

Obsoleting of AAP 7045.002-1(AM1) ADF Wiring and Bonding Manual

Defence Aviation Safety Authority (DASA) wishes to advise that the AAP 7045.002-1(AM1) ADF Wiring and Bonding Manual is obsolete.

DASA does not intend to raise and/or sponsor a replacement publication.

DASA does not object if other organisations desire to raise similar publications for standardisation purposes (under a business case). However, DASA discourages the reinstatement of the obsolete publication without updates, as the content is out of date and deliberate risk management must occur prior to use.

The publication will not be subject to updates and is to be used as ‘historical - for reference only’ unless otherwise authorised. Before using the publication as a basis to do work on aircraft or aircraft components:

- Always first check the aircraft approved maintenance data to identify the approved procedure (if it exists), which will always take precedence and which you should follow;
- If the approved maintenance data does not include sufficient procedural content, make sure that you have approval from your Continuing Airworthiness Management Organisation (CAMO).

Further guidance on the procedures for continued use of the publication for maintenance activities and training purposes, can be found at DEFGRAM 535/2023 and with a copy of the obsolete publication.

The obsolete publication is available at Intranet: [DASA Obsolete Publications](#)
