Volume 1 - Requirements for the DASP

The Defence Aviation Safety Program

Context

1. The Defence Aviation Safety Framework (DASF) is established by the Secretary of the Department of Defence and the Chief of the Defence Force through Joint Directive 21/2021 *The Defence Aviation Safety Framework*. The DASF defines Aviation Safety in the Defence context and sets out responsibilities and accountabilities for the management, oversight and review of Aviation Safety.

2. This structured aviation safety framework is underpinned by the:

    a. Appointment of a Defence Aviation Authority;

    b. Establishment of a Defence Aviation Safety Authority;

    c. Implementation of a Defence Aviation Safety Program;

    d. Promulgation of effective Defence Aviation Safety Regulations; and,

    e. Establishment of an independent accident and incident investigative capability.

3. The basis for the safety obligations on commanders and managers to manage aviation risks is found under the Commonwealth Work Health and Safety Act 2011. However, the Defence AA is authorised to impose a DASF across Defence to assure the Chief of Defence Force, Secretary of Defence and Government that the management of Aviation Safety is credible and defensible in the context of statutory legislation. As such, commanders and managers who are responsible for the design, construction, maintenance and operation of State aircraft and identified support systems must comply with the DASF.

Functions and responsibilities

4. The Defence Aviation Safety Program (DASP) is the ongoing fulfilment of the functions and accountabilities established by the DASF. Described at the highest level, these are:

    a. independent safety assurance applied by the Defence Aviation Safety Authority (DASA), specifically:

        (1) the prescription and interpretation of Aviation Safety management policy, inclusive of Defence Aviation Safety Regulation (DASR) and related standards

        (2) the issuance of authorisations, including permits, approvals and licenses, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR

        (3) ongoing oversight and enforcement activities to assure compliance with the DASR and the continued validity of authorisations issued by DASA

        (4) the promotion of aviation safety through education, training, and dissemination of safety information

    b. independent accident and incident investigations performed by DASA in order to prevent recurrence and improve safety performance

Superseded

c. independent reviews of Aviation Safety coordinated by DASA on behalf of the Defence Aviation Authority.

5. The DASP also identifies continuing processes of hazard identification and safety risk management for execution by commanders and managers.

Scope of aviation activities

6. The following aviation activities are within the scope of the DASP:

a. the operation of aircraft by, or on behalf of, Defence

b. the operation of aircraft by Defence Personnel [1], Australian Defence Force (ADF) Cadets and ADF Cadet Staff in the course of their duties, including ADF Currency Flying Scheme participants

c. the design, production and maintenance of State Aircraft[2] and components thereof

d. the operation, management and certification of Defence aerodromes, including shipborne heliports

e. the provision of Air Traffic Management services and Air Navigation Services by Defence, including equipment and systems

f. the operation of foreign military aircraft within national airspace.

7. The following are outside the scope of the DASP:

a. materiel systems or support equipment, to the extent that they do not affect Aviation Safety

b. Defence personnel acting as crew, or travelling as passengers, on flights which are not exclusively for Defence use.

The DASP Manual

Purpose and applicability

8. The DASP Manual is issued by the Defence AA to establish policy and guidance for the implementation of the DASP. It is applicable to:

a. Commanders and managers responsible for aviation activities identified as being within the scope of the DASP. Aviation safety is a command responsibility and therefore commanders and managers are accountable for ensuring aviation systems under their command or control are designed, constructed, maintained, and operated to approved standards and limitations by competent and authorised personnel acting as members of an approved organisation.

b. The Defence Aviation Safety Authority as the organisation responsible for the implementation of the DASP.

c. Independent reviewers, appointed by the Defence AA, to examine, and make recommendations on, the safety of Defence Aviation activities.

Superseded

Structure

9. The DASP Manual is published in three volumes:

   a. Volume 1 expands on Joint Directive 21/2021 to establish requirements for the implementation of the DASP; in particular:

      (1) legal and governance arrangements

      (2) independent safety assurance

      (3) the Defence Aviation Safety Regulation

      (4) the independent investigation of accidents and incidents

      (5) independent reviews of Aviation Safety.

   b. Volume 2 *Defence Aviation Safety Regulation* establishes all requirements and provisions for the management of Aviation Safety by commanders and managers.

   c. Volume 3 *DASP Guidance* provides an overview of the DASP and how its various elements collectively achieve the required safety objectives. Volume 3 also provides supporting information to promote understanding of concepts and processes spanning multiple requirements or provisions established through Volumes 1 and 2.

Principles

10. The requirements detailed in this manual are based on recognition that:

   a. A credible and defensible level of military Aviation Safety performance is assured in military aviation, by the adoption of common safety rules and by measures assuring that products, persons and organisations comply with such rules.

   b. Foreign military aircraft operating in our national airspace are to be subject to appropriate oversight.

   c. The Defence AA will establish, in line with standards and recommended practices (SARPs) set by the Chicago Convention, essential requirements applicable to aeronautical products, parts and appliances, to persons and organisations involved in aircraft operations, and to persons and products involved in the training of aircrew, aerodromes, and Air Navigation Service Providers (ANSP).

   d. DASA will be empowered to develop the necessary regulations for giving effect to the requirements of this manual.

   e. The scope and requirements of the DASP are clearly defined so that persons, organisations, and products subject to the DASP can be identified without ambiguity.

   f. Aeronautical products, parts and appliances, persons and organisations involved in aircraft operations, as well as persons, products and organisations involved in their training should be certified, licensed or approved once they have been found to comply with the essential Aviation Safety requirements.

   g. Adequate flexibility is provided to effectively address special circumstances such as urgent safety measures, and compelling operational imperatives or emergencies. Provision will also be made for achieving an equivalent safety level by other means.

Superseded

Exemptions to the requirements of this manual are also able to be granted, provided they are strictly limited in scope and subject to appropriate control.

h. The effective functioning of a military Aviation Safety scheme requires strong cooperation between the Defence AA, DASA and regulated organisations, to detect unsafe conditions and take remedial measures as appropriate.

i. The promotion of a 'culture of safety' and the proper functioning of a regulatory system in the fields covered by this manual requires that incidents and occurrences be promptly reported. Such reporting is to be facilitated by the establishment of a non-punitive environment, and appropriate measures should be taken by the Defence AA, DASA and regulated organisations to provide for the protection of such information and of those who report it.

j. Recommendations from air accident/incident investigations are to be acted upon as a matter of urgency, in order to assure confidence in military Aviation Safety management.

k. The objectives of this manual may be efficiently achieved through the recognition of other aviation safety authorities by DASA.

l. In order to properly assist the Defence AA, DASA should develop its expertise in all aspects of military Aviation Safety covered by this manual, and will assist regulated organisations in its implementation. DASA should issue certification specifications and guidance material, make technical findings and issue authorisations as required. The DASA is to also monitor the application of this requirement and associated Regulations, and be given the necessary authority to carry out its tasks.

m. DASA will support the Defence AA in the field of international relations, including the harmonisation of rules, recognition of approvals and technical cooperation, and be entitled to establish the appropriate relations with the military aviation authorities of foreign countries and international organisations competent in matters covered by this manual.

Superseded

2. Legal and Governance

Legal Considerations

Context

1. Under the Commonwealth *Work Health and Safety Act 2011*, commanders and managers have an obligation to ensure that aviation safety risks are managed appropriately.

2. The Defence Aviation Safety Program (DASP), although independent, supports commanders and managers to meet their statutory safety obligations in respect of Defence Aviation through the promulgation of regulations that provide a framework for aviation safety risk management. Commanders and managers may fulfil aspects of their statutory obligations through ensuring compliance with the Defence Aviation Safety Regulation (see Volume 2 *Defence Aviation Safety Regulation*).

3. By contrast, independent safety assurance activities carried out within the DASP are not intended to support commanders and managers to fulfil their statutory safety obligations and must not be construed as doing so. No decision, or absence of a decision, by the Defence AA or DASA is to be construed as fulfilling, in whole or in part, the due diligence obligations of commanders and managers. Examples of activities that are separate from the due diligence obligations include:

   a. the review by DASA of evidence demonstrating compliance with DASR

   b. a decision by DASA to issue, amend, suspend or revoke an authorisation, including any approval, permit or licence.

State Aircraft

4. Article 3(a) of the 1944 *Convention on International Civil Aviation* (Chicago Convention) states that the Convention itself shall be applicable only to civil aircraft, and shall not be applicable to state aircraft. Article 3(b) defines state aircraft as being aircraft used in military, customs and police services.

5. In the Australian context, the *Civil Aviation Act 1988 (Cth)* and *Air Navigation Act 1920 (Cth)* alter the state aircraft definition as follows:

   a. aircraft of any part of the Defence Force (including any aircraft that is commanded by a member of that Force in the course of duties as such a member); and

   b. aircraft used in the military, customs or police services of a foreign country.

6. Therefore for the purposes of this manual, state aircraft are defined as:

   Aircraft of any part of the Defence Force (including any aircraft that is commanded by a member of that Force in the course of duties as such a member); and aircraft used in the military, customs or police services of a foreign country.

   Note: 'Aircraft' includes both crewed and uncrewed aircraft.

Australia's Aviation State Safety Programme

Superseded

7. Australia maintains an aviation State Safety Programme (SSP) in accordance with its obligations under the Chicago Convention. The Australian Aviation SSP describes, inter alia, how the various Australian Government agencies, including Defence, work together to achieve the Aviation Safety outcomes required by the International Civil Aviation Organisation (ICAO). In doing so, the Australian Aviation SSP recognises the role of the DASP in regulating Defence Aviation Safety.

8. Within Australia, the Defence Aviation Safety Authority (DASA) and the Civil Aviation Safety Authority (CASA) perform similar roles in their respective aviation sectors. Both regulatory authorities have established frameworks for the assurance and management of aviation safety, and, both are responsible for the promulgation of effective regulations to support their respective frameworks. While it is intended that the two regulators work similarly to each other, they operate under different legal authorities.

9. CASA derives its authority from the *Civil Aviation Act 1988 (Cth)* and makes the *Civil Aviation Regulations* (CARs) which are legislative instruments. DASA derives its authority from Joint Directive 21/2021, which is an exercise of the administrative power under the *Defence Act 1903 (Cth)* and DASA makes non-legislative regulations called the Defence Aviation Safety Regulations (DASRs). The DASRs are designed to recognise and support compliance with Defence's statutory safety requirements. DASRs are applied to commercial organisations who perform work on aircraft and systems within the DASP through the terms of their contracts/ agreements with Defence.

10. Defence maintains an independent aviation accident and incident investigative capability as well as a system for the collection and analysis of safety data. These functions are carried out by the Defence Flight Safety Bureau within DASA (DASA-DFSB), consistent with the principles of relevant ICAO standards and recommended practices (SARPs). In the Defence context, DASA-DFSB performs a similar function to that of the Australian Transport Safety Bureau (ATSB). The ATSB is established by the *Transport Safety Investigation Act 2003 (Cth).* The non-legislative nature of investigative powers held by DASA-DFSB means that there is often a requirement for close collaboration with ATSB and other civilian agencies.

11. Defence maintains Memoranda of Understanding (MoU) with CASA and the ATSB as follows:

    a. CASA/Defence - The MoU provides a high-level basis for cooperation on harmonisation, where practicable, of civil and military regulatory system outcomes to improve safety, efficiency, consistency and capacity. The MoU allows for the use of implementation agreements to enable seamless interfaces between the two parties and their respective regulations.

    b. Defence/ATSB - The MoU provides a framework to support cooperation between Defence and ATSB in the investigation of transport safety matters.

Governance and Oversight

12. The Defence AA must be supported in the ongoing governance and oversight of the DASP by a board comprising senior executives within and external to Defence.

13. The board, led by the Defence AA, must:

    a. oversee the performance of the DASP, inclusive of commanders and managers and the DASA

Superseded

b. set the DASP strategic direction with respect to proposed Aviation Safety assurance activities

c. review and provide direction on any significant Defence Aviation Safety related matter

d. foster ongoing cooperation and alignment of functions between Defence, CASA and ATSB

e. be cognisant of global Aviation Safety 'best practice'.

Safety Performance Assessment

14. In support of the Defence AA's obligations to report to the Secretary and CDF on Defence Aviation Safety performance, a safety assessment must be published annually by DASA. This safety assessment must contain analysis of all relevant information received through Aviation Safety reporting systems and DASA assurance activities. The analysis must be easy to understand and must indicate whether there are increased safety risks.

15. The safety assessment must:

a. assess the safety performance of the regulated community, including an analysis of related safety metrics

b. identify key Aviation Safety issues for commanders and managers

c. assess the effectiveness of DASA's performance

d. analyse safety intelligence data, identifying trends where applicable

e. identify actions and activities taken to address issues and trends of concern in the field of Aviation Safety.

Superseded

3. Independent Safety Assurance

Introduction

Definitions

1. Aviation Safety is the state in which continuing processes of hazard identification and risk management ensure that risks to the health and safety of personnel arising from aircraft operations are eliminated so far as is reasonably practicable (SFARP) and, if it is not reasonably practicable to eliminate risks, those risks are minimised SFARP.

2. Independent safety assurance refers to the Defence Aviation Authority's (Defence AA's) confidence that the Aviation Safety objective stated above is met in the conduct of Defence Aviation operations. Independent safety assurance is the product of activities that are separate from Aviation Safety risk management processes and decisions, which are the responsibility of commanders and managers. Independent safety assurance activities, or their absence, do not alter commanders' and managers' statutory obligation to ensure safety.

Purpose

3. This chapter establishes requirements and provisions for the conduct of independent safety assurance activities within the DASP.

The Defence Aviation Safety Authority

Functions of the Authority

4. The Defence Aviation Safety Authority (DASA) is responsible for conducting independent safety assurance activities within the DASP. In discharging its responsibilities, DASA must:

   a. prescribe and interpret policy for the management of Defence Aviation safety, inclusive of the Defence Aviation Safety Regulation (DASR) and related standards

   b. issue authorisations, including permits, approvals and licences, to certify that Defence Aviation platforms, systems, organisations and personnel have shown compliance with applicable DASR

   c. conduct ongoing oversight and enforcement activities to assure compliance with the DASR and the continued validity of authorisations issued by DASA

   d. promote Aviation Safety through education, training, and dissemination of safety information.

5. The Director General Defence Aviation Safety Authority (DG DASA) is accountable to the Defence AA to fulfil the requirements prescribed within this chapter.

6. In conducting its functions, DASA must have regard to international best practices in military Aviation Safety, including those established by:

   a. the European Military Airworthiness Requirements (EMAR)

   b. the principles of the International Civil Aviation Organisation (ICAO) Standards and Recommended Practices (SARPs).

Superseded

c. the Civil Aviation Safety Regulations (CASR)

d. the European Union Regulations developed by the European Aviation Safety Authority (EASA)

Prescribe and interpret policy

7. DASA must manage the DASR on behalf of the Defence AA. In doing so, DASA must:

   a. ensure that the DASR conforms to the requirements of Chapter 4 of this Volume

   b. ensure that the Defence AA is afforded adequate oversight and control[3] of DASR amendments that may appreciably increase the compliance burden or appreciably reduce Aviation Safety.

8. DASA must issue standards, inclusive of airworthiness codes, as required for the implementation of the DASR. Such standards must reflect the state of the art and the best practices in the fields concerned and must be updated, taking into account worldwide aviation experience in service, and scientific and technical progress.

9. DASA must issue supporting material to promote understanding of, and compliance with, the DASR. Such supporting material may include an acceptable means to comply with the DASR.

10. When requested, DASA must provide authoritative interpretation of DASR and advice regarding DASR compliance. Such interpretation and advice must not prescribe a particular course of action with respect to the management of Aviation Safety unless there is evidence that the safety level of the system may otherwise be compromised.

11. DASA must establish transparent procedures for developing and issuing Aviation Safety policy, standards and support material. Such procedures must include appropriate provisions for consultation with relevant regulated entities during the development process.

Issue authorisations

12. DASA may issue all authorisations, including permits, approvals, licences and similar artefacts, as necessary for the implementation of the DASR.

13. DASA must only issue authorisations when the applicant has shown, to DASA's satisfaction, that the applicable DASR have been met.

14. DASA must only issue authorisations:

   a. to applicants that are part of Defence; or

   b. to applicants that have a contractual relationship with Defence, or a Defence contractor, and where that contractual relationship permits enforcement of the DASR by DASA; or

   c. to applicants who are in the process of entering into such a relationship; or

   d. are employees or staff members of an entity with such a relationship; or

   e. where it is in Australia's interest to do so.

Conduct oversight and enforcement

Superseded

15. DASA must conduct inspections, monitoring and investigations as necessary to assure compliance with the DASR and the ongoing validity of authorisations it has issued.

16. DASA's oversight and enforcement policies, procedures and decisions must:

    a. promote a generative and just safety culture that supports voluntary reporting of safety issues

    b. ensure that any response to a non-compliance is effective, fair, proportional and graduated

    c. be transparent and evidence-based.

17. DASA must establish transparent procedures for making enforcement decisions. Those procedures must:

    a. ensure the hearing of the entity subject to the enforcement decision is addressed in the decision, as well as that of any other party with a direct concern

    b. provide for notification of the decision to all affected entities

    c. ensure that the decision contains reasons for the decision.

18. DASA may amend, suspend or revoke any authorisation issued by, or under privilege from, DASA when DASA identifies that:

    a. the conditions applying to its issue are no longer fulfilled; or

    b. the entity holding the authorisation fails to fulfil the obligations imposed on it by the DASR.

19. Special procedures must be established to address immediate action to be taken by DASA to react to a safety problem, and to inform the relevant interested parties of the action they are to take.

20. Where practicable, DASA must notify the Defence AA prior to any enforcement action that may appreciably impact Defence aviation capability.

21. The requirements of this Manual do not prevent DASA from immediately addressing any Aviation Safety risk or issue of which it becomes aware.

Promote Aviation Safety

22. DASA must promote Aviation Safety through education, training, and the dissemination of safety information. In performing this function, DASA must provide an ongoing education and training program to promote understanding of, and compliance with, the DASR.

23. Key objectives of Aviation Safety promotion must include:

    a. fostering the maintenance and improvement of Aviation Safety

    b. supporting the development of a generative safety culture

    c. increasing awareness of prominent safety issues

    d. supporting the implementation and maintenance of an effective Safety Management System (SMS)

Superseded

24. The delivery of education and training regarding DASR compliance for specific organisational contexts is outside of DASA's remit.

Administrative responsibilities and provisions

25. **Administration of the DASP Manual.** DASA must manage the DASP Manual on behalf of the Defence AA.

26. **DG DASA delegation.** To assist the Defence AA in fulfilling their obligations, DG DASA is delegated authority to:

    a. approve amendments to, and provide authoritative interpretation of:

        (1) DASP Manual Volume 2, inclusive of all DASR

        (2) DASP Manual Volume 3

        (3) associated standards and supporting material issued under the authority of the Defence AA

    b. issue all authorisations, including permits, approvals, licences, and similar artefacts, as necessary for implementation of the DASR

    c. amend, suspend or revoke any authorisation issued by, or under privilege from, DASA.

27. **Administration of DASA.** DG DASA must take all necessary steps, including the issue of internal administrative instructions and the publication of respective information, to ensure proper functioning of DASA in accordance with this Chapter. In doing so, DG DASA must ensure that the Defence Flight Safety Bureau (DFSB) is able to provide an effective and independent accident and incident investigative capability in accordance with Chapter 5 of this Volume.

28. **Delegation of functions and authorities.** DG DASA may delegate functions and authorities, subject to robust internal control mechanisms, to suitably qualified and experienced personnel, including:

    a. DASA staff and contractors

    b. Defence staff and contractors

    c. staff of contracted organisations.

29. Any delegation of functions and authorities per paragraph 28 above must specify appropriate limitations on any further delegation of functions and authorities by the delegate.

30. When delegating a specific certification task to an entity external to Defence, DG DASA must ensure that the entity complies with the criteria detailed in Annex A to this Chapter. In such instances the respective authorisation must be issued by DASA.

31. **Engagement with the Defence AA and environmental commanders.** DG DASA or any DASA Director, may liaise directly with the Defence AA to report matters of concern that may impact Aviation Safety.

32. DG DASA, or any DASA Director, may liaise directly with Commander Australian Fleet, Commander Aviation Command, and Air Commander Australia, and their subordinate commanders, to discuss matters of concern that may impact Aviation Safety.

Superseded

33. Access to the Defence AA and environmental commanders supports a generative safety culture by enabling the provision of accurate advice on Aviation Safety matters of concern that require expertise in specific operational or technical domains.

34. **Confidentiality.** DASA must take necessary measures to ensure appropriate confidentiality of information received. Information must be handled in accordance with the *Privacy Act 1988 (Cth)*, the *Freedom of Information Act 1982 (Cth)* and Defence policies applicable to that information. Subject to satisfying security requirements, information subpoenaed or otherwise required by a judicial process must be provided in accordance with the form of the notice issued to Defence that requires the information.

35. **Defence register.** DASA must maintain a register of Defence-registered aircraft.

36. **Recognition of other aviation authorities.** DASA may recognise the independent safety assurance applied by other civil and military aviation authorities in order to promote efficiency and interoperability. Recognition must only be permitted when it can be demonstrated that the candidate authority applies credible and defensible Aviation Safety oversight.

37. **Harmonisation.** DASA must establish arrangements with relevant Australian Government agencies in order to harmonise Aviation Safety frameworks where there is potential benefit in doing do.

Annex:

(a) Criteria for Non-Defence Entities Carrying Out Certification Tasks

Superseded

Annex A – Criteria for Non-Defence Entities Carrying Out Certification Tasks

1. The entity, its director and the staff responsible for carrying out the checks, may not become involved, either directly or as authorised representatives, in the design, manufacture, marketing or maintenance of the products, parts, appliances, constituents or systems or in their operations, service provision or use. This does not exclude the possibility of an exchange of technical information between the involved organisations and the entity carrying out the checks.

2. The entity and the staff responsible for the certification tasks must carry out their duties with the greatest possible professional integrity and the greatest possible technical competence and must be free of any pressure and incentive, in particular of a financial type, which could affect their judgment or the results of their investigations, in particular from persons or groups of persons affected by the results of the certification tasks.

3. The entity must employ staff and possess the means required to adequately perform the technical and administrative tasks linked with the certification process; it should also have access to the equipment needed for exceptional checks.

4. The staff responsible for investigation must have:

   a. sound technical and vocational training,

   b. satisfactory knowledge of the requirements of the certification tasks they carry out and adequate experience of such processes, and

   c. the ability required to draw up the declarations, records and reports to demonstrate that the investigations have been carried out.

5. The impartiality of the investigation staff must be guaranteed. Their remuneration must not depend on the number of investigations carried out or on the results of such investigations.

6. Commercial entities must take out liability insurance.

7. The staff of the entity must observe professional secrecy with regard to all information acquired in carrying out their tasks.

Superseded

4. Regulation of Aviation Safety

Introduction

Purpose

1. This Chapter establishes requirements for the management of the Defence Aviation Safety Regulation (DASR) and related standards. The requirements contained therein are applicable only to the Defence Aviation Safety Authority (DASA) as the custodians of the DASR, and are not directly applicable to commanders and managers.

Responsibilities

2. The Defence Aviation Safety Authority (DASA) must ensure that the DASR address the requirements established in this Chapter.

3. Commanders and managers responsible for aviation activities within the scope of the DASP must:

    a. ensure compliance with the applicable DASR, which are promulgated in DASP Manual Volume 2 *Defence Aviation Safety Regulation*; and

    b. take all measures necessary to support independent safety assurance activities carried out by DASA in accordance with Chapter 3.

Application of the regulations

4. Where it can be shown that an equivalent level of safety to that attained by the application of the DASR can be achieved by other means, DASA may approve such other means as compliant with the intended regulatory outcome.

5. DASA may allow a credible and defensible level of military Aviation Safety performance where an equivalent level of safety to that provided by the application of the DASR cannot be demonstrated, but can be supported by the application of sound risk management principles.

The Defence Aviation Safety Regulation

Scope

6. The DASR must be applicable to the safety management of all aviation activities within the scope of the DASP as defined in Chapter 1 of this Volume.

Objectives

7. DASA must ensure that the DASR:

    a. continues to be credible, defensible, and suitable for the Defence context

    b. supports Commanders and managers to comply with statutory safety obligations while retaining the flexibility to respond to compelling operational imperatives

    c. continues to reflect international best practices in military Aviation Safety, including by aligning, where appropriate, with:

Superseded

(1) the European Military Airworthiness Requirements (EMARs)

(2) the principles of the International Civil Aviation Organisation (ICAO) Standards and Recommended Practices (SARPs)

(3) the Civil Aviation Safety Regulations (CASR)

(4) the European Union regulations developed by the European Aviation Safety Authority (EASA)

d. is updated as necessary to address emerging or newly identified aviation safety hazards.

Initial and Continuing Airworthiness

8. The DASR must require that Defence registered aircraft comply with the essential requirements set out in Annex A *Essential Requirements for Initial and Continuing Airworthiness*.

9. The DASR must require that the following entities demonstrate their capability and means to discharge their responsibilities:

a. organisations responsible for the maintenance of products, parts and appliances

b. organisations responsible for the management of Continuing Airworthiness

c. organisations responsible for the design and manufacture of products, parts and appliances

d. personnel responsible for the release of a product, part or appliance after maintenance

e. maintenance training organisations.

10. Unless otherwise accepted, these capabilities and means must be recognised through the issuance of an approval. The privileges granted to the approved entity and the scope of the approval must be specified in the terms of approval.

11. The DASR must specify:

a. conditions for establishing and notifying to an applicant the type-certification basis applicable to a product

b. conditions for establishing and notifying to an applicant the detailed airworthiness specifications applicable to parts and appliances

c. conditions for establishing and notifying to an applicant the specific airworthiness specifications applicable to aircraft eligible for a restricted certificate of airworthiness

d. conditions for issuing and disseminating mandatory information in order to ensure the continuing airworthiness of products

e. conditions for issuing, maintaining, amending, suspending or revoking type-certificates, restricted type-certificates, approval of changes to type-certificates, individual certificates of airworthiness, restricted certificates of airworthiness, permits to fly and certificates for products, parts or appliances, including:

Superseded

(1) conditions on the duration of these certificates, and conditions to renew certificates when a limited duration is fixed

(2) restrictions applicable to the issue of permits to fly. These restrictions should in particular concern the following:

i. purpose of the flight

ii. airspace used for the flight

iii. operational limitations

iv. qualification of flight crew

v. carriage of persons other than flight crew

(3) aircraft eligible for restricted certificates of airworthiness, and associated restrictions

(4) the minimum syllabus of maintenance certifying staff type rating training

(5) the minimum syllabus of aircrew type rating and the qualification of associated flight simulators

(6) the master minimum equipment list (MMEL) as appropriate and additional airworthiness specifications for a given type of operation

f. conditions to issue, maintain, amend, suspend or revoke approvals for organisations engaged in the design, manufacture or maintenance of products parts and appliances

g. conditions to issue, maintain, amend, suspend or revoke approvals for maintenance training organisations

h. conditions to issue, maintain, amend, suspend or revoke approvals for members conducting aircraft maintenance or component maintenance

i. responsibilities of the holders of certificates.

Crew

12. The DASR shall require that personnel involved in the operation of Defence registered aircraft, as well as flight simulation training devices, persons and organisations involved in the training, testing, checking or medical assessment of these crew, comply with the essential requirements set out in Annex B *Essential Requirements for Operations Personnel* [4].

13. The DASR must require that:

a. A person may only act as crew if they are authorised and hold a medical certificate appropriate to the operation to be performed.

b. A person must only be authorised as crew when they comply with the essential requirements on theoretical knowledge, practical skill, language proficiency and experience.

c. Crew must only be issued a medical certificate when they comply with the essential requirements on medical fitness. This medical certificate must be issued by aviation medical examiners.

Superseded

d. The privileges granted to crew and the scope of the authorisation and medical certificate must be specified in such authorisation and certificate.

e. The capability of crew training organisations to discharge the responsibilities associated with their privileges in relation to the issuance of aircrew authorisations may be recognised by the issuance of an approval.

f. Crew training organisations may be issued an approval when they comply with the rules established to ensure compliance with the relevant essential requirements. The privileges granted by the approvals shall be specified thereon.

g. Flight simulation training devices used for the training of crew must be authorised by the appropriate authority. The authorisation must be issued when the applicant has shown that the device complies with the relevant essential requirements.

h. Persons responsible for providing flight training or flight simulation training, or for assessing crew skill must hold an authorisation. Such authorisation must be issued when it is shown that the person concerned complies with the relevant essential requirements.

14. The DASR must specify:

a. the different ratings for crew authorisations

b. the conditions for issuing, maintaining, amending, limiting, suspending or revoking authorisations, ratings for authorisations and approvals applicable to crew

c. the privileges and responsibilities of the holders of authorisations, ratings for authorisations and approvals applicable to crew, crew training staff, and flight simulation training devices.

15. When implementing the DASR for crew, DASA must take specific care that they reflect the state of the art and have considered the best practice.

Air Operations

16. The DASR must require that the operation of Defence registered aircraft complies with the essential requirements for air operations set out at Annex C *Essential Requirements for Air Operations* [5].

17. The DASR must specify:

a. conditions to operate an aircraft

b. conditions for issuing, maintaining, amending, limiting, suspending or revoking authorisations for the conduct of flight operations

c. privileges and responsibilities of the holders of authorisations

d. conditions under which operations must be prohibited, limited or subject to certain conditions in the interest of safety

e. conditions for suspending flying operations.

18. The DASR must:

Superseded

a. define different types of operations and allow for related requirements and compliance demonstrations proportionate to the complexity of operations and the risk involved

b. be based on a risk assessment and be proportional to the scale and scope of the operation

c. allow for immediate reaction to established causes of accidents and serious incidents

d. take into account the safety aspects related to Air Traffic Management and Air Navigation Services (ATM/ANS).

19. When implementing the DASR for air operations, DASA must take specific care that they reflect the state of the art and have considered the applicable best practice.

Standard Rules of the Air

20. Rules of the Air, as they apply to Defence Aviation, must be harmonised with international and domestic civil practice wherever practical, in order to enable Defence aviation interoperability with non-Defence aviation activities.

Aerodromes

21. The DASR must require that aerodromes, aerodrome equipment and the operation of aerodromes comply with the essential requirements set out at Annex D *Essential Requirements for Aerodromes* [6].

22. DASA may decide to exempt Defence aerodromes with only a few movements a year from certification requirements described at paragraph 21, 23 and 24.

23. The DASR must require that:

a. A certificate must be required in respect of each aerodrome. The certificate and certification of changes to that certificate must be issued when the applicant has shown that the aerodrome complies with the applicable aerodrome certification basis, and that the aerodrome has no feature or characteristic making it unsafe for operation. The certificate must cover the aerodrome, its operation and its safety-related equipment.

b. The certification basis for an aerodrome must consist of the following:

(1) the applicable certification specifications related to the type of aerodrome

(2) the provisions for which an equivalent level of safety, if required, has been authorised

(3) the special detailed technical specifications necessary to address unique design or operational issues outside of the scope of the applicable certification specifications.

c. Organisations responsible for the operation of aerodromes must demonstrate their capability to and means to discharge the responsibilities associated with their privileges. These capabilities must be recognised through the issuance of a certificate. The privileges grated to the certified organisation and the scope of the certificate must be specified.

Superseded

d. Aerodrome operators must establish and maintain an accident prevention and safety programme, including an occurrence reporting programme, to aid in continually improving the safety of operations.

e. Aerodrome operators must monitor activities and developments which may cause unacceptable safety risks to aviation in the aerodrome surroundings, and take mitigating measures as appropriate.

24. The DASR must specify:

a. the conditions for establishing and notifying to an applicant the certification basis, including design standards, applicable to an aerodrome

b. the conditions for establishing and notifying to an applicant the detailed specifications applicable to aerodrome equipment

c. the conditions for issuing, maintaining, amending, suspending or revoking certificates for aerodromes and certificates for aerodrome equipment, including operating limitations related to the specific design of the aerodrome

d. the conditions for operating an aerodrome in compliance with the essential requirements

e. the conditions for issuing, maintaining, amending, suspending or revoking aerodrome operator certificates

f. the responsibilities of the holders of certificates.

Air Traffic Management and Air Navigation Services

25. The DASR must require that the provision of ATM/ANS complies with the essential requirements set out at Annex E *Essential Requirements for Air Traffic Management and Air Navigation Services* .

26. The DASR must require that:

a. ATM/ANS providers must be required to hold an authorisation. The authorisation must be issued when the provider has demonstrated its capability and means of discharging the responsibilities associated with the provider's privileges. The privileges granted and the scope of the services provided must be specified in the authorisation

b. ATM/ANS providers must suspend operations where necessary in the interests of safety

c. ATM/ANS providers must react appropriately to accidents and serious incidents

d. Air Traffic Controllers hold an appropriate licence for the ATM/ANS operations to be performed and a current medical certificate

e. the capability of air traffic controller training organisations to discharge the responsibilities associated with their privileges in relation to the issuance of authorisations shall be recognised by the issuance of a certificate. The privileges granted shall be specified therein.

27. The DASR must specify:

a. conditions for the provision of ATM/ANS

Superseded

b. conditions for establishing and notifying to an applicant the detailed specifications applicable to ATM/ANS systems and components

c. conditions for issuing, maintaining, amending, suspending or revoking the authorisations required for the provision of ATM/ANS.

Uncrewed Aircraft Systems

28. The DASR must require that the design, production, maintenance and operation of uncrewed aircraft, and their engines, propellers, parts, non-installed equipment and equipment to control them remotely, as well as the personnel, including remote pilots, and organisations involved in those activities, comply with the essential requirements set out in Annex F *Essentinal Requirements for Uncrewed Aircraft Systems*[8].

29. The DASR may require an authorisation for the design, production, maintenance and operation of uncrewed aircraft, as well as for the personnel, including remote pilots, and organisations involved in those activities.

30. For instances where an authorisation is required, the DASR must require that:

a. the authorisation is issued upon application, when the applicant has demonstrated that it complies with the relevant DASR

b. the authorisation specifies the safety-related limitations, operating conditions and privileges. The authorisation may be amended to add or remove limitations, conditions and privileges

c. the authorisation may be limited, suspended or revoked when the holder no longer complies with the conditions, rules and procedures for issuing or maintaining such instrument.

31. The DASR must specify:

a. the specific rules and procedures for the operation of uncrewed aircraft as well as for the personnel, including remote pilots, and organisations involved in those operations

b. the conditions for issuing, maintaining, amending, limiting, suspending, or revoking authorisations

c. the privileges and responsibilities of the holders of certificates

d. the rules and procedures for the registration of uncrewed aircraft.

Aviation Safety Management Systems

32. DASA must require the creation and maintenance of organisational Aviation Safety Management Systems (ASMS).

33. The DASR regarding ASMS must specify:

a. when an ASMS is required within regulated organisations

b. how the required ASMS elements, namely safety policy and objectives, safety risk management, safety assurance and safety promotion, are to be applied to applicable regulated organisations.

Superseded

Occurrence Reporting

34. The DASR must require the establishment, operation and management of an Occurrence Reporting system. The Occurrence Reporting system must enable assessment of the safety implications of each occurrence, including previous similar occurrences, in order to facilitate the achievement of aviation safety assurance requirements.

35. The DASR shall specify:

    a. conditions for the collection, exchange and dissemination of information

    b. conditions for conducting ramp inspection, including systematic ones.

Non-Defence Registered Aircraft

36. The DASR must specify:

    a. obligations on the Sponsor who purchases, wet lease, dry leases, charters or authorises operation of a non-Defence registered aircraft by, or on behalf of, Defence, including:

        (1) regulatory oversight by a Defence recognised CAA/MAA

        (2) implementation of safety controls such that it is reasonably expected that Aviation Safety will not be compromised

        (3) a framework for suspension of flight

    b. the approval process for any Defence operation of a non–Defence registered aircraft to be operated under an Experimental Certificate of Airworthiness

    c. obligations on Defence personnel to comply with Defence recognised CAA or MAA relevant regulatory requirements and any further controls imposed by the relevant sponsor

    d. obligations on the Sponsor who approves foreign military aircraft to operate within Australian airspace, including a framework for suspension of flight.

Oversight and Enforcement

38. In the context of oversight and enforcement, the DASR must specify:

    a. conditions for the collection, exchange and dissemination of information

    b. conditions for conducting ramp inspections, including systematic ones.

Defence Registration

39. The DASR must specify the conditions for introducing and removing aircraft from the register.

Annex:

(a) Essential Requirements for Initial and Continuing Airworthiness

(e) Essential Requirements for Air Traffic Management and Air Natigation Services

Superseded

Annex A – Essential Requirements for Initial and Continuing Airworthiness

AIM

1. The aim of this Annex is to define joint essential military airworthiness requirements. The detailed product specification including the airworthiness certification basis, shall be established for each product with due regard to the airworthiness essential requirements.

2. These airworthiness requirements do not apply to foreign military aircraft. The safety management of these aircraft is provided through DASR Non-Defence Registered Aircraft.

REQUIREMENTS

3. **Product integrity.** Product integrity must be assured for all anticipated flight conditions and ground operations for the operational life of the aircraft. Compliance with all requirements must be shown by assessment or analysis, supported, where necessary, by tests.

   a. **Structures and materials.** The integrity of the structure must be ensured throughout, and by a defined margin beyond, the operational envelope for the aircraft, including its propulsion system, and maintained for the operational life of the aircraft.

      (1) All parts of the aircraft, the failure of which could reduce the structural integrity, must comply with the following conditions without detrimental deformation or failure. This includes all items of significant mass and their means of restraint.

         i. All combinations of load reasonably expected to occur within, and by a defined margin beyond, the weights, centre of gravity range, operational envelope and life of the aircraft must be considered. This includes loads due to gusts, manoeuvres, pressurisation, movable surfaces, control and use of armaments and propulsion systems both in flight and on the ground.

         ii. Where applicable to the product, consideration must be given to the loads and likely failures induced by emergency landings either on land or water.

         iii. Dynamic effects must be covered in the structural response to these loads.

      (2) The aircraft must be free from any aeroelastic instability and excessive vibration.

      (3) The manufacturing processes and materials used in the construction of the aircraft must result in known and reproducible structural properties. Any changes in material performance related to the operational environment must be accounted for.

      (4) The effects of cyclic loading, environmental degradation, accidental and discrete source damage must not reduce the structural integrity below an acceptable residual strength level. All necessary instructions for ensuring continued airworthiness in this regard must be promulgated.

   b. **Propulsion.** The integrity of the propulsion system, i.e. engine and, where appropriate, propeller, must be demonstrated throughout, and by a defined margin

Superseded

beyond, the operational envelope of the propulsion system and must be maintained for the operational life of the propulsion system.

(1) The propulsion system must produce, within its stated limits, the thrust or power demanded of it at all required flight conditions, taking into account environmental effects and conditions.

(2) The fabrication process and materials used in the construction of the propulsion system must result in known and reproducible structural behaviour. Any changes in material performance related to the operational environment must be accounted for.

(3) The effects of cyclic loading, environmental and operational degradation and likely subsequent part failures must not reduce the integrity of the propulsion system below acceptable levels. All necessary instructions for ensuring continued airworthiness in this regard must be promulgated.

(4) All necessary instructions, information and requirements for the safe and correct interface between the propulsion system and the aircraft must be promulgated.

c. **Systems and equipment.**

(1) The aircraft must not have design features or details that experience has shown to be hazardous.

(2) The aircraft, with those systems, equipment and appliances required for military type-certification, or by operating rules, must function as intended under any foreseeable operating conditions, throughout, and by a defined margin beyond, the operational envelope of the aircraft, taking due account of the system, equipment or appliance operating environment. Other systems, equipment and appliances not required for certification, or by operating rules, whether functioning properly or improperly, must not reduce safety and must not adversely affect the proper functioning of any other system, equipment or appliance. Systems, equipment and appliances must be operable without needing exceptional skill or strength.

(3) The aircraft systems, equipment and associated appliances, including the control station, its data links etc for the uncrewed aircraft systems, considered separately and in relation to each other, must be designed such that any catastrophic failure condition does not result from a single failure not shown to be extremely improbable. An inverse relationship must exist between the probability of a failure condition and the severity of its effect on the aircraft, crew, ground-crew, passengers (where relevant), other airspace users or other third parties. Due allowance must be made for the size and broad configuration of the aircraft (including specific military systems and operations) and that this may prevent this single failure criterion from being met for some parts and some systems on helicopters, small and single engine aeroplanes and uncrewed aircraft systems.

(4) Information needed for the safe conduct of the flight and information concerning unsafe conditions must be provided to the crew, or maintenance personnel, as appropriate, in a clear, consistent and unambiguous manner. Systems, equipment and controls, including signs and announcements must be

Superseded

designed and located to minimise errors which could contribute to the creation of hazards.

(5) Design precautions must be taken to minimise the hazards to the aircraft, crew, ground-crew, passengers (where relevant), other airspace users or other third parties from reasonably probable threats, both inside and external to the aircraft, including protecting against the possibility of a significant failure in, or disruption of, any aircraft appliance.

d. **Continuing airworthiness**

(1) Instructions for continuing airworthiness must be established to ensure that the aircraft military type certification airworthiness standard is maintained throughout the operational life of the aircraft.

(2) Means must be provided to allow inspection, adjustment, lubrication, removal or replacement of parts and appliances as necessary for continuing airworthiness.

(3) The instructions for continuing airworthiness must be in a format appropriate for the quantity of data to be provided, eg paper or electronic. The instructions must cover maintenance instructions, servicing information, trouble-shooting and inspection procedures, including necessary parts data, tools and calibration data.

(4) The instructions for continuing airworthiness must contain airworthiness limitations that set forth each mandatory replacement time, inspection interval and related inspection procedure.

4. **Airworthiness aspects of product operation**

a. The following must be shown to have been addressed to ensure a credible and defensible level of military aviation safety for those on-board or on the ground during the operation of the product:

(1) The kinds of operation for which the aircraft is approved must be established and limitations and information necessary for safe operation, including environmental limitations and performance, must be established.

(2) The aircraft must be safely controllable and maneuverable under all anticipated operating conditions and where applicable, up to the point where the in-flight emergency escape system is activated or in the case of a UAS the activation of the recovery system. Due account must be taken of pilot strength, flight deck environment, aircrew workload and other human-factor considerations and of the phase of flight and its duration.

(3) It must be possible to make smooth transition(s) from one flight phase to another without requiring exceptional piloting skill, alertness, strength or workload under any probable operating condition.

(4) The aircraft must have handling qualities that ensure the demands made on the pilot are not excessive taking into account the phase of flight and its duration.

(5) Procedures for normal operations, failure and emergency conditions must be established.

Superseded

(6) Warnings, or other deterrents intended to prevent exceeding the normal flight envelope, must be provided, as appropriate to type.

(7) The characteristics of the aircraft and its systems must allow a safe return from extremes of the flight envelope that may be encountered.

b. The operating limitations and other information necessary for safe operation must be made available to the crew members.

c. Product operations must be protected from hazards resulting from adverse external and internal conditions, including environmental conditions.

(1) In particular, account must be taken of the exposure to phenomena such as, but not limited to, adverse weather, lightning, bird strike, high frequency radiated fields, ozone, use of armaments (hot gas ingestion, debris etc.), etc, reasonably expected to occur during product operation.

(2) Where applicable, cabin compartments must provide passengers with suitable transport conditions and adequate protection from any expected hazard arising in flight operations or resulting in emergency situations, including fire, smoke, toxic gases and rapid decompression hazards. Provisions must be made to give occupants every reasonable chance of avoiding serious injury and quickly evacuating the aircraft and to protect them from the effect of the deceleration forces in the event of an emergency landing on land or water. Clear and unambiguous signs or announcements must be provided, as necessary, to instruct occupants in appropriate safe behaviour and the location and correct use of safety equipment. Required safety equipment must be readily accessible.

(3) Crew compartments must be arranged in order to facilitate flight operations, including means providing situational awareness, and management of any expected situation and emergencies. The environment of crew compartments must not jeopardise the crew's ability to perform their tasks and its design must be such as to avoid interference during operation and misuse of the controls.

5. **Organisations** (including natural persons undertaking design, manufacture or continuing airworthiness activities)

a. Organisations involved in design (including flight test), production (manufacture) or continuing airworthiness activities must satisfy the following conditions:

(1) The organisation must have all the means necessary for the scope of work. These means comprise, but are not limited to, the following: facilities, personnel, equipment, tools and material, documentation of tasks, responsibilities and procedures, access to relevant data and record-keeping.

(2) The organisation must implement and maintain a management system to ensure compliance with these essential requirements for airworthiness, and aim for continuous improvement of this system.

(3) The organisation must establish arrangements with other relevant organisations, as necessary, to ensure continuing compliance with these essential requirements for airworthiness.

Superseded

(4) The organisation must establish an occurrence reporting and/or handling system, which must be used by the management system under sub-paragraph 4.a.(ii) and the arrangements under paragraph 4.a.(iii), in order to contribute to the aim of continuous improvement of the safety of products ('continued airworthiness of the type design').

b. In the case of maintenance training organisations, the conditions under sub-paragraphs 4.a.(iii) and 4.a.(iv) do not apply.

Superseded

Annex E - Essential Requirements for Air Traffic Management and Air Navigation Services

SERVICES

Aeronautical information and data for airspace users for the purpose of air navigation

1. The data used as a source for Aeronautical Information must be of sufficient quality, complete, current and provided in a timely manner.

2. Aeronautical Information must be accurate, complete, current, unambiguous, from a legitimate source, and of adequate integrity, as well as in a format suitable for users.

3. The dissemination of such Aeronautical Information to airspace users must be timely and use sufficiently reliable and expeditious means of communication protected from intentional and unintentional interference and corruption.

Meteorological information

4. The dissemination of such aeronautical meteorological information to airspace users must be timely and use sufficiently reliable and expeditious means of communication protected from interference and corruption.

Air Traffic Services

5. The data used as a source for the provision of Air Traffic Services must be correct, complete and current.

6. The provision of Air Traffic Services must be sufficiently precise, complete, current, and unambiguous to meet the safety needs of users.

7. Automated tools providing information or advice to users must be properly designed, produced and maintained to ensure that they are fit for their intended purpose.

8. Air Traffic Control Services and related processes must provide for adequate separation between aircraft and, on the aerodrome manoeuvring area, prevent collisions between aircraft and obstructions and, where appropriate, assist in protection from other airborne hazards and must ensure prompt and timely coordination with all relevant users and adjacent volumes of airspace.

9. Communication between Air Traffic Services and aircraft and between relevant Air Traffic Services units must be timely, clear, correct and unambiguous, protected from interference and commonly understood and, if applicable, acknowledged by all actors involved.

10. Means must be in place to detect possible emergencies and, when appropriate, to initiate effective search and rescue action. Such means must, as a minimum, comprise appropriate alerting mechanisms, coordination measures and procedures, means and personnel to cover the area of responsibility efficiently.

Communication services

11. Communication services must achieve and maintain sufficient performance with regard to their availability, integrity, continuity and timeliness. They must be expeditious and protected from corruption and interference.
Navigation services

Superseded

12. Navigation services must achieve and maintain a sufficient level of performance with regard to guidance, positioning and, when provided, timing information. The performance criteria include accuracy, integrity, legitimacy of the source, availability, and continuity of the service.

Surveillance services

13. Surveillance services must determine the respective position of aircraft in the air and of other aircraft and ground vehicles on the aerodrome surface, with sufficient performance with regard to their accuracy, integrity, legitimacy of the source, continuity and probability of detection. A

Airspace management

14. The activation of specific volumes of airspace for a certain use must be monitored, coordinated and promulgated in a timely manner in order to reduce the risk of loss of separation between aircraft in all circumstances. Taking into account the organisation of military activities and related aspects, airspace management must also support the uniform application of the concept of the flexible use of airspace as described by the ICAO, in order to facilitate airspace management and Air Traffic Management.

Flight procedure design

15. Flight procedures must be properly designed, surveyed and validated before they can be deployed and used by aircraft.

SYSTEMS AND CONSTITUENTS

General

16. Air Traffic Management/Air Navigation Service (ATM/ANS) systems and ATM/ANS constituents providing related information to and from the aircraft and on the ground must be properly designed, produced, installed, maintained, protected against unauthorised interference. They must be operated to ensure that they are fit for their intended purpose. The systems and procedures must include in particular those required to support the following functions and services:

    a. airspace management

    b. Air Traffic Services, in particular flight data processing systems, surveillance data processing systems and human-machine interface systems

    c. communications including ground-to-ground/space, air-to-ground and air-to-air/space communications

    d. navigation

    e. surveillance

    f. Aeronautical Information Services

    g. Meteorological Services.

System and constituent integrity, performance and reliability

17. The integrity and safety-related performance of systems and constituents whether on aircraft, on the ground or in space, must be fit for their intended purpose. They must meet the

Superseded

required level of operational performance for all their foreseeable operating conditions and for their whole operational life. ATM/ANS systems and ATM/ANS constituents must be designed, built, maintained and operated using the appropriate and validated procedures, in such a way as to ensure the seamless operation of the air traffic management network at all times and for all phases of flight. Seamless operation can be expressed, in particular, in terms of information-sharing, including the relevant operational status information, common understanding of information, comparable processing performances and the associated procedures enabling common operational performances agreed for the whole or parts of the air traffic management network.

18. The air traffic management network, its systems and their constituents must support, on a coordinated basis, new agreed and validated concepts of operation that improve the quality, sustainability and effectiveness of air navigation services, in particular in terms of safety and capacity.

19. The air traffic management network, its systems and their constituents must support the implementation of civil/military coordination, to the extent necessary for effective airspace and air traffic flow management, and the safe and efficient use of airspace by all users, through the application of the concept of the flexible use of airspace. To achieve those objectives, the air traffic management network, its systems and their constituents must support the timely sharing of correct and consistent information covering all phases of flight, between civil and military organisations.

Design of systems and constituents

20. ATM and ANS systems and constituents considered collectively, separately and in relation to each other, must be designed:

    a. to meet applicable safety requirements in such a way that an inverse relationship exists between the probability that any failure can result in a total system failure and the severity of its effect on the safety of services

    b. taking into account limitations related to human capabilities and performance

    c. in a manner that protects them and the data they convey from harmful interactions with internal and external elements.

21. Information needed for production, installation, operation and maintenance of the systems and constituents as well as information concerning unsafe conditions must be provided to personnel in a clear, consistent and unambiguous manner.

QUALIFICATION OF AIR TRAFFIC CONTROLLERS

Theoretical knowledge

22. An air traffic controller must acquire and maintain a level of knowledge appropriate to the functions exercised and proportionate to the risks associated with the type of service.

23. Acquisition and retention of theoretical knowledge must be demonstrated by continuous assessment during training, or by appropriate examinations.

24. An appropriate level of theoretical knowledge must be maintained. Compliance must be demonstrated by regular assessments or examinations. The frequency of examinations must be proportionate to the level of risk associated with the type of service.

Superseded

Practical skill

25. An air traffic controller must acquire and maintain the practical skills appropriate to exercise his or her functions. Such skills must be proportionate to the risks associated with the type of service and must cover at least, if appropriate to the functions exercised, the following items:

    a. operational procedures

    b. task specific aspects

    c. abnormal and emergency situations

    d. human factors.

26. An air traffic controller must demonstrate the ability to perform the associated procedures and tasks with a level of competence appropriate to the functions exercised.

27. A satisfactory level of competence in practical skill must be maintained. Compliance must be verified by regular assessments. The frequency of those assessments must be proportionate to the complexity and the level of risk associated with the type of service and the tasks performed.

Synthetic training devices

28. When a synthetic training device (STD) is used for practical training on situational awareness and human factors or to demonstrate that skills are acquired or maintained, it must have a level of performance that allows adequate simulation of the working environment and operational situations appropriate to the training provided.

Training course

29. Training must be given by a training course, which may comprise theoretical and practical instruction, including training on an STD, if applicable.

30. A course must be defined and approved for each type of training.

Training Officers

31. Theoretical training must be given by appropriately qualified training officers. They must:

    a. have appropriate knowledge in the field where training is to be given

    b. have demonstrated the ability to use appropriate training techniques.

32. Training on practical skills must be given by appropriately qualified training officers, who have the following qualifications:

    a. meet the theoretical knowledge and the experience requirements appropriate to the training being given

    b. have demonstrated the ability to train and to use appropriate training techniques.

33. Training officers must be or have been entitled to act as an air traffic controller.

Assessors

Superseded

34. Persons responsible for assessing the skill of air traffic controllers must have demonstrated the ability to assess the performance of, and conduct tests and checks on air traffic controllers.

35. Assessors on practical skills must also be or have been entitled to act as an air traffic controller in those areas in which assessment is to be made.

MEDICAL FITNESS OF AN AIR TRAFFIC CONTROLLER

36. All air traffic controllers must periodically demonstrate medical fitness to satisfactorily execute their functions. Compliance must be shown by appropriate assessment taking into account the possible mental and physical degradation due to age.

37. Demonstration of medical fitness, comprising physical and mental fitness, must include the demonstrated absence of any disease or disability, which makes the person providing an air traffic control (ATC) service unable:

    a. to execute properly the tasks necessary to provide an ATC service

    b. to perform assigned duties at any time

    c. to perceive correctly his/her environment.

38. Where medical fitness cannot be fully demonstrated, mitigation measures that provide equivalent safety may be implemented.

SERVICE PROVIDERS

39. Service provision must not be undertaken unless the following conditions are met:

    a. The service provider must have directly or through agreements with third parties the means necessary for the scale and scope of the service. Those means must comprise but are not limited to the following: systems, facilities, including power supply, management structure, personnel, training and education, equipment and its maintenance, documentation of tasks, responsibilities and procedures, access to relevant data and record-keeping.

    b. The service provider must develop and keep up-to-date management and operations manuals relating to the provision of its services and operate in accordance with those manuals. Such manuals must contain all necessary instructions, information and procedures for the operations, the management system and for operations personnel to perform their duties.

    c. As appropriate for the type of activity undertaken and the size of the organisation, the service provider must implement and maintain a management system to ensure compliance with the essential requirements set out in this Annex, manage safety risks and aim for continuous improvement of this system.

    d. The service provider must use only suitably qualified and trained personnel and implement and maintain training and checking programmes for the personnel.

    e. The service provider must establish formal interfaces with all stakeholders which may influence directly the safety of their services to ensure compliance with the essential requirements set out in this Annex.

Superseded

f. The service provider must establish and implement a contingency plan covering emergency and abnormal situations that may occur in relation to its services, including in the case of events which result in significant degradation or interruption of its operations.

g. The service provider must establish an occurrence reporting system as part of the management system under point (c) in order to contribute to the aim of continuous improvement of safety.

h. The service provider must make arrangements to verify that the safety performance requirements of any system and constituent they operate are met at any time.

i. The service provider must verify that the safety performance requirements of any system and constituent they operate are met at any time.

FATIGUE MANAGEMENT

40. ATC service provision must not be undertaken unless the following conditions are met:

a. The prevention of fatigue of personnel providing an ATC service must be managed through a rostering system. Such a rostering system needs to address duty periods, duty time and adapted rest periods. Limitations established within the rostering system must take into account relevant factors contributing to fatigue such as, in particular, sleep deprivation, disruption of circadian cycles, night hours, cumulative duty time for given periods of time and also the sharing of allocated tasks between personnel.

b. The prevention of stress of personnel providing an ATC service must be managed through education and prevention programmes.

c. The ATC service provider must have in place procedures to verify that the cognitive judgement of personnel providing ATC services is not impaired or their medical fitness insufficient.

d. The ATC service provider must take into account operational and technical constraints as well as human factor principles in its planning and operations.

COMMUNICATION, NAVIGATION AND SURVEILLANCE

41. Communication, navigation and/or surveillance service provision must not be undertaken unless the service provider ensures relevant airspace users and ATS units are informed on a timely basis of the operational status (and changes thereof) of their services provided for ATS purposes.

Superseded

5. Independent Investigation Capability

Introduction

Scope

1. Joint Directive 21/2021 *The Defence Aviation Safety Framework* directs DASA to establish an independent investigative capability aligned to ICAO standards and recommended practices (SARPs). This capability is provided by the Defence Flight Safety Bureau within DASA (DASA-DFSB).

Context

2. The DASA-DFSB functions described in this chapter are consistent with the international standards outlined by ICAO in:

   a. Annex 13 to the Convention on International Civil Aviation *Aircraft Accident and Incident Investigation*

   b. Annex 19 to the Convention on International Civil Aviation *Safety Management,* including Amendment 1

   c. ICAO Document 9756 *Manual of Aircraft Accident and Incident Investigation.*

Independent Investigation Capability

Responsibilities

3. In order to discharge the DASA obligations in an effective and impartial manner, DASA-DFSB has been established as the independent Defence Aviation investigation organisation, with the necessary powers, resources, and expertise to oversee Defence Aviation investigation processes and reporting systems.

4. International convention requires the independent investigation organisation to be functionally independent of the authorities responsible for Defence Aviation regulation and, in general, any other party or entity that could conflict with, or influence, its objectivity. Accordingly:

   a. DASA-DFSB is to be functionally independent of the DASA Directorates responsible for airworthiness, certification, flight operation, maintenance, licensing, air traffic control or airport operation

   b. Director DFSB is accorded powers for autonomous action outside of both DASA and the command chain to directly report matters of concern to the Defence Aviation Authority (Defence AA) that may impact aviation safety

   c. Director DFSB may liaise directly with Commander Australian Fleet, Commander Forces Command and Air Command Australia and their subordinate commanders as required to fulfil their responsibilities

   d. DASA-DFSB is to investigate all aviation accidents and selected [9] aviation safety events or issues. Director DFSB is accorded powers to approve an investigation into selected aviation safety events or issues, without an environmental commander's

Superseded

appointment, informing the Defence AA and the applicable environmental commander

e. Director DFSB is to oversee, and be the point of contact for, the Defence Aviation confidential reporting scheme

f. Director DFSB is to ensure acting arrangements are in place to meet the responsibilities laid out in this chapter when necessary

g. DCAF is, in the event of the Defence AA's absence, the appointing authority for DASA-DFSB investigations of aviation events and issues that involve more than one Service

5. This enables DASA-DFSB to be strictly objective and totally impartial, and to also be perceived to be so.

Functions of DASA-DFSB

6. An aviation investigative capability is intended to do more than the retrospective investigation of accidents and incidents. DASA-DFSB shall take a proactive approach to preventing military aerospace accidents and enhancing flight safety through a systematic approach to investigation, research, education and promotion, as detailed at paragraph 8 through to 12.

7. DASA-DFSB shall establish and maintain the Defence Aviation safety reporting framework by:

a. developing and maintaining the Defence Aviation safety reporting system, including an aviation safety accident/incident database

b. developing and maintaining appropriate documentation (policy and guidance) to define the reporting framework

c. establishing a confidential reporting scheme to enable confidential reporting of issues that effect, or might effect, aviation safety

d. defining notification requirements and mechanisms (immediate and routine) for aviation safety reports

e. defining taxonomies to facilitate safety information exchange that are compatible with the ICAO Accident/Incident Data Reporting system and broadly aligned with those of the Australian Transport Safety Bureau (ATSB)

f. defining the classification system for aviation safety reporting

g. developing processes to monitor the health of the aviation safety reporting system.

8. DASA-DFSB shall establish and maintain safety data collection and processing system(s) to capture, store, aggregate and enable the analysis/exchange of safety data and safety information, including but not limited to:

a. data and information pertaining to DASA-DFSB accident and incident investigations

b. data and information related to the Defence aviation safety reporting framework

c. data and information related to DASA-DFSB data gathering and research activities.

9. DASA-DFSB shall conduct safety data analysis, safety related research and review of contemporary practices in aviation safety including, but not limited to:

Superseded

a. producing statistical reports and conducting research into specific matters of concern and contemporary best practices in aviation safety

b. administering aviation safety surveys

c. participating in the Australian State Safety Programme through the Joint Agency Aviation Safety Analysis Coordination Group

d. providing Human Factors guidance and tools.

10. DASA-DFSB shall conduct independent investigation and reporting of all accidents, selected incidents, and selected systemic safety issues including, but not limited to:

a. developing and maintaining appropriate documentation (policy and guidance) to define the conduct of independent investigations

b. establishing and maintaining a Flight Data Recorder and Cockpit Voice Recorder download and analysis capability.

11. DASA-DFSB shall foster safety awareness, knowledge and action through promotional and education programs, utilising the outcomes from safety analysis, research and investigation functions to influence organisational learning.

Conduct of Investigations

12. The following principles are to apply to the conduct of DASA-DFSB independent investigations:

a. The objective of the safety investigation is to identify and reduce safety-related risk.

b. It is not a function of the DASA-DFSB to apportion blame or determine liability. At the same time, an investigation report must include factual material of sufficient weight to support the analysis and findings.

c. The investigation must commence as soon as practicable to ensure all perishable information is collected and protected.

d. The size and scope of the investigation, and the resources expended, must be commensurate with the classification and scale of the event and the anticipated safety outcomes.

e. The investigation must follow a structured process to gather information, determine an event sequence, determine what active failures occurred, analyse how and why those active failures occurred, and compile findings.

f. Investigations must seek to identify the systemic factors that contributed to the event to enable appropriate and effective recommendations to be proposed to improve the safety system.

g. Safety actions and recommendations must focus on the implementation (or improvement) of controls that will eliminate or minimise safety hazards and prevent re-occurrence of the event in an enduring manner.

h. In the course of an investigation, safety actions and recommendations should also be made against evidence of sub-optimal practices, even if not contributory to the event, in order to further enhance safety programs.

Superseded

i. Safety actions and recommendations in investigations must not recommend disciplinary or administrative action against individuals.

j. Investigation reports must be communicated organisation-wide and distributed to other parties that are likely to benefit.

k. Where safety actions are deemed necessary before investigations and/or reports are complete, relevant authorities must be informed of the immediate action required so that they can decide whether such action is appropriate, and implement accordingly.

Protection of Safety Data and Safety Information

13. DASA-DFSB's Safety Data Collection and Processing System(s) (SDCPs) are to be supported by data governance arrangements to ensure that safety data, safety information and related sources are afforded appropriate protection. When an independent investigation by DASA-DFSB has been initiated, all information gathered, including interviews and ambient workplace recordings (e.g. cockpit voice recorders or recordings of air traffic controller work stations) are not subject to release without the formal approval of the Defence AA.

Additional Functions of DASA-DFSB

14. The activities entrusted to DASA-DFSB may be extended to support MAOs and broader DASA activities in so far as these activities do not affect the functional independence of DASA-DFSB.

Superseded

6. Independent Review of Aviation Safety

Introduction

Background

1. The Defence Aviation Authority (Defence AA) has, since 1991, used independent boards of review to provide assurance that a satisfactory basis for airworthiness has been established and is being maintained. The introduction of the Defence Aviation Safety Program (DASP) in 2011 resulted in a broadening of the emphasis beyond airworthiness, to include review of all aviation safety aspects.

Purpose

2. This chapter details the authority for the use of independent review boards, and their execution.

Authority for independent review boards

3. Joint Directive *21/2021 The Defence Aviation Safety Framework* provides the basis for the Defence AA to convene independent boards to review the safety of Defence Aviation activities *10*.

4. The Defence AA requires that review boards be convened to provide independent assurance that aviation safety is being effectively managed. The review board should complement the assurance activities undertaken by DASA and focus on aspects where the DASA assurance activities may provide limited confidence, particularly from a 'system of systems' perspective that examines the relationships and interaction between the separate entities that collectively ensure that aviation safety is being effectively managed. In practice review boards are convened by the DASA on behalf of the Defence AA, however board members remain accountable to the Defence AA for reviewing Defence Aviation aspects as directed, and for providing findings regarding the management of aviation safety.

Review Board Execution

Composition of independent review boards

5. Each review board must comprise at least one operational and one technical member. DASA will assign officers to each board from a panel of review board members in accordance with prescribed criteria. Officers appointed by the Defence AA to the review board panel must:

   a. be star rank officers of the permanent forces, or reserve forces on active duty

   b. possess either:

      (1) an operational background with extensive experience in Defence operation of Aviation Systems

      (2) a technical background with extensive experience in Defence technical management of Aviation Systems.

Scope of independent review boards

Superseded

6. The Defence AA may convene a board to provide an independent review of, and make recommendations in response to, the management of aviation safety for:

   a. Crewed aircraft being introduced into service [11]

   b. Certified or Specified Type A category Uncrewed Aircraft Systems (UAS) being introduced into service [12]

   c. Defence Registered Aircraft, and Certified and Specified Type A category UAS, at a periodicity[13] commensurate with the safety risk

   d. Air Navigation Services and Aerodromes, at a periodicity commensurate with the safety risk

   e. any other reason as appropriate.

7. The default periodicity review of Defence Registered Aircraft, Air Navigation Service, Aerodromes and other reasons is 'normal' periodicity [14]. The period may be increased or decreased after consideration of the following criteria:

   a. the outcomes of previous review board

   b. appreciable changes to the operations (including Statement of Operating Intent and Usage (SOIU)) or major changes to configuration since the previous review board

   c. safety events or DASA assurance evidence, with a specific focus on any trends that may indicate the existence of systemic issues

   d. the adequacy of the operations, support arrangements and safety management arrangements established to satisfy statutory safety obligations

   e. any other concerns regarding the management of aviation safety.

8. At the discretion of the Defence AA, a review board may also be convened to provide an independent review of, and make recommendations regarding, the effectiveness of aviation safety management for operation of Non-Defence Registered Aircraft (NDRA).

Conduct of independent review boards

9. As part of providing confidence that aviation safety is being effectively managed, the review board may consider any aviation safety aspect of concern. Notwithstanding this, their review should predominantly focus on operations, design, support arrangements and safety management criteria likely to pose the greatest risks, and seek a detailed explanation of any significant changes or reasons for non-compliance with safety requirements. Where a high degree of confidence exists in specific aviation safety aspects, the scope of a review board may be limited to those aspects that have been assessed as being likely to pose significant risks to aviation safety.

10. The review board must be made aware of any significant changes affecting the way Defence Aviation is undertaken. These changes, their impact and the actions taken to address any resultant risk should be detailed in submissions provided by DASA and applicable entities regulated under DASR. Regulated entities are required to support the conduct of each review board by making appropriate facilities and relevant personnel available, for both the review board and any preparatory activities undertaken by the review board members. DASA is to

Superseded

provide secretariat support for the review board system, including for each review board convened.

Outcomes of the independent review board

11. The review board is to provide a report detailing any concerns, including recommending corrective actions for consideration by the Defence AA, where it considers there are deficiencies with the effective management of aviation safety.

12. DASA will record any concerns, corrective actions and recommendations raised by a review board. DASA will also monitor actions taken to address any concerns, corrective actions or recommendations raised by a review board.

DASR Release 27 February 2025

DASR Version History

DASR Form 111—DASR Change Proposal (DCP)

Superseded

Introduction

Purpose

1. This Volume establishes requirements for the management of Defence Aviation Safety by commanders and managers.

Structure

2. The Defence Aviation Safety Regulation (DASR) is comprised of:

   a. General Requirements (GR), which are set out below in two subparts:

      i. Subpart A *Scope and applicability* defines the scope of the DASR and the applicability of the DASR parts.

      ii. Subpart B *Common requirements and provisions* establishes requirements and provisions that are each applicable to a significant proportion of regulated entities.

   b. the DASR parts, which are set out in Annex A.

3. DASR clauses and sub-clauses may have associated supporting information in the form of:

   a. **Acceptable Means of Compliance (AMC).** AMC is information published by DASA to identify a means of meeting one or more requirements of the DASR. Regulated entities are not required to comply with AMC and may instead propose an Alternative Means of Compliance to DASA. Any such proposal will be subject to separate assessment by DASA to determine whether the approach is compliant with the DASR.

   b. **Guidance Material (GM).** GM provides additional explanation to assist the application of the requirement and/or explain the AMC.

Context

4. This Volume implements applicable requirements set out in DASP Manual Volume 1 *Requirements for the DASP*.

5. DASP Manual Volume 3 *DASP Guidance* provides further information to support understanding of, and compliance with, the DASR.

Definitions

6. The following definitions apply within this Volume and its annex:

   Continuing Airworthiness. All of the processes ensuring that, at any time in its operating life, an aircraft complies with the airworthiness requirements in force and is in a condition for safe operation.

Superseded

Defence Personnel. All Australian Public Service employees in the Department of Defence, Defence locally engaged employees, Defence civilians, Defence members and the equivalents from other Defence organisations on exchange to Defence.

Defence Registered Aircraft. An aircraft listed on the Defence aircraft register maintained by DASA.

State Aircraft. Aircraft of any part of the Defence Force (including any aircraft that is commanded by a member of that Force in the course of duties as such a member); and aircraft used in the military, customs or police services of a foreign country. This includes Uncrewed Aircraft Systems (UAS).

7. Further definitions are available in the DASP Glossary.

General Requirements

Subpart A: Scope and applicability

GR.10 Aircraft registration

(a) State Aircraft operated by Defence must be:

(1) Defence Registered Aircraft; or

(2) managed in accordance with DASR NDR *Non-Defence Registered aircraft.*

(b) Paragraph (a) is not applicable to Uncrewed Aircraft Systems except as required by DASR UAS *Uncrewed Aircraft Systems.*

GR.15 Airworthiness of Defence Registered Aircraft

(a) The design, production and certification of Defence Registered Aircraft must be managed in accordance with DASR 21 *Aircraft Design, Production and Certification.*

(b) The Continuing Airworthiness of Defence Registered Aircraft, and components thereof, must be managed in accordance with:

(1) DASR M *Continuing Airworthiness Management*

(2) DASR 145 *Requirements for Maintenance Organisations*

(3) DASR 66 *Military Aircraft Maintenance Licencing*

(4) DASR 147 *Aircraft Maintenance Training Organisations.*

(c) By way of exception from DASR GR.15 (a) and (b), the operator of a Defence Registered aircraft in one of the following categories may demonstrate airworthiness management that achieves a level of Aviation Safety at least equivalent to comparable Australian civil registered aircraft: ☐ **AMC**

Superseded

(1) crewed hot air balloons used in balloon transport operations under Part 131 of the Civil Aviation Safety Regulations 1998 (CASR)

(2) Warbird, Historic and Replica Aircraft operated under CASR Part 132.

GR.20 Operations personnel

(a) Personnel and organisations involved in Defence aviation operations must comply with:

(1) DASR *Aircrew*

(2) DASR MED *Medical*

(3) DASR AVFM *Aviation Fatigue Management*

(4) DASR NTS *Non-Technical Skills.*

(b) Paragraph (a) is not applicable to Uncrewed Aircraft Systems except as required by DASR UAS *Uncrewed Aircraft Systems*.

GR.25 Operation of State Aircraft

(a) The operation of State Aircraft by Defence must be in accordance with:

(1) DASR AO.Gen *Air Operations – General*

(2) DASR ARO *Authority Requirements for Air Operations*

(3) DASR ORO *Organisation Requirements for Air Operations*

(4) DASR NDR *Non-Defence Registered aircraft*

(5) DASR SPA *Specific Purpose Approval*

(6) DASR SPO *Special Purpose Operations*

(7) DASR UAS *Uncrewed Aircraft Systems*

(8) DASR FT *Flight Tests*

(9) DASR ACD *Air Cargo Delivery*

(10) DASR RoA *Rules of the Air.*

(b) Defence Registered Aircraft must have a valid type-certificate[1] to conduct operations. The type-certificate must be issued in accordance with DASR 21 Subpart B *Military Type-Certificates and Military Restricted Type-Certificates.*

(c) Defence Registered Aircraft must have a valid certificate of airworthiness[2] to conduct operations. The certificate must be issued in accordance with DASR 21 Subpart H *Military Certificates of Airworthiness and Military Restricted Certificates of Airworthiness.*

Superseded

(d) By way of exception from paragraph (c), an aircraft may be operated where a valid permit to fly has been issued. Any such permit to fly must be issued in accordance with DASR 21 Subpart P *Military Permit to Fly.*

(e) By way of exception from paragraph (c), UAS may be operated without a type-certificate or certificate of airworthiness, provided they are compliant with DASR UAS.10.

GR.27 Operation of Foreign Military Aircraft (FMA) in Australia

☐ **GM**

(a) The Sponsor who approves FMA to operate in Australian territorial airspace must:

1. ensure that FMA operations are conducted in a manner such that risks to the safety of other airspace users and people on the ground are eliminated So Far As is Reasonably Practicable (SFARP) and, where not reasonably practicable to eliminate, minimised SFARP ☐ **GM** ☐ **AMC**

2. issue an Authority to Operate (AUTHOP) to document controls that manage the safety of other airspace users and people on the ground ☐ **GM** ☐ **AMC**

3. monitor the effectiveness of controls against the risk to the safety of other airspace users and people on the ground; and any significant safety events—and suspend FMA operations when there is concern that safety may be compromised. ☐ **AMC**

GR.30 Flight Simulation Training Devices

(a) Flight Simulation Training Devices and their use must be managed in accordance with DASR FSTD *Flight Simulation Training Devices.*

GR.35 Aerodromes

(a) Defence Aerodromes, including shipborne heliports, must be operated, managed and certified in accordance with DASR 139 *Aerodromes.*

GR.37 Air Navigation Services

(a) The provision of Air Traffic Management services and Air Navigation Services by Defence, including equipment, systems, and organisations must be in accordance with:

(1) DASR ANSP *Air Navigation Service Providers*; and

(2) the regulations identified by GR.20 *Operations personnel*, as applicable.

Superseded

GR.38 Air Battle Management

(a) The provision of Air Battle Management operations conducted by Defence, including equipment, systems and organisations, must be in accordance with:

(1) DASR ABM *Air Battle Management*

(2) the regulations identified in GR.20 *Operations personnel*, as applicable

(3) DASR AO.GEN.05 *Management of OIP.*

Subpart B: Common requirements and provisions

GR.40 Occurrence reporting

(a) Where required by other DASR, regulated entities must report aviation safety occurrences to DASA in a form and manner acceptable to DASA. ☐ **AMC**

GR.60 Oversight and enforcement

(a) Regulated entities must cooperate with DASA with a view to assuring compliance with the DASR.

(b) For the purposes of the implementation of paragraph (a), regulated entities must conduct investigations, including ramp inspections, and must take any measure to prevent the continuation of a non-compliance.

(c) In order to facilitate the taking of appropriate enforcement action by competent authorities, regulated entities shall exchange information on identified infringements with DASA.

(d) When objective evidence is found showing non-compliance with the applicable requirements of the DASR, DASA will issue a finding which shall be classified as follows: ☐ **GM**

(1) DASR Level 1 finding - Any non-compliance with the DASR requirements which lowers the safety standard and seriously hazards flight safety.

(2) DASR Level 2 finding - Any non-compliance with the DASR requirements which lowers the safety standard and possibly hazards flight safety.

(3) DASR Level 3 finding - Any non-compliance with the DASR requirements or potential problem that could lower the safety standard and possibly hazards flight safety.

(e) After receipt of notification for a Level 1 or Level 2 finding, the regulated entity shall, to the satisfaction of DASA and within a period agreed by DASA: ☐ **GM**

(1) implement an immediate action to eliminate so far as is reasonably practicable (SFARP), or otherwise minimise SFARP, the Aviation Safety risk associated with the non-compliance;

(2) identify the root cause of the non-compliance;

Superseded

(3) define a corrective action plan; and

(4) demonstrate effective corrective action implementation.

(f) After receipt of notification for a Level 3 finding, the regulated entity shall:

(1) manage the finding internally through its own management system; and

(2) implement action as necessary to address the non-compliance or potential problem.

(g) Non-compliance by the regulated entity with the actions identified in DASR GR.60(e) will result in a full or partial suspension of the relevant DASR authorisation by DASA.

GR.80 Flexibility provisions

(a) (Reserved)

(b) Where an equivalent level of protection to that attained by the application of the DASR can be achieved by other means, DASA may approve exception from those DASR.

(c) DASA may allow a credible and defensible level of military aviation safety performance where an equivalent level of protection to that provided by the application of the DASR cannot be demonstrated, but can be supported by the application of sound risk management principles. ☐ **GM**

(d) DASA must acknowledge that regulated organisations may deviate from the substantive requirements laid down in this Regulation in the event of compelling operational imperatives or emergencies. ☐ **GM**

General Requirements

Volume 2: Defence Aviation Safety Regulation

Introduction

Purpose

1. This Volume establishes requirements for the management of Defence Aviation Safety by commanders and managers.

Structure

2. The Defence Aviation Safety Regulation (DASR) is comprised of:

   a. General Requirements (GR), which are set out below in two subparts:

      i. Subpart A *Scope and applicability* defines the scope of the DASR and the applicability of the DASR parts.

      ii. Subpart B *Common requirements and provisions* establishes requirements and provisions that are each applicable to a significant proportion of regulated entities.

   b. the DASR parts, which are set out in Annex A.

3. DASR clauses and sub-clauses may have associated supporting information in the form of:

   a. **Acceptable Means of Compliance (AMC).** AMC is information published by DASA to identify a means of meeting one or more requirements of the DASR. Regulated entities are not required to comply with AMC and may instead propose an Alternative Means of Compliance to DASA. Any such proposal will be subject to separate assessment by DASA to determine whether the approach is compliant with the DASR.

   b. **Guidance Material (GM).** GM provides additional explanation to assist the application of the requirement and/or explain the AMC.

Context

4. This Volume implements applicable requirements set out in DASP Manual Volume 1 *Requirements for the DASP*.

5. DASP Manual Volume 3 *DASP Guidance* provides further information to support understanding of, and compliance with, the DASR.

Definitions

6. The following definitions apply within this Volume and its annex:

   Continuing Airworthiness. All of the processes ensuring that, at any time in its operating life, an aircraft complies with the airworthiness requirements in force and is in a condition for safe operation.

Superseded

Defence Personnel. All Australian Public Service employees in the Department of Defence, Defence locally engaged employees, Defence civilians, Defence members and the equivalents from other Defence organisations on exchange to Defence.

Defence Registered Aircraft. An aircraft listed on the Defence aircraft register maintained by DASA.

State Aircraft. Aircraft of any part of the Defence Force (including any aircraft that is commanded by a member of that Force in the course of duties as such a member); and aircraft used in the military, customs or police services of a foreign country. This includes Uncrewed Aircraft Systems (UAS).

7. Further definitions are available in the DASP Glossary.

General Requirements

Subpart A: Scope and applicability

GR.10 Aircraft registration

(a) State Aircraft operated by Defence must be:

(1) Defence Registered Aircraft; or

(2) managed in accordance with DASR NDR *Non-Defence Registered aircraft.*

(b) Paragraph (a) is not applicable to Uncrewed Aircraft Systems except as required by DASR UAS *Uncrewed Aircraft Systems.*

GR.15 Airworthiness of Defence Registered Aircraft

(a) The design, production and certification of Defence Registered Aircraft must be managed in accordance with DASR 21 *Aircraft Design, Production and Certification.*

(b) The Continuing Airworthiness of Defence Registered Aircraft, and components thereof, must be managed in accordance with:

(1) DASR M *Continuing Airworthiness Management*

(2) DASR 145 *Requirements for Maintenance Organisations*

(3) DASR 66 *Military Aircraft Maintenance Licencing*

(4) DASR 147 *Aircraft Maintenance Training Organisations.*

(c) By way of exception from DASR GR.15 (a) and (b), the operator of a Defence Registered aircraft in one of the following categories may demonstrate airworthiness management that achieves a level of Aviation Safety at least equivalent to comparable Australian civil registered aircraft: ☐ **AMC**

Superseded

(1) crewed hot air balloons used in balloon transport operations under Part 131 of the Civil Aviation Safety Regulations 1998 (CASR)

(2) Warbird, Historic and Replica Aircraft operated under CASR Part 132.

GR.20 Operations personnel

(a) Personnel and organisations involved in Defence aviation operations must comply with:

(1) DASR *Aircrew*

(2) DASR MED *Medical*

(3) DASR AVFM *Aviation Fatigue Management*

(4) DASR NTS *Non-Technical Skills.*

(b) Paragraph (a) is not applicable to Uncrewed Aircraft Systems except as required by DASR UAS *Uncrewed Aircraft Systems*.

GR.25 Operation of State Aircraft

(a) The operation of State Aircraft by Defence must be in accordance with:

(1) DASR AO.Gen *Air Operations – General*

(2) DASR ARO *Authority Requirements for Air Operations*

(3) DASR ORO *Organisation Requirements for Air Operations*

(4) DASR NDR *Non-Defence Registered aircraft*

(5) DASR SPA *Specific Purpose Approval*

(6) DASR SPO *Special Purpose Operations*

(7) DASR UAS *Uncrewed Aircraft Systems*

(8) DASR FT *Flight Tests*

(9) DASR ACD *Air Cargo Delivery*

(10) DASR RoA *Rules of the Air.*

(b) Defence Registered Aircraft must have a valid type-certificate[1] to conduct operations. The type-certificate must be issued in accordance with DASR 21 Subpart B *Military Type-Certificates and Military Restricted Type-Certificates.*

(c) Defence Registered Aircraft must have a valid certificate of airworthiness[2] to conduct operations. The certificate must be issued in accordance with DASR 21 Subpart H *Military Certificates of Airworthiness and Military Restricted Certificates of Airworthiness.*

Superseded

(d) By way of exception from paragraph (c), an aircraft may be operated where a valid permit to fly has been issued. Any such permit to fly must be issued in accordance with DASR 21 Subpart P *Military Permit to Fly.*

(e) By way of exception from paragraph (c), UAS may be operated without a type-certificate or certificate of airworthiness, provided they are compliant with DASR UAS.10.

GR.27 Operation of Foreign Military Aircraft (FMA) in Australia

☐ **GM**

(a) The Sponsor who approves FMA to operate in Australian territorial airspace must:

1. ensure that FMA operations are conducted in a manner such that risks to the safety of other airspace users and people on the ground are eliminated So Far As is Reasonably Practicable (SFARP) and, where not reasonably practicable to eliminate, minimised SFARP ☐ **GM** ☐ **AMC**

2. issue an Authority to Operate (AUTHOP) to document controls that manage the safety of other airspace users and people on the ground ☐ **GM** ☐ **AMC**

3. monitor the effectiveness of controls against the risk to the safety of other airspace users and people on the ground; and any significant safety events—and suspend FMA operations when there is concern that safety may be compromised. ☐ **AMC**

GR.30 Flight Simulation Training Devices

(a) Flight Simulation Training Devices and their use must be managed in accordance with DASR FSTD *Flight Simulation Training Devices.*

GR.35 Aerodromes

(a) Defence Aerodromes, including shipborne heliports, must be operated, managed and certified in accordance with DASR 139 *Aerodromes.*

GR.37 Air Navigation Services

(a) The provision of Air Traffic Management services and Air Navigation Services by Defence, including equipment, systems, and organisations must be in accordance with:

(1) DASR ANSP *Air Navigation Service Providers*; and

(2) the regulations identified by GR.20 *Operations personnel*, as applicable.

Superseded

GR.38 Air Battle Management

(a) The provision of Air Battle Management operations conducted by Defence, including equipment, systems and organisations, must be in accordance with:

(1) DASR ABM *Air Battle Management*

(2) the regulations identified in GR.20 *Operations personnel*, as applicable

(3) DASR AO.GEN.05 *Management of OIP.*

Subpart B: Common requirements and provisions

GR.40 Occurrence reporting

(a) Where required by other DASR, regulated entities must report aviation safety occurrences to DASA in a form and manner acceptable to DASA. ☐ **AMC**

GR.60 Oversight and enforcement

(a) Regulated entities must cooperate with DASA with a view to assuring compliance with the DASR.

(b) For the purposes of the implementation of paragraph (a), regulated entities must conduct investigations, including ramp inspections, and must take any measure to prevent the continuation of a non-compliance.

(c) In order to facilitate the taking of appropriate enforcement action by competent authorities, regulated entities shall exchange information on identified infringements with DASA.

(d) When objective evidence is found showing non-compliance with the applicable requirements of the DASR, DASA will issue a finding which shall be classified as follows: ☐ **GM**

(1) DASR Level 1 finding - Any non-compliance with the DASR requirements which lowers the safety standard and seriously hazards flight safety.

(2) DASR Level 2 finding - Any non-compliance with the DASR requirements which lowers the safety standard and possibly hazards flight safety.

(3) DASR Level 3 finding - Any non-compliance with the DASR requirements or potential problem that could lower the safety standard and possibly hazards flight safety.

(e) After receipt of notification for a Level 1 or Level 2 finding, the regulated entity shall, to the satisfaction of DASA and within a period agreed by DASA: ☐ **GM**

(1) implement an immediate action to eliminate so far as is reasonably practicable (SFARP), or otherwise minimise SFARP, the Aviation Safety risk associated with the non-compliance;

(2) identify the root cause of the non-compliance;

Superseded

(3) define a corrective action plan; and

(4) demonstrate effective corrective action implementation.

(f) After receipt of notification for a Level 3 finding, the regulated entity shall:

(1) manage the finding internally through its own management system; and

(2) implement action as necessary to address the non-compliance or potential problem.

(g) Non-compliance by the regulated entity with the actions identified in DASR GR.60(e) will result in a full or partial suspension of the relevant DASR authorisation by DASA.

GR.80 Flexibility provisions

(a) (Reserved)

(b) Where an equivalent level of protection to that attained by the application of the DASR can be achieved by other means, DASA may approve exception from those DASR.

(c) DASA may allow a credible and defensible level of military aviation safety performance where an equivalent level of protection to that provided by the application of the DASR cannot be demonstrated, but can be supported by the application of sound risk management principles. ☐ **GM**

(d) DASA must acknowledge that regulated organisations may deviate from the substantive requirements laid down in this Regulation in the event of compelling operational imperatives or emergencies. ☐ **GM**

Regulated entities are not required to comply with AMC and may instead propose an Alternative Means of Compliance to DASA. Any such proposal will be subject to separate assessment by DASA to determine whether the approach is compliant with the DASR.

   b. **Guidance Material (GM).** GM provides additional explanation to assist the application of the requirement and/or explain the AMC.

Context

4. This Volume implements applicable requirements set out in DASP Manual Volume 1 *Requirements for the DASP.*

5. DASP Manual Volume 3 *DASP Guidance* provides further information to support understanding of, and compliance with, the DASR.

Definitions

6. The following definitions apply within this Volume and its annex:

   Continuing Airworthiness. All of the processes ensuring that, at any time in its operating life, an aircraft complies with the airworthiness requirements in force and is in a condition for safe operation.

Superseded

Defence Personnel. All Australian Public Service employees in the Department of Defence, Defence locally engaged employees, Defence civilians, Defence members and the equivalents from other Defence organisations on exchange to Defence.

Defence Registered Aircraft. An aircraft listed on the Defence aircraft register maintained by DASA.

State Aircraft. Aircraft of any part of the Defence Force (including any aircraft that is commanded by a member of that Force in the course of duties as such a member); and aircraft used in the military, customs or police services of a foreign country. This includes Uncrewed Aircraft Systems (UAS).

7. Further definitions are available in the DASP Glossary.

General Requirements

Subpart A: Scope and applicability

GR.10 Aircraft registration

(a) State Aircraft operated by Defence must be:

(1) Defence Registered Aircraft; or

(2) managed in accordance with DASR NDR *Non-Defence Registered aircraft.*

(b) Paragraph (a) is not applicable to Uncrewed Aircraft Systems except as required by DASR UAS *Uncrewed Aircraft Systems.*

GR.15 Airworthiness of Defence Registered Aircraft

(a) The design, production and certification of Defence Registered Aircraft must be managed in accordance with DASR 21 *Aircraft Design, Production and Certification.*

(b) The Continuing Airworthiness of Defence Registered Aircraft, and components thereof, must be managed in accordance with:

(1) DASR M *Continuing Airworthiness Management*

(2) DASR 145 *Requirements for Maintenance Organisations*

(3) DASR 66 *Military Aircraft Maintenance Licencing*

(4) DASR 147 *Aircraft Maintenance Training Organisations.*

(c) By way of exception from DASR GR.15 (a) and (b), the operator of a Defence Registered aircraft in one of the following categories may demonstrate airworthiness management that achieves a level of Aviation Safety at least equivalent to comparable Australian civil registered aircraft: ☐ **AMC**

(1) crewed hot air balloons used in balloon transport operations under Part 131 of the Civil Aviation Safety Regulations 1998 (CASR)

Superseded

(2) Warbird, Historic and Replica Aircraft operated under CASR Part 132.

GR.20 Operations personnel

(a) Personnel and organisations involved in Defence aviation operations must comply with:

(1) DASR *Aircrew*

(2) DASR MED *Medical*

(3) DASR AVFM *Aviation Fatigue Management*

(4) DASR NTS *Non-Technical Skills.*

(b) Paragraph (a) is not applicable to Uncrewed Aircraft Systems except as required by DASR UAS *Uncrewed Aircraft Systems*.

GR.25 Operation of State Aircraft

(a) The operation of State Aircraft by Defence must be in accordance with:

(1) DASR AO.Gen *Air Operations – General*

(2) DASR ARO *Authority Requirements for Air Operations*

(3) DASR ORO *Organisation Requirements for Air Operations*

(4) DASR NDR *Non-Defence Registered aircraft*

(5) DASR SPA *Specific Purpose Approval*

(6) DASR SPO *Special Purpose Operations*

(7) DASR UAS *Uncrewed Aircraft Systems*

(8) DASR FT *Flight Tests*

(9) DASR ACD *Air Cargo Delivery*

(10) DASR RoA *Rules of the Air.*

(b) Defence Registered Aircraft must have a valid type-certificate[1] to conduct operations. The type-certificate must be issued in accordance with DASR 21 Subpart B *Military Type-Certificates and Military Restricted Type-Certificates.*

(c) Defence Registered Aircraft must have a valid certificate of airworthiness[2] to conduct operations. The certificate must be issued in accordance with DASR 21 Subpart H *Military Certificates of Airworthiness and Military Restricted Certificates of Airworthiness.*

(d) By way of exception from paragraph (c), an aircraft may be operated where a valid permit to fly has been issued. Any such permit to fly must be issued in accordance with DASR 21 Subpart P *Military Permit to Fly.*

Superseded

(e) By way of exception from paragraph (c), UAS may be operated without a type-certificate or certificate of airworthiness, provided they are compliant with DASR UAS.10.

GR.27 Operation of Foreign Military Aircraft (FMA) in Australia

☐ **GM**

(a) The Sponsor who approves FMA to operate in Australian territorial airspace must:

1. ensure that FMA operations are conducted in a manner such that risks to the safety of other airspace users and people on the ground are eliminated So Far As is Reasonably Practicable (SFARP) and, where not reasonably practicable to eliminate, minimised SFARP ☐ **GM** ☐ **AMC**

2. issue an Authority to Operate (AUTHOP) to document controls that manage the safety of other airspace users and people on the ground ☐ **GM** ☐ **AMC**

3. monitor the effectiveness of controls against the risk to the safety of other airspace users and people on the ground; and any significant safety events—and suspend FMA operations when there is concern that safety may be compromised. ☐ **AMC**

GR.30 Flight Simulation Training Devices

(a) Flight Simulation Training Devices and their use must be managed in accordance with DASR FSTD *Flight Simulation Training Devices.*

GR.35 Aerodromes

(a) Defence Aerodromes, including shipborne heliports, must be operated, managed and certified in accordance with DASR 139 *Aerodromes.*

GR.37 Air Navigation Services

(a) The provision of Air Traffic Management services and Air Navigation Services by Defence, including equipment, systems, and organisations must be in accordance with:

(1) DASR ANSP *Air Navigation Service Providers*; and

(2) the regulations identified by GR.20 *Operations personnel*, as applicable.

GR.38 Air Battle Management

(a) The provision of Air Battle Management operations conducted by Defence, including equipment, systems and organisations, must be in accordance with:

(1) DASR ABM *Air Battle Management*

(2) the regulations identified in GR.20 *Operations personnel*, as applicable

Superseded

(3) DASR AO.GEN.05 *Management of OIP.*

Subpart B: Common requirements and provisions

GR.40 Occurrence reporting

(a) Where required by other DASR, regulated entities must report aviation safety occurrences to DASA in a form and manner acceptable to DASA. ☐ **AMC**

GR.60 Oversight and enforcement

(a) Regulated entities must cooperate with DASA with a view to assuring compliance with the DASR.

(b) For the purposes of the implementation of paragraph (a), regulated entities must conduct investigations, including ramp inspections, and must take any measure to prevent the continuation of a non-compliance.

(c) In order to facilitate the taking of appropriate enforcement action by competent authorities, regulated entities shall exchange information on identified infringements with DASA.

(d) When objective evidence is found showing non-compliance with the applicable requirements of the DASR, DASA will issue a finding which shall be classified as follows: ☐ **GM**

(1) DASR Level 1 finding - Any non-compliance with the DASR requirements which lowers the safety standard and seriously hazards flight safety.

(2) DASR Level 2 finding - Any non-compliance with the DASR requirements which lowers the safety standard and possibly hazards flight safety.

(3) DASR Level 3 finding - Any non-compliance with the DASR requirements or potential problem that could lower the safety standard and possibly hazards flight safety.

(e) After receipt of notification for a Level 1 or Level 2 finding, the regulated entity shall, to the satisfaction of DASA and within a period agreed by DASA: ☐ **GM**

(1) implement an immediate action to eliminate so far as is reasonably practicable (SFARP), or otherwise minimise SFARP, the Aviation Safety risk associated with the non-compliance;

(2) identify the root cause of the non-compliance;

(3) define a corrective action plan; and

(4) demonstrate effective corrective action implementation.

(f) After receipt of notification for a Level 3 finding, the regulated entity shall:

(1) manage the finding internally through its own management system; and

(2) implement action as necessary to address the non-compliance or potential problem.

Superseded

(g) Non-compliance by the regulated entity with the actions identified in DASR GR.60(e) will result in a full or partial suspension of the relevant DASR authorisation by DASA.

GR.80 Flexibility provisions

(a) (Reserved)

(b) Where an equivalent level of protection to that attained by the application of the DASR can be achieved by other means, DASA may approve exception from those DASR.

(c) DASA may allow a credible and defensible level of military aviation safety performance where an equivalent level of protection to that provided by the application of the DASR cannot be demonstrated, but can be supported by the application of sound risk management principles. ☐ **GM**

(d) DASA must acknowledge that regulated organisations may deviate from the substantive requirements laid down in this Regulation in the event of compelling operational imperatives or emergencies. ☐ **GM**

Introduction

Purpose

1. This Volume establishes requirements for the management of Defence Aviation Safety by commanders and managers.

Structure

2. The Defence Aviation Safety Regulation (DASR) is comprised of:

   a. General Requirements (GR), which are set out below in two subparts:

      i. Subpart A *Scope and applicability* defines the scope of the DASR and the applicability of the DASR parts.

      ii. Subpart B *Common requirements and provisions* establishes requirements and provisions that are each applicable to a significant proportion of regulated entities.

   b. the DASR parts, which are set out in Annex A.

3. DASR clauses and sub-clauses may have associated supporting information in the form of:

   a. **Acceptable Means of Compliance (AMC).** AMC is information published by DASA to identify a means of meeting one or more requirements of the DASR. Regulated entities are not required to comply with AMC and may instead propose an Alternative Means of Compliance to DASA. Any such proposal will be subject to separate assessment by DASA to determine whether the approach is compliant with the DASR.

   b. **Guidance Material (GM).** GM provides additional explanation to assist the application of the requirement and/or explain the AMC.

Context

4. This Volume implements applicable requirements set out in DASP Manual Volume 1 *Requirements for the DASP.*

5. DASP Manual Volume 3 *DASP Guidance* provides further information to support understanding of, and compliance with, the DASR.

Definitions

6. The following definitions apply within this Volume and its annex:

   Continuing Airworthiness. All of the processes ensuring that, at any time in its operating life, an aircraft complies with the airworthiness requirements in force and is in a condition for safe operation.

Superseded

Defence Personnel. All Australian Public Service employees in the Department of Defence, Defence locally engaged employees, Defence civilians, Defence members and the equivalents from other Defence organisations on exchange to Defence.

Defence Registered Aircraft. An aircraft listed on the Defence aircraft register maintained by DASA.

State Aircraft. Aircraft of any part of the Defence Force (including any aircraft that is commanded by a member of that Force in the course of duties as such a member); and aircraft used in the military, customs or police services of a foreign country. This includes Uncrewed Aircraft Systems (UAS).

7. Further definitions are available in the DASP Glossary.

General Requirements

Subpart A: Scope and applicability

GR.10 Aircraft registration

(a) State Aircraft operated by Defence must be:

(1) Defence Registered Aircraft; or

(2) managed in accordance with DASR NDR *Non-Defence Registered aircraft.*

(b) Paragraph (a) is not applicable to Uncrewed Aircraft Systems except as required by DASR UAS *Uncrewed Aircraft Systems.*

GR.15 Airworthiness of Defence Registered Aircraft

(a) The design, production and certification of Defence Registered Aircraft must be managed in accordance with DASR 21 *Aircraft Design, Production and Certification.*

(b) The Continuing Airworthiness of Defence Registered Aircraft, and components thereof, must be managed in accordance with:

(1) DASR M *Continuing Airworthiness Management*

(2) DASR 145 *Requirements for Maintenance Organisations*

(3) DASR 66 *Military Aircraft Maintenance Licencing*

(4) DASR 147 *Aircraft Maintenance Training Organisations.*

(c) By way of exception from DASR GR.15 (a) and (b), the operator of a Defence Registered aircraft in one of the following categories may demonstrate airworthiness management that achieves a level of Aviation Safety at least equivalent to comparable Australian civil registered aircraft: ☐ **AMC**

(1) crewed hot air balloons used in balloon transport operations under Part 131 of the Civil Aviation Safety Regulations 1998 (CASR)

Superseded

(2) Warbird, Historic and Replica Aircraft operated under CASR Part 132.

GR.20 Operations personnel

(a) Personnel and organisations involved in Defence aviation operations must comply with:

(1) DASR *Aircrew*

(2) DASR MED *Medical*

(3) DASR AVFM *Aviation Fatigue Management*

(4) DASR NTS *Non-Technical Skills.*

(b) Paragraph (a) is not applicable to Uncrewed Aircraft Systems except as required by DASR UAS *Uncrewed Aircraft Systems*.

GR.25 Operation of State Aircraft

(a) The operation of State Aircraft by Defence must be in accordance with:

(1) DASR AO.Gen *Air Operations – General*

(2) DASR ARO *Authority Requirements for Air Operations*

(3) DASR ORO *Organisation Requirements for Air Operations*

(4) DASR NDR *Non-Defence Registered aircraft*

(5) DASR SPA *Specific Purpose Approval*

(6) DASR SPO *Special Purpose Operations*

(7) DASR UAS *Uncrewed Aircraft Systems*

(8) DASR FT *Flight Tests*

(9) DASR ACD *Air Cargo Delivery*

(10) DASR RoA *Rules of the Air.*

(b) Defence Registered Aircraft must have a valid type-certificate[1] to conduct operations. The type-certificate must be issued in accordance with DASR 21 Subpart B *Military Type-Certificates and Military Restricted Type-Certificates.*

(c) Defence Registered Aircraft must have a valid certificate of airworthiness[2] to conduct operations. The certificate must be issued in accordance with DASR 21 Subpart H *Military Certificates of Airworthiness and Military Restricted Certificates of Airworthiness.*

(d) By way of exception from paragraph (c), an aircraft may be operated where a valid permit to fly has been issued. Any such permit to fly must be issued in accordance with DASR 21 Subpart P *Military Permit to Fly.*

Superseded

(e) By way of exception from paragraph (c), UAS may be operated without a type-certificate or certificate of airworthiness, provided they are compliant with DASR UAS.10.

GR.27 Operation of Foreign Military Aircraft (FMA) in Australia

☐ **GM**

(a) The Sponsor who approves FMA to operate in Australian territorial airspace must:

1. ensure that FMA operations are conducted in a manner such that risks to the safety of other airspace users and people on the ground are eliminated So Far As is Reasonably Practicable (SFARP) and, where not reasonably practicable to eliminate, minimised SFARP ☐ **GM** ☐ **AMC**

2. issue an Authority to Operate (AUTHOP) to document controls that manage the safety of other airspace users and people on the ground ☐ **GM** ☐ **AMC**

3. monitor the effectiveness of controls against the risk to the safety of other airspace users and people on the ground; and any significant safety events—and suspend FMA operations when there is concern that safety may be compromised. ☐ **AMC**

GR.30 Flight Simulation Training Devices

(a) Flight Simulation Training Devices and their use must be managed in accordance with DASR FSTD *Flight Simulation Training Devices.*

GR.35 Aerodromes

(a) Defence Aerodromes, including shipborne heliports, must be operated, managed and certified in accordance with DASR 139 *Aerodromes.*

GR.37 Air Navigation Services

(a) The provision of Air Traffic Management services and Air Navigation Services by Defence, including equipment, systems, and organisations must be in accordance with:

(1) DASR ANSP *Air Navigation Service Providers*; and

(2) the regulations identified by GR.20 *Operations personnel*, as applicable.

GR.38 Air Battle Management

(a) The provision of Air Battle Management operations conducted by Defence, including equipment, systems and organisations, must be in accordance with:

(1) DASR ABM *Air Battle Management*

(2) the regulations identified in GR.20 *Operations personnel*, as applicable

Superseded

(3) DASR AO.GEN.05 *Management of OIP.*

Subpart B: Common requirements and provisions

GR.40 Occurrence reporting

(a) Where required by other DASR, regulated entities must report aviation safety occurrences to DASA in a form and manner acceptable to DASA. ☐ **AMC**

GR.60 Oversight and enforcement

(a) Regulated entities must cooperate with DASA with a view to assuring compliance with the DASR.

(b) For the purposes of the implementation of paragraph (a), regulated entities must conduct investigations, including ramp inspections, and must take any measure to prevent the continuation of a non-compliance.

(c) In order to facilitate the taking of appropriate enforcement action by competent authorities, regulated entities shall exchange information on identified infringements with DASA.

(d) When objective evidence is found showing non-compliance with the applicable requirements of the DASR, DASA will issue a finding which shall be classified as follows: ☐ **GM**

(1) DASR Level 1 finding - Any non-compliance with the DASR requirements which lowers the safety standard and seriously hazards flight safety.

(2) DASR Level 2 finding - Any non-compliance with the DASR requirements which lowers the safety standard and possibly hazards flight safety.

(3) DASR Level 3 finding - Any non-compliance with the DASR requirements or potential problem that could lower the safety standard and possibly hazards flight safety.

(e) After receipt of notification for a Level 1 or Level 2 finding, the regulated entity shall, to the satisfaction of DASA and within a period agreed by DASA: ☐ **GM**

(1) implement an immediate action to eliminate so far as is reasonably practicable (SFARP), or otherwise minimise SFARP, the Aviation Safety risk associated with the non-compliance;

(2) identify the root cause of the non-compliance;

(3) define a corrective action plan; and

(4) demonstrate effective corrective action implementation.

(f) After receipt of notification for a Level 3 finding, the regulated entity shall:

(1) manage the finding internally through its own management system; and

(2) implement action as necessary to address the non-compliance or potential problem.

Superseded

(g) Non-compliance by the regulated entity with the actions identified in DASR GR.60(e) will result in a full or partial suspension of the relevant DASR authorisation by DASA.

GR.80 Flexibility provisions

(a) (Reserved)

(b) Where an equivalent level of protection to that attained by the application of the DASR can be achieved by other means, DASA may approve exception from those DASR.

(c) DASA may allow a credible and defensible level of military aviation safety performance where an equivalent level of protection to that provided by the application of the DASR cannot be demonstrated, but can be supported by the application of sound risk management principles. ☐ **GM**

(d) DASA must acknowledge that regulated organisations may deviate from the substantive requirements laid down in this Regulation in the event of compelling operational imperatives or emergencies. ☐ **GM**

DASR 21 - Aircraft Design, Production and Certification

21.1 - General

GM

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

Superseded

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

Superseded

v. the master minimum equipment list.

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

Superseded

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

Superseded

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;
2. an identification of the affected aircraft; operating and maintenance associated documentation;
3. the action(s) required;
4. the compliance time for the required action(s); ☐ **GM**
5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

Superseded

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

Superseded

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

Superseded

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

Superseded

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

Superseded

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that:☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall:☐ **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; ☐ **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

   a) have a type-certificate issued in accordance with this DASR; or ☐ **GM**

   b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

Superseded

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

21.A.33 - Inspections and tests

☐ **AMC**

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

i. The materials and processes adequately conform to the specifications for the proposed type design;

ii. The parts of the products adequately conform to the drawings in the proposed type design;

iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: ☐ **GM**

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

Superseded

21.A.35 - Flight Tests

☐ **GM** ☐ **GM1**

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

Superseded

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and
2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification

Superseded

basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

Superseded

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

Superseded

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Superseded

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

Superseded

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor';☐ **AMC**

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs);☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

Superseded

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

Superseded

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

21.A.93 - Application

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

Superseded

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. ☐ **GM**

21.A.95 - Requirements for approval of a minor changes

☐ **AMC**

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. ☐ **GM**

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

Superseded

21.A.97 - Requirements for approval of a major change

☐ **AMC** ☐ **AMC1**

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

Superseded

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

   i. The general configuration or the principles of construction are not retained;

   ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

   i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

   ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). ☐ **GM**

Superseded

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

Superseded

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

Superseded

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued

Superseded

airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

Superseded

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed

Superseded

aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

Superseded

i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

Superseded

21.A.126 - Production inspection system

GM

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; GM

2. incoming materials, and bought or subcontracted parts, are properly identified; GM

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; GM1 GM2

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. GM

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; GM

2. materials subject to damage and deterioration are suitably stored and adequately protected; GM

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; GM

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; GM

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; GM

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. GM

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with

Superseded

those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;
2. A check on flight performance (using normal aircraft instrumentation);
3. A check on the proper functioning of all aircraft equipment and systems;
4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;
5. A check of the operational characteristics of the aircraft on the ground;
6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-

Superseded

certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

Superseded

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties,

Superseded

conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

   iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

   iv. identification and traceability;

   v. manufacturing processes;

   vi. inspection and testing, including production flight tests;

   vii. calibration of tools, jigs, and test equipment;

   viii. non-conforming item control;

   ix. airworthiness coordination with the applicant for, or holder of, the design approval;

   x. records completion and retention;

   xi. personnel competence and qualification;

   xii. issue of airworthiness release documents;

   xiii. handling, storage and packing;

   xiv. internal quality audits and resulting corrective actions;

   xv. work within the terms of approval performed at any location other than the approved facilities;

   xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

   xvii. issue of military permit to fly and approval of associated flight conditions.

   The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

Superseded

GM

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation’s policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

(i) a description of the organisation’s processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

(ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

(iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

(iv) a policy for risk and safety management and associated methodologies;

(v) procedures to identify the instruments and equipment to be carried;

Superseded

(vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

21.A.145 - Approval requirements

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

Superseded

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; ☐ **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; ☐ **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. ☐ **AMC**

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

Superseded

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or
3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**
4. the production organisation no longer meets the requirements of; or
5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a

Superseded

military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

Superseded

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; ☐ **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

☐ **AMC to Subpart H**

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

Superseded

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

21.A.174 - Application

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

i. a statement of conformity:

– issued under DASR 21.A.163(b); or

– issued under DASR 21.A.130 and validated by the Authority; or

– for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

ii. a weight and balance report with a loading schedule;

iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

ii. in any other case:

– a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

– a weight and balance report with a loading schedule;

– the flight manual and any other manuals required by the Authority of the State of registry;

– historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

Superseded

– a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

ii. the applicant has submitted to DASA the following documents:

– evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document

– a copy of the applicable Type Certificate Data Sheet

– a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate

– a copy of the manufacturer's instructions for continuing airworthiness for the aircraft

– a copy of the parts catalogue for the aircraft

– a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

– continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)

– continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

Superseded

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

Superseded

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

Superseded

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. ☐ **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. ☐ **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: ☐ **AMC1** ☐ **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; ☐ **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design

Superseded

organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions

Superseded

and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

(a) (Reserved);

(b) (Reserved);

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

Superseded

v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

Superseded

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

Superseded

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. **GM**

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451. **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: **AMC**

Superseded

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and ☐ **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: ☐ **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; ☐ **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

Superseded

ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. ☐ **GM**

(b) A repair shall be classified and approved by: ☐ **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. ☐ **GM**

21.A.445 - Unrepaired damage

☐ **AMC** ☐ **GM**

Superseded

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other

Superseded

person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

   i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

   ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

Superseded

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**

2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;

Superseded

3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;

4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

Superseded

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

Superseded

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or

2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or

3. the article has proved to give rise to unacceptable hazards in service; or

Superseded

4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

☐ **GM to Subpart P**

21.A.701 - Scope

☐ **GM - MPTF**

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes:☐ **GM - MPTF** ☐ **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)

Superseded

14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;

15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;

16. (Reserved)

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

Superseded

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

Superseded

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

Superseded

21.A.713 - Changes

☐ **GM**

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

Superseded

21.A.727 - Obligations of the holder of a military permit to fly

☐ AMC ☐ GM

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

☐ GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

21.A.807 - Identification of AUSMTSO articles

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART A - GENERAL PROVISIONS

21.1 - General

GM

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

Superseded

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

Superseded

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

Superseded

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

Superseded

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-

Superseded

compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

Superseded

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

Superseded

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as

Superseded

established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

a) have a type-certificate issued in accordance with this DASR; or **GM**

b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

Superseded

AMC

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

i. The materials and processes adequately conform to the specifications for the proposed type design;

ii. The parts of the products adequately conform to the drawings in the proposed type design;

iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: GM

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

GM GM1

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

Superseded

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

Superseded

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or

Superseded

other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

Superseded

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation,

Superseded

the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The

Superseded

military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as ‘major’ or ‘minor’;☐ **AMC**

Superseded

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

Superseded

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

Superseded

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. **GM**

Superseded

AMC

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: GM

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. GM

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

AMC AMC1

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

Superseded

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

i. The general configuration or the principles of construction are not retained;

Superseded

ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). GM

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

Superseded

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and
2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

Superseded

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

Superseded

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

   i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

   ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

Superseded

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: ☐ **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access

Superseded

to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

Superseded

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

   i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

   ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

Superseded

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

21.A.126 - Production inspection system

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

Superseded

2. incoming materials, and bought or subcontracted parts, are properly identified; **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; **GM1** **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. **GM**

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;

2. A check on flight performance (using normal aircraft instrumentation);

3. A check on the proper functioning of all aircraft equipment and systems;

Superseded

4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;

5. A check of the operational characteristics of the aircraft on the ground;

6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or

Superseded

appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

Superseded

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties, conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

Superseded

iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

iv. identification and traceability;

v. manufacturing processes;

vi. inspection and testing, including production flight tests;

vii. calibration of tools, jigs, and test equipment;

viii. non-conforming item control;

ix. airworthiness coordination with the applicant for, or holder of, the design approval;

x. records completion and retention;

xi. personnel competence and qualification;

xii. issue of airworthiness release documents;

xiii. handling, storage and packing;

xiv. internal quality audits and resulting corrective actions;

xv. work within the terms of approval performed at any location other than the approved facilities;

xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

xvii. issue of military permit to fly and approval of associated flight conditions.

The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.143 - Production Organisation Exposition

☐ **GM**

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

Superseded

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

    (vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

Superseded

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. ☐ **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and ☐ **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; ☐ **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and ☐ **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; ☐ **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; ☐ **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. ☐ **AMC**

Superseded

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

Superseded

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or

3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**

4. the production organisation no longer meets the requirements of; or

5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

Superseded

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

Superseded

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

AMC to Subpart H

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

Superseded

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

   i. a statement of conformity:

      – issued under DASR 21.A.163(b); or

      – issued under DASR 21.A.130 and validated by the Authority; or

      – for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

   ii. a weight and balance report with a loading schedule;

   iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

   i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

   ii. in any other case:

      – a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

      – a weight and balance report with a loading schedule;

      – the flight manual and any other manuals required by the Authority of the State of registry;

      – historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

      – a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

   i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

Superseded

ii. the applicant has submitted to DASA the following documents:

- evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document
- a copy of the applicable Type Certificate Data Sheet
- a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate
- a copy of the manufacturer's instructions for continuing airworthiness for the aircraft
- a copy of the parts catalogue for the aircraft
- a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

- continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)
- continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

Superseded

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

Superseded

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

Superseded

ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: **AMC1** **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

Superseded

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

Superseded

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.263 - Privileges

(a) (Reserved);

(b) (Reserved);

Superseded

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

   v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

Superseded

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

Superseded

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. ☐ **GM**

Superseded

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. ☐ **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: ☐ **AMC**

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

Superseded

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

   ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

Superseded

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. **GM**

(b) A repair shall be classified and approved by: **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. **GM**

21.A.445 - Unrepaired damage

AMC **GM**

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Superseded

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

Superseded

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

Superseded

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**
2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;
3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;
4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

Superseded

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

Superseded

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used

Superseded

to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. ☐ **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or
2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or
3. the article has proved to give rise to unacceptable hazards in service; or
4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;
15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;
16. (Reserved)

Superseded

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

Superseded

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

Superseded

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

21.A.713 - Changes

☐ **GM**

Superseded

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

Superseded

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

21.A.807 - Identification of AUSMTSO articles

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

SUBPART C – MILITARY TYPE CERTIFICATE HOLDER ORGANISATION

21.1 - General

☐ **GM**

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

Superseded

ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

Superseded

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

Superseded

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

Superseded

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;
2. an identification of the affected aircraft; operating and maintenance associated documentation;
3. the action(s) required;
4. the compliance time for the required action(s); ☐ **GM**
5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out

Superseded

the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

Superseded

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

Superseded

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

Superseded

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

Superseded

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

   a) have a type-certificate issued in accordance with this DASR; or **GM**

   b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

Superseded

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

21.A.33 - Inspections and tests

☐ **AMC**

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

i. The materials and processes adequately conform to the specifications for the proposed type design;

ii. The parts of the products adequately conform to the drawings in the proposed type design;

iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: ☐ **GM**

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

Superseded

21.A.35 - Flight Tests

☐ **GM** ☐ **GM1**

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

Superseded

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and
2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

Superseded

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

Superseded

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and
2. To ensure that its responsibilities are properly discharged in accordance with:
   i. The appropriate provisions of this DASR; and
   ii. The terms of approval issued under DASR 21.A.80.
3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

Superseded

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

Superseded

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor';☐ **AMC**

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs);☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

Superseded

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this

Superseded

Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

21.A.93 - Application

☐ **AMC**

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; ☐ **GM1** ☐ **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; ☐ **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and ☐ **AMC** ☐ **GM**

Superseded

iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. ☐ **GM**

21.A.95 - Requirements for approval of a minor changes

☐ **AMC**

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. ☐ **GM**

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

Superseded

21.A.97 - Requirements for approval of a major change

☐ **AMC** ☐ **AMC1**

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

Superseded

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

   i. The general configuration or the principles of construction are not retained;

   ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

   i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

   ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). **GM**

Superseded

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

Superseded

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

Superseded

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued

Superseded

airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

Superseded

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

Superseded

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

Superseded

i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

Superseded

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

2. incoming materials, and bought or subcontracted parts, are properly identified; ☐ **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; ☐ **GM1** ☐ **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. ☐ **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; ☐ **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; ☐ **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; ☐ **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; ☐ **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; ☐ **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. ☐ **GM**

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with

Superseded

those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;
2. A check on flight performance (using normal aircraft instrumentation);
3. A check on the proper functioning of all aircraft equipment and systems;
4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;
5. A check of the operational characteristics of the aircraft on the ground;
6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-

Superseded

certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

Superseded

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties,

Superseded

conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

   iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

   iv. identification and traceability;

   v. manufacturing processes;

   vi. inspection and testing, including production flight tests;

   vii. calibration of tools, jigs, and test equipment;

   viii. non-conforming item control;

   ix. airworthiness coordination with the applicant for, or holder of, the design approval;

   x. records completion and retention;

   xi. personnel competence and qualification;

   xii. issue of airworthiness release documents;

   xiii. handling, storage and packing;

   xiv. internal quality audits and resulting corrective actions;

   xv. work within the terms of approval performed at any location other than the approved facilities;

   xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

   xvii. issue of military permit to fly and approval of associated flight conditions.

   The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

Superseded

GM

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;
2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);
3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;
4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);
5. a list of certifying staff as referred to in DASR 21.A.145(d);
6. a general description of human resources;
7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;
8. a general description of the production organisation's scope of work relevant to the terms of approval;
9. the procedure for the notification of organisational changes to the Authority;
10. the amendment procedure for the production organisation exposition;
11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);
12. a list of those outside parties referred to in DASR 21.A.139(a); and
13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

Superseded

(vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

21.A.145 - Approval requirements

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

Superseded

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; ☐ **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; ☐ **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. ☐ **AMC**

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

Superseded

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or
3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**
4. the production organisation no longer meets the requirements of; or
5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a

Superseded

military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

Superseded

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

AMC to Subpart H

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

Superseded

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

21.A.174 - Application

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

i. a statement of conformity:

– issued under DASR 21.A.163(b); or

– issued under DASR 21.A.130 and validated by the Authority; or

– for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

ii. a weight and balance report with a loading schedule;

iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

ii. in any other case:

– a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

– a weight and balance report with a loading schedule;

– the flight manual and any other manuals required by the Authority of the State of registry;

– historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

– a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness

Superseded

Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

ii. the applicant has submitted to DASA the following documents:

– evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document

– a copy of the applicable Type Certificate Data Sheet

– a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate

– a copy of the manufacturer's instructions for continuing airworthiness for the aircraft

– a copy of the parts catalogue for the aircraft

– a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

– continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)

– continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. **GM**

21.A.177 - Amendment or modification

GM

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

Superseded

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

Superseded

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

Superseded

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. ☐ **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. ☐ **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: ☐ **AMC1** ☐ **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; ☐ **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required

Superseded

by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational

Superseded

suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

(a) (Reserved);

(b) (Reserved);

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

Superseded

v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

Superseded

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

Superseded

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. **GM**

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451. **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: **AMC**

Superseded

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and ☐ **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: ☐ **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; ☐ **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

Superseded

ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. ☐ **GM**

(b) A repair shall be classified and approved by: ☐ **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. ☐ **GM**

21.A.445 - Unrepaired damage

☐ **AMC** ☐ **GM**

Superseded

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates

Superseded

shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

Superseded

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**

2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;

Superseded

3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;

4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

Superseded

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

Superseded

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or

2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or

3. the article has proved to give rise to unacceptable hazards in service; or

Superseded

4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;

Superseded

15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;

16. (Reserved)

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

Superseded

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);
2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;
3. the restrictions regarding carriage of persons other than flight crew;
4. the operating limitations, specific procedures or technical conditions to be met;
5. the specific flight test programme (if applicable);
6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;
2. the documentation supporting these conditions; and
3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

Superseded

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

Superseded

21.A.713 - Changes

☐ **GM**

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

Superseded

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

☐ **GM**

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.1 - General

GM

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

i. that State is providing oversight as State of Design; and

ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

ii. For a national programme, the Military Aviation Authority of this Nation/State,

Superseded

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

   i. the minimum syllabus of pilot type rating training, including determination of type rating;

Superseded

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the

Superseded

issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

Superseded

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

Superseded

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

Superseded

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b).☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data.☐ **AMC**☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

Superseded

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

Superseded

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

Superseded

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: ☐ **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; ☐ **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

   a) have a type-certificate issued in accordance with this DASR; or ☐ **GM**

   b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

Superseded

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

21.A.33 - Inspections and tests

☐ **AMC**

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

i. The materials and processes adequately conform to the specifications for the proposed type design;

ii. The parts of the products adequately conform to the drawings in the proposed type design;

iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: ☐ **GM**

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the

Superseded

statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

21.A.35 - Flight Tests

GM **GM1**

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. **GM**

Superseded

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and
2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

Superseded

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

Superseded

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and
2. To ensure that its responsibilities are properly discharged in accordance with:
   i. The appropriate provisions of this DASR; and
   ii. The terms of approval issued under DASR 21.A.80.
3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

Superseded

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

Superseded

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor';☐ **AMC**

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs);☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

Superseded

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this

Superseded

Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

21.A.93 - Application

☐ **AMC**

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; ☐ **GM1** ☐ **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; ☐ **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and ☐ **AMC** ☐ **GM**

Superseded

iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. ☐ **GM**

21.A.95 - Requirements for approval of a minor changes

☐ **AMC**

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. ☐ **GM**

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

Superseded

21.A.97 - Requirements for approval of a major change

☐ **AMC** ☐ **AMC1**

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

Superseded

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

   i. The general configuration or the principles of construction are not retained;

   ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

   i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

   ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). ☐ **GM**

Superseded

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

Superseded

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

Superseded

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued

Superseded

airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

Superseded

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

Superseded

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

Superseded

i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

Superseded

GM

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; GM

2. incoming materials, and bought or subcontracted parts, are properly identified; GM

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; GM1 GM2

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. GM

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; GM

2. materials subject to damage and deterioration are suitably stored and adequately protected; GM

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; GM

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; GM

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; GM

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. GM

Superseded

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with

those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;
2. A check on flight performance (using normal aircraft instrumentation);
3. A check on the proper functioning of all aircraft equipment and systems;
4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;
5. A check of the operational characteristics of the aircraft on the ground;
6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-

Superseded

certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

Superseded

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties,

Superseded

conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

   iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

   iv. identification and traceability;

   v. manufacturing processes;

   vi. inspection and testing, including production flight tests;

   vii. calibration of tools, jigs, and test equipment;

   viii. non-conforming item control;

   ix. airworthiness coordination with the applicant for, or holder of, the design approval;

   x. records completion and retention;

   xi. personnel competence and qualification;

   xii. issue of airworthiness release documents;

   xiii. handling, storage and packing;

   xiv. internal quality audits and resulting corrective actions;

   xv. work within the terms of approval performed at any location other than the approved facilities;

   xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

   xvii. issue of military permit to fly and approval of associated flight conditions.

   The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

Superseded

GM

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;
2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);
3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;
4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);
5. a list of certifying staff as referred to in DASR 21.A.145(d);
6. a general description of human resources;
7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;
8. a general description of the production organisation's scope of work relevant to the terms of approval;
9. the procedure for the notification of organisational changes to the Authority;
10. the amendment procedure for the production organisation exposition;
11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);
12. a list of those outside parties referred to in DASR 21.A.139(a); and
13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

Superseded

(vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

21.A.145 - Approval requirements

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

Superseded

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; ☐ **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; ☐ **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. ☐ **AMC**

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

Superseded

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or
3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**
4. the production organisation no longer meets the requirements of; or
5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a

Superseded

military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

Superseded

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

AMC to Subpart H

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

Superseded

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

21.A.174 - Application

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

i. a statement of conformity:

– issued under DASR 21.A.163(b); or

– issued under DASR 21.A.130 and validated by the Authority; or

– for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

ii. a weight and balance report with a loading schedule;

iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

ii. in any other case:

– a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

– a weight and balance report with a loading schedule;

– the flight manual and any other manuals required by the Authority of the State of registry;

– historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

– a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness

Superseded

Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

ii. the applicant has submitted to DASA the following documents:

– evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document

– a copy of the applicable Type Certificate Data Sheet

– a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate

– a copy of the manufacturer's instructions for continuing airworthiness for the aircraft

– a copy of the parts catalogue for the aircraft

– a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

– continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)

– continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. **GM**

21.A.177 - Amendment or modification

GM

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

Superseded

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

Superseded

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

Superseded

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. ☐ **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. ☐ **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: ☐ **AMC1** ☐ **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; ☐ **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required

Superseded

by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational

Superseded

suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

(a) (Reserved);

(b) (Reserved);

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

Superseded

v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

Superseded

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

Superseded

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. **GM**

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451. **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: **AMC**

Superseded

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and ☐ **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: ☐ **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; ☐ **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

Superseded

ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. ☐ **GM**

(b) A repair shall be classified and approved by: ☐ **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. ☐ **GM**

21.A.445 - Unrepaired damage

☐ **AMC** ☐ **GM**

Superseded

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates

Superseded

shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

Superseded

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**

2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;

Superseded

3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;

4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

Superseded

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

Superseded

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or

2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or

3. the article has proved to give rise to unacceptable hazards in service; or

Superseded

4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;

Superseded

15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;

16. (Reserved)

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

Superseded

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);
2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;
3. the restrictions regarding carriage of persons other than flight crew;
4. the operating limitations, specific procedures or technical conditions to be met;
5. the specific flight test programme (if applicable);
6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;
2. the documentation supporting these conditions; and
3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

Superseded

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

Superseded

21.A.713 - Changes

☐ **GM**

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

Superseded

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

☐ **GM**

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

21.A.807 - Identification of AUSMTSO articles

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.1 - General

GM

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

Superseded

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

Superseded

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

Superseded

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

Superseded

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-

Superseded

compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

Superseded

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

Superseded

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as

Superseded

established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

a) have a type-certificate issued in accordance with this DASR; or **GM**

b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

Superseded

AMC

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

   i. The materials and processes adequately conform to the specifications for the proposed type design;

   ii. The parts of the products adequately conform to the drawings in the proposed type design;

   iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: GM

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

GM GM1

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

Superseded

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

Superseded

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or

Superseded

other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

Superseded

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation,

Superseded

the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The

Superseded

military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as ‘major’ or ‘minor’;☐ **AMC**

Superseded

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

Superseded

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

Superseded

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. **GM**

Superseded

AMC

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: GM

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. GM

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.97 - Requirements for approval of a major change

AMC AMC1

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

Superseded

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

i. The general configuration or the principles of construction are not retained;

Superseded

ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). GM

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

Superseded

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and
2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

Superseded

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

Superseded

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

   i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

   ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

Superseded

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: ☐ **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access

Superseded

to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

Superseded

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

   i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

   ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

Superseded

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

21.A.126 - Production inspection system

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

Superseded

2. incoming materials, and bought or subcontracted parts, are properly identified; **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; **GM1** **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. **GM**

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;

2. A check on flight performance (using normal aircraft instrumentation);

3. A check on the proper functioning of all aircraft equipment and systems;

Superseded

4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;

5. A check of the operational characteristics of the aircraft on the ground;

6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or

Superseded

appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

Superseded

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties, conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

Superseded

iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

iv. identification and traceability;

v. manufacturing processes;

vi. inspection and testing, including production flight tests;

vii. calibration of tools, jigs, and test equipment;

viii. non-conforming item control;

ix. airworthiness coordination with the applicant for, or holder of, the design approval;

x. records completion and retention;

xi. personnel competence and qualification;

xii. issue of airworthiness release documents;

xiii. handling, storage and packing;

xiv. internal quality audits and resulting corrective actions;

xv. work within the terms of approval performed at any location other than the approved facilities;

xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

xvii. issue of military permit to fly and approval of associated flight conditions.

The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.143 - Production Organisation Exposition

☐ **GM**

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

Superseded

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

    (vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

Superseded

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. ☐ **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and ☐ **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; ☐ **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and ☐ **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; ☐ **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; ☐ **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. ☐ **AMC**

Superseded

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

Superseded

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or

3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**

4. the production organisation no longer meets the requirements of; or

5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

Superseded

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

Superseded

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

AMC to Subpart H

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

Superseded

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

   i. a statement of conformity:

      – issued under DASR 21.A.163(b); or

      – issued under DASR 21.A.130 and validated by the Authority; or

      – for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

   ii. a weight and balance report with a loading schedule;

   iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

   i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

   ii. in any other case:

      – a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

      – a weight and balance report with a loading schedule;

      – the flight manual and any other manuals required by the Authority of the State of registry;

      – historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

      – a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

   i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

Superseded

ii. the applicant has submitted to DASA the following documents:

- evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document
- a copy of the applicable Type Certificate Data Sheet
- a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate
- a copy of the manufacturer's instructions for continuing airworthiness for the aircraft
- a copy of the parts catalogue for the aircraft
- a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

- continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)
- continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

Superseded

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

Superseded

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

Superseded

ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: **AMC1** **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

Superseded

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

Superseded

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.263 - Privileges

(a) (Reserved);

(b) (Reserved);

Superseded

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

   v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

Superseded

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

Superseded

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. ☐ **GM**

Superseded

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. ☐ **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451.☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: ☐ **AMC**

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

Superseded

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

   ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

Superseded

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. **GM**

(b) A repair shall be classified and approved by: **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. **GM**

21.A.445 - Unrepaired damage

AMC **GM**

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Superseded

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

Superseded

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

Superseded

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**
2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;
3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;
4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

Superseded

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

Superseded

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used

Superseded

to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. ☐ **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or
2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or
3. the article has proved to give rise to unacceptable hazards in service; or
4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;
15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;
16. (Reserved)

Superseded

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

Superseded

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

Superseded

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

21.A.713 - Changes

☐ **GM**

Superseded

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

Superseded

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

21.A.807 - Identification of AUSMTSO articles

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

21.1 - General

☐ **GM**

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

Superseded

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

Superseded

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

Superseded

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

Superseded

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-

Superseded

compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

Superseded

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

Superseded

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as

Superseded

established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

a) have a type-certificate issued in accordance with this DASR; or **GM**

b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

Superseded

AMC

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

i. The materials and processes adequately conform to the specifications for the proposed type design;

ii. The parts of the products adequately conform to the drawings in the proposed type design;

iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: GM

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

GM GM1

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

Superseded

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

Superseded

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or

Superseded

other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

Superseded

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation,

Superseded

the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The

Superseded

military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as ‘major’ or ‘minor’;☐ **AMC**

Superseded

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

Superseded

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

Superseded

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. **GM**

Superseded

AMC

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: GM

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. GM

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

AMC AMC1

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

Superseded

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

i. The general configuration or the principles of construction are not retained;

Superseded

ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). GM

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

Superseded

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and
2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

Superseded

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

Superseded

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

   i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

   ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

Superseded

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: ☐ **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access

Superseded

to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

Superseded

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

   i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

   ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

Superseded

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

21.A.126 - Production inspection system

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

Superseded

2. incoming materials, and bought or subcontracted parts, are properly identified; **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; **GM1** **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. **GM**

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;

2. A check on flight performance (using normal aircraft instrumentation);

3. A check on the proper functioning of all aircraft equipment and systems;

Superseded

4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;

5. A check of the operational characteristics of the aircraft on the ground;

6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or

Superseded

appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

Superseded

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties, conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

Superseded

iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

iv. identification and traceability;

v. manufacturing processes;

vi. inspection and testing, including production flight tests;

vii. calibration of tools, jigs, and test equipment;

viii. non-conforming item control;

ix. airworthiness coordination with the applicant for, or holder of, the design approval;

x. records completion and retention;

xi. personnel competence and qualification;

xii. issue of airworthiness release documents;

xiii. handling, storage and packing;

xiv. internal quality audits and resulting corrective actions;

xv. work within the terms of approval performed at any location other than the approved facilities;

xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

xvii. issue of military permit to fly and approval of associated flight conditions.

The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.143 - Production Organisation Exposition

☐ **GM**

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

Superseded

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

    (vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

Superseded

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. ☐ **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and ☐ **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; ☐ **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and ☐ **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; ☐ **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; ☐ **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. ☐ **AMC**

Superseded

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

Superseded

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or

3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**

4. the production organisation no longer meets the requirements of; or

5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

Superseded

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

Superseded

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

AMC to Subpart H

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

Superseded

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

   i. a statement of conformity:

      – issued under DASR 21.A.163(b); or

      – issued under DASR 21.A.130 and validated by the Authority; or

      – for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

   ii. a weight and balance report with a loading schedule;

   iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

   i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

   ii. in any other case:

      – a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

      – a weight and balance report with a loading schedule;

      – the flight manual and any other manuals required by the Authority of the State of registry;

      – historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

      – a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

   i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

Superseded

ii. the applicant has submitted to DASA the following documents:

- evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document
- a copy of the applicable Type Certificate Data Sheet
- a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate
- a copy of the manufacturer's instructions for continuing airworthiness for the aircraft
- a copy of the parts catalogue for the aircraft
- a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

- continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)
- continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

Superseded

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

Superseded

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

Superseded

ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: **AMC1** **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

Superseded

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

Superseded

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.263 - Privileges

(a) (Reserved);

(b) (Reserved);

Superseded

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

   v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

Superseded

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

Superseded

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. ☐ **GM**

Superseded

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. ☐ **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: ☐ **AMC**

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

Superseded

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

   ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

Superseded

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. **GM**

(b) A repair shall be classified and approved by: **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. **GM**

21.A.445 - Unrepaired damage

AMC **GM**

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Superseded

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

Superseded

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

Superseded

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**
2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;
3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;
4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

Superseded

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

Superseded

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used

Superseded

to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. ☐ **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or
2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or
3. the article has proved to give rise to unacceptable hazards in service; or
4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;
15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;
16. (Reserved)

Superseded

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

Superseded

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

Superseded

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

21.A.713 - Changes

☐ **GM**

Superseded

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

Superseded

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

21.A.807 - Identification of AUSMTSO articles

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.1 - General

GM

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

Superseded

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

Superseded

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

Superseded

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

Superseded

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-

Superseded

compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

Superseded

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

Superseded

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as

Superseded

established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

a) have a type-certificate issued in accordance with this DASR; or **GM**

b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

Superseded

AMC

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

   i. The materials and processes adequately conform to the specifications for the proposed type design;

   ii. The parts of the products adequately conform to the drawings in the proposed type design;

   iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: GM

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

GM GM1

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

Superseded

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

Superseded

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or

Superseded

other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

Superseded

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation,

Superseded

the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The

Superseded

military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as ‘major’ or ‘minor’;☐ **AMC**

Superseded

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

Superseded

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

Superseded

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. **GM**

Superseded

AMC

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: GM

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. GM

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

AMC AMC1

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

Superseded

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

i. The general configuration or the principles of construction are not retained;

Superseded

ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). GM

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

Superseded

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and
2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

Superseded

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

Superseded

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

   i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

   ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

Superseded

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: ☐ **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access

Superseded

to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

Superseded

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

   i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

   ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

Superseded

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

21.A.126 - Production inspection system

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

Superseded

2. incoming materials, and bought or subcontracted parts, are properly identified; ☐ **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; ☐ **GM1** ☐ **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. ☐ **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; ☐ **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; ☐ **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; ☐ **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; ☐ **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; ☐ **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. ☐ **GM**

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;

2. A check on flight performance (using normal aircraft instrumentation);

3. A check on the proper functioning of all aircraft equipment and systems;

Superseded

4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;

5. A check of the operational characteristics of the aircraft on the ground;

6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or

Superseded

appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

Superseded

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties, conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

Superseded

iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

iv. identification and traceability;

v. manufacturing processes;

vi. inspection and testing, including production flight tests;

vii. calibration of tools, jigs, and test equipment;

viii. non-conforming item control;

ix. airworthiness coordination with the applicant for, or holder of, the design approval;

x. records completion and retention;

xi. personnel competence and qualification;

xii. issue of airworthiness release documents;

xiii. handling, storage and packing;

xiv. internal quality audits and resulting corrective actions;

xv. work within the terms of approval performed at any location other than the approved facilities;

xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

xvii. issue of military permit to fly and approval of associated flight conditions.

The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.143 - Production Organisation Exposition

☐ **GM**

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

Superseded

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

    (vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

Superseded

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. **AMC**

Superseded

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

Superseded

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or

3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**

4. the production organisation no longer meets the requirements of; or

5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

Superseded

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

Superseded

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; ☐ **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

☐ **AMC to Subpart H**

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

Superseded

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

   i. a statement of conformity:

   – issued under DASR 21.A.163(b); or

   – issued under DASR 21.A.130 and validated by the Authority; or

   – for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

   ii. a weight and balance report with a loading schedule;

   iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

   i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

   ii. in any other case:

   – a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

   – a weight and balance report with a loading schedule;

   – the flight manual and any other manuals required by the Authority of the State of registry;

   – historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

   – a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

   i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

Superseded

ii. the applicant has submitted to DASA the following documents:

- evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document
- a copy of the applicable Type Certificate Data Sheet
- a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate
- a copy of the manufacturer's instructions for continuing airworthiness for the aircraft
- a copy of the parts catalogue for the aircraft
- a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

- continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)
- continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

Superseded

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

Superseded

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

Superseded

ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: **AMC1** **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

Superseded

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

Superseded

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.263 - Privileges

(a) (Reserved);

(b) (Reserved);

Superseded

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

   v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

Superseded

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

Superseded

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. ☐ **GM**

Superseded

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. ☐ **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451.☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: ☐ **AMC**

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

Superseded

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

   ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

Superseded

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. **GM**

(b) A repair shall be classified and approved by: **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. **GM**

21.A.445 - Unrepaired damage

AMC **GM**

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Superseded

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

Superseded

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

Superseded

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**
2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;
3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;
4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

Superseded

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

Superseded

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used

Superseded

to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. ☐ **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or
2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or
3. the article has proved to give rise to unacceptable hazards in service; or
4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;
15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;
16. (Reserved)

Superseded

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

Superseded

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

Superseded

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

21.A.713 - Changes

☐ **GM**

Superseded

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

Superseded

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

21.A.807 - Identification of AUSMTSO articles

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART K - PARTS AND APPLIANCES

21.1 - General

GM

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

Superseded

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

Superseded

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

Superseded

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

Superseded

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-

Superseded

compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

Superseded

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

Superseded

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as

Superseded

established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

a) have a type-certificate issued in accordance with this DASR; or **GM**

b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

Superseded

AMC

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

   i. The materials and processes adequately conform to the specifications for the proposed type design;

   ii. The parts of the products adequately conform to the drawings in the proposed type design;

   iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: GM

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

GM GM1

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

Superseded

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

Superseded

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or

Superseded

other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

Superseded

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation,

Superseded

the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The

Superseded

military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as ‘major’ or ‘minor’;☐ **AMC**

Superseded

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

Superseded

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

Superseded

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. **GM**

Superseded

AMC

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: GM

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. GM

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

AMC AMC1

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

Superseded

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

i. The general configuration or the principles of construction are not retained;

Superseded

ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). GM

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

Superseded

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and
2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

Superseded

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

Superseded

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

   i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

   ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

Superseded

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: ☐ **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access

Superseded

to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

Superseded

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

   i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

   ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

Superseded

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

21.A.126 - Production inspection system

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

Superseded

2. incoming materials, and bought or subcontracted parts, are properly identified; **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; **GM1** **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. **GM**

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;

2. A check on flight performance (using normal aircraft instrumentation);

3. A check on the proper functioning of all aircraft equipment and systems;

Superseded

4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;

5. A check of the operational characteristics of the aircraft on the ground;

6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or

Superseded

appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

Superseded

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties, conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

Superseded

iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

iv. identification and traceability;

v. manufacturing processes;

vi. inspection and testing, including production flight tests;

vii. calibration of tools, jigs, and test equipment;

viii. non-conforming item control;

ix. airworthiness coordination with the applicant for, or holder of, the design approval;

x. records completion and retention;

xi. personnel competence and qualification;

xii. issue of airworthiness release documents;

xiii. handling, storage and packing;

xiv. internal quality audits and resulting corrective actions;

xv. work within the terms of approval performed at any location other than the approved facilities;

xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

xvii. issue of military permit to fly and approval of associated flight conditions.

The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.143 - Production Organisation Exposition

☐ **GM**

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

Superseded

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

    (vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

Superseded

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. ☐ **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and ☐ **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; ☐ **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and ☐ **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; ☐ **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; ☐ **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. ☐ **AMC**

Superseded

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

Superseded

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or

3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**

4. the production organisation no longer meets the requirements of; or

5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

Superseded

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

Superseded

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

AMC to Subpart H

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

Superseded

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

   i. a statement of conformity:

      – issued under DASR 21.A.163(b); or

      – issued under DASR 21.A.130 and validated by the Authority; or

      – for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

   ii. a weight and balance report with a loading schedule;

   iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

   i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

   ii. in any other case:

      – a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

      – a weight and balance report with a loading schedule;

      – the flight manual and any other manuals required by the Authority of the State of registry;

      – historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

      – a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

   i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

Superseded

ii. the applicant has submitted to DASA the following documents:

- evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document
- a copy of the applicable Type Certificate Data Sheet
- a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate
- a copy of the manufacturer's instructions for continuing airworthiness for the aircraft
- a copy of the parts catalogue for the aircraft
- a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

- continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)
- continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

Superseded

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

Superseded

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

Superseded

ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: **AMC1** **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

Superseded

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

Superseded

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.263 - Privileges

(a) (Reserved);

(b) (Reserved);

Superseded

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

   v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

Superseded

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

Superseded

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. ☐ **GM**

Superseded

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. ☐ **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: ☐ **AMC**

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

Superseded

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

   ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

Superseded

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. **GM**

(b) A repair shall be classified and approved by: **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. **GM**

21.A.445 - Unrepaired damage

AMC **GM**

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Superseded

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

Superseded

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

Superseded

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**
2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;
3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;
4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

Superseded

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

Superseded

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used

Superseded

to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. ☐ **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or
2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or
3. the article has proved to give rise to unacceptable hazards in service; or
4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;
15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;
16. (Reserved)

Superseded

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

Superseded

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

Superseded

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

21.A.713 - Changes

☐ **GM**

Superseded

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

Superseded

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

21.A.807 - Identification of AUSMTSO articles

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART M - REPAIRS

21.1 - General

GM

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

Superseded

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

Superseded

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

Superseded

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

Superseded

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-

Superseded

compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

Superseded

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

Superseded

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as

Superseded

established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

a) have a type-certificate issued in accordance with this DASR; or **GM**

b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

Superseded

AMC

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

i. The materials and processes adequately conform to the specifications for the proposed type design;

ii. The parts of the products adequately conform to the drawings in the proposed type design;

iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: GM

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

GM GM1

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

Superseded

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

Superseded

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or

Superseded

other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

Superseded

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation,

Superseded

the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The

Superseded

military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as ‘major’ or ‘minor’;☐ **AMC**

Superseded

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

Superseded

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

Superseded

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. **GM**

Superseded

AMC

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: GM

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. GM

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

AMC AMC1

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

Superseded

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

i. The general configuration or the principles of construction are not retained;

Superseded

ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). GM

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

Superseded

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and
2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

Superseded

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

Superseded

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

   i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

   ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

Superseded

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: ☐ **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access

Superseded

to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

Superseded

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

   i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

   ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

Superseded

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

21.A.126 - Production inspection system

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

Superseded

2. incoming materials, and bought or subcontracted parts, are properly identified; **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; **GM1** **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. **GM**

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;

2. A check on flight performance (using normal aircraft instrumentation);

3. A check on the proper functioning of all aircraft equipment and systems;

Superseded

4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;

5. A check of the operational characteristics of the aircraft on the ground;

6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or

Superseded

appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

Superseded

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties, conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

Superseded

iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

iv. identification and traceability;

v. manufacturing processes;

vi. inspection and testing, including production flight tests;

vii. calibration of tools, jigs, and test equipment;

viii. non-conforming item control;

ix. airworthiness coordination with the applicant for, or holder of, the design approval;

x. records completion and retention;

xi. personnel competence and qualification;

xii. issue of airworthiness release documents;

xiii. handling, storage and packing;

xiv. internal quality audits and resulting corrective actions;

xv. work within the terms of approval performed at any location other than the approved facilities;

xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

xvii. issue of military permit to fly and approval of associated flight conditions.

The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.143 - Production Organisation Exposition

☐ **GM**

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

Superseded

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

    (vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

Superseded

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. ☐ **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and ☐ **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; ☐ **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and ☐ **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; ☐ **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; ☐ **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. ☐ **AMC**

Superseded

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

Superseded

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or

3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**

4. the production organisation no longer meets the requirements of; or

5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

Superseded

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

Superseded

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

AMC to Subpart H

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

Superseded

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

   i. a statement of conformity:

      – issued under DASR 21.A.163(b); or

      – issued under DASR 21.A.130 and validated by the Authority; or

      – for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

   ii. a weight and balance report with a loading schedule;

   iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

   i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

   ii. in any other case:

      – a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

      – a weight and balance report with a loading schedule;

      – the flight manual and any other manuals required by the Authority of the State of registry;

      – historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

      – a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

   i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

Superseded

ii. the applicant has submitted to DASA the following documents:

- evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document
- a copy of the applicable Type Certificate Data Sheet
- a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate
- a copy of the manufacturer's instructions for continuing airworthiness for the aircraft
- a copy of the parts catalogue for the aircraft
- a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

- continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)
- continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

Superseded

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

Superseded

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

Superseded

ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: **AMC1** **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

Superseded

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

Superseded

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.263 - Privileges

(a) (Reserved);

(b) (Reserved);

Superseded

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

   v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

Superseded

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

Superseded

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. ☐ **GM**

Superseded

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. ☐ **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: ☐ **AMC**

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

Superseded

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

   ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

Superseded

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. **GM**

(b) A repair shall be classified and approved by: **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. **GM**

21.A.445 - Unrepaired damage

AMC **GM**

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Superseded

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

Superseded

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

Superseded

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**
2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;
3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;
4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

Superseded

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

Superseded

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used

Superseded

to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. ☐ **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or
2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or
3. the article has proved to give rise to unacceptable hazards in service; or
4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;
15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;
16. (Reserved)

Superseded

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

Superseded

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: **GM** **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); **GM1** **GM2** **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. **AMC**

(b) Each application for approval of the flight conditions shall include: **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). **AMC**

21.A.710 - Approval of flight conditions

GM

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or **AMC**

Superseded

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

21.A.713 - Changes

☐ **GM**

Superseded

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

Superseded

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.1 - General

☐ **GM**

(a) When reference is given to ‘design organisation’ the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) ‘Authority’ shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

Superseded

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

Superseded

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

Superseded

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

Superseded

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-

Superseded

compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

Superseded

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

Superseded

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as

Superseded

established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

a) have a type-certificate issued in accordance with this DASR; or **GM**

b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

Superseded

AMC

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

i. The materials and processes adequately conform to the specifications for the proposed type design;

ii. The parts of the products adequately conform to the drawings in the proposed type design;

iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: GM

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

GM GM1

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

Superseded

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

Superseded

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or

Superseded

other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

Superseded

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation,

Superseded

the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The

Superseded

military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as ‘major’ or ‘minor’;☐ **AMC**

Superseded

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

Superseded

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

Superseded

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. **GM**

Superseded

AMC

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: GM

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. GM

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.97 - Requirements for approval of a major change

AMC AMC1

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

Superseded

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

i. The general configuration or the principles of construction are not retained;

Superseded

ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). GM

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

Superseded

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and
2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

Superseded

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

Superseded

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

   i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

   ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

Superseded

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: ☐ **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access

Superseded

to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

Superseded

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

   i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

   ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

Superseded

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

21.A.126 - Production inspection system

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

Superseded

2. incoming materials, and bought or subcontracted parts, are properly identified; ☐ **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; ☐ **GM1** ☐ **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. ☐ **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; ☐ **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; ☐ **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; ☐ **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; ☐ **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; ☐ **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. ☐ **GM**

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;

2. A check on flight performance (using normal aircraft instrumentation);

3. A check on the proper functioning of all aircraft equipment and systems;

Superseded

4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;

5. A check of the operational characteristics of the aircraft on the ground;

6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or

Superseded

appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

Superseded

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties, conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

Superseded

iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

iv. identification and traceability;

v. manufacturing processes;

vi. inspection and testing, including production flight tests;

vii. calibration of tools, jigs, and test equipment;

viii. non-conforming item control;

ix. airworthiness coordination with the applicant for, or holder of, the design approval;

x. records completion and retention;

xi. personnel competence and qualification;

xii. issue of airworthiness release documents;

xiii. handling, storage and packing;

xiv. internal quality audits and resulting corrective actions;

xv. work within the terms of approval performed at any location other than the approved facilities;

xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

xvii. issue of military permit to fly and approval of associated flight conditions.

The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.143 - Production Organisation Exposition

☐ **GM**

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

Superseded

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

    (vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

Superseded

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. **AMC**

Superseded

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

Superseded

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or

3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**

4. the production organisation no longer meets the requirements of; or

5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

Superseded

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

Superseded

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; ☐ **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

☐ **AMC to Subpart H**

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

Superseded

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

   i. a statement of conformity:

      – issued under DASR 21.A.163(b); or

      – issued under DASR 21.A.130 and validated by the Authority; or

      – for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

   ii. a weight and balance report with a loading schedule;

   iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

   i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

   ii. in any other case:

      – a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

      – a weight and balance report with a loading schedule;

      – the flight manual and any other manuals required by the Authority of the State of registry;

      – historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

      – a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

   i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

Superseded

ii. the applicant has submitted to DASA the following documents:

- evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document
- a copy of the applicable Type Certificate Data Sheet
- a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate
- a copy of the manufacturer's instructions for continuing airworthiness for the aircraft
- a copy of the parts catalogue for the aircraft
- a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

- continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)
- continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

Superseded

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

Superseded

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

Superseded

ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: **AMC1** **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

Superseded

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

Superseded

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. **AMC**

21.A.257 - Investigations

GM

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.263 - Privileges

(a) (Reserved);

(b) (Reserved);

Superseded

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

   v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

Superseded

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

Superseded

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. ☐ **GM**

Superseded

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. ☐ **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451.☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: ☐ **AMC**

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

Superseded

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

   ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

Superseded

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. **GM**

(b) A repair shall be classified and approved by: **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. **GM**

21.A.445 - Unrepaired damage

AMC **GM**

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Superseded

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

Superseded

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

Superseded

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**
2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;
3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;
4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

Superseded

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

Superseded

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used

Superseded

to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. ☐ **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or
2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or
3. the article has proved to give rise to unacceptable hazards in service; or
4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;
15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;
16. (Reserved)

Superseded

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

Superseded

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

Superseded

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

21.A.713 - Changes

☐ **GM**

Superseded

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

Superseded

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART P - MILITARY PERMIT TO FLY

21.1 - General

GM

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

Superseded

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

Superseded

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

Superseded

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

Superseded

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-

Superseded

compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

Superseded

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

Superseded

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as

Superseded

established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

a) have a type-certificate issued in accordance with this DASR; or **GM**

b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

Superseded

AMC

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

i. The materials and processes adequately conform to the specifications for the proposed type design;

ii. The parts of the products adequately conform to the drawings in the proposed type design;

iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: GM

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

GM GM1

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

Superseded

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

Superseded

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or

Superseded

other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

Superseded

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation,

Superseded

the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The

Superseded

military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as ‘major’ or ‘minor’;☐ **AMC**

Superseded

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

Superseded

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

Superseded

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. **GM**

Superseded

AMC

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: GM

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. GM

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

AMC AMC1

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

Superseded

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

i. The general configuration or the principles of construction are not retained;

Superseded

ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). GM

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

Superseded

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and
2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

Superseded

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

Superseded

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

   i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and

   ii. The type-certificate holder has agreed to collaborate with the supplemental type-certificate holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.44 and DASR 21.A.118A.

(c) By way of exception from (3) and (4) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), the applicant is entitled to have a supplemental type-certificate for an aircraft issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. ☐ **GM**

Superseded

(d) A supplemental type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the related major change relates.

21.A.116 - Transferability

A supplemental type-certificate shall only be transferred to an organisation that is able to undertake the obligations of DASR 21.A.118A and for this purpose has demonstrated its ability to qualify under the criteria of DASR 21.A.112B.

21.A.117 - Changes to that part of a product covered by a supplemental type-certificate

(a) Minor changes to that part of a product covered by a supplemental type-certificate shall be classified and approved in accordance with DASR 21 Subpart D.

(b) Each major change to that part of a product covered by a supplemental type-certificate shall be approved as a separate supplemental type-certificate in accordance with this Subpart.

(c) By way of exception from paragraph b, a major change to that part of a product covered by a supplemental type-certificate submitted by the supplemental type-certificate holder itself may be approved as a change to the existing supplemental type-certificate.

21.A.118A - Obligations and Australian Military Parts Approval marking

Each holder of a supplemental type-certificate shall:

(a) Undertake the obligations: ☐ **AMC**

1. Laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.105, DASR 21.A.119, DASR 21.A.120A and DASR 21.A.120B;

2. Implicit in the collaboration with the type-certificate holder under DASR 21.A.115(b)(5); and for this purpose continue to meet the criteria of DASR 21.A.112B.

(b) Specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804.

21.A.118B - Duration and continued validity

(a) A supplemental type-certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the supplemental type-certificate shall be returned to the Authority.

(c) The supplemental type-certificate holder shall inform the Authority, as soon as practicable, when it is no longer able to meet the supplemental type-certificate holder responsibilities defined by this DASR, for one or several types of product. In this case, it shall provide access

Superseded

to the Authority with all the information necessary for the latter to ensure, or have ensured, the continued airworthiness of the type design of the concerned products.

21.A.119 - Manuals

The holder of a supplemental type-certificate shall produce, maintain, and update master copies of variations in the manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, necessary to cover the changes introduced under the supplemental type-certificate, and furnish copies of these manuals to the Authority, on request. ☐ **AMC**

21.A.120A - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the supplemental type-certificate for an aircraft, engine, or propeller, shall furnish at least one set of the associated variations to the instructions for continuing airworthiness, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the features of the supplemental type-certificate, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other operator required to comply with any of the terms of those instructions. Availability of some manual or portion of the variations to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the supplemental type-certificate and shall be made available, on request, to any operators required to comply with any of those instructions. A programme showing how changes to the variations to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.120B - Availability of Operational Suitability Data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the military supplemental type-certificate shall make available:

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or an operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

Superseded

1. the authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART F - PRODUCTION WITHOUT MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.121 - Scope

☐ **GM**

(a) This Subpart establishes the procedure for demonstrating the conformity with the applicable design data of a product, part and appliance that is intended to be manufactured without a production organisation approval under DASR 21 Subpart G.

(b) This Subpart establishes the rules governing the obligations of the manufacturer of a product, part or appliance being manufactured under this Subpart. ☐ **GM1** ☐ **GM2**

21.A.122 - Eligibility

Any organisation may apply to show conformity of individual products, parts or appliances under this Subpart, if: ☐ **AMC1** ☐ **AMC2**

(a) It holds or has applied for an approval covering the design of that product, part or appliance; or

(b) It has ensured satisfactory coordination between production and design, through an appropriate arrangement with the applicant for, or holder of, an approval of such a design.

21.A.124 - Application

(a) Each application for an agreement to the showing of conformity of individual products, parts and appliances under this Subpart shall be made in a form and manner established by the Authority. ☐ **GM**

(b) Such application shall contain:

1. Evidence which demonstrate, where applicable, that: ☐ **GM**

   i. the issuance of a production organisation approval under DASR 21 Section A Subpart G—Military Production Organisation Approval Production, would be inappropriate; or ☐ **GM**

   ii. the certification or approval of a product, part or appliance under this Subpart is needed pending the issuance of a production organisation approval under DASR 21 Section A Subpart G. ☐ **GM**

2. An outline of the information required by DASR 21.A.125A(b). ☐ **GM**

Superseded

21.A.125A - Issue of a letter of agreement

The applicant shall be entitled to have a letter of agreement issued by the Authority agreeing to the showing of conformity of individual products, parts and appliances under this Subpart, after: ☐ **GM**

(a) having established a production inspection system that ensures that each product, part or appliance conforms to the applicable design data and is in condition for safe operation.

(b) having provided a manual that contains: ☐ **GM1** ☐ **GM2**

1. a description of the production inspection system required under paragraph a;

2. a description of the means for making the determinations of the production inspection system; and

3. a description of the tests of DASR 21.A.127 and DASR 21.A.128, and the names of persons authorised for the purpose of DASR 21.A.130(a).

(c) demonstrating that it is able to provide assistance in accordance with DASR 21.A.3A, and DASR 21.A.129(d). ☐ **GM**

21.A.125B - Findings

Refer to GR.60 Oversight and enforcement.

21.A.125C - Duration and continued validity

(a) The letter of agreement shall be issued for a limited duration not exceeding one year, or as agreed by the Authority. It shall remain valid unless:

1. the holder of the letter of agreement fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. there is evidence that the manufacturer cannot maintain satisfactory control of the manufacture of products, parts, or appliances under the agreement; or

3. the manufacturer no longer meets the requirements of DASR 21.A.122; or

4. the letter of agreement has been surrendered, revoked, or has expired.

(b) Upon surrender, revocation or expiry, the letter of agreement shall be returned to the Authority.

21.A.126 - Production inspection system

☐ **GM**

(a) The production inspection system required under DASR 21.A.125A(a) shall provide a means for determining that:

1. incoming materials, and bought or subcontracted parts, used in the finished product are as specified in the applicable design data; ☐ **GM**

Superseded

2. incoming materials, and bought or subcontracted parts, are properly identified; ☐ **GM**

3. processes, manufacturing techniques and methods of assembly affecting the quality and safety of the finished product are accomplished in accordance with specifications accepted by the Authority; ☐ **GM1** ☐ **GM2**

4. design changes, including material substitutions, have been approved under DASR Subpart D or DASR Subpart E and controlled before being incorporated in the finished product. ☐ **GM**

(b) The production inspection system required by DASR 21.A.125A(a), shall also be such as to ensure that:

1. parts in process are inspected for conformity with the applicable design data at points in production where accurate determinations can be made; ☐ **GM**

2. materials subject to damage and deterioration are suitably stored and adequately protected; ☐ **GM**

3. current design drawings are readily available to manufacturing and inspection personnel, and used when necessary; ☐ **GM**

4. rejected materials and parts are segregated and identified in a manner that precludes installation in the finished product; ☐ **GM**

5. materials and parts that are withheld because of departures from design data or specifications, and that are to be considered for installation in the finished product, are subjected to an approved engineering and manufacturing review procedure. Those materials and parts determined by this procedure to be serviceable shall be properly identified and re-inspected if rework or repair is necessary. Materials and parts rejected by this procedure shall be marked and disposed of to ensure that they are not incorporated in the final product; ☐ **GM**

6. records produced under the production inspection system are maintained, identified with the completed product or part where practicable, and retained by the manufacturer in order to provide the information necessary to ensure the continued airworthiness of the product. ☐ **GM**

21.A.127 - Tests: Aircraft

(a) Each manufacturer of an aircraft manufactured under this Subpart shall establish an approved production ground and flight test procedure and check-off forms, and in accordance with those forms, test each aircraft produced, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM**

(b) Each production test procedure shall include at least the following:

1. A check on handling qualities;

2. A check on flight performance (using normal aircraft instrumentation);

3. A check on the proper functioning of all aircraft equipment and systems;

Superseded

4. A determination that all instruments are properly marked, and that all placards and required flight manuals are installed after flight test;

5. A check of the operational characteristics of the aircraft on the ground;

6. A check on any other items peculiar to the aircraft being tested.

21.A.128 - Tests: Engines and propellers

Each manufacturer of engines or propellers, manufactured under this Subpart, shall subject each engine, or variable pitch propeller, to an acceptable functional test as specified in the type-certificate holder's documentation, to determine if it operates properly throughout the range of operation for which it is type-certificated, as a means of establishing relevant aspects of compliance with DASR 21.A.125A(a). ☐ **GM1** ☐ **GM2** ☐ **GM3**

21.A.129 - Obligations of the manufacturer

Each manufacturer of a product, part or appliance being manufactured under this Subpart shall:

(a) make each product, part or appliance available for inspection by the Authority; ☐ **GM**

(b) maintain at the place of manufacture the technical data and drawings necessary to determine whether the product conforms to the applicable design data;

(c) maintain the production inspection system that ensures that each product conforms to the applicable design data and is in condition for safe operation; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

(d) provide assistance to the holder of the type-certificate, restricted type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f) :

1. report to the holder of the type-certificate, restricted type-certificate or design approval, all cases where products, parts or appliances have been released by the manufacturer and subsequently identified to have deviations from the applicable design data, and investigate with the holder of the type-certificate, restricted type-certificate or design approval to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)(2); ☐ **AMC**

3. where the manufacturer acts as supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or

Superseded

appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

21.A.130 - Statement of Conformity

(a) Each manufacturer of a product, part or appliance manufactured under this Subpart shall raise a Statement of Conformity, a DASR Form 52 - Military Aircraft Statement of Conformity, for complete aircraft, or a DASR Form 1 - Authorised Release Certificate, for other products, parts or appliances. This statement shall be signed by an authorised person who holds a responsible position in the manufacturing organisation.

(b) A statement of conformity shall include all of the below: ☐ **AMC1** ☐ **AMC2**

1. for each product, part or appliance a statement that the product, part or appliance conforms to the approved design data and is in condition for safe operation;

2. for each aircraft, a statement that the aircraft has been ground and flight checked in accordance with DASR 21.A.127(a);

3. for each engine, or variable pitch propeller, a statement that the engine or propeller has been subjected by the manufacturer to a final functional test, in accordance with DASR 21.A.128, and

4. additionally, in the case of envionmental requirements; ☐ **GM**

   i. a statement that the completed engine is in compliance with the applicable engine exhaust emission requirements on the date of manufacture of the engine, and

   ii. a statement that the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

(c) Each manufacturer of such a product, part or appliance shall present a current statement of conformity, for validation by the Authority: ☐ **AMC**

1. Upon the initial transfer by it of the ownership of such a product, part or appliance; or ☐ **AMC**

2. Upon application for the original issue of an aircraft certificate of airworthiness; or

3. Upon application for the original issue of an airworthiness release document for an engine, a propeller, a part or appliance.

(d) The Authority shall validate by counter-signature the Statement of Conformity if it finds after inspection that the product, part or appliance conforms to the applicable design data and is in condition for safe operation.

SUBPART G - MILITARY PRODUCTION ORGANISATION APPROVAL

21.A.131 - Scope

This Subpart establishes: ☐ **GM**

Superseded

(a) The procedure for the issuance of a military production organisation approval (MPOA), for a production organisation showing conformity of products, parts and appliances with the applicable design data;

(b) The rules governing rights and obligations of the applicant for, and holders of, such approvals.

21.A.133 - Eligibility

Any organisation shall be eligible as an applicant for an approval under this Subpart. The applicant shall:

(a) justify that, for a defined scope of work, an approval under this Subpart is appropriate for the purpose of showing conformity with a specific design; and ☐ **GM**

(b) hold or have applied for an approval of that specific design; or ☐ **AMC1** ☐ **AMC2**

(c) have ensured, through an appropriate arrangement with the applicant for, or holder of, an approval of that specific design, satisfactory coordination between production and design.

21.A.134 - Application

Each application for a production organisation approval shall be made to the Authority in a form and manner established by that Authority, and shall include an outline of the information required by DASR 21.A.143 and the terms of approval requested to be issued under DASR 21.A.151. ☐ **GM**

21.A.135 - Issue of Production Organisation Approval

☐ **GM**

An organisation shall be entitled to have a production organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.139 - Quality System

(a) The production organisation shall demonstrate that it has established and is able to maintain a quality system. The quality system shall be documented. This quality system shall be such as to enable the organisation to ensure that each product, part or appliance produced by the organisation or by its partners, or supplied from or subcontracted to outside parties, conforms to the applicable design data and is in condition for safe operation, and thus exercise the privileges set forth in DASR 21.A.163. ☐ **GM1** ☐ **GM2**

(b) The quality system shall contain:

1. As applicable within the scope of approval, control procedures for: ☐ **GM**

   i. document issue, approval, or change;

   ii. vendor and subcontractor assessment audit and control; ☐ **AMC1** ☐ **AMC2**

Superseded

iii. verification that incoming products, parts, materials, and equipment, including items supplied new or used by buyers of products, are as specified in the applicable design data;

iv. identification and traceability;

v. manufacturing processes;

vi. inspection and testing, including production flight tests;

vii. calibration of tools, jigs, and test equipment;

viii. non-conforming item control;

ix. airworthiness coordination with the applicant for, or holder of, the design approval;

x. records completion and retention;

xi. personnel competence and qualification;

xii. issue of airworthiness release documents;

xiii. handling, storage and packing;

xiv. internal quality audits and resulting corrective actions;

xv. work within the terms of approval performed at any location other than the approved facilities;

xvi. work carried out after completion of production but prior to delivery, to maintain the aircraft in a condition for safe operation;

xvii. issue of military permit to fly and approval of associated flight conditions.

The control procedures shall include specific provisions for any critical parts.

2. An independent quality assurance function to monitor compliance with, and adequacy of, the documented procedures of the quality system. This monitoring shall include a feedback system to the person or group of persons referred to in DASR 21.A.145(c)(2) and ultimately to the manager referred to in DASR 21.A.145(c)(1) to ensure, as necessary, corrective action. ☐ **GM1** ☐ **GM2**

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.143 - Production Organisation Exposition

☐ **GM**

(a) The organisation shall submit to the Authority a Production Organisation Exposition (POE) providing the following information:

1. a statement signed by the accountable manager confirming that the production organisation exposition and any associated manuals which define the approved organisation's compliance with this Subpart will be complied with at all times;

Superseded

2. the title(s) and names of managers accepted by the Authority in accordance with DASR 21.A.145(c)(2);

3. the duties and responsibilities of the manager(s) as required by DASR 21.A.145(c)(2) including matters on which they may deal directly with the Authority on behalf of the organisation;

4. an organisational chart showing associated chains of responsibility of the managers as required by DASR 21.A.145(c)(1) and DASR 21.A.145(c)(2);

5. a list of certifying staff as referred to in DASR 21.A.145(d);

6. a general description of human resources;

7. a general description of the facilities located at each address specified in the production organisation's certificate of approval;

8. a general description of the production organisation's scope of work relevant to the terms of approval;

9. the procedure for the notification of organisational changes to the Authority;

10. the amendment procedure for the production organisation exposition;

11. a description of the quality system and the procedures as required by DASR 21.A.139(b)(1);

12. a list of those outside parties referred to in DASR 21.A.139(a); and

13. if flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test. The flight test operations manual shall include: **AMC**

    (i) a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process;

    (ii) crewing policy, including composition, competency, currency and flight time limitations, where applicable;

    (iii) procedures for the carriage of persons other than crew members and for flight test training, when applicable;

    (iv) a policy for risk and safety management and associated methodologies;

    (v) procedures to identify the instruments and equipment to be carried;

    (vi) a list of documents that need to be produced for flight test.

(b) The production organisation exposition shall be amended as necessary to remain an up-to-date description of the organisation, and copies of any amendments shall be supplied to the Authority.

(c) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS

Superseded

The production organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.143 that:

(a) with regard to general approval requirements, facilities, working conditions, equipment and tools, processes and associated materials, number and competence of staff, and general organisation are adequate to discharge obligations under DASR 21.A.165. ☐ **GM**

(b) with regard to all necessary airworthiness and environmental data:

1. the production organisation is in receipt of such data from the Authority, and from the holder of, or applicant for, the type-certificate, restricted type-certificate or design approval, including any exemption granted against the CO2 production cut-off requirements, to determine conformity with the applicable design data;

2. the production organisation has established a procedure to ensure that airworthiness and environmental data are correctly incorporated in its production data; and ☐ **GM**

3. such data are kept up to date and made available to all personnel who need access to such data to perform their duties.

(c) with regard to management and staff:

1. a manager has been nominated by the production organisation, and is accountable to the Authority. Their responsibilities within the organisation shall consist of ensuring that all production is performed to the required standards and that the production organisation is continuously in compliance with the data and procedures identified in the exposition referred to in DASR 21.A.143; ☐ **GM**

2. a person or group of persons have been nominated by the production organisation to ensure that the organisation is in compliance with the requirements of this DASR, and are identified, together with the extent of their authority. Such person(s) shall act under the direct authority of the accountable manager referred to in subparagraph 1. The person(s) nominated shall be able to show the appropriate knowledge, background and experience to discharge their responsibilities; and ☐ **GM**

3. staff at all levels have been given appropriate authority to be able to discharge their allocated responsibilities and that there is full and effective coordination within the production organisation in respect of airworthiness and environmental data matters.

(d) with regard to certifying staff, authorised by the production organisation to sign the documents issued under DASR 21.A.163 under the scope or terms of approval:

1. the knowledge, background (including other functions in the organisation), and experience of the certifying staff are appropriate to discharge their allocated responsibilities; ☐ **AMC**

2. the production organisation maintains a record of all certifying staff which shall include details of the scope of their authorisation; ☐ **AMC**

3. certifying staff are provided with evidence of the scope of their authorisation. ☐ **AMC**

Superseded

21.A.147 - Changes to the approved production organisation

(a) After the issue of a production organisation approval, each change to the approved production organisation that is significant to the showing of conformity or to the airworthiness and environmental characteristics of the product, part or appliance, particularly changes to the quality system, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the organisation shall demonstrate to the Authority before implementation of the change that it will continue to comply with this Subpart. ☐ **GM**

(b) The Authority shall establish the conditions under which a production organisation approved under this Subpart may operate during such changes unless the Authority determines that the approval should be suspended.

21.A.148 - Changes of location

A change of the location of the manufacturing facilities of the approved production organisation shall be deemed of significance and therefore shall comply with DASR 21.A.147. ☐ **AMC**

21.A.149 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.147, a production organisation approval is not transferable. ☐ **GM**

21.A.151 - Terms of approval

The terms of approval shall identify the scope of work, the products or the categories of parts and appliances, or both, for which the holder is entitled to exercise the privileges under DASR 21.A.163. Those terms shall be issued as part of a production organisation approval. ☐ **GM**

21.A.153 - Changes to the Terms of Approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The applicant shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.157 - Investigations

A production organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

21.A.158 - Findings

Refer to GR.60 Oversight and enforcement.

Superseded

21.A.159 - Duration and continued validity

(a) A production organisation approval shall be issued for an unlimited duration. It shall remain valid unless:

1. the production organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or

2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.157; or

3. there is evidence that the production organisation cannot maintain satisfactory control of the manufacture of products, parts or appliances under the approval; or ☐ **GM**

4. the production organisation no longer meets the requirements of; or

5. the certificate has been surrendered or revoked; or

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.163 - Privileges

☐ **GM**

Pursuant to the terms of approval issued under DASR 21.A.135, the holder of a production organisation approval may:

(a) perform production activities under this DASR;

(b) in the case of complete aircraft and upon presentation of a Statement of Conformity (DASR Form 52 - Military Aircraft Statement of Conformity), under DASR 21.A.174, obtain an aircraft certificate of airworthiness without further showing;

(c) in the case of other products, parts or appliances issue authorised release certificates (DASR Form 1 - Authorised Release Certificate) without further showing; ☐ **AMC** ☐ **AMC2**

(d) maintain a new aircraft that it has produced and issue a certificate of release to service (DASR Form 53 - Military Certificate of Release to Service) in respect of that maintenance; or ☐ **AMC**

(e) under procedures agreed with its Authority for an aircraft it has produced and when the production organisation itself is controlling under its MPOA, the configuration of the aircraft and is attesting conformity with the design conditions approved for the flight, to issue a military permit to fly in accordance with DASR 21.A.711(c) including approval of the flight conditions in accordance with DASR 21.A.710(b). ☐ **AMC** ☐ **GM**

21.A.165 - Obligations of the holder

The holder of a production organisation approval shall:

(a) ensure that the production organisation exposition furnished in accordance with DASR 21.A.143 and the documents to which it refers, are used as basic working documents within the organisation; ☐ **GM**

Superseded

(b) maintain the production organisation in conformity with the data and procedures approved for the production organisation approval;

(c) ☐ **GM1** ☐ **GM2** ☐ **GM3** ☐ **GM4**

1. determine that each completed aircraft conforms to the type design and is in condition for safe operation prior to submitting Statements of Conformity to the Authority; or

2. determine that other products, parts or appliances are complete and conform to the approved design data and are in condition for safe operation before issuing DASR Form 1 - Authorised Release Certificate, to certify conformity to approved design data and condition for safe operation;

3. additionally, in the case of environmental requirements determine that: ☐ **GM**

   i. the completed engine is in compliance with the applicable engine exhaust emissions requirements on the date of manufacture of the engine; and

   ii. the completed aircraft is in compliance with the applicable CO2 emissions requirements on the date its first certificate of airworthiness is issued.

4. determine that other products, parts or appliances conform to the applicable data before issuing DASR Form 1, as a conformity certificate. ☐ **AMC**

(d) record all details of work carried out; ☐ **GM**

(e) establish and maintain an internal occurrence reporting system in the interest of safety, to enable the collection and assessment of occurrence reports in order to identify adverse trends or to address deficiencies, and to extract reportable occurrences. This system shall include evaluation of relevant information relating to occurrences and the promulgation of related information;

(f)

1. report to the holder of the type-certificate or design approval, all cases where products, parts or appliances have been released by the production organisation and subsequently identified to have possible deviations from the applicable design data, and investigate with the holder of the type-certificate, or design approval in order to identify those deviations which could lead to an unsafe condition;

2. report to the Authority the deviations which could lead to an unsafe condition identified according to subparagraph (f)1. Such reports shall be made in a form and manner established by the Authority under DASR 21.A.3A(b)2; ☐ **AMC**

3. where the holder of the production organisation approval is acting as a supplier to another production organisation, report also to that other organisation all cases where it has released products, parts or appliances to that organisation and subsequently identified them to have possible deviations from the applicable design data.

(g) provide assistance to the holder of the type-certificate or design approval in dealing with any continuing airworthiness actions that are related to the products, parts or appliances that have been produced;

Superseded

(h) establish an archiving system incorporating requirements imposed on its partners, suppliers and subcontractors, ensuring conservation of the data used to justify conformity of the products, parts or appliances. Such data shall be held at the disposal of the Authority and be retained in order to provide the information necessary to ensure the continued airworthiness of the products, parts or appliances; **GM**

(i) where, under its terms of approval, the holder issues a certificate of release to service, determine that each completed aircraft has been subjected to necessary maintenance and is in condition for safe operation, prior to issuing the certificate;

(j) where applicable, under the privilege of DASR 21.A.163(e), determine the conditions under which a military permit to fly can be issued; and

(k) where applicable, under the privilege of DASR 21.A.163(e), establish compliance with DASR 21.A.711(c) and (e) before issuing a military permit to fly to an aircraft.

SUBPART H - MILITARY CERTIFICATES OF AIRWORTHINESS AND MILITARY RESTRICTED CERTIFICATES OF AIRWORTHINESS

AMC to Subpart H

21.A.171 - Scope

This Subpart establishes the procedure for issuing airworthiness certificates.

21.A.172 - Eligibility

Any organisation or operator under whose name an aircraft is registered or will be registered under DASR, or its representative, shall be eligible as an applicant for an airworthiness certificate for that aircraft under this Subpart.

21.A.173 - Classification

Airworthiness certificates shall be classified as follows:

(a) certificates of airworthiness shall be issued to aircraft which conform to a type-certificate that has been issued in accordance with this DASR (or if appropriate, based upon a Civil Type-certificate issued by a recognised Civil Authority);

(b) restricted certificates of airworthiness shall be issued to aircraft:

1. which conform to a restricted type-certificate that has been issued in accordance with this DASR; or

2. which have been shown to the Authority to comply with specific airworthiness specifications ensuring adequate safety.

Superseded

(a) Pursuant to DASR 21.A.172, an application for an airworthiness certificate shall be made in a form and manner established by the Authority of the State of registry. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(b) Each application for a certificate of airworthiness or restricted certificate of airworthiness shall include:

1. the class of airworthiness certificate applied for;

2. with regard to new aircraft:

   i. a statement of conformity:

      – issued under DASR 21.A.163(b); or

      – issued under DASR 21.A.130 and validated by the Authority; or

      – for an imported aircraft, any acceptable evidence to support that the aircraft conforms to a design approved by the Authority of the State of registry.

   ii. a weight and balance report with a loading schedule;

   iii. the flight manual and any other manuals required by the Authority of the State of registry.

3. with regard to used aircraft: ☐ **AMC**

   i. originating from a State applying EASA / EMAR / DASR, a Military Airworthiness Review Certificate issued in accordance with EASA Part M / EMAR M / DASR M;

   ii. in any other case:

      – a statement by the Authority of the State where the aircraft is, or was, registered, reflecting the airworthiness status of the aircraft on its register at time of transfer;

      – a weight and balance report with a loading schedule;

      – the flight manual and any other manuals required by the Authority of the State of registry;

      – historical records to establish the production, modification, and maintenance standard of the aircraft, including all limitations associated with a restricted certificate of airworthiness;

      – a recommendation for the issuance of a certificate of airworthiness or restricted certificate of airworthiness and a Military Airworthiness Review Certificate following an airworthiness review in accordance with DASR M.

4. with regard to Defence Registered crewed hot air balloons:

   i. a type-certificate or equivalent document issued by a recognised Civil Aviation Authority is in force for aircraft of that type

Superseded

ii. the applicant has submitted to DASA the following documents:

- evidence that the Type design has been approved by the recognised CAA by issue of a Type certificate or equivalent document
- a copy of the applicable Type Certificate Data Sheet
- a copy of the Aircraft Flight Manual that contains all available options applicable to the Type and which was approved by the recognised CAA that issued the type-certificate
- a copy of the manufacturer's instructions for continuing airworthiness for the aircraft
- a copy of the parts catalogue for the aircraft
- a list of all current service documents applicable to the aircraft

iii. evidence of an agreement requiring the type-certificate holder to:

- continue to supply to the operator any service bulletins or instructions for the continuing airworthiness of aircraft of that type and any amendments to the documents identified in subparagraph (ii)
- continue to execute, in respect of the Defence aircraft, all applicable type-certificate holder functions related to failures, malfunctions, defects and other occurrences relevant to the airworthiness of the aircraft.

(c) Unless otherwise agreed, the statements referred to in subparagraphs (b)(2)(i) and (b)(3)(ii) shall be issued no more than 60 days before presentation of the aircraft to the aviation Authority of the State of registry.

21.A.175 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable airworthiness codes shall be presented in a language acceptable to the Authority of the State of registry. ☐ **GM**

21.A.177 - Amendment or modification

☐ **GM**

An airworthiness certificate may be amended or modified only by the Authority of the State of registry.

21.A.179 - Transferability and re-issuance within States applying EMAR / DASR

☐ **GM**

(a) Where ownership of an aircraft has changed:

Superseded

1. if it remains on the same register in the same State, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be transferred together with the aircraft;

2. if the aircraft is registered on a different register in the same State or in another State applying EMAR / DASR, the certificate of airworthiness, or the restricted certificate of airworthiness conforming to a restricted type-certificate only, shall be issued:

   i. upon presentation of the former certificate of airworthiness and of a valid Military Airworthiness Review Certificate issued under EMAR M / DASR M; and

   ii. when satisfying DASR 21.A.175.

(b) Where ownership of an aircraft has changed, and the aircraft has a restricted certificate of airworthiness not conforming to a restricted type-certificate, the airworthiness certificates shall be transferred together with the aircraft provided the aircraft remains on the same register, or issued only with the formal agreement of the Authority of the State of registry to which it is transferred.

21.A.180 - Inspections

☐ **GM**

The holder of the airworthiness certificate shall provide access to the aircraft for which that airworthiness certificate has been issued upon request by the Authority of the State of registry.

21.A.181 - Duration and continued validity

(a) An airworthiness certificate shall be issued for an unlimited duration. It shall remain valid subject to:

1. compliance with the applicable type-design, airworthiness directives and instructions for continuing airworthiness; and

2. the aircraft remaining on the same register;

3. the type-certificate or restricted type-certificate under which it is issued not being previously invalidated under DASR 21.A.51; and

4. the certificate not being surrendered or revoked by the Authority. ☐ **GM**

(b) Upon surrender or revocation, the certificate shall be returned to the Authority of the State of registry.

21.A.182 - Aircraft identification

Each applicant for an airworthiness certificate under this Subpart shall demonstrate that its aircraft is identified in accordance with DASR 21 Section A Subpart Q—Identification of Products, Parts and Appliances.

Superseded

SUBPART I - NOISE CERTIFICATES

Reserved

SUBPART J - MILITARY DESIGN ORGANISATION APPROVAL

21.A.231 - Scope

This Subpart establishes the procedure for the approval of design organisations and rules governing the rights and obligations of applicants for, and holders of, such approvals. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.233 - Eligibility

At the discretion of the Authority, any organisation shall be eligible as an applicant for an approval under this Subpart:

(a) In accordance with DASR 21.A.14, DASR 21.A.112B, DASR 21.A.432B or DASR 21.A.602B; or

(b) For approval of minor changes or minor repair design, when requested for the purpose of obtaining privileges under DASR 21.A.263.

21.A.234 - Application

Each application for a design organisation approval shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.243, and the terms of approval requested to be issued under DASR 21.A.251. ☐ **AMC**

21.A.235 - Issue of Military design organisation approval

An organisation shall be entitled to have a design organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart. ☐ **GM**

21.A.239 - Design assurance system and Safety Management System

(a) The design organisation shall demonstrate that it has established and is able to maintain a design assurance system for the control and supervision of the design, and of design changes, of products, parts and appliances covered by the application. This design assurance system shall be such as to enable the organisation: ☐ **GM1** ☐ **GM2**

1. To ensure that the design of the products, parts and appliances or the design change or repair solution thereof, comply with the applicable type-certification basis, the applicable operational suitability data certification basis, and environmental protection requirements (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

Superseded

ii. The terms of approval issued under DASR 21.A.251.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. **AMC**

(b) The design assurance system shall include an independent checking function of the showings of compliance on the basis of which the organisation submits compliance statements and associated documentation to the Authority. **AMC**

(c) The design organisation shall specify the manner in which the design assurance system accounts for the acceptability of the parts or appliances designed or the tasks performed by partners or subcontractor according to methods which are the subject of written procedures. **GM**

(d) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.243 - Handbook (Design Organisation Exposition)

(a) The design organisation shall furnish a handbook to the Authority describing, directly or by cross-reference, the organisation, the relevant procedures and the products, or changes to products to be designed. If flight tests are to be conducted, a flight test operations manual defining the organisation's policies and procedures in relation to flight test shall be furnished. The flight test operations manual shall include: **AMC1** **AMC2**

1. a description of the organisation's processes for flight test, including the flight test organisation involvement into the permit to fly issuance process. See DASR 21 Section A Subpart P – Military Permit to Fly; **AMC**

2. crewing policy, including composition, competency, currency and flight time limitations, as required by the Authority;

3. procedures for the carriage of persons other than crew members and for flight test training, when applicable;

4. a policy for risk and safety management and associated methodologies;

5. procedures to identify the instruments and equipment to be carried;

6. a list of documents that need to be produced for flight test.

(b) Where any parts or appliances, or any changes to the products are designed by partner organisations or subcontractors, the handbook shall include a statement of how the design organisation is able to give, for all parts and appliances, the assurance of compliance required by DASR 21.A.239(b), and shall contain, directly or by cross-reference, descriptions and information on the design activities and organisation of those partners or subcontractors, as necessary to establish this statement.

(c) The handbook shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority.

Superseded

(d) The design organisation shall furnish a statement of the qualifications and experience of the management staff and other persons responsible for making decisions affecting airworthiness and environmental protection (where applicable) in the organisation. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) The organisation shall establish and maintain a Safety Management System (SMS), in accordance with DASR.SMS.

21.A.245 - Approval requirements

The design organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.243 that, in addition to complying with DASR 21.A.239: ☐ **GM1** ☐ **GM2**

(a) the staff in all technical departments are of sufficient numbers and experience and have been given appropriate authority to be able to discharge their allocated responsibilities and that these, together with the accommodation, facilities and equipment are adequate to enable the staff to achieve the airworthiness, operational suitability and environmental protection (where applicable) objectives for the product;

(b) there is full and efficient coordination between departments and within departments in respect of airworthiness, operational suitability and environmental protection (where applicable) matters.

21.A.247 - Changes in design assurance system

After the issue of a design organisation approval, each change to the design assurance system that is significant to the showing of compliance or to the airworthiness, operational suitability and environmental protection (where applicable) of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the design organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the handbook, and before implementation of the change, that it will continue to comply with this Subpart after implementation. ☐ **GM**

21.A.249 - Transferability

Except as a result of a change in ownership, which is deemed significant for the purposes of DASR 21.A.247, a design organisation approval is not transferable. ☐ **GM**

21.A.251 - Terms of approval

The terms of approval shall identify the types of design work, categories of products, parts and appliances for which the design organisation holds a design organisation approval, and the functions and duties that the organisation is approved to perform in regard to the airworthiness, operational suitability and environmental characteristics of products. For design organisation approval covering type-certification or AUSMTSO authorisation for Auxiliary Power Units (APUs), the terms of approval shall contain in addition the list of products or APUs. Those terms shall be issued as part of a design organisation approval. ☐ **GM1** ☐ **GM2**

Superseded

21.A.253 - Changes to the terms of approval

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The design organisation shall comply with the applicable requirements of this Subpart. ☐ **AMC**

21.A.257 - Investigations

☐ **GM**

(a) The design organisation shall make arrangements that allow the Authority to make any investigations, including investigations of partners and subcontractors, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) The design organisation shall allow the Authority to review any report and make any inspection and perform or witness any flight and ground test necessary to check the validity of the compliance statements submitted by the applicant under DASR 21.A.239(b).

21.A.258 - Findings

Refer to GR.60 Oversight and enforcement.

21.A.259 - Duration and continued validity

(a) A design organisation approval can be issued for an unlimited duration, unless otherwise specified by the Authority. It shall remain valid for that duration unless:

1. the design organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. the Authority is prevented by the holder or any of its partners or subcontractors to perform the investigations in accordance with DASR 21.A.257; or
3. there is evidence that the design assurance system cannot maintain satisfactory control and supervision of the design of products or changes thereof under the approval; or
4. the certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.263 - Privileges

(a) (Reserved);

(b) (Reserved);

Superseded

(c) A holder of a design organisation approval shall be entitled, within the scope of its terms of approval, as established by the Authority, and under the relevant procedures of the design assurance system:

1. to classify changes to a type-certificate or to a supplemental type-certificate and repairs as 'major' or 'minor'; ☐ **AMC1** ☐ **AMC2**

2. to approve minor changes to type-certificates or to supplemental type-certificates and minor repairs; ☐ **AMC1** ☐ **AMC2** ☐ **AMC3**

3. (Reserved);

4. (Reserved);

5. to approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. to approve for certain aircraft the flight conditions under which a military permit to fly can be issued in accordance with DASR 21.A.710(a)(2), except for permits to fly to be issued for the purpose of DASR 21.A.701(a)(15), (16) and (17); ☐ **AMC**

7. to issue a military permit to fly in accordance with DASR 21.A.711(b) for an aircraft it has designed or modified, or for which it has approved in accordance with DASR 21.A.263(c)(6), the flight conditions under which the military permit to fly can be issued, and when the holder of a design organisation approval itself: ☐ **AMC** ☐ **GM**

   i. controls the configuration of the aircraft, and

   ii. attests conformity with the design conditions approved for the flight;

8. to approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. to issue certain supplemental type-certificates under Subpart E and approve certain major changes to those certificates. ☐ **AMC1** ☐ **AMC2**

(d) For a military product derived from a civil type certified product, the holder of a MDOA or holder of a MTC approved organisation shall be entitled, within its terms of approval and under the relevant procedures of the design assurance system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC** ☐ **AMC1**

   i. a modification; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual or

   v. changes to the approved operational suitability data.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC** ☐ **AMC1**

Superseded

i. a major modification; or

ii. revisions to the flight manual; or

iii. revisions to the approved sections of the maintenance manual or

iv. changes to the approved operational suitability data.

21.A.265 - Obligations of the holder

The holder of a design organisation approval shall, within the scope of its terms of approval, as established by the Authority:

(a) maintain the handbook required under DASR 21.A.243 in conformity with the design assurance system; ☐ **AMC**

(b) ensure that this handbook or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof, comply with applicable specifications and requirements and have no unsafe feature;

(d) provide to the Authority statements and associated documentation confirming compliance with paragraph (c), except for approval processes carried out in accordance with DASR 21.A.263(c);

(e) provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) determine, in accordance with DASR 21.A.263(c)(6), the flight conditions under which a military permit to fly can be issued; and

(g) establish, in accordance with DASR 21.A.263(c)(7), compliance with DASR 21.A.711(b) and DASR 21.A.711(e) before issuing a military permit to fly (DASR Form 20b - Military Permit to Fly (Approved Organisation)), for an aircraft.

(h) designate data and information issued under the authority of the approved design organisation within the scope of its terms of approval as established by the Authority with the following statement: “The technical content of this document is approved under the authority of the MDOA ref. [3-letter designation of country].[Military Authority].21J.[XXXX]”. ☐ **GM**

SUBPART K - PARTS AND APPLIANCES

21.A.301 - Scope

This Subpart establishes the procedure relating to the approval of parts and appliances. ☐ **GM**

21.A.303 - Compliance with applicable requirements

The showing of compliance of parts and appliances to be installed in a type-certificated product shall be made: ☐ **GM**

Superseded

(a) in conjunction with the type-certification procedures of DASR 21 Subpart B, D or E for the product in which it is to be installed; or

(b) where applicable, under the AUSMTSO authorisation procedures of DASR 21 Subpart O; or

(c) in the case of standard parts, in accordance with officially recognised Standards. ☐ **GM**

21.A.305 - Approval of parts and appliances

In all cases where the approval of a part or appliance is explicitly required by this DASR or Authority measures, the part or appliance shall comply with the applicable technical standards and airworthiness codes as referred to in Subpart O.

21.A.307 - Release of parts and appliances for installation

☐ **AMC**

A part or appliance shall be eligible for installation in a type-certificated product when it is in a condition for safe operation, and it is:

(a) accompanied by an authorised release certificate (DASR Form 1—Authorised Release Certificate), certifying that the item was manufactured in conformity to approved design data and is marked in accordance with DASR 21 Subpart Q,

(b) a standard part, or

(c) (reserved)

(d) (reserved)

SUBPART L - (NOT APPLICABLE)

SUBPART M - REPAIRS

21.A.431A - Scope

(a) This Subpart establishes the procedure for the approval of a repair design of a product, part or appliance, and establishes the rights and obligations of the applicants for, and holders of, those approvals. ☐ **GM**

(b) Reserved.

(c) A 'repair' means elimination of damage and/or restoration to an airworthy condition following initial release into service by the manufacturer of any product, part or appliance.

(d) The elimination of damage by replacement of parts or appliances without the necessity for design activity shall be considered as a maintenance task and shall therefore require no approval under this DASR.

(e) A repair to an AUSMTSO article other than an Auxiliary Power Unit (APU) shall be treated as a change to the AUSMTSO design and shall be processed in accordance with DASR 21.A.611. ☐ **GM**

Superseded

(f) In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.431B - Standard repairs

(Reserved)

21.A.432A - Eligibility

(a) Any organisation that has demonstrated, or is in the process of demonstrating, its capability according to DASR 21.A.432B shall be eligible as an applicant for a major repair design approval under the conditions laid down in this Subpart.

(b) Any organisation shall be eligible to apply for approval of a minor repair design.

21.A.432B - Demonstration of capability

(a) An applicant for a major repair design approval shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart. ☐ **GM**

(c) By way of exception from paragraph (a) any government organisation applying for a major repair design approval may demonstrate its capability in accordance with DASR 21.A.2 and DASR 21.A.14(c), including demonstration of compliance with DASR 21.A.451.☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any applicant for a major repair design approval may demonstrate its capability by holding military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.432C - Application for a repair design approval

(a) An application for a repair design approval shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a major repair design approval shall include, or be supplemented after the initial application by, a certification programme containing: ☐ **AMC**

1. a description of the damage and repair design identifying the configuration of the type design upon which the repair is made;

2. an identification of all areas of the type design and the approved manuals that are changed or affected by the repair design;

Superseded

3. an identification of any reinvestigations necessary to demonstrate compliance of the repair design and areas affected by the repair design with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

4. any proposed amendments to the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including the means and process proposed to be followed to demonstrate compliance with DASR 21.A.433(a)(1) and references to related compliance documents;

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis and the potential impact of that non-compliance on product safety; and **AMC**

7. the specification whether the certification data is prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

21.A.433 - Requirements for a repair design

(a) A repair design shall only be approved: **AMC**

1. when it has been demonstrated, following the certification programme referred to in DASR 21.A.432C(b), that the repair design complies with the type-certification basis incorporated by reference in, as applicable, either the type-certificate, the supplemental type-certificate or the APU AUSMTSO authorisation, as well as with any amendments established and notified by the Authority; **GM**

2. when compliance with the type-certification basis that applies in accordance with (a)(1) has been declared and the justifications of compliance have been recorded in the compliance documents;

3. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested; and

4. where the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.432C(b)(7):

   i. when the holder has indicated that it has no technical objection to the information submitted under (a)(2); and

   ii. when the holder has agreed to collaborate with the repair design approval holder to ensure discharge of all obligations for continued airworthiness of the changed product through compliance with DASR 21.A.451.

(b) The applicant shall submit to the Authority the declaration referred to in (a)(2). and, on request by the Authority, all necessary substantiation data.

Superseded

21.A.435 - Classification and approval of repair designs

(a) A repair design shall be classified as either "Major" or "Minor" in accordance with the criteria set out in DASR 21.A.91 for a change to the type-certificate. **GM**

(b) A repair shall be classified and approved by: **GM**

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1), (2) and (5) of DASR 21.A.263(c), as recorded in the terms of approval.

21.A.439 - Production of repair parts

Parts and appliances to be used for the repair shall be manufactured in accordance with production data based upon all the necessary design data as provided by the repair design approval holder:

(a) under DASR 21 Subpart F; or

(b) by an organisation appropriately approved in accordance with DASR 21 Subpart G; or

(c) by an appropriately approved maintenance organisation.

21.A.441 - Repair embodiment

(a) The embodiment of a repair shall be made in accordance with DASR 145, or by a production organisation appropriately approved in accordance with DASR 21 Subpart G, in accordance with the privilege provided for in DASR 21.A.163(d).

(b) The design organisation shall transmit to the organisation performing the repair all the necessary installation instructions.

21.A.443 - Limitations

A repair design may be approved subject to limitations, in which case the repair design approval shall include all necessary instructions and limitations. These instructions and limitations shall be transmitted by the repair design approval holder to the operator in accordance with a procedure agreed with the Authority. **GM**

21.A.445 - Unrepaired damage

AMC **GM**

(a) When a damaged product, part or appliance, is left unrepaired, and is not covered by previously approved data, the evaluation of the damage for its airworthiness consequences may only be made:

1. by the Authority; or

2. by an appropriately approved design organisation under a procedure agreed with the Authority.

Superseded

Any necessary limitations shall be processed in accordance with the procedures of DASR 21.A.443.

(b) Where the organisation evaluating the damage under paragraph (a) is neither the Authority nor the type-certificate or supplemental type-certificate or APU MTSO authorisation holder, this organisation shall justify that the information on which the evaluation is based is adequate either from its organisation's own resources or through an arrangement with the type-certificate, supplemental type-certificate or APU MTSO authorisation holder, or manufacturer, as applicable.

21.A.447 - Record keeping

☐ **AMC** ☐ **AMC1**

For each repair, all relevant design information, drawings, test reports, instructions and limitations possibly issued in accordance with DASR 21.A.443, justification for classification and evidence of the repair design approval, shall:

(a) be held by the repair design approval holder at the disposal of the Authority; and

(b) be retained by the repair design approval holder in order to provide the information necessary to ensure the continued airworthiness of the repaired products, parts or appliances.

21.A.449 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the repair design approval shall furnish at least one complete set of those changes to the instructions for continuing airworthiness which result from the design of the repair, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable requirements, to each operator of aircraft incorporating the repair. The repaired product, part or appliance may be released back into service before the changes to those instructions have been completed, but this shall be for a limited service period, and in agreement with the Authority. Those changes to the instructions shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. The availability of some manual or portion of the changes to the instructions for continuing airworthiness, dealing with overhaul or other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight — hours/cycles.

(b) If updates to those changes to the instructions for continuing airworthiness are issued by the holder of the repair design approval after the repair has been first approved, these updates shall be furnished to each operator and shall be made available on request to any other person required to comply with any of the terms of those changes to the instructions. A programme showing how updates to the changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

Superseded

21.A.451 - Obligations and Australian Military Part Approval (MPA) marking

(a) Each holder of a major repair design approval shall:

1. undertake the obligations:

i. laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.439, DASR 21.A.441, DASR 21.A.443, DASR 21.A.447 and DASR 21.A.449;

ii. implicit in the collaboration with the type-certificate or supplemental type-certificate and APU AUSMTSO authorisation holder, under DASR 21.A.433(b), as appropriate.

2. specify the marking, including AUSMPA (Australian Military Part Approval) letters, in accordance with DASR 21.A.804(a).

(b) Except for type-certificate holders or APU AUSMTSO authorisation holders for which DASR 21.A.44 applies, the holder of a minor repair design approval shall:

1. undertake the obligations laid down in DASR 21.A.4, DASR 21.A.447 and DASR 21.A.449; and

2. specify the marking, including AUSMPA letters, in accordance with DASR 21.A.804(a).

SUBPART N - (NOT APPLICABLE)

SUBPART O - AUSTRALIAN MILITARY TECHNICAL STANDARD ORDER AUTHORISATIONS

21.A.601 - Scope

This Subpart establishes the procedure for issuing Australian Military Technical Standard Order (AUSMTSO) authorisations and the rules governing the rights and obligations of applicants for, or holders of, such authorisations. **GM**

21.A.602A - Eligibility

Any organisation that produces or is preparing to produce an AUSMTSO article, and that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.602B shall be eligible as an applicant for an AUSMTSO authorisation.

21.A.602B - Demonstration of capability

Any applicant for an AUSMTSO authorisation shall demonstrate its capability as follows:

(a) for production, by holding a production organisation approval, issued in accordance with DASR 21 Subpart G, or through compliance with DASR 21 Subpart F procedures; and

(b) for design:

1. for an Auxiliary Power Unit, by holding a design organisation approval, issued by the Authority in accordance with DASR 21 Subpart J;

Superseded

2. for all other articles, by using procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR. ☐ **AMC**

21.A.603 - Application

(a) An application for an AUSMTSO authorisation shall be made in a form and manner established by the Authority and shall include an outline of the information required by DASR 21.A.605. ☐ **AMC**

(b) When a series of minor changes in accordance with DASR 21.A.611 is anticipated, the applicant shall set forth in its application the basic model number of the article and the associated part numbers with open brackets after it to denote that suffix change letters or numbers (or combinations of them) will be added from time to time.

21.A.604 - AUSMTSO Authorisation for an Auxiliary Power Unit

With regard to AUSMTSO authorisation for an Auxiliary Power Unit (APU):

(a) by way of exception DASR 21.A.603, DASR 21.A.610 and DASR 21.A.615, the following requirements shall apply: DASR 21.A.15, DASR 21.A.16B, DASR 21.A.17A, DASR 21.A.20, DASR 21.A.21, DASR 21.A.31, DASR 21.A.33, DASR 21.A.44,. However except that an AUSMTSO authorisation shall be issued in accordance with DASR 21.A.606 instead of the type-certificate;

(b) by way of exception from from DASR 21.A.611, DASR 21 Subpart D shall apply to the approval of design changes by the APU MTSO authorisation holder and design changes from other applicants classified as a minor change, and the requirements of DASR 21 Subpart E shall apply to the approval of design changes by other applicants classified as a major change. Where the requirements of Subpart E apply, a separate AUSMTSO authorisation shall be issued instead of a supplemental type-certificate.; and

(c) the requirements of DASR 21 Subpart M shall apply to the approval of repair designs.

21.A.605 - Data requirements

☐ **AMC** ☐ **GM**

(a) The applicant shall submit to the Authority the following documents:

1. a certification programme for the AUSMTSO authorisation, setting out the means to demonstrate compliance with DASR 21.A.606(b); ☐ **AMC**
2. a statement of compliance certifying that the applicant has met the requirements of this Subpart;
3. a Declaration of Design and Performance (DDP), stating that the applicant has demonstrated that the article complies with the technical standards and airworthiness specifications in accordance with the certification programme;
4. a copy of the technical data required in the applicable technical standards and airworthiness specifications;

Superseded

5. the exposition (or a reference to the exposition) referred to in DASR 21.A.143 for the purpose of obtaining an appropriate production organisation approval under DASR 21 Subpart G or the manual (or a reference to the manual) referred to in DASR 21.A.125A(b) for the purpose of manufacturing under DASR 21 Subpart F without production organisation approval;

6. for an APU, the handbook, or a reference to the handbook, referred to in DASR 21.A.243 for the purpose of obtaining an appropriate design organisation approval under DASR 21 Subpart J;

7. for all other articles, the procedures, or a reference to the procedures, referred to in DASR 21.A.602B(b)(2).

(b) The applicant shall report to the Authority any difficulty or event encountered during the approval process that may significantly impact the AUSMTSO authorisation. **GM**

21.A.606 - Requirements for the issuance of an AUSMTSO authorisation

In order to be issued a AUSMTSO authorisation, the applicant shall:

(a) demonstrate its capability in accordance with DASR 21.A.602B;

(b) demonstrate that the article complies with the technical conditions of the applicable technical standards and airworthiness specifications or with deviations therefrom approved in accordance with DASR 21.A.610, if any

(c) comply with the requirements of this Subpart; and

(d) declare that no feature or characteristic has been identified that may make the article unsafe for the uses for which certification is requested. **AMC**

21.A.607 - AUSMTSO authorisation privileges

The holder of an AUSMTSO authorisation is entitled to produce and to mark the article with the appropriate AUSMTSO marking.

21.A.608 - Declaration of Design and Performance (DDP)

AMC

(a) The DDP shall contain at least the following information:

1. information corresponding to DASR 21.A.31(a) and DASR 21.A.31(b), identifying the article and its design and testing standard.

2. the rated performance of the article, where appropriate, either directly or by reference to other supplementary documents.

3. a statement of compliance certifying that the article has met the applicable technical standards and airworthiness specifications.

4. reference to relevant test reports.

Superseded

5. reference to the appropriate Maintenance, Overhaul and Repair Manuals.

6. the levels of compliance, where various levels of compliance are allowed by the applicable technical standards and airworthiness specifications.

7. list of deviations accepted in accordance with DASR 21.A.610.

(b) The DDP shall be endorsed with the date and signature of the holder of the AUSMTSO authorisation, or its authorised representative.

21.A.609 - Obligations of holders of AUSMTSO authorisations

The holder of an AUSMTSO authorisation under this Subpart shall:

(a) manufacture each article in accordance with DASR 21 Subpart G or Subpart F that ensures that each completed article conforms to its design data and is safe for installation;

(b) prepare and maintain, for each model of each article for which an AUSMTSO authorisation has been issued, a current file of complete technical data and records in accordance with DASR 21.A.613;

(c) prepare, maintain and update master copies of all manuals required by the applicable airworthiness specifications for the article;

(d) make available to users of the article and to the Authority on request those maintenance, overhaul and repair manuals necessary for the usage and maintenance of the article, and changes to those manuals;

(e) mark each article in accordance with DASR 21.A.807;

(f) comply with DASR 21.A.3A, DASR 21.A.3B and DASR 21.A.4;

(g) continue to meet the certification requirements of DASR 21.A.602B.

21.A.610 - Approval for deviation

(a) Each manufacturer who requests approval to deviate from any performance requirements of applicable technical standards and airworthiness specifications shall demonstrate that the standards from which a deviation is requested are compensated for by factors or design features providing an equivalent level of safety.

(b) The request for approval to deviate, together with all pertinent data, shall be submitted to the Authority.

21.A.611 - Design changes

GM

(a) The holder of the AUSMTSO authorisation may make minor design changes (any change other than a major change) without further authorisation by the Authority. In this case, the changed article keeps the original model number (part number changes or amendments shall be used

Superseded

to identify minor changes) and the holder shall forward to the Authority any revised data that are necessary for compliance with DASR 21.A.603(b).

(b) Any design change by the holder of the AUSMTSO authorisation that is extensive enough to require a substantially complete investigation to determine compliance with the applicable technical standards and airworthiness specifications is a MAJOR change. Before making such a change, the holder shall assign a new type or model designation to the article and apply for a new authorisation under DASR 21.A.603.

(c) No design change by any organisation, other than the holder of the AUSMTSO authorisation who submitted the statement of compliance for the article, is eligible for approval under this DASR 21 Subpart O unless the organisation seeking the approval applies under DASR 21.A.603 for a separate AUSMTSO authorisation.

21.A.613 - Record keeping

Further to the record keeping requirements appropriate to, or associated with, the quality system, all relevant design information, drawings and test reports, including inspection records for the article tested, shall be held at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the article and of the type-certificated product in which it is fitted. ☐ **AMC**

21.A.615 - Inspection by the Authority

Upon a request of the Authority, each applicant for, or holder of an AUSMTSO authorisation for an article shall allow the Authority to:

(a) witness any tests;

(b) inspect the technical data files on that article.

21.A.619 - Duration and continued validity

(a) An AUSMTSO authorisation shall be issued for an unlimited duration. It shall remain valid unless:

1. the conditions required when AUSMTSO authorisation was granted are no longer being observed; or
2. the obligations of the holder specified in DASR 21.A.609 are no longer being discharged; or
3. the article has proved to give rise to unacceptable hazards in service; or
4. the authorisation has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

Superseded

21.A.621 Transferability

Except for a change in ownership of the holder, which shall be regarded as a change of significance, and shall therefore comply with DASR 21.A.147 and DASR 21.A.247 as applicable, an AUSMTSO authorisation issued under this DASR is not transferable.

SUBPART P - MILITARY PERMIT TO FLY

GM to Subpart P

21.A.701 - Scope

GM - MPTF

(a) Military permits to fly shall be issued in accordance with this Subpart to aircraft that do not meet, or have not been shown to meet, applicable airworthiness requirements but are capable of safe flight under defined conditions and for the following purposes: **GM - MPTF** **AMC**

1. development;
2. showing compliance with regulation or airworthiness requirements;
3. design organisations or production organisations crew training;
4. production flight testing of new production aircraft;
5. flying aircraft under production between production facilities;
6. flying the aircraft for customer acceptance;
7. delivering or exporting the aircraft;
8. flying the aircraft for Authority acceptance;
9. market survey, including customer's crew training;
10. exhibition and air show;
11. flying the aircraft to a location where maintenance or airworthiness review are to be performed, or to a place of storage;
12. flying an aircraft at a weight in excess of its maximum certificated takeoff weight for flight beyond the normal range over water, or over land areas where adequate landing facilities or appropriate fuel is not available;
13. (Reserved)
14. flying aircraft meeting the applicable airworthiness requirements before conformity to the environmental requirements (where applicable) has been found;
15. for individual aircraft or types for which a certificate of airworthiness or restricted certificate of airworthiness is not appropriate;
16. (Reserved)

Superseded

17. operation of new or modified capability, prior to completion of certification, due to of a capability imperative;

18. operation of aircraft where a required maintenance activity has not been completed, due to a capability imperative.

(b) This Subpart establishes the procedure for issuing military permits to fly and approving associated flight conditions and establishes the rights and obligations of the applicants for, and holders of, those permits and approvals for flight conditions.

21.A.703 - Eligibility

☐ **GM**

(a) Any organisation shall be eligible as an applicant for a military permit to fly except for a military permit to fly requested for the purpose of DASR 21.A.701 (a)(15) where the applicant shall be the owner.

(b) Any person or organisation shall be eligible for application for the approval of the flight conditions.

21.A.705 - Authority of the State

☐ **GM**

For the purpose of this Subpart, the 'Authority' shall be:

(a) the Authority of the State of registry; or

(b) for unregistered aircraft, the Authority designated by the State which prescribed the identification marks.

21.A.707 - Application for military permit to fly

(a) Pursuant to DASR 21.A.703 and when the applicant has not been granted the privilege to issue a military permit to fly, an application for a military permit to fly shall be made to the Authority in a form and manner established by that Authority.

(b) Each application for a military permit to fly shall include: ☐ **GM**

1. the purpose(s) of the flight(s), in accordance with DASR 21.A.701;

2. the ways in which the aircraft does not comply with the applicable airworthiness requirements;

3. the flight conditions approved in accordance with DASR 21.A.710.

(c) Where the flight conditions are not approved at the time of application for a military permit to fly, an application for approval of the flight conditions shall be made in accordance with DASR 21.A.709.

Superseded

21.A.708 - Flight conditions

Flight conditions include:

(a) the configuration(s) for which the military permit to fly is requested;

(b) any condition or restriction necessary for safe operation of the aircraft, including: ☐ **GM** ☐ **GM1**

1. the conditions or restrictions put on itineraries or airspace, or both, required for the flight(s);

2. any conditions and restrictions put on the flight crew to fly the aircraft required by the Authority;

3. the restrictions regarding carriage of persons other than flight crew;

4. the operating limitations, specific procedures or technical conditions to be met;

5. the specific flight test programme (if applicable);

6. the specific continuing airworthiness arrangements including maintenance instructions and the regime under which they will be performed. ☐ **GM**

(c) the substantiation that the aircraft is capable of safe flight under the conditions or restrictions of subparagraph (b); ☐ **GM1** ☐ **GM2** ☐ **GM3**

(d) the method used for the control of the aircraft configuration, in order to remain within the established conditions. ☐ **GM**

21.A.709 - Application for approval of flight conditions

(a) Pursuant to DASR 21.A.707(c) and when the applicant has not been granted the privilege to approve the flight conditions, an application for approval of the flight conditions shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) Each application for approval of the flight conditions shall include: ☐ **AMC**

1. the proposed flight conditions;

2. the documentation supporting these conditions; and

3. a declaration that the aircraft is capable of safe flight under the conditions or restrictions of paragraph DASR 21.A.708(b). ☐ **AMC**

21.A.710 - Approval of flight conditions

☐ **GM**

(a) When approval of the flight conditions is related to the safety of the design, the flight conditions shall be approved by:

1. the Authority; or ☐ **AMC**

Superseded

2. an appropriately approved design organisation, under the privilege of DASR 21.A.263(c)(6).

(b) When approval of the flight conditions is not related to the safety of the design, the flight conditions shall be approved by the Authority, or the appropriately approved organisation that will also issue the military permit to fly.

(c) Before approving the flight conditions, the Authority or the approved organisation must be satisfied that the aircraft is capable of safe flight under the specified conditions and restrictions. The Authority may make or require the applicant to make any necessary inspections or tests for that purpose.

21.A.711 - Issue of a military permit to fly

(a) The Authority shall issue a military permit to fly: ☐ **GM**

1. upon presentation of the data required by DASR 21.A.707;

2. when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710; and

3. when the Authority, through its own investigations, which may include inspections, or through procedures agreed with the applicant, is satisfied that the aircraft conforms to the design defined under DASR 21.A.708 before flight.

(b) An appropriately approved design organisation may issue a military permit to fly (DASR Form 20b—Military Permit to Fly - Approved Organisation), under the privilege granted under DASR 21.A.263(c)(7), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(c) An appropriately approved production organisation may issue a military permit to fly (DASR Form 20b) under the privilege granted under DASR 21.A.163(e), when the flight conditions referred to in DASR 21.A.708 have been approved in accordance with DASR 21.A.710. ☐ **GM**

(d) Reserved

(e) The military permit to fly shall specify the purpose(s) and any conditions and restrictions, which have been approved in accordance with DASR 21.A.710. ☐ **GM**

(f) For permits issued under subparagraph (b), (c) or (d) a copy of the military permit to fly and associated flight conditions shall be submitted to the Authority at the earliest opportunity but not later than three days from the permit being issued.

(g) Upon evidence that any of the conditions specified in DASR 21.A.723(a) are not met for a military permit to fly that an organisation has issued pursuant to subparagraph (b), (c), or (d), that organisation shall revoke that military permit to fly immediately and inform without delay the Authority.

21.A.713 - Changes

☐ **GM**

Superseded

(a) Any change that invalidates the flight conditions or associated substantiation established for the military permit to fly shall be approved in accordance with DASR 21.A.710. When relevant, an application shall be made in accordance with DASR 21.A.709.

(b) A change affecting the content of the military permit to fly requires the issuance of a new military permit to fly in accordance with DASR 21.A.711.

21.A.715 - Language

The manuals, placards, listings, and instrument markings and other necessary information required by applicable type-certification basis shall be presented in a language acceptable to the Authority.

21.A.719 - Transferability

(a) A military permit to fly is not transferable. ☐ **GM**

(b) (reserved)

21.A.721 - Inspections

The holder of, or the applicant for, a military permit to fly shall provide access to the aircraft concerned at the request of the Authority.

21.A.723 - Duration and continued validity

(a) A military permit to fly shall be issued for a maximum of 12 months, unless otherwise specified by the Authority, and shall remain valid subject to:

1. compliance with the conditions and restrictions of DASR 21.A.711(e) associated to the military permit to fly;
2. the military permit to fly not being surrendered or revoked;
3. the aircraft remaining on the same register.

(b) (Reserved)

(c) Upon surrender or revocation, the military permit to fly shall be returned to the Authority.

21.A.725 - Renewal of military permit to fly

Renewal of the military permit to fly shall be processed as a change in accordance with DASR 21.A.713.

21.A.727 - Obligations of the holder of a military permit to fly

☐ **AMC** ☐ **GM**

Superseded

The holder of a military permit to fly shall ensure that all the conditions and restrictions associated with the military permit to fly are satisfied and maintained.

21.A.729 - Record keeping

GM

(a) All documents produced to establish and justify the flight conditions shall be held by the holder of the approval of the flight conditions at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

(b) All documents associated to the issue of permits to fly under the privilege of approved organisations, including inspection records, documents supporting the approval of flight conditions and the military permit to fly itself, shall be held by the related approved organisation at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness of the aircraft.

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.A.801 - Identification of products

(a) The identification of products shall include the following information:

1. manufacturer's name;
2. product designation;
3. manufacturer's Serial number; and
4. any other information the Authority finds appropriate.

(b) Any person or organisation that manufactures an aircraft or engine under DASR 21 Subpart G or Subpart F shall identify that aircraft or engine by means of a fireproof plate that has the information specified in paragraph (a) marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

(c) Any organisation that manufactures a propeller, propeller blade, or propeller hub under DASR 21 Subpart G or Subpart F shall identify it by means of a plate, stamping, engraving, etching or other approved method of fireproof identification that is placed on it on a non-critical surface, contains the information specified in paragraph (a) and will not likely be defaced or removed during normal service or lost or destroyed in an accident.

(d) (Reserved)

Superseded

21.A.803 - Handling of identification data

(a) No person shall remove, change, or place identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU, without the approval of the Authority.

(b) No person shall remove or install any identification plate referred to in DASR 21.A.801, or in DASR 21.A.807 for an APU, without the approval of the Authority.

(c) By way of exception from paragraphs (a) and (b), any person or organisation performing maintenance work under the applicable associated implementing rules may, in accordance with methods, techniques and practices established by the Authority:

1. remove, change, or place the identification information referred to in DASR 21.A.801(a) on any aircraft, engine, propeller, propeller blade, or propeller hub, or in DASR 21.A.807(a) on an APU; or

2. remove an identification plate referred to in DASR 21.A.801, or DASR 21.A.807 for an APU, when necessary during maintenance operations.

(d) No person shall install an identification plate removed in accordance with subparagraph (c)(2) on any aircraft, engine, propeller, propeller blade, or propeller hub other than the one from which it was removed.

21.A.804 - Identification of parts and appliances

(a) Each part or appliance shall be marked permanently and legibly with:

1. a name, trademark, or symbol identifying the manufacturer in a manner identified by the applicable design data; and **GM**

2. the part number, as defined in the applicable design data; and

3. the letters AUSMPA (Australian Military Part Approval) for parts or appliances produced in accordance with approved design data not belonging to the type-certificate holder of the related product, except for AUSMTSO articles.

(b) By way of exception from paragraph (a) if the Authority agrees that a part or appliance is too small or that it is otherwise impractical to mark a part or appliance with any of the information required by paragraph (a), the authorised release document accompanying the part or appliance or its container shall include the information that could not be marked on the part.

21.A.805 - Identification of critical parts

In addition to the requirement of DASR 21.A.804, each manufacturer of a part to be fitted on a type-certificated product which has been identified as a critical part shall permanently and legibly mark that part with a part number and a serial number.

Superseded

21.A.807 - Identification of AUSMTSO articles

(a) Each holder of an AUSMTSO authorisation under DASR 21 Subpart O shall permanently and legibly mark each article with the following information:

1. the name and address of the manufacturer;

2. the name, type, part number or model designation of the article;

3. the serial number or the date of manufacture of the article or both; and

4. the applicable AUSMTSO number.

(b) By way of exception from paragraph (a), if the Authority agrees that a part is too small or that it is otherwise impractical to mark a part with any of the information required by paragraph (a), the authorised release document accompanying the part or its container shall include the information that could not be marked on the part.

(c) Each person who manufactures an APU under DASR 21 Subpart G or Subpart F shall identify that APU by means of a fire-proof plate that has the information specified in paragraph (a), marked on it by etching, stamping, engraving, or other approved method of fireproof marking. The identification plate shall be secured in such a manner that it is accessible and legible, and will not likely be defaced or removed during normal service, or lost or destroyed in an accident.

Superseded

SUBPART Q - IDENTIFICATION OF PRODUCTS, PARTS AND APPLIANCES

21.1 - General

GM

(a) When reference is given to 'design organisation' the following shall apply:

1. An organisation responsible for the design of products, parts and appliances or for changes or repairs thereto shall demonstrate its capability in compliance with national military airworthiness regulation being in accordance to this DASR, further referred to as DASR 21. In the case that governmental organisations undertake design activities with any other organisation responsible for the design of products, parts and appliances or for changes or repairs thereto, they shall be treated as a single organisation when demonstrating their capability in accordance with DASR 21.

2. By way of exception from point 1, an organisation whose principal place of business is in a non-participating Member State, or where a participating Member State (pMS) has not yet transposed EMAR 21 in their national military airworthiness regulations, may demonstrate its capability by holding a certificate or similar approval issued by an authority of that State for the product, part and appliance for which it applies, provided:

   i. that State is providing oversight as State of Design; and

   ii. through Recognition (EMAD–R) it can be determined, that the national airworthiness system of that State includes the same independent level of checking of compliance as provided by DASR 21, either through an equivalent system of approvals of organisations or through direct involvement of the authority of that State.

(b) All references to 'aircraft' throughout this DASR means 'military aircraft', defined as those that follow special laws and regulations and are designed with specific characteristics for military operations.

(c) 'Authority' shall be, unless otherwise specified in this DASR:

1. The Authority in charge of the type certification process:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

2. The Authority in charge of the production / design organisation approval:

   i. For a multinational programme, the Military Airworthiness Authorities of the participating Nations/States; or

   ii. For a national programme, the Military Aviation Authority of this Nation/State,

3. The Authority in charge to issue the military permit to fly

4. The registration Authority in charge to issue the Certificate of Airworthiness; or

Superseded

5. For unregistered aircraft, the Authority which prescribed the identification marks.

(d) 'Applicant' shall be:

1. The contractor which should comply with this DASR; or

2. Any organisation which must obtain from an Authority a type-certificate, a restricted type-certificate, a supplemental type-certificate, an Australian Military Technical Standard Order (AUSMTSO) authorisation, a major change or a major repair design approval based on this DASR. It should be included herein the certificate of airworthiness, as mentioned in DASR 21.A.172, and Military Permit to Fly / Flight Conditions, as mentioned in DASR 21.A.703.

3. Any organisation or operator or its representative which applies for an airworthiness certificate under Subpart H of this DASR.

(e) 'Certification' - the process of recognition that a product, part or appliance, organisation or person complies with the applicable airworthiness requirements followed by the declaration of compliance.

(f) 'continued (design) airworthiness' means all tasks to be carried out to verify that the conditions under which a type-certificate or a supplemental type-certificate has been granted continue to be fulfilled at any time during its period of validity (Type Design)

(g) 'continuing (preservation of) airworthiness' means all of the processes ensuring that, at any time in its operating life, the aircraft complies with the airworthiness requirements in force and is in a condition for safe operation (Maintenance).

(h) All references to 'certificates' throughout this DASR means 'military certificates (Although credit can be taken from any prior Civil Certificate issued by a recognised Civil Authority).

(i) All references to 'organisation approvals' throughout this DASR means 'organisational approvals accepted or issued by military authorities'.

(j) Where this DASR requires specific DASR forms to be used, equivalent forms approved by the Authority are permitted.

(k) "Operational Suitability Data (OSD)" means data, which are part of an aircraft type-certificate, restricted type-certificate or supplemental type-certificate, which may consist of the following:

i. the minimum syllabus of pilot type rating training, including determination of type rating;

ii. the definition of scope of the aircraft validation source data to support the objective qualification of simulators or the provisional data to support their interim qualification;

iii. the minimum syllabus of maintenance certifying staff type rating training, including determination of type rating;

iv. determination of type or variant for cabin crew and type specific data for cabin crew;

v. the master minimum equipment list.

Superseded

SECTION A - TECHNICAL REQUIREMENTS

SUBPART A - GENERAL PROVISIONS

21.A.1 - Scope

This Section establishes general provisions governing the rights and obligations of the applicant for, and holder of, any certificate issued or to be issued in accordance with this Section. ☐ **AMC**

21.A.2 - Undertaking by another organisation than the applicant for, or holder of, a certificate

The actions and obligations required to be undertaken by the holder of, or applicant for, a certificate for a product, part or appliance under this Section may be undertaken on its behalf by any other person or organisation, provided the holder of, or applicant for, that certificate can show that it has made an agreement with the other person or organisation such as to ensure that the holder's obligations are and will be properly discharged. ☐ **AMC**

21.A.3A - Failures, malfunctions and defects

(a) System for Collection, Investigation and Analysis of Data. ☐ **AMC** ☐ **AMC1** ☐ **AMC2** ☐ **AMC3** ☐ **GM**

The holder of a type certificate, restricted type certificate, supplemental type certificate, Australian Military Technical Standard Order (AUSMTSO) authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR shall have a system for collecting, investigating and analysing reports of and information related to failures, malfunctions, defects or other occurrences which cause or might cause adverse effects on the airworthiness of the product, part or appliance covered by the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR. Information about this system shall be made available to all known operators of the product, part or appliance and, on request, to any person authorised under other associated DASR.

(b) Reporting to the Authority. ☐ **GM** ☐ **GM1**

1. The holder of a type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, shall report to the issuing / approving Authority any failure, malfunction, defect or other occurrence of which it is aware related to a product, part or appliance covered by the type certificate, restricted type certificate, supplemental type certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, and which has resulted in or may result in an unsafe condition.

2. These reports shall be made in a form and manner established by the Authority, as soon as practicable and in any case dispatched not later than 72 hours after the identification of the possible unsafe condition, unless exceptional circumstances prevent this. ☐ **AMC** ☐ **AMC1**

Superseded

(c) Investigation of Reported Occurrences.

1. When an occurrence reported under paragraph (b), or under DASR 21.A.129(f)(2) or DASR 21.A.165(f)(2) results from a deficiency in the design, or a manufacturing deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer (Production Organisation) as appropriate, shall investigate the reason for the deficiency and report to the Authority the results of its investigation and any action it is taking or proposes to take to correct that deficiency.

2. If the Authority finds that an action is required to correct the deficiency, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, major repair design approval or any other relevant approval deemed to have been issued under this DASR, or the manufacturer as appropriate, shall submit the relevant data to the Authority.

21.A.3B - Airworthiness Directives

(a) An Airworthiness Directive means a document issued or adopted by the Authority which mandates actions to be performed on an aircraft to restore an acceptable level of safety, when evidence shows that the safety level of this aircraft may otherwise be compromised. ☐ **GM**

(b) The Authority shall issue an airworthiness directive when: ☐ **AMC** ☐ **GM**

1. an unsafe condition has been determined by the Authority to exist in an aircraft, as a result of a deficiency in the aircraft, or an engine, propeller, part or appliance installed on this aircraft; and

2. that condition is likely to exist or develop in other aircraft, including engine, propeller, part or appliance installed on those aircraft that may be affected by this unsafe condition.

(c) When an Airworthiness Directive has to be issued by the Authority to correct the unsafe condition referred to in paragraph (b), or to require the performance of an inspection, the holder of the type-certificate, restricted type-certificate, supplemental type-certificate, major repair design approval, AUSMTSO authorisation or any other relevant approval deemed to have been issued under this DASR, shall:

1. propose the appropriate corrective action and/or required inspections and submit details of these proposals to the Authority for approval; ☐ **AMC1** ☐ **AMC2**

2. following the approval by the Authority of the corrective action and/or required inspections referred to under subparagraph (c)1, make available to all known operators or owners of the product, part or appliance and, on request, to any person required to comply with the airworthiness directive, appropriate descriptive data and accomplishment instructions.

(d) An Airworthiness Directive shall contain at least the following information:

1. an identification of the unsafe condition;

Superseded

2. an identification of the affected aircraft; operating and maintenance associated documentation;

3. the action(s) required;

4. the compliance time for the required action(s); ☐ **GM**

5. the date of entry into force.

21.A.4 - Co-ordination between design and production

☐ **AMC**

Each holder of a type-certificate, restricted type-certificate, supplemental type-certificate, AUSMTSO authorisation, approval of a change to type certificate or approval of a repair design, shall ensure collaboration between the design organisation and the production organisation as necessary to achieve:

(a) The satisfactory coordination of design and production required by DASR 21.A.122, DASR 21.A.130(b)(3) and (b)(4), DASR 21.A.133 or DASR 21.A.165(c)(2) and (c)(3), as appropriate; and

(b) The proper support of the continued airworthiness of the product, part or appliance.

SUBPART B - MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.11 - Scope

This Subpart establishes the procedure for issuing Military Type-Certificates (MTCs) for products and Military Restricted Type-Certificates (MRTCs) for aircraft, and establishes the rights and obligations of the applicants for, and holders of, those certificates.

21.A.13 - Eligibility

Any organisation that has demonstrated, or is in the process of demonstrating, its capability in accordance with DASR 21.A.14 shall be eligible as an applicant for a type-certificate or a restricted type-certificate under the conditions laid down in this Subpart.

21.A.14 - Demonstration of capability

(a) Any organisation applying for a type-certificate or restricted type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph (a), as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this DASR, under the following: ☐ **AMC** ☐ **GM**

1. Products with simple or limited scope of design.

Superseded

2. Starting phase toward a military design organisation approval or limited duration of design activities.

3. Products for which the major part of the Type Design certification activities have already been accepted by the Authority concerned.

4. Reserved.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.44. ☐ **AMC** ☐ **AMC1** ☐ **GM**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a type-certificate or restricted type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.15 - Application

(a) An application for a type-certificate or restricted type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) An application for a type-certificate or restricted type-certificate shall include, as a minimum, preliminary descriptive data of the product, the intended use of the product and the kind of operations for which certification is requested. In addition, it shall include, or be supplemented after the initial application, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: ☐ **AMC** ☐ **GM** ☐ **GM1**

1. a detailed description of the type design, including all the configurations to be certified;

2. the proposed operating characteristics and limitations;

3. the intended use of the product and the kind of operations for which certification is requested;

4. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.17A, 21.A.17B and 21.A.18;

5. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents; ☐ **AMC**

6. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-

Superseded

compliance on product safety or environmental protection. The proposed assessment shall take into account at least the elements set out in Section 3 of AMC 21.A.15(b)(6) - Level of Involvement. Based on this assessment, the application shall include a proposal for the involvement of the Authority in the verification of the compliance demonstration activities and data; and ☐ **AMC** ☐ **GM**

7. a project schedule including major milestones.

(c) After its initial submission to the Authority, the certification programme shall be updated by the applicant when there are changes to the certification project affecting any of the points 1 to 7 of (b). ☐ **GM**

(d) An application for a type-certificate or restricted type-certificate for an aircraft shall include, or be supplemented after the initial application, an application supplement for approval of the operational suitability data. ☐ **AMC** ☐ **GM1** ☐ **GM2**

(e) An application for a type-certificate or restricted type-certificate shall be valid for five years, unless the Authority agrees at the time of application that its product requires a longer time period for the applicant to demonstrate and declare compliance. ☐ **GM**

(f) In the case where a type-certificate or restricted type-certificate has not been issued, or it is evident that it will not be issued, within the time agreed in point (e), the applicant shall apply for an extension of the validity of the application and comply with any changes to the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established and notified by the Authority in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18 for a new date that is in compliance with the time period established under (e). ☐ **GM**

21.A.16A - Airworthiness Codes (AUS)

☐ **AMC** ☐ **GM**

The Authority shall approve the use of airworthiness codes and other detailed specifications, including codes and specifications for airworthiness and environmental protection, that may be used to demonstrate compliance of products, parts and appliances with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 Such codes and specifications shall be sufficiently detailed and specific to indicate to applicants the conditions under which certificates are to be issued, amended or supplemented.

21.A.16B - Special conditions (AUS)

☐ **AMC** ☐ **GM** ☐ **GM1**

(a) The Authority shall prescribe any special detailed technical specifications, named 'special conditions', for a product if the related airworthiness codes and specifications do not contain adequate or appropriate safety standards for the product because:

1. The product has novel or unusual design features relative to the design practices on which the applicable airworthiness codes are based;

2. The intended use of the product is unconventional;

Superseded

3. Experience from other similar products in service or products having similar design features or newly identified hazards have shown that unsafe conditions may develop; or

4. Applicable airworthiness codes do not exist for the concerned product class or do not address the requested kind of operations.

(b) Special conditions contain such safety standards as the Authority finds necessary in order to establish a level of safety equivalent to that of the applicable airworthiness codes or a level of safety acceptable if airworthiness codes do not exist for the concerned product.

21.A.17A - Type-certification basis for a type-certificate or restricted type-certificate (AUS)

☐ **AMC** ☐ **AMC1** ☐ **GM** ☐ **GM1**

The type-certification basis for a type-certificate or restricted type-certificate shall consist of:

(a) The requirements of the airworthiness code established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless: ☐ **AMC**

1. The applicant chooses to comply, or is required to comply with DASR 21.A.15(f), with requirements of the airworthiness code which became applicable after the date of the application. In that case, the type-certification basis shall include any other requirements of the airworthiness code or other detailed specifications that the Authority finds are directly related; or

2. The Authority accepts any alternative to a designated airworthiness requirement that cannot be complied with, for which compensating factors have been found that provide an equivalent level of safety; or

3. The Authority accepts or prescribes other means that: ☐ **GM**

   i. In the case of a type-certificate, demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4; or

   ii. In the case of a restricted type-certificate, provide a level of safety adequate with regard to the intended use; and

(b) Any special condition prescribed by the Authority in accordance with DASR 21.A.16B(a).

(c) Dedicated airworthiness requirements and means of compliance established to account for military operations that are not covered under (a).

21.A.17B - Operational suitability data certification basis for an aircraft type-certificate or restricted type-certificate (AUS)

☐ **AMC**

The operational suitability data certification basis shall consist of:

(a) the airworthiness codes for operational suitability data established according to DASR 21.A.16A from those applicable to the product at the date of application for that certificate, unless:

Superseded

1. the applicant chooses to comply, or in accordance with DASR 21.A.15(f) is required to comply with requirements of the airworthiness codes which became applicable after the date of the application; if an applicant chooses to comply with an airworthiness code which became applicable after the date of the application, the type-certification basis shall include any other requirements of the airworthiness code that are directly related; or

2. the Authority accepts or prescribes alternative means to demonstrate compliance with the relevant essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

(b) any special condition prescribed by the Authority in accordance with DASR 21.A.16(a).

21.A.18 - Designation of applicable environmental protection requirements (AUS)

The applicable environmental protection requirements shall be established when certifying a product, taking account of the military operational need.

21.A.19 - Changes requiring a new type-certificate

Any applicant proposing to change a product, shall apply for a new type-certificate if the Authority finds that the change in design, configuration, power, thrust, or mass is so extensive that a substantially complete investigation of compliance with the applicable type-certification basis is required.

21.A.20 - Demonstration of compliance with the type certification basis, operational suitability data certification basis and environmental protection requirements

☐ **AMC** ☐ **GM** ☐ **GM1** ☐ **GM2**

(a) Following the acceptance of the certification programme by the Authority, the applicant shall demonstrate compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as established in accordance with DASR 21.A.17A, DASR 21.A.17B and 21.A.18, and shall provide the Authority with the means by which such compliance has been demonstrated.

(b) The applicant shall report to the Authority any difficulty or event encountered during the process of demonstration of compliance that may have an appreciable effect on the risk assessment under DASR 21.A.15(b)(6) or on the certification programme, or may otherwise necessitate a change to the level of involvement of the Authority previously notified to the applicant. ☐ **GM**

(c) The applicant shall record justification of compliance within compliance documents as referred to in the certification programme. ☐ **AMC**

(d) After completion of all demonstrations of compliance in accordance with the certification programme, including any inspections and tests in accordance with DASR 21.A.33, and after all flight tests in accordance with DASR 21.A.35, the applicant shall declare that: ☐ **GM**

1. it has demonstrated compliance with the type-certification basis, operational suitability data certification basis and environmental protection requirements, as

Superseded

established under DASR 21.A.17A, 21.A.17B and 21.A.18, following the certification programme as accepted by the Authority; and

2. no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(e) The applicant shall submit to the Authority the declaration of compliance provided for in (d). Where the applicant holds an appropriate design organisation approval, the declaration of compliance shall be made in accordance with DASR 21 Subpart J and submitted to the Authority.

21.A.21 - Requirements for the issuance of a type-certificate or restricted type-certificate

(a) In order to be issued a product type-certificate or, when the aircraft does not meet the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4 an aircraft restricted type-certificate, the applicant shall: **AMC**

1. demonstrate its capability in accordance DASR 21.A.14; **AMC**

2. comply with DASR 21.A.20

3. demonstrate that the engine and propeller, if installed in the aircraft:

a) have a type-certificate issued in accordance with this DASR; or **GM**

b) have been demonstrated to be in compliance with the aircraft type-certification basis and the environmental protection requirements established by the Authority as necessary to ensure the safe flight of the aircraft.

(b) By way of exception from (a)(2), at the applicant's request included in the declaration referred to in 21.A.20(d), the applicant is entitled to have the aircraft type-certificate or restricted type-certificate issued before the applicant has demonstrated compliance with the operational suitability data certification basis, provided that the applicant demonstrates such compliance before the date at which those data are to be actually used. **GM**

21.A.31 - Type design

(a) The type design shall consist of:

1. The drawings and specifications, and a listing of those drawings and specifications, necessary to define the configuration and the design features of the product shown to comply with the applicable type-certification basis and environmental protection requirements;

2. Information on materials and processes and on methods of manufacture and assembly of the product necessary to ensure the conformity of the product;

3. An approved airworthiness limitations section of the instructions for continuing airworthiness as defined by the applicable airworthiness codes; and

4. Any other data allowing by comparison the determination of the airworthiness and, if relevant, the environmental characteristics of later products of the same type.

(b) Each type design shall be adequately identified.

Superseded

AMC

(a) (Reserved)

(b) Before each test is undertaken during the demonstration of compliance required by DASR 21.A.20, the applicant shall have verified:

1. For the test specimen, that:

i. The materials and processes adequately conform to the specifications for the proposed type design;

ii. The parts of the products adequately conform to the drawings in the proposed type design;

iii. The manufacturing processes, construction and assembly adequately conform to those specified in the proposed type design; and

2. For the test and measuring equipment to be used for the test, that those are adequate for the test and appropriately calibrated.

(c) On the basis of the verifications carried out in accordance with (b), the applicant shall issue a statement of conformity listing any potential non-conformity, together with a justification that this will not affect the test results, and shall allow the Authority to make an inspection it considers necessary to check the validity of that statement.

(d) The applicant shall allow the Authority to: GM

1. Review any data and information related to the demonstration of compliance; and

2. Witness or carry out any test, including any flight and ground test, or inspection conducted for the purpose of the demonstration of compliance.

(e) For all the tests and inspections witnessed or carried out by the Authority in accordance with (d)(2):

1. The applicant shall submit to the Authority a statement of conformity provided for in (c); and

2. No change that affects the validity of the statement of conformity shall be made to the test specimen, or the test and measuring equipment, between the time the statement of conformity provided for in (c) was issued and the time the test specimen is presented to the Authority for test.

GM GM1

(a) Flight testing for the purpose of obtaining a type-certificate shall be conducted in accordance with conditions for such flight testing approved by the Authority.

(b) The applicant shall make all flight tests that the Authority finds necessary:

Superseded

1. To determine compliance with the applicable type-certification basis, and environmental protection requirements; and

2. To determine whether there is reasonable assurance that the aircraft, its parts and appliances are reliable and function properly. ☐ **GM**

(c) Reserved

(d) Reserved

(e) Reserved

(f) The flight tests prescribed in subparagraph (b)(2), shall include:

1. For aircraft incorporating turbine engines of a type not previously used in type-certificated aircraft, at least 300 hours of operation or as agreed by the Authority, with a full complement of engines that conform to a type-certificate; and ☐ **GM**

2. For all other aircraft, at least 150 hours of operation or as agreed by the Authority. ☐ **GM**

21.A.41 - Type-certificate and restricted type-certificate

The type-certificate and restricted type-certificate shall include the type design, the operating limitations, the type-certificate data sheet for airworthiness, the applicable type-certification basis and environmental protection requirements (where applicable) with which the Authority records compliance, and any other conditions or limitations prescribed for the product in the applicable airworthiness requirements and environmental protection requirements. The aircraft type-certificate and restricted type-certificate data sheet shall include the record of CO2 emissions compliance and the engine type-certificate data sheet shall include the record of exhaust emissions compliance, where applicable and as established in accordance with DASR 21.A.18 ☐ **AMC**

21.A.M42 - Integration

The aircraft MTC holder shall be responsible for the integration of Products, Weapons and other Systems onto the aircraft, except for approvals under Subpart E. ☐ **GM**

21.A.44 - Obligations of the holder

Each holder of a type-certificate or restricted type-certificate shall: ☐ **AMC** ☐ **GM**

(a) Undertake the obligations laid down in DASR 21.A.3A, DASR 21.A.3B, DASR 21.A.4, DASR 21.A.55, DASR 21.A.57,DASR 21.A.61 and DASR 21.A.62; and, for this purpose, shall continue to meet the requirements of DASR 21.A.14; ☐ **AMC**

(b) Specify the marking in accordance with DASR 21 Subpart Q; and

(c) Ensure the continued integrity of the aircraft structure and propulsion system through ongoing monitoring and periodic assessment. ☐ **AMC**

Superseded

21.A.47 - Transferability

Transfer of a type-certificate or restricted type-certificate may only be made to an organisation that is able to undertake the obligations under DASR 21.A.44, and, for this purpose, has demonstrated its ability to qualify under the criteria of DASR 21.A.14.

21.A.51 - Duration and continued validity

(a) A type-certificate and restricted type-certificate shall be issued for an unlimited duration. They shall remain valid subject to:

1. The holder remaining in compliance with this DASR; and

2. The certificate not being surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the type-certificate and restricted type-certificate shall be returned to the Authority.

(c) The type-certificate or restricted type-certificate holder must inform the Authority, as soon as practicable, when it is no longer able to meet the type-certificate or the restricted type-certificate holder responsibilities defined by this DASR, for one or several types of product.

21.A.55 - Record keeping

All relevant design information, drawings and test reports, including inspection records for the product tested, shall be held by the type-certificate or restricted type-certificate holder at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the product. ☐ **GM**

21.A.57 - Manuals

The holder of a type-certificate or restricted type-certificate shall produce, maintain and update master copies of all manuals required by the applicable type-certification basis, the applicable operational suitability data certification basis and environmental protection requirements for the product, and provide copies, on request, to the Authority. ☐ **AMC**

21.A.61 - Instructions for continuing airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of the type-certificate or restricted type-certificate shall furnish at least one set of complete instructions for continuing airworthiness, comprising descriptive data and accomplishment instructions prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine or propeller upon its delivery or upon issue of the first certificate of airworthiness for the affected aircraft, whichever occurs later and thereafter make those instructions available on request to any other operator required to comply with any of the terms of those instructions. The availability of some manual or portion of the instructions for continuing airworthiness, dealing with overhaul or

Superseded

other forms of heavy maintenance, may be delayed until after the product has entered into service, but shall be available before any of the products reaches the relevant age or flight-hours/cycles.

(b) In addition, changes to the instructions for continuing airworthiness shall be made available to all known operators of the product and shall also be provided on request to any other operator required to comply with any of those instructions. A programme showing how changes to the instructions for continuing airworthiness are distributed shall be submitted to the Authority.

21.A.62 - Availability of operational suitability data

☐ **GM**

The holder of the type-certificate or restricted type-certificate shall make available:

(a) at least one set of complete operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any change to the operational suitability data to all known operators of the aircraft; and

(c) on request, the relevant data referred to in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of this set of operational suitability data; and

2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

SUBPART C - MILITARY TYPE-CERTIFICATE HOLDER ORGANISATION

21.A.71 - Scope

This Subpart establishes the procedure for the approval of military type-certificate holder organisations (MTCHO) and rules governing the rights and obligations of applicants for, and holders of such approvals.

21.A.73 - Eligibility

At the discretion of the Authority, any Australian government organisation shall be eligible as an applicant for a military type-certificate holder organisation approval under this Subpart:

(a) when intending to hold a military type-certificate in accordance with DASR 21.A.14; and

(b) by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data of the applicable product. The agreement shall include detailed statements on how the actions and obligations are delegated to enable the applicant, in cooperation with the contracted organisation, to comply with the requirements of this Subpart. ☐ **AMC** ☐ **AMC1** ☐ **GM**

Superseded

21.A.74 - Application

☐ **AMC**

Each application for a military type-certificate holder organisation approval shall be made in a form and manner established by the Authority, and shall include an outline of the information required by DASR 21.A.77, and the terms of approval requested to be issued under DASR 21.A.80.

21.A.75 - Issue of Military Type-Certificate Holder Organisation approval

An organisation shall be entitled to have a military type-certificate holder organisation approval issued by the Authority when it has demonstrated compliance with the applicable requirements under this Subpart.

21.A.76 – (Type) Continued Airworthiness System

(a) The military type-certificate holder organisation shall demonstrate that it has established and is able to maintain a system for the management of the continued airworthiness of the products covered by the application. This continued airworthiness system shall be such as to enable the organisation: ☐ **GM**

1. To ensure that the continued airworthiness of the product is carried out in accordance with DASR 21.A.44, DASR 21.A.118A (where applicable) and DASR 21.A.451 (where applicable); and

2. To ensure that its responsibilities are properly discharged in accordance with:

   i. The appropriate provisions of this DASR; and

   ii. The terms of approval issued under DASR 21.A.80.

3. To independently monitor the compliance with, and adequacy of, the documented procedures of the system. This monitoring shall include a feed-back system to a person or a group of persons having the responsibility to ensure corrective actions. ☐ **AMC**

(b) (Reserved)

(c) The military type-certificate holder organisation shall specify the manner in which the continued airworthiness system accounts for the acceptability of tasks performed by supporting organisations according to methods which are the subject of written procedures. ☐ **AMC** ☐ **GM**

(d) The organisation shall integrate into a Safety Management System (SMS), in accordance with DASR.SMS. ☐ **AMC**

21.A.77 - Type Continued Airworthiness Exposition

(a) The military type-certificate holder organisation shall furnish a Type Continued Airworthiness Exposition (TCAE) to the Authority describing, directly or by cross-reference, the organisation,

Superseded

the relevant procedures and the products for which the continued airworthiness will be managed. ☐ **AMC** ☐ **GM**

(b) (Reserved)

(c) The TCAE shall be amended as necessary to remain an up-to-date description of the organisation, and copies of amendments shall be supplied to the Authority

(d) The military type-certificate holder organisation shall identify the positions responsible for making decisions affecting continued airworthiness in the organisation. ☐ **AMC** ☐ **GM**

21.A.78 - Approval Requirements

☐ **GM**

The military type-certificate holder organisation shall demonstrate, on the basis of the information submitted in accordance with DASR 21.A.77 that, in addition to complying with DASR 21.A.76:

(a) The implemented arrangements are adequately resourced to ensure the continued airworthiness of the product;

(b) There is full and efficient coordination between organisations. ☐ **GM**

21.A.79 - Changes in Continued Airworthiness System

☐ **GM**

After the issue of a military type-certificate holder organisation approval, each change to the continued airworthiness system that is significant to impact the continued airworthiness of the product, shall be approved by the Authority. An application for approval shall be submitted in writing to the Authority and the military type-certificate holder organisation shall demonstrate to the Authority, on the basis of submission of proposed changes to the Type Continued Airworthiness Exposition, and before implementation of the change, that it will continue to comply with this Subpart after implementation

21.A.80 - Terms of approval

☐ **GM**

The terms of approval shall identify the products for which the organisation holds a military type-certificate holder organisation approval, and the functions and duties that the organisation is approved to perform to maintain the continued airworthiness of products. Those terms shall be issued as part of a military type-certificate holder organisation approval.

21.A.81 - Changes to Terms of approval

☐ **AMC**

Each change to the terms of approval shall be approved by the Authority. An application for a change to the terms of approval shall be made in a form and manner established by the Authority. The

Superseded

military type-certificate holder organisation shall comply with the applicable requirements of this Subpart.

21.A.84 - Investigations

(a) The military type-certificate holder organisation shall make arrangements that allow the Authority to make any investigations, including investigations of their supporting organisations, necessary to determine compliance and continued compliance with the applicable requirements of this Subpart. ☐ **GM**

(b) (Reserved)

21.A.85 - Findings

When during the investigations referred to in DASR 21.A.84, objective evidence is found showing non-compliance of the holder of a military type-certification holder organisation approval with the applicable requirements of this DASR, the finding shall be classified in accordance with DASR GR.60.

21.A.86 - Duration and continued validity

(a) A military type-certificate holder organisation approval can be issued for an unlimited duration. It shall remain valid for that duration unless:

1. The military type-certificate holder organisation fails to demonstrate compliance with the applicable requirements of this Subpart; or
2. The Authority is prevented by the holder or any of its supporting organisation to perform the investigations in accordance with DASR 21.A.84; or
3. There is evidence that the continued airworthiness system cannot maintain satisfactory control and supervision of the continued airworthiness of products under the approval; or
4. The certificate has been surrendered or revoked under the applicable administrative procedures established by the Authority.

(b) Upon surrender or revocation, the certificate shall be returned to the Authority.

21.A.87 - Privileges

(a) (Reserved);

(b) (Reserved);

(c) For a military product having an approval from a recognised Military Aviation Authority, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To classify changes to a type-certificate or to a supplemental type-certificate and repairs as ‘major’ or ‘minor’;☐ **AMC**

Superseded

2. (Reserved);

3. (Reserved);

4. (Reserved);

5. To approve certain major repair designs under Subpart M to products or Auxiliary Power Units (APUs); ☐ **AMC1** ☐ **AMC2**

6. (Reserved);

7. (Reserved);

8. To approve certain major changes to a type-certificate under Subpart D; and ☐ **AMC1** ☐ **AMC2**

9. (Reserved);

(d) For a military product derived from a civil type-certified product, the holder of military type-certificate holder organisation approval shall be entitled, within its terms of approval and under the relevant procedures of the continued airworthiness system:

1. To declare the applicability, through validation of no impact to the military certification basis and the intended use, of the following when it is has already been approved by a recognised civil aviation authority: ☐ **AMC**

   i. a modification or repair; or

   ii. an instruction for continuing airworthiness; or

   iii. revisions to the flight manual; or

   iv. revisions to the maintenance manual.

2. To approve the following, when it is has already been approved by a recognised civil aviation authority and when it has been declared to be applicable to the military product: ☐ **AMC**

   i. a major modification or repair; or

   ii. revisions to the flight manual; or

   iii. revisions to the approved sections of the maintenance manual.

21.A.88 - Obligations of the Military Type-Certificate Holder Organisation

The holder of a military type-certificate holder organisation approval shall:

(a) Maintain the TCAE required under DASR 21.A.77 in conformity with the continued airworthiness system; ☐ **AMC**

(b) Ensure that the TCAE or relevant procedures included by cross-reference are used as a basic working document within the organisation; ☐ **GM**

(c) determine that the design of products, or changes or repairs thereof that leverage prior certification, comply with applicable specifications and requirements and have no unsafe feature.

Superseded

(d) provide to the Authority statements and associated documentation confirming suitability of prior certification as per paragraph (c), except for approval processes carried out in accordance with DASR 21.A.87 (c) or (d);

(e) Provide to the Authority data and information related to required actions under DASR 21.A.3B;

(f) (Reserved)

(g) (Reserved)

(h) Designate data and information issued under the authority of the approved military type-certificate holder organisation within the scope of its terms of approval as established by the Authority with the following statement: *"The technical content of this document is approved under the authority of the Military Type-Certificate Holder Organisation ref. AUS.DASA.21C.[XXXX]"* ☐ **GM**

SUBPART D - CHANGES TO MILITARY TYPE-CERTIFICATES AND MILITARY RESTRICTED TYPE-CERTIFICATES

21.A.90A - Scope

☐ **GM**

This Subpart establishes the procedure for the approval of changes to type-certificates, and establishes the rights and obligations of the applicants for, and holders of, those approvals. In this Subpart, references to type-certificates include type certificate and restricted type certificate.

21.A.90B - Reserved

(Reserved)

21.A.91 - Classification of changes to a type-certificate

Changes to a type-certificate are classified as minor and major. A 'minor change' has no appreciable effect on the mass, balance, structural strength, reliability, operational characteristics, operational suitability data or other characteristics affecting the airworthiness of the product or its environmental characteristics. Without prejudice to DASR 21.A.19, all other changes are "major changes" under this Subpart. Major and minor changes shall be approved in accordance with DASR 21.A.95 or DASR 21.A.97 as appropriate, and shall be adequately identified. ☐ **GM**

21.A.92 - Eligibility

(a) Only the type-certificate holder may apply for approval of a major change to a type-certificate under this Subpart; all other applicants for a major change to a type-certificate shall apply under DASR 21 Subpart E. ☐ **GM**

(b) Any organisation may apply for approval of a minor change to a type-certificate under this Subpart.

Superseded

AMC

(a) An application for approval of a change to a type-certificate shall be made in a form and manner established by the Authority.

(b) An application shall include, or be supplemented after the initial application with, a certification programme for the demonstration of compliance in accordance with DASR 21.A.20, consisting of: **AMC** **GM** **GM1**

1. a description of the change identifying:

   i. the configuration(s) of the product in the type-certificate upon which the change is to be made;

   ii. all areas of the product in the type-certificate, including the approved manuals, that are changed or affected by the change; and

   iii. when the change affects operational suitability data, any necessary changes to the operational suitability data; **GM1** **GM2**

2. an identification of any reinvestigations necessary to demonstrate compliance of the change and areas affected by the change with the type-certification basis, operational suitability data certification basis and environmental protection requirements; **GM**

3. for a change to a type-certificate:

   i. a proposal for the initial type-certification basis, operational suitability data certification basis and environmental protection requirements, prepared in accordance with the requirements and options specified in DASR 21.A.101;

   ii. a proposal for a breakdown of the certification programme into meaningful groups of compliance demonstration activities and data, including a proposal for the means of compliance and related compliance documents;

   iii. a proposal for the assessment of the meaningful groups of compliance demonstration activities and data, addressing the likelihood of an unidentified non-compliance with the type-certification basis, operational suitability data certification basis or environmental protection requirements and the potential impact of that non-compliance on product safety or environmental protection; and **AMC** **GM**

   iv. a project schedule including major milestones.

(c) An application for a change to a type-certificate shall be valid for five years unless the Authority agrees at the time of application on a longer time period. In the case where the change has not been approved, or it is evident that it will not be approved, within the time limit provided for in this point, the applicant shall apply for an extension of the validity of the application and comply with the type-certification basis, operational suitability data certification basis and environmental protection requirements, established in accordance with DASR 21.A.101. **GM**

Superseded

AMC

(a) Minor changes to a type-certificate shall be classified and approved by:

1. the Authority; or

2. an approved military design organisation within the scope of its privileges provided for in (1) and (2) of DASR 21.A.263(c),recorded in the terms of approval.

(b) A minor change to a type-certificate shall only be approved: GM

1. when it has been demonstrated that the change and areas affected by the change comply with the type-certification basis and the environmental protection requirements incorporated by reference in the type-certificate;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data comply with the operational suitability data certification basis incorporated by reference in the type-certificate;

3. when compliance with the type-certification basis that applies in accordance with (1) has been declared and the justifications of compliance have been recorded in the compliance documents; and

4. when no feature or characteristic has been identified that may make the product unsafe for the uses for which certification is requested.

(c) By way of exception from (b)(1), airworthiness requirements which became applicable after those incorporated by reference in the type-certificate can be used for approval of a minor change, provided they do not affect the demonstration of compliance. GM

(d) By way of exception from (a), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a minor change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used.

(e) The applicant shall submit to the Authority the substantiation data for the change and a statement that compliance has been demonstrated in accordance with (b).

(f) An approval of a minor change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

AMC AMC1

(a) Major changes to a type-certificate shall be classified and approved by:

1. the Authority; or

Superseded

2. an approved design organisation or holder of a type certificate within the scope of its privileges provided for in (1) and (8) of DASR 21.A.263(c) or (2) of DASR 21.A.263(d), as recorded in the terms of approval.

(b) A major change to a type-certificate shall only be approved: ☐ **GM**

1. when it has been demonstrated that the change and areas affected by the change comply with the type certification basis and environmental protection requirements, as established by the Authority in accordance with DASR 21.A.101;

2. in the case of a change affecting the operational suitability data, when it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established by the Authority in accordance with DASR 21.A.101; and

3. when compliance with (1) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change.

(c) By way of exception from (2) and (3) of (b), at the applicant's request included in the declaration referred to in DASR 21.A.20(d), a major change to an aircraft type-certificate may be approved before compliance with the operational suitability data certification basis has been demonstrated, provided that the applicant demonstrates such compliance before the date at which those data are actually used. ☐ **GM**

(d) An approval of a major change to a type-certificate shall be limited to the specific configuration(s) in the type-certificate to which the change relates.

21.A.101 - Type-certification basis, operational suitability data certification basis and environmental protection requirements for a major change to a type-certificate

☐ **AMC** ☐ **GM**

(a) A major change to a type-certificate and areas affected by the change shall comply with either the airworthiness requirements applicable to the changed product on the date of the application for the change or airworthiness requirements which became applicable after that date in accordance with (f) below. The validity of the application shall be determined in accordance with DASR 21.A.93(c). In addition, the changed product shall comply with the environmental protection requirements established in accordance with DASR 21.A.18.

(b) By way of exception from (a), an earlier amendment to an airworthiness requirement referred to in (a), and to any other airworthiness requirement which is directly related may be used in any of the following situations, unless the earlier amendment became applicable before the date at which the corresponding airworthiness requirements incorporated by reference in the type-certificate became applicable:

1. A change that the Authority finds not to be significant. In determining whether a specific change is significant, the Authority considers the change in context with all previous relevant design changes and all related revisions to the applicable airworthiness requirements incorporated by reference in the type-certificate for the product. Changes meeting one of the following criteria shall automatically be considered significant:

i. The general configuration or the principles of construction are not retained;

Superseded

ii. The assumptions used for certification of the product to be changed do not remain valid.

2. Each area, system, part or appliance that the Authority finds not affected by the change.

3. Each area, system, part or appliance that is affected by the change, for which the Authority finds that compliance with the airworthiness requirements described in (a) would not contribute materially to the level of safety of the changed product or is impractical.

(c) (Reserved)

(d) If the Authority finds that the airworthiness requirements applicable on the date of the application for the change do not provide adequate standards with respect to the proposed change, the applicant shall also comply with any special conditions, and amendments to those special conditions, prescribed by the Authority in accordance with DASR 21.A.16B, to provide a level of safety equivalent to that established in the airworthiness requirements applicable on the date of the application for the change.

(e) By way of exception from (a) and (b), the change and areas affected by the change may comply with an alternative to an applicable airworthiness requirement if proposed by the applicant, provided that the Authority finds that the alternative provides a level of safety which is:

1. In the case of a type-certificate:

i. equivalent to that of the airworthiness requirements designated under (a) or (b) above; or

ii. compliant with the essential requirements of Annex A to DASP Manual Volume 1 Chapter 4.

2. In the case of a restricted type-certificate, adequate with regard to the intended use.

(f) If an applicant chooses to comply with airworthiness requirements set out in an amendment that becomes applicable after submitting the application for a change to a type-certificate, the change and areas affected by the change shall also comply with any other airworthiness requirement which is directly related.

(g) When the application for a change to a military type-certificate for an aircraft includes, or is supplemented after the initial application to include, changes to the operational suitability data, the operational suitability data certification basis shall be established in accordance with (a)-(f). GM

21.A.105 - Record keeping

(a) For each change, all relevant design information, drawings and test reports, including inspection records for the changed product tested, shall be held by the applicant at the disposal of the Authority and shall be retained in order to provide the information necessary to ensure the continued airworthiness, continued validity of the operational suitability data and compliance with applicable environmental protection requirements of the changed product.

Superseded

(b) Unless otherwise laid down by the Authority, the records must be retained for at least two years after the removal of service of the last aircraft of the type certified.

21.A.107 - Instructions for Continuing Airworthiness

☐ **AMC** ☐ **GM**

(a) The holder of a minor change approval to a type-certificate shall furnish at least one set of the associated variations, if any, to the instructions for continuing airworthiness of the product on which the minor change is to be installed, prepared in accordance with the applicable type-certification basis, to each known operator of one or more aircraft, engine, or propeller incorporating the minor change, upon its delivery, or upon issuance of the first certificate of airworthiness for the affected aircraft, whichever occurs later, and thereafter make those variations in instructions available, on request, to any other person or organisation required to comply with any of the terms of those instructions.

(b) In addition, changes to those variations of the instructions for continuing airworthiness shall be made available to all known operators of a product incorporating the minor change and shall be made available, on request, to any person or organisation required to comply with any of those instructions.

21.A.108 - Availability of operational suitability data

☐ **GM**

In the case of a change affecting the operational suitability data, the holder of the minor change approval shall make available

(a) at least one set of changes to the operational suitability data prepared in accordance with the applicable operational suitability certification basis, to all known operators of the changed aircraft, before the operational suitability data must be used by a training organisation or operator; and

(b) any further change to the affected operational suitability data, to all known operators of the changed aircraft; and

(c) on request, the relevant parts of the changes in (a) and (b) above, to:

1. the competent authority responsible for verifying conformity with one or more elements of the affected operational suitability data; and
2. any person or organisation required to comply with one or more elements of this set of operational suitability data.

21.A.109 - Obligations and Australian Military Parts Approval marking

The holder of a minor change approval to type-certificate shall:

(a) Undertake the obligations laid down in DASR 21.A.4, DASR 21.A.105, DASR 21.A.107;

(b) Specify the marking, including AUSMPA (herein 'Australian Military Part Approval') letters, in accordance with DASR 21.A.804.

Superseded

SUBPART E - MILITARY SUPPLEMENTAL TYPE-CERTIFICATES

21.A.111 - Scope

This Subpart establishes the procedure for the approval of major changes to the type-certificate under supplemental type-certificate procedures, and establishes the rights and obligations of the applicants for, and holders of, those certificates. In this Subpart, the references to type-certificates include type-certificates and restricted type-certificates.

21.A.112A - Eligibility

Any Organisation that has demonstrated, or is in the process of demonstrating, its capability under DASR 21.A.112B shall be eligible as an applicant for a Supplemental Type-Certificate (STC) under the conditions laid down in this Subpart.

21.A.112B - Demonstration of capability

☐ **GM**

(a) Any organisation applying for a supplemental type-certificate shall demonstrate its capability by holding a military design organisation approval (MDOA), issued by the Authority in accordance with DASR 21 Subpart J.

(b) By way of exception from paragraph a, as an alternative procedure to demonstrate its capability, an applicant may seek Authority agreement for the use of procedures setting out the specific design practices, resources and sequence of activities necessary to comply with this Subpart.

(c) By way of exception from paragraph (a) and (b), any government organisation applying for a supplemental type-certificate may demonstrate its capability by having an agreement in place, accepted by the Authority, in accordance with DASR 21.A.2 with a design organisation which has access to the type design data. The agreement shall include detailed statements how the actions and obligations are delegated to enable the government organisation, in cooperation with the contracted organisation, to comply with the requirements of DASR 21 Subpart J, including demonstration of compliance with DASR 21.A.118A must be acceptable to the Authority. ☐ **AMC**

(d) By way of exception from paragraphs (a), (b) and (c), any organisation applying for a supplemental type-certificate may demonstrate its capability by holding a military type-certificate holder organisation (MTCHO) approval, issued by the Authority in accordance with DASR 21 Subpart C.

21.A.113 - Application for a Military Supplemental Type-Certificate

(a) An application for a supplemental type-certificate shall be made in a form and manner established by the Authority. ☐ **AMC**

(b) When applying for a supplemental type-certificate, the applicant shall:

i. include in the application the information required by DASR 21.A.93(b);

Superseded

ii. specify whether the certification data has been or will be prepared completely by the applicant or on the basis of an arrangement with the owner of the type-certification data.

(c) DASR 21.A.93(c) applies to the requirements for the time limits of the application effectivity as well as the requirements related to the need to update the type-certification basis, operational suitability data certification basis and environmental protection requirements, when the change has not been approved or it is evident that it will not be approved within the time limit established.

21.A.115 - Requirements for approval of major changes in the form of a supplemental type-certificate

☐ **AMC** ☐ **GM**

(a) Supplemental type-certificates shall be issued by:

1. the Authority; or

2. an approved design organisation within the scope of its privileges provided for in (1) and (9) of DASR 21.A.263(c), as recorded in the terms of approval.

(b) A supplemental type-certificate shall only be issued when; ☐ **AMC**

1. the applicant has demonstrated its capability in accordance with DASR 21.A.112B;

2. it has been demonstrated that the change to a type-certificate and areas affected by the change comply with the type-certification basis and the environmental protection requirements, as established in accordance with DASR 21.A.101;

3. in the case of a supplemental type-certificate affecting the operational suitability data, it has been demonstrated that the necessary changes to the operational suitability data meet the operational suitability data certification basis, as established in accordance with DASR 21.A.101;

4. compliance with (2) and (3) has been demonstrated in accordance with DASR 21.A.20, as applicable to the change; and

5. in case the applicant has specified that it provided certification data on the basis of an arrangement with the owner of the type-certification data in accordance with DASR 21.A.113(b):

   i. The type-certificate holder has indicated that it has no technical objection to the information submitted under DASR 21.A.93; and
