aircraft acquisition projects, an initial AMP must be approved by DASA prior to the conduct of any maintenance activities. Maintenance activities can in some cases pre-date flying operations on the Defence Register, since they include aircraft preservation and other maintenance tasks required to prepare the aircraft for operation.

6.1.2.37 **Military Aircraft Maintenance Licenses.** AMOs require some personnel to hold particular categories of Military Aircraft Maintenance Licences (MAMLs). Furthermore, in order to be entitled to exercise certification privileges on a specific aircraft type, the holder of a MAML requires their licence to be endorsed with the relevant aircraft type ratings. As part of the AMO approval process for a new aircraft, the AMO will need to demonstrate that its personnel hold sufficient and applicable MAMLs.

6.1.2.38 **Maintenance Training Organisation.** A Maintenance Training Organisation (MTO) conducts training and examinations for maintenance personnel as specified in DASR 66. While a new MTO would rarely be required for a new Defence aircraft, an extant MTO would need to demonstrate its competence to conduct the type/task training and assessments for the new aircraft.

6.1.2.39 **Summary.** Summarised, the five DASA authorisations related to continuing airworthiness (of which maintenance is a component) of Defence aircraft acquisitions are presented in Figure 4.

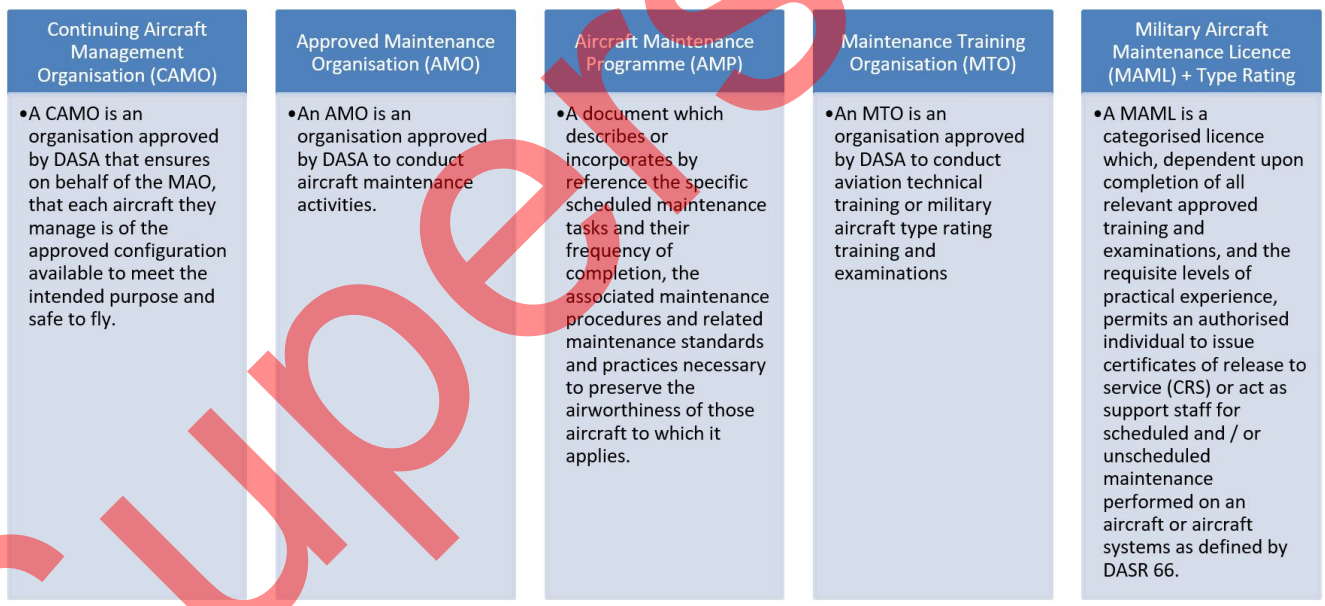

Figure 4: DASA continuing airworthiness-related authorisations

6.1.2.40 DASPMAN Volume 3 Chapter 5.3, Aviation Safety Authorisations, provides additional insight into CAMOs, AMOs, AMPs, MTOs and MAMLs.

Aircraft operation

6.1.2.41 A Military Air Operator Certificate (MAOC) is the principal authorisation granted by DASA to conduct military air activities. Each aircraft type operated by the MAO is authorised by a separate DASA-issued Operations Specification (OpSpec) annex. The OpSpec annex details, amongst other

Superseded

things, key positions of the MAO, operating provisions, roles and tasks, specific approvals, and any limitations or conditions imposed by DASA.

6.1.2.42 The relevant OpSpec annex is required before first flight of the aircraft by the MAO[12]. DASA will issue the OpSpec annex once assured that the necessary Fundamental Inputs to Capability (FIC) elements, as well as quality and safety management systems, are in place to support intended operations.

6.1.2.43 Preparing a MAO to take on a new Defence aircraft can be a substantial undertaking. Amongst other things, for the new aircraft type the MAO will need to:

1. define the operating intent and usage for the aircraft through an approved Statement of Operating Intent and Usage (SOIU)
2. ensure arrangements are in place for maintaining the airworthiness of the aircraft through a CAMO and AMOs
3. implement the multitude of systems needed to manage Operations personnel and Air operations
4. produce/accept Orders, Instructions and Publications (OIP)[13]
5. establish an Aviation Safety Management System (ASMS).

6.1.2.44 Implementing these requirements, even for an existing MAO, is likely to require considerable planning and effort. Consequently, DASA recognises that a graduated capability growth plan for operational authorisations may be required. The Aviation Safety Acquisition Management Plan (ASAMP - see Chapter 6.1.1 and later in this chapter) is a suitable repository for reflecting the status of the acquisition program, including details of work completed, re-programing of remaining activities and risk management for the incomplete tasks.

6.1.2.45 **Summary.** Summarised, the singe DASA flight operations-related authorisation relevant to aircraft acquisitions is presented in Figure 5.

Superseded

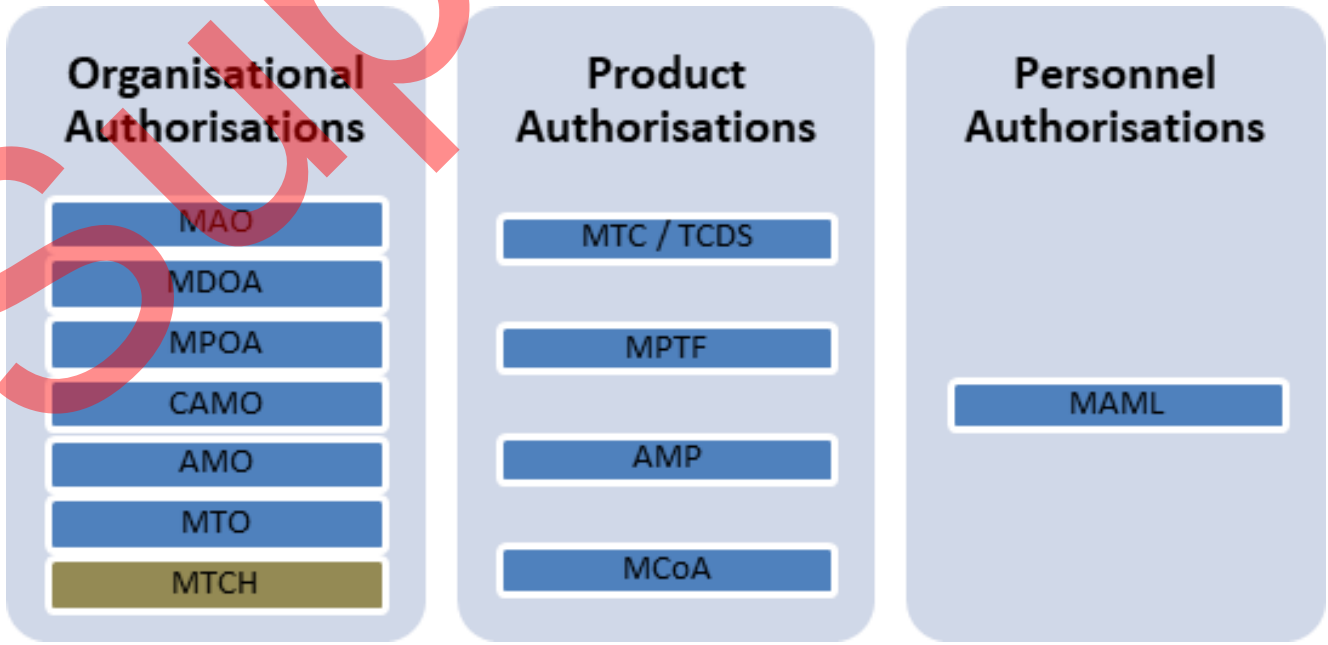
Figure 5: DASA authorisations related to aircraft operations

6.1.2.46 Chapter 5.3, Aviation Safety Authorisations, provides additional insight into MAOs.

Summary

6.1.2.47 This section has presented an overview of the DASA authorisations that may be relevant to new aircraft design, construction, maintenance and operation. Depending on the acquisition arrangements and the aircraft role, some authorisations might not be required.

6.1.2.48 The diagram at the start of this section (Figure 1) summarised all of the possible DASA authorisations according to whether they were relevant to new aircraft design, construction, maintenance or operation. However, another way of grouping them is according to whether they are organisational, product or personnel authorisations, as shown in Figure 6.



Superseded

Figure 6: DASA authorisations for new aircraft (grouped by category)

6.1.2.49 This grouping has the advantage that the eight organisational authorisations all use substantially the same processes for application and approval, and the three product authorisations have strong synergies. Consequently, for simplicity, this grouping will be used in the next section.

Processes, Plans and DASA Interaction

6.1.2.50 The previous section presented an overview of the DASA authorisations that may be relevant to new aircraft acquisitions. While the respective DASRs define the required safety outcomes for these DASA authorisations, history has shown that achieving the authorisations can be a complex and protracted journey. This section guides the reader though the process of achieving these DASA authorisations.

6.1.2.51 Figure 7 shows how the various DASA authorisations usually fit onto a project timeline. The vertical stripes present four significant milestones for introducing a new aircraft to Defence, the items above the dashed line show DASP-related project and Command activities, and the items below the line show the DASA authorisations. A time scale has purposely not been included, because this can vary enormously between aircraft acquisitions.

Superseded

Figure 7: Common project timeline for DASA authorisations

6.1.2.52 The elements below the dashed line can broadly be grouped into five activities, as shown in Figure 8. With the exception of Activity 1, the remaining activities are rarely sequential; more often than not Activities 2 and 3 are executed concurrently, and several activities may be cyclic.

Superseded

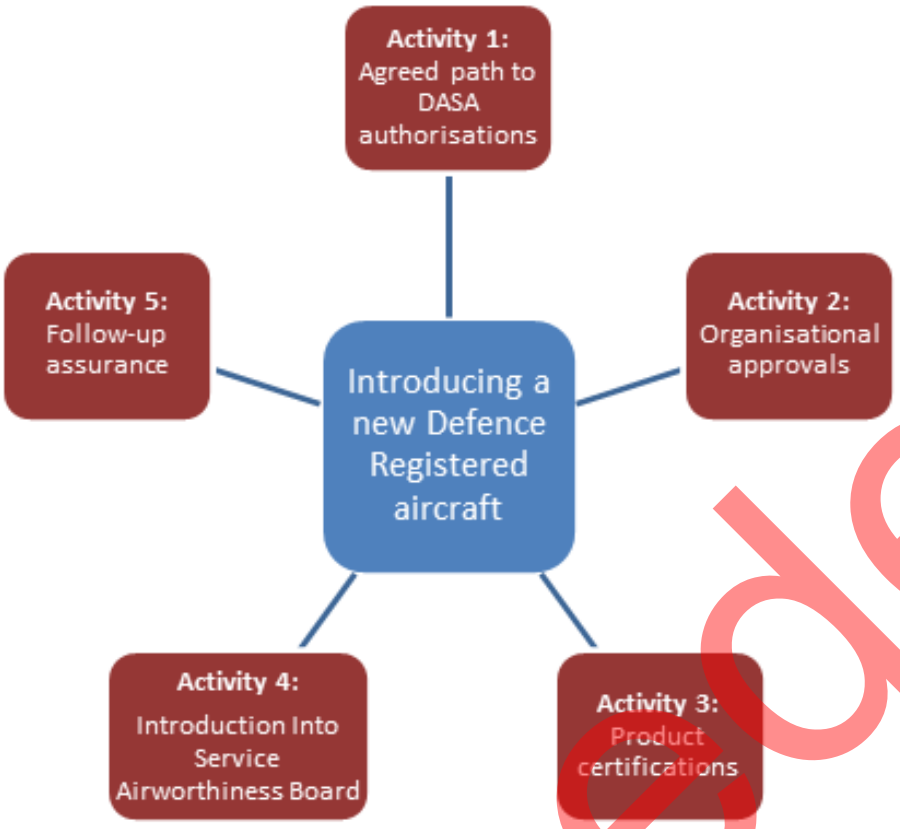


Figure 8: Activities in introducing a new Defence aircraft

6.1.2.53 Each of these five activities from Figure 8 is explored below.

Activity 1: Agreed path to authorisations

6.1.2.54 A major milestone in the aircraft acquisition process is the achievement of a range of DASA authorisations. However, establishing the contracts, systems and people to merit each authorisation is usually complex, with considerable potential to waste time and resources. Effective engagement with DASA is therefore in the best interests of all parties.

6.1.2.55 **Initial engagement.** Engagement should ideally commence as soon as Defence's acquisition organisation has a reasonable view on the candidate aircraft, the need for Defence-unique design changes, and the probable operating and support constructs[14]. Engagement should be well-advanced before Defence issues any tender documents (eg Requests for Tender, Foreign Military Sales Letter of Requests, etc) that may later affect an authorisation.

6.1.2.56 The initial engagement should involve DASA specialists, the Defence acquisition organisation, and capability manager representatives. If known, the Defence and industry organisations that will support the aircraft could also participate. Key outcomes will be:

1. a shared understanding of the project scope and schedule, candidate aircraft and the likely scope of Defence-unique design changes

Superseded

2. initial views on which of the seven DASA organisational approvals are likely to be needed and, for those that may not be needed, agree on the alternative means of achieving the same safety outcomes

3. initial views on how the aircraft might achieve an MTC, including how current or future certifications by DASA-recognised national or military airworthiness authorities (NAA/ MAAs) might contribute

4. initial views on whether an MPTF might be required to allow for test and other flying prior to the issue of an MTC

5. DASA should provide a management overview of each likely DASA authorisation, including: key milestones, common approval timeframes, recommended DASA collaboration, availability of training and other guidance material, and so on.

6.1.2.57 Annex A presents an expanded version of the above list, which can be used as a set of talking points for this initial engagement. Depending on the acquisition strategy, some of the details may initially be sparse. If so, further engagement should be scheduled for when the information is likely to become available, but still before releasing RFTs or equivalent documents.

6.1.2.58 **Documented agreement.** As noted in Chapter 6.1.1, DASRs do not mandate a plan or agreement for achieving DASA authorisations. It is, however, a practice that DASA highly recommends, given the substantial complexities in establishing the organisations and systems to manage aviation safety, and therefore the potential impacts (both positive and negative) on cost and schedule - and ultimately Defence capability.

6.1.2.59 DASA advocates the production of an Aviation Safety Acquisition Management Plan (ASAMP). The ASAMP is an iterative agreement between Applicants and DASA on the path to achieving DASA authorisations, and supports commanders and managers in accounting for parallel lines of effort and cross-regulation dependencies.

6.1.2.60 Annex B presents the suggested content and management arrangements for an ASAMP. Summarised, it suggests the main body of the ASAMP should describe the overarching aviation safety acquisition strategy and bring together the planned outcomes of the operational, technical, logistical and safety management activities. It should also describe the management of flight operations during acquisition, particularly if operations are to commence under an MPTF.

6.1.2.61 Annex B also suggests the ASAMP should include a series of annexes, with individual annexes dedicated to each DASA authorisation. Each annex could be sponsored by the relevant Applicant for the DASA authorisation, and could form an agreement between DASA and the Applicant on the path to the particular authorisation. For simple acquisitions, the annexes might directly present the information[15]. For more complex acquisitions, particularly where there are a range of Applicants for the various DASA authorisations, the annexes might merely contain a link to a planning document that is drafted and managed by the respective Applicant. Either way, the annexes should be 'modular', whereby each annex is configuration managed and approved separately to the main body of the ASAMP.

Superseded

6.1.2.62 The ASAMP should be drafted after the acquisition strategy solidifies (usually post Government approval), but before RFTs (or equivalent) are released. The ideal time to draft the ASAMP is usually soon after the initial engagement with DASA, and in fact that engagement will influence much of the ASAMP content. The ASAMP would normally be updated after contracts and agreements are signed, since the path to most DASA authorisations should be clear.

6.1.2.63 Once contracts and agreements are signed, the main body of the ASAMP need only be updated when there is a marked change in the acquisition strategy or high-level schedule for the project. The annexes, on the other hand, will probably be updated more frequently, particularly in the earlier stages of the project as knowledge and plans evolve.

6.1.2.64 **Ongoing engagement.** DASA's experience is that three forms of engagement should be maintained throughout the project lifecycle, as follows:

1. Periodic major stakeholder engagements, expanding on the initial engagement suggested previously in this section. This should occur throughout the acquisition project lifecycle, usually when significant milestones are approaching

2. Frequent coordination and status updates between senior project management staff (commonly the CASG Project Engineering Manager, the CM Transition Team lead, etc), and DASA's operational and technical leads for the acquisition

3. Engagement as required between each of the Applicants for a DASA authorisation and the respective DASA specialist.

6.1.2.65 **DASA assistance with contract reviews.** There is no DASR requirement for DASA to be engaged in seeking offers (eg RFT or equivalent), selecting the successful tenderer, negotiating the contract, and signing the contract. However, where a contract element may one day affect a DASA authorisation, prudent DASA involvement can reduce project cost and schedule risk. Areas where DASA can contribute include:

1. Prior to RFT (or equivalent) issue:

    i. confirming the RFT requirements for organisational approvals are appropriate for aircraft acquisition and/or in-service support

    ii. confirming the RFT airworthiness design requirements (including airworthiness codes and other standards), and proposed approach to aircraft certification, present a suitable pathway to MTC

    iii. confirming the RFT aircraft production arrangements present a suitable pathway to issue of MCoA

    iv. confirming aircraft registration pathways, particularly for significant modifications to a green aircraft by a third party

Superseded

v. providing expert input to specialist aircraft design technology requirements, such as aircraft structural integrity (ASI) design and in-service management systems.

2. For RFT assessment:

i. If any of the above RFT items seek preliminary plans for DASA organisational approvals or product certifications, then DASA can participate in the assessment of those plans

ii. otherwise, while the Defence acquisition organisation will conduct the tender evaluation, DASA staff are available for on-call advice and assistance as required[16]

3. For contract negotiation: DASA staff would rarely be directly involved in contract negotiations, but are available for on-call advice and assistance as required.

4. Final contract review: DASA does not review the mature contract prior to signature, but is available for advice and assistance as required.

6.1.2.66 **Delegations.** During the project lifecycle, organisations may elect to delegate their Command responsibilities, for example the appointment of the senior operator within the project transition team to make operational decisions in relation to the project. Once notified of the delegation, DASA will treat the decisions and approvals of the delegate as if the accountable manager had issued them.

6.1.2.67 Later in the project lifecycle, usually just before MTC issue, a 'Platform DoSA' will need to be appointed by DASA. The Platform DoSA role is normally delegated to the incumbent Defence CENGR of the platform MTCH organisation, and is responsible for assurance of MTCH actions with respect to reportable occurrences, issue of MCoAs, approval of flight conditions and issue of Airworthiness Directives. DASP Manual Volume 3 Chapter 4.3, Delegates of the Safety Authority, provides additional information.

Activity 2: Organisational approvals

6.1.2.68 Professional aircraft design, construction, maintenance and operation organisations are cornerstone to aviation safety. Implementing the required organisations for a new aircraft, and obtaining DASA approval of each organisation, is usually a significant activity for both the Applicants and DASA. This section explores the planning, establishment and assessment of new DASA-approved organisations.

6.1.2.69 **Planning.** As noted in Activity 1, the ASAMP should include a planning annex for each organisational approval. The ASAMP should plan for the organisational approvals to be achieved well prior to their need date, which are likely to be as follows:

Superseded

1. MAO: DASA authorisation is required prior to the first operation of the aircraft by the MAO[17]. This authorisation is reflected in DASA's issue of an OpSpec annex for the new aircraft

2. MDO:

   i. (for initial aircraft design): Required prior to design changes to the green aircraft, if those changes are not to be certified by a recognised NAA/MAA

   ii. (for in-service support): Required prior to first flight on the Defence Register, unless DASA has agreed to an alternative interim support arrangement

3. MTCH: Implementation of suitable MTCH arrangements are a prerequisite for issue of an MTC. However, depending on the acquisition arrangement, some of these functions may need to be in place earlier to support the initial MPTF

4. MPO: Required prior to any aircraft production activity, unless an alternative production approval path has been agreed by DASA

5. CAMO: Required prior to first flight of the aircraft on the Defence Register

6. AMO: Required prior to first flight of the aircraft on the Defence Register[19], unless an alternative interim maintenance arrangement has been agreed by DASA. AMOs will need MAMLs in sufficient numbers to meet AMO needs, relevant to the scope of operations and numbers of aircraft

7. MTO: Agreed in consultation with DASA.

6.1.2.70 Note that while DASA agreement to the above authorisation plans is not a regulatory requirement, it is encouraged by DASA. As Figure 9 shows, the time needed to implement a new organisation and then achieve a DASA organisational approval can be substantial, so careful management is needed to minimise Defence's schedule risk.

Superseded

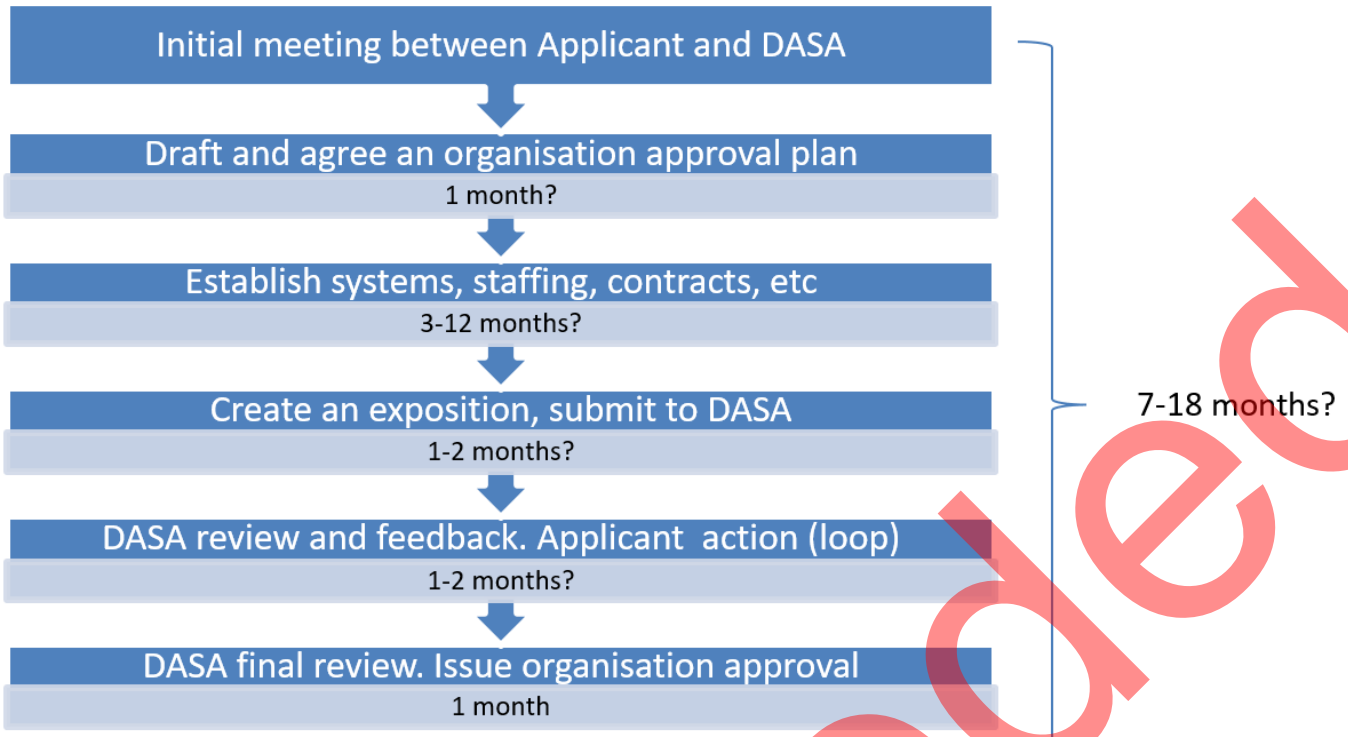

Figure 9: Timeline for DASA organisational approvals

6.1.2.71 **Establishing organisations.** DASP Manual Volume 3 Chapter 5.3, Aviation Safety Authorisations, presents a description of each DASA organisational approval, including the key artefact(s) needed to show regulatory compliance - for example, the MDO's design organisation handbook, the AMO's Maintenance Organisation Exposition (MOE), the MAO's Operations Compliance Statement (OCS), and so on. Each of these artefacts will help guide the Applicant's efforts to establish an organisation that professionally supports Defence aviation safety, as will the Acceptable Means of Compliance (AMC) and Guidance Material (GM) accompanying the relevant DASRs. DASA-sponsored education courses and DASA website material also offer useful information.

6.1.2.72 However, Applicants must bear in mind that such guidance may be incomplete, or not entirely relevant to the local context. Consequently, DASA cannot overstate the importance of the Applicant's role in refining the organisation beyond DASR (and DASA) requirements. This might include, for example:

1. learning from other Defence organisations
2. learning from comparable civil organisations[20]
3. exploring the (often extensive) guidance material released by other NAA/MAAs[21]
4. consulting with staff and others with relevant domain expertise.

6.1.2.73 A robust and evolving Aviation Safety Management System (ASMS) is pivotal to establishing an organisation that optimises its contribution to Defence aviation safety. An ASMS utilises a systematic

Superseded

approach to managing aviation safety, including organisational structures, accountabilities, policies and procedures. An effective ASMS continuously improves an organisation's safety performance through pro-actively collecting and analysing safety data to predict, prevent and treat aviation hazards and risks. DASP Manual Volume 3 Chapter 6.2, Safety Management, provides further guidance.

6.1.2.74 **DASA assessment.** The annexes in Chapter 5.3 provide insight into DASA's approach to assessing, and ultimately approving, a new or expanded organisational approval. Most approvals follow a similar process, namely:

1. the Applicant drafts an 'Exposition' or similar document, as key evidence that their organisation has implemented the systems and processes needed to comply with the relevant DASRs

2. the applicant submits the relevant DASR Form to seek an organisational approval

3. DASA conducts an assessment of the Exposition and the documents it references, often as a desktop activity for new organisations; on occasion DASA may do an on-site assessment

4. if needed, the applicant remedies any deficiencies that preclude DASA's approval of the organisation

5. DASA issues an organisational approval, perhaps initially limited in scope

6. once the aircraft is operating and the organisation has the opportunity to exercise its approval, DASA will conduct a deeper assessment, usually including an on-site visit, placing particular emphasis on the effectiveness of the ASMS and system monitoring.

6.1.2.75 Figure 10 summarises the path through to DASA approval for the seven organisations common to new aircraft acquisitions.

Superseded

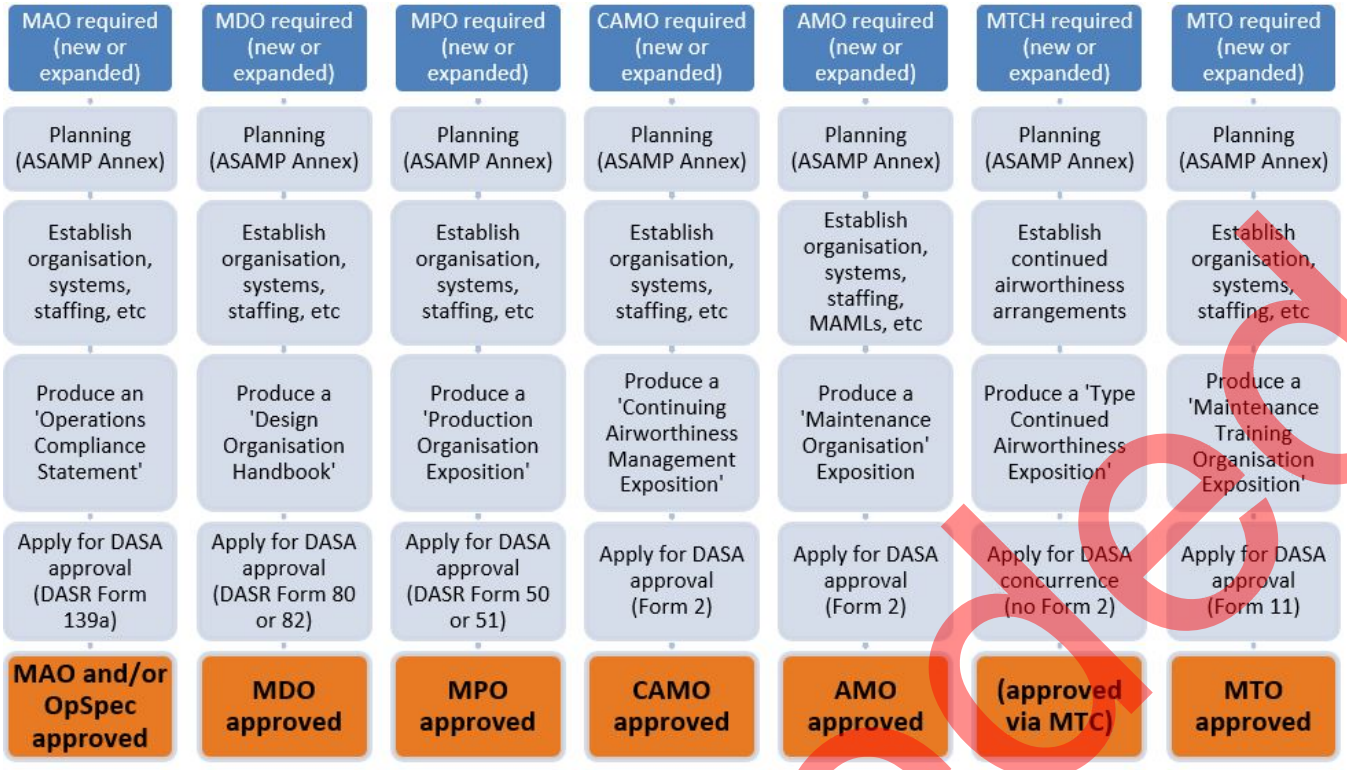

Figure 10: Path to DASA organisational approvals

Activity 3: Product authorisations

6.1.2.76 The four common product authorisations for new aircraft are the MTC, MCoA, MPTF and AMP. While an MPTF will often be issued prior to an MTC and MCoA, preparatory work on the other two will usually precede and support the issue of the MPTF. Hence, this section will consider the MPTF last.

6.1.2.77 Before exploring the four product authorisations, some brief discussion on safety risk management is warranted. Risk management is almost always a contributor to MTC and MPTF authorisations, so all stakeholders need to be conversant with Defence's 7-step risk management approach, as explained in the DASA Advisory Circular 003/2018, Risk Management in the DASP. Furthermore, DASA's experience is that this risk management is most effective when all parties robustly consult, cooperate and coordinate with each other. Critically, this must occur across organisational boundaries, and across specialisations (most notably between operators and engineers).

6.1.2.78 **MTC.** Achieving an MTC for a new aircraft is a significant milestone for an aircraft acquisition project, and one that commonly takes substantial planning and effort. While the path to an MTC is explored in DASP Manual Volume 3 Chapter 7.2, Certification, for the benefit of readers not needing that depth of information, a brief description of the process is included here.

Superseded

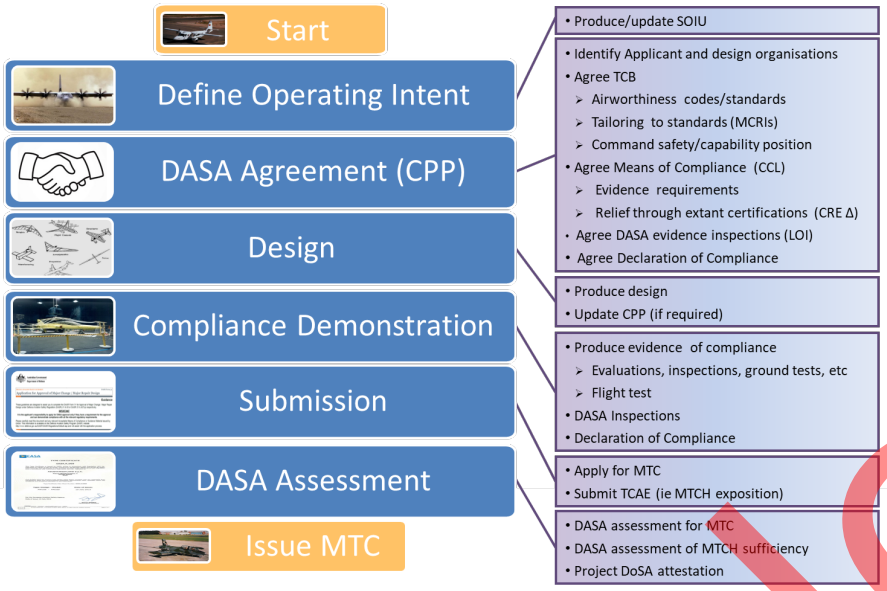

Figure 11: Path to issue of an MTC

6.1.2.79 An overview of the type certification process, culminating in an MTC, is shown in Figure 11. The first step, defining the operating intent for the aircraft, is pivotal to designers producing a design that is safe for Defence's intended Configuration, Role and Environment (CRE). A poorly-developed operating intent, or one developed late in the design lifecycle, can (and previously has) resulted in:

1. additional cost to re-design elements of the aircraft
2. operational limitations to eliminate the elevated risk, or
3. management and retention of elevated risk, often for the life of the aircraft.

6.1.2.80 The second step shows the Applicant and DASA agreeing on a Certification Program Plan (CPP). While a CPP is not explicitly required by DASR, it is inconceivable that Defence would pursue a certification program without an agreed CPP, since it imposes obligations on both the Applicant and DASA. Critically, the CPP:

1. agrees on the Type Certification Basis (TCB) for the new aircraft, which comprises the airworthiness requirements (inclusive of tailoring) that the design must meet
2. agrees on the evidence that will be produced by the design organisation(s) to demonstrate the design complies with the TCB
3. agrees on the application of 'recognition of prior acceptance', where existing product certifications by DASA-recognised NAA/MAAs will contribute to the certification of Defence's new aircraft [22]
4. defines the extent of DASA's inspections of compliance demonstration evidence.

Superseded

6.1.2.81 The tailoring of the TCB, mentioned in the first sub-paragraph above, is accomplished using one of five types of Military Certification Review Item (MCRI)[23]. Four of these MCRIs either maintain or improve the safety of the aircraft design, while the fifth, the 'Exception MCRI', can approve a reduction in the safety of the aircraft design. This reduction is only justifiable where requiring compliance with a TCB requirement would adversely affect Defence capability. While DASA ultimately approves the Exception MCRI, it is based heavily on Command's confirmation that a capability imperative exists, and that the risks due to the TCB non-compliance have been eliminated or otherwise minimised SFARP. The document used to communicate and record these Command risk decisions is normally the Airworthiness Issue Paper (AwIP). Guidance for AwIPs is provided at annex C.

6.1.2.82 The third step in the certification process is where the design organisation produces the design. For new Defence-unique designs, this often requires a DASA-approved MDO unless the design will be certified by a DASA-recognised NAA/MAA, as explained earlier in this chapter. The MDO must be in place before the design effort commences.

6.1.2.83 The fourth step, Compliance Demonstration, is where the MDO produces evidence that their design meets the DASA-agreed TCB. This step may require DASA approval of an MPTF to enable flight testing if the aircraft is already on the Defence Register. The MPTF is explored later in this section.

6.1.2.84 The fifth and six steps wrap up the certification process, and are largely self-explanatory. It is worth noting that while an Airworthiness Board (AwB) is not a prerequisite for DASA issue of an MTC, if the Defence Aviation Authority (Defence AA) elects to convene an AwB near to the MTC issue date, then DASA may wait until after that event to issue the MTC. AwBs are explored later in this chapter.

6.1.2.85 **MCoA.** As noted previously, an MCoA cannot be issued prior to the MTC. However, it is normal practice for the Defence acquisition organisation to be prepared in advance, so DASA[24]can issue MCoAs for the delivered fleet directly following the issue of the MTC. DASPMAN Volume 3 Chapter 5.3 presents the conditions and processes for MCoA issue.

6.1.2.86 **MPTF.** Once a new aircraft type has been added to the Defence Register, but prior to issue of the MTC, MAOs may need to operate the aircraft. For example, the flight test MAO may need to conduct flight tests to generate compliance demonstration evidence, and to contribute to operational test and evaluation (OT&E). The operational MAO may need to maintain crew currency, evolve OIP, conduct OT&E, and so on.

6.1.2.87 DASA can issue an MPTF if the aircraft design has been shown to substantially comply with its TCB, the configuration of the aircraft is clearly defined, the aircraft is capable of safe flight under defined conditions, and any elevated risk has been justifiably retained. An MPTF is effectively reliant on both the MTC and the MCoA processes being well-advanced.

6.1.2.88 The initial MPTF will usually constrain the MAO's operation of the aircraft. After all, the type certification program is still incomplete so there will be areas of the design that are known to be deficient or where uncertainty still remains, and hence the MPTF will impose commensurate risk controls. DASPMAN Volume 3 Chapter 7.5, Flight Conditions and MPTFs, explores MPTFs and their associated flight conditions, including risk management, the application process, periods of validity, and so on. The MAO will often self-impose additional constraints on flight operations, and will ease these constraints as the systems and personnel skills mature.

Superseded

6.1.2.89 **AMP.** CASG's Reliability and Aircraft Maintenance Program (RAMP) team, which is collocated with DASA's Melbourne office, provides Defence's centre of expertise for AMPs, and advises DASA on whether an AMP should be approved[25]. Both DASA and the RAMP team should be engaged early in the acquisition phase for guidance on AMP requirements.

Activity 4: Convene an Airworthiness Board

6.1.2.90 As discussed in Chapter 6.1.1, the Defence AA would normally require that an AwB be convened prior to operation of a new aircraft on the Defence Register[26]. The Introduction into Service AwB, normally held immediately prior to the commencement of flight operations, complement regulatory activities conducted by the DASA and build on the confidence of DASA authorisations. This AwB is underpinned by progressive check-ins by the board members with both DASA and the regulated community, focussing on:

1. understanding the status of DASA assurance of relevant products and organisations
2. safety assurance of the collective enterprise (CM, CASG, Industry) introducing the new platform;
3. potential organisational culture hazards; and
4. transition safety risks associated with the introduction of the capability through to reaching initial operational capability milestones.

6.1.2.91 The artefacts submitted by Applicants to the AwB would predominantly consist of already produced project documentation and attestations that collectively summarise the readiness to commence Flight Operations:

1. Airworthiness Plans, Artefacts, Approvals and Authorisations
2. FIC Status and Capability Realisation
3. Integrated Airworthiness System Assessment
4. MAO Risk Management and OIP

6.1.2.92 The Defence AA would normally require progressive AwBs during the initial operating period for a new aircraft, most likely aligned with key Operational Capability milestones. Hence the AwB can explore whether the operational and support systems are maturing commensurately. Periodicity might be influenced by the severity of organisational and/or product deficiencies noted during DASA assurance activities and/or a previous AwB.

6.1.2.93 Annex D presents additional guidance on the submissions, requirements and conduct of an AwB for a new aircraft type.

Superseded

Activity 5: Follow-up DASA assessments

6.1.2.94 The organisational and product authorisation requirements presented in this chapter are seldom wholly implemented when the Applicants apply for the relevant DASA authorisations. Provided DASA is satisfied the safety risks due to the deficiencies can be robustly managed, this may not preclude DASA from issuing the authorisation, as explored in the following paragraphs.

6.1.2.95 **Organisational approvals.** When DASA initially issues an organisational approval, the processes and people may not yet have been exercised for the new aircraft type. For example, an MDO may not have produced designs, the MAO may not have exercised its ASMS, organisational deficiencies may have been identified by DASA, and so on. Equally, the organisation may self-identify temporary deficiencies in their own processes and people.

6.1.2.96 These issues may not preclude DASA from issuing the organisational approval if satisfied the organisation has the ability to safely operate and support the aircraft. DASA may elect to moderate this risk through, amongst other things:

1. placing limitations on operations, initially via the initial MPTF and later via the OpSpec
2. initially constraining the 'privileges' that are available to organisations under some regulations
3. re-visiting the organisation soon after their systems and processes have been exercised.

6.1.2.97 Over time, once DASA is assured the deficiencies or lack of experience have been addressed, the constraints may be eased. The Defence AA may convene AwBs to provide additional confidence.

6.1.2.98 **Product authorisations.** As a matter of pragmatism, a MTC can be issued before compliance with the TCB has been entirely demonstrated. As a result, the MTC may include temporary limitations, or the TCB may include temporary Exception MCRIs (with supporting AwIPs documenting essential risk management), pending resolution of the outstanding design issues. Once evidence of TCB compliance is provided to DASA's satisfaction, the limitations or other risk management measures can be progressively removed.

Project completion

6.1.2.99 Even after the above five activities have been substantially completed, residual issues may still be outstanding. Provided these issues are sufficiently few in number and complexity[27], they have been professionally transitioned to the running system, and any associated risks are being managed in the relevant ASMS, DASA will in due course consider the acquisition project to be closed.

6.1.2.100 The residual issues will be monitored by DASA through normal compliance assurance activities.

Niche Applications

Superseded

6.1.2.101 So far, this chapter has focused on new aircraft types being acquired by Defence. This final section will explore three niche applications of the information presented in this chapter, namely fleet additions, acquisition of used aircraft, and Major design changes to in-service aircraft.

Fleet addition aircraft

6.1.2.102 When additional aircraft are to be added to an extant Defence fleet, the guidance presented earlier in this chapter is still mostly relevant, although it can be applied in a substantially abbreviated form. An assessment of each of the five activities from the previous section is presented below.

6.1.2.103 **Activity 1: Agreement on DASA authorisations.** The information presented in the previous section is entirely relevant. That is, the acquisition organisation should engage with DASA before contracts and other agreements are signed, and an agreed path to DASA approvals should be documented in an ASAMP. The ASAMP will be much abbreviated compared to the acquisition of a new aircraft type, and some of the ASAMP annexes will not be required.

6.1.2.104 **Activity 2: Organisational approvals.** Each of the organisational approvals will likely be in place, so this activity is limited to ensuring those organisations can manage the additional workload and (where applicable) the configuration differences of the new aircraft.

6.1.2.105 **Activity 3: Product certifications.** If the new aircraft are precisely the same configuration as the extant fleet, they can simply be listed on the MTC and individual MCoAs then issued for each new aircraft. More likely, however, there will be configuration differences. While other avenues may be acceptable, most often the new aircraft are added to the MTC mirroring the configuration of the extant fleet, and the configuration deltas for the new aircraft are processed as design changes (Major and Minor) to the common type design. If there will be a delay in completing this activity, an MPTF can be used to cover the configuration differences of the additional aircraft.

6.1.2.106 If there are substantial configuration differences to the extant fleet, perhaps even with changes to the TCB, the new aircraft might need to undergo a targeted type certification program that focuses on the configuration deltas. DASA's approval may be reflected as a separate model number on the MTC, or the deltas might be encompassed in a Military Supplemental Type Certificate (MSTC).

6.1.2.107 **Activity 4:** AwB. AwB independent review of additional aircraft would normally be considered as part of the next scheduled sustainment AwB. In exceptional circumstances, a separate AwB may be convened if the acquisition of additional aircraft requires appreciable changes to extant FIC arrangements.

6.1.2.108 **Activity 5:** Follow-up DASA assessments. The information on product deficiencies presented in the previous section is equally relevant to fleet addition aircraft. The information on organisational deficiencies, on the other hand, is unlikely to be applicable; rather, the next routine compliance assurance activity would check how the organisation is coping with the extra workload.

Used aircraft

Superseded

6.1.2.109 Where Defence elects to acquire used aircraft, the guidance presented earlier in this chapter is entirely relevant. However, there are additional actions that will need to be undertaken for Activity 3: Product Certification, namely the provision of additional documentation and the completion of additional inspections to support the issue of an MCoA.

6.1.2.110 **Documentation.** DASR 21.A.174 presents a list of the additional documentation needed for a used aircraft, namely:

1. (if the aircraft originates from a foreign military applying an EMAR based regulations): a Military Airworthiness Review Certificate;

2. (if the aircraft originates from a civil state of registry that is recognised by DASA): an export certificate of airworthiness from the recognised CAA;

3. (if the aircraft originates from elsewhere):

    i. a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer

    ii. a weight and balance report with a loading schedule

    iii. the flight manual and any other manuals required by the Authority of the State of registry

    iv. historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness

    v. a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

6.1.2.111 **Inspections.** Used aircraft require a more stringent inspection than new build aircraft, and must be performed by an appropriately qualified, independent and experienced organisation. The inspecting organisation is to conduct a comprehensive review of the aircraft design, maintenance and operational documentation, verified by a physical inspection of the airframe structure, engines and other systems.

6.1.2.112 The inspecting organisation is to provide inspection reports detailing the airworthiness inspection result. As a minimum, reports should include the following:

1. details of the aircraft inspected, including registration number, manufacturer, serial number, model designation, and Certificate of Airworthiness number

2. last known inspected configuration of the aircraft

Superseded

3. a summary of the usage and maintenance history of the aircraft, engines and propellers, including current maintenance, weight and balance, and lifed component status

4. details of any major structural and life-limited component changes made to items such as wings and tailplane, and a summary of the individual histories of such components, unless new when fitted

5. details of any accidents or incidents in which the aircraft has been involved

6. details of any major repairs or modifications performed on the aircraft, engines and propellers and verification that they have been properly approved and incorporated

7. details of any applicable aircraft-general, type-specific, engine or equipment airworthiness directives or service bulletins and verification that the aircraft complies

8. a condition assessment of flight safety critical components and fatigue-sensitive structure

9. recommendations for the resolution of any airworthiness deficiencies or concerns arising as a result of the airworthiness inspection

10. flight manuals and any other manuals.

6.1.2.113 Should Defence be contemplating the acquisition of used aircraft, DASA should be contacted early in the decision process. DAVENG staff in particular will provide the acquisition project with useful guidance.

Major design changes

6.1.2.114 This chapter has so far focused on aircraft acquisitions. However, the content can be extensively applied to particularly complex Major design changes to in-service aircraft. A Major design change is one that has an appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, or other characteristics affecting the airworthiness of the product .

6.1.2.115 Defence currently conducts around 70 Major design changes to its fleet each year. Most of these design changes have little if any significant impact on the aircraft operator or support organisations. Occasionally, however, Defence undertakes a Major design change whose effects pervade the DASP.

6.1.2.116 An example might be an extensive mid-life cockpit upgrade, which will not only challenge the design organisation, it can extensively affect MAO OIP, require simulator upgrades, change the aircrew training curriculum, allow new Performance Based Navigation approvals, require additional maintenance equipment and training, require new production organisations, require parallel operations of two different aircraft configurations for extended periods, and so on. An extensive flight test program to explore human factors and other certification issues might also be required.

Superseded

6.1.2.117 Making such pervasive changes to the aircraft and supporting systems can be a complex undertaking that requires coordination and often robust risk management across multiple organisational boundaries. While it perhaps does not have the complexities of introducing a new aircraft into service, it is far from straightforward and can introduce elevated safety risks if not executed well. In such circumstances, increased independent assurance from DASA is likely to benefit aviation safety.

6.1.2.118 Where DASA, in consultation with the MAO and CASG, identifies a Major design change that warrants this expanded DASA independent assurance, DASA will treat the project similarly to an aircraft acquisition. This may include, for example, increased scrutiny of organisational approvals, a closer assessment of how the new configuration is introduced into service (including, if necessary, imposing temporary operating constraints), greater assurance of risk management decisions, and so on. The Defence AA may require an AwB to be convened to provide an independent review of how well the new configuration has been integrated into Defence.

6.1.2.119 For these Major design changes, the guidance in the previous section is applicable almost in its entirety. Notably, an ASAMP should be raised, albeit some elements will self-evidently either be of limited scope or not applicable. An SOIU update may be required, organisational approvals may need to be expanded, and so on. The only element that is unchanged is the type certification process, since DASA certification oversight is always implemented commensurate with risk, and this is unaffected by the additional DASA scrutiny outlined in this section.

Annexes:

1. Project Initiation Meeting
2. ASAMP Guidance
3. Airworthiness Issue Papers
4. Airworthiness Board Guidance

6.1.3 Acquisition of Non-Defence-Registered Aircraft

Introduction

6.1.3.1 Civil registration of a Defence aircraft may be attractive to Capability Managers (CMs) and acquisition organisations. It may provide contractual and ongoing management simplicity, and sometimes lower costs and result in a faster introduction into service.

6.1.3.2 Regardless of the registration arrangement, Command retains the responsibility for ensuring the safety of aircraft occupants, other aircraft, people, and facilities on the ground. However, in the case of non-Defence-Registered (NDR) aircraft, DASA has a comparatively lesser role in guiding and assisting Command in meeting these obligations.

Purpose

Superseded

6.1.3.3 This chapter guides Defence's aircraft acquisition organisations and Military Air Operators through the aviation safety requirements and recommended practices during the acquisition of an NDR aircraft, but only to the extent, that DASA is involved in the process.

CONTENT UNDER REVIEW

Circa 2023, DASA is currently conducting a major review of the DASA approach and regulations for non-Defence Registered (NDR) aircraft. The review will assess, amongst other things, the legal implications of a State aircraft being regulated by a civil regulator, the need (if any) for DASR regulations to supplement the civil regulations, the role of DASA (if any) in aviation safety assurance, and so on.

Once the review is completed, DASR.NDR and this DASPMAN chapter will be updated. In the meantime, Defence organisations considering the acquisition of a NDR aircraft should contact DASA for advice.

Superseded

6.1. Introduction of New Defence Aircraft Capabilities

6.1.1 Introduction

Background

6.1.1.1 Defence periodically adds aircraft to its inventory to meet a capability need. The aircraft may be purchased or leased, crewed or uncrewed, Defence or civil registered. An essential prerequisite for Defence operation of a new aircraft, regardless of the acquisition arrangement, is for Defence to confirm that it is safe for flight. This encompasses the safety of aircraft occupants, other airspace users, and overflown people and facilities.

6.1.1.2 The acquisition process for a new aircraft begins during the capability development phase of the life cycle, where operational requirements are defined and potential solutions investigated. The Aviation Safety management process commences concurrently with the acquisition process, and remains inextricably linked. Decisions made early in the acquisition process can have an enduring effect on Aviation Safety.

6.1.1.3 For a Defence aircraft to be safe for flight, the aircraft to be appropriately designed, constructed, maintained and operated, as explained in DASP Manual Volume 3 Chapter 3, The Defence Aviation Safety Program. It is the responsibility of aircraft acquisition organisations in Defence, relevant in-service organisations and Defence industry partners, to ensure a Defence aircraft is safe for flight, both from the initial design and throughout its Defence lifecycle. In turn, the relevant Aviation Safety authorities need to gain assurance that the aircraft is safe for flight. If suitably assured, the Aviation Safety authorities can issue a range of 'authorisations', usually in the form of certificates, permits, approvals or licenses.

Purpose

6.1.1.4 This series of chapters aims to guide Defence aircraft acquisition organisations, relevant in-service organisations and Defence industry partners through the aviation safety requirements and recommended practices during the aircraft acquisition process.

6.1.1.5 This first chapter provides a general introduction to acquiring new Defence aircraft, including registration requirements, Aviation Safety responsibilities, engagement with Aviation Safety authorities and other common concepts.

Applicability

6.1.1.6 This chapter is applicable to the acquisition (whether through purchase, lease or other arrangement) of the following Defence aircraft:

1. Defence registered crewed aircraft
2. Non-Defence registered crewed aircraft (short term)
3. Defence registered certified uncrewed aircraft systems (UAS)

Superseded

6.1.1.7 While the concepts in this chapter are also broadly applicable to Open and Specific category (ie non-certified) UAS, the regulatory approaches for these UAS are substantially different to certified aircraft, so DASP Manual Volume 3 Chapter 10, Uncrewed Aircraft Systems, separately covers their acquisition.

Structure

6.1.1.8 This chapter will provide context for the next four chapters, which will individually cover the three different arrangements for Defence aircraft acquisitions listed in paragraph 6, and as shown in Figure 1.
